What refreshment of change—aye, what beauty Elysian
The sweep of that curve may deny to the vision!
Oh, my soul yearns for sight! Oh, my feet long to follow,
Swift-winged with sweet hope as with wings of a swallow!
Though lonely the way, void of song, void of laughter,
I must go to the end—I must know what comes after!

AUSTIN DOBSON AS A PLAYWRIGHT: At a dinner recently given to Mr. Austin Dobson, so the *Author* reports, an anonymous poet addressed the following lines to the guest of the evening:

A fool might think (and what is worse is
Some of the stupid wise have said it)
That Austin Dobson's perfect verses
Achieve no more than courtly credit.

Ah, if he chose to drop this magic—
Show himself Playwright! Sweep the stage
With comedies and humorous tragic—
How rich were we, and rich this age!

Retire at last to sylvan Arbors,
Change, Sir, the lute for louder Chords;
Exchange your Board of Docks and Harbors
For triumphs on still greater Boards:

Sir, write us Plays! Take sock and buskin—
Steele comes to life—Rise, Goldsmith's heir!
Cyrona's windbag stick your tusk in,
And be our Congreve—our Moliere!

THE KAISER'S GIFT TO HARVARD: Emperor William's gift to the Germanic museum will embrace the casts of twenty-five subjects. Many of them are important architectural monuments, and the collection ranges in point of time from the great bronze doors at the cathedral of Hildesheim, which date from the beginning of the eleventh century, down to Gottfried Schadow's statue of Frederick the Great at Stettin, erected in 1793.

SCIENTIFIC

The Solar Theory of the Weather

REPORT AND COMMENT OF THE ROCHESTER *Post-Express* ON AN ADDRESS
DELIVERED BY HENRY C. MAINE BEFORE THE ACADEMY
OF SCIENCE, MARCH 10

THE weather theory that Henry C. Maine set forth in his address before the academy of science is a simple one, and should not, as seems to be the case, be beyond the grasp of ordinary intelligence. It is that the direct relation of cause and effect exists between solar phenomena and terrestrial meteorological phenomena; that whenever there are unusual disturbances on the sun, unusual weather disturbances occur on the earth; that there is a periodicity in the weather disturbances; that this periodicity corresponds with the revolution of the sun on its axis; that when, by revolution, the disturbed area on the sun is turned toward the earth again, it is again manifested in the renewal of the weather disturbances. As the sun revolves on its axis once in about twenty-five days, it follows that there will be a certain correspondence from day to day of the weather of one twenty-five-day period with the weather from day to day of the next twenty-five-day period.

There will not, however, be perfect correspondence, for two reasons. One reason lies in the movement of the earth in its orbit around the sun, which alters the angle of incidence of the sun's rays, and the other lies in the changes constantly occurring in the condition of the sun. Suppose, for example, that on the surface of the sun turned toward the earth on a certain date, a terrific disturbance should occur. It would be immediately reflected in meteorological disturbances on the earth. As the sun continued to revolve, the disturbed area would, after a time, pass out of sight; it would be on the side of the sun turned from the earth. Suppose, again, that during the interval that the disturbed area was turned away from the earth, the disturbance should subside entirely. Upon the presentation to the earth of the surface where the disturbed area was, there would not be a repetition of the meteorological disturbance that occurred twenty-five days before. Consequently the prophecy based upon the assumption that the disturbed area would continue for twenty-five days, would not be fulfilled. But, as Mr. Maine showed, disturbed areas on the sun last seventy-five days or longer and produce repeated meteorological disturbances. It should be remembered, also, that during such long periods other disturbances are likely to break out on the sun, and that these new disturbances modify the old disturbances and consequently the weather, and interfere with the perfect accuracy of the prophecies based upon the periodicity in the presentation of solar disturbances toward the earth. Happily, these modifying influences are, on the whole, so slight as not to interfere seriously with the accuracy of Mr. Maine's long-distance forecastings.

The chief difficulty in comprehending this theory is due to confounding solar disturbances with sun spots. Because of this confusion, many people call the theory the sun-spot theory. As a matter of fact, the sun spots play a very small part in the theory; they are of very little consequence. What is of consequence is the solar disturbances that the spots may or may not indicate. Generally speaking, spots indicate solar disturbances only after they have begun to subside and pass away. It is the solar disturbances

of great power, no matter whether visible or invisible, that act upon the weather in the most pronounced manner and constitute the true basis of Mr. Maine's theory. It is unquestionably the appearance of the spots on the surface of the sun by rotation and the corresponding appearance of meteorological disturbances on the earth that led him to connect the two as cause and effect. But after he had satisfied himself, by years of observation, that the relation of cause and effect did exist, he became convinced that it was the solar disturbance that the spot indicated, and not the spot itself, that was the true cause of weather changes. Having reached this induction, it was only a step to another, equally obvious and simple, namely, that whenever a storm occurs on the earth its cause is to be found in the sun. That is why Mr. Maine said that he had ceased to make special observations of the sun.

All that he needs to do in order to make his long-distance forecastings is to note carefully what the weather is for a period of twenty-five days and to predict that, in general, the weather for the next twenty-five days will be a duplication. But for the reasons already indicated, he can not predict with strict accuracy. If he could tell what modifications would occur in the condition of the sun for the next twenty-five days to change the operation of the forces exerted on the earth during the previous period of twenty-five days, he would be able to predict with greater accuracy. But this knowledge is not to be had at present, and may never be had. But it is a decided gain to be able to say, even in a general way, what the weather will be twenty-five days ahead.

The Effect of Electrical Waves on the Brain

SOME NOVEL EXPERIMENTS

A. FREDERICK COLLINS reports, in the *Electrical World and Engineer*, the results of experiments undertaken to discover the effects of electrical waves on the brain. He first inserted two glass armored needles into the brain of a freshly killed animal, and found that the disruptive discharge oscillated to and fro, emitting electric waves of great frequency; the characteristic sounds of cohesion could be distinctly heard in the receiver, almost exactly as when the standard carbon coherer was inserted in place of the brain. The same experiment was made with a living cat and a human brain, the apparatus used being an oscillator with a coil, an interrupter giving a 2-cm. spark.

Mr. Collins believes that he has established: (1) that electric waves emitted by lightning produce cohesion of the brain cells; (2) that cohesion takes place in brain matter when in the living state as well as immediately succeeding death; (3) that cohesion of the brain is manifested physiologically through the nervous system and not by direct action; (4) that which is often defined as fear is due to the action of electric waves on the brain; (5) that the brain cells are more violently affected than the brain fibers; (6) that this condition prevails when the brain cells or the nervous system or both are in a state of disorder, and, finally,

(7) that the long electrical waves propagated by the disruptive discharge of lightning may produce distinct symptoms, and which may, under certain conditions, result in death.

Pneumonia the Most Deadly of Diseases

STEPHEN SMITH BURT, in the *Medical Record*, New York
Condensed for PUBLIC OPINION

THE death rate from pneumonia in the United States, in 1890, throughout the area of registration, was 189.9, and in 1900 it was 191.9, per 100,000 of the population; whereas, in 1890 there were 245.4 and in 1900 there were 190.5 deaths from consumption under the same relative circumstances. Therefore, while the last-named disease is upon the decline, pneumonia, as the chief destroyer of life in this country, is coming into fateful prominence. According to the statistics of the census year of 1900, the three most common causes of death were pneumonia, consumption, and heart disease, and in the order enumerated.

The eradication of pneumonia, the scourge of civilization, in view of the present limitations of our knowledge, seems well-nigh impracticable. Still, on the other hand, a decided step has been taken in the right direction. It is now settled beyond question that the micrococcus lanceolatus is a uniform, unfailing agent, in contradistinction to diverse predisposing causes, of acute lobar pneumonia. This micro-organism is a somewhat elliptical, lance-shaped diplococcus that exists in the blood, heart, liver, spleen, kidneys, and other tissues of the body, as well as in the lungs. It is present, as a rule, in the diseases which complicate pneumonia, such as pleuritis, pericarditis, endocarditis, peritonitis, and meningitis. It is found almost invariably in the pneumonic sputum and, not infrequently, in the living blood. It occurs in all its malignancy in the mouth and bronchial secretions of many healthy individuals. It also dwells in a non-virulent condition in the mouth and throat of nearly everybody. The dust-laden atmosphere of the houses we inhabit, and of the public halls we frequent, is more or less permeated by these mephitic organisms. And the floating, powdered sweepings of our streets must necessarily contain a fair share of what is practically everywhere.

Among the conditions that tend to lower the resisting power of the body for the germs of pneumonia are the suboxidation from an habitual lack of proper deep breathing, and the many hours daily spent in a polluted atmosphere. Few houses, schools, shops, factories, places of business, of worship, or of amusement, when filled with people, are adequately ventilated. The air of many of our public conveyances, such as the cars and ferries, when overcrowded, as they almost invariably are, is extremely poisonous. Going from the overheated, or the underheated, nearly always fetid, air of these places into the damp, chilly outdoor air, in view of the known whereabouts of the pneumococci, is not infrequently a dangerous proceeding. The personal measures for the prevention of pneumonia, aside from the disinfection of the pneumonic expectoration, are the avoidance of undue exposure to inclement weather and of all crowded, ill-ventilated gatherings; reasonable attention to questions of sanitation; temperance in eating, in drinking—in fact, in everything; daily bathing, in order to ensure a healthy action of the skin, and regular exercise in the open air, with special reference to com-

plete respiration. There is nothing better constituted to purify the blood, and thus fortify the system against infection, than systematic deep breathing out of doors while briskly walking or engaged in horseback riding. Frequent changes of underclothing are exceedingly desirable. Linen network underwear is conducive to a marked freedom from acute nasopharyngeal and bronchial catarrhs. Active and unimpeded transpiration through the skin, complementary to the internal excretory organs, is a physiological necessity neither fully nor generally appreciated. Finally, viewed as a hotbed of micro-organisms, the mouth should be rinsed two or three times a day with a solution of formaldehyde in the strength of twenty drops, of the forty per cent solution, to a pint of distilled water; for it is salutary, if not absolutely prophylactic. These are some of the apparently simple, though actually important, expedients for self-preservation.

While pneumonia is to a great degree, if not entirely, a preventable disease, the practical difficulties involved in its prevention are evidently considerable. When the resisting power has been weakened by intemperance, by chronic disease, by neglect of hygienic and sanitary precautions, by old age, and by destitution, it is very prone to succumb to an encounter with the specific pneumonic micro-organisms. Destitution, with its attending wretchedness, is largely a contributing factor in the prevalence of contagious and infectious diseases, and among them to the high death rate from pneumonia, especially in large centers of population, and any successful effort toward the alleviation of this condition is so much gained for the cause of preventive medicine, as well as philanthropy.

The New Vapor Engine

R. H. THURSTON, in *Science*, New York. Condensed for
PUBLIC OPINION

PROFESSOR JOSSE, at the great Charlottenburg technical school, and his co-workers among the steam-engine builders of Berlin, have been for some time at work determining the practicability of utilizing the binary-vapor system of heat-engine, supplementing the steam engine by a "waste-heat engine," in which a more volatile vapor is employed to transform into useful mechanical energy the large fraction of heat rejected from the former.

The thermodynamic efficiency of any heat engine is determined, at best, by the range of temperature worked through and without regard to the nature of its working substance. It is true that the practicability of employment of one or another fluid in the heat engine varies with the temperature and pressure ranges, and that there is as yet no known fluid which precisely adapts itself to the demand of the engineer within the practical limits of pressure and of temperature, coincidentally, which he now safely, conveniently, and economically handles. He finds one fluid suited to the pressure, the other to the temperature range, one to the upper, another to the lower, portion of either scale; but he knows of none which meets his needs on both scales. By combining fluids in series, however, it is at least ideally possible to secure this coincidence of available pressure and temperature ranges. Thus, it has often been proposed to utilize the rejected heat of the gas engine in an accessory steam engine, to thermodynamically transform the waste heat of the latter by a secondary apparatus employing one of the more volatile liquids in a cycle of low-temperature range.

There exists a very large defect in the standard steam engine, in its inability to utilize the temperature range of its cycle below about 50 deg. C. (122 F.), while it is usually true that at least one-half, and often much more than one-half, of the heat energy which should be transformed into work escapes transformation simply because of the low terminal pressures of the engine at the lowest temperatures of its range. It is this loss which is sought to be reduced by the series-fluid engines and which, so far as the thermodynamic and the dynamic questions are concerned, may be actually saved in large degree.

Professor Josse has succeeded in producing the horse power with an expenditure of less than eight and a half pounds of moderately superheated steam per hour. The experiment has been made with the utmost care and repeated under varying conditions, until there can remain no doubt of the fact. He further states that the steam and sulphur-dioxide, binary-vapor system adopted by him can be constructed at no greater cost than the standard triple-expansion engine which it rivals, that, properly cared for, it is not subject to injury by corrosion, as had been anticipated by engineers generally, and that it can be safely insured against loss or accident through leakage. If experience confirms this claim, this means that the long-sought utilization of the waste heat of the steam engine may be practically accomplished.

Various Topics

WIRELESS TELEPHONY:—The signal corps of the United States army has succeeded in sending wireless telephone messages a distance of 480 feet.

LIGHTNING SPECTRUM PHOTOGRAPHED: Very wide interest has been taken in the spectrum of lightning, photographs of which have been obtained at the Harvard college observatory. These were made by pointing a telescope, provided with an objective prism toward a portion of the sky where lightning was particularly bright. The spectrum is not always the same. Many of the lines appear to be due to hydrogen. The first line is a broad, bright band, extending from wave-length 3,830 to 3,930, and may be identical with the nebular line 3,875. The spectrum of lightning is curiously like that of the new star in Perseus, and other new stars.—*Science*.

ANTIPLAGUE VACCINATION: Pinto, the official chief of the health department of the state of Rio, Brazil, reports the results of the previous antiplague vaccination undertaken at Campos during the recent widespread epidemic of plague there. He states that the vaccine was obtained from Terni's institute at Messina or from the national vaccine bureau, and 1,803 persons were vaccinated, all at their homes. One exhibited symptoms of the disease immediately after the vaccination, another thirty-two days afterward. Of the total number, therefore, only one contracted the plague after being vaccinated, with the exception of the one who was already under the influence of the disease as above mentioned. The one plague patient had the disease lightly.—*Journal American Medical Association*.

RELIGIOUS

The Religious Life of the Southwest

A REPORT FROM THE FIELD

THE studies of religious life in America, by Mr. Ernest Hamlin Abbott, that have appeared at intervals in the *Outlook*, are carried forward another stage in a recent issue of that paper. This time, Arkansas is the scene of his observations. Arriving in Little Rock during the racing season, he was impressed with the low or contradictory standards of morals of the church people. One good deacon who was called on to help in some Y. M. C. A. meetings sent word that he was suffering from a severe headache, the result of losing thirty dollars at the races the day before. "Those churches in the south and southwest which especially pride themselves on the fact that they are stalwart in doctrine are not, so far as I could see, strong in moral fiber or rich in spiritual life. In the southwest, intellectual certainty was very manifest; moral conduct was emphasized, but seemed to be determined by more or less dogmatic precepts generally acquiesced in rather than by unifying principle; and spiritual experience was confined to a vague assurance that the future condition of one who maintained his intellectual certainty and followed the accepted moral precepts would not be endangered.

"At the beginning of my trip some one told me that there was no better reflector of the religious life of the southern people than the provincial religious papers. My experience confirmed this. The reason for this fact is not far to seek. The southern people are not great readers. Even the clergymen of St. Louis, so I was told at a denominational bookstore, buy but few books. The dwellers in the small towns and the country regions of the south, whose access to literature is more difficult and whose means for purchase are small, are the more dependent for their

reading upon their local denominational papers."

Two men—father and son—the editors of a religious weekly in Little Rock, seemed to Mr. Abbott to typify the religious feeling of their section. "In the conversation of these men there was no suggestion of interest in what is called spiritual life. There was not even any use of cant terms, which may be called the blank cartridges of the church militant; no hint that religion had to do with character, except as it involved stalwart adherence to a faith that had once for all been delivered to the saints. Nor was there any recognition of the effect which religion might have on the social life of men. Indeed, when I made an inquiry on this point, I was told that there were no social problems there! Happy city of over thirty thousand, without a social problem to disturb its Christian people! This was the reason given for the fact that the churches devoted all their attention to the conversion of the individual. This 'conversion' was attained when the individual intellectually accepted certain dogmas and publicly identified himself with some church.

"Under these two divisions, doctrine and organization, could be included all that I found characteristic of the religious life of the southwest, as expressed not only by what these two editors said, but, with perhaps one or two exceptions, by what I heard on every hand. The political ideas of my interlocutor consistently reinforced his religious conceptions. He was, of course, a Democrat, and was an active member of his party organization. He measured political life, first, by political doctrines—the formulas of faith that had once for all been delivered to the fathers of the republic—and, second, by his party, which apparently could do no wrong. His religious creed was

like his political platform—not subject to interrogation. Any one who questioned either was 'more liberal,' or, as he preferred to say, 'looser'—both terms of opprobrium. His church was, like his party, the embodiment of righteousness and safety. Those who belonged to other parties and other churches were mistaken—that was all that need be said about them. As for those who belonged to no party and no church—well, we did not discuss such people."

Liberty of Conscience in Russia

A SIGNIFICANT DEBATE

IN December, 1901, at a missionary congress in Orel, central Russia, M. Stakhovitch, marshal of the nobility of the government of Orel, spoke boldly and openly for liberty of conscience. What he said was nothing new or important to people outside of Russia, but it is most unique and significant that he should have been allowed to speak without rebuke or punishment for such a cause in Russia, within a year after the excommunication of Count Tolstoy for a similar offense. One rather startling inference is that he was inspired from St. Petersburg to make the declaration by way of trying the temper of the orthodox church.

According to Count Tolstoy, who discusses the incident in *La Revue* (Paris), M. Stakhovitch "proposed to the congress to recognize the absolute liberty of conscience, including not only the freedom of belief, but also the right to withdraw from the orthodox church and to make converts to another religion in disagreement with it. M. Stakhovitch considered that the liberty so understood and practiced would but add to the triumph and the propagation of orthodoxy."

The *Zerkovnya Viedemosti* pays considerable attention to the address, and summarizes at some length the most striking portions of it. "After M. Stakhovitch had been asked the question, who had prohibited liberty of conscience in Russia and who punished it, he accused the civil power of the state for having, in an unbecoming manner, assumed jurisdiction of a foreign territory—that of the intellect and conscience. We have, he said, with a criminal hand chained the Church of God to the feet of a vain and profane earthly power. By this means the evil was ostensibly occasioned, that the church was not protected, but in its spiritual entireness destroyed. Inasmuch as she takes her refuge in unspiritual means, to coarse, material force, she ceases to be the church, and comes to be an institution of the state, a kingdom of this world, undoubtedly holding that the domain of conscience and faith was exclusively the domain of the church."

An orthodox clergyman, T. Thscherkasski, also spoke on the same subject, and a part of his address appeared later in the St. Petersburg *Viedemosti*, from which the following is quoted: "Is it not depressing for our entire country, and for our orthodoxy, that we who enjoy the immense conquests of science, participate in the cultured life of the entire world, and form one family with the nations of Europe, up to now can not desist from the custom of persecuting those people who do not think, believe, and confess their faith as we do? . . . 'Man is a free, rational being, created after the image of God.' Thus the first declaration reads in any of our catechisms of the elementary instruction in the orthodox doctrine. But if this be so, if man is indeed a free, intellectual being, then give him the possibility to choose his belief."

The Inspiration of the Bible

PROFESSOR PEARSON'S DECLARATION OF PRINCIPLES

THE article by Professor Charles W. Pearson, expressing the belief that the Biblical accounts of miracles were mythical or legendary (PUBLIC OPINION, 30 January), and which aroused such a storm of protest that the author has since resigned from the faculty of Northwestern university, is reprinted from the Evanston (Ill.) *Index*, in the March number of the *Open Court*. Professor Pearson states his case clearly at the outset: "Jesus told the Scribes and Pharisees that they had made 'the word of God of none effect through their tradition.' Very many of our religious teachers are today doing the same thing. Modern preaching lacks truth and power because so many churches cling to an utterly untenable tradition that the Bible is an infallible book. This dogma is their besetting sin. It is the golden calf of their idolatrous worship. It is the palpable lie that gives the ring of insincerity to all their moral exhortations. If theologians wish to regain their lost intellectual leadership, or even to possess an influence on the thoughtful part of the community, coördinate with that of poets, philosophers, and men of science, they must throw aside the dogma of an infallible Bible as completely and frankly as Protestants have thrown aside the dogma of an infallible pope."

Professor Pearson cites the miracles of the fiery furnace in the book of Daniel, the feeding of Elijah by the ravens, the feeding of the multitude by Jesus and the increase of the widow's barrel of meal by Elijah and the cruse of oil by Elisha as impossible of literal belief, and concludes that "the legendary element is as obvious and as indisputable in the New Testament as in the Old. The great spiritual teachings of the Bible rest upon absolute and eternal truth, but its history and science are always imperfect and often erroneous. Not 'the stars in their courses' only, not merely astronomy, but geology and biology, have shown that the story of creation in Genesis is poetic."

"It will be asked in dismay by conservative people what is left to the church if it accepts these views. I answer: An infinitely truer, richer, and more spiritual religion. Faith, hope, and charity are left. The moral law is left. The Bible itself is left, and all its spiritual teachings are freed from the dead body of tradition and quickened into new life. The existing churches, by laying aside their legends and superstitions and accepting reverently all truth as it is revealed, must become fit agencies for the best minds to utilize or must yield to new and more progressive organizations. The evasion and suppression of truth, if persisted in, becomes mere priestcraft and imposture, and leads to the decay and death of any church that permits it. Miracles of the class before spoken of, once a help, are now a hindrance. Those churches which continue to teach that such legends, errors, or allegories are literal truth, taint all the rest of their message. People are saying, and they will say more and more, 'I can not believe these stories, and I will have nothing to do with any church that teaches their literal truth or calls the book that contains them infallible.' It is the cowardly refusal of the churches to admit patent facts and to advance with the advance of knowledge, that has brought about their present deplorable condition and the low moral state of the nation that depends so largely upon them for spiritual guidance and strength."

The Question of Naval Chaplains

New York Sun. Excerpt

THE question of chaplains in the naval services has been raised of late in the United States, Great Britain, and France; in our navy, it has to do with the subject of pay, in the British navy, with that of representation for the Catholic church, in the French navy it refers to the continuance of chaplains. In our naval service there are twenty-four chaplains, four with the rank of captain, equivalent to colonel in the army, seven ranking as commanders or lieutenant-colonels, and thirteen as lieutenants or captains in the army. A naval chaplain recently submitted to the secretary of the navy suggestions for an increase in the number of chaplains and in their pay; with the first suggestion Mr. Long agreed, in view of the increase in the navy at large; but not with the second. A chaplain begins with \$2,300 salary at sea, and after five years gets \$2,800, which sum thereafter is not increased; this pay, the secretary thinks, is much larger than the average salary paid to civilian clergymen; the duties of other naval officers, who receive regular increases in pay, become more onerous, but those of chaplains in practice do not. The secretary points out that though army chaplains receive increased pay for length of service, they begin with lower salaries than naval chaplains, and even after twenty years' service get less than naval chaplains receive after five years.

The Irish members of parliament are trying to obtain the appointment of Catholic priests as sea-going chaplains in the British navy, thus far without success. They have appealed to the sense of justice of the government, pointing out that though there are now some 12,000 Catholic sailors actually afloat, there is not a single Catholic chaplain at sea. Two priests serve as chaplains on shore, though their highest pay is just half of the highest pay received by Anglican chaplains. Perhaps more effective than an appeal to British fair play in a matter involving religious differences is the reminder of the Catholics that the British navy needs men, and that the Irish hierarchy has warned Catholics not to enter the service until provision is made for their religious necessities.

The French feeling against the Catholic church is manifesting itself in new regulations "to protect liberty of conscience," which some French officers say are really an attack on all religion. The regulations just abolished gave full liberty to any man to attend or to stay away from mass; but the French government, not satisfied with this abolition, is suppressing chaplaincies in the navy entirely.

New Finds in Early Christian Literature

New York Independent. Excerpt

THE Biblical scholarship of Europe is now for the first time reaping some good results from the friendship that exists between the sultan and the kaiser. A special irade of the former, recently published, directs that the whole Christian literary contents which have recently been found in the famous Kubbeh-el-Chasme, or treasury, at Constantinople, are to be sent to Berlin as a gift of the sultan. This is the outcome of an agitation that has been carried on by several German savants for a number of years.

The Kubbeh traditionally is a storehouse of the Christian literary remains saved from the destruction of the great St. John Basilica in Damascus. Through the influence of the present chancellor of the German empire, Von Bülow, permission was granted two years ago to have these literary remains examined, the sultan having given orders to have a complete catalogue of the Kubbeh documents prepared. A young Syrian scholar from Berlin, Dr. Violet, was at once sent to investigate.

The rather confident hope that older copies of the New Testament than the vatican or the Sinaitic would be found was not realized. But the Christian languages, Syriac and Greek, were not lacking, and after much careful work in cleaning and photographing these documents, which were all in a rather dilapidated state, Dr. Violet has made a number of finds of special interest to the student of the early and earliest Christian literature. The leading documents of this class are the following: (1) A unique fragment, consisting of Psalm 78 in Greek and Arabic, the latter written in Greek letters, so that the old pronunciation of the Arabic can be readily determined; (2) Samaritan fragment of the Pentateuch; (3) fragments of the New Testament in the Greek language, dating from the fourth and fifth and possibly from the third century; (4) remnants of unique translation of portions of the Old and of the New Testament into Palestinian Syriac, probably not unlike the dialect spoken by Christ dating from the fourth or fifth century; this collection, including large parts of Pauline letters, supplementing the old Palestinian translations of the gospels found on Mt. Sinai; (5) 117 sheets of old Syriac prayers, of special importance for the study of the worship of the old Syrian church; (6) a Hebrew fragment of the Pentateuch, of uncertain date; (7) 25 sheets of a Greek psalter in old uncial letters; (8) a large fragment of a Greek church father; (9) 47 sheets of an unknown commentary of Theodore of Mopsuestia in the Syriac language; (10) a number of fragments in Syriac, Hebrew, Greek, Latin, and Armenian; (11) a portion of a Latin letter of King Baldwin IV of Jerusalem addressed to a merchant; (12) an old French account of the crusades.

STATE AID TO RELIGIOUS SCHOOLS: The new educational law just adopted in Holland extends state aid to all schools, religious and secular, which prove by tests that a satisfactory character of secular education is imparted.—*Pittsburg Catholic*.

CHRISTIAN ENDEAVORERS IN A PRISON CAMP: There are eight Christian Endeavor societies in the Boer prison camp in Ceylon, with a membership of seven hundred. Three are Junior societies, A, B, and C. Branch A consists of boys up to the age of fifteen. In branch B are youths from fifteen to nineteen. Young men from nineteen to twenty-one make the membership of branch C. Through the kindness of the prison authorities they have a small printing press, and are allowed to publish a small weekly paper of their own, *De Strever* (*The Endeavorer*).—*Christian Endeavor World*.

PREACHER REBUKES KING: In the course of a sermon recently, the Rev. Joseph Parker, D.D., pastor of the City Temple, London, administered a pointed rebuke to King Edward, which was loudly applauded by the congregation. Having alluded to public-houses as "trapdoors of hell," Dr. Parker referred to the King's recent brewing of beer while visiting Lord Burton. "If the king brews beer," said he, "what can be wrong in the subject drinking it? What the king does is likely to be imitated by others. His Majesty is more than a man and must regard all questions from a kingly viewpoint. If the king goes to a Sunday concert, as he did recently, he deals a deadly blow to the Englishman's Sunday."

THE NEWS OF THE WORLD

MONDAY, MARCH 10

DOMESTIC.—The United States supreme court decided that the anti-trust law of Illinois is unconstitutional; this decision in effect wipes out the anti-trust laws in thirteen states.... Secretary Long resigned from the cabinet and the president selected Representative William H. Moody, of Massachusetts, to succeed him, the change to take effect on May 1.... The government's bill to test the legality of the Great Northern and Northern Pacific merger was filed in the United States circuit court at St. Paul, Minnesota.... Some fifteen thousand men, including sympathizers, on New England railroads, are involved in the freight handlers' strike at Boston, and traffic is blocked at the wharves in that city.

FOREIGN.—Lord Kitchener reported a heavy reverse in the western Transvaal on March 7, a strong force under General Lord Methuen being defeated by the Boers under De La Rey; General Methuen was wounded and captured, and the British casualties included 8 officers and 38 men killed, and 5 officers and 72 men wounded; the British also lost four guns.... The first colonial exhibition was opened in London; it consisted largely of Canadian exhibits from the recent Glasgow fair.... The Italian chamber of deputies elected Signor Bianchieri, a former presiding officer, president, by 350 out of 402 votes.... Colombian insurgents have captured the important town of Agua Dulce.

TUESDAY, MARCH 11

DOMESTIC.—Prince Henry of Prussia sailed on the Hamburg-American steamer *Deutschland*; farewell visits were paid to the prince on board the vessel, and messages were exchanged between the prince and President Roosevelt; the *Deutschland* was saluted by craft in the harbor and the batteries at the forts along the bay.... President Roosevelt sent his first veto message to congress, disapproving a bill to remove the charge of desertion from the record of a sailor.

FOREIGN.—The Danish lower house ratified the treaty providing for the sale of the West Indian islands.... The sittings of the Spanish houses of parliament were suspended.... The Bank of St. Petersburg, at Azov, is insolvent, and the government has taken charge of its affairs.... Alexander Mavroyeni Bey, formerly the minister of Turkey at Washington, has been appointed governor of the island of Samos.... A tidal wave on the coast of Mexico killed 53 persons.

WEDNESDAY, MARCH 12

DOMESTIC.—William J. Glenn, door-keeper of the house of representatives, and a well-known New York politician, died in Washington.... John P. Altgeld, ex-governor of Illinois, died suddenly at Joliet, Illinois, of cerebral hemor-

rhages shortly after finishing a public speech in favor of the Boers.... The Mississippi river steamer *Providence* was capsized by a sudden squall at Lone Landing, and twenty-one people were drowned.... The Pennsylvania railroad company has decided to issue \$50,000,000 of bonds to cover its Hudson river tunnel and other expenses.

FOREIGN.—King Edward's proposed visit to Ireland has been abandoned, owing to the disturbed conditions in the island.... The Liberal forces on the Isthmus of Panama have captured the rich district of Chiriqui.... Two Boer officers were killed in a fight in Cape Colony.... Two German newspaper men were sentenced to fine and imprisonment for printing a false report about Emperor William.

THURSDAY, MARCH 13

DOMESTIC.—Acting on instructions from Peking the United States, French, and British consuls are amicably adjusting the dispute regarding mission land at Tien Tsin. Mrs. Catherine Soffel, who aided the Biddle brothers to escape from the Pittsburg jail, was indicted on three charges.... A gift of \$250,000 from Mrs. C. P. Huntington made available the conditional gifts to the Harvard medical school.

FOREIGN.—Mr. Brodrick announced in parliament that General Methuen had been released by the Boers, and was on his way to Klerksdorp in charge of a British medical officer, and General Kitchener subsequently announced his arrival there.... The Atlantic union, an association formed to draw together English-speaking peoples, held its annual meeting in London, and Lord Monckswell was elected president; its membership has trebled in the last year.... Portuguese troops attacked slave traders in East Africa and liberated seven hundred slaves.... The British admiralty has contracted for the construction of seven cruisers and two battleships.... A town in the province of Kastamouni, Asia Minor, was recently destroyed by earthquake, and four persons were killed and a hundred injured.

FRIDAY, MARCH 14

DOMESTIC.—Secretary Shaw announced that purchases of government bonds by the treasury department would be discontinued for the present.... W. A. Rodenberg, of Illinois, resigned from the United States civil service commission.... The house conferees on the question of reciprocity with Cuba were in session again, without reaching an agreement, but it was said that a compromise is likely to be adopted soon.... Announcement of the gift by Mr. Carnegie of \$175,000 for a library at Albany was made.... The National railroad of Mexico was incorporated in Utah, to operate a road from Laredo to the City of Mexico.

FOREIGN.—Cecil Rhodes is seriously ill at Cape Town; a syndicate has been formed to take over his holdings in the chartered company in the event of his death.... King Edward and Queen Alexandra held their first court at Buckingham palace; four American women were presented.... Lord Francis Hope, brother of the Duke of Newcastle, has failed; his creditors claim £4,000.... The steamer *Elbe* reached the Azores, to convey the passengers of the disabled Cunard line steamer *Etruria* to their destination.... The folketing, by a vote of 88 to 7, approved the sale of the Danish West Indies to the United States.

SATURDAY, MARCH 15

DOMESTIC.—The resignation of William M. Johnson, first assistant postmaster-general, has been accepted by President Roosevelt.... By an explosion in the powder mixing department of a Cleveland torpedo factory one girl was killed and seven other persons were injured.... Blizzard weather, with a heavy fall of snow, prevailed in the Dakotas and Wyoming, and trains were stalled at many places.... Two mills of the Lafin & Rand powder works, four miles north of Columbus, Kansas, exploded, and one workman was killed and several others were injured, while thousands of dollars' worth of property was destroyed.

FOREIGN.—Messrs. Bainbridge and Ragsdale were appointed to adjust claims of Americans at Peking.... The condition of Cecil Rhodes was considered to be very critical.... The queen regent of Spain has called upon Señor Sagasta to form a new cabinet; Sagasta has consented.

SUNDAY, MARCH 16

DOMESTIC.—A site for a new army post has been selected on the Pasig river, seven miles from Manila, by General Chaffee; a quarantine has been put in force at Manila against vessels from Hong Kong, at which port cholera is prevalent.... The United States gunboat *Machias* arrived at St. Thomas, D. W. I.; she will probably remain there to take part in the transfer of the islands to the United States.... A cyclone at Birmingham, Alabama, wrecked forty houses and killed one man.

FOREIGN.—The Suez canal is blocked by two Shell line steamers, one on fire and the other ashore and abandoned.... Lord Kitchener transmitted to London further details received from Lord Methuen of the rout of the latter at Twebosch, in the Transvaal; they show that the British infantry and artillery fought well, but the mounted troops fled in panic before the onset of the Boers.... Emperor William has ordered two battleships to meet the *Deutschland*, on which Prince Henry is returning to Germany from America.

The Books of The Week

THE HOUSE WITH THE GREEN SHUTTERS. By George Douglas. Cloth, pp. 328, \$1.50. New York: McClure, Phillips & Co.

"THE House with the Green Shutters" is a gloomy study in retribution, in the inevitable reaping that follows the sowing. It is the recognition of this unalterable law of life, together with a terse, direct, unequivocal form of expression, and an analysis of human motives as keen as Zack's, that makes for power in Mr. Douglas's first novel; that explains why it has made something of a sensation in literary circles. The story unfolds itself in a dull little country town in Scotland, where "the passing of a single cart is an event, and a gig is followed with the eye till it disappears." The men and women of Barbie formed a sort of chorus around the central figure, Gourlay, who looked down on the petty burg with full consciousness of the envy he inspired. He knew that those who groveled at his feet hated him in their hearts, yet his keenest delight in life was to make them grovel. "He was a stupid man with a strong character in which he took a dogged pride. He was so dour of wit that he could never hope to distinguish himself by anything in the shape of cleverness. He asserted his superiority and held his own only by affecting a brutal scorn of everything said and done unless it was said and done by John Gourlay." The house with the green shutters was built as a monument to his peculiar pride. Every time he looked at it he had a sense of triumph over his enemies who could not afford to build fine houses. He kept the carrying trade of Barbie all in his own hands, not through any shrewd commercial instinct, nor for greed of gain, but by force of bullying and for sheer love of driving his competitors from the field. He was not content with mere servility on the part of a workman; he never rested till he had broken the man's spirit. In selecting a wife, he chose a well-dowered woman, whose weak will he could bend to his own. His first punishment came in the discovery that this spiritless slattern was not a fit housekeeper for his house with the green shutters, and "the sight of her incompetence filled him with a seething rage." His second punishment came in the worthlessness of the two children of this union. His son proved cowardly, lazy, and weak of will, his daughter, a sickly, characterless non-descript. Gourlay's third punishment came in the form of a powerful competitor, who fought force with sagacity, primitive methods with progressive ideas, until he utterly routed the carrier of Barbie. Eventually the man who had bullied, and browbeaten, and scorned his fellow beings reaped the humiliation of poverty and disgrace, and

THE NEW NATURE LIBRARY

Mrs. Anna Botsford Comstock, a recognized authority, says in the New York Times Saturday Review:

"Doubleday, Page & Co. are issuing a superb set of books under the title of 'The New Nature Library,' which are designed especially to help those without scientific training to comprehend the beauties and wonders of nature. The illustrations have created a new epoch in colored pictures direct from photographs, and the text is uniformly interesting and instructive."

The books are of large quarto size, and very elaborate. The regular price of the seven is \$18.00, and 88,000 books have been sold at this rate. The volumes are: Nature's Garden (Wild Flowers); The Insect Book; The Butterfly Book; Bird Neighbors; Game Birds; The Mushroom Book; and Bird Homes.

COUNTRY LIFE IN AMERICA

is a monthly magazine devoted to the interests of all who love the country. Prof. L. H. Bailey, a well-known authority and writer on rural and agricultural subjects, is its editor. The magazine is printed on fine coated paper throughout, and the illustrations are the best that artistic photography and the finest engraving and printing can make them. Begun in November, it has met with such success as to justify our enlarging its size and scope very materially.

THE COMBINATION

We now offer a year's subscription to "Country Life in America," together with The New Nature Library, (a special library edition, bound in polished buckram with leather title label and gilt top) for only \$1.00 with the order and \$1.00 per month for 17 months or \$17.10 cash with order. Mail this coupon to us with only one dollar, and we will send prepaid the seven books, and enter your subscription to COUNTRY LIFE IN AMERICA. If, upon examination, you are not satisfied with the volumes, send them back by express collect, and your one dollar will be refunded. If you are satisfied, complete your payment by sending us \$1.00 a month for 17 months, making the total amount \$18.00. (Or send us \$17.10 at once, which will be accepted as full payment.)

FROM A SUBSCRIBER:

"I consider this the best investment in books that I have ever made, as the purchase price represents but a small part of the actual book value of the set."

Marcus S. Farr,

the gibes and jeers of those whom he had trampled under his feet. The loss of the house with the green shutters was the crowning misfortune, followed swiftly by the final tragedy, the horrible ending of four lives sacrificed to brutal stupidity and pride. As a ruthless picture of the sordid meanness and baseness of which humanity is capable, of life unilluminated by a single ray of sweetness or light, "The House with the Green Shutters" is without an equal in modern fiction. While it is given the local coloring of a Scotch village and dressed in Scotch dialect, it is the sort of a story that might belong to any place where men live down to the worst that is in them.

FREDERIQUE. By Marcel Prevost. Translated by Ellen Marriage. Cloth, pp. 396, \$1.50. New York: T. Y. Crowell & Co.

THIS is the novel that caused M. Prevost to be hailed as the "apostle of feminism" by his admiring countrywomen. His gospel, briefly and profanely stated, is this: The world is in a very bad way and can only be set right by a great Virgin Force, composed of women of strong wills, and sound morals, and noble aims, women who eschew love and marriage, and devote themselves wholly to the Cause. There will always be women to marry and keep the world going, but it will devolve on the Virgin Force to see that it is run properly. This doctrine is woven into the story of two charming French girls who leave their Parisian home to carry the glad tidings to darkest London. The elder, Frederique, is a well-disciplined, self-reliant creature with scarcely a trace of the old Eve in her composition. The younger, Lea, being more pliable, betrays the Cause to the extent of falling in love with one Georg, a Swedish artist. She will not marry him, however, though she consents to be his "chosen sister in a mystic union of souls." When Georg insists on sending for a clergyman, she flees to Paris, where, strongly entrenched behind a strong Virgin Force, she is able to resist the appeals of the insistent Swede. M. Prevost has made the most of his material. He has convinced us that he is a good story-teller, but a poor preacher.

PRINCIPLES OF WESTERN CIVILIZATION. By Benjamin Kidd. Cloth, pp. 538, \$2. New York: Macmillan Co.

MR. KIDD's book fulfills the first and most important condition of a great work, it stimulates the reader to do a little thinking for himself. That, by the way, is a quality inherent in all that Mr. Kidd writes. His thesis by which he explains the dominant principles of western civilization and which is in turn explained by those principles is that progress has come, and is to come still more in the future, by the gradual substitution of the future for the present as the ascendant element in human thought. Through the middle ages and down into the last century was presented the antithesis of a church whose whole teaching was of the things of the future dominating over and embracing a sec-

"Reveals her one of the great novelists of our day."

The VALLEY of DECISION

By EDITH WHARTON

HAMILTON W. MABIE says in the N. Y. Times Saturday Review:

"It is individual and original to a high degree.

"It is rare and fine and full of distinction.

"A novel of notable charm and ability.

"Full of nice shadings, of delicate distinctions, of those side lights, skilfully shifted, which bring out the different aspects of a rich and varied experience.

"A study of temperament of a very artistic kind, admirable in its poise.

"A delight as a piece of exquisite handicraft."

The CRITIC

FOR ONE YEAR and

Roosevelt's
WORKS \$5.00

Fourteen Volumes
Sagamore Edition

An unprecedented opportunity enables us to announce the most generous offer ever made by a leading magazine. For \$5.00 to new subscribers, THE CRITIC for one year, and the Sagamore Roosevelt, delivered, 14 vols., large, clear type, in handsome khaki cloth binding.

THE CRITIC is a necessity to any one who aims at culture or knowledge of literary affairs. It is a satisfaction to all who care for bright reading, careful criticism, fine illustrations, and brilliant caricature. It is the leading literary magazine, and the chronicle of art, music, and the drama as well.

"No other magazine in its kind can quite take its place."—*Thomas Bailey Aldrich.*

"THE CRITIC long since took rank as the FOREMOST LITERARY PAPER of America."—*N. Y. Times.*

"There is no other publication in America that rivals THE CRITIC in its field."—*N. Y. Sun.*

Roosevelt's Works "American Ideals," "Administration Civil Service," "The Wilderness Hunter," "Hunting the Grisly," "Hunting Trips of a Ranchman," "Hunting Trips on the Prairie, etc.," "The Winning of the West" Series (6 vols.), "Naval War of 1812" (2 vols.). A set of great interest and value to every American family.

The regular price of THE CRITIC is \$2.00 per year; the regular price of the set is \$7.00. We cannot guarantee a continuance of this offer. Prompt action is necessary. Subscribers in foreign countries must pay delivery charges. [Mention PUBLIC OPINION.]

Single Copies of THE CRITIC may be bought from any leading newsdealer

ular state whose gaze was fixed on the present. Out of this conflict has emerged the consciousness of the need to separate church and state in order that the former may have full freedom to align its practices with its professions and point its adherents to the future without obstacle or contradiction. Now the task of the time is to bring the political and economic activity of the world up to the same high level of ideal and action; to purge all human thought of the base utilitarianism that regards only the wants of today. That way lies progress and growth; any other way is to degeneration and death.

THE GIANT'S GATE. By Max Pemberton. Cloth, pp. 393, New York: Frederick A. Stokes Co.

MR. PEMBERTON has no hesitancy in undertaking large themes, and it must be said to his credit that he handles them in workmanlike fashion. The political unrest in France at the time of the assassination of President Faure and on the eve of the second trial of Dreyfus furnishes him with the material for this his latest romance. General Jules Davignon, the idol of the army, is in love with an English girl. The interest of the story centers around his hesitations between love and the calls of duty. When at length, at the urging of his sweetheart, he returns to France it is only to find Loubet, the successor to Faure, too strong for him and his revolutionist friends, and the uprising that had been planned for the day of the Premier de Longchamps ends in a miserable fiasco. Davignon, who had taken no part in the final demonstrations, is sentenced to the military prison at Belfort for a term of years, and the story ends with the English girl at Belfort awaiting the end of her lover's imprisonment.

WITH THE ROYAL TOUR. A Narrative of the Recent Tour of the Duke and Duchess of Cornwall and York through Greater Britain, Including His Royal Highness's speech Delivered at the Guildhall, on December 5, 1901. By E. F. Knight. Cloth, pp. 410, \$2. New York: Longmans, Green, & Co.

MR. KNIGHT accompanied the tour of the Duke of Cornwall in the capacity of correspondent for the London *Morning Post*, and his narrative has considerable interest quite apart from the character of the tour. He describes the places visited as seen at their best, and such scenes as the opening of the Australian parliament and the particulars of the New Zealand visit are valuable and interesting from whatever point they are viewed. The book is well illustrated by reproductions of photographs.

AMERICA THE LAND OF CONTRASTS. A Briton's View of His American Kin. By James Fullerton Muirhead. Cloth, pp. 282, \$1.20. New York: John Lane. The Bodley Head.

MR. MUIRHEAD is the editor of Bader's Guide to the United States (and to many other places), and a trained

observer. His view is a keen one, and, since nothing is more agreeable than reading or hearing pleasant things about oneself, his book is one that we can recommend both for entertainment and instruction. On the whole the view is complimentary, but what are called contrasts in the title often turn out to be contradictions or inconsistencies in the text. The most self-satisfied patriot can not fail to profit by this dispassionate, and at the same time, discriminating examination of the peculiarities, vices, and virtues of his land and its people, as they appear to one whose perspective has not been spoiled by familiarity—by too near a view.

IRRIGATION IN THE UNITED STATES. By Frederick Haynes Newell. Cloth, pp. 566, \$2. New York: T. Y. Crowell & Co.

MR. NEWELL, who is the chief hydrographer of the United States geological survey and an authority of wide reputation, presents here the whole subject of the reclamation of arid lands, stating the problems to be met and the most approved methods of meeting them under almost all conditions. The book is not technical, but it is authoritative, and will provide all needful information to anyone who wishes to post himself upon an important national problem, and at the same time be a safe guide, and an inspiration as well, to the home-seeker who must grapple with the practical difficulties of irrigation.

CHARLOTTE. By L. B. Walford. Cloth, pp. 386, \$1.50. New York: Longmans Green, & Co.

CHARLOTTE is an unscrupulous coquette who makes the mistake of becoming engaged to a faultless young man who might have stepped direct from the pages of a Sunday-school book. The young man is madly in love with her at first, but experience opens his eyes, and when she runs away with another man on the eve of her marriage he is able to bear up manfully and to receive the commiseration of his friends with equanimity. The only character in the story deserving sympathy is Charlotte.

THE HAND OF GOD IN AMERICAN HISTORY. A Study of National Politics. By Robert Ellis Thompson, S. T. D. Cloth, pp. 235, \$1. New York: T. Y. Crowell & Co.

A CURSORY glance over the whole field of American history with a view to demonstrating the intervention of Divine Providence in the affairs of the American people at critical periods. Those who are inclined to believe such a theory will believe it any way, and those who reject it are not likely to find any convincing arguments in this book.

THE SILENT PIONEER. By Lucy Cleaver McElroy. Cloth, pp. 391, \$1.50. New York: T. Y. Crowell & Co.

A STUDY of Kentucky in the days of Daniel Boone in which hairbreadth escapes from the Indians follow each other with startling rapidity. "The Silent Pioneer," Boone, manages to get in a number of bits of sage philosophy in his loquacious intervals.

Globe-Wernicke

"Elastic" Book Cases

PERFECTION

BUSINESS AND FINANCE

The Business Situation Selected and Condensed for PUBLIC OPINION THE GENERAL SITUATION

Dun's Review, New York, March 15

Business in Boston was completely paralyzed by the strike of freight handlers and teamsters, which directly affected thirty thousand men and indirectly rendered other thousands idle by holding back supplies of raw material. Outside of Massachusetts, however, the labor situation is exceptionally free from controversy, and even in the coal mines there is less than the usual agitation as April approaches. Distribution of spring merchandise is making rapid progress, the most sanguine expectations being fully realized in all sections outside the strike area. Effects of bad weather are shown in railway earnings, for the first week of March only 1.3 per cent larger than last year, while there is an increase of 14.4 per cent over 1900. Full returns for February exhibit gains of 3.1 per cent over 1901 and 15.6 over 1900. The slight loss of 7.1 per cent in bank exchanges at New York is fully accounted for by the decrease in volume of speculation, while compared with 1899 there is a gain of 8.2 per cent. At other leading cities the activity in trade is shown by gains of 15.6 per cent over last year and 23.5 per cent over 1899.

IRON AND STEEL

Consumers of iron and steel products are still anxious regarding conditions during the next three months. After July 1 it is believed that deliveries will be ample. According to the *Iron Age* the weekly capacity of pig iron furnaces in blast on March 1 had declined

A BUSY WORKER

Coffee Touches Up Different Spots

Frequently coffee sets up rheumatism when it is not busy with some other part of the body. A St. Joe, Mo., man, P. V. Wise, says: "About two years ago my knees began to stiffen and my feet and legs swell, so that I was scarcely able to walk, and then only with the greatest difficulty, for I was in constant pain.

I consulted Dr. Barnes, one of the most prominent physicians here, and he diagnosed the case and inquired, 'Do you drink coffee?' 'Yes.' 'You must quit using it at once' he replied. I did so and commenced drinking Postum in its place.

The swelling in my feet and ankles and the rheumatic pains subsided quickly, and during the past 18 months I have enjoyed most excellent health, and, although I have passed the 68th mile post, I have never enjoyed life better.

Good health brings heaven to us here. I know of many cases where wonderful cures of stomach and heart trouble have been made by simply throwing away coffee and using Postum."

to 330,710 tons, or about ten thousand tons from the production on February 1. All records prior to February 1 are still eclipsed, and the resumption of many idle plants this month practically assures new high-water marks in the near future unless some unforeseen interruption occurs. As operations at steel works were also retarded, furnace stocks of pig iron declined only about 25,000 tons during February. The most important event of the week was the heavy buying of steel bars by makers of agricultural implements in anticipation of higher prices becoming effective on April 1. Billets command large premiums for spot delivery, and more purchases are reported from foreign makers. Pipes and tubes are more active as the season advances, while large contracts have been placed for structural shapes.

COTTON AND WOOL

Labor disturbances have tended to strengthen the tone of textile products by reducing available supplies which were already none too large. All divisions of the cotton goods market are affected, and a general advance in quotations will inevitably follow any protracted interruption to manufacture and transportation, owing to the healthy consumptive demand. Export business is still checked by the firm view of holders. Complaints are also heard as to the delivery of woolen goods, but trade is only fair and cancellations of orders for overcoatings are frequently reported.

CORN AND WHEAT

Official indications of farm reserves on March 1 were not surprising as to corn, dealers anticipating that supplies would be only about one-half last year's, but the statement that 23 per cent of the enormous wheat yield remained in farmers' hands was not calculated to sustain values. Needed rains in the southwest made the outlook more favorable for the next crop, and further weakness in quotations developed. A sustaining feature was the interior movement of only 2,681,891 bushels, against 3,902,650 last year, while on the other hand total exports from the United States were

"SUPPOSE I DIE"

We have helped the people to answer that question for half a century or more; to make provision for their survivors. We do more: We assist men in making provision for their old age, when the money-producing power is waning. Get our free booklet, "The How and the Why." It brushes cob-webs from the brain.

Penn Mutual Life Insurance Co.

921-923-925 Chestnut St., Philadelphia.

No Need to Worry

if you have a life policy in

The Travelers Insurance Co.

of Hartford. In case of death, the family will be protected, the mortgage on the house raised, and shelter left for the helpless ones. Travelers Life Policies provide safe insurance at a lower premium than mutual companies and at a guaranteed net cost. In mutual companies the net cost is usually greater than expected, because actual dividends never equal estimated dividends, and the net cost is never known beforehand.

Nearly every person sooner or later meets with an accident. Injuries mean loss of income and added expense.

An Accident Policy in The Travelers

(the largest and strongest Accident Insurance Company in the world) guarantees a weekly income while disabled, and large amounts for loss of legs, arms, hands, feet or eyes. If death ensues, a stated sum is paid. Nearly \$27,000,000 have been distributed among 373,000 policy holders or their families, for injuries or death.

Agents in every town; or write for interesting literature to

The Travelers Insurance Co.

Hartford, Conn.

(Founded 1863)

but 2,598,472 bushels, compared with 4,962,674 a year ago. As to corn, both comparisons were striking, receipts aggregating only 1,893,950 bushels, against 4,131,337 a year ago, while Atlantic exports fell to the lowest record for many years, 96,179 bushels, against 3,329,902 in 1901.

FAILURES

Failures for the week were 232 in the United States against 209 last year, and 34 in Canada against 33 in 1901.

Financial

Bradstreet's, New York, March 15

THE MONEY MARKET.

A firmer tone has been shown in the New York money market during the present week. Gold shipments have been suspended, owing to the fact that foreign-exchange rates yielded slightly as money advanced, which, with the easier feeling as to money in Europe, cut off the profits in gold-exporting transactions. The banks have continued to lose money to the interior and the treasury, and among the incidents of the week was the transfer through the treasury of some \$2,000,000 from New York to San Francisco, presumably in connection with payments for the stock of the local traction companies there, which have been acquired by eastern capitalists. Time money is in moderately good supply, rates being generally held at $4\frac{1}{4}\%$ to $4\frac{1}{2}\%$ per cent for all periods. Call money continues to be offered in volume to supply Wall street's requirements, but early in the week standing loans were

TOOK THE HINT

Friend Told Him to Change His Food

Once in a while one can serve a friend and win a life-long obligation by a little food advice. This is worth while. "Very thankful I was to a friend for his advice when he told me about Grape-Nuts Breakfast Food at the time I was suffering. My stomach trouble originally came from neglect of colds which caused catarrh of the stomach, then followed misery from dyspepsia, headache, loss of vitality and flesh.

Last August a friend in discussing my health said if I would change my food and take Grape-Nuts instead of any other food or medicine for one week he would guarantee that I would be greatly improved and feel like a new man.

He was so positive that I concluded to try it and, as I said, I am exceedingly thankful to him. In a week's time I lost the heavy, dead feeling in my head nausea had ceased and the action of my general system had greatly improved.

I have stuck fast to Grape Nuts. Now I weigh nine pounds more and am steadily improving. Grape-Nuts has a most exhilarating effect on the system and makes one feel bright and alive, as though he were well nourished as a healthy man should be.

The price of Grape-Nuts is within reach of all, but I consider it worth its weight in gold." John Haywood, 3931 Aspen St., Philadelphia, Pa.

as a rule marked up to $3\frac{1}{4}\%$ per cent, and in some cases 4 per cent has been insisted on, while $4\frac{1}{2}\%$ to 5 per cent was touched on Friday. Commercial paper is in fair supply, but there is only a limited out-of-town demand, rates being firm at the figures quoted below.

THE STOCK MARKET

In spite of higher rates for money and the decreasing bank holdings of cash, the New York stock market has shown a strong undertone, and prices recover with ease when subjected to bearish pressure. Speculation, however, is very narrow, and manipulation accounts for most of the activity and improvement in stock values. Specialists and stocks which have pool support furnished most of the transactions. The coal stocks are irregular, in spite of assistance, owing to fear of a miners' strike. The Pennsylvania's proposed issue of \$50,000,000 $3\frac{1}{2}\%$ per cent convertible bonds is well received, and the proposition to retire \$200,000,000 of United States Steel preferred with an issue of \$250,000,000 5 per cent bonds failed to stimulate the Steel stocks. Bonds are strong and tend to appreciate under good investment buying. Foreign exchange is weaker on the rise in rates for money, demand sterling being $4.87\frac{1}{2}\%$ to $4.87\frac{1}{2}\%$.

BANK CLEARINGS

Clearings for the week ending Thursday, March 13, aggregate \$2,121,137,353, a loss of 1 per cent as compared with the total of last week, but a gain of one-half of 1 per cent over the figures of a year ago. Outside of New York the decrease from last week is 4 per cent, while, as compared with a year ago, there is a gain of 16 per cent.

Various Topics

An apparent slackening in railroad construction activity is indicated by the particulars as to new projects, on which work has been started or is ready to begin. Investigations by the *Railroad Gazette* show 1,308 definite projects now under way in the United States, against 1,689 in October last, and 1,700 in March, 1901.

The Tuskegee (Ala.) Normal and Industrial institute students, who were engaged in the latter part of 1900 by the German government to teach the natives of Togo-land, German West Africa, how to grow cotton, have, according to the report of the colonial committee, succeeded in producing cotton which is graded on the Bremen exchange above American middling.

What was formerly a waste and expense is now a source of profit. The annual report of the Delaware, Lackawanna & Western railroad states that 822,000 long tons of merchantable coal were obtained last year by the washeries located at old culm banks. The recovery of this product has proved so profitable that the construction of an additional washery has been decided upon. The operations of this company represent about 12 per cent of the total anthracite production.

WIT AND HUMOR

The New, New Song

When all the world is Morgan's, lad,
and all the seas between;
And every lamb a Sage, lad, and every
lass a Green;
Then hey for automobile, lad, and to
Wall street away;
Young bulls must make their pile, lad,
or bears may have their day.

When all the oil is Rockefeller's, and
all the stocks are Hill's;
And all the railways Vanderbilt's, or
Gould's, or D. O. Mills';
To England in your airship, lad, of
Schwab and Yerkes the peer;
God grant you find a billion there, to
found a college here.

—Life.

A True American Hogg

(Ex-Gov. Hogg, of Texas, refuses to
attend King Edward's levee if he must
wear "court dress," consisting of knee
breeches, small sword, etc.)

Here's to Hogg of Texas!
Hogg, the pa-tri-ot!
Wear the royal knee pants?
Wow! He swears he'll not.
Hogg, the ostrich-rider;
Hogg, the panther-foe,
Says he'll wear his long suit
Else he will not go.

Hail to Hogg of Texas—
Hogg, the Plutocrat!
Oleagiously
He may be termed that.
Yet he won't wear knickers
To go to see the king.
Short-ribbed Hogg of Texas,
You're the re-al thing!

Root for Hogg of Texas!
Mark how he will loom,
With a most portentous
Presidential boom,
Down with rank and costume!
England's fuss and fog!
Here's what we're demanding—
'Merican-Dressed Hogg!
—Josh Wink in Baltimore American.

The Ponger and the Pingstress

If a man who plays at ping pong is a
"ponger,"
Then a singer of a "singsong" is a
"songer";
If the "songer" is a singer,
Then the "ponger" is a "pinger,"
And the man who says it's wrong must
be a "wronger."
If your charming partner at the game's
a "pingstress,"
Then an operatic nightingale's a "sing-
stress";
If the song she sings is sung,
Is the game of ping pong "pung"?
And is the girl who lingers called a
"lingstress"?

Digging on the Isthmus

They are digging up the data
That will aid them in debate;
They are digging up the influence
Where dollars congregate;
They are digging up those arguments
We listen to with awe—
And some say "Nicaragua"
And some say "Panama."

They're digging up enormous words
(They quite despise the small),
Till we fear the pick and shovel
Will not get a show at all.
But cheer up, weary brethren,
We can do it, and we shall—
But it takes a heap of digging
To construct a ship canal.

—Washington Star.

Ajax's Mistake

Ajax stood under the open sky and shook his fist.

"What's the matter, Jax?" asked Achilles, who happened to be returning from his club, for the hour was early.

"Sat! Don't bother me!" replied Ajax, angrily. "Can't you see that I'm defying the lightning?"

"Lightning be hanged!" answered Achilles, with fine scorn. "That isn't lightning; it's the last speech of Tillman's going to New York by wireless telegraphy."

Naturally, Ajax folded himself into the smallest possible compass and sneaked off.—Portland Oregonian.

"Ah!" sighed the young widow, "no other man can ever fill poor John's place. I loved him from the bottom of my heart."

"Of course," rejoined the sympathetic friend, "but you know there is always room at the top.—Chicago Daily News.

"Does a marriage ceremony make you nervous?" asked the Philadelphia woman.

"It used to," replied the woman from Chicago.—Philadelphia Record.

PUBLIC OPINION

Number 13
Volume XXXII

The Week

Thursday
March 27, 1902

THAT opposition to the shipping subsidy bill was not dead but merely sleeping, is shown by the leading summary in the American department of this issue. Indeed, now that the bill has passed one house of congress, this opposition is stronger than ever. It is a long time since any party measure has been so generally attacked by those who in the ordinary course of events would be its supporters. And with staunch party organs giving warnings of the fatal political effect of such a piece of legislation, it is not remarkable that it should be thought that the house will show no eagerness to follow the senate in voting government bounties to shipbuilders, the congressional elections being so near at hand as to make it unsafe to take risks with public sentiment.

FOR once General Miles appears to have public support behind him in one of his frequent clashes with his civil superiors. The Washington correspondents agree that President Roosevelt and Secretary Root want to retire him summarily for his opposition to the army reorganization bill, which opposition has recently been accompanied by assertions that the proposed legislation is designed mainly to concentrate arbitrary military powers in the president, and to make the commanding general subordinate to favorites of the department. The correspondents also agree, however, that the administration does not feel free to shelve General Miles because he has too many friends in congress (among whom is Senator Hawley, chairman of the military affairs committee), and out of it who would retaliate by blocking the legislation of which the general disapproves.

WE have no means of knowing whether or not the lobby against tariff concessions to Cuba has given up hope, but newspaper opposition, such as it was, has almost entirely ceased, the *New York Press* being alone in demanding a continuance of the fight against modifying the tariff in Cuba's favor. The *Press* and its kind do not think that any great harm will result to any American industry from the lowering of duties on Cuban products; but they do fear that concessions to Cuba will be an entering wedge in the hands of those who would split the protectionist policy. As the *Philadelphia Inquirer* puts it, "The twenty per cent reduction isn't much, and it will have little or no effect upon the growers of sugar beets in this country. The real objection is the principle involved." From many quarters comes the demand that since the principle is to be violated, a sufficient reduction be made to give Cuba adequate relief. This would mean a reduction of at least thirty-three and one-third per cent instead of twenty per cent in the Dingley duties.

DISREGARDING the arguments of constitutional hair-splitters, editorial and congressional, the senate has passed the bill making an attempt upon the life of the president or any official in the line of succession to the presidency a capital offense. Those who shall "aid, abet, advise, or counsel" the assassination of the president are made liable to a penalty of twenty years' imprisonment, and the threat to kill the president or his possible successors is made punishable by a term of ten years' imprisonment. The propagation of anarchy, when this includes the advocacy of assassination will be virtually impossible in this country, if this bill becomes a law and is enforced. No one objects to the attainment of this desirable result; but there have been objections to the passage of a law which assumes that the life of a president is more valuable than that of any other citizen and that he is entitled to special measures of protection. Another objection was that the law would give the courts arbitrary constructive powers to suppress merely undesirable utterances.

RUSSIA being unready to assert her full strength in the far east expresses herself as being altogether pleased with the terms of the Anglo-Japanese convention. If the transsiberian railway were in better shape, if Russia had plenty of money and better port facilities for her fleet, her answer would doubtless have been very different in tone. But when she is prepared to meet England and Japan, or whatever powers may oppose her, a growl may be expected to follow the soft notes that now come from St. Petersburg. This is the opinion of the best informed observers, who also point out that the situation must be such as to give us no concern for some years to come. The open door is secure because all the powers are pledged to keep it open—Russia, because she is not yet strong enough to close it; France, because she is no stronger than Russia; England and Japan, because it is to their advantage, and Germany, because her trade interests are of more practical importance than her colonial aspirations.

BETWEEN the "never-ending war" and Irish disturbances, the British parliament passed a lively week. The Liberal leader made an unusually severe attack on the conduct of the war, and moved the appointment of a select investigating committee to inquire into the letting of contracts for transportation and for the purchase of meat, forage, and horses. The secretary of state for war rather took the wind out of Sir Henry Campbell-Bannerman's sails when he replied that the government not only did not fear, but would welcome such an inquiry, and would, in fact, insist upon it at the proper time, that is, when the war was over. The house indicated that it was thoroughly in accord with this view of the matter by a vote of 346 to 191—a somewhat larger majority than the government has been able to muster on several occasions recently.

LATER in the week, when the war was again under discussion, Mr. John Dillon took occasion to call Mr. Chamberlain "a damned liar"—this in reply to the colonial secretary's assertion that the honorable member was a good judge of treason. Promptly suspended for a week, Mr. Dillon proceeded to Ireland, where he was, of course, welcomed as a hero, the severest commentator upon his performance being the *Dublin Telegraph*, which remarks that it is anticipatory to say that Mr. Chamberlain is damned, and adding: "As to his being a liar, that goes without saying." All accounts agree that the Irish question was never in a more acute state, and that the government would take drastic measures against the United Irish league if it were not for the fact that they hesitate to introduce a jarring discord into the harmony of the coronation anthem. Other explanations coupled with commendations of the government's course will be found in the foreign department of this issue.

THE thing of immediate importance in the reorganization of the Spanish cabinet is that Sagasta remains at the helm and that General Weyler is retained, thus securing to the young king, when he comes to the throne next May, the services of the wariest politician in Spain, and of the only man who can control the army. The new minister of finance will probably have no better success than his predecessor, and the troublesome religious questions will remain unsettled, beyond the trifling concession involved in the reduction of the number of bishops, but it is now believed that Alfonso will at least be allowed to begin his reign in peace in defiance of all the prophecies to the contrary. There have been rumors that the young king was incompetent, and that the regency was likely to be continued, but these have been denied.

AMERICAN

Shall the Shipping-Subsidy Bill Become a Law?

THE senate passed the shipping subsidy bill by a vote of 42 yeas to 31 nays. Six Republican senators voted against the bill on final passage—Messrs. Allison and Dolliver, of Iowa, Proctor and Dillingham, of Vermont, and Spooner and Quarles, of Wisconsin. Mr. McLaurin, of South Carolina, was the only Democrat who voted for the bill. An amendment, offered by Mr. Allison, limiting the extra compensation to mail lines to \$8,000,000 a year, was adopted. Senator Hanna introduced amendments at the last moment, which were adopted as the closing paragraphs of the bill, providing that no foreign-built ships should get the benefit of the proposed subsidy, and that American registers should not hereafter be granted to foreign-built vessels.

The bill, as indicated by comment quoted in PUBLIC OPINION in the past few months, is generally condemned by the press without regard to party. The New York press is a unit against it, and the Republican *Press* rails against the "dowager leadership" which throws Republicans into conflict with each other. The Brooklyn *Standard-Union* (Rep.), however, hopes that the bill will become a law because the granting of shipping bounties is "in perfect harmony with the party's pledges and principles." The Manchester, New Hampshire, *Union* (Dem.) thinks that representatives will hesitate about voting for a bill "which looks like a steal" to the voters. From New England, nevertheless, comes the only hearty support of the bill. The Boston *Journal* (Rep.) says that the date of its passage by the senate was "a grand one for the American flag, American ships, and American seamen," and calls attention to the fact that "those senators who voted against the bill hail from states that do not own a single ship or a single mile of seacoast." The Bangor, Maine, *Commercial* (Rep.) declares that the bill is "a measure in the direct line of national progress and the building up of the merchant marine." The Philadelphia *Press* (Rep.) looks for the passage of the bill by the house, defending the measure on the ground that it will establish new lines of American ships, increase our commerce, keep at home vast millions now paid for foreign ships and foreign labor, and furnish needed auxiliary cruisers. "It is a wise measure and ought to go on the statute books as soon as possible." The *Inquirer* (Rep.), of the same city, also approved the bill, but the *Ledger* (Ind. Rep.) hopes for its defeat by the house because it "is unwise, unjust, and certain to carry in its train mischievous consequences besides the waste of public money." The Philadelphia *Record* (Dem.) sees the set of a current against the granting of shipping subsidies and thinks this may defeat the bill in the house. The *Times* (Ind.) warns Republicans of the political consequences of their "high-handed" course.

The Baltimore *American* (Rep.) opposes the bill because congress "has no right to tax the whole American people in order to put money into the pockets of a few individuals." The Pittsburgh *Post* (Dem.) denounces the plan of the bill as one "to spend public money for the benefit of a particular industry," and hopes that the house "will be able to

withstand the temptation and defeat this great job." The Pittsburgh *Gazette* (Rep.) approves the bill.

The Chicago *Tribune* (Rep.) pronounces the bill "one of the most dangerous measures ever introduced in congress; its effrontery is the amazing and discouraging feature of it," and the *Tribune* warns the party that the passage of the measure would be "an invitation to a popular uprising" against it. "It is not too late to secure the defeat of this scandalous bill," says the Chicago *News* (Ind.), and this course is urged upon the house. The main objection of the Chicago *Post* (Rep.) to the bill is that it contains no assurance that it will accomplish the object sought. This is also the objection of the *Inter-Ocean* (Rep.), while the *Chronicle* (Dem.) hopes for the defeat of the measure in any form.

The Columbus *Dispatch* (Ind.) contents itself with observing that "popular sentiment" is against the bill. The Cincinnati *Times-Star* (Rep.) denies that the bill is in the interests of the trusts, and pronounces this charge "a buncombe cry; Mr. Morgan and his foreign-built ships will not receive a penny." In spite of this, the Minneapolis *Journal* (Rep.) admonishes the senate "that if it thinks this kind of business popular, it is likely to discover that it is possible for its judgment to make a miscalculation." The bill "is simply a grab," says the Indianapolis *News* (Ind.), "and the only thing to do is to beat it. It is vicious from every point of view." The St. Louis papers, in varying degrees, are opposed to the bill. Farther west it finds some support, as, for example, at the hands of the Salt Lake City *Tribune* (Rep.), which thinks that it should become a law; "the American people have been bled on ocean transportation long enough." The San Francisco *Chronicle* (Rep.) hopes for the defeat of the bill by the house, while the *Call* and the *Bulletin* (Rep.) are lukewarm in their support.

Senator Hanna as a Presidential Candidate

THE Washington correspondent of the New York *Commercial Advertiser* (Rep.) offers this explanation of the reappearance of "the Hanna boom": "Senator Scott, of West Virginia, and some other members of the Republican national committee, are behind the project to boom Senator Hanna as a candidate for president in 1904. The senator himself is far from pleased with this 'previousness.' It is said here that behind the members of the national committee in this movement are the representatives of certain large business interests, who are not altogether pleased with the course of the administration, and who would be glad to see Republican sentiment diverted from President Roosevelt. Senator Hanna's name appears to be the only one at present available for their purpose." The Washington correspondent of the New York *Times* (Ind. Dem.) confirms this dispatch, and says that "talk about the Hanna boom for president amuses nobody more than it does Mr. Hanna himself. Mr. Hanna does not expect to be

president of the United States nor to be nominated for the presidency by a Republican national convention. Nobody intimates that a presidential bee is buzzing in the senator's bonnet. He is gratified as now and then some newspaper article comes under his eye in which favorable comment is made on the suggestion that he would be a good man to head the Republican ticket in 1904, but he knows that he would not be a vote-winner, and he knows there is not the slightest chance that his capacity in that line will be tested."

The "talk" which is said to give Mr. Hanna so much amusement nevertheless goes on. The *New York Press* (Rep.) is not inclined to dispute the contention that Mr. Hanna would make a good "business man's" president. He might, the *Press* admits, give the country a business man's administration—if elected, but the "if" is a big one. The *Philadelphia Times* (Ind. Dem.) has observed that "Hanna's candidacy is by no means to be dismissed as an idle dream." He has been shrewd enough to recognize the popular objections to protective tariffs, subsidies, and "the whole scheme of distinctively Republican policy," and he "has made himself conspicuous as a friend of the laboring man. How far this latest attitude would serve him in a campaign is not easy to determine, but it is significant of his expectations. Both the practical politicians and the powerful business interests of the country would find in Hanna an entirely acceptable candidate, whose strength it would be a gross error to underrate."

The *Albany Press-Knickerbocker* (Ind.) has also noticed that "slowly but surely Mark Hanna, the man of millions, the former controller of legislation in favor of trusts, is gaining a reputation as a person who has lost the thirst for gold and is now seeking to secure fair treatment for the masses. There have been instances of wealthy and noble men laying aside luxury and power in order to elevate mankind; but we are inclined to believe that any manifestations by Senator Hanna of interest in the toiling masses is prompted by selfish motives, and that he has become 'the friend of the people' in the hope that he will eventually secure the presidential nomination. With Senator Hanna in the White House, the money power would be in its glory."

In connection with the talk of Mr. Hanna's candidacy has come up discussion of Mr. Roosevelt's future. A garbled story in regard to the reappointment of Mr. Lyons, the colored register of the treasury, who announced that he was pledged to the support of Mr. Hanna if he should be a candidate, was the starting point of this discussion. The *Hartford Times* (Dem.) asserts that "at the present time Mr. Roosevelt seems to be making about the same kind of appointments that politicians like Blaine or Conkling would have made in his place. He is still a great reformer, of course, and the reform to which he devotes most of his effort is the selection for federal office of men who know how to work for the party all the time 'without violating any of the rules.'" On the other hand, the *New York Evening Post* (Ind.), not an extravagant admirer of the

president, has faith that "if it comes to having to buy a continuance in office with patronage or other official favors, or by building up a personal 'machine,' he will assist, with the utmost serenity, in the inauguration of his successor on the 4th of March, 1905, and leave the field with the sense that he has made 'the best possible run for his money.'" The *Providence Journal* (Ind.) refers with approval to the statement of its Washington correspondent that "the president pays so little attention to his 'fences' in making nominations as to arouse the wonder of some of the politicians," and adds that "if Mr. Roosevelt continues to follow his own ideals of the duty of a president of the United States, his 'fences' may be left to take care of themselves."

The Argument Against the Popular Election of Senators

SENATOR HOAR'S objection to the proposed amendment of the constitution providing for the popular election of senators finds support in some quarters. The *New Orleans States* believes that "Mr. Hoar suggests dangers that are worthy of serious consideration. As the wealth of the country becomes more and more congested in the great financial centers of the north and east, and with the growing insolvency of corporate greed, there is danger that the barriers of the constitution, already weakened, may become weaker still, if encouragement be given to the efforts to tinker with its provisions. Thus, Mr. Hoar suggested, that a change in the constitution regarding the manner of electing senators might encourage others to demand a change in the basis of senatorial representation, and thereby sweep away the protection provided by the framers of the constitution for the weaker states. Some of the large states have often chafed in the past against what is termed the inequality of state representation in the senate, and these might easily be induced to join in an agitation for representation upon a population basis. Of course, such a propaganda could not hope to accomplish anything as conditions now stand, but there is no knowing what developments might take place in a few years of this swift-moving age of the world; and with the equality of the states in the senate once disturbed, we should soon see an end of state autonomy, and then farewell to a Republican form of government."

Previous summaries in PUBLIC OPINION have already shown that the election of senators by popular vote is very generally advocated; this is also shown by the action of many state legislatures and the vote of the house in favor of the constitutional amendment now before congress. The *Chicago Chronicle* rejoices that "the objection which is urged to the very insistent demand of the people that United States senators be chosen by popular vote is at length openly avowed. Various senators have publicly stated of late that 'the proposed reform would remove one of the two bulwarks set up by the fathers against

hasty and ill-advised action by the people.' The senate is one of these bulwarks and the supreme court is the other. The proposition to change the method of electing senators is favored by the great mass of the people. Very few men in public life who aspire to a future will oppose it. It would be worth while to see if the people, when practically agreed upon the desirability of an object, can bring it to pass without violence and in the manner laid down in the constitution itself. If they shall succeed they may be moved to experiment in some other direction."

The Concession to Cuba

THE ACTION OF THE HOUSE CAUCUS

LAST week the caucus of Republican members of the house, by a vote of 85 to 31, approved the measure granting a 20 per cent reciprocal reduction in the tariff duties on Cuban products. Any measure for the relief of Cuba has yet to pass the house and senate, but in the meantime we give the comment upon the action of the caucus.

The *New York Tribune* (Rep.) says: "The caucus did well. It might have done better. It might have voted for honor and for profit weeks or months ago. It might have done so by unanimous vote, instead of merely by an overwhelming majority. It might have made the terms of reciprocity more liberal. Nevertheless, what it did on Tuesday night will serve. The door was opened. The Republican party was put upon record. The administration was sustained." The *Commercial Advertiser* (Rep.) calls the action of the caucus "a farce," but declares that it is not too late for the senate and the president to insist upon doing the right thing for Cuba. Any man or party, says the *Evening Post* (Ind.), that can see "magnanimity" in the pitiful concession made to Cuba "would laud a skinflint millionaire for giving a quarter to the sailor who saved his life." The *Press* (Rep.) very strongly objects to the policy approved by the caucus, but on quite different grounds. Reduction of the tariff, says the *Press*, involves a subversion of protection and represents "a policy of wreck and ruin. This is war. It is the slaughter of the American tariff system." Cuba needs no relief, the *Press* claims.

The *Boston Journal* (Rep.) grants that 20 per cent is not a large rate of reduction, but calls attention to the fact that it covers all Cuban products, and asserts that "our concession is therefore more generous than the mere figure of 20 per cent would indicate." The *Transcript* (Ind. Rep.) does not see how the small concession made can be of any benefit to the island's industries, but it thinks the caucus action very significant as an indication that powerful protected industries can no longer dictate congressional policy.

Any further opposition to the relief of Cuba through tariff concessions should cease, the *Philadelphia Press* (Rep.) says: "It would be against the president, against declared party policy, against Republican unity, against national duty, against a general public opinion." The *Pittsburg Press* (Rep.) calls the caucus action "a victory of considerable proportions for public sentiment," but adds that the concession of 20 per cent was "hardly what the Cuban sugar-planters were entitled to." The *Indianapolis News* (Ind.) says that "it is worth something to have won a victory over the beet-sugar crowd, but it is not

a victory over which there can be much boasting." Cuba asked for bread, the *Kansas City Star* (Ind.) observes, and we have given her a stone. "Commercially the 20 per cent reciprocity proposition is a subterfuge; morally it is a mockery." Using the same figure of speech, the *Chicago Inter-Ocean* (Rep.) declares that we have given Cuba but a fifth of a loaf in response to her cry for bread. The *Chicago News* (Ind.) calls the concession "20 per cent of justice," but hopes that Cuba will be able to get along in spite of our parsimony toward her.

Replies to the "Confessions of a Provincial Editor"

IN our issue of March 13, we referred to the Confessions of a Provincial Editor in the March *Atlantic*. The substance of the confession was that "a small newspaper sells its space to the advertiser, its policy to the politician—the ultimate editor of a small newspaper is the advertiser, the biggest advertiser is the politician." One would naturally expect the provincial editors to take up the cudgels in defense of their craft, but it is a metropolitan weekly, *Harper's*, that makes the strongest reply. "The mischief of such a view is that the public is led to believe that the entire fabric of so-called provincial journalism is a gigantic sham; where editors making well-sounding pretensions buy their material prosperity by trading with the community's rights, and never dare once to assert themselves. Few newspaper men of long experience in small cities—or in large ones, for that matter—would assert that they had never done things for which they were not sorry or ashamed." Like men in any occupation, they yield sometimes under stress, to their lasting regret; but like men in other occupations, too, they keep the faith when keeping involves, or seems to involve, some sacrifice. Nor is it true that they go without food in their larders and flowers in their gardens in order to maintain their ideas of what they owe to their communities."

The Norfolk (Virginia) *Landmark* also makes the easy rebuttal of flat contradiction. "While admitting that there are many newspapers controlled by, and conducted for, special interests, the *Landmark* asserts that "there are many newspapers in this country, and just as many of them proportionately outside of the great cities as in those teeming centers, which are absolutely independent. Neither indirect nor direct bribers would dare to approach them. These newspapers are the real 'free press' of the country, and make up, therefore, 'one of the bulwarks of liberty.' A single one of them will have more influence with the people than any number of organs of special commercial or political interests."

The Milwaukee (Wis.) *Free Press*, on the other hand, confesses that the sanguine and ambitious young editors are soon "brought face to face with the fact that their readers are not especially interested in the reformation of the world, but are looking rather for their own individual profit, particularly in a financial light. If a newspaper stands in the way of such profit, it must be induced, or compelled, to get out of the way if possible. And with a country newspaper existing from hand to mouth, it is often easy for the enemy to bring such pecuniary pressure to bear upon it as to convince the proprietor that there is no practicable way out of the difficulty short of selling out."

Congressional Summary

CONGRESS DAY BY DAY

MARCH 17.—The shipping subsidy bill was passed by the senate by a vote of 42 to 31; Senators Allison, Dolliver (Ia.), Dillingham, Proctor (Vt.), Quarles and Spooner (Wis.), Republicans, voted against the bill, and McLaurin (Dem., S. C.) for it; the Allison amendment limiting the time of contracts to July 1, 1920, was accepted by Mr. Frye and adopted. The house spent the day in consideration of the river and harbor appropriation bill.

MARCH 18.—The senate debated the bill providing for the protection of the president of the United States and for the punishment by United States courts of those who commit assaults on him; Mr. Bacon (Dem., Ga.) opposed the bill, and Mr. Hoar (Rep., Mass.) and Mr. Mason (Rep., Ill.) supported it; the committee on finance ordered a favorable report on the bill repealing the war taxes, and the committee on privileges and elections began consideration of the house resolutions providing for the election of United States senators by direct vote of the people. The house continued to debate the river and harbor appropriation bill.

MARCH 19.—In the senate, the bill for the protec-

tion of presidents was under consideration throughout the session, an elaborate legal argument in its favor being made by Senator Spooner (Rep., Wis.); Senator Proctor (Rep., Vt.) introduced a bill continuing in force the present law for the exclusion of the Chinese until the expiration of the existing treaty with China, or until a new treaty shall be negotiated. In the house, the ways and means committee's bill for reciprocity with Cuba was introduced by Chairman Payne; general debate on the river and harbor bill closed; the Democratic members of the house, at a caucus, unanimously adopted resolutions declaring that congress should express the sympathy of the American people for the struggling Boer republics.

MARCH 20.—The bill for protection of presidents was under consideration in the senate, and an agreement to vote on it was reached; the war tax repeal bill was reported from the finance committee with amendments. Slow progress was made on the river and harbor bill in the house.

MARCH 21.—The war tax repeal bill and the bill to protect presidents were passed in the senate, and the river and harbor appropriation bill was passed in the house.

MARCH 22.—The senate was not in session. The house spent the day in the consideration of contested election cases. The Democratic contestant from the VIIth Alabama district was seated.

FOREIGN

The "Practical Certainty" of a Russo-Japanese War

WRITER in the *March Contemporary Review*, London (New York: L. Scott Pub. Co.), outlines a state of affairs in the far east, from which, he says, it is pretty safe to conclude that a Russo-Japanese war

can be predicted as some day a practical certainty:

Of the many points deserving attention in the present tangled skein of politics in the far east, few are more important and interesting than those which await solution between Japan and Russia. On the one hand is seen a great continental state, autocratically governed, ruthless in its systems, and unprincipled in its policy, driven, partly by political "tradition," partly by the desire to participate in the wealth accruing from sea trade, to find an outlet on salt water. Shut off by an unbroken barrier of alien territory, however, from all the seas and oceans which wash the southern shores of Europe and Asia, the stream of her advance has been consistently diverted farther and farther east, and after an infinity of patient labor and steadfast purpose has successfully traversed the largest continent in the world, and reached the coasts of the distant Pacific, where it now seeks the most suitable outfall. But even here there are checks; for it happens that where the artificial restrictions of foreign territories end, the natural and more formidable difficulties of winter ice begin, and Russia has consequently cast her eyes southward again, in an endeavor to find and follow the line of least resistance toward any of the good harbors on these shores. She has already one at Port Arthur, and seeks to connect it with her northern territories through Manchuria. But Port Arthur does not come up to her hopes, and she now turns, therefore, to the one remaining region which contains harbors that are preëminently suited to fulfill her requirements. The Korean peninsula is situated in an excellent position, has at least one admirably sheltered and capacious anchorage, is peopled by a feeble and primitive race, and in its natural features lends itself easily to defense, in accordance with the methods of modern scientific warfare, after being once occupied. Russia is therefore secretly determined to have Korea.

On the other side of the question, however, we find a new world power forty millions strong, which has within very recent years appeared on the scene, equipped with a political ambition in some ways at least as unbounded as Russia's, the advantages of an insular position, and an equally strong and natural desire to accumulate wealth by commerce; animated, moreover, by a spirit of patriotism which, in some of its moods, verges on the fanatical, and is ready to accept unhesitatingly any sacrifices for the national honor; and, lastly, impelled to seek territorial aggrandizement by the wants of an increasing population. Japan has for long regarded Korea with the jealous eye begotten of the necessity to live, which is the strongest of human motives. With a rapidly increasing number of mouths to feed, and a congestion of population which threatens to become serious, she sees there—and at present nowhere else—exactly what she needs in the way of a land suited by climate and other natural resources to her requirements. Japan is therefore determined that Korea shall never fall into Russia's hands, and the resolve is very openly expressed.

The author, who signs himself "China Station," then considers the advantages and disadvantages under which the belligerents will enter the lists: "Taking Russia first, we find that the numerical preponderance lies with her, both as regards population, fleet, and army. She also has in the end the longer purse, and can better afford to await events, as the matter is less pressing so far as she is concerned. Lastly, she reaps the great benefits conferred by the possession of an autocratic form of government, which can frame its policy and carry out its intentions without the interference of nervous and uninstructed popular criticism. But here her advantages end."

Japan would open hostilities under conditions almost exactly reversed. "The numerical strengths of her population and fighting services are less than those of her huge but unwieldy rival; her finances are burdened, and at present she finds money very 'tight'

on all sides. But, on the other hand, she can apply her whole available forces in the matter; her home bases are, and of course always will be, situated in commanding positions immediately on the spot; she is quite independent of foreign coaling stations or other extraneous aid; and finally, she can rest assured that even if she suffers defeat on the sea she will still be safe from invasion."

With many qualifying "ifs," the writer gives the fight to Japan, even if the war should be fought out between the two original combatants. He also shows that Russia can not for the present hope to wage successful war against Japan without the help of the French coaling stations on the eastern route, which would, of course, constitute a serious breach of neutrality on the part of France and thereby bring into operation the new Anglo-Japanese treaty.

The Russo-French Note on the Anglo-Japanese Convention

LAST Thursday the *Official Messenger*, of St. Petersburg, printed the text of a Russo-French joint declaration regarding the convention recently signed by Great Britain and Japan. The note states that the allied Russian and French governments are "wholly pleased" to observe that the convention supports the Russian policy of the open door and the integrity of China—and of Korea, it is added, doubtless for the benefit of Japan. Following this declaration is the statement that "They (Russia and France) are compelled, however, not to lose from view the possibly inimical action of other powers, or a repetition of disorders in China, possibly impairing China's integrity and free development, to the detriment of their reciprocal interests. They, therefore, reserve to themselves the right to take measures to defend these interests." Paris papers are much gratified by the publication of this declaration, which, in addition to its effect on the situation in the far east, is taken as a "striking consecration" of the dual alliance. The *Gaulois* thinks that the declaration "comes at an opportune moment to remind Great Britain that her treaty with Japan does not leave her such a free field as she seems to believe."

The renewed avowal of Russia that her policy is aimed to secure the integrity of China is regarded in London as the first practical evidence of a new order in the far east. But one or two suspicious commentators take a less favorable view of the note, the *New York Tribune* correspondent says, and assert that while the phrasing is harmless, its issuance is proof that the powers against whom the Anglo-Japanese agreement was aimed accept full responsibility and stand together.

The Outlook in Russia

RIOTING AND DISTRESS

THE St. Petersburg correspondent of the *London Times* describes a great demonstration in the Russian capital on Sunday. It was, he says, organized by two committees, one of students and the other of workmen. Students to the number of 10,000 attempted to organize a procession, singing revolutionary songs and shouting "Free Russia!" "Down with the autocracy!" The police and cavalry then charged, but used only their Cossack whips and the flats of their sabers. Many persons were hurt, but only a few were seriously injured.

From other parts of Russia, the *Times* correspondent goes on to say, disquieting reports have been received. The most significant disturbance occurred a fortnight ago at Poltava, an unimportant place near Kieff, with no university or factory. In the course of a performance in the theater cries of "Down with despotism!" were raised and revolutionary proclamations were distributed.

A writer in the *March Westminster Review* emphasizes the extent of agricultural distress in Russia and its attendant evils. Since 1888 there has been a partial or severe famine, reports of which are suppressed by the government, and "that the Russian people are being roused up to the real state of matters is quite evident. For months back it has been rare that an issue of the *Novosti* or *Novoe Vremya* has not contained several long and interesting letters from provincial correspondents describing the utter destitution of the peasants and the means taken by the government and Red Cross society to help them with food, seed, and horses. Not only the peasants but the nobility have suffered. The *Novoe Vremya* recently published advertisements of the sale of between 1,700 and 1,800 estates for loans and taxes. The Nobles' bank holds in pledge 20,000 estates against which £68,000,000 has been advanced. In the northeast half the peasant children born do not survive their infancy. Dr. Nikiteno is quoted as saying that "in many parts of Russia cattle get better food and more attention than children, and these figures are sufficiently corroborative of his statement. The never-ending influx of whole families of needy peasants to the large cities is constantly worrying the government, while it is estimated that no fewer than 200,000 people crowd annually into Siberia—driven from a rich and fertile country which can not support them, though they be only twenty-eight to the square mile."

SCENE IN GERMANY.—*Cleveland Leader*

THE NATIVE: "Ye'll miss a great reception if ye don't come over."—*Detroit News*

When asked what he thought were the causes of his misfortunes, the Russian peasant promptly gave six reasons; they were: "Unfavorable weather; want of land; excessive rents; burdensome taxation; want of seed; want of horses to work the land." Taxation, the author says, may seem to be the prime cause of the miserable condition of the peasants. "Tax-collectors seem as numerous as the sands of the sea, and their powers, short of hanging, unlimited. But, he adds, 'let the peasants assign what causes they will, the cause of Russia's agricultural depression is simply exhaustion of soil. From a modern point of view—farming at high pressure—the Russian peasant belongs to the mediæval ages; he has yet to learn the very A B C of the practice of crop rotation.'"

In conclusion, the author, David Bannerman, says that "it might be going too far were we to suggest that to-day we find Russia much as Young found France on his famous visits on the eve of the Revolution, but we think we have supplied some strong points of resemblance, so far as purely agricultural conditions are concerned. We hear much of a deep spirit of unrest and discontent pervading every class of society all over the country; let us hope that the cry for light is not followed by too lurid a dawn."

Pan-Germanism

Vienna Correspondent London Times. Excerpt

FOR sundry reasons, it would be a serious mistake to ignore the circumstance that the principal champions of continental Anglophobia have been, and still are, the Pan-Germans. They take their stand on the theory that the Boers, like the Dutch, the Flemings, and the German Swiss, are kinsmen of their own, and that a not distant future will and must bring about Pan-Germanic unity in its most comprehensive form. Extravagant though such aspirations may appear to the casual observer, they are not altogether excluded from the domain of practical politics. Pan-Germanism is beginning to play very much the same part in the general tendency of German foreign policy as did for so many years what was at one time looked upon as the mere Utopia of Pan-Slavism in the foreign policy of Russia.

There has, at all events, been one substantial result of Pan-Germanic propaganda, and that is in Austria. We have heard from the very first that official Germany had nothing to do with it, and even regarded it with anything but a favorable eye. There are people who believe that to be the case; but it would be a travesty of the truth to maintain that there is only one opinion on the subject. Of course, there is no tangible connection between official Germany and the Pan-Germanic agitation, nor would any such connection materially promote the ends which the Pan-Germans have in view. But the propaganda is, nevertheless, an increasing and already formidable danger for the world. At the present moment it involves far greater peril than the older movement of Pan-Slavism. The latter has already realized a portion of its program, whereas the Pan-Germanic movement, although not in its infancy, is at all events far from having reached maturity.

Meanwhile, it may be well to put before the public an example of the attitude of that party in Austria towards South African affairs. The *Ostdeutsche Rundschau* publishes a long article welcoming the return to Vienna of Dr. Florian Albrecht, a young Aus-

trian medical man who served for over two years in the Boer ambulance, and who has now brought an autograph letter of thanks from General Botha to Herr Schönerer, the well-known leader of the Pan-Germanic party in this country. It attributes greater importance even from a political standpoint to the modest greeting conveyed from South Africa to "Germans of the Eastern Marches" than to the fraternal hand which the German emperor has just reached across the Atlantic ocean. The *Ostdeutsche Rundschau* concludes by heartily thanking the Boers for having shown that the great Germanic race can scatter all its oppressors to the wind if it once acquires the consciousness of its own Titanic strength.

The Situation in Ireland

COERCION DISAPPROVED IN ENGLAND

CONDITIONS have not altered since the meeting of the cabinet council on March 11 to consider the condition of Ireland. The ministers then decided that the time had not yet come for bringing into play the more drastic features of the crimes act, nor was it thought necessary at present to suppress the United Irish League as a national organization, or any of its local branches.

The London *Telegraph* says that "There will be none so disappointed as the professional Irish politicians when they learn that, though the government intends to deal severely with individual disturbers of peace, it does not mean to give Mr. O'Brien's league the cheap advertisement of suppression." The London *Daily News* also approves the government's course, but for a different reason. To suspend the law in Ireland," the *News* says, "is a shameful business at any time, but to suspend it at a moment when we are busy making another Ireland in South Africa, would be madness. Coercion is only another name for martial law. It means government by police, soldiers, and informers. It is an open substitution of force for the process of law and justice. But if you are going to rule by force, it is tolerably obvious that you must have the force available. Is it available in Ireland? There is the usual complement of constabulary and soldiers there, but if it is to be a case of coercion, every one knows that this force will be insufficient, and that no means exists of recruiting it. We repeat that to declare war on the Irish organizations at such a moment is stark madness. Not that the government will abstain on this account. Judging by their monumental inability to read the plainest facts, or to take account of the most elementary forces, the probabilities are, on the whole, in favor of coercion." The *Morning Leader* declares that coercion is out of the question, because "Ireland is crimeless. The whole trouble is caused by the poverty of the west, poverty which would have driven a less religious population into anarchism. The one thing which you can not repress by a crimes act is poverty."

Speaking of the abandonment of the king's visit to Ireland, the London *Times* says that "it is the natural consequence of the flagrant display of disloyalty and seditious feeling in which some representatives of Ireland have chosen to indulge." The *Standard* observes that since Irishmen "have filled the air in Ireland with talk of sedition, and have found dupes to serve their purposes, there need be no cause for surprise if their country is looked upon rather as one to avoid than to live in while their influence lasts."

SOCIOLOGICAL

Stony Wold Sanatorium

A MODEL INSTITUTION FOR TUBERCULOUS WORKING WOMEN

WE have recently recorded in this department a number of philanthropic enterprises in behalf of sufferers from tuberculosis, notably the "Kaiser Friedrich Hopiz" for tuberculous German children, the sanatorium soon to be erected in England through the generosity of Sir Ernest Cassel, and the New York State Sanatorium for Consumptives, for which a site has recently been purchased at Ray Brook, in the Adirondacks. Another institution to be established in the Adirondacks is the Stony Wold sanatorium, for self-supporting women who can pay a small charge, and for the wives and children of self-respecting workmen, who can support their families, but have not surplus enough to pay the large charges of special treatment for those of tuberculous tendency. It is not in any way connected with the state institution at Ray Brook, which cares for wholly destitute victims of consumption. The Stony Wold sanatorium is intended to be a model for all future sanatoriums, and will have every advantage that thought and experience can put into it. The entire first floor is given up to the patients. A large dining-room, an assembly-room for recreation, with a stage for amateur performances; a library, the physicians' offices and laboratory, and an immense hall, with great open fireplace in which real logs will be burned, are on this floor. The second floor will be devoted to the family of the physician in charge, the medical attendants, and nurses. The "help" will be lodged on the third floor. At each side of the main building a large wing is planned for the patients' sleeping-rooms, and an enormous porch, 178 feet front, will give them a pleasant outdoor sitting-room, with hammocks and every comfort. The entire building is constructed with a view to the best possible ventilation, and the patients will be kept in the open air practically all the time. The capacity of each of the four dormitories will be twenty-five persons, the largest number that is permitted to be grouped together by the newest method of treatment for tuberculosis.

Stony Wold sanatorium is a non-sectarian insti-

tution; it is the outcome of the connection of its president, Mrs. James Edward Newcomb, with various clubs for working girls and women, where she heard constant and earnest inquiries for an institution where tuberculosis patients could be effectively treated at low cost. A little more than a year ago this enterprise was barely conceived. At the present time it is thoroughly organized and incorporated, with a board of directors, a medical board, an advisory board, and twelve auxiliaries, whose work is far-reaching.

The sum of \$55,000 has already been raised by subscription, and \$200,000 more is needed to complete the institution. The site, bought for \$20,000, consists of 1,250 acres, a solid mass of pines and balsams, sixty feet above the level of Lake Kushaqua. On the grounds are several well-fitted camps that will be rented to families of means as a source of permanent income.

Chinese as Servants

A WOMAN'S VIEW OF CHINESE EXCLUSION

CLARA E. HAMILTON, writing for the New York *Independent*, says that Chinese exclusion would eventually rob the Pacific coast of its only servant class. "It is difficult," she says, "for those living in the east to understand the domestic problems of the Pacific coast. We have no servant class, and when one stops to consider all that this fact implies, it is not hard to see that the householder here has many perplexities to face. It is not to be supposed that we have no working people on the coast, for we have, although not in due proportion; but that solid class of men and women who take daily toil cheerfully and as a matter of course are conspicuously absent. Just why this is true, it is hard to determine—partly, perhaps, because the working classes, as well as those of wealth, are shifting and unsettled, not only in point of residence, but in the matter of finance as well. It is a country of frequent ups and downs,

PLAN OF GROUNDS AND BUILDINGS OF STONY WOLD SANATORIUM

employer and employed often changing places. However that may be, the fact remains that nowhere in the country is it so well-nigh impossible to get a fair amount of service in return for reasonable wages. All this would be less intolerable if the quality of service rendered were in any sense equivalent to the remuneration. But the work is carelessly done, and the workers, as a class, are utterly unreliable. Matters have been going from bad to worse for some time, and the past two years have witnessed a marked increase in the number of families living at hotels, while more than one woman of wealth, who still clings to old traditions and desires to maintain a home for her family, has been obliged to do her own cooking, not to mention taking care of her house."

This writer says that the Pacific coast needs Chinese servants because their service is uniform, reliable, equivalent to the remuneration received, and because it acts as a check upon the unjust demands of other servants. "If you have a well-trained Chinese cook, you have a treasure. You explain to him carefully, upon his arrival, just what you expect him to do, how many meals he is to prepare, what sort of cookery, in a general way, you prefer, and how far beyond the kitchen and dining-room you wish his duties to extend. If he agrees, the matter is ended. He will give you but little extra service, but he lives up to his contract to the very last letter. He is quiet, usually respectful, and always orderly, deft, and capable."

According to this writer, the Chinese do not cheapen servant labor. It has always been the case, she says, that a Chinese cook commands higher pay than does a white cook. "A few years ago, when a girl for general housework could easily be found for eighteen dollars a month, you must pay a Chinaman twenty-five, and besides that, he would smilingly inform you that he 'no sabe sweep.' Now that so many of them have left the country, it is impossible to secure a good one for less than thirty-five or forty dollars a month." It is this writer's conviction that California can command such uniformly well-rendered service from no other class.

Foreigners in New York City

ONLY 737,477 OUT OF 3,500,000 ARE AMERICAN BORN

THE census of 1900 reveals the fact that of the 3,500,000 people in the city of New York, only 737,477 are white persons born of native parents, or 21.4 per cent of the population of the city. New York's foreign-born exceed in number the foreign-born of Chicago, Philadelphia, St. Louis, and Boston combined, and exceed in percentage all of those cities and every other city in the United States except Fall River. Within every group of 100 persons in New York city, seventy-eight are either (a) foreigners or (b) the children of parents one or both born outside of the United States, or (c) colored people. Only twenty-two of the 100 are white persons born in America, of American parents. In a bulletin issued by the Federation of Churches and Christian Organizations of New York city, Dr. Walter Laidlaw, the secretary, says: "In the last ten years the net increase of New York's foreign-born population has been 307,317 persons, of whom 102,249 are Russians, 94,236 Italians, while from Austria, Bohemia, Hungary, Poland, and Rumania combined, the increase has been 101,250. There has been an increase from

every country in Europe, except Ireland, Germany, and Scotland; but Italy, Austria, Bohemia, Hungary, Poland, Rumania, Russia, Greece, and Turkey have contributed 97.6 per cent of the increase, while all of the rest of the world has contributed only 2.4 per cent. That is to say, a detailed comparison of the increase of the foreign-born population of New York, by nationalities, shows that southern and eastern Europe is almost entirely responsible for the increase of New York's foreign-born. The Irish-born number 20,728 less than in 1890; the German-born 5,431 less, the Scotch 369; the Australians 40 less."

An Unusual Criminal

THE PUZZLING CASE OF THE LIVERPOOL FORGER

THE criminal Goudie, the principal figure in the forgeries on the Bank of Liverpool, has proved a puzzling study to criminologists. The London *Spectator* presents his case as follows: "Here was a quiet young Shetlander of the steadiest habit of life, without ordinary vices, without ambitions, without taste for luxury, who lived like a poor bank clerk, and did his six hours a day of monotonous work with unflinching assiduity, yet who, all the while, was stealing on a colossal scale—the total reached £160,000—for the benefit of others than himself. He never had £1,000 of the money for himself, never accumulated any hoard, never made any preparations for flight, though he had evidently thought over that ultimate necessity, but at the instigation of blackmailing sharpers quietly went on forging as if that was part of his regular duty. It is suggested that he was a coward, and continued forging merely to avoid exposure of his first offense; but his conduct at the last was that of a very cool person, who did not care particularly when the end, which from the first was inevitable, arrived. He could have defied his blackmailers at any moment if he had chosen, by simply threatening to 'give them away' to the police, the course which, when arrested, he at once pursued. There was nothing to prevent his taking a great sum and bolting, and he never attempted it, but went on dully from month to month stealing, stealing, stealing money which, as an old Yorkshire woman once said, 'gave him nowt, not even wickedness.' He is quoted as an illustration of the passion of gambling; but except at first he never really gambled, his confederates never allowing him to win, a fact which must have been patent to him from their letters. The only possible explanation of him, to our mind, is that he was an exceptionally stupid and unimaginative person, with the fondness for dull excitement which such persons often display, and who found it in the forgeries themselves, in the danger he ran, in the way he was getting the better of the bank, in the contrast between the little he received and lived on and the great sums of which he disposed, between himself as the humble bank clerk and himself as one of the most successful of criminals. His repayment for his danger was, while the game lasted, the consciousness of power, a feeling akin to that enjoyment in a control like that of a deity over the issues of life and death to which several of the great poisoners have confessed as the moving-spring of murders from which they reaped no sort of personal advantage."

A CORRECTION: The article in our issue of March 20 on "The Increase of Tramping," should have been credited to the *Independent* instead of the *Outlook*.

LETTERS & ART

The Work of Sir Philip Burne-Jones

AS VIEWED BY AMERICAN CRITICS

SIR PHILIP BURNE-JONES, son of the late Sir Edward Burne-Jones, is exhibiting twenty-six paintings at the Knoedler galleries, New York. The exhibition has made something of a sensation, which the *New York Times* accounts for as follows: "There are artists who steal into notice because it is found that certain collectors, whose attention has been called their way by fellow-craftsmen or by critics, have been purchasing the works of the favored ones, whereupon other collectors rush in and the art dealers discover that it is safe to venture. There are others who float into notice buoyed up by some story or relationship that has little to do with the quality of their work. They achieve notoriety and are talked about for a time, but, as they have no body of convinced admirers behind them, soon become the victims of the craving for a new sensation, and so disappear from the scene. Sir Philip Burne-Jones, Bart., has inherited from his distinguished father a title, but also the awkward bequest of a comparison. Edward Burne-Jones was a romantic and a literary painter, gifted with a style whose distinction lay in the study of line. He was a poet and an illustrator of themes from the old romance. His son is an illustrator, but hardly a poet." The *Commercial Advertiser*, on the other hand, says that the artist demonstrates his claim to attention by originality and invention.

Sir Philip's vogue rests chiefly upon his picture "The Vampire," which inspired the well-known verses of his cousin, Rudyard Kipling. According to the *Times*, "Sir Philip's illustration is quite as flat, un-moved, and untrue of ring as the verses; it does not represent Kipling's idea any more than Kipling's verses represent it; there is no vampire about it, also none of the suggestion in Kipling's verse that the man—some man—any man, is the victim of the woman—some woman—any woman, who uses and abuses him and remains always an overrated enigma who 'never could understand.'" To the critic who writes for the *Advertiser*, however, "the meaning is not to be mistaken, and the moral is no less evident. The light is that of the moon, which plays on the white garments and surroundings, and the general effect is impressive, if rather uncanny. It is much the best piece of painting here, for the technical shortcomings are less pronounced, and the theme itself

is sufficient to hold the attention of the spectator."

The other prominent pictures in the collection are thus described by the *Times* critic: "A little more serious work is the illustration of 'An Unpainted Masterpiece,' the short story by Henry James. The studio and its light and shade are good in atmosphere, and for once Sir Philip puts a little verity into a figure, that of the artist who has worked on his picture until he has destroyed every vestige of it. That figure does look dejected. But what is to be said of 'Ave, Stella Maris!' A woman on a rock and a man in the water, which, so we are told, represents this: 'A statue of the Virgin comes to life and stretches out its hands to help a drowning sailor.' Statue? Virgin? Drowning sailor? There are none of these. 'The Man and the Mask' is a larger illustration to symbolize the same idea that Kipling has revamped in his 'Vampire,' namely, that man does not understand woman because woman wears a mask. 'The Shadow of the Saint,' like the 'Ave Stella Maris,' comes dangerously near the ridiculous. It is St. Simeon Stylites, the champion sensationalist in Christian hagiology, whose lean shadow, as he stands on his column, falling on a moonlit wall, is to startle two girls returning from a feast. To do these girls justice, they look as if they were fresh from a Dorcas sewing circle, and they are not in the least startled—as why should they have been, seeing they lived in the same town with a tiresome sensation monger, who roosted for years on the top of a pillar in order to shirk work and have fools bring him his breakfast. The best things among the twenty-six pictures are two portraits, one of Mr. Kipling, the other of Mr. Louis N. Parker. They are straightforward, painstaking likenesses of the two authors which will please their respective relatives because they resemble the sitters as much as a nicely colored photograph."

Both critics agree that Sir Philip is a literary artist pure and simple, who depends entirely on the story or parable or symbol he illustrates, not on the artistic artfulness of his brush. The *Times* thinks it "exceedingly unfortunate that so much pother has been raised in the papers about Sir Philip and his 'Vampire,' for expectation naturally rose mountains high, and all that appears is a little mouse of a talent, which seems to have lost its way." This is not far from being the general conclusion of the critics.

THE VAMPIRE
(By Sir Philip Burne-Jones)

The Case Against Maurice Hewlett

THE CORRUPTION OF FREDERIC HARRISON

READERS of PUBLIC OPINION are already acquainted with Frederic Harrison's enthusiasm for Maurice Hewlett. In a series of skits entitled "Authors at Bow Street," London *Punch* thus states the case against Mr. Hewlett: "Maurice Hewlett, Cinque-centist, was charged with producing inflammatory literature detrimental to the best interests of Positivism and demoralizing to Mr. Frederic Harrison. He was further charged with stealing a suit of mail from Wardour street, and a title from Geoffrey Chaucer, an elderly man, who failed to attend. Eliza Comte, who said that she was Mr. Harrison's cook, gave evidence as to her master's change of habits. Before Mr. Hewlett's 'Richard Yea and Nay' came into the house, she said, Mr. Harrison was always that Positive; but since then you never knew whether he meant it or not. And his language! He never used to say things like 'By my Halidom!' But now—well! Once Mr. Harrison was all for guillotines, but now he cuts the bread with a battleaxe. And Mr. Harrison used to come home from Fetter lane on Sunday evenings quiet as a mouse; but now he halloas in front of the house—'What ho, without there! Let down the drawbridge! Raise the portcullis! A stoup of wine, I say!' But the worst was when he wanted her to change clothes with him. (*Sensation.*) . . . The bench, after a short deliberation, condemned Mr. Hewlett to abandon fiction for history, to forswear Canary, and exchange chain mail for Jaeger. The other charges were not proceeded with."

What Is Popular Poetry?

MR. YEATS'S OPINION

MR. W. B. YEATS, the Irish poet, is of the opinion that what we call popular poetry never came from the people at all. Writing for the *Cornhill Magazine*, he says: "Longfellow and Campbell and Mrs. Hemans, and Macaulay in his Lays, and Scott in his longer poems, are the poets of the middle class, of people who have unlearned the unwritten tradition which binds the unlettered, so long as they are masters of themselves, to the beginning of time and to the foundation of the world, and who have not learned the written tradition, which has been established upon the unwritten. I became certain that Burns, whose greatness has been used to justify the littleness of others, was in part a poet of the middle class, because though the farmers he sprang from and lived among had been able to create a little tradition of their own, less a tradition of ideas than of speech, they had been divided by religious and political changes from the images and emotions which had once carried their memories backward thousands of years. Despite his expressive speech, which sets him above all other popular poets, he has the triviality of emotion, the poverty of ideas, the imperfect sense of beauty of a poetry whose most typical expression is in Longfellow. Longfellow has his popularity, in the main, because he tells his story or his idea so that one needs nothing but his verses to understand it. No words of his borrow their beauty from those that used them before, and one can get all that there is in story

and idea without seeing them, as if moving before a half-faded curtain embroidered with kings and queens, their loves and battles and their days out hunting, or else with holy letters and images of so great antiquity that nobody can tell the god or goddess they would commend to an unfading memory. On the other hand, when a Walt Whitman writes in seeming defiance of tradition, he needs tradition for his protection, for the butcher and the baker and the candlestickmaker grow merry over him when they meet his work by chance. Nature, which can not endure emptiness, has made them gather conventions which can not disguise their low birth, though they copy, as from far off, the dress and manners of the well-bred and the well-born. The gatherers mock all expression that is wholly unlike their own, just as little boys in the street mock at strangely dressed people and at old men who talk to themselves."

Brieux and His Works

THE INTERPRETER OF THE BOURGEOIS

A WRITER in the current *Contemporary Review* discusses the work of M. Brieux, the French playwright, who, within the last ten years, has produced fifteen plays depicting the every-day life of the ordinary bourgeois. This writer, Claire de Pratz, says that M. Brieux has lived long in the provinces; he is a democrat in every sense of the word, being the son of a carpenter, and having received first the education of a primary school and later on of the Lycée. He is now forty-three years of age; but he began his literary career on the staff of a provincial paper, the *Nouvelliste de Rouen*. He is not a Parisian in any sense of the word. He has none of the wit of a *boulevardier*, *blase*, or *roue*. He can not understand it at all, and does not wish to acquire it. He is morally most courageous, almost rash, and dares to study openly the larger questions of humanity with a new insight and understanding, as well as with an upright judgment and a warm heart.

Each of his plays, we are told, is in a measure a didactic comedy in defense of an idea. In "Blanchette" he studies the question of the relative positions of parents and children in the character of Elise Rousset—the educated daughter of uneducated parents. "L'Engrenage" treats of political corruption, and of the means by which a perfectly honorable man may be led through political ambition to do dishonorable actions, although he returns to strict honesty afterward. In "Les Bienfaiteurs" false ideals of philanthropy are shown up to derision and scorn, and their evils castigated. In "Les Trois Filles de M. Dupont," a feminist play *par excellence*, the three careers hitherto open to the modern woman are relatively compared and discussed, and so far as the construction of a play and its inherent qualities are concerned, this is perhaps one of the finest productions of the author. "Le Berceau" is directed against divorce. "Les Remplaçantes" concerns the evils of wet-nursing, evils which affect the very source and strength of the race. "Ménages d'Artistes," one of his first plays, was written to prove that the creative artist has not necessarily the right of immolating the happiness of others in the interests of his art. "L'Evasion" is a vehement protest against the more pessimistic theories of heredity. "Le Résultat des Courses" shows us the evils of gambling, while "La Robe Rouge," which is at present

being translated into English, treats of the abuses of "La Magistrature."

Mlle. de Pratz says that "it is evident, strongly evident, in everything that he has written that he is truly a sincere thinker as well as a keen observer, and that the theories he develops in his plays form an indestructible part of his own moral and intellectual development. He is no mere dilettante, mainly propelled by keen, vivid introspective interest or by outward observation toward the creation of those types and characters which constitute the puppets in the play of life. The struggles of the passions do not interest him. The whys and wherefores of this lady's loves, of that man's infidelity, of this prejudice, or of that dramatic situation, in no way appeal to him. The hard, stern questions with which modern men of science and thought are now battling, the solution of which in a right or wrong sense will help to make or to mar the onward movement of civilization, are the subjects which attract the muse of M. Brieux. And in all his work there is so much vigor, such profound sincerity, that even those dilettantes—those lovers of impeccable form who represent, defend, and uphold the classical paganism of our modern France—are bound to declare themselves won over to his side."

The Versatile Richard Strauss

W. VON SACHS, in the New York Commercial Advertiser. Condensed for PUBLIC OPINION

DURING the past season, Herr Richard Strauss has, for the musical public of Vienna, been the hero of the hour. He appealed to his auditors in a threefold capacity—as composer, as illustrator, and as accompanist. In the first, he presented his new one-act opera, "Feuersnoth" (Fire's Dearth); in the second, he furnished a melodramatic background to Herr Ernst Possart's reading of Tennyson's "Enoch Arden," while in the third he assisted, at the piano, his wife in her interpretation of upward of a score of his songs. However much or little one may be in sympathy with Richard Strauss as a composer, critical opinion all the world over is pretty well agreed that he is one of the few modern tone-poets who have attained prominence, and whose works, no matter how revolutionary their form or matter, merit, by reason of their superlative cleverness, the attention they have everywhere elicited.

Unlike Strauss's first music-drama, "Feuersnoth" does not unfold a tragic tale. Its author, Herr Ernst von Wolzogen, calls it a "song poem" (*Singgedicht*), and on a somewhat tenuous mediæval background he dramatizes an episode taken from an old Dutch legend. To this libretto, which is neither very diversified nor rich in incident, and which, in point of phraseology, keeps more than closely to the model set by Wagner, Richard Strauss has written a score that, in many of its features, has an unquestionable affinity with that of the "Meistersinger." The characteristic note of both is the musical illustration of the German burgher's life in the days past and gone. Compared with one another, the older work seems simplicity itself, and melodiousness, too, many will be disposed to add. For though "Feuersnoth" has that in common with all of Richard Strauss's compositions, that it possesses passages of singular beauty, it likewise offers wastes of efforts, which, however cleverly they may document inventive ability of a high order, are positively distressing to the ear. This Munich townspeople speak a musical language that is composed to

an overwhelming degree of dissonances, and hardly ever do their phrases flow naturally, let alone mellifluously. A few snatches sung by a trio of girls who seem to have descended in a direct line from our old friends the Rhine daughters, and a tuneful, catching waltz are about the only distinctly pleasing bits until we are well on in the latter half of the opera, and here the score gains in interest and attractiveness from page to page till the superb fire scene is reached, which certainly deserves to stand forth as one of the most effective pieces of musical coloring in the entire literature of modern composition.

Various Topics

THOMAS SIDNEY COOPER, the venerable painter who had exhibited at the Royal academy for sixty-seven consecutive years, died recently at the age of ninety-eight. Almost to the very last he maintained the excellence of his workmanship, betraying no loss of manual dexterity. His pictures were exceedingly popular, and a vast number of fraudulent imitations of them were put upon the market.

THE SOCIETY OF AUTHORS has just issued its report for 1901. With regard to the pension fund of the society, it is pointed out that during the past year a great advance has been made—the first pension has been awarded—£60 per annum, to Mrs. J. H. Riddell. The fund is slowly but steadily increasing. Three considerable law-suits were supported by the society during the year, particulars of which are given.

INTERNATIONAL "SHERLOCK HOLMES": Three companies are playing "Sherlock Holmes" in England, one in London, two in the provinces, two companies are playing the piece in Holland, and it is to be produced in Danish for Copenhagen, and in Russian for St. Petersburg; and the German version will be heard speedily in Vienna and Berlin. Mr. Gillette's acting has been understudied by Dutch, Russian, German, French, and Danish Sherlocks, and will be closely imitated in one capital after another. He has converted Sherlock Holmes into a good European, who is welcomed in every continental tongue as the most cosmopolitan figure on the modern stage.

MASSENET'S NEW OPERA, "Le Jongleur de Nôtre Dame," inspired by the fourteenth century legend, narrated by Anatole France in "Etui de Nacre" and produced recently at Monte Carlo, is pronounced by Lucien Muhlfeld, the musical critic of *Le Journal*, to be superior to "Griselidis" and on the same level with "Manon" and "Werther." The *Gaulois*, *Figaro* and *Soleil* also proclaim "Le Jongleur" to be one of Massenet's finest compositions, notwithstanding the fact that it does not contain a single female character.

WHEN JAN MEETS JAN: Paderewski had held the money-making record for European musicians in America until Kubelik came, and he has not been enamored of the Bohemian boy. When he discovered, in the midst of a recital in Cleveland, that his program contained an advertisement of the violinist, he donned his overcoat, gloves, and silk hat and went out on a strike. On the promise of the local management to furnish twenty copies of the Kubelik program with Paderewski's name in big type he was induced to finish the program. We will not attempt to describe the scene made by Kubelik when the incident was reported to him. The *Columbus Dispatch* cartoonist suggests that when Jan meets Jan, they fight out their feud with their own weapons.

SCIENTIFIC

The Harmonograph

ARCHIBALD WILLIAMS, in the April *Pearson's Magazine*, New York
Condensed for PUBLIC OPINION

A HARMONOGRAPH may be briefly defined as an instrument for registering the curves formed by the combined action of two or more pendulums. A single pendulum suspended from a bearing that permits free motion in all directions can be made to trace a beautiful spiral curve, diminishing toward the center of points of rest. Suppose that from the "bob" of one pendulum a second is hung. The motion now becomes very complicated, because each pendulum has to adapt itself to the other. By registering the compromise, or composite motion, we obtain a beautiful curve known as a harmonogram, or harmony drawing. It can be made by anyone possessing patience and a little mechanical skill.

The upper pendulum is a wooden "batten" $2\frac{1}{2}$ inches broad, 1 inch thick, and 84 inches long, with a small platform screwed transversely to the lower end. It swings on what is known as a "universal joint," or one that allows the rod to move in all directions, but not to twist on its own axis—which would spoil the diagrams. From the platform of this pendulum (shown below) is hung a second pendulum with a heavy weight attached. This bearing need not be "universal"; in fact, a weight on a chain serves well enough for the lower element of the harmonograph. An arm, swinging on the top of a support resting on the floor, carries the stylus, which must move upward and downward, but not sideways. In order to make successful harmonograms, the two pendulums must be "tuned"—that is, so adjusted that the motions of the lower bear a definite numerical proportion to those of the upper. All the compound numerical diagrams here given result from the ratio 4 to 1, the pendulums being 84 and 21 inches long.

As the time of oscillation of a pendulum varies inversely with the length of the pendulum, it is obvious that the lower and shorter pendulum will swing four times while the other swings once. In tuning, weight as well as length must be considered. The upper pendulum should be heavier than the other; in this case the weights are 50 pounds and 17 pounds, respectively. The exact weight and length can only be found by experimenting with diagrams.

We fill the stylus with ink—red or an aniline will do, but not Indian, which is full of clogging suspended matter. A card is then laid on the platform and adjusted until its center is exactly under the point of the stylus. Grasping the upper pendulum, we sway

it slowly till the oscillations almost cover the card, and then release it. Immediately afterward the stylus is lowered and the tracing begins.

The chief charm of the harmonograph is the infinite variety of the designs produced. Even if the general characteristics of several diagrams are the same, the details will vary, unless special measures have been taken to insure the repetition of a given design. And not only can an infinity of varying harmonograms be produced with one ratio of pendulum length, but the ratio can be altered, opening at each change a fresh field to the experimenter.

We might add that the ratio 4 to 1 is an easy one to begin with, and its results are most satisfactory. The fact should be kept in mind that length is of primary importance, and weight of secondary; for, though the one can be partially compensated by the other, it holds as a general rule that, until the length ratio is approximately correct, the figure will be out of harmony. The effect of added weight in both elements is to produce more delicate tracings, with the lines closer together, since the air resistance to the machine does not increase in proportion to the weight.

Automatics in Gun-Making

March *World's Work*, New York. Excerpt

A NEW semi-automatic gun recently brought out by Commander W. H. Driggs represents a distinct advance from the older rapid-fire gun and extends to our ordnance the same evolution which commercial mechanisms are undergoing. In the invention of war material, simplicity must not be sacrificed to automatic action or rapidity of fire. Previous to the invention of this gun a semi-automatic gun had been brought out in Europe, but its mechanism was more complex and its rate of fire slower.

In the new semi-automatic gun which possesses the advantage of simplicity, our navy possesses the fastest rapid-firing gun in the world. In tests on the naval proving ground at Indian Head, Maryland, a six-pounder gun of the new type was fired for a short time at the rate of seventy-five shots per minute, and showed a sustained speed of sixty shots per minute.

Under the same conditions, the foreign gun of the same caliber with which it was compared fired forty-two shots per minute. This means that at a critical moment three of our guns would be equivalent

HARMONOGRAMS

to more than five of the foreign guns. The speed need not vary greatly whether the shots are aimed or unaimed, as the sole duty imposed on the firer is to keep the gun trained on the target. When the gun is fired it is unclamped and free to move in any direction on a universal joint. It is aimed by placing the right shoulder against the shoulder bar and grasping the pistol grip with the right hand. Thus it is as easily directed as a rifle. When firing rapidly, the trigger, which is forward of the pistol grip, is pulled to the rear and held there; the firing is performed automatically by the closing of the breech.

The gun is mounted on what is known as a "hydraulic recoil mount," on a "crinoline" or (cage) stand. In this mount the recoil after firing is checked by liquid in the recoil cylinder, and at the same time a spring is compressed which returns the gun to the firing position. The gun recoils, the breech remaining closed and locked until the movement is stopped by the action of the recoil cylinder. On the return movement to the firing position, the breech is opened, the fired cartridge case ejected, the firing mechanism cocked, and the breech block caught in the open position. The movement of the breech block in opening extends the coil spring on the left side of the gun, and furnishes the power for returning the breech block to the closed position. This, however, can not take place at once, for as the breech block starts to return, it is caught and held in the open position. The insertion of a fresh cartridge releases the mechanism, closing the breech and firing the gun.

With the exception of the loading, all the operations are performed automatically, so that the gun may be operated by two men, one to point the gun and another to throw in ammunition. An idea can be had of the work accomplished by a six-pounder gun of this type, by considering that in one minute 750 pounds of cartridges are handled, ninety-four pounds of powder burned, and 450 pounds of steel discharged, and that each one of the six-pound projectiles will perforate a three-inch steel plate.

If there is any machine in the handling of which manual labor should be dispensed with it is the gun. The introduction of the semi-automatic principle produces two important advantages—a reduction in the number of each gun's crew, with the exposure of fewer men to the enemy's fire, and the avoidance of confusion around the gun during the stress of action.

The Talking Electric Arc

M. J. LEROY, in *La Nature*, Paris. Translated and Condensed for PUBLIC OPINION

THE electric arc can be used as a telephone receiver as well as a telephone transmitter. It is only necessary to place the arc in the telephone circuit, in the place of the ordinary receiver, or in the place of the transmitter, and one shall hear at a distance in the arc or in a telephone receiver the pronounced words. This experiment has been made many times, and has succeeded perfectly. We have heard at the factory of Messrs. Heller, Coudray & Co. a lamp which sang and talked, and the following is the method employed: The principle of the experiment is always the same, and consists of producing variations in the intensity of the current and of closing the telephone circuit with the electric arc.

A first circuit is formed with a pile, a microphone, and the primary circuit of an induction coil. The secondary circuit of this coil is connected directly with

the carbons of the arc; this latter is fed by a circuit proceeding from the distributing wire with a resistance in circuit. In speaking before the microphone, the vibrations of the membrane determine the variations of intensity, and the secondary induced currents in their turn act on the electric arc and produce the sonorous waves which one clearly hears. As is evident, the arrangement is very simple, it being necessary, however, to take certain special precautions. The quality of the carbons should be seen to, as well as the space which separates the two. The best results are obtained with the Siemens carbons and with a space of two to three centimeters. Sharp sounds are transmitted with extreme clearness, as well as words, and it would appear that valuable applications could be made of this property of the electric arc. One might use the arc lamps in railroad stations by placing at the end of trains the microphones, and before departing, the conductor of the train could cry for the last time, "All aboard for Cherbourg." This signal would be immediately repeated in the interior of the station by the arc lamps.

The Conversion of Milk

London Sun. Excerpt

MILK, of whatever kind, is always composed of four things—water, fat, sugar, and protein. The last is a substance that goes to make muscle and blood. One milk differs from another only in the proportions of fat, sugar, and protein which it contains. The expert knows, to begin with, that his ordinary, every-day cow-milk is, say, 4 per cent fat, $4\frac{1}{2}$ per cent sugar, and $3\frac{1}{2}$ per cent protein. His recipe tells him that to convert this into pig-milk he must change these percentages to $4\frac{3}{4}$ per cent fat, $3\frac{1}{2}$ per cent sugar, and $1\frac{1}{4}$ per cent protein. The pig-milk, in a word, is richer in fat than cow-milk, but poorer in sugar and flesh-forming stuff. By dilution with distilled water the sugar and protein are reduced, while more cream is put in to add the extra fat required. The same process varied, using cow-milk always as a basis, produces dog-milk, sheep-milk, or goat-milk. This method is also applied to the feeding of human babies on a very great scale. At the present time thousands of infants in Chicago, and similarly in other large cities, are being regularly fed with artificial milk, prepared in the manner above described from cow-milk. It is done usually by doctor's prescription. That is to say, the family physician who has an infant in charge sends a prescription to the milk laboratory, stating the percentages of fat, sugar, and protein wanted, and the prepared fluid is delivered twice a day in sealed bottles.

How many milk-drinkers know that milk is seldom sterilized as a precaution against contagion? The truth is that the medical profession long ago learned that while it purified milk to kill all the germs in it by the sterilizing process, the indiscriminate slaughter of microbes injured the quality of the lacteal fluid. In other words, superheating, it was found, disastrously affected the proteids of the product. So, for a long time, none of the patients in the hospitals has been given sterilized milk. It is merely Pasteurized, and that is quite another thing, though the distinction is not generally understood even by the few persons who know that it is made. In the sterilizing process milk was brought to a temperature of 212 degrees Fahrenheit. In order thoroughly to kill the germs of disease, it was either boiled three times on three suc-

cessive days for half an hour at a time, or the bottles of milk were put in a vessel known as an autoclave and therein superheated, by retention of the steam, to the requisite degree. In Pasteurization a far lower temperature is reached, and the milk is heated only once. Pasteurization kills the disease microbes, but does not kill the spores which cause the milk to ferment, so, while it was possible to keep sterilized milk a considerable time in good condition, the Pasteurized article turns sour as other milk does.

"Thermite"

A GOVERNMENT REPORT THAT STEEL EXPOSED TO ITS ACTION
MAY BE CUT AS EASILY AS LEAD

A WASHINGTON dispatch says that there is no such thing as a burglar-proof vault or safe, according to a report submitted by treasury experts to Assistant Secretary Taylor last week.

The best-tempered steel, no matter how thick, is not proof against a new chemical compound which professional cracksmen have learned to use. This compound, called thermite, when mixed with magnesium powder, will destroy the hardness of the metal and rob it of its temper, enabling a burglar with ordinary tools to cut into it as though it were lead.

The investigation of the reality of the security afforded by these steel structures was made by J. E.

Powell, the chief mechanical and electrical engineer of the treasury, and John P. Bergin, vault, safe, and lock expert. These men went to Chicago and other cities and made experiments with thermite and also with electricity. They have come back to Washington convinced that the present value of safes and vaults as against burglars is much overestimated. An application of thermite and magnesium made to a steel plate of the highest temper and five-eighths of an inch in thickness reduced the metal to a condition rendering it possible to cut a hole through it with an ordinary chisel.

Messrs. Powell and Bergin have submitted a set of conclusions and recommendations as a result of their investigations. They say that, inasmuch as the best types of safes and vaults are not invulnerable, it would be advisable, in their judgment, for the government to install alarm systems in the new vaults now being constructed at the New York custom-house, at the sub-treasury in Philadelphia, and wherever else government moneys are kept.

PURIFICATION OF SUGAR SOLUTIONS: MM. Lavollay and Bourgoin, of Paris, have recently patented a method for the purification of crude sugar juices, consisting in outline in electrolyzing them between zinc plates while maintaining in suspension a pulverized mixture of calcium fluoride and manganate. After a few minutes' treatment barium carbonate is stirred in to complete the decolorization.

RELIGIOUS

Pulpit Handicaps in America

AN ENGLISH VIEW OF AMERICAN CONDITIONS

AN English Nonconformist minister who has spent some time in this country writes in the *Independent* of some of the handicaps that rest upon the American preacher. The things he cites may seem trivial, but he contends that they make the difference between a tolerable and an effective preacher.

The first of these is the domination of false and harmful conceptions of the function of music in public worship. Music is appropriate and helpful in a service in so far as it either is used by the members of the congregation to express their religious emotions, or is employed by some devout and skillful singer or singers to carry a message of Christian stimulus or comfort to the hearts of the listeners. As a means of entertainment it has no place at all in the distinctively religious meetings of the church, but the strongest impression left upon me by what I have heard Sunday after Sunday has been that it is for providing musical entertainment that the average church quartet earns its salary. I admit the technical ability which distinguishes the performance in the best-equipped churches. My complaint, however, is not against exhibitions of imperfect training, but against exhibitions altogether. The concert-room and the Christian sanctuary can not be satisfactorily combined under one management.

Not the least of the surprises that a year's residence in America has brought me has been the discovery that, though a Nonconformist of the Nonconformists, I have felt more at home in congregations of the Protestant Episcopal church than in those of any other denomination. In England, an Anglican church is one of the last places I should think of go-

ing to for spiritual refreshment. The spread of the ritualistic movement in town and country has been so rapid and complete that one would have to take some pains to find an Anglican church where the element of display was not painfully obtrusive. I have, therefore, been astonished to find that a service corresponding in simplicity and freedom from ostentation to the usual type of a Nonconformist service in England is most likely to be afforded in this country among those who derive their ecclesiastical origin from the Established church of England.

The second great difficulty with which American preachers have to contend is suggested by Mr. Spurgeon's remark that nobody was ever converted when his feet were cold. The necessary adaptation of this most orthodox dogma for American consumption is that nobody is likely to be spiritually receptive when his body is uncomfortably hot. The excessive and unwholesome artificial warmth of American churches is a real foe to devotion. Regarding my recent experience in the American pew in the light of my earlier experience in the English pulpit, I am convinced that the American preacher is handicapped by these local customs more seriously than he himself realizes. When he stands up to begin his sermon he is not touching the highest point of an ascending scale of spiritual emotion. His discourse must be disjointed from what has gone before; the preceding part of the service is no preparation for what is to come. The devout mood has yet to be created, and created in spite of lassitude and wandering thoughts. The preacher has to overcome not only his own languor—the product of an unwholesome atmosphere and the tediousness of listening to uninspiring music—but the languor of his hearers. In listening to American

preachers I think I have noticed a certain lack of spontaneity and naturalness. There is a sense of effort and over-elaboration on the part of the preacher. The discourse smells of the lamp. It would not be safe to leave anything to the influence of the occasion. The congregation, instead of helping the preacher, has to be helped by him out of its listlessness, and he must, therefore, spice his sermon plentifully with epigram and anecdote in order to keep his hearers awake. That which should have prepared the path of the gospel has degenerated into a dead weight that has to be removed out of the way. I am not surprised to hear of so many breakdowns among American preachers. The strain of working under such conditions must be a heavy tax upon the strongest.

Social Democracy and the Church in Germany

CHRISTIAN LUHNOW, in the *Outlook*, New York. Condensed for PUBLIC OPINION

THE amazingly low percentage of church attendance and the small number of churches in the capital city of the German empire—Berlin—is just now emphasized by the completion of the magnificent edifice opposite the imperial palace, popularly called the "Dome," which is to serve as the royal house of worship. With a population of over 1,800,000, Berlin today has less than threescore churches. The Protestant church recognizes in Social Democracy a foe. The church is allied to the state by close ties since the "Kulturkampf," the disfranchisement of Jesuit societies and the Catholic church. Consequently, the leaders of Social Democracy make no secret of the opposition to the church. For every one church erected, there are at least five halls devoted to the propagation of Social Democracy or the principles of Marx and Lassalle. Where Social Democracy directly fails to perform its work against the church, the philosophies of Nietzsche, of Schopenhauer, Kant, and Hegel influence the masses.

Brave but evidently unavailing efforts have been made to stem the influence of Social Democracy upon the church. The Christian Social movement, the Evangelical Workmen's union, and other intermediary societies were formed to weaken the Social Democratic cause. This party appealed to the masses by demanding legislation for the workman and for a higher standard of existence among the peasant classes. This is where Social Democracy gained its power and replaced in a measure the Evangelical church in the confidence of the masses, both in the capital and the provinces. The church, supported as it is by the state, had not much incentive to do missionary work until Social Democracy entered with its doctrines. It is only since the workmen's unions and Christian social societies have come into existence in answer to the gauntlet thrown down by the radical political party. Many earnest men, good and true to the cause, devote themselves to elevate the standard with which Bismarck led the Prussians into battle, "We Fear None but God." But the promise of a co-operative commonwealth, of the so-called *Kladaradatch*, with its division of spoils and other illusive promises held out to the peasant and the populace by the Social Democracy, appeals strongly to the lower classes. Efforts to reconcile the Social Democrats and bring them into closer touch with the church have been fruitless. Bebel, Heine, Richter, Singer, and the other luminaries of the party listen to no compromises, but declare that the church and state are closely welded authorities which are inimical to

From the Painting by Hofmann

Easter Morning

Slowly the night when the Lord lay dead
Swung to the dawn of another day,
Till a far, sweet hue with a tender touch
Warmed like a blush, through the solemn gray;
But the world slept on and no one knew
What feet in the shadows had been abroad,
And no one heard when in heaven they sang,
"Christ is risen! give glory to God."

Nobody saw until Mary came,
Mary redeemed from the curse of sin,
Weeping for love at the open tomb,
Seeking her Lord in the morning dim.
Eager the question upon her lip,
She spoke it out to the shining guard—
Fearless of angels, careless of men—
"Where have they borne him? I seek my Lord."
Nobody heard till the Master's voice
Uttered her name in the silence sweet,
The soul most loving was first to know
Death was vanquished, and life complete.

F. H. T.

Social Democracy. The Lutheran synods and religious councils struggle with the invasion of the Social Democratic party upon their preserves at every annual and periodical meeting. But it is only recently that the missionary movement in the provinces has been supported with any show of energy. The struggle is uphill, with the popular educational movements tending away from the orthodox church, and Social Democracy, on the other hand, attempting to incite prejudice against the clergy. [Recent dispatches represent continental Europe as full of religious excitement. At the vatican, Cardinal Rampolla is the leader of the reactionaries. In Austria, the issue between the Progressists and the Ultramontanes is sharply drawn. The new Spanish Cabinet has made concessions to the anti-Clericals.]

Ministers in Literature

MEN OF THE CLOTH AS NOVELISTS AND PLAYWRIGHTS

A GENERATION ago ministers were in the habit of unsparingly condemning novels, the people who wrote them, and the people who read them. The Boston (Mass.) *Transcript* reminds us that "ministers are now writing novels, instead of condemning them, as their predecessors did." Among the preacher authors who have come into prominence lately are: Basil King, author of "Let Not Man Put Asunder," and James M. Ludlow, author of "Deborah." Dr. Henry Van Dyke, Charles W. Gordon (Ralph Connor), and Charles F. Goss are already well known.

The *Transcript* thinks that ministers "can poke their theology with better effect into a novel than into a sermon. In the former, it can be discreetly hidden, while in the latter it is often too conspicuous. The experience of modern ministers admirably prepares them for the industry of novel writing. It is the best field possible for the study of character. Their contact with all sorts and conditions of people makes them doubly sensitive of the peculiarities of human nature. To hold in all they know about it must be a trying and rasping asceticism. Opening out the safety-valve in sermons will doubtless make their audience too well acquainted with the serious disturbances incidental to parochial life, and if they can show these up to a good advantage in a novel, it is the best way out of a common difficulty."

The stage is another field into which clergymen have entered. The Rev. Father John Talbot Smith has written a drama based on the marriage of Miss Patterson to Jerome Bonaparte, which has been accepted for production by Miss Henrietta Crossman. Recently Abbé Jouin's play, "La Passion," was produced in Paris, the first play by a priest to be performed in a licensed theater in France.

The New York *Sun* is moved by these examples to cite some historical instances of clerical dramatists. "John Home, in whose tragedy of 'Douglas' so many Young Norvals have taken audiences into their confidence regarding the way in which their fathers kept their flocks upon the Grampian hills, was a Presbyterian minister until he had to surrender his living because of writing a play. Charles Maturin was an Anglican clergyman, whose gloomy tragedy, 'Bertram' found in Edmund Kean an interpreter so successful as to lead the author to give up the church for literature. George Croly was a clergyman, but his trag-

edy of 'Catiline' is remembered better than his sermons; and Dean Milman wrote for the stage as well as for the pulpit, his tragedy of 'Fazio' having been kept alive to recent times by Mary Anderson's performances of it. The latest English clergyman to turn to the stage is perhaps the Rev. Freeman Wills, who, after several partial or complete failures, has made one success at least with 'The Only Way.'"

A Christian Endeavor Home in Japan

HARRY STEELE MORRISON in the *Christian Endeavor World*, Boston. Excerpt

WHILE on my trip around the world I visited Nagasaki, Japan, and while there I was greatly impressed with the work of the Christian Endeavor or Seaman's home. A friend in Manila had advised me to visit the place; and, when I inquired for it at the landing-stage, I had no difficulty in finding a jinrikisha man to take me there. It is centrally located near the docks, where sailors land from the ships in the harbor, and it is admirably equipped for the work it does. It is the only charity of its kind in the world.

It seems that in 1895 the United States steamship *Charleston* was laid up for ten months in the harbor of Nagasaki with a broken shaft. On board the cruiser there was a small band of floating Christian Endeavorers, and they soon found that in Nagasaki there was no decent place where a Christian sailor could spend his time ashore. Sailors were turned out of the hotels and better restaurants, and they had no alternative but to patronize the low saloons which infest every seaport of the far east. These young Christians of the *Charleston* thought that a home should be started where men could eat and sleep and spend their time when on shore leave, and instead of asking others to start the movement they at once subscribed \$300 among themselves. Considering that there were only fifteen men in the society, and the low wages paid to seamen, this was a very creditable beginning. The officers and other men on the cruiser contributed \$215, and through the agency of Miss Russell, of the Methodist girls' school, some support for the enterprise was found among the English and American residents of Nagasaki; and Carlton H. Jencks, president of the Christian Endeavor society of the *Charleston*, worked untiringly for the foundation of the home.

The home was started on a small scale at its present site, and was gradually improved until at present it is able to do a wonderful work among the soldiers and sailors who come ashore from foreign ships in Nagasaki harbor. Two additions have been constructed since the start six years ago, and recently seven bathrooms have been put in. The sleeping accommodation consists of seventy-five beds, and when these are all taken, the visitors are satisfied with a "shake-down" on the floor. The largest number ever cared for over night was 101. In the dining-room more than 50,000 meals have been served, and it is the only place in Nagasaki where a sailor can get a good meal at a reasonable price. From six hundred to seven hundred meals a day can be served.

MISSION TO ROME: The pope, speaking recently to Cardinal Machi, expressed great satisfaction at the decision of the United States to send a mission to Rome to treat on the Philippines question. The pontiff recalled pleasurably another mission sent for his 1887 jubilee by President Cleveland.

"YOU CAN'T SHARPEN THAT SWORD ON ANY SUCH GRINDSTONE."—*Ram's Horn*.

THE NEWS OF THE WORLD

MONDAY, MARCH 17

DOMESTIC.—Señor Concha, the new Colombian minister, presented his credentials to President Roosevelt.... The severe storm in the northwest ended, but intense cold followed, and there was much suffering and some loss of life in the Dakotas and Montana.... Seven members of the life-saving crew and five sailors were drowned off Monomoy Station, Massachusetts, in the effort to rescue the *Wadena's* crew.... The senate passed the shipping subsidy bill, 42 to 31, six Republicans voting against and one Democrat (McLaurin, S. C.) in favor of its passage.

FOREIGN.—A conference of the ministers of the powers at Peking decided on the principle of restoring the Chinese government at Tien Tsin, thus reversing the decision of the military commander.... The strike of dock laborers at La Rochelle, France, is ended, the employers having accepted the demands of employees.... The Venezuelan insurgents are displaying increased activity, and have captured the port of Guanta and Margarita island.... Sir Richard Temple, a former governor of Bombay, died in London.

TUESDAY, MARCH 18

DOMESTIC.—President Roosevelt vetoed two bills for the relief of soldiers who served in the Civil War.... General Otis testified before the senate committee on the Philippines, saying that the Filipinos had always been treated kindly by American soldiers.... The United Mine Workers of America assembled in convention at Shamokin, Pennsylvania, almost six hundred strong.... The Republican house caucus adopted the Sibley proposition, granting a 20 per cent reduction on imports from Cuba to December 1, 1903.... Fire destroyed, with loss of three lives, the Phoenix-line pier, in Hoboken, New Jersey, together with the steamer *British Queen* and several lighters and barges.... Dr. Edmund J. James assumed his position as head of the Northwestern university at Evanston, Illinois.

FOREIGN.—It was reported from Hong Kong that General Ma had been defeated by the rebels.... The new Spanish cabinet was announced; most of its former members remain in office.... The emperor of Germany met Prince Henry on his arrival in Germany.... The Portuguese troops captured 162 slave dealers and killed 50 at Pemba Bay, Portuguese East Africa, recently, when the government forces attacked twelve strongholds and liberated 700 slaves.... The French chamber of deputies voted to increase the terms of its members from four years to six.... Pan-Germans created a scene in the reichsrath at Vienna by openly cheering the Hohenzollerns.

WEDNESDAY, MARCH 19

DOMESTIC.—The Turkish government refused the demand of the United States for the repayment of the \$72,000 paid to the brigands as the ransom for Miss Stone and Mme. Tsilka.... The land-thing, at Copenhagen, voted to ratify the treaty providing for the cession of the Danish West Indies to the United States.... President Roosevelt offered the vacant civil service commissionership to James R. Garfield, son of the late President Garfield.... A caucus of Democratic members of the house of representatives adopted resolutions declaring that congress should express sympathy with the Boers.... The supreme court of California declared the trust clause in the will of the late Senator James G. Fair invalid, and the property will at once be distributed among the children of the senator.

FOREIGN.—A conjoint Russo-French declaration has been sent to all the powers, announcing satisfaction of the two governments with the purpose of the Anglo-Japanese convention, and announcing their intention to respect the integrity of China, but reserving the right to take measures to protect their interests there.... The Servian ministry resigned.... The British house of commons passed a bill pensioning the aged poor.... Forty Russian and Polish students have been expelled from Prussian technical schools on charges of political agitation.

THURSDAY, MARCH 20

DOMESTIC.—Lieutenant General Miles, in testifying before the senate committee on military affairs, threatened to resign if Secretary Root's general staff plan is adopted.... The French government, through Ambassador Cambon, requested the state department to institute negotiations for a parcels post treaty between the United States and France.... The president nominated Nevada N. Stranahan to be collector of customs at the port of New York.... The Metropolitan street railway company stockholders ratified the \$150,000,000 New York traction deal.... José Andrade, former Venezuelan minister to the United States, died in New York.

FOREIGN.—John Dillon, for applying an offensive epithet to Secretary Chamberlain in the British house was suspended by the speaker.... The political situation in Hayti is becoming critical; the authorities continue to make arrests, prisoners of importance being taken on board a warship in Port-au-Prince harbor.... Emperor William ordered that a new yacht in the service of the admiralty at Wilhelmshaven be named the *Alice Roosevelt*.... A rare edition of William Caxton's "Royal Book for a King" brought \$11,125 at a London auction sale.

FRIDAY, MARCH 21

DOMESTIC.—The case of General Miles was considered at the cabinet meeting; the president said he was tired of the friction in the army.... The house committee on naval affairs voted to take no action on the numerous Schley bills and resolutions pending before it.

FOREIGN.—Mr. Balfour announced in the house of commons that he would move to limit the suspension of John Dillon to one week.... Meetings of retail tobacconists were held in the chief cities of the United Kingdom, and in nearly all cases the sentiment was favorable to working with the American trust and hostile to the Imperial or British concern.... It is reported that the entire force under Marshal Su, twenty thousand men, had deserted and gone over in a body to the rebels of southern China.

SATURDAY, MARCH 22

DOMESTIC.—General Leonard Wood, military governor of Cuba, arrived in Washington and conferred with the president and Secretary Root on plans for the evacuation of Cuba.... Attorney-General Knox decided that the public lands of Porto Rico are the property of the United States.... Russell S. Taft, chief judge of the supreme court of Vermont, died in St. Albans.... Judge Townsend rendered a decision holding the French steamship *La Bourgogne* responsible for the marine disaster of July 4, 1898, in which several hundred lives were lost.... Charles M. Schwab and other capitalists bought a controlling interest in the Canadian copper company and a considerable block of stocks of the Nickel corporation; they intend to form a holding company, capitalized at \$9,000,000, to control their joint holdings.

FOREIGN.—The strike of agricultural laborers in Italy is spreading.... Cambridge easily defeated Oxford in the boat race from Putney to Mortlake.... The town of Kam-Chau was captured by Chinese rebels.

SUNDAY, MARCH 23

DOMESTIC.—Four more cases and two deaths from cholera are reported at Manila; in Mindanao seventeen signalmen were attacked by Moros, who killed one signalman and captured the transportation of the Americans.

FOREIGN.—Acting President Schalk-Burger, F. W. Reitz, ex-secretary of state of the Transvaal, and Commandants Meyer and Krogh came into the British lines at Pretoria, in South Africa, under a flag of truce, and proceeded to the Orange River Colony.... The election of Maxime Gorki to be an honorary member of the St. Petersburg Academy of Sciences was annulled.... Liberals and Socialists of Belgium demonstrated in favor of universal suffrage.

This week we bring out three new books.

One of them, "The Making of a Statesman," the author's name will immediately commend to you. Joel Chandler Harris wrote it. Perhaps you know him better as "Uncle Remus." You will find him in a different vein in this novelette of love and political ambition. The short stories that complete the book are in his old style.

To appreciate what "Red Saunders" is you have only to begin the book. Once begun, it will hold you in a developing maze of hilarity to the end. There is more genuine blue-devil-exorcising fun in Henry Wallace Phillips' cowboy, "Red," than in a whole library of Humor with a capital H.

Last summer a man found an island. It was small, but good: even valuable. It lay where the Sound joins the Atlantic, a mile off the Connecticut shore. Nobody owned it. The man took possession. With two companions who knew as little of open-air life as himself, he went to live there. The discoverer was Arthur Henry, and the record of his little kingdom is called "An Island Cabin." It is made up of equal parts of ozone and adventure.

To recapitulate:

The Making of a Statesman,
and other Stories.

By Joel Chandler Harris. \$1.25
Red Saunders: His Adventures
West and East.

By Henry Wallace Phillips. \$1.25
An Island Cabin.

By Arthur Henry. \$1.50

The Books of The Week

THE VALLEY OF DECISION. By Edith Wharton. Cloth, 2 vols., \$2. New York: Charles Scribner's Sons.

MRS. WHARTON has chosen a really great theme for her latest novel—a man's struggle for an ideal and his failure to realize it because of the blind ingratitude of those he sought to benefit. It is not a new theme either in literature or life, but it is given new force and vigor in its present incarnation. It is wrought out in the life of an Italian duke of the latter half of the eighteenth century, at that critical period of history which found "multitudes, multitudes in the valley of decision," compelled to choose between drifting with the old order of things or struggling for the new cause of liberty. Our hero, Odo Valsecca, Duke of Pinaura, quickened by the new sense of brotherhood, dedicated himself to repaying the people he was called to rule for generations of unheeded suffering and unrewarded toil. He felt called upon to acquit the debt of a long, unrighteous rule, to pay, if need be, with the last drop of his blood, for the savage victories of one ancestor, the rapacity of another, the magnificence of a third, the secret vices of a fourth. "All these passions had preyed on the people, on the tillers and weavers and vine-dressers, obscure servants of a wasteful greatness: their's had been the blood that had renewed the exhausted veins of their rulers, through generation after generation of dumb labor and privation. And the noblest passions, as well as the basest, had been nourished at the same cost. Every flower in the ducal gardens, every picture on the palace walls, every honor in the ancient annals of the house, had been planted, paid for, fought for by the people. With mute, unconscious irony the two powers had faced each other for generations; the subjects never guessing that their sovereigns were puppets of their own making, the dukes that their pomp and circumstance were but a borrowed motley." Burning with these thoughts, Odo set himself to redeem the credit of his house, at the cost of every personal inclination, at the sacrifice of the love that endears life and ennoble failure. The instrument he chose was a charter providing for a constitutional ministry and giving his people a voice in their own government. But the people were not ready for the charter; to them it smacked of France, of atheism; it was something new and therefore to be suspected. Incited by the jealous nobles and the clergy, they repudiated the charter and attempted to take the life of him who had given it.

Up to this point in the story we have followed the course of one increasing purpose, the growth of an ideal from its first faint glimmerings in the heart of

KROEH'S LIVING METHOD FOR LEARNING

How to Think in French

Sent, postpaid, on receipt of \$1.00

The most successful means yet devised for learning and teaching how to speak French.

"I am sure the book will accomplish precisely what is set to be its purpose."—Prof. James W. Bright, Johns Hopkins University.

"You have done a great and beautiful work in the publication of your manuals."—Bishop John H. Vincent, Chancellor of Chautauqua.

How to Think in German

Sent, postpaid, on receipt of \$1.50

As a practical book to aid in quickly acquiring the power of correct and fluent speaking of the German language, this work has no equal."—Scientific American, Nov 11, 1893.

How to Think in Spanish

Sent, postpaid, on receipt of \$1.50.

"The learner is not obliged to think of rules or of English words when he wishes to speak Spanish."—N.Y. School Journal, July 14, 1894

Four-Track Series No. 5, "America's Winter Resorts," sent free on receipt of a two-cent stamp, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.

an ardent and sensitive boy of nine, to its definite form in the mind of a man. The question now arises, "What will our hero do now that his illusions are shattered, his dream of brotherhood turned into a nightmare?" No man can pass through a crisis like this and remain the same; he will either give vent to his bitterness, as did Timon of Athens, when he shook the dust of the ungrateful city from his feet and from his cave rained curses on the false Athenians; or he will philosophically renounce ideals and try to make the dust of life as it is. Odo was not a Timon; he accepted his defeat as a part of life. He realized that "for generations, for centuries, man had fought on; crying for liberty, dreaming it was won, waking to find himself the slave of the new forces he had generated, burning and being burnt for the same beliefs under different guises, calling his instincts ideas, and his ideas revelations; destroying, rebuilding, falling, rising, mending broken weapons, championing extinct illusions, making his failures for achievements, and planting his flag on the ramparts as they fell. And as the vision of this inveterate conflict rose before him, Odo saw that the beauty, the power, the immortality dwelt not in the idea, but in the struggle for it." The spirit of the man was gone, his zest for life was gone, he plodded along indifferently until echoes of the French revolution began to rumble in Pianura, and his people, catching the fever for liberty, demanded from him the constitution they had rejected. Then a wrath like Timon's awoke within him and vented itself in an unconditional refusal of the terms proposed to him. He would not give a constitution or promise allegiance to France. If his people would not follow him against France, he could still march against her alone. "He recalled how his Piedmontese ancestors had gone forth against the same foe, and the stout Donnaz blood began to bubble in his veins." Thus we leave him, with the old passion of action stirring him and his face set toward Piedmont.

Mrs. Wharton has shown remarkable skill in centering the interest of the story so completely in one person and one theme, and at the same time weaving in such splendid and lifelike pictures of attendant circumstances: the intrigues at court, and convent, and monastery; the work at the universities; the attempts of the stage; the daily doings of the nobles and their satellites; the wretched life of the poor. There is an air of completeness about the whole novel sadly lacking in most of the fiction of the day. No situation is slighted or over-drawn, no word or phrase is overworked. Care and precision are marked in every detail, and a fine sense of unity and proportion prevails in the development of the story. Mrs. Wharton possesses a gift for characterization, though she is apt to be a trifle too sympathetic with the worthy and too keenly sarcastic with the worthless.

John Wanamaker

One dollar is all

A single Dollar (if you act at once) is all it will cost you to secure possession of RIDPATH'S History of the World. A great big set of 9 Royal Octavo volumes with 4000 illustrations, and many maps and color plates. The rest you pay in monthly payments of \$2 each.

Your Last Chance!

IF you'd like to own the best World's History in existence—a history that's as interesting as a story-book and almost as reliable as the law of gravitation—send for the free prospectus and specimen-page book to-day, using the coupon in the corner.

We've a pamphlet, prepared by the publishers of the history, which tells just what the work is, how it came to be written, and the sort of readers it aims to entertain and interest. This pamphlet also contains specimens of the illustrations and text pages, and if you're interested, and mail us the coupon, we'll send it to you free of cost.

Reading that pamphlet will settle in your mind, once for all, whether you need the history or not; and you'd best settle it now, **for this is our last advertisement of Ridpath's History at HALF PRICE.**

THE DEVELOPMENT OF CABINET GOVERNMENT IN ENGLAND. By Mary Taylor Blauvelt. Cloth, pp. 300, \$1.50. New York: Macmillan Co.

Those who desire to trace the development of the English system of cabinet government from the *concilium ordinarius* of the Norman kings to the present highly developed system of party control can do no better than read Miss Blauvelt's admirable book. In brief form she discusses the rise of the cabinet through the various differentiations of the privy council, the coalition cabinet responsible only to the king, the advisers of the early Hanoverians responsible at first to the house of lords and later to the growing house of commons, to the present state of affairs in which the cabinet must be in accord with the party in power in the lower house, and is chosen without regard to the rank or genealogy of the members. Starting as a selected committee of the privy council, the cabinet at no time even down to the present has been legally recognized as a part of the governmental scheme of English politics. No better instance than the English cabinet could be found of the gradual, extra-legal evolution of the forms and machinery of government, and there have been few better studies of its growth than the one which Miss Blauvelt has given us.

THE LEOPARD'S SPOTS. A Story of the White Man's Burden, 1865-1900. By Thomas Dixon, Jr. Cloth, pp. 465, \$1.50. New York: Doubleday, Page & Co.

Mr. Dixon has essayed a picture of the manner in which the men and women of the south have rendered the work of the northern reconstructionists of no effect. The scene is laid in North Carolina and the characters most often on the stage are a chivalrous young southerner, who ventures into matrimony and the governor's chair at one and the same time, and his sweetheart a flawlessly beautiful and very charming young woman. It would be useless as well as unkind to criticize the literary form of a book that is so evidently written for the purpose of defending a section and a cause. The woes of the section and the ultimate merit of the cause compensate for many of the defects that the book contains, and the attractiveness of the love story that runs through the pages will render the reader blind to the others.

MONSIEUR MARTIN. A Romance of the Great Swedish War. Cloth, pp. 556. \$1.20 net. New York: G. P. Putnam's Sons.

MONSIEUR MARTIN is an English tutor in the household of the Countess Polenstjerna, of Sweden, at the outbreak of the wars of Charles XII, the "Madman of the North." He commits the grave indiscretion of falling in love with the young countess, his pupil, and to atone for his indiscretion is sent to Dresden to bring home the Lord Karl, the cousin of the countess, and her affianced husband. He succeeds, but the young lord becoming involved in a quarrel with another cousin, the Count

Bengt, is killed. Another complication is introduced when it is discovered that the countess and Bengt are in love with each other. The whole difficulty is finally solved by the death of Bengt in a duel, the successes of Monsieur Martin as a soldier under Charles, and his final marriage with the countess after the novelist has given her time to recover from her infatuation for Bengt.

ONE WORLD AT A TIME. By Thomas R. Slicer. Cloth, pp. 269, \$1.35 net. New York: G. P. Putnam's Sons.

THIS is a collection of essays which fitly express the sanity and tolerance of Dr. Slicer's faith. In the chapters on The Skeptic and The Agnostic, he speaks a very necessary word for the qualities of doubt and unbelief in the religious makeup of the individual. Whether the reader agrees with Dr. Slicer in everything or not, he must be impressed with the evident fairness and sincerity of the man.

PRACTICAL ASTROLOGY. By Comte De St. Germain. Cloth, pp. 292, \$1. Chicago: Laird & Lee.

EVERY Man His Own Astrologer, might properly have been the title of this book, which is a volume of serious pretensions, claiming to be based upon the most ancient sources of the "science," and setting forth its tenets and methods in such a way that one may with comparative ease determine his nature and future, and the nature and future of others. It provides a means of amusement if nothing more.

A POLITICAL PRIMER OF NEW YORK CITY AND STATE. The City Under the Revised Charter of 1902. By Adele M. Fielde. Paper, pp. 118. New York: League for Political Education.

A PRACTICAL guide for the city and state of New York. It contains maps of the legislative and administrative divisions of the city and state, describes the manner of nominating and electing the officers, and outlines the functions of the officers, commissions, departments, and representatives of the government.

THE MAGIC WHEEL. By John Strange Winter. Cloth, pp. 386, \$1.25. Philadelphia: J. B. Lippincott Co.

A STORY in which hallucinations, clairvoyants, and second sights play an important part. The Woman discovers the Man in a vision and rescues him, when shipwreck has made him a cast-away on a desert reef, in the same way. A clumsy and utterly preposterous tale.

LEPIDUS, THE CENTURION. By Edwin Lester Arnold. Cloth, pp. 305, \$1.50. New York: T. Y. Crowell & Co.

A CONFESSEDLY impossible but not unpleasant tale of the resurrection of a Roman centurion buried in a vault on an English estate ever since the Roman invasion of Britain.

DISCOURSES ON MIRACLES. By Bishop S. M. Merrill and Bishop Henry W. Warren. Cloth, pp. 131, 25 cents. Cincinnati: Jennings & Pye.

Sets in 13 Handsome Volumes, 7000 pages. Size of Volumes, 8x5½ inches.

Shakespeare Club Closing!

To obtain a set of the New International Shakespeare at half-price you must be prompt. Of the sets allotted to the Half-Price Shakespeare Club there is only a small number remaining unsold, and it is certain that they will be disposed of in a short time. When they are sold there will be no more sets at our disposal for introductory purposes and **the price will positively be advanced.** The coupon in this advertisement, if cut out and mailed in time, will bring a set to you for examination, express prepaid, and **\$1.00 a month will keep it.** No student or lover of Shakespeare should let this opportunity pass.

The Best Shakespeare

In **accuracy, clearness, convenience of arrangement**, and in all that goes to constitute an ideal Shakespeare, the International Edition holds first place. This edition reproduces the famous Cambridge text, which has been for forty years the standard text of Shakespeare. To this text have been added **Prefaces**; copious **Critical Comments** taken from the works of great Shakespearean scholars; full **Glossaries** defining every difficult word; **Explanatory and Critical Notes**, which make clear every obscure passage. There are over **200 Illustrations**, many of them being rare woodcuts of Shakespeare's time. There are also numerous full-page **chromatic plates** in colors and **photogravures** on Japan vellum. Included with the set is a complete **Life of Shakespeare**, containing the facts actually known about him, by Israel Gollancz, with critical estimates of Shakespeare's genius by Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shakespeare's Works are given complete, including the **Sonnets and Poems**. The volumes are elegantly bound in half-leather or cloth. **A set of this edition is a complete Shakespearean Library.**

Sets at Half-price—If you are Prompt

We are so confident that this edition will please the most exacting buyer that we are willing to send complete sets for examination. But **prompt action is necessary** if you wish to obtain a set before the advance in price. At the present prices a set of this edition is a rare book bargain. The special prices are **\$22 for a set in half leather**, and **\$18 for a set in cloth**—about one-half the regular subscription prices. You may pay in little payments of \$1 a month. The Coupon will bring you a set for examination (**express prepaid by us**), and if not satisfactory it may be returned at our expense without costing you a cent.

FREE We will send **free with each set** of this edition a complete Topical Index to Shakespeare's plays (forming one volume) and a Plan of Study for each play, containing study questions. The Index Volume is in every way equal to a Concordance, and no Concordance can be purchased for less than \$6.00. The Method of Study for each play is invaluable to students.

Beautiful Specimen Pages Sent on Request.

BUSINESS AND FINANCE

The Business Situation
Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Don's Review, New York, March 22

Evidences of further improvement are numerous. Labor controversies are less threatening, many settlements having been effected, while others are momentarily anticipated; wages have been advanced, not only through strikes, but in some cases voluntarily; traffic congestion has subsided until it is possible to deliver goods according to specifications; aside from some idle footwear shops, the leading lines of manufacture are very fully engaged, while jobbing trade is of exceptional magnitude. Prices of the sixty most active railway securities have reached a new high record, yet the volume of speculation for the week was only about 40 per cent of last year's, consequently the loss of only 17.3 per cent in bank exchanges at New York reflects the enormous payments outside

THE NEW WOMAN

Made Over by Quitting Coffee

Coffee probably wrecks a greater percentage of Southerners than Northern people, for Southerners use it more freely.

The work it does is distressing enough in some instances; as an illustration, Miss Sue W. Fairall, 517 N. 4th St., Richmond, Va., writes, "I was a coffee drinker for years, and for about six years my health was completely shattered. I suffered fearfully with headaches and nervousness, also palpitation of the heart and loss of appetite.

My sight gradually began to fail and finally I lost the sight of one eye altogether. The eye was operated upon and the sight partially restored, then I became totally blind in the other eye.

My doctor used to urge me to give up coffee, but I was willful and continued to drink it until finally in a last case of severe illness the doctor insisted that I must give up the coffee, so I began using the Postum Food Coffee, and in a month I felt like a new creature.

I steadily gained in health and strength. About a month ago I began using Grape-Nuts Breakfast Food and the effect has been wonderful. I really feel like a new woman and have gained about 25 pounds.

I am quite an elderly lady and before using Postum and Grape-Nuts I could not walk a square without exceeding fatigue, now I walk ten or twelve without feeling it. Formerly in reading I could remember but little, but now my memory holds fast what I read.

Several friends who have seen the remarkable effects of Postum and Grape-Nuts on me have urged that I give the facts to the public for the sake of suffering humanity, so, although I dislike publicity, you can publish this letter and my name if you like."

of the stock market. Compared with 1899, the previous banner year, there is a gain of 10.4 per cent. At other leading cities there are gains of 4.0 and 21.5 per cent, respectively. Railway earnings thus far reported for March show an increase of 2.7 per cent over 1901 and 16.7 over 1900.

IRON AND STEEL

Pressure for iron and steel has not diminished perceptibly, yet the impression is growing that after July 1 the situation will become approximately normal, and it will be possible to secure deliveries with some degree of promptness. This is the more probable as there has been a further stiffening of quotations and additional importations, which would have been much larger but for the advance in foreign markets. It is worthy of note that imports are mainly of pig iron, billets, and sheets, while the exports of many lines of expensive machinery and other finished products are fully sustained. Large contracts are constantly under consideration for structural material on domestic account, including railway bridges, viaducts, car shops, and office buildings. In this respect the domestic consumption this year will far surpass all records. Open weather has brought out a heavy tonnage of merchant pipe.

COTTON AND WOOL

Advanced wages at cotton mills mean a higher cost of production, and the market has hardened in consequence. Business under the new conditions has not yet been sufficiently large to establish quotations, yet some advances of 2 to 5 per cent are recorded. Export sales are still checked by high prices. A helpful feature is the increased demand at southern jobbing centers. Woolens are quiet, with only a fair movement of staple lines, though some fancy grades are fully sold and out of the market.

to 4,525 bushels for the week, against only 3,98,472 last week, and 3,355,098 a year ago. Western receipts continued to be an unfavorable comparison with the movement in 1901, wheat amounting to 3,99,990 bushels, against 4,165,833, corn 1,460,536, compared with 3,074, Atlantic exports of corn increased only over the low record of the preceding week to 298,884 bushels, but there still a severe loss as compared with 2,351,272 bushels shipped a year ago.

FAILURES

Failures for the week numbered 209 in the United States against 224 last year, and 31 in Canada against 33 last year.

Financial

THE MONEY MARKET

Bradstreet's, New York, March 22

The fact that large offerings of bonds were made March 15 when Secretary Shaw terminated the purchasing of governments by the treasury, seemed to create a better feeling in the New York loan market at the beginning of the week. The inquiry was light, but as the week progressed shipments of funds to the interior tended to create renewed

A BLIND WANDERER

Didn't Know that Food Could Restore Her

A well known writer uses Grape-Nuts as a tonic when feeling the effects of extra heavy work. She writes, "Grape-Nuts should be taken regularly as one would a tonic. I eat mine cold in the morning with hot milk or cream poured over it, and it is delicious, nourishing, and strengthening.

Some time ago I said to a lady friend who was a great sufferer from dyspepsia and had been an invalid for five years, and who was a mere skeleton, 'If I had only known you sooner you need not have suffered all these years.' She looked at me in surprise and asked me what I would have done. 'I should have put you on Grape-Nuts Breakfast Food.' I replied quite confidently. 'Did you ever hear of it?' Oh, yes, she had heard of it, but never tried it as she had never had her attention called to it especially and had not thought it applied to her needs.

'Now,' I said, 'If you will just set about it and try Grape-Nuts for a week, three times a day, I will guarantee you will rise up and call me blessed.'

She took my advice and followed it faithfully. When I saw her about a week later she looked like a different person although she had only gained two pounds in weight, but said she felt so much better and stronger and has greatly improved in health and strength since using the food.

She is getting well and you can imagine her delight is unbounded. My own experience and that of others is sufficient evidence of the scientific value of a food that supplies nourishment to the system and builds up the brain and nerve centers." Name given by Postum Co., Battle Creek, Mich.

conservatism, the near approach of April 1, with the customary settlements, creating a feeling that rates would be firmer before that date. Call money, which early in the week was quoted at from 3¼ to 4½ per cent, hardened, and its range was advanced to 4@5 per cent, with 4½ per cent as the prevalent figure for such accommodation to Wall Street borrowers. Time money has been offered with moderate freedom, chiefly by trust companies and out-of-town lenders, who desire to obtain full rates, the prevalent figures being 4¼@4¾ per cent for all periods. There was a slight increase in the offerings of commercial paper and only a moderate buying demand, rates being firm at 4½@5 per cent for double names.

THE STOCK MARKET

Stock-market prices at New York hold firm, with irregular advances in grangers and high-priced specialties. Firmer rates for money create no apprehension, but a threatened strike in the coal region causes dullness in the anthracite shares. Better news about crop prospects has strengthened the granger shares, and the market views the Northern Securities litigation mainly as a cause for waiting tendencies in speculation. The traction stocks were irregular owing to litigation attacking the Metropolitan street railway deal, though Brooklyn rapid transit advanced on the ratification of its bond issue. The steel stocks are quiet, pending announcement of the plan for a bond issue and the retirement of part of the preferred stock. Bonds are very strong, with a steady demand for prime investments and advancing tendencies in lower-priced issues of fair quality. Foreign exchange is dull at around 4.87½ for demand sterling.

BANK CLEARINGS

Bank clearings for six business days ending with March 20 aggregate \$2,166,794,610, an increase of 2 per cent over last week's total, but a decline of 10 per cent from the figures of the week one year ago. Exchanges at cities outside of New York amount to \$760,632,684, a loss of 4 per cent from last week, but a gain of 5 per cent over the same week last year.

The Reduction in Exports

A bulletin issued by the treasury bureau of statistics says that the reduction of \$41,000,000 in the exports of the United States for the eight months ending with February is not considered at all discouraging by those interested in the growth of our export trade, nor is it an indication of a decline in the general growth of that trade. On the contrary, in all important articles except three, in which conditions are abnormal, there has been an increase. The decrease is solely or practically so in corn, due to the great crop shortage caused by the drought of last summer; in copper, in which prices have greatly fallen, and in iron and steel manufactures, due to the unusual demand of the home market upon our manufacturers and the reduced demand in foreign markets. In corn and cornmeal alone the exports fall

more than \$47,000,000 below the corresponding period of last year, while the total decrease in all exports was but \$41,012,584; showing that if exports were normal the total would show an increase of more than \$6,000,000 over last year and over the corresponding period of any preceding year.

In iron and steel manufactures figures of the seven months ending with January (February figures being not yet available) show a reduction of about \$16,000,000 in exports, this being due to the excessive demand of the home market upon our manufacturers and the lower prices and reduced demand abroad. In wheat the exports for the eight months show an increase of nearly \$30,000,000 compared with those of the same months of the preceding year, and in provisions there is an increase of \$5,000,000. In cotton the month of February shows an increase of over \$2,000,000 compared with February, 1901, though the six months of the cotton year ending with February show a decrease of about \$10,000,000, due to lower prices and not to any reduction in quantity, the number of pounds exported during the period being 2,638,347,613 pounds, against 2,308,244,326 pounds last year, an increase of over 330,000,000 pounds.

Even with this decrease of \$41,000,000 the United States still stands at the head of the world's exporting nations, the total exports of domestic merchandise being, United States, \$957,986,427, and the United Kingdom, which most nearly approaches the figures of the United States, \$911,346,250.

Various Topics

It is reported that the Canadian Pacific railway has placed an order for 20,000 tons of steel rails in Germany.

Attorney-General Knox has ruled that Honolulu is a Pacific port of the United States, and that vessels from New York are entitled to a drawback on coal shipped for the voyage.

The Bank of England at its semi-annual meeting March 20 declared the usual half-yearly dividend of 5 per cent. The profits for the six months to February 28 were £738,898.

Lloyd's statistical tables for last year, recently issued, show a net addition to the combined steam and sail tonnage of the United Kingdom of 571,045 tons—the largest of any addition during the decade, and comparing with 286,478 tons in 1900 and 379,865 tons in 1899.

What is said to be the greatest cargo of armor ever shipped from Homestead, Pennsylvania, left that place March 18 en route for New York, where it was hurried to Europe by fast steamers. The shipment, which is for the Russian government, consisted of thirty-six plates for the first-class battleships *Bordina* and *Ariel*, now building in the imperial yards at St. Petersburg, Russia. In addition to these plates there were thirty-six tons of taper plates.

WIT AND HUMOR

The Charms of Spring

There's something fine about the spring;
It brings the green upon the trees,
With rose and daisy blossoming,
And droning song of honeybees.
It brings the apple blossom, pink,
To make the orchard breezes sweet;
But what is best in spring—I think—
It brings the folks upon the street.

It brings the girls in filmy ruff,
And dainty bonnets full of bloom;
And such a sight is fair enough,
Without the orchard's rare perfume.
It brings the girls, and women, too,
Those human blossoms of this earth,
Elusive bargains to pursue,
And fill the air with: "What's this
worth?"

It brings the milliners benign,
Who take a bonnet's giddy price
And make it end with "49,"
Which makes it stunning, swell and
nice.
It brings the girls upon the street
Inspecting shops where bargains
lurk—
Where tailored suits are "just too
sweet"—
And, oh, it keeps the men at work!
—*Baltimore American.*

Divine Afflatus

Regarding the young authoress nar-
rowly, and from several directions, for
three-quarters of an hour, we found our
curiosity still quite unsatisfied.

So we asked, bluntly:

"Why do you write novels? In par-
ticular, is it because of an imperious,
irresistible inspiration?"

"Well, there's that," answered the
girl, after a moment's thought, "and
then there's the occasional rainy day. It
is so dull! After one has cried as long
as one possibly can, and nobody calls, it
is such a relief to write a novel or two!
I'm not intellectual enough to read, and
not strong enough physically to while
away much time eating. So what am I
to do?"

There were tears in her eyes now.
Dear heart! She thought we were blam-
ing her.—*Life.*

He married her—his fair typewriter
girl—
So ladylike, so gentle, such a pearl!—
And now discovers, to his consternation,
There's not a thing she'll do at his dic-
tation.—*Chicago Tribune.*

Archbishop Ryan's friends tell this
story of his grace: The archbishop was
about to take a train for Baltimore at
the Broad street station when a young
man accosted him, saying: "Your face
is familiar. Where in hell have I seen
you?"

"I really don't know," said the arch-
bishop, blandly. "What part of hell do
you come from?"—*Chicago Journal.*

\$10 SECURES A \$480 LOT IN GREATER NEW YORK

**Greatest Offer Ever Known—Guaranteed Increase in Value
20 per cent. Within One Year—Will Double in Value upon
Completion of New Bridge—Only 35 Minutes from New York
City Hall—Free Trip to New York and Return.**

This remarkable proposition carries the guarantee of the largest real estate firm in the world, established 15 years, with over 30,000 satisfied customers, whose testimony is the best evidence of its sterling character.

It brings you into personal touch with New York's wonderful expansion, and enables you to profit by its enormous growth in values. It offers you an opportunity to realize large profits from a comparatively small investment, and with absolute safety—an opportunity to make money the way the Astors made theirs, by legitimate natural increase in real estate values. We own 1,500 acres of the best land in Brooklyn, secured before its consolidation with New York, lying in the direct pathway of the tremendous development now going on, and which will be enormously increased by the new bridges, tunnels, etc. Write us for all the facts and convincing evidence of this unprecedented situation and the wonderful future of Brooklyn Borough.

Our property is only 3½ miles from Brooklyn Bridge; only 35 minutes from New York City Hall; we are developing it with the highest class of improvements (see photograph) in exact accordance with city specifications, on 60, 80 and 100-foot streets boulevarded with macadam from curb to curb, granolithic curbing, gutters and sidewalks (5 feet wide and 12 inches deep) with flower beds, trees and shrubbery, city water, etc. The lots now sell for \$480, and guarantee will be worth \$576 within one year from now, will unquestionably bring \$10,000 in ten years' time; it is today *intrinsically* worth as much as the \$40,000 lot at 92d Street, New York, for it is under the same city government, transportation is similar, same distance from City Hall, same running time, same fare, almost the same street improvement, and now merely lacking building development. Values must equalize themselves, and are already increasing with marvelous rapidity.

Corner of Utica Avenue and Linden Boulevard, Rugby. Every improvement you see has been made within six months.

LISTEN TO OUR PROPOSITION: For \$10 down and \$6 per month until paid for, we sell you a regular New York City lot, full size, subject to the following guarantees from us: If at the expiration of the year 1902 this \$480 lot is not worth \$576—or 20 per cent. increase—based on the price at which our corps of salesmen will then be selling similar lots, we will refund all of the money you have paid us, with 6 per cent. interest additional. If you should die at any time before payments have been completed, we will give to your heirs a deed of the lot without further cost. If you should lose employment or be sick you will not forfeit the land.

FREE TRIP TO NEW YORK CITY. As a further guarantee of good faith, we agree with all persons living east of Chicago to pay you in cash the cost of your railroad fare to New York and return, if you visit our property and find one word of this advertisement a misrepresentation; or in case you buy, to credit cost of the fare on your purchase; to those living farther away than Chicago, we will pay that proportion equal to round-trip Chicago ticket.

AS AN INVESTMENT, we believe this to be one of the safest, surest and most profitable that could be entered into. It is safer than a Savings Bank, it is not subject to panic, while the prospective profits are infinitely greater. It is the surest because, as a matter of history, New York City property has steadily increased in value ever since the city was originally formed. It is bound to be profitable because there is no other land within the same distance of New York City Hall that can be had for anything near as low a price—for New York has become so congested that the "density belt" has advanced to the very gates of our properties.

Please note that our guarantee absolutely insures you a profit, or your money will be refunded. For first selection we would advise you, if you are already satisfied, to send first payment, \$10 in cash, at our risk immediately, and we will select the very best lot for you; or, if you prefer to wait for further particulars, write for complete details immediately. It will cost you nothing to thoroughly satisfy yourself on every point. We solicit closest investigation.

Titles are guaranteed to us by the Title Guarantee & Trust Company, of New York.

WOOD, HARMON & CO., "Dept. H.B.," 257 Broadway, NEW YORK

The following testimonial was given us by the Nassau National Bank of Brooklyn.

"There is no doubt the property offered by Wood, Harmon & Co. in the 29th Ward represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood, Harmon & Co. are perfectly reliable, and are worthy the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States."

Rheumatism

The Editor of the NEW ALBANY (Ind.) MEDICAL HERALD, in the course of an article on the treatment of Rheumatism says:

"But not until lately, when Tartarilithine has been employed by us, have we obtained results that were even fairly satisfactory in the treatment of gout and rheumatism. By the employment of this preparation I have been able to relieve some of the most distressing afflictions of this class, and now regard Tartarilithine as the most valuable remedy at our disposal in the treatment of this class of affections. In rheumatism and in gout Tartarilithine can be administered with confidence."

PUBLIC OPINION

Number 14
Volume XXXII

The Week

Thursday
April 3, 1902

THE publication of the details of General Miles's proposals for the pacification of the Philippines and the correspondence sent to congress Saturday in connection with this proposal will doubtless change the consensus of opinion indicated by the leading summary in this issue. The general's proposal that he be allowed to supercede (for that is what his proposal would amount to, as Secretary Root says) the existing Philippine authorities in order that he might have an opportunity to try moral suasion on the Filipinos, lacks the elements of common sense. This at least is the opinion of those who have so far passed on it. These include President Roosevelt, who delivers the unkindest cut of all by saying that "Had there been any doubt before as to the wisdom of denying General Miles's request, these papers would remove such doubt."

CUBA is to be free, the prophecies of pessimistic persons to the contrary notwithstanding. Secretary Root's letter to Governor General Wood sets May 20th as the date on which the control of the island is to be turned over to the regularly elected government of the island. After thirty years of war it has taken but three years to get matters in the island in such shape that its control could safely be assumed by the ravaged and pestilence and debt-burdened people. This is an achievement of which we may well be proud; order and healthy conditions have been brought about, and with the passage of the Cuban reciprocity bill, the outlook will be for a happy and prosperous future.

CONGRESS began its investigation into the so-called "Danish Islands scandal" last Tuesday, although most people, and we believe all newspapers, had decided that there was nothing in the case to call for an investigation. The Danish government has reiterated in the most positive terms that there was no basis for the charges that money had been demanded or paid for the bribing of anyone in connection with the sale of the islands, the whole business growing out of the efforts of two lobbyists to defeat the transfer of the islands when they found that they would not make anything out of the sale. However, no one fearing the result of the investigation moved by Mr. Richardson, he is advised on all sides to go ahead and see what he can discover.

NOT long ago we printed a number of editorials from the daily and weekly press pointing out that public sentiment against strikes and the obvious wastefulness of this method of settling labor disputes had resulted in a general reluctance on the part of labor to resort to a strike until all other means of obtaining redress of grievances had been exhausted. The truth of this was impressively demonstrated last week when a strike of 16,000 mill operatives at Lowell was averted by mutual concessions at the last moment and by the fact that the threatened coal miners' strike has so far been postponed by the efforts of the civic federation and the moderation displayed by operators and miners alike.

KENTUCKY'S tenth congressional district has produced a woman candidate for congress on the Prohibition ticket in the person of Miss Mary Burkhart, described in the dispatches as being young, attractive, and wealthy. Miss Burkhart is making a house-to-house canvass, finding her way over the sparsely inhabited mountain counties on horseback. In normal times a Prohibition candidate in this region would not have a chance worth considering, but in view of the personal attractions of this particular aspirant, the energy of her campaign, and the chivalry of the blue-grass male, it is re-

motely possible that "the lady from Kentucky" may take her seat in the United States house of representatives.

CONTINENTAL comment ascribes to Cecil Rhodes a desire to crown himself emperor of South Africa, but everywhere else his efforts are acknowledged to have been directed solely toward the extension of the British empire for Britain. Every side of his career is touched upon in the symposium in our foreign department this week, the most obvious comment being that so far as his faults and virtues were concerned, they were neither greater nor less than his ambitions and aims. All men who have done great things have had great failings, and no one has so far disputed that Cecil Rhodes was a great man—not even those who condemn his methods of accomplishing his aims.

RHODES dies just as there is in South Africa "a sense of departing darkness," as one correspondent puts it. No definite news from Kronstad in reference to the Boer conference there has yet been received, but in London there is thought to be a hopeful prospect of the success of Schalk-burger's mission. He and General Botha are said to be ready to make peace on the basis of a general amnesty, legislative autonomy, and a money grant in aid of the ruined burghers. If we may judge from the recent tone of London papers, peace on these terms, the Boers waiving all claims to independence, would be approved by the majority of Englishmen. But DeWet, De La Rey, Mr. Steyn, and the Kruger party in Europe have yet to agree to a waiver of independence.

AN encyclical which reads like a farewell message from the venerable pope was printed in the *Osservatore Romano* on Saturday. It is distinguished not so much by its commands as by its characterization of the present state of society. "Never," it is declared, "has humanity found itself in a more miserable condition." Disorder in all social affairs, especially in family relations, socialism, anarchism, and unjust wars are some of the manifestations of the "inquietude" of the world. And to meet this situation the pope invokes the union of all Christian churches and the enforcement of the teaching of religion as the only remedy. In the few comments we have seen upon the encyclical, the one impression seems to be that if the case is as bad as the pope puts it, his remedy is woefully inadequate.

JUST before the Easter holidays a new Irish land bill was introduced in the house of commons. We wish we could give the details of this bill, but the provisions of its forty-five clauses are so intricate that no one seems to be willing to take the trouble to unravel and describe its provisions. The only thing known about the bill, therefore, is that it is a short and hesitating step toward Irish land reform; no one looks upon it as more than a drop in the bucket of Irish grievances. It is said to be likely, nevertheless, that it will be put into effect, although several half-measures of land reform are already in force and have, it is admitted, done more harm than good.

PENSION Commissioner Evans has sent in his resignation to the president, much to the joy of those who have found fault with his strict construction of the pension laws, but greatly to the regret of the public at large. It is deplored on all sides that the commissioner is to give way to his opponents, and that his resignation means such a surrender is apparent from the fact that he explains it on the ground that his presence is an embarrassment to the administration.

AMERICAN

The Issues Between General Miles and The Administration

THE first reports of General Miles's statement before the military affairs committee of the senate in relation to the army reorganization have excited more discussion than has any other topic during the past week. The commanding general was at first reported as having characterized the bill as one aimed to concentrate despotic powers in the hands of the president; he also charged that the general staff feature would result in the exercise of favoritism, and that he could name the men who would be advanced if the bill became a law. The revised statement contains this paragraph: "It seems to me you are throwing the door wide open for a future autocrat or a military despot. It is not, in my judgment, in accordance with the principle and theory of democratic government, nor for the best interests of the army, which has existed more than a hundred years and fulfilled all your requirements, to adopt such a scheme." The immediate result was to start rumors to the effect that the president and the secretary of war would retire General Miles.

The Philadelphia *North American* (Ind. Rep.) thinks such a course would be very unwise. "The people have had enough of this business of disciplining and discrediting every successful military and naval commander who dares to exercise independent judgment and the right of free speech, and it will be well for the politicians to keep their hands off Miles for the present." The Philadelphia *Times* (Ind. Dem.) agrees with Miles's criticism of the army bill, and thinks that he has rendered a great service in calling attention to its dangerous character. How widely different are the views of the press on this subject, however, is shown by the assertion of the New York *Press* (Rep.): "It is a court-martial offense for him to denounce in the way he has done it the efforts of the president and the secretary of war to establish a general staff, in keeping with the most approved practices of the best military system of the world, as a conspiracy, in behalf of favorites, against the welfare of the army." The Baltimore *American* (Rep.) disagrees entirely with this opinion, asserting that it was not only the general's right, but his duty, to oppose legislation that would bring about a condition in the war department similar to the clique rule that prevails in the navy. Exactly similar views are expressed by the Chicago *Post* (Rep.) and the *Record-Herald* (Rep.), the latter adding that "it is to be

GENERAL NELSON APPLETON MILES
From the Painting of Charles Ayer Whipple

hoped that the president will not be persuaded to make a martyr of General Miles, and, above all, that he will not further encourage the unwelcome prominence of Corbin and his clique." The *Inter Ocean* (Rep.), on the other hand, declares that "General Miles is so constituted that he can not contemplate or discuss any army measure without reference to his own greater glory. This has become an infirmity with General Miles—an infirmity that renders him not only useless, but actually mischievous."

The Milwaukee *Free Press* (Rep.) and the Minneapolis *Times* (Ind. Dem.) refer to the rejection of Miles's plan for the pacification of the Philippines in partial explanation of his present attitude, the *Free Press* saying that Miles has "slopped over again" and asking: "Suppose some inferior officer should declare that if the plans of General Miles are carried out, he will resign, and that such plans would be subversive of all discipline, how long would that officer last?" The St. Paul *Globe* (Dem.) is not greatly disturbed by the general's threat to resign, but it thinks "The public has gained information of the desire and intention of the president and his friends to make of the army a thing to be manipulated in the political game if they think their interests can be served thereby." The Detroit *Tribune* (Ind.) finds little to choose between the administration's "constant flouting" of the general and his intemperate and ill-judged outbreaks. On the whole, however, the *Tribune* thinks it would be wiser "to let Miles alone."

In the south, General Miles has the sympathy of many, if not a majority, of the newspapers; this is the result of the observation of the Memphis *Commercial Appeal* (Dem.) which says that "General Miles has frequently been without sympathy, but in this instance he will discover that the country is largely behind him."

Shall ex-Presidents Be Made Life Senators?

MR. CHARLES FRANCIS ADAMS has recently made an important contribution to the perennial discussion of this subject, saying that "it is a method of political utilization of valuable material, otherwise lost, which entirely commends itself to my judgment. The best way always of considering such a proposition is to look at it historically. Consider, therefore. For

a moment, what would have been the practical result had this theory been engrafted into the original constitution. Had it been engrafted there, Washington would have been an *ex officio* member of the senate for three years, John Adams for twenty-five, Jefferson for seventeen. Monroe and Madison would have been senators for a number of years. Then follows J. Q. Adams, and, as you know, he was in the national councils for sixteen years after being retired from the presidential chair, and from the public point of view those were the most valuable years of his life. Jackson would have been about six years a senator; Van Buren about twenty-two years. The terms of office of the succeeding presidents would all have been short."

Coming at once to more recent days, Mr. Adams thinks that few would be found in the whole land who would hesitate to say that the services of either Grover Cleveland or Benjamin Harrison would have been detrimental to the public interests were one of them in the senate now and had the other been there until his death. Now, consider for a moment what possible injury could result from such a transfer of ex-presidents to the senate. On the one hand a dignified and adequate provision would be made for our ex-presidents, in such a way that the country would be assured of their services and counsel. On the other hand, experience has shown that there never would have been more than three, at the outside, senators for life, and, as a rule, but one. Today, for instance, there would be just one, and that one ex-President Cleveland. The mere statement of the case seems to me to carry conviction."

This statement of the case finds support in many quarters, the *Troy Press*, for example, saying that "the reasons for making ex-presidents life senators are patent, patriotic, and potential, and we have yet to see in the entire discussion one valid objection to the plan." The *New York Sun*, on the other hand, marshals three objections to the plan advocated by Mr. Adams and those who agree with him.

In the first place, says the *Sun*, "the legislator with a life term of office is not tolerated by American principles. No matter how able and disinterested he

may be, no matter how great may have been his public services, his continuance in office must be subject always at stated periods to the votes of those whom he represents. When he is relieved of all political responsibility for his acts as a law-maker, and is confirmed in his irresponsible power so long as breath shall remain in his body, the government of which he is a part ceases to be republican and becomes to that extent an autocracy.

"The second consideration is this: The introduction of this abnormal element into the law-making power would upset the system of government through party organizations.

"Then again: The presidential life senator might hold his seat and possess his vote under the fiction that he represented not a particular state, but the nation at large; nevertheless, as a matter of fact he would be a son and citizen of some particular state.

"Such are some of the objections to the presidential life senator. He is needed in the senate neither for the country's sake nor for his own. Our ex-presidents are already provided with a position of incomparable dignity, that of citizens of the United States who have been honored with election to the nation's highest office."

The Proposed Investigation of Southern Elections

THE house caucus, having approved the resolution of Congressman Crumpacker for an inquiry into the electoral situation developed in the south by laws disfranchising the Negroes, strenuous objections from southern newspapers might have been expected. If such objections have been made, we have not been able to find them. Instead, we see the *Jacksonville Times-Union* advising Democrats not to oppose the resolution. "What have we to hide?" asks the *Times-Union*. "Are we ashamed of what we do? We have claimed that our practice is forced upon us by absolute necessity. Offer an amendment providing that the same committee take testimony as to elections in

OUT OF THE BAY AND INTO THE OCEAN

—*Minneapolis Tribune*

UNCLE MARK—"If I kin jist git these two ter goin' together!"

—*Minneapolis Journal*

all the states, and then no man of the south should object." The *Washington Post* (Ind.) is very much opposed to the Crumpacker program because it believes that the course proposed will result in sectional ill-feeling: "Every thinking man feels that the *status quo* is desirable and should not be disturbed. We want no encouragement to the northern fanatic and the southern fire-eater to again pose as the representative characters of the two sections. The Republican party claims parentage of existing prosperity. Why should it want to be guilty of infanticide? Why should it go forth Crumpackering against the welfare of the whole country, in a warfare that can never justify the sacrifice it will require, and that will destroy what has been so carefully builded?" The *Washington Star* (Ind.) thus answers the *Post* and those who agree with its position: "Excited resistance to a mere resolution of inquiry into the matter raises the reasonable presumption that the vociferous protestants against investigation are concerned in or profit by violations of the provision of the constitution to which attention is called. Is there not a distinct comic opera suggestion in the indignant and denunciatory attitude of those who in confessed violation of the constitution exercise an unjust and illegal excess of power in the electoral college and the house at the expense and to the injury of all other Americans? Are the millions of Americans outside of a few states to submit indefinitely to this unconstitutional and injurious discrimination against them in order that the beneficiaries thereof may not be irritated and that universal good feeling may prevail? There will be no force bill, and no Negro domination in the south. But it is not in the American nature, or in human nature, that the men and states of the west and north should permit the whites of a few states in the south to cast far weightier votes than they, man for man and state for state, in the electoral college and house, when the constitution specifically provides the remedy against this injurious discrimination."

The Danish Islands "Scandal"

A CHARGE OF BRIBERY IN CONNECTION WITH THE SALE
TO THE UNITED STATES

IN the house on Thursday, Mr. Richardson secured the adoption of a resolution of inquiry into the charge that \$500,000 had been demanded of the Danish government by its alleged agent, Captain Christmas, to be used in bribing senators, representatives, and newspapers to favor the purchase of the Danish West Indies by this country. Mr. Richardson also charged Secretary Hay with withholding knowledge of these alleged facts. Not much excitement has been occasioned by the charges, perhaps because the Danish government denies that Christmas was its agent and denies that it ever paid any money to him. This being so, he could hardly have bribed anyone in this country. The state department "regards the charges as unworthy of attention." The *New York Commercial Advertiser* (Rep.) says that Mr. Richardson has "not only slandered his own country before the world, but smacked his lips over the revelations of what he thought would 'disgrace this country in the eyes of every foreign court in the world' and pronounced them 'luscious.' Not content with that, he made this attack upon Secretary Hay, knowing full well that his assertions were as preposterously false as they were blackguardly." Other papers do not take the matter so seriously. "While recognizing the necessity of an

investigation, we must say that the first impression is that the Dane himself is more likely to be smirched than anyone else. If there is rottenness, it seems to be in Denmark. At any rate, let us see what there is in it," says the *Boston Post* (Dem.). To the *Springfield Republican* (Ind.) the charges have all the marks of "a colossal fabrication. There is little reason in the idea that it was necessary for any agent of Denmark to use money in a dishonorable way in order to forward the acquisition of the islands by the United States; nor is it credible that any senator or representative or executive officer of the government received bribes for his support of the scheme."

"The chances are a hundred to one," says the *New York Journal* (Dem.) "that Christmas is a liar who was on the lookout for a rake-off, but if so, he lied to a government with which we are in negotiation for its islands, and the honor of the United States demands that his story shall be sifted to the bottom." The *Philadelphia North American* (Ind. Rep.) is similarly minded: "If the hands of congress are clean, it is all the more important that any smirch put upon the body by lobbyists pretending to be able to bribe members should be removed. Nothing less than a thorough investigation of the Christmas charges can relieve congress of the suspicion that it has been worked by a syndicate of corruptionists."

The Special Message in Regard to Cuba

THE president, in a special message to congress, last week, recommended immediate provision for diplomatic and consular representation of the United States in Cuba, the government of which will be turned over to the people of the islands on May 20, instructions to that effect having been issued by the secretary of war on March 25. The president also called attention to "the new relations which have been created by the achievement of Cuban independence," and states that these "are to be broadened by conventional pacts with the Cubans and by wise and beneficent legislation aiming to stimulate the commerce between the two countries, if the great task we accepted in 1898 is to be fittingly accomplished."

"That if is suggestive," says the *New York Herald* (Ind.). "If a handful of greedy beet-sugar manufacturers will permit it, this great nation may keep its faith and maintain its honor!" The *New Haven Register* (Ind.) "regrets that the president was not more definite in regard to the nature and scope of the 'wise and beneficent legislation aiming to stimulate the commerce between the two countries,' though greater definiteness was not, perhaps, essential in a message dealing principally with other matters about which there is no difference of opinion. Carping at this time would be somewhat premature." The *New York Times* (Ind. Dem.) adopts almost the same words, but is more emphatic: "We should not have deemed it unfitting or inopportune had the president taken occasion to state in the definite and convincing manner of which he is at times the master the nature and extent of the 'wise and beneficent legislation aiming to stimulate the commerce between the two countries.' Such a statement would have strengthened that public sentiment of justice to which the congress must in the long run yield. It would have separated the administration beyond all dispute from the miserable and cruel and sordid plots that are being pressed

in the national capital in the name of the majority party, and with which the party leaders appear not to be able to deal as they should. We are bound to infer, in the absence of more explicit utterance by Mr. Roosevelt, that he is persuaded that justice and decency will yet prevail—in the house, in the senate, in the conference committee, somewhere at some time not too long deferred—without further public pressure from him." The *New York Evening Post* (Ind.) thinks that "the most obvious suggestion as to the effect of the message is the uselessness of all this elaborate machinery of government unless something be done speedily to set Cuban industry in motion."

The *Chicago Inter-Ocean* (Rep.) does not see the necessity of diplomatic representatives in Cuba—"it would be manifestly improper" in view of our relations with the island.

The Sentence of the Cuban Postal Thieves

C. F. W. NEELY, E. J. Rathbone, and W. H. Reeves, accused of embezzling Cuban postal funds, have been convicted at Havana and sentenced to ten years' imprisonment. In addition, Neely was fined \$56,701, Rathbone \$35,324, and Reeves \$35,516, these fines representing, we believe, the estimated amount of their respective stealings.

The *Cleveland Plain Dealer* (Dem.) thinks "The lesson may be of service in other departments of 'our colonial system'—for at the time of the wrongdoing Cuba was practically as much a part of our 'colonial system' as Porto Rico or the Philippines." The same opinion is expressed by the *Chicago Journal* (Ind.): "This measure of justice ought to act as a warning to others who think they see in our island acquisitions opportunities for spoliation and robbery."

The *Chicago Record-Herald* (Rep.) finds cause for public congratulation in the outcome of the trials, "For the issue of the affair proves that political influence has its limits with us, and the nation is vindicated in the condemnation of its unworthy representatives." The *Pittsburg Chronicle-Telegraph* (Ind.)

thinks the sentences will be an object lesson to the Cubans, accustomed as they have been to the escape of official wrongdoers. The *Cincinnati Times-Star* (Rep.) finds the sentences "rather startling in their severity," but "not such as should be questioned." The verdict "washes the hands" of the administration, the *Detroit News* (Ind.) says.

Pan-American Diplomacy and the Isthmian Canal

IN the April *Atlantic Monthly*, Hon. John W. Foster reviews the history of Pan-American diplomacy, in the course of which he touches upon the attitude of the United States in connection with the Nicaragua canal: "For half a century our government has been hampered in the realization of this great enterprise by treaty relations with Great Britain; but having released itself from European embarrassments, it is now addressing itself to perfecting satisfactory arrangements with the countries of Central America in or adjacent to which the canal may be located. It proposes to construct the canal at its exclusive cost, taking all the risks of its practicability and profit, and upon completion to throw it open to the commerce of the world on terms of equality. Notwithstanding the assumption of these burdens, it proposes to pay to the government through whose territory the canal may pass a liberal compensation for the right-of-way. Neither does it seek any territorial aggrandizement, or other privileges than such as are absolutely necessary for the proper maintenance, control, and preservation of this valuable and important property. To this end, it is understood, negotiations are in progress to obtain a lease, perpetual or for a long term of years, for the strip of land through which the canal passes, with the right of police and judicial control. Such privileges do not derogate materially from the sovereignty of the nation in whose territory the canal shall be constructed, but, on the other hand, confers upon it valuable pecuniary benefits, and guarantees the peace and security of the locality. Such conduct is in marked contrast with that of its great commercial

A WAIL FROM THE NURSERY

—*Cleveland Plain Dealer*

rival, Great Britain. That government allowed the Suez canal to be built by a private company, with capital largely contributed by the people of other nations, although the enterprise was to be mainly for the benefit of its own commerce and its possessions. When the canal was shown to be an engineering success and a profitable investment, it purchased a controlling interest in the stock; and then, in order to make sure of connection through the canal with its imperial domain and for its navy, in time of peace and war, it took violent military possession of the entire country in which the canal is located, and still continues as overlord."

Mr. Foster's review presents no such record of aggrandizement on our part, and yet the South American opinion of us has not always been free from suspicion. Neither are our commercial relations on a satisfactory basis. The leading reasons for this being "the lack of frequent and direct communication and the absence of satisfactory tariff arrangements. Much might be done to overcome the first if our government would give greater encouragement to the establishment of steamship lines, and the second if satisfactory reciprocity treaties could be made."

Mr. Bryan on Mr. Cleveland's Dreams

MR. BRYAN'S *Commoner*, in its last issue, commented at some length upon a letter recently written by Mr. Cleveland in which the ex-president spoke of "the joy of believing that the time is fast approaching when our grand old party will shake off the dreadful dreams that have afflicted it, and fight again, as of old, the glorious battles of pure democracy."

"To understand," says the *Commoner*, "what he considers 'dreadful dreams' and what he regards as 'pure democracy' we must recall his last administration. For four years he stood between the people and reform; for four years he made the White House the rendezvous of cunning and crafty representatives of predatory wealth; for four years the corporations and syndicates controlled his administration and forced him to veto Democratic measures and sign Republican measures. It is to this kind of 'pure democracy' that he invites the party to return. And what were the 'dreadful dreams,' nightmares, that disturbed his sleep? Well, there were not many of them; there was just one—the repudiation of his administration by an indignant democracy—and this was not a dream, but a living reality. He was charged with a betrayal of his trust, with turning the party organization over to Wall Street, and with using the patronage at his disposal to punish loyal Democrats and to reward recreant ones. The charge was preferred before the rank and file of the party, and he was condemned by the largest jury that ever sat upon a case. When the election was over, he made a speech at a high-priced banquet and boasted of his part in the Republican victory. If we could punish the betrayal of political confidence as we do the embezzlement of public money, he would be receiving the limit of the law."

The *St. Paul Globe* (Dem.) thinks "It is poor politics for Mr. Bryan to denounce Mr. Cleveland, and it would be poor politics for Mr. Cleveland to denounce Mr. Bryan. This is not a time for bickering or nagging. Let Democrats bury the hatchet." The *Los Angeles Herald* (Rep.) facetiously observes

that "With such friction between the two great shining lights of the Democratic party, a lively fight for harmony all along the line may be expected. But Bryan would do well to remember that there is one marked difference between his political record and that of Grover Cleveland. The latter was twice elected president, and the former was twice defeated."

Congressional Summary

CONGRESS DAY BY DAY

MARCH 24.—The senate began consideration of the oleomargarine bill; it places a tax of 10 cents a pound on "oleo" colored in imitation of butter, and reduces the present tax of 2 cents per pound on "oleo" to one-quarter of 1 cent a pound in its uncolored form; the Philippine committee considered and adopted that section of the Philippine bill relating to mining in the islands. In the house, debate on the contested election case of Moss against Rhea, from the IIIrd Kentucky district, continued.

MARCH 25.—Debate on the oleomargarine bill continued in the senate. In the house John S. Rhea, Democrat, from the IIIrd Kentucky district, was unseated, and the seat was given to J. McKenzie Moss, Republican; consideration of the army appropriation bill began; the house committee on foreign affairs completed the Chinese exclusion bill, and ordered a favorable report on it; it provides for absolute prohibition of Chinese laborers.

MARCH 26.—In the senate the day was spent in debate on the oleomargarine bill. The house concluded the general debate on the military appropriation bill; at the beginning of the session the house passed the Burleson resolution, calling on the president for information relative to the application of General Miles to go to the Philippines.

MARCH 27.—The senate was still debating the oleomargarine bill; Senator Patterson made an attack on General Funston. A committee was appointed in the house, under a resolution introduced by Mr. Richardson, of Tennessee, to investigate charges of bribery in connection with the sale of the Danish West Indies; the military appropriation bill was passed.

MARCH 28.—The senate was not in session. In the house a message was received from the president vetoing a bill to remove the charge of desertion from a soldier's record; 215 private pension bills were passed; the sundry civil appropriation bill was introduced.

MARCH 29.—The senate was not in session. The bill to improve the efficiency of the revenue-cutter service was under consideration in the house.

THE IMPORTS INTO THE PHILIPPINES from the United States for the nine months ending September 30, 1901, were valued at \$2,712,190. This is a great business. It would pay the expenses of our army of occupation for about two weeks.—*Indianapolis News*.

FOREIGN

The Death of Cecil Rhodes

A MAN WHO "THOUGHT IN EMPIRES AND DEALT IN MILLIONS"

CECIL J. RHODES died at Cape Town, March 25, aged 49. A review of his life will be found in the Book Review department of this issue.

A typical comment upon Mr. Rhodes's career is made by the London *Telegraph*: "The British empire is the poorer by the loss of a great Englishman. If throughout the length and breadth of the dominion ruled over by His Majesty King Edward VII there lived one man who had a special claim to be regarded as the type of English 'empire makers,' that man was Cecil John Rhodes. What he actually accomplished for the empire was to secure in Africa a free road to the north. Had he not intervened, there is very little doubt that the South African republic would have extended westward till its frontiers joined those of Germany, and British expansion in South Africa would have been stopped forever. With all his faults—and they were neither few nor small—Cecil John Rhodes was a great empire maker and a great Englander." The London *Chronicle* comments in a similar vein: "In Mr. Rhodes the world loses one of the most conspicuous figures and Britain a great augments of her empire. He made blunders, and his blunders were colossal. As for the rest, Mr. Rhodes will live in British history as a man who claimed and secured the north of South Africa for Great Britain and yet made the keeping of it much more difficult than it might otherwise have been." The London *Daily News* is not altogether alone in the dissenting opinion it entertains: "If Mr. Rhodes had died before the Jameson raid, his death would have been an event; it is now a piece of news. The truth is, Mr. Rhodes meddled with things which were above him. He understood financiers and the motives which prompt them. He was a man of remarkable energy and great determination, who did with money everything money can do, but there are things which money can not do, and Mr. Rhodes could not do them, either."

"Questions of evil and of good apart," says the New York *Tribune*, "the magnitude of Cecil Rhodes's mark upon the history of the age, and, indeed, upon the immeasurable future, is beyond dispute. Not for half a century and more has Great Britain or any nation produced a more powerful and successful empire builder, nor has there been in that time a man who has done more toward filling up the blank spaces upon the map of the world and toward giving them their distinctive color." The Brooklyn *Eagle* echoes this view and carries its eulogy even further: "He was too big a man to need epitaph or eulogy which cloaks his smaller and his meaner side; the weakness and

CECIL J. RHODES

the evil which were his in common with lesser mortals were but the foils which emphasized the superb strength and dignity of his nature." The New York *Times* freely grants the greatness of Mr. Rhodes's influence, but adds that events have shown that he might well have applied the lines:

I sometimes think that it were best
To leave the Lord alone.

The Boston *Post* charges Rhodes with indirect responsibility for the Boer war, but this was only an "incident of the work to which he devoted the tremendous energy of his nature. He dies even while England is paying the 'price that staggers humanity' for the aggressions which he pointed out." The Philadelphia *Ledger* makes the most severe commentary we have

seen upon the South African statesman: "The apologists for Rhodes declare that he cared nothing for money except for the power which it brings, and they seek to condone his course because his schemes led to an increase of British territory. It may be admitted that he had courage, foresight, force, and intellect, but when the history of South Africa shall be written the verdict upon Cecil Rhodes will be that he was one of the boldest and most unscrupulous of all the adventurers who ever engaged in the work of empire building for Great Britain or any other nation." And the Buffalo *Commercial* thinks it is too early to balance Rhodes's account with the empire, too early to say whether his services were detrimental or valuable: "The whole bill of damages due to the terrible mistakes he made has not yet been liquidated by the empire he sought to serve. His services have been at once splendid and costly. Whether the additions he made to the imperial possessions are worth the apparently total alienation of the Dutch element in South Africa is a question for future consideration and decision. Perhaps we charge him with too large a share of the responsibility for the terrible blood-feud that has been established between the British and the Boers by the war that still rages in that region. Possibly larger forces, beyond all individual control, hurried the tragic clash of antagonistic civilizations to a crisis. The clash might have come eventually had Cecil Rhodes died ten years ago. Who can say? Happily it is not for finite human minds to unravel the web and to pronounce judgment."

The Philadelphia *Record* does not doubt the permanency of Rhodes's work and influence. He has made a permanent impression on South Africa, and "the time will come when he will have his due place as one of the most striking figures of the century which gave him birth."

Changes in Italian Radicalism

April Review of Reviews, New York. Condensed for PUBLIC OPINION

IN the *Nuova Antologia*, Professor Alessandro Chiappelli, of the Royal university of Naples, comments interestingly on the late transformations of the Socialist and radical parties in Italy. The position of the neo-radicals, as formally expressed in the speech of their leader, Signor Sacchi, at Cremona, is that, while ready to further any democratic movement, they believe the most far-reaching reforms—financial, political, and social—to be possible under a monarchical form of government; differing in this from the republican element of the Extreme Left, whose congress, convened at Ancona last November, declared the abolition of the monarchy to be the starting-point of any effectual reform.

"No mind in touch with modern thought," says Professor Chiappelli, "can fail to be impressed by the similarity between this recent division in the radical group of parliament and the secession from the nucleus of the Lombard federation of a notable party of Italian Socialists led by Signor Turati; the Lombard federation, faithful in theory to the doctrines of Marxism, not believing—or, practically, not desiring—the parliamentary action of the Socialist group of the chamber to be compatible with the liberal policy of a bourgeois ministry. Now there is unquestionably inseparable from the very essence of political radicalism a perception and capability for evolution, for the direction of its practical side in accord with the perennial changing of historical conditions and with the development of the political and social forces of a people. For this reason, the radical Left can not follow today the same line of political conduct as did its first exponents without denying its own principle and renouncing henceforth all vital and effective action in the common political life. But it is none the less true, as others have already noticed, that the new tendency of the radical group is due in great part to the successful exertions of the extreme labor groups in parliament, grown in numbers and power since the last elections. Without this stimulating and inspiring influence, we would not have had either the policy outlined by Signor Sacchi or the discussions arisen concerning it; and, least of all, would we have seen the phenomenon of Socialism become also among us a reforming power, for the impelling needs of the laboring multitudes contributed most to the shelving by both parties of the question of monarchy, especially since the crown shows its intention to heed the voices issuing from the camps and 'blazing forges' of the working men.

"There are two points to be considered: First, the diversity of criterions to be followed in the practical action of the Socialist party does not cause to swerve, nor does it arrest for a moment, the progressive force of the laboring class. Secondly, the social power which is at the base of the present labor movement, and is its leading cause, is such that no hesitation or dissension among the heads can affect it. The salient point is that these splits are signs of vitality in a party, and at a certain period of its evolution are inevitable, and indeed salutary. History teaches that in all schools, religions, and social institutions, when the number of followers grows beyond a certain figure the old methods of action and resistance are no longer possible, nor are they adequate to the new need, and

schisms become inevitable. As soon as the primitive sect spreads throughout the world, the old inactivity, once necessary to cope with the surrounding society, does not appear at all opportune when there is a need for adaptation to that society and to propitiate while reforming it. It may be added that the persistence in a far-off ideal, even though an illusory one, of social reform, like the collectivism of the Socialists, is practically indispensable for the social and political development of a doctrine or of a party; since nothing has more influence in life, nothing is more fitted to move the masses as a powerful lever for their salvation, than illusions. Anatole France has said with truth that error in life is not less necessary than truth. If, then, the standstill socialism, loyal to bygone ideals, continues side by side with the progressive and reforming socialism—to which in Italy the constitutional neo-radicalism will serve as a stepping-stone because it conveys the wants of the workmen to parliamentary discussions in an acceptable and practical form—this is a social and historical necessity, favorable indeed to the cause of socialism (which fact our conservatives would do well to recognize).

"The right and left wing of Socialism, so to contrast their tendencies, are like the two wings which sustain its flight—feared by some, blessed and sympathized with by others."

What Will China Do?

JULIAN RALPH, in the April *World's Work*, New York
Condensed for PUBLIC OPINION

WHAT will China do or try to do, and what will be her next mood? George Lynch, in his "War of the Civilizations," says: "We have violated their temples and shrines; we have outraged their women, driving them to suicide; we have sent marauding expeditions throughout the land encircling Peking, and finally we have imposed the overpowering burden of indemnity, not alone on the actual offenders, but on the whole of the law-abiding population, who had nothing to do with the outrages on foreigners. I do not think China will ever become an aggressive power," he says. "But it is quite capable of becoming as effectually defensive as is Japan. It has more reasons for becoming a self-contained and defensive power than Japan, because it contains within itself everything necessary to the intellectual as well as the physical life of the people." He thinks that what Japan has done on a small scale, China will do on an enormously larger one.

I think I am right in saying that Dr. W. A. P. Martin, Dr. Arthur H. Smith, and Mr. Lynch look for a renewal of anti-foreign demonstrations. I know that I am correct in saying that all these authorities—and every man I have met who knows the east—agree that the Chinaman is capable of higher intellectual achievements and a more substantial, enduring civilization than the Japanese, once he is awakened. It appears that the awakening is now rapidly progressing. The empress dowager remains to stem the tide, it is true, but the able right hand which executed her cunning projects in the past died with the death of Li Hung Chang. She and her Manchu nobles may sell northern China to Russia, outright, if the English and Japanese, in their new alliance, do not prevent it; for these rulers are but conquerors and foreigners, and care for nothing in China but their power and their pockets. Even then it may chance that the great bulk of the Chinese (already familiar with the plans of a

host of patriots who wish to throw off the Manchu yoke) may rouse themselves and wage such a war upon the foreigners on their soil as will in dread reality "stagger humanity."

If the unprincipled empress, on the other hand, still desires to annihilate the "foreign devils," and if she hopes to free herself of debt to Russia by including the Russians in the victims of the next uprising, we are supplied with signs that her subjects are preparing to lend willing ears to such proposals. It was George Lynch who first pointed out that the demand for an indemnity to be raised by the whole populace was a grave injustice. Today, Mr. H. J. Whigham, commenting upon his experience on a journey along the flooded Yang-tse valley, says: "If anything at all could goad the harmless, peace-loving villagers of the Yang-tse to anti-foreign fury, it is the imposing of indemnity taxes at the present moment."

Finally, we note that every week makes more and more clear the fact that Japan is to be reckoned as China's ally in the future. The policy of Japan in which she seeks the support of England is laid bare in her demand that China promote to a place in the Peking foreign office the notorious boxer, Na Tung, who went to Tokio to apologize for China's misdeeds. From this hour on we may count upon Japan as the hearty friend of China, and we may be certain that her hatred of Russia no longer slumbers.

A Japanese Interpretation of the Treaty with England

IN our last issue we printed an article on "The Practical Certainty of a Russo-Japanese War"—the writer's opinion being based mainly on the determination of Russia not to abate her ambitions in Manchuria and Korea. Now we have the opinion of a Japanese statesman that the Anglo-Japanese treaty makes for war because Japan is similarly determined, and because of the national fever to cope with and to "lick" a western power! "This pseudo-alliance has

brought immediately that fever to our brain when it was happily subsiding. If England has thought of insuring peace, the Japanese nation sees exclusively war—war, at last, with a foe worthy of her—and is, therefore, enthusiastic. I pray to the heavens I may be mistaken, but I foresee how we shall be intractable and touchy in Korea. If England has thought of loosing the dogs of war on her traditional competitor without any risk and trouble for herself, I fear that she has attained her end."

This is the statement quoted by the Tokyo correspondent of the New York *Tribune*. The statesman in question also points out another respect in which the treaty has a tendency to bring about war. It will restrain a combination against Japan. But it will not prevent; it will rather provoke a duel between Japan and Russia over Korea. For Russia now has what she has all along wanted, an assurance of Great Britain's practical neutrality in such a war. At the same time, British interests in China are protected against any hostile combination of powers. The treaty is, therefore, a good thing for Great Britain, but a perilous thing for Japan. "This treaty has now freed Russia from all hesitancy; until now she did hesitate on account of the unknown consequences productive of a real treaty, offensive and defensive, between Japan and England; she is now in possession of the very thing she wished for—England's neutrality. She will now be able to concentrate all her work and all her power for her single-handed collision with us, and with all the energy which to her vital interests is added by her hatred for us since the blood of the Lord's anointed (do not smile; it is so; we know it pertinently; inquire from the meanest mujik)—the czar's blood, then czarewitch, was spilled in Japan by a Japanese sword."

CHINESE MINES, according to the latest dispatches, are to be let to foreigners in any part of China on the following terms: The government to have 25 per cent of the profits, 25 per cent of the output of diamonds and other gems, 15 per cent of gold, silver, and mercury, 10 per cent of copper, lead, and zinc, and 5 per cent of coal and iron.

SOCIOLOGICAL

Wealth, Poverty, and Divorce

THE VIEWS OF PERCY STICKNEY GRANT

IN an article in the current issue of *Ainslee's Magazine*, the Rev. Percy Stickney Grant explains why divorce is more common in this country among the rich than among the poor. The reasons assigned are economic rather than moral. The poor man shuns the divorce court not because he is better than the rich man, but simply because he is poor and belongs to the working class. His disinclination to divorce is accounted for as follows: "Marriage is a natural and simple relationship among working people; it is to them a human fact like birth and death, and is almost as inevitable; it is not to be discussed or analyzed, but is to be accepted. Among the poor, just as among many lower races, to be unmarried is a reproach. The poor do not expect of marriage so much as the rich expect. The simpler satisfactions of family life are sufficient for them. They obey the human instinct, and give each other help, comfort, and companionship. But the deeper bonds of mental sympathy, of spiritual relation, of wide social serviceableness, they rarely crave or develop. Husband and wife are of greater mutual help among working people than among the rich. The wife keeps house—she is cook, chambermaid, nurserymaid—and, in addition, often earns a substantial part of the family income. The poor man *needs* his wife, and the poor woman *needs* her husband, in a sense little understood among the rich. The mansion of Dives runs very well when his wife is away from home, as he has frequent opportunity of learning. Lazarus, if he has a home, might as well lock it up unless his wife is with him. The working classes are more used to patient endurance than are the rich. The very fact of poverty is often a proof of passivity, as wealth is often a proof of domineering energy, which is unwilling to accept an unpleasant condition as a fixed condition. Children are desired by the poor not only to satisfy natural affection and to complete the family circle, but because they are a source of income, and can eventually provide for their parents' old age. It is no uncommon thing in cotton-spinning districts to see middle-aged men throw up their jobs and spend their days in idleness, supported by the wages of their children, which they receive quite as naturally as a business man who has retired on a competence would receive his interest and dividends. Desertion, not divorce, is the recourse of the poor. Bigamy is the crime of the working classes more than of the rich. I have never personally known a divorced person in the working classes. I have, however, known countless cases of bigamy."

In summing up the reasons for divorces among the rich—or, at any rate, those above the so-called working class—Mr. Grant points to the frequent absence of the ties of children; the inequality of age; the leisure of women; and the desire for mere sensation. Mr. Grant places special emphasis on two other causes. He says that the idea of love that women of leisure at the theater and the opera "drink in *ad nauseam*, is not that feeling which gives strength or permanence to marriage or honor and reverence to old age. Yet, these audiences are filled with a theory of love which they are apt to exact from the busy men, their husbands whom they find waiting for them on

their return home, and to accept from the idle young men dangling after them." Furthermore, Mr. Grant maintains that the freer habits of life permitted to men before marriage are a very fertile cause of family disunion. "A pleasure-wearied man and a fresh girl are not in the same spiritual class. Her ideals and his own, even their senses are so different, as in time inevitably to lead to disaster. The manager of a house of mercy told me that the unfortunate young women under his care declare that their class is largely sustained by married men."

As an illustration of how differently wealth may affect the divorce problem, Mr. Grant cites the reversed conditions in Japan. "In that land where a man can divorce his wife for disobedience or jealousy, or talking too much, it is the poor oftener than the rich who seek divorce. Here, again, the reason is not moral, but economic. The rich man can endure his wife by adding a concubine to his household. The poor man can not afford to do this."

Enriching Village Life

HOW CLEANLINESS AND ORDER AND BEAUTY MAY BE MAINTAINED

MR. SYLVESTER BAXTER, writing for the *April Century*, says that one of the most hopeful chapters in the record of American progress toward the ideals of a higher civilization is that which tells of the development of a more beautiful life for the people at large. A higher standard of living is marked, he says, in more beautiful home surroundings; in better architectural standards, domestic, mercantile, and public; in better-kept highways, improved paving, good sidewalks, etc.; in the beautifying of public places, creating parks and playgrounds, planting shade-trees in town and country, protecting scenes of cherished beauty and setting them apart for public enjoyment; and in organizing associations for accomplishing some of these ends through voluntary effort, and inducing action on the part of municipalities, etc., toward effecting other improvements of perhaps more comprehensive character.

Mr. Baxter says that in some of the newest and crudest communities, which seem hopelessly involved

A WELL-ORDERED VILLAGE STREET.—*Century*

in raw ugliness, the response to this movement has often been most alert. "When I first visited the capital of a certain state beyond the Mississippi, nothing could have been more depressing than the impression which it made. Every street was a wide slough of mud in wet weather, and was suffocating with dust when dry. The entire city had a correspondingly slouchy, unkempt, and vulgar appearance. Ten years later I found a wonderful change: the streets all well and smoothly paved, good buildings on every hand, pleasant and tasteful homes the rule, the whole city well groomed in appearance, and the seat of a genuine civilization."

Mr. Baxter maintains that cleanliness, order, and beauty are within reach of the smallest and poorest community, and that they are cheaper to maintain than slovenliness and dirt. One man can do much to arouse village pride to organize efforts for betterment. "To keep the interest alive in organized work of the kind, it is essential to be able to point to practical results achieved, and to hold out various desirable things to be definitely aimed at. The community should be interested by some definite advance made each year—certain tangible objects accomplished, and certain inviting ends to be looked forward to. And the public should be impressed with the practical advantages derived from such activities—how they actually pay in dollars and cents by increasing the attractiveness of a place, and consequently the value of property, as well as in adding to the beauty of existence and making life richer and fuller."

Our Greatest Social Problem

FROM A FRENCHMAN'S POINT OF VIEW

M. HUGUES LE ROUX, whose opinions on social questions in France have already been quoted in this department, in a recent interview in New York spoke of his impressions of social conditions in this country as he had observed them in the various cities he had visited. He concluded as follows: "I have only been here a little more than a month, yet I think that I have found what is your greatest social problem. Be careful how you solve it, for in my opinion the future of the republic depends upon it. It is the conflict between business and love. In the beginning the woman has been your incentive for work; now there seems to be a tendency to love work for work's sake. The women are all on one side of the road; the men on the other. They are strangers to each other during twelve of the twenty-four hours. The time may come when they will be strangers through the whole long day. Stop raising this barrier of business between yourselves and your women. When you reach home, weary and sullen, but gold-laden, do not believe that by laying this wealth at the feet of the goddess of your household you are giving her that for which she yearns most. Give her less gold and more of yourself. I spoke on this subject before a number of your admirable colleges for women. I asked the young women of these colleges which they would value most, and, as they are women and human, they all chose dearth of gold and abundance of kind words, personal attention, confidence, and love.

"And then, is this drudgery sincerely for the sake of enthroning your queen? Soon the fever of work sets in, and the original incentive becomes merely an

accessory. Business today is already the chief cult with many. The horse trained to run, at first finds it an exertion, but once let him set out on his career and racing becomes his life. The women, whom you are daily neglecting more and more for business, have already begun to turn to pursuits usually considered out of their field as a compensation for the loss of your company."

Is This a Degenerate Age?

AN INQUIRY INTO THE EFFECTS OF COMMERCIALISM.

THE familiar cry that this is an age of social and individual degeneracy, that everything is dominated by an intense commercialism, which destroys men's finer instincts and lowers the general moral tone of the community, meets with a sharp rebuff administered by Professor J. J. Stevenson, in the April *Popular Science Monthly*. Professor Stevenson admits that ours is an age of commerce, an age of devotion to material things; but that devotion, he contends, has nothing of grossness nor is it in any sense inconsistent with a just devotion to higher things. He offers the following arguments to prove that because of commercialism this age, on the whole, is vastly better than its predecessors:

The exigencies of commerce have aroused a public opinion which curbs rapacity and demands arbitration of international disputes. War between Great Britain and the United States is well-nigh impossible—it would lead to financial ruin in both countries. The terrible conflict between Slav and Teuton, for which so many wait in dread, is likely to remain a nightmare. Great Britain needs Russia's grain; Russia needs the manufactures of Britain and Germany. Germans control Russia's trade even in far-off Siberia, and Germans are teaching Russians how to develop their resources. The rabble in each country may rave as they please—a power mightier than they makes for peace. The same influence is exerted for maintenance of friendly relations within the commercial nations themselves. Compulsory arbitration of labor disputes has been established in some portions of the British empire and several of our own states have taken the initial step by appointing arbitration commissions to serve when called upon.

Commercial Britain has the best city governments in the world; its civil and diplomatic service shows a sense of honor as high as that of the American army; within the United States, civil service reform has gone far toward removing the evils of patronage which degraded our politics even less than thirty years ago.

The American employer discovered, long before the missionary, that the condition of a man's body had much to do with his openness to reason. Men, well-fed, well-clad, and comfortably housed, are more efficient in every respect than are men scantily supplied and embittered against the dealings of Providence. The recognition of this fact of manhood in the employee is the basis of American commercialism and the true secret of its success. Away from towns, owners of mines or great manufacturing establishments, knowing that men, to do good work, must be well cared for, build comfortable homes for their employees and charge low rental. Many of them recognize a certain responsibility; they encourage thrift and urge, even assist, employees to own their dwell-

ings. Sanitary regulations have led to sanitary living, so that, in spite of the fact that men work more intensely than ever before, they break down less rapidly and fourscore is more nearly man's expectation of life now than was threescore and ten fifty years ago.

The rights of man as man before the law are acknowledged by the two great commercial nations as never before, and as by no other nations. A defendant no longer rests under the assumption of guilt; he is innocent until the charge has been proved; a married woman is no longer merged in her husband; in the eye of the law, she is at least her husband's equal. There never was a time when business honor was so high as now; the whole commercial fabric is based upon it. Whether the moral sense has been quickened or experience has taught that honesty is the best policy, matters not—the fact remains that in business a man must be honest and honorable; dishonest dealing is fatal.

Commercialism, leading to such broad results for all, has a marked influence upon those who have led in the advance. American men of commerce, be they lawyers, merchants, manufacturers, bankers, or railroad managers, acknowledge the community of interest and seek fame or immortality as philanthropists. As for the fires of creative imagination, one may say only that they are as brilliant now as at any previous time—with this difference, creative imagination is about better business now than formerly—it no longer wastes itself in cultivating merely the esthetic side of man, it works for his uplifting, physically, morally, intellectually.

A New Movement in Education

April *World's Work* New York. Condensed for
PUBLIC OPINION

FOLLOWING the Slater fund, to aid the education of the blacks, and the Peabody fund, to aid the education of both races in the south, comes an even more important help to southern education without distinction of sex, or creed, or color. The general education board, which has applied to congress for a charter, has been organized as a body of representative men to receive and to administer funds for this patriotic purpose. They have already more than a million dollars. The aim of the board is not a "missionary" aim. It is broadly patriotic. It will do its work in a practical way—without fads or theories, without sectional feeling, race prejudice, or any aim except the building up of the neglected masses of our population. It is organized on a broader basis than any body was ever before organized for such a purpose; and its *personnel* includes men of northern birth and men of southern birth. Its work is educational. Its field is the country—for the present the southern states only, because, for reasons that antedate all men now living, help is most needed there—help for communities, to be given without regard to sex or race. Its method is to judiciously supplement the fund raised by taxation in these communities. It makes no paupers. It carries no insults. It is not personal, and it is not offensive. It is a contribution to democracy, and not to individuals nor to private enterprises. The money is distributed through the public channels solely for the public good. It trains the taxpayer; it trains the local board of administration; it builds up public opinion; and it thus bears fruit generation after generation.

New Penal Laws in Switzerland

TO COPE WITH THE EVILS OF ALCOHOLISM

SWISS prison statistics show that drink is the chief immediate cause of the crime and arrest of 37.7 per cent of the persons in penal confinement. This fact has led to the formulation of new penal laws in Switzerland outlined by a writer in the *Blaetter fuer Gefaengnissskunde* as follows: If a crime is due to excessive drinking, the judge can prohibit the convict from visiting saloons for from one to five years. An habitual drunkard, in addition to his punishment, may be committed, with medical approval, to an institution for the cure of inebriety; likewise, a drunkard acquitted on the ground of unaccountability. Any person who delivers to a child of less than fifteen years liquor that can injure the health is liable to arrest. If the same offense is repeated within a year, the right to deal in liquors may be withdrawn. A saloonkeeper who wittingly delivers liquor to one forbidden to frequent public houses, will be fined not more than 100 francs, or imprisoned not more than eight days. Drunken disturbance of the peace is punishable by fine of not more than 100 francs. Repetition of the offense within a year is punishable by imprisonment for not over eight days, or by prohibition to visit any saloon. The offender may, in addition, be sent to an institution for the cure of inebriety. A drunkard who, after warning, fails to support his family will be arrested. Should the offense be repeated within one year, he may be sent to the workhouse for from one to three years; if need be, also to a cure. One who, though able to work, tramps, or frequents parks and public places, or begs, or sends others to beg for him, will be arrested. If the offense is repeated within a year, he may be sent to the workhouse for from one to three years, and, if necessary, also to a cure. The judge is allowed the power, apart from any penalty, with medical approval, to send the drunkard to a cure. If it is justifiable to send the idle to a workhouse, it appears to be evident duty to send to a place of cure those who, by drink, are being inclined to crime.

Various Topics

FARMING OUT CONVICTS IN GEORGIA: In the April *Frank Leslie's*, Mr. B. F. Blackburn, writing of the farming out of convicts as practiced in Georgia, says: "Of the 2,084 convicts, 1,145 are on the public roads and 939 are hired to private individuals who, in some instances, treat them very much as they please, desisting only when their offenses become notorious. Under the state system the convicts are well treated, and the system of allowances for good behavior shows rebates averaging 25 per cent for ten-year terms, and even greater for longer time."

THE GIRLS' LETTER GUILD is an English organization whose popularity is rapidly increasing and whose influence is said to be excellent. Now there is talk of trying the scheme in this country, but it is doubtful whether our democratic working girls would take to it kindly. The Bishop of Coventry is president of the English guild, and the idea of the organization is to bring illiterate and untrained girls of the working classes into touch with women of culture and refinement, through correspondence. Each gentlewoman who joins the guild agrees to pay one shilling a year, and to write every month a long friendly letter to any one of the girls who may be allotted to her. She is to take an interest in the girl's welfare, her work, and amusements, and hopes, and ambitions. She must, if possible, win the girl's liking and confidence, and do all that she can to advise her, to correct false ideas, vulgarity, impropriety, to inspire wholesome ideas and ambitions.

LETTERS & ART

Paul Helleu, Master of Dry Point Etching

DOUGLAS STORY, in the April *Munsey*, New York. Condensed for PUBLIC OPINION

THE success of pictorial art depends on the artist's power of elimination.

What we call "composition" is really the exclusion of all unnecessary detail from a group or a landscape—the focusing of the spectator's eye upon the central point or idea of the picture. This power of concentration is a more delicate quality in the hands of the black and white artist than in him who has a pallet at command. All his effect must be obtained through a single medium; his lights and shadows, his color and tone, must all be represented by gradations of black, by careful selection of his virgin spaces in white. In all the range of black and white processes there is none so delicate as that of dry point etching. By this process the operator gets more of what artists call "color" into a plate. Its results are more toneful, its effects more pleasing to the eye. That is to say, the worker in black and white, using this method, has more power of artistic elimination than by any other means. In etching proper the operator takes a plate of copper, covers the surface with wax or other colloid substance. On this the etcher draws with an etching point the picture he has conceived. Into the furrows left by the style, acid is poured. This eats its way into the copper plate and so leaves an impression from which copies may be printed. In dry point etching, on the other hand, the artist works directly upon the plate and uses neither wax nor acid. His deepest blacks are produced by the furred edge left by the cutting instrument. His softer tones he obtains by rubbing away those exposed edges, and a delicacy impossible to the operator in wax and acid.

With the development of photography, etching and engraving have fallen from their ancient high estate, and it is only since the limitations of the mechanical processes have been demonstrated that the older form has been revived by modern artists. One of the most remarkable of these is Paul Helleu, a young artist of Paris. Helleu began his art life as a painter in pastel and made for himself a reputation in the Ecole des Beaux Arts. One day he called upon Tissot, the Christ painter, and found him at work on a dry point plate. The process interested him to the extent of practicing it for himself until he had passed his first teacher. Like all black and white artists, Hel-

"A PAIR OF BLUE EYES"

From an etching by Paul Helleu

leu has found in the Japanese the masters of the art. Aubrey Beardsley learned from them the proper contrasting of squares of black and white—the composition of a black and white picture. Helleu has learned from them boldness of outline and delicacy of manipulation, the elegance of the curve. In all of Helleu's work there is the charm of a delicate workmanship, the force of a strong conception, and the grace of a beautiful outline. In it one finds more of the "sunshine of sunshine" than of the "gloom of gloom." The beauty of his art is indeed a joy forever to all art lovers. Like Rembrandt, he works with few models and with those who are nearest and dearest to him—his wife and his little daughter. Out of them he has composed scores of plates, varying infinitely in tone and color, but alike in their uniform beauty. Yet are his etchings never pretty with the prettiness of the chocolate

box lid. They are virile while dreamy, strong while chivalrous. A man of some forty years of age—tall, lean, swarthy—Helleu is a typical oriental in appearance. Sargent chose him as the model for Malachi.

Literary Values

JOHN BURROUGHS, in the April *Century*, New York. Condensed for PUBLIC OPINION

THINGS do not endure in this world without a certain singleness and continence. Trees do not grow and stand upright without a certain balance and proportion. A man does not live out half his days without a certain simplicity of life. Excesses, irregularities, violences kill him. It is the same with books; they, too, are under the same law; they hold the gift of life on the same terms. Only an honest book can live; only absolute sincerity can stand the test of time. Any selfish or secondary motives vitiate a work of art, as they vitiate a religious life. Indeed, I doubt if we fully appreciate the literary value of the staple, fundamental human virtues and qualities—probity, directness, simplicity, sincerity, love. There is just as much room and need for the exercise of these qualities in the making of a book as in the building of a house, or in a business career. How conspicuous they are in all the enduring books—in Bunyan, in

Walton, in Defoe, in the Bible! It is they that keep alive such a book as "Two Years Before the Mast," which Stevenson pronounced the best sea-story in the language, as it undoubtedly is. None of Stevenson's books have quite this probity and singleness of purpose, or show this effacement of the writer by the man. It might be said that our interest in such books is not literary at all, but purely human, like our interest in "Robinson Crusoe," or in life and things themselves. But the experience itself of a sailor's life would be to most of us very prosy and distasteful. Hence there is something in the record, something in the man behind the record, that colored his pages, and that is the source of our interest. This personal element, this flavor of character, is the salt of literature. Without it, the page is savorless.

In all good literature we have a sense of touching something alive and real. The writer uses words not as tools or appliances; they are more like his hand or his eye or his ear—the living, palpable body of his thought, the incarnation of his spirit. The true writer always establishes intimate and personal relations with his reader. He comes forth; he is not concealed; he is immanent in his words; we feel him; our spirits touch his spirit. If a writer have not a distinct quality and flavor of his own, he can make no contribution to literature. He may write faultless English; that will not save him. He must write vital English; his sentences must bud and sprout out of himself, as the plants and trees out of the soil.

Huysmans as a Mystic Realist

THE EFFECT OF HIS CONVERSION ON HIS ART

"AMONG the literary men of our time, M. Joris Karl Huysmans is undoubtedly the one whose destiny has been the most singular, the most antagonistic to its point of departure." In these words M. Felicien Pascal summarizes in *La Contemporaine* (Paris) his impressions following a recent visit he paid to the new apostle of naturalistic mysticism. M. Huysmans, although born in Paris, belongs to a family of Dutch painters. He is the only one who has adopted the literary vocation. His first novel, "Marthe, histoire d'une jeune fille," written in 1876, was so obscene that it could not be published in France. As a natural sequence, the author followed the pornographic phalanx led by Emile Zola and contributed to the *Soirees de Medan*, in which he inserted "Sac au Dos." During the last few years, however, M. Huysmans has been converted, and the strangest part of it is that very few Catholics believe him to be sincere, while his former skeptical friends entertain no doubt about his honesty in the matter. Huysmans is now "lay oblate"; until recently he lived with the Benedictine monks at the village of Ligugue, near Poitiers; since the expulsion of the monks he has returned to Paris, and is to be found at the convent of the sistory of the same order. He follows regularly the religious service sung in the old Gregorian music, and devotes the balance of the time to the study of old liturgical books and writing Christian novels. "I am not in need," he says, "of verdure around me. The country, nature, tell me nothing." "After seeing M. Huysmans at home, it is useless to ask, as many Catholics do, if his conversion is sincere. He has penetrated the personal points of Catholicism, and we feel that he has adapted his mind to them without losing his penetration and vigor.

"There is in his case an evolution of the soul, the most surprising which could be imagined, because it is more against the current of the century than anything which could be conceived in the way of transformation of a modern conscience." Nostalgia was the result of his association with Zola. He became "disgusted with this atrocious modern life, this new Americanism of morals characterized by the triumph of the strong-box." He came nearer Flaubert and the de Goncourts, and finding nothing else, he delved in spiritism and occultism. His curiosity concerning sacrilegious orgies led him to the study of demonology and satanism. "He discovered the existence of the Fallen Angel in the abominations of Gilles de Rais and in the obscenities of the "Black Mass" of L'Abbe Vintzas, and as soon as he believed in the existence of the enemy of God, he was compelled to believe in God, the conception of Satan being impossible without the conception of God. It was the first time that the Devil brought back a soul to God. Since then Huysmans has devoted his time to the publication of religious books in which the mysticism is made realistic. His doctrine is a symposium of symbolism, mysticism, and liturgy to which "he has been led by the powerful seductions of Satanism and the singularities of demonology." No wonder, then, that his documentary and naturalistic Christianity has to refrain at times from admiring the stinging beauties of sin.

Apart from his religious opinion, Huysmans is considered by all a true artist in literature. Analyzing his two last novels, "Saints Lydwine de Schiedam" and "de Tout," in *La Revue Blanche*, M. Michel Arnaud praises the literary accomplishments of the author whose style he characterizes in a few words. "It is very simple, it is very beautiful." Huysmans's belief is that of a realist; his faith is contrary to Chateaubriand's. He does not like clouds or veils. He wants accurate facts which can not be doubted. Beauty for the realist is akin to dream and illusion; it is so well suited to the desires of the soul that the soul identifies itself with it, believes even that it has created it. But pain, ugliness, and nausea, everything against which the flesh rebels, everything which violates the spirit, this is the real, the indubitable fact, which can strengthen the faith alarmed at a charm too pure. Contrast is what enraptures him; he needs the bloody mulsh of the pallet to see before his eyes the resplendent whiteness of the celestial lilies."

The "Riddling" of Thackeray

WAS HE AN "APOSTLE OF MEDIOCRITY" AND A "SENTIMENTALIST"?

THE latest instance of literary iconoclasm is the "riddling" of Thackeray in the *Nineteenth Century*, the *London Academy*, and the *Bookman*. Mr. Walter Frewen Lord, writing for the first named, declares that "in all great walks of life—in the church, in war, in commerce, and in diplomacy—Mr. Thackeray has nothing but abuse and sneers for success; if we find that he loves to portray the ludicrous and the discreditable only, is it unfair to say that he is the apostle of mediocrity? Mediocre ways of life, mediocre thoughts, mediocre inclinations (miscalled passions), mediocre achievements—these, if not positively enjoined, as they sometimes are, are in effect all that is left to one who takes Mr. Thackeray for his guide. For the rest, never had a mean gospel so doughty an apostle."

Mr. Lord goes on to say that the church is represented by the Rev. Charles Honeyman, an untruthful, shifty, luxurious, clerical humbug; the Rev. Tufton Hunt, a criminal, a blackmailer, and a drunkard; the underbred, ignorant Bute Crawley; and the boorish Dr. Tusher. Again, according to Thackeray, the peerage would appear to have consisted entirely of fops and rakes. "But the fops and rakes," says Mr. Lord, "by judiciously employing their considerable leisure and resources, re-transferred to themselves the power of which they were deprived in 1832. It is no more possible to imagine Kews and Dorkings and Highgates effecting a revolution than it is to imagine Binnies and Sedleys governing India, or to imagine a great nation committing its spiritual interests to Charles Honeyman and the Bishop of Bullocksmithy." Again, "Let any student hold a levée, in his own mind, of the Ralph Spurriers, the Michael O'Dowds, and the George Tuftons and their likes, and then ask himself: 'Does this collection of boobies and fops and gluttons really represent the mighty British army?'" In every walk of life, Mr. Lord asserts, "Mr. Thackeray saw nothing but the mediocre."

The *Bookman* pats the *Academy* on the back for riddling Thackeray's limitations so tersely and completely. This writer, says the *Bookman*, has "found Thackeray's most vulnerable side, and shows with a great deal of cleverness that the author of 'Esmond' could never have been a complete artist because he was always in his writings a sentimentalist. In a recently printed letter about the origin of Colonel Newcome, Thackeray said that, of course, he had to 'angelicize' the old gentlemen at the club. Why? Because he hated to look a fact squarely in the face. Not only did Thackeray seem to think that the full delineation of sin was outside of the province of the novelist, but that the paths of high virtue were also forbidden to him. He says in 'Pendennis': 'A veil should be thrown over those sacred emotions of love and grief. The maternal passion is a sacred mystery to us.' The maternal emotion, argues the writer in the *Academy*, had no business to be a mystery to him. It was not a sacred mystery to Balzac when he wrote his description of the baby's bath in 'The Two Young Brides.' The creator of *Becky Sharp* was nearly always sentimental about women. It was 'The women,' and then, 'God bless 'em!' The Women—God bless 'em,' frame of mind does not make for either dignity or veracity in fiction."

Russian Periodical Literature

VICTOR S. YAKROS, in the April *Critic*. Condensed for PUBLIC OPINION

PERIODICAL literature in Russia boasts a noble, useful, heroic, and interesting past, and is hopeful of a bright future, but its present condition is extremely dismal. The particular business of serious periodical literature is the discussion of living problems and the application of first principles to current topics. The discussion may be didactic or indirect. It may take the form of essays and controversial articles, or it may be imparted by means of fiction, poetry, and other art forms. But it can not be vigorous, significant, and vital if the national life with which it deals is narrow, unprogressive, colorless. The Russian reviews live on the past and in the past. They have undergone no change in twenty years, and stagnation means deterioration. Their "palmy days" were the sixties and seventies of the last century.

The *Vestnik Evropy* (*European Messenger*) must be named first. Its policy is indicated by its name. It is old, respected, ably edited, and (for Russia) widely read. It is Liberal in the European sense of the term. The only Conservative review is the *Russky Vestnik* (*Russian Messenger*), which is in its forty-sixth year, and which has declined greatly since the death of Michael Katkov, its gifted but ultra-reactionary first editor. This magazine makes war upon everything western and defends the *status quo* as the best possible order, appropriate to the genius of Russia, and infinitely superior to the "anarchy" of Europe at large. Radicalism is represented and expounded by the heir and successor of the above-mentioned contemporary and *Annals of the Fatherland*, called *Russkoye Bogatstvo* (*Russian Treasure*), published and edited by V. G. Korolenko, the novelist-publicist, known to Americans by the translation of his "Blind Musician," and the critic-sociologist-philosopher, N. K. Mikhailovsky. This review is but nine years old. It is under special restrictions, being subject to preliminary censorship. There is but one other review to be named, *Russkaya Mysl* (*Russian Thought*), edited by professors of the Moscow university, and Liberal in direction, with Radical leanings. This review, twenty years old, was never "young." It has been dull, heavy, mediocre, from the beginning, and has done or said nothing original.

It should be added that there are several "new" magazines in Russia, published by and for the younger generation of symbolists, decadents, veritists, and what not. They profess to treat the "fathers" with contempt and to revalue all literary and moral and art values. No one is able to grasp their philosophy, and they could hardly give an intelligible exposition of it themselves. Bourenin, one of the ablest newspaper critics, lately wrote as follows about these iconoclastic and "modern" periodicals: "Their general characteristic is impotence joined to impudent superficiality of thought. They long to proclaim something new and profound to the world, but they do not know what this 'something' is. Under the pretext of revaluation of values, they riotously boom quack-born crudities; exalt half-formed talent, and confusedly set forth ill-digested ideas. They are terribly mediocre and unscrupulous, and how can they revalue that produced by talent and brains?"

The Aisles of the Wood

WILLIAM HAMILTON HAYNE, in *Harper's*

He is not wise who would shun the joy
Of the life that is called alone,—
To roam the wood, with the heart of Spring
Soft beating against his own.

To watch the clouds as they form or fade,
By the breath of the wind-tide kissed,
On the ocean blue of boundless sky,
With its filmy veil of mist.

To hear the minstrels of high degree
Outpour from their eager throats
In lyric rapture, divine and deep,
Their current of golden notes.

To touch the blades of the keen, soft grass,
And flowers that star the sod,—
Children of bloom who can only speak
In the vernal tongues of God. . . .

He is not wise who would shirk his part
In the Master Gardener's plan,
And shun the aisles of the ardent wood
To follow the ways of man.

SCIENTIFIC

What the Lightning Flash Reveals

AND HOW IT WAS PHOTOGRAPHED

PHILIP S. FISKE, in the April *World's Work*, describes the method devised by Professor Pickering, of Harvard, to obtain photographs of the spectrum of lightning. The photographs were necessarily "snapshots," and the apparatus for taking them consisted of a large telescope with a plate holder slipped into one end and a prism at the other, in front of the lens, the prism producing a spectrum just as the triangular glass pendants of a chandelier produce variegated bands when rays of light pass through them. The occurrence of several dry thunder storms—clouds and lightning without rain—made it possible to put the

pressure and the intensity of the current, has been obtained artificially by producing a spark from an electric battery in a glass tube or in the open air. The spectrum of lightning is really the spectrum of the earth's atmosphere, at least of that particular part of it in which the flash occurs. And right there comes in the most startling theory to which the Harvard observatory photographs have given rise.

The earth's atmosphere is made up of oxygen, hydrogen, and a certain amount of aqueous vapor, such as we so often see condensed into clouds. Oxygen and hydrogen have always been considered elements in chemistry; that is, it has been believed that

From the World's Work

SPECTRUM OF A LIGHTNING FLASH

apparatus into successful operation, and the resulting photographs, four in all and the first of their kind, are thus described by Mr. Fiske:

When the plates were developed, the lines of the spectrum were distinctly marked on four of them. The photographic plate is not sensitive to yellow nor red, so that the possibilities of photography are limited to one end of the spectrum. The colors in this end are indicated in the photograph by differences in degrees of blackness and whiteness, and are distinguished by the wave-lengths of the lines. When an astronomer wants to decipher a photographic spectrum he studies line after line with a microscope, measuring each and noting its position and its relations to its surroundings until he knows exactly what each signifies. And that is the way that Professor Pickering read the spectrum of lightning.

The lightning flash which we see is really the light given out by a portion of the atmosphere, which is made self-luminous by the passage through it of a current of electricity. Precisely the same effect, with proper allowance for the difference in the atmospheric

they were not compounds of any kind and could not be split up, but stood among the units of creation. Professor Pickering's four photographs show, however, a strange variation in the hydrogen lines which some scientific men have taken as indicating that there may be some finer subdivision of nature than has yet been recognized. A few have gone so far as to suggest that there is some final element, as yet undiscovered, from which all of the so-called chemical elements are formed by combination, and one man, at least, thinks that it may turn out to be electricity.

But there is another side to the story which these wonderful photographs tell. There is a curious resemblance between the photographs which the Harvard observatory has taken of the spectrum of lightning, which is, as a matter of fact, the spectrum of the atmosphere of our world, and those made at the same place of the spectrum of Nova Persei, the new star recently discovered. The hydrogen lines are nearly identical in the two sets of pictures. Furthermore, there are in the spectrum of Nova Persei none of the lines denoting the presence, in gaseous forms, of metals in its atmosphere.

Infection from Cigar Clippers

Journal American Medical Association, Chicago. Excerpt

IN these days of general microbiphobia, new perils to health and life are constantly unfolding themselves before our troubled visions. Some of these, as given out, are without question exaggerated and comparatively negligible; others, however, are worthy of some attention. The dangers from certain methods sometimes employed by cigarmakers were recognized long ago, even before the popular fear of germs had been aroused. The latest danger from this source is indicated, according to the newspapers, in a warning of the Chicago board of health, which pronounces the "mechanical cigar-clippers" in general use where cigars are sold a menace to the health of the community. It is a common practice for a smoker to moisten the tip of his cigar with saliva before inserting it into the clipping machine; he thus leaves whatever pathogenic germs his mouth can convey to infect the next comer. A continual series of such procedures can, it is easily imagined, make these little conveniences excessively dangerous disease-promoters. There is a still further danger to be considered: the infected clippings are not thrown away or destroyed, but serve, at least in many cases, to meet the demand for tobacco in some other form, as cigarette or snuff material, which are other agents for spreading infection.

The Mechanism of Dreams

A PSYCHOLOGICAL EXPLANATION

IN a recent article published in the *Bulletin de l'Institut Psychologique International* (Brussels), Mr. H. Bergson explains the psychology of dreams, as he would explain all other natural perceptions. "The mechanism of dreams," he says, "is similar to the mechanism of normal perception. In both cases there are matter and form. Matter is constituted first by the 'phosphorics' and then by the real impressions made upon the organs of senses. During sleep, as well as during wakefulness, a certain sensible matter is offered to our eyes, to our ears, to our touch. *Verbi gratia*: it is for the eyes a candle suddenly lighted in the room and which suggests to the sleeper the idea of a fire; it is for the ear an inner buzzing, the creaking of a piece of furniture or the wind playing its chromatic gamut in the chimney, forming sounds which the dream transforms into conversation, songs, outcries, music; for the touch it is the contact of our body with its light garment, reminding us that we are lightly clothed, etc., etc. All these confuse and intense data form the material of the dream."

The data, however, are insufficient to produce the dream which gains its precision through our memory of former events. In normal perception the impression gained from the outside is completed by our memory. For instance, one or several formulæ are written incorrectly, some letters are missing. These formulæ are displayed on a board in a dark room, and the electric light is turned on for a space of time too short to permit to read each letter. Nevertheless, the observer makes out the full text of the formulæ, his memory supplying him with the missing letters, correcting the errors. In fact he reads the formulæ in the exact manner it should have been written. How

is this? The observer has unconsciously called upon his memory which shows to him the words of the formula in their right shape. What he saw was not the formula as it was written, but a mental recollection made tangible to give a form to the impression originated on the outside. So it is during sleep. Our recollections, which in the normal state are dormant, come to the surface under the influence of external impressions experienced by the sleeper; they give to these impressions an element of "decision" replacing "indecision"; they transform them into definite and precise objects.

"Such is," concludes Mr. Bergson, "the mechanism of perception, properly speaking, which is also the mechanism of dreams. In one case real impressions are made upon the organs of senses; in the other our recollections are encircled by a casual impression through the vitality of which they are able to return to life."

Notwithstanding the numerous facts quoted by Mr. Bergson in support of his theory, a writer (H. A. M.) in the *Theomiste* (Paris) holds a contrary opinion: "Following his explanation, more ingenious than accurate, at least as far as mechanism of normal perception is concerned, Mr. Bergson considers the following questions: 'Where is the precise, essential difference between perception and dream? What is sleep? What is the psychological (not physiological) characteristic of sleep?' He finds this characteristic in the absence of will-power and necessary efforts when we select in our memory the recollections which are suitable to our actual impressions and when we adapt them to each other."

The *Theomiste* writer is not fully convinced by the explanation, yet he quotes Mr. Bergson's answer: "When we dream, as well as when we are awake, we exercise the same faculties, but in one case these faculties are in a state of tension, in the other in a state of relaxation. In dreams we have the whole mental life, minus the tension, the effort, and the bodily movement. We perceive, we remember, we reason; these faculties abound in dreams because abundance, in the spiritual domain, does not mean effort. '*Precision de l'ajustement*' (precision of adjusting), however, requires effort. It is this force which is wanted in the dreamer, and which distinguishes him from the man who is awake."

The Relation of Low Winds to Behavior

THE April number of the *Popular Science Monthly* presents a study by Professor Edwin Grant Dexter, of the University of Illinois, of the effect of calms on the behavior of individuals. His conclusions are based on a minute comparison of school, penitentiary, police, board of health, and bank records, mostly in New York city. The data include: Registration and deportment in public schools and in penitentiaries; arrests (males and females) for assault and battery, drunkenness, and insanity; suicide and deaths; policemen off duty for sickness; and clerical errors. Those days were considered as calm on which the average hourly movement of the wind did not exceed four miles.

In the table which follows, Mr. Dexter summarizes his observations. One hundred per cent represents the normal or expected number of such phenomena under ordinary conditions:

Schools; absences.....	314%	Drunkenness (male)....	78%
Schools; deportment....	50%	Insanity (male).....	67%
Penitentiary deportment	80%	Insanity (female).....	34%
Assault and battery		Suicide.....	62%
(male).....	89%	Death.....	104%
Assault and battery		Policemen off duty.....	105%
(female).....	45%	Banks, Errors in.....	105%

These figures may be interpreted thus: "During calms, those life phenomena which are due to depleted vitality are excessive," and those "which are due to excessive vitality are deficient in number." In explanation of this state of affairs there are two general hypotheses. "The first is based upon the general facts bearing upon ventilation, and the second upon those of atmospheric electricity. The first would only be applicable to the conditions of large cities, while the second would be valid for any spot on the earth's surface. If the normal proportions of oxygen are to be maintained in the immediate vicinity of great combustion of oxygen, fresh air must by some means be brought in to take the place of that, the normal mixture of which has been disturbed. We are quite familiar with these facts in their bearing upon the ventilation of buildings, but there is no difference except that of magnitude between a building in which the air is being robbed of its oxygen through combustion, and a city in which the same process is going on.

"Some interesting facts not already alluded to are suggested by this study, and in conclusion I shall mention two of them very briefly. First, there would seem to be reason to infer that the influence of calms upon children is more marked than that upon adults. The basis for this belief is found in the fact that the absentees from school were increased three-fold during their prevalence, while no one of the classes of adults was affected to anything like such an extent. Second, that women seem to be more sensitive to such influence than men. Evidences of this are to be found in the study of arrests for assault and battery where the sexes were tabulated separately."

INSURANCE AGAINST SMALLPOX: The principle of insurance against the various risks to which men and affairs are liable is receiving a constantly-extending application. At the present time it is not surprising that insurance corporations have turned their attention to smallpox risks. For the sum of 1s. 2d. a person can obtain for a year an insurance policy entitling his heirs to £100 after his death from smallpox and entitling himself to £1 weekly for five weeks of a non-fatal attack. Lloyds we note make a difference in the rates charged as between recently-vaccinated and not-recently-vaccinated persons. Doctors it is said are charged specially high rates particularly if they attend smallpox, in which case the charge is no less than 50s. per cent against attack.—*British Medical Journal*.

RELIGIOUS

Passion Plays in America

APROPOS OF THE MONTREAL PERFORMANCE

 OUR last issue referred to the work of some of the notable minister-playwrights and commented on the growing friendliness between the pulpit and the stage. We have now to chronicle a still further advance—or retrogression, according to the point of view—the presentation of religious dramas in professional theaters. A dispatch to the *New York Herald* describes the performance of "The Passion Play" in the French national theater in Montreal. For the first time the Roman Catholic authorities have apparently endorsed a theatrical performance, and no word of condemnation has been heard from any of the Montreal pulpits. The play is in French, but English-speaking people are equally anxious to be present, and never in Montreal have so many persons sat through a play without the slightest idea of what words were being spoken, but yet were completely overcome by the remarkable acting, scenes, and situations, that in themselves suggest the dialogue. It is no uncommon thing to see half the audience in tears during the crucifixion scene.

Since the piece was first presented there have been a few changes in the cast, and it is now composed almost entirely of French-Canadian actors who have had experience in France or the United States. The financial position of M. Julien Daoust, the proprietor, in the matter is one of the interesting features of the whole story. It may almost be said that he has come from poverty to affluence in two weeks. A struggling actor, playing at the various French theaters in Montreal, he announced that he believed that there was money in the "Passion Play," and, despite the protests of his friends, he got M. Germain Beaulieu, a French Canadian advocate, to write a two-hour version from the original Oberammergau piece. In a single night success came to such an extent that already M.

Daoust's profits are estimated at many thousand dollars. In the play, M. Daoust assumes the part of Jesus, and his make-up is quite startling. His eyes are naturally sunken, and physically he is all that history suggests. In many respects the part of Judas is the best rôle in the play. It was brought out with much force by M. E. Meussot. The principal women in the cast are Mlle. Rhea, who appears as Magdalene; Mlle. Johanna, a former member of Mr. Charles Frohman's forces, who takes the rôle of Martha, and Mme. Reid Bedard, who is the Mary.

The *New York Evening Post*, in commenting on the Montreal performance and the possibility of a similar spectacle appearing in New York city, vigorously condemns the whole idea. "It should be realized that the life of the great sufferer for humanity was essentially undramatic. Its moral beauty was expressed often in passive endurance, at most in words or in slight intimate actions which can not be adequately represented under the conditions which bind the actor. As soon as the touching episodes of the Scripture are put upon the stage, all the non-essentials are exaggerated for spectacular effect, and what was insignificant as regards religion becomes positively bad as regards art. The dubious success of a few closet dramas, which have touched lightly the life of Christ, should not blind anyone to the fact that any dramatization of the Passion is inevitably, under present conditions, a vulgarization of the supreme act of the most revered of lives. We can not believe that any manager, Christian or otherwise, will wish to revive the Passion in such form as must infallibly recall Judas, who sold his Lord for thirty pieces of silver."

Instead of being shocked, the *Boston Journal* thinks that the importation of the Oberammergau play "to Madison Square garden, the American Cir-

THE ARREST OF JESUS
Scene from "The Passion Play" in the French Theater at Montreal

cus Maximus, seems feasible enough and reverent. So much lies in the effect produced by the actors as actors. They may personally be models of all that is good, and yet fail to be impressive in holy parts, or they may be none too virtuous as citizens and bring tears to the eyes and goodness to the hearts of the spectators."

The Unity of Christianity and Judaism

THEODORE F. SEWARD, in the April *Arena*, New York. Condensed for PUBLIC OPINION

THE beginning of the twentieth century is signalized by a great discovery. It is not the perception of any single mind, but a truth that is dawning upon the consciousness of all enlightened minds; namely, that the principles of Christianity and the principles of Judaism are not antagonistic. They are in their essence identical and sympathetic. Ideal Christianity and ideal Judaism are one. The error arose from confounding principles with personality. "The Jews killed Jesus, our Redeemer." This slogan was sufficient to kindle and keep alive the deepest prejudices and most intense hatred of an age of ignorance and superstition. And one utterance of the mob at Jerusalem has unfortunately confirmed and intensified the antagonism.

What has Judaism contributed to the treasures of the world's thought and life? The question may be answered categorically: (1) Monotheism; (2) Divine Fatherhood; (3) Human Brotherhood; (4) The Ten Commandments, embodying a perfect system of ethics. This catalogue shows at a glance the impossibility of any real antagonism between the Hebraic and Christian systems of thought and standards of life when rightly understood. Now that the theological mist is rising, and the smoke of controversy is clearing away, the Messianic principle (which is simply love revealed and manifested) is beginning to be recognized as something distinct from ritualism on the one side and from the theological formulations on the other. Hence, many of the Jews are beginning to say, with Rabbi Kaufman Kohler, of New York city:

"The beautiful tales about the things that happened around the lake of Galilee show that there was a spiritual daybreak in that dark corner of Judea of which official Judaism had failed to take sufficient cognizance." Words and acts of sympathy and comity between churches and synagogues are becoming common. A Presbyterian minister, writing on the subject, says: "I have often spoken against the anti-Jewish spirit. We are more indebted to them than to any other race. Jesus said, 'Salvation is of the Jews.'" A Christian publishing house is bringing out at vast expense a Jewish encyclopedia, which will not only have a great historic value, but will serve as a bond of mutual respect between the Jew and the Christian.

This *entente cordiale* between religious and social forces, which have heretofore been divided and more or less antagonistic, is most timely. In fact, it is fast becoming an absolute necessity for the preservation of our social fabric. The problems of life have become so complex and the adjustment of the social order so difficult under modern conditions that there is but one hope for a favorable solution; namely, through a combination of the best men and women, irrespective of race or creed, working in sympathy and harmony for the uplifting of mankind. Such a combination or coalition is now in a more or less conscious process of formation. And the basis of the alliance is a recognition of the golden rule as the only basis of a true civilization. This is to be the rallying cry hereafter of the advocates of "liberty, equality, and fraternity."

CHRISTIAN METROPOLITAN DAILY: Though the experiment is not being heralded by any pious professions, it appears that London is to be given a distinctively Christian daily newspaper. Mr. George Cadbury, until now a minor partner in the ownership of the London *Daily News*, has purchased the control of the property. He is widely known as an unassuming but rigidly conscientious Christian man, and it is confidently expected that he will carry the highest ideals into his newspaper business. He is a strict member of the church of Friends, and the teacher of one of the largest Bible classes in the English metropolis.—*Interior*.

The Search for a New Religion in Japan

JAPAN has religious nostalgia; this is apparent from a series of articles published in the *Tetsugaku Zasshi* (Tokyo), under the signature of Dr. Tnoue Tetsujiro. Buddhism, Shintoism, and Christianity are no longer favored by the intellectualists who devote their most earnest efforts to the search for a supreme doctrine. Dr. Tnoue Tetsujiro, who heads this religious crusade, leading the Japanese toward the promised land of a new faith, does not fail to attack all the existing creeds which happen to be in his way. Hence there is a certain amount of reserve in the other Japanese reviews toward the iconoclastic reformer. Answering his detractors and critics, Dr. Tnoue says: "My new religion is not a patching up of ancient doctrines. I would like to find a new Essence for our life, but not a new form. The form has constantly changed through the centuries, and all forms are alike. But there is an Essence which has never changed." The doctor is particularly harsh on Catholicism, which he places below Protestantism; besides, he states that all religions are superannuated because they are based upon words and external ceremonies. Concerning his new religion, the prophet entertains no illusions; it is only intended for cultivated minds. "People, like children, need toys to play with. Christianity and Buddhism are their toys." It may be noticed that if Dr. Tnoue is rather unjust toward Christianity, he is really cruel toward Shintoism and Buddhism.

The Church Conscience

SAMUEL ZANE BATTEN, in the *March American Journal of Sociology*, Chicago. Condensed for PUBLIC OPINION

IN considering the church as the maker of conscience, we do not mean to imply that this is all the work that the church has to do; we only maintain that this is an important and essential part of the church's work. There is the work of the church in evangelism; there is the work of the church in missionary extension; there is the work of the church as the leader of worship and the quickener of devotion. But, over and above this, there is the work of the church as the maker of conscience. This has to do with what may be called the prophetic, the ethical, the social work of the church. The term "conscience" is here used to describe that power of the human soul by which man makes moral distinctions and guides his life. So far as one can see, there is no other institution so well qualified for this work. The state can not do this work, for government is itself a creature rather than a creator. The state is the organ of the political consciousness, and by its very existence it implies a consciousness lying back of its organization. The daily press can not do it, for the press is fast becoming an echo and not a voice. The public schools can not do it, except in an elementary and primitive way. The public school deals with intellect rather than with conscience, with knowledge rather than with ethics. Nor can the various reform bodies and philanthropic agencies do this important work. As a rule, these societies are organized to prosecute some special reform, and they can not teach all-around morality.

First of all, the church, as a depository of the di-

vine ideal, must set up an ideal, a standard of success; and must create a conscience which shall honor this standard and fulfill this ideal. The church must create a higher type of political obligation. The American people, one is ready to believe, have a very keen sense of personal integrity. They have also a very enlightened ecclesiastical conscience. They are very regardful of the higher proprieties of family and social life. They have a very deep sense of obligation toward the heathen peoples of the world. But have the American people a political conscience? Have they learned to interpret all the relations of their commercial and political life in the light of the Christian ideal and the Christian law? Here and there may be found a man who does this; but as a people it can hardly be said that we have attained.

The preacher is not here to preach ethics or sociology; he is not here to preach on the rights of labor or the rights of capital; he has nothing to do with the platforms of parties and the programs of reformers. But he is here to witness for righteousness and love in all the relations of life; he is here to show laborers and capitalists that they are brothers and partners; he is here to create the conscience which shall make all right laws and statutes. In some churches men are disciplined today for heretical opinions concerning the Scriptures or the Trinity; in some other churches men are disciplined for dancing and card-playing. But who ever heard of a church member being disciplined for political crookedness and commercial inhumanity? The fact is, as everyone knows, some of the men guilty of these political treasons and industrial cruelties are members of Christian churches in good and regular standing. In every Christian church there ought to be an atmosphere so intense, a sentiment so strong, a passion for righteousness so deep, that the political corruptionist and commercial sharper should be compelled to reform or surrender his membership.

Various Topics

RELIGIONS IN NEW YORK CITY: The religious division of the people of New York is given as Roman Catholic, 1,226,561; Hebrew, 598,012; Protestant, 1,733,465.

A HOTEL CHAPLAINCY COMMITTEE has been formed by several New York clergymen with the Rev. R. S. MacArthur as chairman. The movement has grown out of the independent work of the Rev. H. M. Warren, of the Central Park Baptist church, who, two years ago sent cards to the various hotels of the city offering to render any needed pastoral assistance to the guests. It will be the duty of the present committee to perform the same service, but in a larger and more efficient way than one man could.

THE "MESSIAH" IN KANSAS: From the old country Handel's great oratorio, the "Messiah," has followed the star of empire to the prairies of Kansas, and has become the annual musical treat of thousands of music-loving people, who, in many cases, travel twenty and thirty miles by wagon to hear it given by a chorus of four hundred trained voices at Lindsborg, the center of a Swedish colony, during Holy Week. Four performances were given this year, the last being on Easter Sunday. Mme. Lillian Nordica was the star of this year's singing festival, having been specially engaged.—*Boston Transcript*.

CELIBACY OF CLERGY ATTACKED: A movement has been started in Palermo, the object of which is to circulate literature directed against the celibacy of the clergy. Circulars have been sent to nearly all the priests in Italy. In these circulars celibacy is attacked both on scriptural and moral grounds. Attention is called to the fact that eleven of the apostles were married men. Special attention is called to the practice of the Greek church, in which it is required that the clergy must be married.—*Northwestern Christian Advocate*.

THE NEWS OF THE WORLD

MONDAY, MARCH 24

DOMESTIC.—In the postal fraud cases in Havana, C. F. W. Neely was sentenced to ten years' imprisonment and to pay a fine of \$56,701, W. H. Reeves to ten years' imprisonment and to pay a fine of \$35,516, and Estes G. Rathbone to ten years' imprisonment and to pay a fine of \$35,324....President Roosevelt had a conference with Estrada Palma, at which it was decided that the inauguration of General Palma as president of Cuba shall not take place before May 20....The temporary injunction asked for by the Interstate Commerce commission against six railroads entering Chicago was granted by the federal court.

FOREIGN.—In the house of commons the war secretary, Mr. Brodrick, stated that safe conduct had been granted to Acting President Schalkburger and other Boer leaders to go through the British lines to confer with President Steyn regarding peace terms....The French parliament voted a credit of 500,000 francs for the expenses of President Loubet's trip to St. Petersburg....There have been 470 deaths from cholera at Mecca and Medina during the last ten days.

TUESDAY, MARCH 25

DOMESTIC.—Secretary Root, by direction of the president, instructed General Wood to turn over the government of Cuba to its people on May 20; a small force of United States troops is to remain permanently in the island....Major-General Elwell S. Otis was placed on the retired list of the army....The French deputies voted \$120,000 for France's exhibit at the St. Louis exposition.

FOREIGN.—A new Irish land bill was reported to the British house of commons; it does not provide for the compulsory sale of land, but appoints a commission to deal with the question....Tax riots in Honan province, China, culminated in a rebellion....Japanese are seizing foreign property in collecting the house tax.

WEDNESDAY, MARCH 26

DOMESTIC.—Noriel, the only insurgent general still in the field except Malvar, has been captured in the Philippines; the health authorities report forty-nine cases of cholera and thirty-nine deaths at Manila....Albert Patrick was convicted of the murder of William Marsh Rice in New York city....The bill to give the Rapid Transit commission, of New York city, power over the franchise for the Pennsylvania tunnel was passed by the assembly....Millers, in a meeting at Chicago, formed a national federation, representing a capital of \$400,000,000 and an annual output of 100,000,000 barrels.

FOREIGN.—Cecil Rhodes died at Cape

Town, in the forty-ninth year of his age....General Kitchener reports a combined movement against De La Rey in the western Transvaal; the Boer general escaped, but the British columns captured 135 prisoners and several guns; the pope has called upon Christian people throughout the world to pray for peace in South Africa....Protocols for the renewal of diplomatic relations with France were submitted to the Venezuelan congress....England has asked Canada to send 2,000 more troops to South Africa....The prospectus of the new Russian 4 per cent loan was issued in Berlin.

THURSDAY, MARCH 27

DOMESTIC.—President Roosevelt sent a special message to congress asking authority to appoint diplomatic and consular representatives of the United States in Cuba....The legislature at Albany closed the shortest session since 1794....At the court-martial at Manila, Smoke, a Filipino scout, said the natives had planned to murder Major L. W. T. Waller and Lieutenant Williams....Representatives of the coal operators and of the miners of Pennsylvania met, and at the request of the civic federation action regarding a strike was postponed for at least thirty days....Judge Chytrans, of Chicago, decided that a railroad company can not put off a train a passenger who is riding on a "scalped" ticket.

FOREIGN.—Public honors will be paid to the memory of Cecil Rhodes in Cape Town, Kimberley, and London; Englishmen are surprised at the world-wide tributes to Mr. Rhodes's greatness in view of his complicity in the Jameson raid....The Princess Radziwill was committed for trial at Cape Town on the charge of forging the name of Cecil Rhodes to promissory notes....The British authorities in the West Indies have been instructed to refuse permission to the rebel steamer *Bolivar* to coal and receive supplies at British ports....The shareholders of the Canadian Pacific railroad approved an issue of \$19,500,000 new stock....Venezuela insurgents have captured San Antonio and Maturin, but have lost two ports on the island of Margarita.

FRIDAY, MARCH 28

DOMESTIC.—Henry Clay Evans, the commissioner of pensions, has placed his resignation in the hands of the president....A crowd of twenty-four masked men at Casper, Wyoming, lynched Charles Woodward, condemned to be hanged for murder but reprieved, by hanging him from the official gallows....Governor Murphy, of New Jersey, signed the bill giving the United States steel corporation power to convert part of its 7 per cent preferred stock into 5 per cent bonds.

FOREIGN.—Advices from London make it appear that there is no immediate prospect of peace in South Africa....The tobacco war has had little effect upon the price of that commodity in Great Britain....Turkish soldiers attacked a post on the Bulgarian frontier.

SATURDAY, MARCH 29

DOMESTIC.—An agreement between the transatlantic lines, excepting the Beaver line, was signed at Liverpool for a minimum saloon passage rate, effective on March 31....A high official of the Danish government said that the charges of bribery made by Captain Christmas in connection with the sale of the Danish West Indies were false....President Roosevelt made public the correspondence in which the request of Lieutenant General Miles to be sent to the Philippines was disapproved....Mr. Dickinson, United States consul general at Sofia, has become persona non grata to Bulgaria, and lost his post by his activity in the case of Miss Stone....The loss by floods in Tennessee is estimated to reach fully \$1,000,000; several towns suffered severely and there were a few lives lost.

FOREIGN.—A thousand people have been killed in riots at Ta-Ming-Fu, in Pe-Chi-Li province, China, caused by attempts to collect indemnity for the Catholics....The report came that the British were worsted in a fight with Boers in Cape Colony on March 24, having eight men killed, ten wounded, and twenty-nine captured....The stock market in London is buoyant in anticipation of better times after the return of peace in South Africa....Prince Derneburg, former German minister to Great Britain and France is dead.

SUNDAY, MARCH 30

DOMESTIC.—Joseph Potter, LL.D., a member of the second division of the court of appeals, New York, died in Whitehall, New York....Guthrie, Oklahoma, had a \$350,000 fire....James R. Garfield has accepted the place of civil service commissioner made vacant by the resignation of William A. Rodenberg.

FOREIGN.—The British steamer *Holyrood* was sunk in collision with the British steamer *Bernard Hall* west of Fastnet Light, Ireland, in a dense fog; the crew of the *Holyrood* were rescued....The steamer *Lake Superior*, with one thousand immigrants on board, went on a reef at St. John, N. B., and unsuccessful efforts were made to float her....The total British revenue for the year was £152,601,637, an increase of £12,613,315 over the preceding year, of which the income tax yielded £34,800,000....The North German Lloyd steamship company directors voted for an increase of 10,000,000 marks capital.

The Books of The Week

CECIL RHODES. A Study of Character.

By Howard Hensman. Leather, pp. 382, \$5. New York: Harper & Bros.

MR. HENSMAN appears to have had exceptional opportunities for learning all that there is to learn about the youth of Cecil John Rhodes, whose death gives an increased value to these pages. We expected to be told that he displayed in his youth the characteristics that distinguished maturer years, and we are not disappointed. In his schoolboy days, "he had an indomitable spirit and a dogged perseverance." Religion, French, and classics were the favorite studies of this younger son of a parish vicar, and at one time it was proposed that Rhodes should enter the ministry. Instead, he went to South Africa for his health. This was June, 1870, and when Rhodes was seventeen years old. Gold and diamonds had been discovered three years before—there then appeared to be more diamonds than gold and Rhodes set about the task of getting his share. In course of time he formed the diamond trust, known as the De-Beers company, crushing all rivals and centering the control of the whole diamond output in his own hands. But this was not accomplished in a day. Rhodes returned to England every year to continue his studies, and at other times a stranger in Kimberley might have found him in these days seated on an upturned bucket sorting with keen eyes the diamonds on an improvised table in the open air while he read for his examinations with one eye on his book and one on his native workmen in the diamond mines. In 1881 he took B.A. and M.A. degrees at Oxford, where he had entered Oriel college in 1873.

In one way and another, as Mr. Hensman puts it, Mr. Rhodes had by this time become a growing political power in the country. His first and in one sense his greatest service to the empire in South Africa, was the retention in British hands of the western trade route to the Zambesi. This he accomplished by fairly legitimate means. Later when he was ready to seize the country now called Rhodesia, he resorted to different methods. From Lobengula, through a third person, he obtained authorization to prospect for minerals in the great territory north of the Transvaal, now colored red on the map. On the basis of this concession the British South African company was formed and the country of the Matabele, Basutos, and some smaller tribes was without further delay transformed into British territory. Only an Englishman could fail to see the absurdity of protesting against Boer or Portuguese interference with native rights, as in the case of Manicaland, and then gobbling up the land the minute the

weaker thief had been forced to release its hold.

The great object of Rhodes's life, we are repeatedly told, was the federation of South Africa—under the British flag. Money-making was merely a means to this end. Thus, in speaking of the amalgamation of the diamond mines, Mr. Hensman says that what Rhodes was working for was "the formation of a gigantic monopoly with ample funds at its command, which he would be able to use for the purpose of developing his scheme of British expansion towards the Zambesi." He followed up this ambition to the day of his death, and while the raid and other opposing forces defeated or postponed the achievement of his aim to paint the map of Africa "all red," as he expressed it, he added territory about fifteen times the size of England, Scotland, and Wales to the empire. The methods by which this feat was accomplished are not specifically touched upon, Mr. Hensman avoiding the subject on the absurd plea that "to discuss it would be out of place in this present work." Where such a discussion would be in place if not here, it is difficult to imagine.

The raid and succeeding events are, of course, fully dealt with. Mr. Rhodes's connection therewith being set forth fairly and the action of the then premier of Cape Colony in lending aid to an armed incursion into a friendly neighbor's territory properly condemned in the mild language of the investigating committee's report. Of course Mr. Hensman agrees with Mr. Chamberlain that however much Mr. Rhodes might have failed in his duties as a public man, there was nothing in the affair which rebounded to his private dishonor.

It only remains to tell of the splendid bravery shown by Rhodes in penetrating the Matabele camp to settle the rebellion of 1896, and of the part he played in the defence of Kimberley. It is in connection with the latter subject that Mr. Hensman is finally induced to admit that "It is an unfortunate truth that on several occasions a kink in Mr. Rhodes's mental organism has led him to regard himself as being above the rules which control the movements of an ordinary individual." Rhodes, in short, was a modern Cromwell, a twentieth century Napoleon; he "dealt in millions and thought in empires," and had the infirmities common to this type of great men.

NAPOLÉON. A Sketch of His Life, Character, Struggles, and Achievements. By Thomas E. Watson. Cloth, pp. 719, \$2.25. New York: The Macmillan Co.

MR. WATSON tells us that it has been his purpose "to portray Napoleon as he appears to an average man. . . . to give to the great Corsican his proper historical position, his true rating as a man and a ruler, together with a just estimate of his achievements." In this endeavor Mr. Watson has, in a

A Grand Duchess And Her Court.

THE LIFE OF ANNA AMALIA, DUCHESS OF SAXE-WEIMAR-EISENACH AND THE CLASSICAL CIRCLE OF WEIMAR.

By Frances Gerard, Author of "The Romance of Ludwig II. of Bavaria," etc. 2 vols. 8vo. 42 illustrations. \$7.50 net.

"A capital study of a noble woman, the work is also valuable as throwing considerable light upon such great men as Herder, Schiller, Richter, Wieland, and above all, Goethe."

The Autobiography of Lt. Gen. Sir HARRY SMITH

With Portraits and Illustrations. 2 vols. 8vo. \$8.00 net. Postage, 30c.

"Alive with energy . . . as bright and gay as a romance by Lever, and it will be many years before we find so brilliant an example of simple enthusiasm . . . there is not a page of these two admirable volumes that is not worth reading. It is packed with military wisdom; all soldiers may study it with profit."—*The Spectator*.

FIVE STUART PRINCESSES

Edited by ROBERT S. RAIT,

Fellow and Lecturer of New College, Oxford. 8vo, illustrated, \$3.50 net; postage 15c.

The five princesses are Margaret of Scotland, Elizabeth of Bohemia, Mary of Orange, Henrietta of Orleans, and Sophia of Hanover.

PETER III., Emperor of Russia

By R. NISBET BAIN.

Author of "The Daughter of Peter the Great." 8vo, illustrated, \$3.50 net; postage 14c.

"As a 'secret history' of the Russian Court of the day, Mr. Bain's Biography is in every sense a curious revelation."—*London Bookseller*.

NAPOLÉON'S LETTERS TO JOSEPHINE, 1796-1813

For the first time collected and translated, with notes, social, historical, and chronological, from contemporary sources.

By Henry Foljambe Hall, F. R. Hist. S.

8vo, illustrated, \$3.00 net; postage 16c.

"This book is a very great addition to Napoleonic literature. The letters form most interesting reading and can but modify the most virulent hostile estimate of the writer."—*Baltimore Sun*.

SACHARISSA.

Some Account of Dorothy Sidney, Countess of Sunderland, Her Family and Friends, 1617-1684.

By JULIA CARTWRIGHT.

Author of "Beatrice d'Este," "Madame," etc. 8vo, illustrated, \$2.50 net; postage 12c.

"Her qualities of mind, her wit, and her social tact, to say nothing of her talent as a writer of letters, make pleasant memories cluster about her name."—*Outlook*.

Vegetable Galls.

An introduction to their study, Collecting, Mounting, Classification, etc.

The Law of Growth And Other Sermons.

By Phillips Brooks. Selected from his unpublished manuscripts, and will be found to be in his best vein. 21 Sermons. Cloth, \$1.20 net; postage 12c.

E. P. DUTTON & CO.,
PUBLISHERS,

31 West 23d Street, New York.

measure, succeeded, but it is a legitimate question whether or not the task were worth doing simply because it has been done so many times before. It is not true, as Mr. Watson appears to believe, that Napoleon is in need of defense or explanation on any side of his character, or in any of his relations to the history of his own or later times. It is true that he has been misrepresented and belittled, especially by English historians, against whom Mr. Watson repeatedly turns the shafts of his sarcastic reproaches, but there are some hundreds of histories besides those of Scott and Lockhart, Mr. Watson's particular abominations. Another American, Professor Sloane, has given us an estimate of Napoleon that is far more trustworthy than the present one, more definite, and more convincing, because it is based upon a much more scholarly foundation of fact. The view Mr. Watson presents to us is interesting, but no view has historical value unless it is laid before the reader in such a way that its truth and reasonableness make an insistent appeal. Mr. Watson's view does not make such an appeal, partly because it is not clear cut, and partly because it soon becomes plain that the author has two ways of applying standards by which he judges men and events. By the same one he will condemn an hereditary ruler and uphold a Napoleon; by another he will judge harshly a policy when it is put into effect by one nation, England, for example, and excuse the employment of the same policy by Napoleon, because, forsooth, it had been wrongly employed before. This is an unendurable fault, as is also the too frequent employment of "perhapses." Perhaps is the last word an historian should employ. "Spain had been his ally, but had, perhaps, never had her heart in the alliance." The question, among others, that Mr. Watson purposed to settle was whether Spain was or was not a sincere ally. She was not, as a matter of fact, and if Mr. Watson was in any doubt about it or about the many other things he qualifies by "perhaps," he should have disposed of his doubts before he began writing history.

One does not have to look far for the explanation of Mr. Watson's admiration. It is based on the fact that Napoleon was a great law-giver, that he broke down the old system of privilege, transformed Jacobinism into reason, and started the world on the road toward true democracy. Because he did these things, Mr. Watson pardons his later absolutism, and because he thinks it was only the spread of liberal ideas that the enemies of France feared and attacked, he can find nothing worthy in their conflict with the force that would have overwhelmed them had they not combined to stop it. This is not said by way of argument against Mr. Watson's position; it is said merely in explanation of our opinion that the book is neither a safe guide as to facts, largely because it does not tell the whole story, nor sound as to its conclusions, because its author is prejudiced.

ANTICIPATIONS OF THE REACTION OF MECHANICAL AND SCIENTIFIC PROGRESS UPON HUMAN LIFE AND THOUGHT. By H. G. Wells. Boards, pp. 343, \$1.80. New York: Harper & Bros.

ALL men know by this time that Mr. Wells has a fertile imagination. He also has the power to make the products of his imagination seem altogether reasonable and probable. This explains why his anticipations, which are neither more nor less than a forecast of the social and mechanical state of the world in the year 2,000, are highly interesting. They are not fanciful; they are offered seriously and earnestly, although now and again we have suspected that Mr. Wells was making sly sport of our credulity. In as few words as possible, the anticipations are based upon the simple rule of the survival of the fittest. This rule is applied to men, things, and institutions alike; the best characteristics of great cities will be diffused, the reproduction of the unfit will be restrained, war (like famine and pestilence), will be lifted from the shoulders of man, and the black, and brown, and yellow people who do not come up to the standard of efficiency will have to go. The processes by which the author arrives at his conclusions are often as interesting as the conclusions themselves.

PSYCHIC RESEARCH AND GOSPEL MIRACLES. By Edward Macomb Duff and Thomas Gilchrist Allen. Cloth, pp. 396, \$1.50. New York: Thomas Whittaker.

MIRACLES, or as Carlyle termed them, Hebrew second-hand clothes, have for some time been put aside in serious religious discussion, because of the fact that they represented an impediment and an appeal to the undemonstrable. Now, however, two gentlemen appear, one a clergyman and the other a man of science, and tell us that Christ's miracles are neither an evolution of superstition, the work of myth builders, nor borrowings here and there, but are scientific facts quite capable of verification. Thus the miraculous draught of fishes is but an example of telekinesis, or the producing of material motion by mental forces; the changing of water into wine is an example of chemicalization, etc. The discussion is, to say the least, ingenious and the authors are possessed of sufficient knowledge, theological, psychical, and scientific, to make their arguments convincing. The book is decidedly stimulating reading for the orthodox believer or for the free thinker.

THE LITTLE BROTHER. By Josiah Flynt. Cloth, pp. 254, \$1.50. New York: Century Co.

FROM "Tramping with Tramps" to "The Little Brother" is a far cry. In the former, Josiah Flynt had the rare privilege of opening up an entirely new field to the readers of books, and the material he had at hand was rich and valuable. In the latter book he has suffered from the inevitable necessity of working over matter that has already done good service in his earlier books, and the story which he presents

is neither sufficiently new nor striking to raise it above the common crowd. From the pen of any one else it would be tolerable, but for Josiah Flynt it is a distinct retrogression. It is of a boy who runs away from home with a tramp and dies at a "hangout." The point, as discovered in the last chapter, is the fact that the man with whom he ran away was his father, and the husband of the woman whom he had been taught to regard as his sister, and that he was their son. The clear deduction is the transmission of the "wanderlust" from father to son in spite of a conflicting early environment.

THE DARK OF THE MOON. By S. R. Crockett. Cloth, pp. 454, \$1.50. New York: Harper & Brothers.

A STORY of the gypsies and crofters of Scotland and the revolt against the landlords for the evictions of early Hanoverian times. Mr. Crockett is the master of an apparently inexhaustible mine of information about the feuds and factions of Scotland, and he makes use of it in an effective fashion. Of course, his 'men are "braw" and his maids "bonny," but for once he has omitted the customary blackhearted villain. The death of the two gypsy brothers for the honor and the safety of the clan is told more simply and effectively than is often the case in such descriptions.

A SECULAR VIEW OF THE BIBLE. By Constantine Grethenbach. Cloth, pp. 342, \$2. New York: Peter Eckler.

MR. GRETHENBACH endeavors to separate the wheat of the Bible from the chaff, the incidental from the essential, to disclose what the scriptures really narrate and the true values which should be given the various portions. The book is a curious product of learning and is to be commended more for its erudition than for its interest to the layman.

THE NEW WORLD AND THE NEW THOUGHT. By James Thompson Bixby. Cloth, pp. 219, \$1. New York: Thomas Whittaker.

THAT space is but a screen upon which are thrown the manifold shapes and colors of existence; that man is growth and growing, life a development and developing, and the world a battle ground to temper the soul is the substance of Dr. Bixby's teaching. The author believes that "those creatures succeed who in fulfilling their own life, also compass the good of other beings," that it is possible to know God and that our religious instincts have objective validity.

OCEAN TO OCEAN. An Account Personal and Historical of Nicaragua and Its People. By J. W. G. Walker, U. S. N. Cloth, pp. 309, \$1.25. Chicago: A. C. McClurg & Co.

WITH the isthmian canal problem prominently before the public, this book should find many interested readers. It is popular in its treatment, being more like a carefully kept diary than anything else, and giving an excellent idea of Nicaragua, the land and its people, and

FORCES IN FICTION. By Richard Bur-
ton. Cloth, pp. 177, \$1. Indianapolis:
Bowen-Merrill Co.

PROFESSOR BURTON has written very
entertainingly of various phases of the
art of fiction, emphasizing every point
made by illustrations from well-known
novels. While giving due weight to the
value of invention and construction, he
believes that the novelist ultimately
stands or falls by characterization. He
thinks that "the revolt from the tyranny
of love as an all-absorbing theme can
be traced most convincingly and that
this is a testimonial to the inspiring
breadth and variety of the novel." He
upholds the "dark" in fiction provided
it is not used in undue proportion to its
place in life. On these and kindred sub-
jects, Professor Burton writes with a
conviction bred of wide reading and
keenness of insight.

NAUGHTY NAN. By John Luther Long.
Cloth, pp. 418, \$1.50. New York:
The Century Co.

MR. LONG has put something of the
flower-like quality of his "Madame
Butterfly" into his first novel. It is dainty
and fragile, but it lacks the exquisite
perfection of the short story. The
hero, who tells his own tale, convinces
us that he is a good lover. Nan is a
beautiful, capricious sprite, who might
try our patience sadly if we saw her
through other eyes than an indulgent
lover's. Their idyll is partly comedy
and partly pathos, and wholly improb-
able if put under a realistic microscope.

STEPHEN A. DOUGLAS. By William Gar-
rett Brown. Cloth, pp. 141, 65 cents.
Boston: Houghton, Mifflin, & Co.

THIS is a new volume in the Riverside
Biographical series. Most of the au-
thors of these biographies have freely
confessed that their work was little
more than the recasting in condensed
form of more extended biographies.
Mr. Brown, however, has done a cer-
tain amount of original work, and his
presentment of Douglas's life and char-
acter reflects the swiftness and concen-
tration that characterized the career of
this brilliant figure of the abolition
struggle.

PING-PONG (TABLE TENNIS). The
Game and How to Play It. By Ar-
nold Parker. Cloth, pp. 112, 75 cents.
New York: G. P. Putnam's Sons.

MR. PARKER was the winner of the
Queen's hall open tournament, and what
he has to say about the game that has
taken England by storm and is rapidly
advancing on America may be accepted
implicitly.

TWENTY-SIX AND ONE. By Maxim
Gorky. Cloth, pp. 241, \$1.25. New
York: J. F. Taylor & Co.

THE best thing we have read from the
pen of Maxim Gorky is the short story
"Twenty-six and One," a simple, little
sketch of a bakeshop, full of genuine
sentiment and poetic feeling. Two
other stories are found in this volume

COURS COMPLET DE LANGUE FRANCAIS.
Par Maxime Ingres. Cloth, pp. 314.
Chicago: The University Press.

THIS is undoubtedly the most complete course in French encompassed in one volume that we have yet seen. The author holds that translation is not a means of study, but a result of study. His aim is to enable the student to *assimilate* French as completely and as rapidly as possible, by the incessant training of eye, ear, and memory. With the aid of a dictionary (all instructions are given in French), and an authority on pronunciation, one might make considerable progress in the language by mastering this one book.

CHRIST AND HIS CROSS. Selections from Rutherford's Letters. Arranged. By L. H. M. Soulsby. Cloth, pp. 207.
New York: Longmans, Green & Co.

THE editor explains that this volume of selections is made for those who do not already know Rutherford, and who might turn away from the original because of its difficult phraseology and constant interweaving of texts. Mr. Soulsby in the preface gives a very good outline of the Scotch minister's life and work.

THE MINISTRY OF CONVERSION. By Arthur James Mason, D.D., Cloth, pp., 168. New York: Longmans, Green & Co.

THIS volume contains the substance of a course of lectures at Cambridge in 1892, delivered by the invitation of the special board of divinity. The scope of the book is sufficiently indicated by the title, which does not, however, suggest the breadth of view and sanity of the author's declarations.

THE NEXT GREAT AWAKENING. By Josiah Strong. Cloth, pp. 233, 75 cents.
New York: Baker & Taylor Co.

A STUDY of the great religious revivals of the last four centuries, and a forecast of the one that is to come in the present century. According to Dr. Strong the next great awakening is to be based upon the social teachings of Christ.

WILD LIFE OF ORCHARD AND FIELD. By Ernest Ingersoll. Cloth, pp. 347, \$1.40.
New York: Harper and Brothers.

A VERY attractive volume of nature studies greatly enriched by photographs from life of both the four-footed and winged denizens of orchard and field.

THE AMERICAN FARMER. By A. M. Simons. Cloth, pp. 208, 50 cents. Chicago: Charles H. Kerr & Co.

A SOCIALISTIC view of agrarian questions in the form in which they arise in the United States.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, March 29

Favorable weather greatly facilitated Easter retail trade, the volume of transactions in all lines of wearing apparel being of exceptional magnitude. Activity was by no means restricted to these special lines, however, the general distribution of merchandise exceeding that of previous seasons, with prices well maintained. A distinct evidence of the vigor of legitimate trade is found in the decline of only 21.4 per cent in bank exchanges at New York, notwithstanding the fact that transactions at the stock exchange were not more than a third of those in the corresponding week last year, while at other leading cities clearings exhibited a gain of 9.8 per cent over last year and 31.5 per cent over 1899. Another undeniable indication of expansion in the nation's business is the increase of 4.6 per cent over last year's in railway earnings for March, while compared with 1900 the gain amounts to 14.4 per cent. Industrial activity has suffered no diminution, the civic federation adjusting some labor controversies, while others are in a fair way to reach peaceful termination.

COFFEE TOOK IT

Robbed the Doctor of His Cunning

"I was compelled to drink some Java coffee yesterday morning and suffered so much from its effects that I feel like writing you at once.

I am 61 years old and for a great many years have been a coffee drinker. My nerves finally got into a terrible condition and for about two years I suffered with sinking spells and was so nervous that it seemed as though I could hardly live. I suffered untold agonies. My heart would stop and my kidneys gave me no end of trouble.

About six months ago I gave up coffee for good and began using Postum. I insisted on knowing that it was properly made by being sufficiently boiled, and I prefer a cup of rich Postum to Java, Mocha, or any other coffee.

My sinking spells have left me, my head gives me no trouble now, the kidneys are greatly improved, and, in fact, I feel a great change in my whole body. It is such a comfort to be well again.

I know a physician in San Antonio who had become so nervous from the use of coffee that his hand trembled so badly that he could not hold a lancet, or even take a splinter out, and could scarcely hold anything in his hand. Finally he quit coffee and began using Postum. Now the doctor's nervousness is all gone and he is in good health." Name given by Postum Co., Battle Creek, Mich.

IRON AND STEEL

Demands for an eight-hour day after May 1 by the blast-furnace men were the most disturbing feature in the iron and steel industry, and this is not causing much alarm, as an agreement will probably be reached during the intervening month. Production is now beyond all previous records, and the movement of coke is ample, although the early opening of lake navigation may withdraw some of the transporting facilities which can not well be spared. Buying has been notably active in bars for implement makers, and producers have sold their entire output so far ahead that new business is not sought. Many plans for immediate structural work have been abandoned, owing to the insufficient supply of available material. On the other hand, there are reports of reselling contracts for rails and other supplies by consumers who have secured larger deliveries than will be needed. The appearance of this speculative element would be ominous if quotations were more excessively inflated. Aside from the advance in bar iron at Pittsburgh to 1.80, and foundry iron at Chicago to \$18.50, there are no important price changes, southern furnace producers having decided to postpone the contemplated advance.

COTTON

A severe reaction occurred in cotton, due entirely to the excessive speculative purchases which made the market top-heavy. Vigorous operations for the short account precipitated liquidation and forced prices downward sharply. Dispatches from the south endorse earlier statements of scanty stocks remaining, a canvass by the *Journal of Commerce* making the stocks at uncounted towns 55 per cent less than a year ago. Daily reports of receipts at ports and interior cities also exhibit material losses from the movement a year ago.

PROVISIONS

A slight recovery in coffee from the bottom price must be attributed to aggressive option buying, as the statistical position is not improved, Brazil receipts exceeding last year's high record to date by over a third. A temporary reduction in refined sugar was quickly restored, as the market for raw grades became very strong. Meats again advanced in the face of easier grain, a helpful influence being the largest single order ever placed for the British army. Another reason for strength is the light average weight of live stock receipts, indicating early marketing and suggesting scarcity later in the season.

CORN AND WHEAT

Weakness appeared in the cereals early in the week when there was a certain unanimity about encouraging weather reports and increased acreage.

FRANK P. CLEVELAND.
"The Real Estate Expert."
1400 Adams Express Bldg., CHICAGO, ILL.

Subsequently there was partial recovery owing to less cheerful news from Kansas and Oklahoma, but the net result for the week was a decidedly lower range of prices. Wheat exports materially declined from the satisfactory record of 4,657,625 bushels last week to only 3,088,642 bushels this week, which compare with 3,936,832 in the same week last year. There was a decrease in western receipts to 2,747,094 bushels, against 4,052,508 a year ago, but the difference in arrivals of corn was less striking: 1,976,064 bushels against 2,682,918 a year ago. Atlantic shipments of the minor cereal were only 138,344 bushels, compared with 2,946,461 in 1901.

FAILURES

Failures for the week numbered 205 in the United States against 206 last year, and 22 in Canada against 29 last year.

THE MONEY MARKET

Bradstreet's, New York, March 29

There appeared to be some pressure in the New York loan market this week, due to the fact that certain in-

FOOD AND NEURALGIA

The Right Food Will Drive it Away

Good food cures neuralgia and many other diseases if it is the right kind of food and taken regularly, for the proper food will surely rebuild the cellular tissues and build the right kind of cells instead of diseased cells. When the rebuilding is under way the disease leaves.

That is the fact and the base of the food cure. There are hundreds of thousands of cases to prove the truth of this assertion.

A man in Delaware, Ia., Mr. Thomas Craven, says: "My wife has been greatly afflicted with neuralgia and has never found any medicine that would cure her.

I was told that if she could be fed on Grape-Nuts Breakfast Food for a time she would probably get well, so we started on Grape-Nuts. Within a very short time Wife became entirely free from pain and is now, to all appearances, entirely cured of her trouble.

We cannot find words to express our appreciation of the beneficial results from this greatest food in existence, Grape-Nuts.

stitutions were called on to supply their out-of-town banks with more or less currency for the April settlements. Indications, however, are that this loss was partly made good by shipments of money from other nearby cities, and estimates made on Thursday indicated that the net loss to the banks through the interior movement and the treasury operations was only about \$1,300,000. The prolonged holiday which the stock market was about to take from Thursday's close until the next Monday, while it caused speculative inactivity and decreased Wall Street's demands for accommodation, also appeared to render bankers conservative on the matter of rates, and though 4 1/2@4 3/4 per cent was the ruling quotation for renewals, call money at the stock exchange on Wednesday and Thursday loaned during the greater part of the day at 5 per cent. There was only a very limited demand for time money, which was not freely offered, the rates asked being as a rule 4 1/4@4 3/4 per cent for all periods. Commercial paper is dull, with limited offerings of prime names and an indifferent buying demand, rates being based on 4 1/2@5 per cent for double names.

THE STOCK MARKET

Higher money and holidays rendered the New York stock market very dull this week. Heavy speculative liquidation was, however, lacking, and bear manipulation failed to unsettle prices to any extent; better crop news and the favorable developments in the anthracite labor situation causing a rallying tendency, and a somewhat bullish view of the market's immediate future. Bonds are very firm. Foreign exchange is stronger at 4.87 3/4 for demand sterling, but higher money here and the financial position abroad forbid gold exports.

BANK CLEARINGS

Bank clearings for six business days ending with March 27 aggregate \$2,063,748,166, a decrease of 4 per cent from last week's total and a decline of 10 per cent from the figures of this week one year ago. Exchanges at cities outside of New York amount to \$770,466,975, an increase of 1 per cent over last week and a gain of 12 per cent over the same week last year.

Various Topics

According to Calwer's *Handel und Wandel*, the average dividend paid by the large German industrial companies for 1901 amounted to 7.90 per cent, as compared with 11.50 per cent in 1900.

Murray's Price Current makes the entire winter hog pack in the west about 10,375,000 hogs. This compares with 9,277,000 for the preceding winter season and 9,720,000 two years ago, which was the previous high record.

Retail tobacconists of Glasgow met March 25 to consider the rival propositions made by the Imperial tobacco company and the American tobacco company, through its English branch, Ogden's. They decided unanimously that they would sign neither agreement.

WIT AND HUMOR

Queries

A bred and born philologist is what I claim to be,
But find that there are many things that greatly puzzle me.
For instance, take a cricket ball; you buy it—then it's bought,
But if you take and shy it, is it right to say it's short?
A drummer is a man we know, who has to do with drums,
But I never met a plumber yet who had to do with plums.
A cheerful man who sells you hats would be a cheerful hatter;
But is a serious man who sells you mats "a serious matter"?

You take your girl to Yarmouth, then you are a pair of trippers.
If you slipped with her while skating, would you be a pair of slippers?
If it freezes when it's frosty, is it squosty when you squeeze?
Would you have to buy a biograph to write biographies?
A man is called a baker when to earn his bread he bakes;
But do we call a Quaker by that name because he quakes?
But if you are a dealer, why, of course, you have to deal,
But you may be a peeler, though you never have to peel.

A man who brews, as everybody knows, is called a brewer;
But if your landlord sues you, would you say he is a sewer?
A girl will change the color of the hair upon her head,
It's strange; but still you'll find that though she dyed, she isn't dead.
Would a pious man who fried a kipper be a holy friar?
A timid man who lies in bed—is he "a fearful liar?"
If with mud you find you're spattered from a passing horse's hoof,
And you use a bad expletive, would that be a "muddied oaf?"
—W. Stanford, in *London Academy*.

Trouble

Can not some wise one tell us,
To ease our wondering minds,
Who is it loses all the fault
That other people find?

—*Baltimore World*.

"Goodness!" exclaimed the bay to the river, at the height of the spring floods, "how big your mouth has grown!"

"Yes," replied the river, "that's because my head's so swollen."—*Philadelphia Press*.

The poor, benighted Hindoo,
He does the best he kindo;
He sticks to his caste from first to last,
And for pants he makes his skindo.

PUBLIC OPINION

Number 15
Volume XXXII

The Week

Thursday
April 10, 1902

CECIL RHODES'S will has given rise to more discussion than has any other subject this week. Under the provisions of this extraordinary document two Oxford scholarships for every state and territory in the United States are established, and similar provision is made for students from South Africa, Australia, and Canada. Mr. Rhodes's bequest, which is understood to involve \$10,000,000, was, of course, made in pursuance of his belief that the most potent influence for good in the world is the Anglo-Saxon race. And it is to bring the scattered forces of the race together that he established the scholarships referred to.

EVERYONE, we believe, sympathizes with the object of the bequest, but among those who are willing to look a gift horse in the mouth are a few who do not hesitate to point out that the influence of the plan will work almost wholly upon England and her university, and that the influence upon this country will be negligible. To bring about the condition sought by Mr. Rhodes, if it can be brought about by the means adopted, it would, it is realized, be necessary to send as many Englishmen here as we send Americans abroad, and even then the whole number of students would not be more than a slightly leavening force.

ONE of the most peculiar situations ever developed in any municipality is that now existing in the police department of New York city. Dr. Parkhurst sums up the whole case when he says that it was expected that the Low administration would reform the police; instead of which the police are reforming the administration. They have broken away from their superiors and are enforcing the laws, especially the excise law, New York having been "dry" last Sunday for the first time since Theodore Roosevelt was commissioner of police. This unheard-of enforcement of law is due to the fact that the policeman is tired of acting as a scapegoat for his officers, who receive whatever profit is derived from non-enforcement of law. It is a situation well worth watching, both for entertainment and instruction. District Attorney Jerome is earnestly cheering the patrolmen on and assuring them of his support.

NEW YORK'S preëminence in the matter of municipal malfeasance seems, in fact, to be slipping away, the state of affairs in the St. Louis municipal assembly being far worse than anything New York has been guilty of for years. The investigation conducted by the grand jury has disclosed the fact that the body mentioned was organized into gangs for plundering those who were interested in municipal legislation, grants, and franchises. Bribes for letting legislation "get through" ranged from \$100 to \$100,000, and one city father is said to have made \$175,000 out of one deal, taking \$100,000 from one bidder for his vote and \$75,000 from another. It will not be in order for St. Louis to throw stones at New York for some time to come.

THE New York chamber of commerce has, it is reported, invited the Prince of Wales to participate in the dedication of the chamber's new building next fall, and the impression is that the prince will accept the invitation. If he does so the visit will be another influence similar to that set in motion by Prince Henry's visit and the Rhodes will. It will also be another instance of the part now played by commerce in the world's affairs, a part which kings, least of all, can afford to ignore. It is an interesting fact that the New York chamber of commerce received its original charter from George III, March 13, 1770.

ANOTHER "conspiracy in restraint of trade" has come into an unenviable prominence this week. This is the meat trust, whose methods of doing business appear to be founded upon the rule of "charging all the traffic will bear," and which holds not only the small dealer in the hollow of its tentacles, but which is strong enough to bulldoze the railways into making special rates for their benefit. It is understood that the president has instructed that an inquiry be made into the methods of the meat combination, and every person in the country being vitally interested in the manipulation of the price of meat, the result will be watched with general concern, far more concern, indeed, than has been felt in the war on the railway merger.

GREAT BRITAIN'S fiscal year ended with the last day of March, and her balance sheet shows a most encouraging state of affairs. The income for the past year amounted to \$760,000,000, about \$60,000,000 in excess of the preceding year. While chiefly due to increased rates of taxation, it is a good sign that the receipts from excise taxation decreased, while the income tax increased to a figure which means that the incomes of Englishmen must have been augmented in the past year by \$300,000,000. It can scarcely be said, in view of these facts, that ruin is staring Britain in the face. The increase in the income-tax rate which is expected to accompany the introduction of the budget on Thursday excites only nominal opposition.

AN impressive example of the good influence which may be exercised by a legislative body which does not owe its existence to popular choice was supplied by the French parliament last week. The deputies, with an eye to the effect such action would have on this month's elections, padded the budget with a variety of expensive schemes; the senate, being indifferent to the effect of liberal appropriations on the voters, threw out every extravagant project, the budget thus amended, was passed by a vote of 367 to 80, and the parliament adjourned. There is no present reason to suppose that when it meets again on June 1st the government will have lost any of its present strength.

COLOMBIA'S president, San Clemente, died during the week, an event in which we have a substantial material interest, because of its effect on the future of the country through which the Panama canal runs. San Clemente and Morroquin, the vice-president, were aged figureheads, elected by ex-President Caro, who thought he would have no difficulty in controlling them. Caro's calculations were exact in the case of San Clemente, but Dr. Morroquin was the man who stepped into power when San Clemente's hand weakened. The former has now retired, the latter is dead, and Caro, it is said, being a back-number, the way is open for a peaceful and regular state of affairs in Colombia.

IT is reported that the Manchurian convention between China and Russia has been signed. The exact terms of the revised treaty are unknown, but it can not be very bad if the other powers have withdrawn their opposition to it. It is significant, however, that China agrees to pay the cost of Russian military operations in Manchuria, and it may be taken for granted that the latter will not terminate her occupation until the bill is paid, an impossible task for the present. It would tax the imagination to discover why China should be made to pay for this forcible military occupation of her territory, even if she had not already bound herself to pay an indemnity that will tax her resources for years.

AMERICAN

"The Busiest Man of Us All"

A MORNING WITH PRESIDENT ROOSEVELT

LINCOLN STEFFENS, in the April *McClure's*, draws a pen-picture of the day's work of President Roosevelt, concluding with a plea for the relief of the president somewhat on the lines of ex-Senator Chandler's protest. (PUBLIC OPINION, 16 Jan.)

An early riser and up betimes, President Roosevelt darts into the breakfast-room with a cheerful hail. The day's work is begun. By nine he is in his office, where he and Mr. George B. Cortelyou, the secretary to the president, are to have a quiet hour forecasting and planning the business before them. Mr. Cortelyou shows him the list of his appointments; the notes of bills, orders, and reports to come up, and such mail as he has to see. The president has to hurry, because, as an exception (which occurs nearly every day), an appointment has been made before no o'clock, at 9.45; and it is 9.30 now.

Just then the president's usher looks in. The president is indicating—not dictating, mind you (there is no time for that), but flashing hints of the replies he would make to the cream of his mail; and the secretary is making shorthand signs to recall them.

"Senator —," says the usher; "important."

The president waves to let Senator — come in, pellets some more hints at Mr. Cortelyou, and turns just in time to welcome his visitor. Before their hands have relaxed the grasp, the president and the senator are at it. It is important; and they go over it all, but at high speed. Before they are through, another senator joins them, and by 9.45 the man with the special appointment is there.

On the White House door hangs a sign "Closed," and two men in simple blue uniform guard the entrance. You go up to the door. "I wish to see the president," you say. The door is opened, and you pass up, following others, and followed by many more. Servants still are busy in the East Room; upstairs belated doorkeepers and clerks are hanging up their hats and overcoats. There are twenty people waiting in the hall; for if you are the public, you can not go beyond, unless you have a special appointment; that is the rule. But you see many men and women filing in through the door, and you send in your card. The doorkeeper nods an invitation to enter.

There is no chair unoccupied. The room is a large one, and chairs and sofas are set all about it; but they are filled, and many persons are standing. There are senators and representatives. They were admitted at once because it was their hour; but who are the other people—all these well-dressed men and shabby women? They are the constituents of the congressmen, who are breaking the rules established for their own convenience. They stand about in groups, some talking aloud and laughing, others whispering. Except for the dignified secretary standing at his desk, the scene is one of picturesque self-assurance, of a democratic holiday.

Time passes and more people come in. Ten o'clock comes and goes, and the secretary steps into the cabinet-room. You can see the president talking

there with a new set of "important" visitors. You look about you and count again the relatively important visitors, fifty-three in all: seven senators, seventeen representatives, two politicians, and two police officers from New York, three women, two

"JUST WANT TO SEE THE PRESIDENT"

officers, and—the rest must remain unclassified.

The cabinet door opens and the president, in a long frock-coat, springs up the steps into the room. He looks about and halts.

"I can't see all these people, Mr. Cortelyou. I won't. I can not do it." But his eye has been flashing about him, and in the window-seat spies a man he knows.

"Senator —, I am glad to see you," he says, and he seizes the senator's hand. "I want to talk to you about—" The senator turns to a man and a woman with him. "Mr. President, I wish to present to you Mr. and Mrs. —. They have come all the way—" "I am glad to meet you. I am glad to meet you," the president says to each of his new acquaintances, and his mind springs back to the business suggested by the sight of the senator. "Senator," he says, "come in here with me. I want to see you about—"

He dives back into the cabinet-room, and the senator follows. The door slams shut and the crowd, which has been silent to gaze, rallies and takes up the conversation again by groups. More visitors file in, more congressmen, more constituents. When the president reappears, he comes as before with a leap and a pause, then steps out a few paces, and swings

all the way around. He goes up briskly to the first group. A senator is the center of it, and you expect to hear business; but no, it is constituents—a lot of them. The president shakes each by the hand, and to each says, "I am glad to see you," "I am very glad to see you," "I am very glad indeed to see you," "It is a pleasure to meet you," and so on, each greeting varying a little by word or accent. But the president is intent on something he has to say to that senator, and he pushes through up to him and carries him over to the fireplace, where they talk for a moment. Then the host fends away to some one else, striking out first for the faces he recognizes, usually those of congressmen or officers of some department or branch of the service. Usually, too, the president has something serious to say, but rarely can he say it till he has "met" somebody. I wished, the day I was there, that not less but more Americans could have been there to see what the busiest man of us all was busied with.

General Miles's Philippine Plan

THE LATEST PHASE OF HIS DIFFERENCES WITH THE ADMINISTRATION

GENERAL MILES'S suggestion, disclosed in the correspondence referred to in our last issue, that he be sent to the Philippines with Cuban and Porto Rican specimens of our benevolent rule, the idea being that this would have a good moral effect on the Filipinos, has served to keep "the case of General Miles" before the public. The harsh comments of President Roosevelt and Secretary Root on the correspondence in which the suggestion was made have added fuel to the discussion.

The *New York Times* (Dem.) pronounces the Miles proposal "childish." The *Brooklyn Eagle* (Ind. Dem.) thinks it rather "visionary." The *World* (Dem.) is ironical: "He wants the belligerents to get together and talk things over. But that's the way wars are settled, not 'carried on!' It wouldn't do." The *Journal* (Dem.) defends General Miles and his proposal. The *Sun* (Rep.) ridicules the idea of such a mission as the general recommended, and refers to him as "that once able soldier transformed into a bewildered demagogue."

"A great many people," says the *Philadelphia Record* (Dem.) "will be disposed to believe that the plan of pacification in the Philippines outlined by General Miles might have been profitably adopted at an earlier stage in the game. His suggestions, however, came too late. He might have known from previous experience that any suggestion would have been unwelcome." The *Ledger* (Ind. Rep.) thinks that the suggestion of the commanding general was entitled to respectful consideration; it finds nothing unreasonable in his suggestion that he should command his subordinates.

The *Chicago Journal* (Ind.) admits that while it has up to this time sympa-

thized with General Miles, "in his latest contention he is entirely wrong, and not only wrong, but ridiculous." The *Evening Post* (Rep.) does not approve the general's suggestions, but it criticizes the tone adopted by president and secretary in answering him, and asks: "Does Secretary Root regard General Miles as utterly incompetent and unfit for his position? Is the lieutenant-general of our army an imbecile and cheap intriguer?"

How sharply the press is divided on this subject is shown by these two comments from the *Detroit Journal* (Rep.) and the *Free Press* (Ind. Dem.) The former is "surprised to find General Miles putting forth a program so cheap and trivial in comparison with the difficulties of the problem. But Secretary Root condemns it with an unnecessary display of contempt." The *Free Press*, however, can find "nothing Quixotic in the commanding general's suggestion. The effectiveness of the method was demonstrated in dealings with the Indians, and the presumption must be that it was worth trying in the Philippines. In view of the failure to establish peace after three years of persistent warfare, other methods of arriving at that much-desired result were deserving of more sympathetic consideration than General Miles's plan received."

The Resignation of Pension Commissioner Evans

MR. JOHN M. CARSON, the trustworthy and well-informed Washington correspondent of the *Philadelphia Ledger*, discredits the impressions sought to be conveyed by the administration that Pension Commissioner Evans's resignation was offered by him without any suggestion from the president. As Mr. Carson tells the story, Mr. Roosevelt approves of Mr. Evans's policy, but "whether on account of the demands of the Grand Army men or not, the president, on March 15, sent for the commissioner and informed him that he desired to be able to say that he, the president, controls the situation, and to that end would like to have the commissioner's resignation." The resignation was accordingly sent to the president, but it was to remain a profound secret until

the president was ready to act. On March 28 Mr. Carson was assured by Mr. Evans that he had not resigned. "One hour after this unaccountable prevarication of the commissioner," says Mr. Carson, "he was summoned to the White House and informed by the president that he had decided to make public announcement of the resignation."

The *Duluth Tribune* (Rep.) sees in this story nothing inconsistent with the official announcements: "It is further explained that President Roosevelt and Commissioner Evans came to the opinion about the same time that there was nothing to be gained by

"I HATE TO SPOIL THIS FIGUREHEAD."—*Detroit News*

keeping up the fight. They agreed as to the wisdom of changing the man, and they also agreed as to the desirability of continuing the principle for which he had stood. The man might be changed in order to have less friction, and for the comfort of the man, but the work should go on."

The Boston *Herald* (Ind. Dem.) is not so easily satisfied: "Mr. Evans offered to resign, but we think no intelligent man will be deceived on that point. So he offered to resign to President McKinley. The difference is that McKinley refused to accept his resignation, while Roosevelt did accept it. The one president protected him from his enemies; the other left him naked to them." The Boston *Post* (Dem.) says that "the pension agents have won their fight. It doesn't matter that Evans's retirement comes through the form of resignation of office. It doesn't matter that Roosevelt promises to find him a new place with a bigger salary. It doesn't matter that the president declares he will have a new commissioner who will continue Evans's policy. These things are all apart and count for nothing against the naked fact that the claim agents have ridden rough-shod over the Rough Rider who has happened into the White House." The Louisville (Ky.) *Courier-Journal* (Dem.) only hopes that the assurances that the policy of Commissioner Evans will be continued, will be "made good."

The Topeka *Capital* (Rep.) is frankly glad that the commissioner is to go: "His continuance in office another four years would have been at the severe cost of the veterans of the armies of Meade, Sherman, Thomas, and Grant in public esteem and reputation for their personal honesty, manliness, patriotism, and character for American citizenship. This is a cost that the country can not afford to face, and it is well rid of Mr. Evans in the pension bureau."

German Influence in America

PAST AND PRESENT

MR. J. G. ROSEGARTEN, in the April *Lippincott's Magazine*, gives a brief review of the important part Germans have played in the development of the United States, and particularly in the wars in which we have been engaged, and adds that while Von Holst represents and typifies the German student and teacher in a succession of works dealing with our constitutional history, there is hardly an event or a question in recent American history, social, economical, or political, that has not been discussed by Germans, fully masters of all that is of interest in our contemporary history. "A country that has New York, with more Germans than in any German city except Berlin, and a larger German population scattered throughout its length and breadth than any single German state or all its colonies put together, can not fail to keep in close touch with the mother country and to influence and to be influenced by all the movements, financial and political, that have a common interest for the people of both countries. The literature of the two countries is largely common to the people there and here, and a German who comes to Harvard as a professor follows the good example set by Lieber and Vethake and Seidensticker here in Philadelphia, and may well find the same hearty welcome."

"The interdependence of two nations with so much in common in their past and so many ties in the pres-

ent can not fail to be an important factor in the future. Allied for the industrial development of the parts of the world hitherto remote from commerce, and united in many matters of education and training, Germany and America may well move forward in harmony, each maintaining all of its independence of method and thought and action, yet both gaining strength from a better understanding and mutual self-help by which each may supplement the needs of the other."

The Philippine Bills

THE PROPOSED REPUBLICAN AND DEMOCRATIC MEASURES

THE majority of the senate Philippine committee has approved a bill for the government of the Philippines which would establish a situation very similar to that now existing. The commission now in control of civil affairs in the islands is continued, and the final solution of the problem of permanent rule is to lie in the extension of civil governments "so far and so fast as the communities in such civil divisions are fit for same." The commission is authorized to report when in its judgment the operation of these local bodies indicates that the Filipinos are ready for a popular representative government. A census of the islands is provided for. The house Republicans have framed a similar bill, the main difference between the two being that the senate bill establishes a silver standard, while the house bill does not. The Democratic minority of the senate Philippine committee has also framed a bill, in which it is proposed that the United States shall relinquish sovereignty over the islands, but that it shall continue to occupy and govern them until such time as it is thought wise to call a constitutional convention for the establishment of a native independent government to which the control of the islands is to be surrendered by us, we reserving naval, military, cable, and coaling stations. When this is done, the independence of the islands is to be proclaimed, the United States binding itself to make a treaty with the great powers securing its inviolability and equal trade opportunities for it.

The St. Louis *Globe-Democrat* (Rep.) looks upon all these measures as merely tentative. We shall have to wait upon the taking of the census before definite plans are made, but "the government, even in the most favorable conditions, will necessarily have to be very elementary at first, and then be extended as far and as fast as the islands are prepared for it. It is the desire of the American people to give the Filipinos a large share of home rule eventually, and the sooner they are prepared for this, the better the United States will be pleased. The Philippine question is a large subject, and should be studied with care and without any partisan prepossessions or prejudices." The Chicago *News* (Ind.) on the whole approves the Republican measure: "The passage of this bill will continue the slow process of building up self-governing institutions in the Philippines and giving the islanders that increased degree of autonomy which President Roosevelt has declared they should have. Republicans as well as Democrats have declared for the largest possible measure of self-government, and if this declaration is made in good faith, it would seem certain that the work of rearing a representative government in the Philippines can not be begun too soon."

The Indianapolis *Sentinel* (Dem.) finds that the

Republican Philippine bill is such a queer mixture of good and bad that "it may be called characteristically Republican. If the islands were promised independence, the scheme of government would be excellent, but with the implication that they are to remain a part of the United States, their character becomes very different. The framers of the law seem to have no conception of the evils that must inevitably result from incorporating the millions of people of these

The Democratic bill does not suit the *Kansas City Star* (Ind. Dem.) any better than the Republican bill suits the Democratic papers. "Exceptions to the administrative policies of the Republican party are in order," says the *Star*, "if any can be made, but it is a colossal mistake on the part of the Democracy to keep up its attitude in favor of the independence of the islands. That will never come about. Such an issue will never bring a party victory. In fact, it would de-

islands into our body politic." The *Minneapolis Tribune* (Rep.) claims that the Republicans "are working toward an end not unlike that proposed by the Democrats, except for the folly of relinquishing sovereignty while retaining its real powers and responsibilities. But they have not tied their hands by announcing a definite program before they knew that it was a practical possibility. The Republican policy in the islands will be an evolution; that of the Democrats is a visionary experiment, like the innumerable and forgotten constitutions of the French republic."

feat a party otherwise deserving success. This, like 'imperialism,' or free silver, is one of the things that the Democratic party should endeavor to forget and let the country forget, if that party wants to make itself felt in the more vital and immediate questions before the people."

The free silver coinage provision of the senate bill does not meet with favor in any quarter. It is objected to by the *Chicago Chronicle* (Dem.) on the ground that all important nations now have the gold standard—Japan and India, in the east, being among

them. And it has seemed "incredible" to the *Chronicle* "that a committee of congress should deliberately determine to prolong a monetary condition which keeps the exchanges between the Philippines and the rest of the world in a state of uncertainty and confusion which not only inflicts loss upon the plain business people of the islands, but discourages those enterprises from which so much is expected, not more in profits to investors than in pacification and industrial progress." The *Chronicle* is still unwilling to believe that a committee of the senate has "agreed to sacrifice interests of the highest importance to those of money-changers or to any imaginary necessity for bribing our mountain states to support the expansion policy." Many other papers, Republican and Democratic, express the same opinion.

Reciprocity with Canada

AN APPARENTLY UNANIMOUS DEMAND

THE budget which has just been presented in the house of commons at Ottawa was made the occasion of another noteworthy reference to reciprocity with this country. Referring to this incident, the *New York Commercial Advertiser* (Rep.) says: "The dominion finance minister, Mr. Fielding, like all his predecessors in that office since confederation in 1867, could not make his annual statement without emphasizing the growing urgency of this question. Almost every important speech in the commons is concerned with it. The interest of Mr. Fielding's reference to it hinged on the declaration that in a year or two there will be a thorough revision of the Canadian tariff, and that next summer there will be a conference of colonial premiers in London, mainly for the purpose of considering imperial trade relations. It is within bounds to say that the fate of both these questions depends chiefly upon the attitude of the Republican party in regard to reciprocity with Canada. That country has the first claim upon the party if reciprocity is to be a Republican policy in fact as well as in name. If we may judge by newspaper reports, and more especially by the all but unanimous vote of the chambers of commerce, the New England states want reciprocity more than the dominion does. And it is noteworthy that the demand for it comes from Republicans and Democrats alike."

The question also came up in the Canadian house in another form. Hon. John Charlton, a member of the joint high commission, declared that reciprocity with the United States is the thing Canada most desires, because she needs it above all else. Failing that, Canada must raise the tariff, though she would regret to see this step taken. "While Canada now purchases \$56,000,000 annually from the United States, we could put up the taxes and get along without most of the American goods. It would be a stringent measure, but Canada could show the United States her existence did not depend on the United States." The *Montreal Herald*, commenting upon the speech, observes that Mr. Charlton showed that "there is not, perhaps, so much cause for alarm after all, for he casually mentioned that were it not for another matter cropping up—the Alaskan boundary dispute, no doubt—there would have been a very good and very favorable treaty made with the Americans, which certainly does not indicate that the hostility of which he spoke before is quite implacable."

In a communication to the *New York Times*, a

writer notes that even those who call themselves unconditional protectionists are impressed with the advantages to flow from the "freest possible interchange of Canadian raw materials for our manufactures." He proceeds to say that the sentiment for a liberal reciprocity arrangement with the dominion is practically unanimous in New England. In this sentiment protectionists and free traders are working "in seemingly perfect harmony." The industries of New England require cheaper raw material to avoid "industrial eclipse." The action of the Boston chamber of commerce is recalled. That body proposes that the United States shall "take the initiative in arranging a reciprocal treaty of trade with the Canadian government, on the basis of according to Canada concessions in duties equivalent to those which she shall grant to the United States." Representative business bodies from Maine to Oregon, nearly 100 in number, have made similar representations.

The *Philadelphia Ledger* (Ind. Rep.) believes that "if the reported practical unanimity of sentiment as to reciprocity with Canada prevails in such a stronghold of Republicanism as New England, the revision of our trade relations with the dominion, it may be reasonably expected, will receive the earnest attention of congress. As it is, Canada buys \$56,000,000 annually from the United States. Great Britain and Germany are the only countries that take our goods in greater quantities. The present magnitude of this trade with Canada is a persuasive reason for the intelligent consideration of trade arrangements which will increase it; at least, preserve it."

The Defeat of Senator Jones

PRIMARY ELECTIONS FOR SENATOR APPEAR TO HAVE RESULTED IN THE CHOICE OF EX-GOV. JAMES P. CLARKE

PRIMARY elections in Arkansas for senator seem to have resulted in the defeat of Senator James K. Jones and the choice of James P. Clarke to succeed the former. Senator Jones's term expires in March, 1903. He was three times elected to the house and three times to the senate. As chairman of the Democratic national committee, he managed the campaigns of 1896 and 1900.

"As a seasoned politician," says the *Washington Star* (Ind.), "Mr. Jones is doubtless prepared for many of the comments which will follow his defeat for reelection to the senate. Among the first to rejoice will be men who, some of them openly, some of them secretly, sympathized with his efforts in behalf of Mr. Bryan and lamented their failure. Had success been achieved, they would have fawned upon him for favors, and taxed his patience with appeals for introductions to Mr. Bryan and endorsements for office. Success was impossible, and now the time-servers turn away from him, and even charge him with their discomfiture. It is an old, old story, and a quarter of a century of practical politics must have developed in the Arkansas senator something akin to philosophy. Nothing succeeds like success, and nothing draws down upon one's head more immoderate or undeserved censure than failure." The *St. Louis Globe-Democrat* (Rep.) claims to be the instrumentality through which Senator Jones was defeated: "Opposition to Bryan, or a lurch toward the reorganization of the Democratic party, is not the cause of the repudiation of Jones in Arkansas. He played false on the trust question. While he was a director and stockholder in the round cotton bale monopolistic com-

pany, he was among the foremost in denouncing the trust system. The *Globe-Democrat* originally gave the plain facts in the case. Senator Jones denied them and resorted to abuse of this paper as the trump card of his campaign for another term as senator. But the Democrats of Arkansas examined the charges, perceived their truth and the double dealing of Jones and have accordingly retired him as a public servant."

"Of course," says the *Chicago Chronicle* (Dem.),

equal to fill. His views of national politics were all of the Arkansas school. Notwithstanding his long public career, he never advanced a degree in knowledge of the country beyond the narrowest lines of frontier and southern isolation. The next chairman of the Democratic national committee should be a man of the greatest sagacity on a national scale, a man who understands the people in all parts of the country, a man who can meet the arts of the expert Re-

"this ends Mr. Jones's career in national politics. Probably he would not have been reappointed chairman of the Democratic national committee if he had been reelected as senator. The Democratic party is passing under new leadership—or rather under leadership that is truly Democratic, not populist nor of any strange origin. Yet a kind word in passing is due to Chairman Jones. When he was made chairman of the Democratic national committee, he was placed in a position which he was preposterously un-

publican managers, who can vie with them on their own fields of strategy and action."

CONGRESS DURING THE WEEK: The only important features of last week's session of the United States congress, were the passing of the Oleomargarine bill by the senate, and the Indian appropriation bill carrying \$9,415,339. The Oleomargarine bill has already passed the house. On Thursday a bill to increase the efficiency of the revenue cutter service was passed by the house. The Chinese exclusion bill was before both houses at the end of the week.

FOREIGN

Mussulman Outbreaks

AN EXPLANATION OF THE RELIGIOUS DISTURBANCES IN TURKESTAN AND ELSEWHERE

RELIGIOUS outbreaks are quite frequent in Turkestan, but until recently the Russians paid very little attention to them. This is particularly true of the numerous military bands of explorers which are constantly at work preparing the Russian advance through central Asia. These bands, commanded by competent officers of the engineering corps, progress steadily, in all directions, hundreds of miles from the Russian frontier, not even taking the precaution of operating from a basis of supplies. Uniforms are discarded, but not the weapons which are supposed to be used for hunting purposes. The explorers, however, fall in with hostile populations and sometimes come to grief. As a rule the Russian government remains silent on the subject, but it can not prevent the moral effect from being disastrous. Among the Mussulman tribes the advance of the explorers is signaled with an incredible rapidity, and at the least provocation the religious feeling aroused by the dervishes is intensified to the point of open rebellion. Hence these religious outbreaks which from time to time are reported even in the countries regularly occupied by the Russians.

This is what occurred recently at Adidjan, Turkestan. Mohamed Ali, a well-known "ichan," a dervish of Min-Tioube, between Och and Marghilan, announced to the faithful during the festivities of the Beiram, at the conclusion of the Ramadam or Mussulman Lent, that he had been selected by God to exterminate the infidels. At the head of a well-armed band of fanatics he proceeded to Adidjan, about 160 miles from Min-Tioube, and slaughtered two companies of Russian soldiers in their barracks. Fortunately the garrison was distributed over the city, a fact ignored by the ichan; the other Russian soldiers came to the rescue and the Mussulmans were routed in short order.

The *Islam* (Cairo), the official organ of the educated Mussulmans in Europe, although recognizing that the Russians should take extraordinary precautions in Turkestan, does not fear immediate danger. Religious wars, however, are to be dreaded at all times, and concerning the outbreak at Adidjan, it formulates the following opinion: "Many causes were assigned to this outbreak which worried the Russian government a good deal; it was attributed to the emir of Afghanistan, whose agent the 'ichan' was supposed to be; others said that the sultan had something to do with this beginning of revolutionary movement; finally England was accused. It is useless to complicate the question in this manner. Islamism is worked up in Turkestan, like everywhere else, through a kind of revolutionary mysticism, which originates with the hatred against the infidels, and believes in the necessity of proclaiming the holy war. All these corporations of howling and whirling dervishes are the schools of fanaticism and religious folly in which are mentally prepared the revolutions of the future. When a dervish or ichan believes that he is inspired and that the time has arrived, an outbreak takes place like at Adidjan. The same thing occurs in Algeria and for the same causes. We should not believe, however, that the Russian domination in Asia is seriously endangered by this religious agitation, which is only

visible to the careful observer." And the *Islam* concludes by stating that a general insurrection would be impossible in Asia, particularly on account of the intense jealousy between the various tribes and the rivalry among the cities. He thinks, however, that notwithstanding the efforts of General Ivanov, the governor-general, local outbreaks may occur at any moment.

The same paper, however, entertains the idea that a general uprising on pacific lines is possible, if France is willing to do her part. "Islam," it says, "is a theocratic democracy, a military congregation, at the same time a formidable war engine, . . . which has been only paralyzed through want of intellectual direction." And over the signature of Mr. Napoleon Ney, the *Islam* proposes the creation in Paris of a sort of Mussulman vatican council, composed of the religious and military chiefs, the sheiks, the imans, and the mitjaheds, who constitute a hierarchy similar to the priests, bishops, and archbishops. This council would issue an official organ printed in French and Arabic and direct the movements of the Mussulmans toward Pan-Islamism. "If France is willing," states Mr. Napoleon Ney, "we are ready to put this project to execution." And naturally the first step would be to expel England from Egypt. This statement is particularly interesting if we take into consideration the advance of the sheik, Senoussi, who is looked upon in northern Africa as the true mahdi, toward Egypt at the head of 3,000 horsemen.

Why Europe Is Likely to Remain at Peace

IN an article in the April *North American Review*, by the late Jean de Bloch, the probability of a European war is discussed at length, the conclusion being that such a war is unlikely for many reasons. First, the military establishments of the powers are so large that it is realized that only long and exhausting warfare could give either side an advantage—not one but many battles would have to be fought. Furthermore, there are no great leaders. The successors of Moltke and Skobeloff may exist, but they are as yet unknown. "So far as the calculations of statesmen go, they do not exist."

There is another reason why war upon the continent is unlikely. This is "the extreme caution of European statesmen, their distrust of popular agitation, and their nervous dread of responsibility. The Transvaal war, from its beginning to its present stage, has been a continuous and uninterrupted exposure of the vanity of complacent thoughts which, the proverb tells us, are the children of vain wishes. Not merely every military, but every political, every social, every material, every spiritual consideration relied upon has been found to be a baseless edifice, which the first breeze of actual fact has overthrown. Can it be believed that, with the lesson before their eyes of this general ensnaring of the intelligence of the most practical people in the world, the more cautious and responsible statesmen of Europe will lightly enter

upon a war so vast and so terrible that all the incidents in the bloody struggle under the southern cross would be crowded into a single one of its battlefields?

"The answer to that question lies in the nervous distrust of themselves, and the still greater distrust of popular agitation, which characterizes all the present rulers of Europe. An infinitesimal risk of diplomatic friction is sufficient to prevent decisive steps being taken in international matters, even where great good might possibly result from an active policy. The impassioned movement which is still proceeding on the continent for intervention on behalf of the Boers has never altered a word in diplomatic dispatches. The *status quo* has now become a religion in Europe. Everywhere there is a fearful, almost superstitious, dread of uttering an unconsidered word which might alarm foreign suspicion or pander to domestic passion. Even the Armenians must be abandoned to their fate, lest some inconsiderable element of friction should disturb the placid relations of the European powers.

"All this, it may indeed be urged, points to the postponement of war rather than to the assurance of peace. It indicates no lightening of the burden of armaments, and offers, at best, but the lesser of two evils. Therein lies Europe's danger; and it may indeed be doubted whether sudden destruction in the cataclysm of universal war is less to be feared than the continuous decay of the social organism, the shackling of civilization, and the ultimate political revolt which militarism must bring about."

Russian Military Scandals

THE CASE OF COLONEL GRIMM

THE Russian press continues to maintain the most profound silence in regard to the case of Colonel Grimm, who was recently sentenced to death by a court-martial in Warsaw, on the charge of treason. According to a *New York Times* special, published the other day, the confession of Colonel Grimm revealed a widespread conspiracy in which several generals in high standing in the Russian army were involved. The details of the charges stated that although Colonel Grimm, with the full knowledge of his superiors, furnished false plans of Russian defense to a certain member of the triple alliance, he also furnished genuine documents.

According to a writer in *L'Echo de Paris*, the chief of the French staff will soon be informed of the doings of Grimm and others in connection with the plan of mobilization of the French and Russian armies acting together against Germany backed by Austria and Italy. The same authority

states that at the French war office it is fully believed that Colonel Grimm gave up to Germany not only the plans of the forts along the whole of the Polish frontier, but, by his relations with other Muscovite officers of Teutonic origin, and opposed to the Franco-Russian alliance, obtained and handed over to the envoys and agents of the Prussian staff nearly the whole tenor of the convention between the Third republic and the czar's government. This convention comprised plans of mobilization.

It is also stated in Paris that secret service men are looking for a certain Russian general, now in southern France, who is supposed to have communicated to a foreign power reports of an interview between his superior officer and a former chief of the staff of the French army—General de Boisdeffre, of Dreyfus notoriety. The interview in question dealt with the subject of combined action between France and Russia in the event of an outbreak of a European war. The Russian general who is being followed by the secret service agents is said to be staying on the Riviera under an assumed name.

It is the belief in Vienna, where the press is naturally on the defensive, that the execution of Colonel Grimm, who is now in St. Petersburg, will not be carried out, even after the prisoner has revealed all he has to tell. It is also added that no truth should be placed in the Russian official advices, which are that Colonel Grimm, in order to save his life, has made a long, detailed confession. It is, moreover, denied that a domiciliary search was made at the Austrian and German consulates in Warsaw. The German press re-echoes Viennese sentiment, but declares that many of the most sensational stories in regard to Colonel Grimm's treason emanating from Warsaw are inspired by anti-German sentiment there, which is thus seeking vengeance for the treatment of Poles in eastern Prussia.

The Cracow newspapers state that Colonel Grimm received from Germany a fixed annual payment of 12,000 marks for his services, besides a handsome sum for special communications. Being an officer of the general staff, he could hold intercourse with the agents of foreign powers without exciting suspicion. Russia has adopted the custom of the French general staff of drawing up fictitious plans and letting them fall into the hands of foreign agents. That was part of Colonel Grimm's duty, but instead of false plans he communicated the real ones.

WANT THE ALBANIAN THRONE: According to the Vienna newspapers, says the correspondent of the *London Times* in the Austrian capital, three candidates for the future Albanian throne are being discussed. Two are Neapolitans and one a Spaniard.

The Beauties of the Censorship in Russia

THE semi-official press in Europe seldom takes exception to the decisions of the censor. On this account it is quite interesting to note the recent attitude of the *Independance Belge*, the semi-official international organ of Russia, concerning the drastic measures taken by the Russian censor against the *Rossia*, a liberal newspaper published in St. Petersburg. Under the caption the "Obmanow" the *Rossia* printed a monograph signed "Old Gentleman," which is the *nom de plume* of M. Amphitheakow, who, by the way, is the St. Petersburg correspondent of the *Independance Belge*. The censor, possibly on account of the similarity of names—Obmanow and Romanow—concluded that M. Amphitheakow intended to attack the czar and his immediate relatives. Therefore he suppressed the *Rossia*, and ordered the deportation to Siberia of M. Sazonow, the chief editor, as well as the deportation of the author of the monograph. "Since then," says the *Independance Belge*, "the *Rossia* has been permitted to reappear, but its administrators and editors have been replaced by men recom-

mended by the Russian administration. In other words, *Rossia* has been allowed to be printed again providing it would not be the *Rossia* any more."

The *Independance Belge* publishes an excerpt of the "Obmanow"; it is the story of a young man very much like Nicholas II, raised by a reactionary father, but who rebels, when left to himself, against the traditions of the family. He reads, when he is watched, the *Grajdani* (Citizen), organ of the dynasty, which "preaches the political and social efficacy of the *knout* and other corporal punishments inflicted on the recalcitrant plebe," but when he has a chance he peruses the *Russian Gazette*, the ultra-liberal organ of the Russian press.

"The reading of these contradictory newspapers confuses the ideas of the young man, who becomes unable to establish a distinction between the conservatism of the aristocracy and the liberalism condemned by the Russian censorship." It appears that M. Amphitheakow is a humorist, but, says the *Independance Belge*, "it would require a great deal of good, or rather ill-will, or something akin to the delirium of persecution, to find in the "Obmanow" anything which could be construed as *lese-majeste*." The Brussels newspaper concludes that it will take the chances of its recalcitrancy.

SOCIOLOGICAL

A Benevolent Feudalism

THE NEXT STEP IN THE SOCIO-ECONOMIC EVOLUTION OF AMERICA

MR. W. J. GHENT, who has been identified with various movements for social reform, and has studied American society hoping to discover "tendencies toward a practical and enduring collectivism," tells us that he has found instead "a mighty and resistless tendency toward an all-comprehending and probably a long-enduring, *regime* of benevolent feudalism." In the *Independent* for April 3, he points out in our present social order all the essentials of a renascent feudalism and describes some of the particular forms which it is fast assuming. His picture of the new *regime* is in part as follows:

The new feudalism is characterized by a class dependence rather than by a personal dependence. But it differs in still other respects from the old. It is qualified and restricted, and by agencies hardly operative in medieval times. Democracy tends to restrain it, and ethics to moralize it. On the ethical side it is qualified by a growing and diffusive sense of responsibility and of kinship. The principle of the "trusteeship of great wealth" having found lodgment, like a seed, in the erstwhile barren soil of mammonism, has become a flourishing growth. The enormous benefactions for social purposes, which have been common of late years, and which in 1901 reached a total of \$107,000,000, could come only from men and women who have been taught to feel an ethical duty to society. It is a duty, true enough, which is but dimly seen and imperfectly fulfilled.

Unlike the old feudalism, it is not confined to the country. Qualified in certain respects though it be, it has yet a far wider province and scope of action. The great manorial estates now being created along the banks of the Hudson, along the shores of Long

Island sound and Lake Michigan, are but its pleasure places—its Sans Soucis, its Bagatelles. For from being the foundation of its revenues, as were the estates of the old feudalism, these are the prodigally expensive playthings of the new. The oil wells, the mines, the grain fields, the forests, and the great thoroughfares of the land are its ultimate sources of revenue; but its strongholds are in the cities. It is in these centers of activity, with their warehouses, where the harvests are hoarded; their workshops, where the metals and woods are fashioned into articles of use; their great distributing houses; their exchanges; their enormously valuable franchises to be had for the asking or the seizing, and their pressure of population, which forces an hourly increase in the exorbitant value of land, that the new feudalism finds the field best adapted for its main operations.

Bondage to the land was the basis of *villeinage* in the old *regime*; bondage to the job will be the basis of *villeinage* in the new. The wage-system will endure, for it is an incomparably simpler means of determining the baron's volume of profits than were the "boon-works," the "week-works," and the *corvees* of old. But with increasing concentration on the one hand, and the fiercer competition for employment on the other, the secured job will become the laborer's fortress, which he will hardly dare to evacuate. The hope of bettering his condition by surrendering one place in the expectation of getting another will be qualified by a restraining prudence. He will no longer trust his individual strength, but will protest against ill conditions, or, in the last resort, strike, only in company with a formidable host of his fellows.

The new *regime*, when it shall have become fully developed, whole and perfect in its parts, will be about as follows:

- I The barons, graded on the basis of possessions.
- II The courtiers and court agents.
- III The workers in pure and applied science, artists and physicians. The new feudalism, like most autocracies, will foster not only the arts, but also certain kinds of learning—particularly the kinds which are unlikely to disturb the minds of the multitude. A future Marsh or Cope or Le Conte will be liberally patronized and left free to discover what he will; and so, too, an Edison or a Marconi. Only they must not meddle with anything relating to social science. For obvious reasons, also, physicians will occupy a position of honor and comparative freedom under the new *regime*.
- IV The *entrepreneurs*, the managers of the great industries, transformed into a salaried class.
- V The foremen and superintendents. This class has heretofore been recruited largely from the skilled workers, but with the growth of technical education in schools and colleges and the development of fixed caste, it is likely to become entirely differentiated.
- VI The villeins of the cities and towns, more or less regularly employed, who do skilled work and are partially protected by organization.
- VII The villeins of the cities and towns who do unskilled work and are unprotected by organization. They will comprise the laborers, domestics, and clerks.
- VIII The villeins of the manorial estates, of the great farms, the mines, and the forests.
- IX The small-unit farmers (land owning), the petty tradesmen, and manufacturers.
- X The sub-tenants on the manorial estates and great farms (corresponding to the class of "free tenants" in the old feudalism).
- XI The cotters, living in isolated places and on the margin of cultivation.
- XII The tramps, the occasionally employed, the unemployed—the wastrels of city and country.

Tuskegee Cotton-Planters in Africa

MODEL FARMS ESTABLISHED AMONG THE NATIVES

ABOUT a year and a half ago Mr. J. N. Calloway, one of the teachers of agriculture at Tuskegee institute, in Alabama, was hired, with three graduates, by the German Colonial Economic society to go to the German colony of Togo, in West Africa, to teach cotton culture to the natives there. Mr. Calloway has just returned to Togo after a visit to Tuskegee to secure the services of more young men skilled in cotton-culture in establishing model farms among the natives. This is not in any sense an emigration scheme, as all these persons are hired to work by the German society; but it sheds some light on what trained Negroes may be able to do for their unenlightened brothers in Africa. Mr. Calloway, writing of the enterprise for the *Outlook*, says that a hundred acres of ground have already been laid out, and that they have had plenty of laborers. Men, women, and children work for from ten to twenty cents a day and board themselves. They seem interested in the new methods, and are wonderfully willing to work, considering how little accustomed they have been to steady employment, and how easy it is to exist there with little labor. Mr. Calloway thus describes some of the features of the social organization of the natives of Togo: "The men are apt to have more than one wife. It is rare that a Bushman has more than four wives, but I heard of a trader who had nine. The traders' wives are quite commonly employed in the business of their husband. They do not live in any one place, but are located at various points—sometimes as much as a hundred miles away—where they act as sub-agents and saleswomen. Each Bush-

man's wife has a house to herself, and her own farm to carry on. The women and children do most of the work of cultivating the fields, although the man of the house—or houses, rather—sometimes has a patch of land also that he takes care of when he is at home. The fact that wives are bought makes girl children at a premium, and girl babies are more welcome than boys. A girl is often betrothed or sold by the time she is five years old to the father of a boy for his son's wife when she gets old enough. In such case as this, though, not more than \$1.25 is paid for her, as there is always the danger of death or accident. A good-looking girl of marriageable age is worth as much as seven dollars. If she is a very good-looking girl, or especially desirable for any reason, the father is apt not to be willing to sell her to a Bushman, but to look about for a clerk or trader who will be able to pay as high as fifteen or twenty dollars, or perhaps even more, for a desirable wife."

The Right to Choose Fellow-Servants

THE DECISION OF THE NEW YORK COURT OF APPEALS

HAVE men organized in a local or national union the right to demand of an employer the discharge of non-union men and enforce this demand by a threat to strike? Six judges of the New York court of appeals have decided this question in the affirmative, resting their opinion on this argument: "So long as workmen must assume all the risk of injury that may come to them through the carelessness of co-employees, they have the moral and legal right to say that they will not work with certain men, and the employer must take their dictation or go without their services." The decision further defines what may and may not be done in case of strike. A strike *per se* is not unlawful. Preliminary to a strike certain representations may legally be made. There may be negotiations looking to a settlement of the trouble without a resort to extremes, always providing, of course, that the employer is willing to negotiate. And upon the employer an ultimatum may legally be served, always providing that such ultimatum goes not too far, that it is a simple declaration of intention to withdraw. Threatening language is in order. It is not a violation of law to threaten to walk out.

The Brooklyn *Eagle* says the decision is all the more significant because in the case decided two labor organizations were at odds. "National association steamfitters declined to work with Enterprise association workmen. At special term they were enjoined from striking or making threats. At appellate division they secured a reversal of the order and the case was carried to the court of appeals. Organized labor was arrayed against organized labor. It is held to be clearly within the province of one body of workmen to leave an establishment in which members of another organization are employed. Victory and defeat go together. When one side wins, the other side loses. The memorandum says that there must be no intention to 'inflict injury upon others,' but defeat can scarcely be said to be other than injurious. However, that is not the point. Incidental injury does not count. Though victory may be detrimental to one set of men, the others have the right to win if they can, providing they resort only to peaceful methods. Obviously, the court of appeals regards this as axiomatic."

The Chicago *Evening Post* commends the decision as being "sound, logical, and vigorous." The essential principle upheld therein is, according to the *Post*, the only one that fits modern conditions and modern ideas of coöperative and concerted action. "To say that union men *must* work with non-union men is clearly nonsense, and it is equally irrational to say that they may not, as a condition of remaining in the employer's services, ask the dismissal of persons obnoxious to them. The wisdom or necessity of such demands is not a question for legislatures or courts. It is hardly necessary to point out that non-union men have the same right to decline to work with unionists, and that employers have the right to select their workmen from either class. On the subject of 'threats' and 'conspiracies' there is great confusion of thought, and the New York decision is a notable contribution to a consistent and enlightened philosophy of industrial relations."

Does the Race of Man Love a Lord?

THE HOMAGE PAID TO POWER AND CONSPICUOUSNESS

"WE do love a lord—and by that term I mean any person whose situation is higher than our own. The lord of a group, for instance: a group of peers, a group of millionaires, a group of hoodlums, a group of sailors, a group of newsboys, a group of saloon politicians, a group of college girls." This is the gist of an article by Mark Twain in the current *North American Review*. It is the combination of power and conspicuousness, he argues, which human nature reveres in rank of any sort.

"Rank holds its court and receives its homage on every round of the ladder, from the emperor down to the rat-catcher; and distinction, also, exists on every round of the ladder, and commands its due of deference and envy. To worship rank and distinction is the dear and valued privilege of all the human race, and it is freely and joyfully exercised in democracies as well as in monarchies.

"A Chinese emperor has the worship of his four hundred millions of subjects, but the rest of the world is indifferent to him. A Christian emperor has the worship of his subjects and of a large part of the Christian world outside of his dominions; but he is a matter of indifference to all China. A king, class A, has an extensive worship; a king, class B, has a less extensive worship; class C, class D, class E get a steadily diminishing share of worship; class L (sultan of Zanzibar), class P (sultan of Sulu), and class W (half-king of Samoa), get no worship at all outside their own little patch of sovereignty.

"Take the distinguished people along down. Each has his group of homage-payers. In the navy, there are many groups; they start with the secretary and the admiral, and go down to the quartermaster—and below; for there will be groups among the sailors, and each of these groups will have a tar who is distinguished for his battles, or his strength, or his darning, or his profanity, and is admired and envied by his group. The same with the army; the same with the literary and journalistic craft; the publishing craft; the cod-fishery craft; Standard oil; United States steel; the class A hotel—and the rest of the alphabet in that line; the class A prize-fighter—and the rest of the alphabet in his line—clear down to the lowest and obscurest six-boy gang of little gamins, with its one boy that can thrash the rest, and to whom he is king

of Samoa, bottom of the royal race, but looked up to with a most ardent admiration and envy. All the human race loves a lord—that is, it loves to look upon or be noticed by the possessor of power or conspicuousness."

London Social Statistics

TAKEN FROM THE LATEST CENSUS

DETAILS of the new London census give some interesting social statistics. The number of families in the metropolis is 1,019,546, and the average in a family is slightly over 4.4 persons. These families share the services of 234,398 female and 15,425 male servants. In London, females exceed the males by 252,371. Widowers are returned as numbering 72,128, while widows are nearly thrice that number. The youngest couple, husband and wife, are both 16, and the youngest wife in London is 15. The pauper inmates of workhouses are given as 46,646. The percentage of the total population of the age of 10 and upward engaged in trade or occupations is 83.6 per cent of men and 37.4 per cent of women. The number engaged in electrical work has increased 16.6 per cent and the actors, who total 2,234, show an increase of 78 per cent compared with 1891. Women occupied in commercial business and as clerks have increased 18.1 per cent, and make a total of 19,097 compared with 84,315 males similarly employed. Foreigners who have not been naturalized total 135,377, and of these Russians are the most numerous, numbering 38,117. These are followed by Germans, Russian Poles, and citizens of France and Italy. Of the Americans who have not been naturalized, actors figure most conspicuously, numbering 211, three-fifths of the total profession being unkindly ranked by the census as of "minor occupations."

Various Topics

THE SAVINGS OF WAGE EARNERS in the United States, if the deposits in savings banks are any indication at all, evidence thrift and prosperity. The banks of this class in New York city alone have resources on hand of \$800,000,000. In the Bowery district, the increase of deposits in excess of withdrawals was \$4,000,000 compared with last year.

ANOTHER VIEW OF THE CHINESE SERVANT: A California subscriber, in reply to the article in our issue of March 27, says that while there is no servant class in her state, that "there are many self-respecting white men and women who would gladly do the work for the pay the Chinaman receives." She continues: "Offer good, reliable men and women the wages you offer a Chinese, demand no more of them, give them the same latitude, the same instruction, the same patient charity, and you will get far more thorough and trustworthy service than was ever had from a Chinaman, and have less fear of your family contracting loathsome diseases and vile habits."

RECENT BENEFACTIONS: Several notable gifts for general educational purposes have been made recently. Barnard college in New York city is the richer by \$500,000, half being contributed by friends of the college and half by John D. Rockefeller. Teachers college, another affiliated institution of Columbia university, has received \$250,000 for a new gymnasium. The Jewish theological seminary of America has recently completed a fund of \$200,000 contributed by Jacob H. Schiff, the late Leonard Lewisohn, and Guggenheimer Bros., and is to remove to the neighborhood of Columbia. Newton theological seminary announces the receipt of \$300,000. Mr. Carnegie's latest offer is one of \$250,000 to the city of Havana for a public library on condition that the city give the land for the building and provide \$25,000 a year for maintenance and improvements.

LETTERS & ART

The Significance of the Play to the Audience

ITS INTERPRETATION BY THE BOXES AND THE GALLERY

THE significance of the play to the audience has furnished the theme of two articles in current periodicals. Mr. David Warfield writes from the standpoint of the stage, for the *Independent*, and Miss Elizabeth McCracken from the standpoint of the audience, for the *Atlantic Monthly*. Mr. Warfield maintains that "the rapport between the man upon the stage and his auditors is an entity, which, though invisible, is real, often tangible, and always audible." He contrasts the significance of a play to the "boxes" and its meaning to the "top gallery." He finds this explanation for the difference: "To the individual whose ideas of morals come largely from the closet and the library, a bad man is a study. He is not particularly abhorrent, but is rather interesting. When he appears upon the stage, he is to be smiled at and enjoyed. To the street arab and the workingman, the bad man is a very familiar character. He typifies the bully of the block, the wife-beater in the same tenement, the corner loafer, the barroom brawler, and the sneak thief who is liable to deprive them of their hard-earned little stores. When he appears upon the boards, their jaws clench and their fists double. If the villain is well acted, he is hissed and hooted at. Frequently I have seen a well-acted villain cursed and threatened by some one in the gallery carried away by his feelings. A similar difference is to be noted in the point of view respecting the heroine of so-called social problems, whether she be the adventuress, the "woman with a past," the "lady who dared," or any other variation of character within the limbo of non-ethics. To the boxes, such characters are "simply delicious." "Mrs. Tanqueray" and "Mrs. Dane" fill boxes and parquet, but to the gallery these characters bring up even a fiercer opposition than do the ordinary villains.

Miss McCracken, who, in the course of her settlement work, has had much to do with the people who see the play from the gallery, says: "Few things could be more charmingly simple than their relations to that least simple of all the arts, the acted play. In the first place, they have gone to the theater, and they go to the theater, to see the play; not to see the players, nor to see how they play the play, nor why they possibly play it thus, nor why they do not play it in some other way ("in any conceivable other way," as I overheard a critic murmur, at a recent Shakespearean revival), nor what the author of the play meant, nor what he did not mean, nor what he should have meant. They may see all these things; they frequently do see several of them; but they go to the theater to see the play. It is interesting to remember that in Shakespeare's time the entire audience went to see the play."

Miss McCracken treats us to gallery interpretations of "Cyrano," "Merchant of Venice," "Othello," "Hamlet," "Nell Gwynn," "The Gay Lord Quex," "The Little Minister," "Way Down East," and "The Sunken Bell." A tenement girl, when asked her opinion of the first named, said: "Well, I think all the trouble came because they all cared so much about looks. Cyrano cared about looks, and Roxane cared about looks, and Christian cared about looks. Of

course, Cyrano's carin' made the most trouble, because he cared the most." At the same time this girl comforted a child with a disfigured face with the remark, "Looks ain't what count. It's what we do that counts." Miss McCracken observes: "The influence was simple in its trend, but it was potent; and in the city tenements the new measure of values it created has a deep meaning. Simple as it was, what was the meaning of M. Rostand's and Mr. Mansfield's art in the play of 'Cyrano de Bergerac' but just exactly that 'it's what we *do* that counts, not looks'?"

Another characteristic gallery interpretation is that given by the woman who had been to see "Merchant of Venice." "I didn't care much for Shylock," she said reflectively, "but he wasn't a person you would want to care much 'bout; but," and her eyes lighted and she indicated the picture of Miss Terry, "she was lovely. It's a long time since I saw her, but I've never forgot the things she said 'bout havin' mercy, and how she looked when she said 'em. People ain't always had mercy for me; and when I've wanted to pay 'em back for it or be mean to anybody, I jes' remember her and what she said 'bout havin' mercy—and I don't want to be mean 'cause of her," she concluded, almost shyly.

Is Plot the First Essential in a Novel?

London Academy. Condensed for PUBLIC OPINION

THE unlettered often confess with an unnecessary shame that they read novels "only for the plot." And they speak as if the paramount interest in a novel is not, and ought not to be, always the interest of what will happen next, and what will happen ultimately, to the characters who have won our attention; as if plot was a sort of concession to people of their kind, a base element to be hidden and overlaid by such superior things as "style," "characterization," "pathos," and "humor." Now, plot is absolutely the first essential in a novel; indeed, it may perhaps be said to be the only essential. One may conceive a novel, and a quite tolerable novel, in which the characters are nothing but labelled puppets, in which there is neither style, nor pathos, nor humor, nor any of those similar qualities which the unlettered quite wrongly deem to be entities of themselves. But one can not conceive a novel without a plot. It is as impossible to think of a novel without a plot as it is for anyone not a metaphysician or other subnatural person to think of thought without words. The "sensational serial" differs from the ordinary form of novel not in the fact that the interest of its plot overtops every other interest, but in the fact that the interest of its plot overtops every other interest to an unusual degree. Every novel is in a sense a sensational serial. A novel is never dull when the plot-interest is alive, and when the plot-interest declines, it is always dull. It expires then of inanition: its heart has ceased to beat, and no fine raiment, nor rouge, nor galvanic twitching of muscles can disguise the pallor and inertia of the corpse.

An Advance in American Art

THE TWENTY-FOURTH ANNUAL EXHIBITION OF THE
SOCIETY OF AMERICAN ARTISTS

THE twenty-fourth annual exhibition of the Society of American Artists, now open in New York, is pronounced by all the art critics as quite the best the organization has yet held. The catalogue runs to 318 numbers, including ten or twelve miniatures and about twice as many pieces of sculpture, and the proportion of really interesting work is unusually encouraging. Some of the previously exhibited paintings have already been discussed in these columns; they include Mr. Whistler's "Andalousienne," the distinguished portrait of a woman in black, and his beautiful little pyrotechnical study, "Nocturne, Black and Gold"; Mr. A. P. Ryder's romantic "Siegfried"; Mr. Abbey's sumptuous interior study with picturesque figures, "Sylvia"; Mr. Lockwood's interesting portrait of Mr. La Farge; Mr. Horatio Walker's powerful piece of realism, "Peasants Scraping a Pig"; the clever figure studies by Mr. Robert Henri and Mr. A. H. Maurer; Mr. J. W. Alexander's large decorative canvases, and Miss Cecilia Beaux's accomplished productions. Mr. Arthur Hoeber, writing for the *Commercial Advertiser*, characterizes the collection as follows: "There are, happily, fewer vagaries than usual, with an absence of the ranker impressions, and there are, perhaps, not so many of the dark pictures that might have been expected, considering the present vogue of this manner of painting. Old academicians have been permitted to display their art; there are works that are tight in the handling, and others that are broad enough to suit the most exacting, and many schools are represented; but in the end there has been gathered an interesting collection that may be said to fitly chronicle the latest developments in American art."

Five pictures in the exhibition have received prizes, and this year there is little difference of opinion as to the merits of the prize pictures. The Carnegie prize of \$500 goes to Mr. Murphy, for his "October Fog," a faithful and beautiful study of vaporous atmosphere. From the Shaw fund an award has been made to Mr. Leonard Ochtman for his "Early Morning"; another from the same source has been bestowed upon Mr. H. Bolton Jones for a landscape, "Early Spring"; and still another has been found for Mr. H. M. Walcott, the painter of "Gossip," a picture of Dutch peasant women, which is dainty in color and moderately picturesque, but of no serious significance. The only prize for a work of art produced by an American woman, the Julia A. Shaw memorial prize of \$300, has been won by Mrs. MacMonnies with her spacious canvas, "Blossoming Time in Normandy."

The notable portraits of the collection are by John S. Sargent, William M. Chase, Cecilia Beaux, Irving R. Wiles, Carroll Beckwith, Wilton Lockwood, Alphonse Jongers, and Louise Cox. The *Sun* critic says that "the portrait by Sargent shows the painter for what we have long known him to be, a vivid, often audacious, actualist. He has rendered here chiefly the brisk, assertive qualities that characterize a man of action; with a precision as off-hand as it is consummate; so that except for the manner in which certain passages are painted, the portrait

has little pictorial charm, no subtlety or inspiration, and little evidence of feeling; a canvas that notwithstanding its brusque cleverness, one may be disposed to class as jejune in the extreme, perhaps even commonplace. If we compare with it William M. Chase's portrait of Mr. Louis Windmüller, the advantage is altogether with the latter. This is a sincere and serious example of portraiture, wherein respect for and sympathy with the sitter are revealed; a composition of agreeable balance, with fluent ease of movement and a rendering of the subject's exterior that is admirably lifelike and includes abundant suggestion of character." All the critics speak enthusiastically of the sterling merit of Cecilia Beaux's portrait of Mrs. Phelps-Stokes, of the fine authority of its method, its beauty of color, and its distinction of style.

Mr. Hoeber says that the exhibition demonstrates that the greatest progress of the native workman is in a landscape direction. "The reason is perhaps not difficult to find, and is due to a variety of causes.

"IN THE STUDIO" W. M. Chase

From the *Commercial Advertiser*

"MRS. J. PHELPS STOKES" Cecilia Beaux

"BESIDE THE

Permission of Curtis and Cameron

American costumes and homes, particularly of the twentieth century, do not lend themselves to the pictorial. The practical, commercial life of the nation is not conducive to much artistic inspiration, for in the building of the republic it is the necessary and the useful that have been cultivated. We have no picturesque peasantry, and the severe black garb of the men offers little for the making of pictures. Finally, serious work at the landscape is unattended with either the trouble or the expense of the model in the studio, and the academic foundation so necessary with the portrayal of humanity is by no means as imperative." The landscapes that have been most highly commended are Winslow

Homer's "Northeastern," Walter Nettleton's "Imprisoned Brook," Walter Palmer's "Evening Star," and Frank Dumond's "Afternoon."

The most prominent figure pieces are Mr. Chase's "In the Studio," Mr. Elliott Daingerfield's "Tanagra," Mr. Warren Davis's "Beside the Forest Brook," and Mr. John W. Alexander's picture of "A Mother."

The Test of Culture

SHALL IT BE LITERARY, OR SCIENTIFIC?

A WRITER in a recent issue of the *Dial* recalls the story of Mr. Herbert Spencer, who somewhere speaks scornfully of the man who is not ashamed to be ignorant of the Eustachian tubes, but who would blush if caught saying "Iphigénia." This writer, commenting, expresses his "sympathy rather than scorn" for such a man, adding: "One can be well-educated without knowing anything of the Eustachian tubes, but ignorance concerning the pronunciation of 'Iphigenia' betokens a defect of culture." In the current number of the *Dial*, Mrs. Celia Parker Wooley makes the following reply: "I read this twice to make sure whether the writer were in earnest or only practicing a little humorous aside upon us. If in earnest, then it seems to me his own test of culture is of the same *ex parte* order as that which he condemns in Mr. Spencer. It is the literary man's definition against the scientist's. Similarly, some scholarly divine might tell us that one can be well-educated and know nothing about either the Eustachian tubes or the right penultimate accent in the word Iphigenia, but it is indispensable that one should know all about the spelling of Jahweh and the chapter and verse where the second writer in Isaiah begins. A socialistic writer and reformer would probably reject all three of these tests, and declare that that alone was true culture which included a perfect knowledge of the wage system and how to rescue the submerged tenth. The artist would tell us that whatever we did or did not know, we must, if we make any pretensions to culture, understand the difference between a life-study and a drawing from the flat. The musician would say we must have a perfect comprehension of the intricacies of Brahms and the harmonic subtleties of Wagner. And so on! Each has his own definition of what we call culture, or of what constitutes an educated man; but must we depend upon or be limited to any one of these judgments? Is there not a definition, or at least an ideal, larger and truer? Is culture to be measured by one's proficiency in any single branch of human knowledge, gathered from books, the study, laboratory, or workshop? Is it not rather to be defined in terms of life and human experience, as spiritual energy and power? If this idea seems too wide and vague, certainly the others mentioned fall far short of the real requirements. Emerson told us long ago that culture 'kills exaggeration, the conceit of our village or city.' It also kills the conceit of our particular calling or point of view."

THE DEGENERATION OF THE HOUSE OF MOLIERE: So much has been made of the tradition of the "House of Molière" that it is something of a shock to find a French playgoer who declares that many of the actors of the Théâtre Français are absolutely careless in their reading of famous lines, an abuse to which the practice of cutting down the classic plays for purposes of representation lends a certain warrant. Still it is disquieting to be told that the lines of the great seventeenth century dramatist are frequently mangled in recitation, and worst of all sacrileges, that actors introduce gratuitous witticisms of a topical cast into the comedies of Molière himself, as degenerate English actors do in the plays of Sheridan.—*Nation*.

SCIENTIFIC

Why Do We Cry?

CAMILLE MILINAND, in *La Revue*, Paris. Translated and Condensed for
PUBLIC OPINION

WE cry for many causes, through pain, joy, spite, rage, emotion, and shame. Is it possible to reduce these causes to a single one? We do not think so, because tears may be divided in three categories: mechanical tears, involuntary tears, and semi-voluntary tears. Yawning, coughing, laughing to excess, and spasms of nausea are examples of mechanical tears, without mentioning the "classical effect of the onion." The mechanism of tears, however, is always the same, whatever may be the cause. Physiologically speaking, we know that tears are a secretion intended to protect the visual apparatus. This secretion is produced when the blood vessels of the eyes are greatly compressed or when the muscles of the eyes are strongly contracted: this explains why we cry when laughing to excess, coughing or yawning. This explanation is also in accordance with the theory of Darwin concerning the first tears of a child: these tears are the result of violent efforts made by the child to cry. Later on the cry disappears under the influence of will, habit, and education, but the tears remain. Tears shed at a theater during a performance probably belong to this category, and it is quite probable that emotion has very little to do with them. What occurs is simply a phenomenon of muscular contraction; instinctively, following a well-known law of imitation, we reproduce the mimics of the actor, we declaim with him, we contract our face like him; and these contractions induce mechanical tears.

Among the cause of involuntary tears may be included excess of sadness; there is an intensity of suffering which resolves itself into tears. More often, however, tears are the result of a sudden relaxation following intense emotion. The following physiological explanation given by Ribot in his "Psychology of Sentiments" is interesting: "Tears," he says, "are connected with an increase of the blood pressure; during the period of sorrow or grief, there is a decrease instead of an increase of this pressure; therefore tears are not due to sorrow itself, but to the reaction following the first period of sorrow." We may explain in this manner why we cry from joy. Literally speaking, we cry because a sudden relaxation ends very intense and very painful sufferings. Involuntary tears, however, are the exception. In many instances we cry because we want to, while it would be possible for us to refrain from it. These tears may be called semi-voluntary. This means that alone we would not cry, while we cry in presence of other people. Without mentioning the tears of the liar, of the hypocrite, of the comedian, it can not be denied that on many occasions our tears are sincere although semi-voluntary. To explain this intervention of our will it is well to remember that tears constitute a form of language the meaning of which could often be translated in this fashion: "I am very unhappy; I implore your sympathy, your pity." Tears of children, of women, and even of men, possess that meaning. As a matter of fact, we do not deliberately say to ourselves "I am going to cry to be pitied by the by-standers"; yet unconsciously this is our object. On other occasions the meaning is different; our tears mean, for instance: "I share your sorrow; I am deeply moved through

sympathy toward you." In these cases we either appeal to sympathy or express sympathy. It may be interesting in this respect to quote the opinion of Schopenhauer, who claims that tears are not produced by pain, but the result of the pity we have for ourselves. According to this theory, when we cry in presence of death our tears are not shed because we have made a loss, but because we pity the fate of humanity; in other words, our own fate. We agree with Schopenhauer, inasmuch as he means that tears are the language through which we express how miserable is our fate. Comparing tears to other signs of our emotions, to blushing, laughing, and smiling, we may say that tears are the opposite of blushing. In one case we try to conceal our emotions, while in the other we do the reverse. Likewise, blushing is always involuntary, while crying is not. A dramatic author will indicate in the scenic directions of his drama that the comedian has to cry at a given moment, but he will never instruct him to blush.

It is generally admitted that tears express sorrow, while a laugh is produced by joy. We must not forget, however, that we cry from joy; besides, it can hardly be said that we are happy because we laugh at a drunken man staggering in the streets, at the *lapsus linguae* of an orator, at the snoring of a member of the congregation during the sermon. The fact is that laughing means something else besides joy. Under these circumstances laughing indicates that we have noticed a weakness, an infirmity, a distraction on the part of our peers. In the words of Hobbes, the laugh is a "sudden pride," the realization of our superiority over the defects of others. Tears, on the contrary, are an avowal of weakness, an appeal to pity. We could almost say that the laugh is the sign of triumph of the victor, while tears are the signs of the distress of the vanquished.

An Animal Calendar

HENRI COUPIN, in *La Nature*, Paris. Translated for
PUBLIC OPINION

WE know that coral reefs are separated from the land by lagoons in which swim numerous animals, many sedentary living beings existing also at the bottom. In these lagoons are found the voluminous benitiers, known to swallow the natives, and the trepang, which, smoked, constitutes a delicious food exported to foreign countries, particularly to China, where exotic dishes are highly appreciated. There is also in the lagoons another edible animal, less known than the others, but very interesting from a biological point of view. It is a worm called "palolo," and classified by the naturalists under the name of *Lysidice viridis*. This worm lives at the bottom of the water, and its existence would never have been suspected but for its habit of swimming to the surface twice a year, in October and November, exactly on the day of the last quarter of the moon, also on the preceding and on the following day. This precision is such that the natives take notice of it to correct their calendar, of which they do not take very good care. In their estimation, October and November are re-

spectively the little and the big months for the palolo. At these periods the palolos are so numerous on the surface of the sea that the water actually looks like liquid mud.

The palolo is mostly found at the Samoa islands, and also near the adjacent group (Fiji, Tonga). It is a worm 50 centimeters in length, and from 3 to 5 millimeters thick, looking exactly like a piece of thread. The most remarkable thing is that the elements coming to the surface of the water to float are only a part of the animal; the head remains at the bottom of the water, probably to regenerate the body through a peculiar budding process, while the balance of the decapitated body emerges to float. This last part drops below the water the eggs of which it is full, and this is probably the cause of its peregrination. The natives have noticed for a long time the emission of eggs. Palolo means "animal giving oil" (lolo) without dying (pa). Once freed from their eggs, the worms go down again to the bottom of the sea at the very moment the sun begins to ascend the horizon. Therefore there is no time to be lost in gathering them. Although they have lost their heads, they know what they are doing.

Plants That Walk

EDWARD STEP, in the April *Pall Mall Magazine*, London
Condensed for PUBLIC OPINION

IN our common purple orchis and some other species there occurs what we may term a geographical movement—a real traveling of the plant. If we dig up one of these, we shall find its roots include two smooth, roundish tubers, one in the process of formation, the other formed last year, and now being drawn upon by the growing stem for its nourishment. Next year this one will have become wasted, whilst the new tuber will be supporting the new stem, and a newer tuber will be forming on the farther side. This process goes on year after year, with the result that the stem is each year about half an inch from the spot

the plant occupied twelve months previously. A similar action, though much more pronounced, is characteristic of some garden lilies and several of our spring-flowering bulbs. Tulips, if planted in the shadow of thick shrubs, such as evergreens, will walk away from them into the lighter portion of the border. The movement of garden lilies, especially *Lilium auratum* and *L. speciosum*, is still more apparent. Place a bulb of *Lilium auratum*, the heavily scented, golden-rayed lily of Japan; in the center of a large flower-pot. For a season or two it retains its position; then it breaks up into a number of smaller bulbs, equaling or exceeding in number the flowering stems sent up the previous summer; but when these in turn give off

each a stem, it does not at once assume a vertical direction, but shoots almost horizontally until it reaches the side of the pot, when it rises erectly.

There is a North American fern that occupies new territory in a similar fashion to that which Milton thought to be the method of the banian. It bears a superficial resemblance to our common hart's-tongue fern, especially at the base of the frond; but the other end goes off to a very long, sharp point, that is little more than an extension of the midrib beyond the frond. The whole frond has a graceful arching habit, and it has generally been described as rooting in consequence of the tip bending down and coming in contact with the earth. This is what actually takes place: a bud forms at the extreme tip of the frond, and develops a cluster of little fronds and roots whilst swaying in the air. The increasing weight of the young plant, especially when laden with rain or dew, causes the parent frond to bend its tip to the earth, when the roots of its offspring take hold and become fixed. When well established and come near to maturity, their frond tips repeat the process, and several generations may be found thus attached together. This peculiarity has gained for the fern the popular names of "Walking-leaf" and "Jumping-fern." Several of our grasses and sedges develop creeping stems of great length, which give rise to new plants at every point, or at intervals. The familiar quitch, twitch, or couch, is of this character; but the most striking examples are to be found in maram-grass and sea-sedge that occur on sand-dunes by the sea. These plants of the sea-shore make ropes of their enormous creeping root-stocks wherewith the sands are tied together, and many banks that would otherwise wash away with the first high tide are held intact.

Antiseptics in Food Preservation

APPROPOS OF THE RECENT ACTION OF THE GERMAN GOVERNMENT

THE German government has given rise to some discussion by its action in excluding American meats treated with antiseptic preparations. The New York *Times* refers to the great diversity of opinion among authorities as to the effect of such treatment. "Liebreich declares that borax and boracic acid have no harmful effect if consumed in small quantities; Halliburton affirms that all preservative additions to food should be prohibited by law, under penalties so severe as to be effectually deterrent; Lebbin and Kallman declare that the results of experiments on animals show that sulphites are less hurtful than common salt; Lange and Gruber strongly object to their use, on the ground that they render foods impossible of assimilation; Tunnicliffe and Rosenheim contend that neither boracic acid nor formaldehyde have any unfavorable influence if taken into the stomachs of ordinarily healthy children; Kister reaches a conclusion exactly the reverse of this. And so it goes all along the line. At the feet of any one of the authorities named the average practicing physician could sit and learn wisdom; and until a consensus of scientific opinion shall furnish a basis of agreement as to what is dangerous and what is not, attempts to regulate this matter by legislation will be like formulating bulls against comets.

"The antiseptics in common use for food preservation are boric and boracic acid, salicylic acid, sodium salicylate, benzoic acid, fluorides, sulphites, and formaldehyde. The borax compounds are chiefly used

to preserve meats, fish, and dairy products. Salicylic and benzoic acids and sulphites are used chiefly in wines and vegetable preparations such as jellies, jams, etc. Fluorides are chiefly used in beer, and formaldehyde in milk. Whether their action on the higher organisms is the same as upon bacteria, though perhaps less in degree, is a question concerning which, as we have shown, there is a wide divergence of opinion. Smoked meats, preserved by the absorption of pyroligneous acid, and salted and corned meats, preserved by sodium chloride and potassic nitrate, may be open to every objection urged with good reason against 'embalmed beef.'"

The *Journal of the American Medical Association* says: "Vaughan and Veenboer have tested the effects of borax on the system and have looked into the literature on the subject, coming to the following conclusions: '1 The use of borax or boric acid as a preservative in butter and cream in the quantities specified in the recommendations of the English commission is justified both by practical results and by scientific experimentation. 2 The dusting of the surfaces of hams and bacon, which are to be transported long distances, with borax or boric acid, not exceeding 1.5 per cent of the weight of the meat, is effective and not objectionable from a sanitary standpoint. 3 Meat thus dusted with borax or boric acid does not become slimy because the preservative thus used prevents the growth of aerobic, peptonizing micro-organisms.'"

A MONSTER LOCOMOTIVE: An order given by the Atchison, Topeka & Santa Fe railroad company to the American locomotive company calls for an engine that will haul a load of 2,100 tons up a 50-foot grade. The rigid wheel base is 20 feet, and it weighs 137½ tons. On the drivers there is a weight of 230,000 pounds, or 115 tons. The type is the decapod, with ten drivers. To the top of the stack the height is 15 feet, and to the top of the boiler 12 feet 7½ inches. The heaviest engine now doing mountain work for the Santa Fe has a weight of 163,000 pounds on the drivers, and a number of engines are being built for the company which will have a weight of 191,000 pounds on the drivers.

GREAT SALT LAKE GOING DRY? The decline in the surface of Great Salt Lake is causing apprehension among the people of Utah. This interesting body of water has been sinking for a number of years, but the causes of its decline are not well understood. It is thought by some that the lake is subject to cycles of change which correspond to like cycles of years of heavy and light rainfall, and that it is now undergoing one of its low water periods, from which it will soon revive. The movement in the waters has also been thought to be related to the development of agriculture and grazing interests, which divert large quantities of water from the streams which feed the lake for use upon the land. During past years cutting of the timber on the neighboring mountains has been unusually heavy, practically destroying the forest protection of the headwaters of a number of streams whose waters flow into the lake. The cutting of these forests is supposed to have injured the flow of the streams and thus to have affected the lake level.—*Railway Age*.

RELIGIOUS

Moral Education in France

JEAN CHARLEMAGNE BRACQ, in the April *Educational Review*, New York. Condensed for PUBLIC OPINION

TWENTY years ago the Catholic church had still virtual control of French education. Symbols of Catholic faith were found everywhere in school buildings. The catechism was on a par with arithmetic, and Roman Catholic prayers were recited several times a day, notwithstanding the presence of non-Catholics. So great was the power of the clergy that, in places not a few, the local priest became a real despot for the local teacher. This was an anachronism which could not last. In 1882 the parliament—after long and stormy discussions—voted the secularization of the common schools. Instead of the religious practices, and the mechanical teaching of the catechism, the teaching of morals was introduced, and great efforts were made, in a new way, for the improvement of character. Without surrendering any effort for the mental development of the pupils—while increasing every provision to secure greater intellectual efficiency—great stress was laid upon their moral development by the very means the results of which so far had been mere intellectuality. Languages, mathematics, literature, history, and other studies, aside from their specific aim, must at the same time yield a certain training of the will. Every exercise of the school must secure results in which, when possible, thought, feeling, volition, and action would be but four inseparable steps.

Morals in the schools are not always taught from books, but sometimes by brief, earnest talks, prepared by the teacher from the books. They are imparted to children from five to seven in a mere oral form, by the simplest way possible. Here the teaching does not go further than to say that this act is right and that is wrong. The great end is intense moral cul-

ture by emotions. With the other classes the greater number of teachers use books. In the elementary primary class, from seven to nine, instruction is generally by means of narratives, illustrations, and quotations bearing upon the immediate relations of the pupils among themselves. The effort is not so much to enlighten the moral consciousness as to secure the immediate introduction of principles into life. This instruction must be in touch with events in the daily life of the pupils. In the middle primary class, from nine to eleven, the program centers upon duties toward parents, servants, classmates, the fatherland, and God. The method used with the preceding class is continued, but with more order and precision. Here again one is impressed with the same intense purpose of moral utility which we have already noticed. In the superior primary class—that is, from eleven to thirteen—the work includes the study of the elementary principles of morality, concluded with a special study of social morality. In the secondary schools great stress is laid upon moral education, but the teaching of morals has also its place. Here the scope might be stated as follows: Primary moral notions. Domestic, social, and personal duties. All this remains intensely practical and even dogmatic. In the last year of lycée and college work, ethics constitute an invaluable part of the course of philosophy.

It is difficult to gauge the results of a work like this. After centuries of experience, there are still those who question the moral influence of the church, of science, and of art. There are those who view this experiment as a failure because they had expected sudden moral transformations, which are impossible. The Catholic clergy condemned the system before it had been tried in one single school. The Duc de

Broglie attacked it most violently, insisting that the "godless schools" were already showing their baneful fruition in the alarming increase in the number of youthful criminals. Since then the number of young delinquents has decreased, and yet M. de Mun and his friends continue this disloyal campaign. When they say that the morals taught in the schools are powerless because they lack theoretical unity and church help, they might be answered that it is impossible to do more poorly than they with their boasted adjuncts. I do not underrate the advantages of teaching morals with the support of a historic religion, but that can no longer be done in France. Meanwhile, with their manifest imperfections, the schools have become institutions, not only to make the pupils think, but think right, then feel right, then will right, then do right, and finally be right, the permanence of which is character.

Discord in the American Theosophical Society

RECENT dispatches from San Diego, California, announce that Mrs. Katherine Tingley, the leader of the American Theosophical society, has been obliged to "accept" the resignation of Dr. Jerome Anderson, as president of the Point Loma University brotherhood. Dr. Anderson is in open rebellion against Mrs. Tingley. He declares that she usurped the place of leader of the theosophists, that she spent \$300,000 on a "freakish oriental court" at Point Loma, California, and went to live there with a court "such as has never been seen off a comic-opera stage"; that she invented new court regulations, and new branches of theosophy, such as the "school for the revival of the Lost Mysteries of Antiquity"; that she compels men and women of wealth and high social position to wear "long gowns and ridiculous hats" in her presence. Dr. Anderson finally declares that of the 140 prosperous lodges organized by W. P. Judge not more than a dozen exist today.

In a published interview, Dr. Anderson said: "One reason for our trouble is that our constitution is foolishly broad and confers unlimited powers upon the 'master.' Recognizing her autocratic powers under the constitution, she demands that all members bow their knees before her and she expects them to worship her. From her decisions there is no appeal. If she exercised her functions wisely, there would be no trouble, but she is a foolish, vainglorious woman, whose head has been turned by adulation and who can not brook any opposition. Her conduct is very unsatisfactory to the theosophists, and we have decided to quit."

The Growth of Mormonism

EVANGELICAL MISSIONARY SOCIETIES ISSUE A WARNING

A JOINT statement has been issued by the secretaries of ten of the evangelical missionary societies of America calling the attention of the members of the Christian denominations to the rapid growth of Mormonism. It is in part as follows: "The undersigned, representatives of missionary societies of Christian denominations in the United States, beg leave most earnestly to call the attention of the Christian public to the position, work, and menace of Mor-

monism in our country. We are moved to this statement by the vitality which the Mormon system has shown—not only in western states and territories, but generally throughout the country. We are persuaded that Christian people have no adequate conception of the vitality, nor of the methods—seductive and often successful—by which the hateful system is being pressed upon the public attention. Whatever modifications public sentiment or governmental action may have forced upon the Mormon attitude and Mormon practices, it has not essentially changed its character since the days of Joseph Smith and Brigham Young. Its priestly oligarchy threatens free government, its grasping priestcraft invades property rights; its varied vices are destructive of good morals, while its pagan doctrines and practices are antagonistic to the gospel of Christ. The ambition of Mormons, which they do not even conceal, is to secure control of state after state, until, by means of the balance of power, they may make national legislation against Mormonism impossible. Toward this end they are moving by an organization as compact and skilfully devised for its purpose as any that ever engaged the activities of man. Their approaches to people are made the more seductive because their appeal affects to be based upon commonly accepted Bible truths. Only after entrance has been gained and the door has been closed against retreat is the awful system gradually unveiled to its converts. We urge upon the pastors and teachers to unveil to their people and scholars this system, so seductive and dangerous to all the best interests of every community and of our country. We urge upon the public press the duty of educating the public conscience by unsparingly giving the facts of the nature and the work of Mormonism, and we appeal to Christian and patriotic people everywhere to resist wherever it appears a system hostile at once to our free institutions and our Christian faith."

The Catholic Church and Liberty

A CATHOLIC VIEW OF CATHOLICISM IN THE UNITED STATES

IN a monograph published in the *Correspondant* (Paris) under the signature of Mgr. H. Gabriels, bishop of Ogdensburg, New York, the writer examines at length the causes which have had the largest influence on the development of Roman Catholicism in the United States during the last century. Although stating that the United States was not favorable in 1800 to the expansion of Catholicism, he does not deny that the principle of liberty was the starting force that permitted the 50,000 Catholics living in this country at that time to increase to the millions. The population of the republic amounted then to 5,350,000, while in 1890 the Catholic communicants numbered 10,778,000 out of a total of 76,000,000.

Concerning the influence of liberty on Catholicism, Mgr. Gabriels says: "It is an error to believe that in the United States the separation of the church and state is absolute. This separation has been claimed by a handful of liberals and freethinkers, but until now without success. It is true that the close union between church and state found elsewhere does not exist, but the states recognize some Christian traditions, such as the observation of the Sabbath, the oath, clerical immunity to a certain extent, and other religious privileges; it protects the ceremonies of the cults, recognizes canonical authority, and passes sentence upon ecclesiastical differences between members

of the church according to the laws of the church itself. Not only does it grant entire liberty to religious associations and to educational institutions, but it facilitates the incorporation of dioceses, parishes, congregations, schools, and cemeteries, which thus become individuals and can enjoy their rights in accordance with their own statutes. The public has not been terrorized yet by the specter of mortmain. If it was not for public education without God and a few minor points, we could consider the United States government as a model for the countries not possessing the unity of faith."

Concerning the freedom of teaching in the public schools, the opinion of the Catholic bishop is interesting. "The system of public schools," he says, "is the idol of Methodist, Baptist, and Presbyterian sects, as well as of the ignorant masses, because it is necessarily bound to reach the Catholic faith and to make, as they say, a united people of all the children of the nation. Popular opinion on this point is so strong that a politician running for office would scarcely dare to dispense with the usual protestations of devotion to non-sectarian schools." The writer recognizes, nevertheless, that Mgr. Hughes, Catholic bishop of New York, is the one through whose efforts the legislature of his state enacted the law on non-sectarian schools, forbidding the teaching of any religion in the public schools. On account of the treachery of one of his political friends, he could not secure a proportional apportionment of the public funds for the schools of the various churches then in existence, and therefore he advocated the lesser evil, notwithstanding the recriminations of the Catholics and even the Lutherans and a few Episcopalians.

The Easter Encyclical

THE POPE ISSUES HIS TESTAMENT TO THE CHURCH

THE *Osservatore Romano*, the organ of the vatican, prints the Easter encyclical issued by the pope, in which he says the time has come when he must recognize that he is approaching the end of the term of his life on earth and that this encyclical should be his testament to the Catholic church. The pope says he would encourage the Catholic bishops throughout the world to continue vigorously to resist the persecutions which now afflict the church. These persecutions will continue, but they will not affect the spread of the light of Christ among infidels. Never has humanity found itself in more miserable condition than at present. There is disorder in all social relations, and especially in family relations; excessive liberty has been created which has fostered socialism and anarchism. Unjust wars, the encyclical says, are being waged by strong nations against weak and feeble peoples. There are exaggerated armaments among great nations, the effects of which are even more disastrous than war. All these things have created world-wide inquietude. Unceasing troubles and misery have provoked the people to anarchism, which henceforth promises to constitute a formidable league against emperors, kings, and presidents of all governments. These governments must adopt decisive measures for the defense of genuine liberty and must enforce the teaching of religion. In conclusion the pope invokes the union of Christian churches as the leading remedy to save society from the violent attacks of atheists and Freemasonry. He maintains the necessity of upholding the temporal rights of the church and

counsels the active spread of Catholic workmen's societies. He also condemns the forthcoming institution of the law of divorce in Italy, and urges all Catholics to combat doctrines contrary to religion.

Honors Paid to Edward Everett Hale

THE eightieth birthday of Dr. Edward Everett Hale was celebrated in Boston, April 3. A letter from President Roosevelt was read in which the president compared Dr. Hale to "Timoleon in his last days at Syracuse, loved and honored in his old age by the fellow-citizens in whose service he had spent the strength of his best years." The address of congratulation was delivered by Senator Hoar, who spoke in terms of warm and sincere praise. "Dr. Hale has not been a founder of a sect," he said. "He has never been a builder of partition walls. He has helped throw down a good many. But still, without making proclamation, he has been the founder of a school which has enlarged and broadened the church into the congregation, and which has brought the whole congregation into the church. I do not know another living man who has exercised a more powerful influence on the practical life of his generation. He has taught us the truth, very simple, but which somehow nobody ever got hold of till he did, that virtue and brave living, and helping other men, can be made to grow by geometrical progression."

Dr. Lyman Abbott writes a very frank appreciation of Dr. Hale for the current number of the *Outlook*. He says in part: "It would be difficult to name any man who has better exemplified in his spirit and by his life that faith, hope, and charity which constitute the essence of true religion, or any man who is more beloved by a greater number of friends, many of whom have never seen his face or heard his voice. He has thus unconsciously painted his own portrait in the motto which he has given to the world, for to look up and not down is faith; to look forward and not back is hope; to look out and not in, and to lend a hand is love. Dr. Hale is a man of vision. He is in the best sense of the term an idealist. If he does not live in two worlds, he brings from the invisible world its light and its warmth to irradiate the visible one. He is a man of hope, in the best sense of the term an optimist."

Various Topics

THE NEW THOUGHT movement is to be represented by a summer school of the cult to be held at Oscawana, New York, beginning July 1 and lasting for two months. The prospectus indicates a purpose to establish a regular summer camping community after the fashion of the religious camps at Ocean Grove and other places of the sort.

Y. M. C. A. LIABLE TO TAXATION: By a decision handed down by Surrogate Church in Brooklyn the Young Men's Christian Association of that borough will have to pay a transfer tax of \$500 on the bequest made to it of \$10,000 by the late Henry G. Fay. The corporation had appealed from the decision of the appraisers on the ground that it was a religious corporation and under the laws of 1896 was exempt. In his decision Surrogate Church says to him it seems that "a religious corporation should be one formed primarily for religious purposes, exercising some ecclesiastical control over its members, having some distinct form of worship and some method of discipline for violation thereof, and the mere fact that it has been formed for a good and worthy object in which incidentally there will be some religious exercises involved does not make it a religious corporation."

MISCELLANY

The Romances of the House of Hapsburg

SOME MESALLIANCES OF AUSTRIAN ROYALTY

THE various romances of the house of Hapsburg is the subject of an article by Mr. S. M. Williams in the April *Munsey's Magazine*. The long list of irregular affairs of the heart for which the Austrian royal house is noted began with the Archduke Johann, brother of the Emperor Franz I. It was his lot to fall in love with and marry Anna Plochl, daughter of the job master at Aussee, in the province of Salzburg, whom he saw first in 1822, disguised as a boy and acting as postillion for his royal highness. After the marriage, which was strongly opposed by the emperor, she was created Baroness Brandhofen and later Countess of Meran. The emperor finally relented and the couple were restored to royal favor.

Sixty-four years later another Archduke Johann, nephew of the present emperor, became enamored of Milly Stubel, a dancer in the Vienna opera-house. The emperor refused permission for the proposed marriage, but the archduke had his way in the end at the price of his rank and Austrian citizenship. They were married in London, in 1890, and the archduke, who had assumed the name of Johann Orth, sailed for South America in the ship *St. Margarethe*, bought for his own use. He was joined at Buenos Ayres by his wife, who had gone out by the mail steamer. In July, 1890, they sailed from that port together with a crew of twenty-five men and but one officer, Herr Orth. A few days later bad weather forced them to put in to a port in southern Chile for a few days. Soon they sailed away, and that is the last that has ever been known of Johann Orth, archduke of Austria, and his wife, Milly Stubel, the ballet dancer.

While Johann Orth was struggling with the emperor, the saddest tragedy of the century befell the house of Hapsburg—a tragedy having its origin in a *mariage de convenance* and its culmination in love that could not be sanctioned either by the church or by the family. Crown Prince Rudolf, the emperor's only son, was married in 1881 to Princess Stephanie, daughter of the king of the Belgians. He made no pretense of loving her, and his indifference and her furious jealousy soon made life intolerable for both of them. At this juncture, Prince Rudolf met the Baroness Marie Vetsera, the daughter of an Austrian diplomat and a wealthy Jewess, and lost his heart to her instantaneously. His application to the pope for permission to divorce Stephanie was sternly refused, and after many bickerings a reconciliation was about to be effected, when the Baroness Marie made her way to the prince and pleaded with him not to desert her. He yielded to her importunities, and on the evening that a family dinner was to be held to celebrate the crown prince's reconciliation with his wife, Rudolf fled with the baroness to his hunting château of Meyerling, near Vienna. The next morning, the dead bodies of the prince and the baroness were found in a room of the château. The manner of their death is the secret of the Hapsburgs. Three years later, Princess Stephanie married Count Elemer Lonyay, an attaché of the Austrian embassy in London, and the younger son of an old Hungarian family. The emperor gave his consent to the match on condition that

the princess renounce her membership of the Austrian royal family and give up control over her daughter, but her father, King Leopold, has never forgiven her. Her daughter, the Archduchess Elizabeth, created a sensation a few months ago by marrying Prince Otto Windischgrätz, a member of a minor and impoverished branch of one of the families recognized by the *bundesact* of 1815 as of equal birth with royalty. Although sacrificing her rank and privileges as archduchess, Elizabeth has not contracted a strictly morganatic marriage.

When, in the course of time, the much-beloved old emperor passes away, his nephew, Archduke Franz Ferdinand, will ascend the throne. But there will be no empress to be crowned by his side, although his wife, whom he married a little more than a year ago, will live in the royal palace with him. He will be the only sovereign in Europe with a recognized and honored morganatic wife. She was the Countess Sophie Chotek, a descendant of one of the oldest Bohemian families and a former lady-in-waiting to the Archduchess Isabella, of one of the collateral branches of the reigning dynasty of Austria. When the archduke announced his intention of marrying her, the emperor tried vainly to dissuade him, but finally compromised on a year's delay, promising to give his consent then, if the archduke remained of the same mind. The year passed, and as Franz Ferdinand was still firm in his decision, the emperor consented to a morganatic marriage, and the archduke and heir to the throne took this oath: "I, Franz Ferdinand, swear by God Almighty to observe the family statutes of our house in general and in particular in regard to my marriage with Countess Sophie Chotek. I swear that I acknowledge my marriage to be a morganatic union, that any children of this marriage will not be entitled to claim succession to the throne of Austria or Hungary." The Countess Chotek has been raised to the rank of Princess Hohenberg, but by the rules of the court she must give way in precedence to all the Hapsburgs and all the nobility who, like the Windischgrätz family, are regarded as of equal birth with royalty.

A REMARKABLE CURE: Reports of a remarkable cure by electricity and hypnotism come from Prague. A man named Adolf Resch met with an accident which resulted in serious nerve shock, loss of speech, and partly idiocy. Dr. Jaksch, of the Prague hospital, subjected the man to a treatment which has had the most beneficial effect. After being electrified by a powerful current the patient was hypnotized. While under this influence he spoke, with difficulty at first, but afterwards with ease, and finally he not only regained the power of speech but the use of his intellect.—*London Morning Post*

TELEPHONING FROM MOVING CARS: A dispatch from Grand Rapids, Michigan, states that Benson Bidwell has shown successfully there the feasibility of telephoning from a moving electric car without regard to the speed attained or the noise incident to the movement of the car. In the presence of several men Mr. Bidwell, the inventor, and his brother, Charles F. Bidwell, made the demonstration. They used three cars which were put at their service by the Grand Rapids railway company and the passengers on these cars had no difficulty in talking from one car to the other, no matter how fast the cars were going.

THE NEWS OF THE WORLD

MONDAY, MARCH 31

DOMESTIC.—Señor Concha, the Colombian minister, delivered to Secretary Hay a protocol giving Colombia's consent to the sale of the Panama canal company's property to the United States....Major Littleton W. T. Waller testified at his trial in Manila in his own behalf concerning the hardships of the march of the marines across Samar....Ex-Governor Clarke of Arkansas was endorsed for United States senator....At least twenty-two persons were killed by an explosion of gas in the Nelson mine, Dayton, Tennessee.

FOREIGN.—A revolution has broken out in San Domingo, and there has been sharp fighting on the south coast at the town of Barahona....The plague situation is growing worse in the Punjab, India, where 70,000 deaths are reported monthly....A Russian subsidized steamer landed 60,000 rifles at a seaport of Persia on the Persian gulf....Lieutenant General Sir Andrew Clarke, agent general for Victoria, Australia, is dead....Ernest M. Lieber, the Centrist leader in the reichstag, is dead....A fire in the silk manufacturing town of Fukui, Japan, destroyed 4,000 houses.

TUESDAY, APRIL 1

DOMESTIC.—The inquiry into the charges of bribery made by Captain Christmas in connection with the sale of the Danish West Indies was begun; Niels Grön, the first witness, testified that he knew of no attempt to bribe any member of congress....William Williams, of New York city, was selected to succeed Thomas Fitchie as commissioner of immigration....Republicans elected a majority of the Chicago city council, but Alderman "Bathhouse" John Coughlin, Democrat, won after a sharp contest....The New York state court of appeals decided that union men may refuse to work with non-union men and strike if they desire....Dr. Thomas D. English, the author of "Ben Bolt," died at Newark, New Jersey.

FOREIGN.—Thirty-nine British soldiers were killed and 45 injured in a railroad wreck near Barberton, Transvaal....Eleven persons were drowned by the sinking of the steamer *Cambrian Princess* in collision near Nab lightship, England....Dr. Manuel A. San Clemente, titular president of Colombia, died at Villeta, near Bogota....President Diaz opened the Mexican congress, saying in his message that the country was prosperous....The third instalment of the Chinese indemnity was paid at Shanghai; it amounted to 1,800,000 taels.

WEDNESDAY, APRIL 2

DOMESTIC.—At the trial of Major Waller, at Manila, Private McGee testified that twelve men were shot in Samar; Private Healy, of the 27th in-

fantry, was hanged in Manila for the murder of Sergeant Moreland....President Roosevelt appointed Brigadier-General Hughes a major-general and Colonels De Russy, Burt and Sheridan brigadier-generals in the regular army....A national convention of the Allied party, whose object is stated to be the "union of all reform forces against plutocracy," met at Louisville, Kentucky....The Republican state convention of Oregon nominated W. J. Furnish for governor....The Bethlehem steel company voluntarily increased the wages of its employees.

FOREIGN.—The Second Dragoon guards attempted to surprise a Boer laager in South Africa, but were repulsed and pursued....Emperor William delegated Prince Henry to represent him at King Edward's coronation....In answer to representations of the powers the porte replied that the insecurity of Christians in Macedonia and Albania is due to the Macedonian committee's importations of arms and dynamite....Stephen Ralli, head of the well-known mercantile firm of that name in London, is dead.

THURSDAY, APRIL 3

DOMESTIC.—The charges of bribery made by Captain Christmas in connection with the sale of the Danish West Indies were denied by Abner McKinley, Senator Lodge, Carl Fischer-Hansen, Congressman Gardner, and others who testified before the investigating committee....The senate committee on military affairs reported adversely the nomination of Captain William Crozier to be chief of ordnance of the army....The American Philosophical society held its first general meeting since its foundation by Benjamin Franklin, in 1743, in Philadelphia....A great fire swept Atlantic City, New Jersey, destroying twelve hotels and many other buildings.

FOREIGN.—After funeral services in Parliament House, Cape Town, the body of Cecil Rhodes was placed on a train to be taken to Rhodesia....Acting President Schalkburger has succeeded in getting into communication with President Steyn....Lieutenant Witton, Australian officer, convicted of making reprisals on Boer prisoners, reached England to serve out his life sentence at penal servitude....The freedom of the city of Dublin was conferred on John Redmond and Patrick McHugh, Irish members of parliament.

FRIDAY, APRIL 4

DOMESTIC.—Cases of cholera at Manila caused prisoners to be placed in a detention camp....Lieutenant Commander William H. Schuetze, a well-known naval officer, died in Washington....The place of commissioner general of immigration, to succeed T. V. Powderly, was offered to and accepted

by Frank P. Sargent, chief of the Brotherhood of Locomotive Firemen....Descendants of Absalom Case claim \$80,000,000 worth of property in the heart of Cleveland, Ohio....The Virginia constitutional convention adopted the proposed suffrage plan and adjourned to May 22.

FOREIGN.—The will of Cecil Rhodes provided scholarships at Oxford for two students from each of the states and territories of this country, five scholarships from Germany, and scholarships for each of the British colonies....In a sharp fight near Hart's river, Transvaal colony, the Boers were repulsed; great gallantry was shown by the Canadian rifles....Two victories of Conservatives in the Department of Boyaca, Colombia, were reported, and officials regard the rebellion as practically ended.

SATURDAY, APRIL 5

DOMESTIC.—Secretary Hay ordered an investigation into the governor of Louisiana's complaint against purchases of supplies for the British army, and Attorney General Knox rendered an opinion on the law of neutrality....The president pardoned Joseph B. Coghlan for an offence committed many years ago, thus restoring him to the rank he lost in the navy.

FOREIGN.—By the falling of a spectators' stand, due to a crush and panic, at an international football match at Glasgow, twenty-one persons were killed, two hundred and fifty were more or less seriously hurt....Casualty lists forwarded to London by Lord Kitchener showed the desperate character of the recent fighting in the Transvaal; on the Hart's river the British lost three officers and twenty-four men killed and sixteen officers and 151 men wounded, while the Boers lost 137 killed or wounded; in the fight at Boschman's Kop, on March 31, the British lost two officers and eighteen men killed and five officers and fifty-eight wounded.

SUNDAY, APRIL 6

DOMESTIC.—Race riots threaten in Lawton, Oklahoma, where the negroes refuse to leave the town....One man was killed and five were injured in a train wreck at Millets, Michigan, on the Grand Trunk railroad....The result of a survey of the West Indies, which has been made by Admiral Bradford, shows that Havana possesses the harbor best adapted for a principal naval station.

FOREIGN.—Caspar Krüger, eldest son of President Krüger of the Transvaal republic, and twenty-four other members of the Krüger family, are among those burghers who have sworn allegiance to King Edward....Hebrew charitable organizations of Berlin with a membership of 15,000 have been incorporated into a central body.

The Books of The Week

THE CONQUEROR. Being the True and Romantic Story of Alexander Hamilton. By Gertrude Franklin Atherton. Cloth, pp. 546, \$1.50. New York: Macmillan Co.

THE warmest sympathy with Mrs. Atherton's aim in writing this book can not obscure the fact that it was impossible for her to perform the task she assumed with credit either to the novelist or to the historian. For this is a biography of Hamilton, told in the form of a work of fiction. It claims to be, and in the main it is, truthful as to important details, but these are staged amid wholly imaginary scenery. Mrs. Atherton knows just what Hamilton said and just what was said to him on every momentous occasion of his life. She knows more than this. She knows that after Burr's victory in New York Hamilton went home with a smile on his face and ate an oyster stew—not a lamb stew or a kidney stew, but an oyster stew. And when Monroe, Muhlenberg, and Venable came to him with the Reynolds documents that were afterwards to play such a conspicuous part in the campaign attacks upon him, he stared at them with no trace of passion in his face, "his eyes looked like steel, his whole face had hardened into a mask." This is likely enough, as it is also likely that Hamilton partook of an oyster stew on the occasion previously mentioned; it is also probable that other incidents are imagined with a high degree of accuracy, for Mrs. Atherton understands the man of whom she writes, his personality as well as his actions. Nevertheless, this fanciful embellishment of hard, cold facts is puerile. This is the way history is written to induce children to read it. It is very absurd to the reader who has never required any inducement to familiarize himself with the personality and immense services of Hamilton to his country. After saying this, it may be inconsistent to add that we are glad the book has been written, for while the new life of Hamilton that Mrs. Atherton threatens to write will probably not be read to any great extent, this book will be read under the misapprehension that it is a novel, whereas, as a matter of fact, it is a hybrid, a piece of literature that would be very difficult to classify.

The book has another fault. Its glorification of Hamilton exceeds all reason. That he was, all things considered, the greatest and most useful man of his time, we verily believe. But we think a shred of talent should be left to some of his contemporaries. Mrs. Atherton is not altogether willing to do this—Jefferson is a sneaking Jacobin, John Adams a dolt, and so on. Even Washington shines only by reflection—Hamilton (aet. 19), while acting as his

aide, wrote "the mass of correspondence signed 'George Washington,' which raised the commander of the American forces so high in the estimation of Europe, adding to his military renown the splendor of a profound and luminous intellect." Thus Washington's intellectual eminence is borrowed from Hamilton, not only at this time but throughout his term as president, and he is even made to say to his aide when sending him on a mission to Gates: "Come back as soon as you can. I believe I am not lacking in courage, but I always have most when you are close by."

As a sort of prologue Mrs. Atherton exercises her considerable art as a novelist upon the romantic story of Hamilton's mother, Rachael Lavine (or Levine as Mrs. Atherton prefers to spell it). This is the best and most interesting part of the book. If the novelist's purpose was to wholly exonerate Hamilton's mother for her irregular relations with James Hamilton, her purpose is perfectly accomplished. Not only this, but the mother of Hamilton is made to appear in the light of a great as well as a good woman.

THE LAND OF NOME. By Lanier McKee. Cloth, pp. 260, \$1.50. New York: The Grafton Press.

MR. McKEE was among the first to proceed to Nome upon the announcement of the gold discoveries. His object was the practice of law, but finding that an unfavorable place to hang out his shingle, he went to Council City, so that his narrative covers not only Nome but nearly all the camps of the vicinity. When Mr. McKee saw the city of Nome it was a straggling camp, deep in mud and disorder. When he left it last year it was an orderly town with at least one first-class hotel, boarded streets, a good water supply, a fire department, telephones, and with an electric lighting system under way. "The social atmosphere of Nome now demands a white collar and a shoe shine." As to the wealth of the country, Mr. McKee says that "it has hardly been scratched," and that there is more gold to be taken out than has yet come to light. Speaking generally of Alaska, he says: "The rush to Cape Nome has attracted attention to only a comparatively insignificant portion of Alaska, and emphasized but one of the treasures in its vast, unexplored storehouse. In the north and east, and over by the Canadian border line, is the world-famous Klondike region. Fifteen hundred miles distant to the west, close to Siberia, are the Nome gold fields. Southeast are found seemingly inexhaustible quartz-gold mines, the greatest salmon fisheries in the world, and a climate and soil which will make agriculture possible and profitable. And away to the south and west are immense forests, mines of copper and the Pribilof islands, the home of the fur-seal. Within the boundaries of Alaska there lies a country incomprehensible in its extent and difficulties, inconceivable in the pos-

sibilities of its latent wealth. The marvelous discoveries of gold at Cape Nome, which have entailed so much hardship and scandal, bringing riches to many and disappointment to more, will at least have worked a highly beneficial result in bringing to light the neglect and needs of our wonderful Alaska."

Not the least valuable part of Mr. McKee's book is the account he gives of the Noyes scandal, which began with the arrival at Nome in 1900 of Judge Arthur H. Noyes and Alexander McKenzie, and ended only last February when Noyes was removed from office by President Roosevelt. No more outrageous example of barefaced swindling was ever exposed, the plan of the conspirators being to throw valuable mines into the hands of a receiver, Mr. McKenzie acting in the latter capacity, and then to make all that could be made out of the receiverships before any appeal from Noyes's action could be heard. Influences of various kinds have kept the story from the notice of the public to a certain extent, but it is now set forth in such a way that there is no likelihood of the case being befogged or misunderstood. As a whole Mr. McKee's book is both entertaining and informing. He has no reason to exaggerate or mislead, and he has an eye at the same time for the picturesque and dramatic side of life in a land of gold.

SPINDLE AND PLOUGH. By Mrs. Henry Dudeney. Cloth, pp. 342, \$1.50. New York: Dodd, Mead & Co.

MRS. DUDENEY's good workmanship in "The Maternity of Harriott Wicken" and "Folly Corner" has already commanded our admiration. In both of these novels she came out especially strong in portraying the ruling passions of two frail and rather worthless women. In "Spindle and Plough," she has drawn her heroine from an entirely different model, a strong-minded, strong-willed young woman with none of the weaknesses that are called feminine. This girl, who goes by the outlandish name of Shalisha Pilgrim, is the daughter of an artist of peasant stock and a conventional, middle-class mother. She is a man-hater and a nature-lover. Her ruling passion is gardening, and she eventually becomes the landscape gardener of a large estate. The owner offers to make her his wife, but she declines the honor, marries his head farmer, and gardens happily ever after. On this slight framework Mrs. Dudeney has built a story that depends for interest entirely upon the details with which she has furnished it. It is full of humorous situations and naive revelations of human nature. Mrs. Dudeney is not so successful with her brainy and brawny Shalisha, as she was with poor, silly Harriott and foolish, infatuated Pamela; but if we find the gardener a bit heavy at times, there is endless diversion in her capricious mother, a middle-aged coquette, who puts out tentacles to every man she meets and sighs resignedly, "One does not look for the ideal in a second husband";

also, in the plain speaking "Godmother Bloss," in the vulgar "Poundsberry person," and in that interesting family of disreputables, the Toffins. Boaz Boylette, the master of Bramble Tye, and Felix Rule, his head farmer, furnish an interesting study in contrast between the dilettante and the primitive man, but they are not especially interesting in themselves. Mrs. Dudeney apparently makes a thorough and conscientious study of each type portrayed and then allows each character to follow his own bent in the development of the story, to make himself sublime or ridiculous, to furnish humor, or pathos, or power, according to the dominant note of his nature. She rarely makes a mistake in calculating the effect of a given set of circumstances upon a given temperament.

THE BATTLEGROUND. By Ellen Glasgow. Cloth, pp. 512, \$1.50. New York: Doubleday, Page & Co.

MISS GLASGOW has put a delightful group of people into a thoroughly enjoyable story. They represent the flower of Virginia plantation life, the refinement and gentle breeding which is like the fragrance of an old-fashioned garden. The story is entirely concerned with the households of two neighboring plantations. The heads of the houses discuss politics over rare old port and madeira, their wives exchange remedies and recipes, their children fall in love with one another, and their slaves hold high carnival together. In their days of ease they entertain one another with free-handed hospitality and lavish outlay; in time of war they sacrifice sons, wealth, homes, even the sacred family plate, to the cause; in the bitter hour of defeat they endure poverty and privation together. Through weal and woe they are uniformly brave, loyal, thorough-bred sons and daughters of Virginia. Miss Glasgow's sketches of slave-life are sympathetic, and often amusing. Aunt Ailsey, the conjurer, can hold her own with any of the darkies in fiction, Uncle Remus not excepted. When the little heroine reverently questioned, "I reckon you're mighty old, Aunt Ailsey—most as old as God, ain't you?" Aunt Ailsey pondered the question. "I ain' sayin' dat, honey," she modestly replied. "Then you're certainly as old as the devil—you must be," hopefully suggested the little girl. The old woman wavered: "Well, de devil, he ain' never let on his age," she said at last, "but w'en I first lay eyes on 'im, he warn' no mo'n a brat." Taken altogether, "The Battleground" is sure to please: it is bright, animated, full of action and human interest, with a nice adjustment of lights and shadows.

THE MADNESS OF PHILIP. By Josephine Dodge Daskam. Cloth, pp. 222, \$1.50. New York: McClure, Phillips & Co. MISS DASKAM is one of a few true interpreters of child life. With a delicious humor and heartfelt sympathy she relates the experiences of real boys and girls, their hopes and fears, their jealousies and ambitions, their occasional

spells of virtue, their frequent lapses into very original sins. In the seven stories of this collection, she presents an interesting variety of little people as they appear in the kindergarten, on the playground, in dancing school, or at home. All these stories abound in amusing touches, in keen observations, and in a thorough comprehension of the things that stir the imagination of a child.

THE SON OF A FIDDLER. By Jeannette Lee. Cloth, pp. 286, \$1.50. Boston: Houghton, Mifflin & Co.

How the follies of a father may be visited upon his son is the theme of "The Son of a Fiddler." A violinist, who has made a wreck of his life, brings his boy back to the old homestead to be brought up according to the strict regulations of a New England farm. But the boy soon takes to fiddling and goes to Boston to follow his vocation. There he meets his mother, a popular actress, falls in with stage folk, and follows in the footsteps of his father. It is an interesting study in temperament and two of the characters, the boy and his mother, are well drawn. The author writes in a simple, straightforward fashion, and lights up her pictures of New England farm life and Bostonian Bohemia with a few flashes of humor.

THE THRALL OF LEIF THE LUCKY. By Otilie A. Liliencrantz. Cloth, pp. 349, \$1.50. Chicago: A. C. McClurg Co.

MISS LILIENCRANTZ, a descendant of Lief Ericsson, we are told by her publisher, has put her famous ancestor into a thrilling tale of the viking days, entitled "The Thrall of Leif the Lucky." It is full of fierce love and reckless daring, of "songs of smiting steel," of brutal deeds, and "shivers of superstition." A description of crossing an ice-bound fiord in an Arctic storm contains the thrill de resistance. Translations of verses from Hávamál, placed at the heads of the chapters, charge the atmosphere with the viking's philosophy. Miss Liliencrantz has certainly entered heart and soul into the spirit of her work, and the fire of her enthusiasm glows on every page. The colored illustrations and the symbolic decorations are quite a feature of the volume.

THESAURUS OF ENGLISH WORDS AND PHRASES. By Peter Mark Roget. Cloth, pp. 270, \$1.50. New York: T. Y. Crowell & Co.

A NEW and improved edition of Dr. Roget's excellent and unique work on English phraseology. The object of this work is the exact converse of that of a dictionary, namely this: The idea being given, to find the word, or words, by which that idea may be most fitly and aptly expressed. The collection of synonyms that Dr. Roget spent a lifetime in classifying and arranging is, in this edition, enlarged and supplied with a full index by his son, John Lewis Roget.

The Pocket Balzac

The above illustration shows the difference in size between our new pocket edition of the *Comédie Humaine* of Honoré de Balzac and the library edition.

THE POCKET EDITION comprises the well-known exact and literal translations of *Katherine Prescott Wormeley*, the result of 15 years of study.

This handsome and convenient edition of the great French novelist's best writings is printed in large, clear type, on thin but opaque paper, illustrated with photogravure frontispieces from original pictures by noted French artists, and superbly bound in cloth or limp leather.

MRS. SEELY'S COOK BOOK. A Manual of French and American Cookery with Chapters on Domestic Servants, their Rights and Duties, and Many other Details of Household Management. By Mrs. L. Seely. Cloth, pp. 432, \$2. New York: Macmillan Co.

THE recipes in this volume are numerous, varied, and doubtless in every way practical, but its most unique feature is the information given as to the management, duties, clothing, etc., of domestic servants.

THE YOUNG MAN IN MODERN LIFE. By Beverly Warner, D.D. Cloth, pp. 193, 85 cents. New York: Dodd, Mead, & Co.

A VOLUME of advice to young men at all stages of life, and one that is sane and wholesome, but, which, like all other books of its kind, presupposes that every young man will exist in a certain environment and be able to escape therefrom or absorb the advantages thereof as he wills.

THE BOOK OF THE APPLE. By H. H. Thomas. Cloth, pp. 112, \$1. New York: John Lane.

A NEW volume in the series of books on practical gardening, and containing besides the chapters strictly concerned with the growing of apples, several chapters by the editor on the history and cookery of apples, and on the making of cider.

VERBA CRUCIS. By Rev. T. Calvin McClelland. Cloth, pp. 80, 50 cents. New York: T. Y. Crowell & Co.

THE sub-title describes this book as a meditation on what Jesus said on Calvary, the seven chapters being reprints of Rev. T. C. McClelland's sermons on the seven utterances of Christ on the Cross.

THE RÔLE OF THE UNCONQUERED. By Test Dalton. Cloth, pp. 328, \$1.50. New York: G. W. Dillingham Co.

A STORY of the wooing of the Princess Maria de Medici by King Henry of Navarre, told in the fiery fashion of the popular historical novel.

DAUDET'S TARTARIN DE TARASCON. With Notes and Vocabulary. By C. Fontaine. Cloth, pp. 145, 45 cents. New York: American Book Co.

PRESENTS the adventures of the illustrious Tartarin in attractive form for school use.

GOOD CHEER NUGGETS. By Jeanne G. Pennington. Cloth, pp. 112, 45 cents. New York: Fords, Howard & Hulbert.

ENCOURAGING words from Maeterlinck, Le Conte, Victor Hugo, and Horatio Dresser.

FRANCESCA DA RIMINI. By George Morehead. Paper, pp. 192, 25 cents. New York: J. S. Ogilvie Pub. Co.

A FAIR "novelization" of the famous play.

HESTER BLAIR. By William Henry Carson. Cloth, pp. 348, \$1.50. Boston: C. M. Clark Pub. Co.

THE BOOK OF THE NEW CENTURY

The Empire of Business

How to Breathe for Health, Strength and Endurance

The aim of every system of physical exercise is to invigorate and rebuild the internal organism—the Lungs, Heart, Stomach, Liver, Intestines, etc. By intelligently applied

Breathing Gymnastics

I accomplish this directly. My method enables the weakest woman to invigorate her internal organs as thoroughly as though she possessed the muscles and endurance of a Hercules. I first develop your lungs and teach you how to breathe deeply, causing an abundant supply of rich blood to flow through every vein in the body. Then, I develop your external body. Adopting any other method is like beginning at the end and working backwards. I guarantee unquestionable results. Let me send you my handsomely illustrated book, "Experience versus Experiment," descriptive of my course and methods. IT'S FREE.

P. von Boeckmann, R. S. 1153 Hartford Building
Union Square, New York City

NOTE.—I publish a 64-page illustrated book on Breathing and Exercise, including a Chart of valuable Exercises for the development of the lungs and muscular system. It is the most instructive treatise ever published on this subject and is well worth ten times the small price asked. Sent on receipt of ten cents.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, April 5

Labor controversies continue to be the only seriously disturbing events in the industrial world, and, while many disagreements have been promptly settled, others have appeared to interrupt production and make manufacturers conservative about new undertakings. Retail distribution of spring wearing apparel received a check from the more inclement weather in many localities, yet merchandise of most staple lines is purchased freely, and collections are satisfactory at nearly all points except the south. Comparison of bank exchanges with last year's figures is manifestly unfair, since there was no holiday in 1901, and speculation was then surpassing all records, exceeding this week's transactions by about 300 per cent. Making proper allowance for these in-

fluences, the decrease of 29.3 per cent at New York and 1.8 per cent at other leading cities is by no means a poor showing. Railway earnings for March show an increase of 4.9 per cent over last year's figures, and 16.2 per cent over 1900.

IRON AND STEEL

Supplies of iron and steel do not seem in any immediate danger of overtaking demand. In fact, the prospect of labor disturbance on May 1 makes the situation still more uncertain, and those who hoped for equilibrium in the market by July 1 are less sanguine. Midsummer seems to be the dividing line as to quotations, prices after July 1 averaging about \$1 per ton less than earlier deliveries, while those few fortunate sellers of spot material continue to secure large premiums. Nominally there is little change in prices, as practically all new business accepted is for distant delivery. Pittsburg pig iron is definitely higher, however, and large contracts are still under negotiation between the Bessemer producers and the leading consumer.

COTTON AND WOOL

In the markets for textile products there is a distinctly firm tone. Labor troubles and the high position of raw cotton are both factors of strength, while mills have orders that will occupy their full capacity for some time. Although quotations are nominally without change, the scarcity of available supplies makes it a simple matter to hold prices. Export inquiry for sheetings and drills has increased, but makers insist on higher prices than are offered in many cases. It is between seasons for woolen goods and there is the usual quiet, except where buyers are anxiously looking for goods to replace deliveries interrupted by the strike at Olneyville and vicinity.

CORN AND WHEAT

Widely divergent views as to the crop outlook resulted in a dull market for the cereals and only small changes in prices. Reports of severe loss by frost in the extreme northwest indicate that much replanting may be necessary,

FOOD DOES IT

Restores Health More Surely Than Any Medicine

It is a short road to trouble when the food does not supply the right material to rebuild the brain. You cannot use the brain without breaking down small particles every day, and you cannot rebuild unless the food furnishes the right kind of building material, and that is albumen and phosphate of potash. Not such as you get from the druggist but such as Nature stores in certain kinds of food.

Grape-Nuts contains these particles and well defined results can be obtained from using the toothsome, delicious food.

A brain worker whose name can be given by the Postum Co., Battle Creek, Mich., writes: "Last Fall I got in a desperate condition through excessive mental work and lack of proper food. I was finally compelled to abandon all business and seek absolute quiet and rest in the country.

I had been under the care of a good physician for several months, but it seemed my food did not rebuild the brain tissue properly. I was on the verge of despair when I left for the country.

Down at the ferry I purchased an evening Journal and my attention was attracted to the headlines of a Grape-Nuts advertisement which read, 'Food Cure Nature's Way.' I read it carefully and decided to give Grape-Nuts a trial, so next morning I went in on the new food, and in two weeks' time gained 10 pounds and felt like a new man all over.

I candidly believe if I had known the remarkable sustaining power of the food prior to my illness I would not have needed a physician, nor would I have been sick at all."

The Mortgage on Your House

can be paid after your death and a home saved for wife and children if you have

A LIFE POLICY in The Travelers Insurance Co.

It provides safe insurance at a lower guaranteed net cost than mutual companies. Mutual companies charge for insurance and give such a share in the profits as they may see fit. The Travelers charges for insurance only. Therefore the net cost of a Travelers Policy is guaranteed and known beforehand and the difference in cost is in your pocket first to last.

Nearly every person sooner or later meets with an accident. Injuries usually mean loss of income and added expense.

An Accident Policy in The Travelers

(the largest and strongest Accident Insurance Company in the world) guarantees a weekly income while disabled, and large amounts for loss of legs, arms, hands, feet or eyes. If death ensues, a stated sum is paid. Nearly \$27,000,000 have been distributed among 375,000 policy holders or their families, for injuries or death.

Agents in every town; or write for interesting literature.

PERKINS & CO., Lawrence, Kan.

but this does not mean a lower yield. It does suggest that the crop will be more expensive, however. Drought is threatened at other points, but traders are extremely cautious regarding these rumors. Wheat receipts for the week were but 2,074,699 bushels, against 3,357,135 last year, while exports from all ports of the United States amounted to 3,365,070 bushels, compared with 4,626,037 a year ago. There was not the customary loss in receipts of corn; 1,580,505 bushels comparing with 1,602,027 a year ago, but Atlantic exports were only 204,356 bushels, against 3,046,891.

A FIGHT ON

When You Tell People to Quit Coffee

"At least 75 people among my acquaintances have been helped or cured by leaving off coffee and using Postum Food Coffee in its place," writes a little woman from Independence, Ia. "I will mention one case. Miss Cora —. I learned she was suffering from nervousness and constipation and went to call on her. Found her in bed, and she looked like a living skeleton, so wild and haggard that I feared for her reason."

I asked Cora if she was improving any. She said not but was gradually growing worse. The doctor was coming twice a day and giving her a powerful nerve. She said, 'I am so miserable that I tell you privately if I don't get better soon I will end it all myself some day. I told her not to talk that way for I believed it was something she ate or drank that caused the trouble and she might get well by making a change in her diet. I told her my own experience in leaving off coffee when I was in almost as bad a shape as she, but as soon as I mentioned coffee I had a fight on my hands, for she insisted that coffee helped her and her mother backed her in it, saying that it was 'the only thing she did enjoy' and 'she did not believe coffee hurt anyone.'

I talked with them a long time and finally got Cora to agree to let me make a cup of Postum Food Coffee for her supper. She was surprised that it was so good. Said she 'had heard it was terrible wishy-washy stuff.' I told her it was because they did not follow directions in boiling it enough. She promised to use it faithfully for two or three weeks and if she was not better I would admit that I was wrong.

I went to see her again in about ten days and Cora met me at the door with a smile and said, 'Ada, your doctor Postum is the best doctor of them all. I can sleep all night, can eat heartily, and am growing stronger every day. Ma and all the rest of us use Postum now in place of coffee.'

The facts are the girl was being actually poisoned to death by coffee. Cora has since married and has a happy home and you may depend upon it no coffee is allowed to enter there." Name given by Postum Co., Battle Creek, Mich.

FAILURES

Business failures for the week number 176, as against 188 in this week last year.

Financial

Bradstreet's, New York, April 5

THE MONEY MARKET

The tension which the New York loan market had been exhibiting for a fortnight or so was relaxed this week. The banks continue to lose money to the treasury, but with the completion of the April 1 disbursements considerable money has been unlocked, and funds seem likely to come back with freedom from the interior. Demands continue to be light in view of the dullness of the stock market, but borrowings on bonds and arrangements in connection with various syndicate operations seem to require considerable sums and keep the volume of bank loans at a high figure despite the heavy reduction in that item shown by last Saturday's bank statement. Call money eased off early in the week from $4\frac{1}{2}$ to $3\frac{1}{2}$ per cent, the extreme being 3 to $4\frac{1}{4}$ per cent. Time money is in better supply, and the inquiry for it moderate and irregular, rates being $4@4\frac{1}{2}$ per cent for all periods. There is a renewed buying demand for commercial paper by both local and out-of-town institutions, the figures for it being based on $4\frac{1}{2}@5$ per cent for prime double names.

THE STOCK MARKET

Increased activity has been seen in the New York stock and securities market this week, with advances led by the high-priced dividend-paying stocks. Manipulation by bull pools on these and other securities is seen, but easier money has caused increased public interest in speculation, and favorable crop advices with diminished danger of labor troubles also support bullish sentiment. The bond market is firm and higher on continued investment buying. Foreign exchange holds firm at an advance, demand sterling being 4.87%, but gold shipments are considered unlikely owing to changed conditions in the foreign money and exchange markets.

BANK CLEARINGS

Bank clearings for the week ending with April 3 aggregate \$1,964,161,327, a decrease of 5 per cent from last week's total and a decline of 23 per cent from a year ago. Exchanges at cities outside of New York amount to \$765,137,527, a loss of six-tenths of 1 per cent from last week and a decline of 1 per cent from last year.

Various Topics

A further change in the rate of exchange between Mexican silver and American gold has been made by the Philippine commission. It now takes \$2.27 silver to equal one American dollar.

The exports to the United States from the Berlin consular district for the first quarter of 1902 amounted to 6,999,249 marks, as against 5,143,289 marks for the corresponding period last year.

WIT AND HUMOR

Ping Pong

The shades of night were falling fast
As to the dining-room there passed
A youthful pair, who gaily bore
A box, on which was this—no more—
"Ping Pong."

They cleared the table with a swish,
From doily down to butter-dish;
Then through the center stretched a
net,
And soon the ball the racket met—
Ping Pong.

"Try not the game!" the housemaid
cried.
"The dinner's ready now," she sighed,
"And I must put it on the board."
The young man turned and fiercely
roared:
"Ping Pong."

The cook strode to the open door,
And cautioned them to cease once
more.
"The roast," she urged, "is sure to
burn."
The maiden gasped: "I'm bound to
learn
Ping Pong."

The family lurked in the hall,
And moaned: "Are we to eat at all?"
But still they heard the ping and pong
That made the cadence of a song—
Ping Pong.

And back and forth they smote the
sphere,
Until the dawn of morning clear.
The father, mother, sisters, too,
Wailed hungrily: "Alas! We rue
Ping Pong!"

* * * * *
One day the searchers, out of breath,
Found all these people starved to
death;
The cook, the housemaid, beau and
belle,
The family—and, sad to tell,
Above them pinged the pongful knell:
"Ping Pong!"

SPINAL DEFORMITIES

85 Per Cent. Cheaper than
the old methods. 100 per
Cent. Better.

Weight-cases where others weigh pounds. For Men, Women and Children; none too young, none too old to be cured.

We offer the only Scientific Appliance ever invented for the relief and cure of this unsightly condition; cured Mr. P. B. Sheldon, the inventor, of curvature of the spine of 30 years' standing.

THROW AWAY THE CUMBERSOME AND EXPENSIVE
PLASTER-OF-PARIS AND SOLE LEATHER JACKETS

Our appliance is light in weight, durable, and conforms to the body as not to evidence that a support is worn. It is constructed on strictly scientific anatomical principles, and is truly a godsend to sufferers from spinal troubles, male or female. We also make Scientific Appliances for protruding abdomen, weak back, stooping shoulders. Send for free booklet and letters from physicians, physical instructors, and those who know from experience of our wonderful appliances. SATISFACTION GUARANTEED. Write to-day for measurement blank. Don't wait.

STAMFORD, N. Y., February 9, 1901.

After having worn the plaster-of-paris jacket, I can truthfully say your appliance is far more comfortable to wear. It corrects curvature quite as well and fits the body so perfectly that no one would suspect I was wearing one. You have my life long gratitude and well wishes.

IDA BLOOD.

The plaster-of-paris jacket above mentioned weighed 14 lbs. The Philo Burt Appliance put on in its place weighed 17 ounces—a difference of 11½ ounces, or more than 1 pound.

PUBLIC OPINION

Number 16
Volume XXXII

The Week

Thursday
April 17, 1902

THOSE who foresaw an unpleasant reception for the president on his visit to South Carolina (reported in the department of American Affairs of this issue), were completely and happily disappointed. The president spoke, as he always does, clearly and forcefully, and the orators of the state, replying, assured him of South Carolina's unquenchable admiration for him and unfaltering trust in the wisdom and integrity of his administration. It is plain that if north and south had not already been united over more banquet tables than one well could count, the recent presidential visit would have done the trick effectually. While the people of the state can not reasonably be charged with any attempt to apologize for the recent discourtesies of some of their representatives, they have, nevertheless, demonstrated that the proof of a state is in seeing it and not in meeting its senators.

CUBA has been trembling in the balance so long that it is to be suspected that the altogether too tight little island has become afflicted with chronic palsy. She is still in doubt whether the "duty" we owe her is a twenty per cent duty, or a mere moral obligation. Reports from Washington declare that the party whip is being applied freely to bring members into line for the Payne bill, and that certain members with pet measures up their sleeves are likely to feel the sting of the lash unless they come up and cast their votes for it like little men.

A NEW inauguration day has been suggested by the national committee appointed to consider the advisability of a change. The last Thursday in April is the day suggested. The suggestion meets with quite general approval, although it has been urged that the selection of a day of the week instead of the month will result in making the terms of the presidents of unequal length. To some this may seem very much like straining at a gnat, but to the delicate organisms of American politicians even gnats are troublesome things. Another reason alleged for the change is that it will lengthen the short session of congress nearly two months. But the rub comes in the fact that it will be necessary to amend the constitution in order to adopt the new day. If we had only to construe it, we should be on familiar ground.

NEWS from the seat of the Philippine war in the senate investigating committee is more calculated to bewilder than to enlighten. General MacArthur testifies that the Filipinos are a gentle, modest race, naturally predisposed to republican institutions. This is a trifle startling to the average citizen who has been led to look upon them as given over wholly to bolos and strong drink. In the trial of Major Waller, in Manila, the defendant testified that he was instructed by his superior officer, General Smith, to spread the mantle of peace over the province of Samar by the simple process of killing all the natives over ten years old. Editors with "anti-Imperialistic" leanings are ransacking their dictionaries for sulphurous expletives to express their feelings; the others are "waiting for further testimony." In summing up the case against Major Waller, Judge Advocate Kingsbury took the ground that military, not martial, law was existing in the province, and, that, therefore, the natives executed were not liable to the death penalty for the crimes of which they were accused. The court acquitted Major Waller by a vote of eleven to two, thus inferentially placing the responsibility for his acts on his superior officer. Another point for the enemies of the administration is the report of Major Gardener, the civil governor of Tayabas province, in which it is declared that the American troops have acted toward the natives with unnecessary severity, thus alienating

many who would otherwise have been friendly to the American occupation.

THE Chinese exclusion bill passed by the house is now before the senate where it has been vigorously criticized by Senator Cullom. The measure is very sweeping in its terms, practically admitting none but diplomatic agents and students. The latter are not to be allowed to remain in the country longer than is necessary to complete their education. Newspaper comment on the bill indicates a widespread belief that the heathen Chinese has no monopoly on the "ways that are dark, and the tricks that are vain."

EUGENE F. WARE, of Kansas, otherwise known as "Ironquill," has been appointed pension commissioner to succeed Henry Clay Evans, lately resigned. The appointment is unique in that it was unsolicited and unexpected. It was generally conceded that it was Kansas's turn, but the people who know everything, except the things that are true, were backing another man for the place. Mr. Ware had an honorable record as an officer in the Iowa Volunteer infantry during the civil war; since 1871 he has practiced law at Fort Scott and Topeka. Although he has taken an active part in Republican politics he has never aspired to official honors, his only formal service being in the state senate. The president is generally commended for his choice. To be sure, Mr. Ware is guilty of poetry at times, whence his pseudonym of "Ironquill," but to a man of his undoubted ability much may be forgiven.

BRUSSELS is now the storm center of socialistic agitation on the European continent. For a week the city has been the scene of wild riots and disorder, culminating on Saturday in a hot fight with the police and the troops, in which a few of the rioters were killed and several injured. A general strike in the mines and factories has been ordered. The immediate cause of the trouble is the demand for a revision of the constitution in order to secure popular suffrage, although the erection of a republic on the ruins of the kingdom is vaguely hinted at. Added to this is the fact that the king, who appears to be almost everything but divine or right, is bitterly hated by the Liberal element. The article in Foreign Affairs will bear out the conclusion that while this may have the appearance of a distance of a tempest in a teapot, it is likely to prove a serious business for the teapot.

LONDON again sees the end in South Africa, and it is to be hoped that it is the right end. The British are in the difficult state of having to deal with two sets of negotiators, the Boer generals who have been doing the fighting in the field, and Kruger and Leyds and their followers on the continent, who are surrounded by enemies of England, and are in no position to know the exact condition of the Boer forces. Some uncomplimentary surprise has been expressed over the acquittal of the Boer commandant Kreitzinger, who was tried by court martial on charges similar to those on which Scheepers was convicted and executed last January.

RUSSIA and China have come to terms at last, and the Manchurian convention has been signed. As announced previously, Russia agrees to evacuate the three Manchurian provinces in three successive periods of six months each, beginning with the date of signing. The convention is specific in its terms, and bears all the marks of a bona fide agreement, but it would probably be interesting if the mental reservations of Russian statesmen could be discovered.

AMERICAN

The President at Charleston

PRESIDENT ROOSEVELT VISITS THE SOUTH CAROLINA EXPOSITION

THE visit of President Roosevelt to the South Carolina exposition, April 8 and 9, was the occasion of a great celebration among the people of the southern city. Mr. Roosevelt is the first Republican president to visit Charleston, and the fourth president of any party. The others were Washington, Monroe, and Cleveland. He is also the first president to enter Fort Sumter. Among the incidents of his visit was the presentation by him of a sword to Major Micah Jenkins, a former "Rough Rider." It will be remembered that the first invitation to make the presentation was withdrawn by Lieutenant-Governor Tillman, a relative of Senator Tillman, at the time of the Tillman-McLaurin embroglio on the floor of the senate. At the exposition the address of welcome was delivered by Governor McSweeney. In reply, the president referred to the cordial relations existing between north and south, as shown in the kindly manner in which he had been received and in the coöperation of the two sections in the war with Spain and in the Philippines. Passing on to more concrete questions, he said of Cuba: "We have rightfully insisted upon Cuba adopting toward us an attitude differing politically from that she adopts toward any other power; and in return, as a matter of right, we must give to Cuba a different—that is, a better—position economically in her relations with us than we give to other powers. This is the course dictated by sound policy, by a wise and far-sighted view of our own interest and by the position we have taken during the past four years. We are a wealthy and powerful country, dealing with a much weaker one; and the contrast in wealth and strength makes it all the more our duty to deal with Cuba, as we have already dealt with her, in a spirit of large generosity." His attitude toward industrial combinations was briefly defined: "This is an era of great combinations, both of labor and of capital. In many ways these combinations have worked for good, but they must work under the law, and the laws concerning them must be just and wise, or they will inevitably do evil; and this applies as much to the richest corporation as to the most powerful labor union. Our laws must be wise, sane, healthy, conceived in the spirit of those who scorn the mere agitator, the mere inciter of class or sectional hatred; who wish justice for all men, who recognize the need of adhering so far as possible to the old American doctrine of giving the widest possible scope for the free exercise of individual initiative, and yet who recognize also

that, after combinations have reached a certain stage, it is indispensable to the general welfare that the nation should exercise over them, cautiously and with self-restraint, but firmly, the power of supervision and regulation."

So far as can be discovered, the comment of southern papers on the visit and the speech is warmly congratulatory. The *Charleston News and Courier* assures the president that "he comes by much of the best that is in him honestly—his mother was a southern woman; and he will find in her people the very hope and strength and safety of this republic. They will stand by him faithfully in the right settle-

ment of the great problems he will have to handle, and they will stand by him to the last for whatever will preserve the national dignity and promote the national glory and preserve the national honor. The people of Charleston and the promoters of the great enterprise which is the occasion of the president's visit to this city really feel indebted to him for this distinguished mark of friendship for them and for the south."

"The president's trip to the exposition has no political significance," says the *Columbia (S. C.) State*. He does not intend that it shall have, nor will it be so construed. On the contrary, the reception which South Carolina's historic metropolis gives to the president illustrates the peculiar greatness of our political system, wherein we may differ most radically and debate most strenuously and yet retain mutual respect and regard."

The *Boston Advertiser*, representing a portion of the union that has most often found itself at variance with the feelings and ideals of the south, thinks that "it is reasonable to expect that good will come of this visit. The more the different parts of the country come into fraternal touch with one another, the more the peace and unity of the republic will be fostered. It is especially desirable for the party which is in power at the national capital to become known through its highest official representatives to the people of any section of the country where that party is but feebly represented in the persons of local citizens." "The day has gone by when such an event as the visit of the president to the south could fittingly be referred to as evidence of a reunited country," is the opinion of the *Pittsburg Gazette*. "We have advanced so far beyond 'the healing of the breach' that we forget there ever was a breach. This nation is in the possession of a generation that has grown up since the war and at the head is a man who represents the generation."

PRESIDENT ROOSEVELT
AND GOVERNOR MCSWEENEY

The Beef Trust

THE PRICE OF MEAT GREATLY ADVANCED

A CAMPAIGN has been opened by many of the newspapers against the Chicago beef trust, as they call it, with the New York *Herald* as the banner-bearer. The price of meat advanced six per cent during March, in spite of the lower level of fodder. The *Herald* claims to have discovered indubitable evidence of an agreement among the large packers to maintain prices and to blacklist dealers who violate the conditions imposed upon them. The Pittsburg *Times* does not believe that the trust is responsible for the increased price of meat, but ascribes it to natural conditions. "It appears that the farms have young cattle coming on, and that the calves and yearlings of this spring will afford a supply next year more in keeping with the needs of the country. Upon that, and nothing else, depends the price of meat in days to come. Meat is high now because of the shortage of the grain crops and from the hard times of that period which followed the panic of 1893. Until the herds are fully replenished, meat will continue to command a high price."

Others are not so easily satisfied. The Philadelphia *Times* is of the opinion that "the explanation is in the undue advantages which the trust enjoys, first, through railway favoritism, and, secondly, through absolute immunity from foreign competition." The Detroit *Free Press* lays the whole difficulty at the door of the tariff, which has sheltered the beef trust while it was "conquering the foreign market at the expense of the domestic market. From Washington come veiled hints of proceedings against the trust under the Sherman law; but the mere fact of a combination is not the important thing. If the combination is possible, it is sure to come whether there is a Sherman law or not. If Washington is so desirous of striking a blow at the beef trust, a slight amendment to the Dingley law would place meats on the free list. Then the American people would have the benefit of Canadian and South American competition, and the trust

could not make a desirable balloon of its prices, whenever it felt disposed to conquer another foreign market at the home consumer's expense."

"A more promising means of destroying the trust," suggests the Philadelphia *Public Ledger*, "is to be found in the movement of independent butchers and others to combine against it and secure their supplies from other sources. Even if this movement should take definite shape, a gigantic struggle may be expected, and the success of the independent combination will depend largely on the measure of support the public will give it when the grasping trust, in order to crush out the revolt, lowers prices with a rush."

A British Camp in the United States?

LOUISIANA is greatly wrought up over the shipments of horses and mules, for the use of the British forces in South Africa, from Chalmette, in that state. Governor Heard has addressed a letter to the state department asking for directions as to his duty in the matter, and Attorney-General Knox has delivered an opinion on the subject at the request of Secretary Hay. The situation is further complicated by the arrival in New Orleans of Major-General Sir Richard Campbell Stewart on a tour of "inspection of the various departments of the remount service of the portion of that branch of the British military establishment that is in this country." General Samuel Pearson, a Boer military leader, is in New Orleans, and has called upon the governor to expel the British, threatening to take the law into his own hands if his request is not heeded. The attorney-general, in his decision, says very properly that the question whether there has been a departure from the rules of neutrality is a "delicate one." He goes on to state that "carrying on commerce with a belligerent in the manner usual before the war is not giving unlawful aid. The mere increased demand for warlike articles and their increased quantity in the commerce does not make that commerce cease to be the same as before the war."

HANDS ACROSS THE SEA.—Detroit Journal

AN OLD FRIEND ATTEMPTS A RESCUE.—Cleveland Plain Dealer

It does not seem to be settled that the fact that the belligerent government is a purchaser makes the neutral government's permission of the commerce a departure from the obligation to give no aid to the belligerent."

The New Orleans *Times-Democrat* declares: "It is now known of all men that Port Chalmette is, and has for months been, a British military camp, and that this camp is furnishing the British army in South Africa with the essential sinews of war." The Springfield (Mass.) *Republican* asks a very sweeping question of Secretary Hay. "Mr. Hay claims that American citizens may lawfully sell and ship to a belligerent horses and mules—which are universally recognized as contraband of war and as military supplies, rather than as simple merchandise—but how can he deduce from that the conclusion that the belligerent may establish, under his own immediate management and control, at a selected port, in the neutral territory of the United States, a horse and mule depot with a 'transport landing' where that belligerent's army transports constantly take on cargoes of military supplies—the establishment, by its very organization, equipment, and permanence, constituting a military base in every essential sense of that military phrase?"

The Detroit *Free Press* and the Philadelphia *Public Ledger* take a middle ground. Says the former: "The mere purchase of horses and mules is not, *per se*, a violation of the rights of the other belligerent, despite the fact that in this case the animals are plainly contraband of war. But the maintenance of a British military establishment on American soil is another matter." The latter holds that "there is no hard-and-fast rule which determines what is and what is not contraband. Munitions of war are always contraband, but horses, mules, and forage 'may or may not be contraband, according to the particular circumstances of the war.' In the Boer war, from the circumstances of the case, under any equitable decision, horses and mules would be declared contraband."

On the other hand, the Philadelphia *Record* comes out flatly against the suppression of the shipments. "No authority of the United States or of any state," it declares, "has the power to interdict the sale of war material to anybody, either during the continuance of peace or after the outbreak of hostilities. Manufacturers of guns and breeders of army mules have the same right as have the flour millers, cotton spinners, or wheat growers to sell their products to whomsoever they may find willing to pay the price."

A New Party

THE ALLIED PEOPLE'S PARTY ORGANIZED AT LOUISVILLE

A CONVENTION of three hundred delegates, representing the various elements of the Populist movement, was held at Louisville, Kentucky, during the week ending April 5. The platform adopted contains a demand for the initiative and referendum, for the public ownership of all public utilities, the nationalization of all lands, scientific money based on the entire wealth of the people, issued by the government, a legal tender for all debts but not redeemable in any specific commodity, the election of president and senators by the people, the creation of a cabinet department of labor, the establishment of postal savings banks, and the adoption of any constitutional amendments necessary to make possible the passage of such laws. Fusion with the Democrats was opposed.

Editorial writers are not disposed to take the movement seriously, although the Minneapolis *Times* (Ind.) reminds its readers that "when the party that nominated Fremont held its first convention it, too, was regarded by dominant factions as made up of cranks, chimera followers, and impossibles, yet that party grew into a regnant political division that for more than a generation has controlled the destinies of the republic. Elision could be exercised with great advantage in the platform adopted, but some of the planks come nearer to the sentiments of the majority of the people of this country than leaders in the Republican or the Democratic party would care to admit." "Why a new party at this time?" the Washington *Star* (Ind.) inquires. "The Populist party grew out of a series of poor crops and great depression of the agricultural interests. But there is little left of the Populist party today. A series of good crops and a rise in prices have undone what a series of poor crops and low prices created and for a period supported. The great majority of the farmers have more faith now in the weather than in politics." The St. Louis *Globe-Democrat* (Rep.) is of the opinion that the new party "will hit the Democracy much harder than it will the Republicans. Most of its adherents will be drawn from the elements which otherwise would support the Democratic ticket."

A Gammany in St. Louis

MEMBERS OF MUNICIPAL ASSEMBLY CHARGED WITH BRIBETAKING

EVIDENCE taken before the February grand jury in St. Louis reveals a shocking condition of affairs in the St. Louis municipal assembly. Three indictments were presented for bribery, or attempted bribery, and one for perjury. The grand jury reported that not only were bribes accepted by members of the "house of delegates," but that legislation was held up for the express purpose of securing a good price for the votes necessary to its passage. One official accepted \$75,000 for the performance of a certain official function and then took \$100,000 from some one else for doing the exact reverse. Prices ranging from \$100 to \$100,000 were frequently paid for votes and influence. The grand jury says of the members of the house of delegates who appeared before it: "We regret to report that we found a number of these utterly illiterate and lacking in ordinary intelligence, unable to give a better reason for favoring or opposing a measure than a desire to act with the majority. In some no trace of mentality or morality could be found; in others, a low order of training appeared, united with base cunning, groveling instincts, and sordid desires."

The St. Louis *Globe-Democrat* demands the punishment of the officials of the Central traction company, "who, to make a million for themselves, used \$250,000 to debauch the municipal assembly, created to promote the welfare of the city and sworn to do it. Is every one of the bribers to escape by the statute of limitation? The people will watch this phase of the matter with intense interest. Punishment of the men bribed will not suffice." The Philadelphia *Record* grows pessimistic over this evidence of the weakness of democracy. After reminding its readers that popular suffrage in St. Louis has been in existence for generations, and that the city is scarcely younger than Philadelphia as a chartered corporation, it declares:

"Even without the bribery features which have marked the transaction in St. Louis, and which have marked similar transactions in New York and recently in several communities in Pennsylvania, the giving away of valuable and easily marketable franchises is a proof that the American people are not more fit to govern themselves than are the clouted bolomen of the distant Philippines."

The Brooklyn *Standard Union* cites the grand jury's characterization of the St. Louis aldermen quoted above and complacently concludes: "It would be untruthful to say that any considerable number of our own city fathers were ever quite so degenerate as that, yet memory distinctly recalls a few well-known aldermen, both in Manhattan and Brooklyn, to whom the above description might at least partially be applied. Fortunately, however, a vigilant press and an outraged people saved New York at several critical junctures from falling to the St. Louis level."

Abuses in the Transport System

THE reports transmitted to the house of representatives by Secretary Root, April 9, respecting investigation by army officers into methods employed in the transport service, reveal a scandalous condition of inefficiency and extravagance, if not of downright fraud. General Young's synopsis of the report of Lieutenant-Colonel Chamberlain shows that there was no adequate supervision of any feature of the fitting out of the transports for a long time after the service was inaugurated; that competitive bids were not secured in the matter of supplies; that prices were paid greatly in excess of rates in the open markets; that much of the refitting cost exorbitant figures and was of inferior character, and that the interests of the government were unprotected, while irresponsible and incompetent men acted as inspectors. The investigating board report that these abuses have been remedied wherever found. It appears undeniable, however, that the government has been improperly charged to the extent of many thousands of dollars, none of

which is likely to be recovered, while no suggestion seems to be advanced for the trial of the officials, military and civil, implicated in the "mismanagement."

The Philadelphia *Public Ledger*, recounting the abuses mentioned above and absolving Secretary Root from any intent to deceive the public by withholding the report of the investigating board from August, 1901, to the present time, says that "at this time nothing remains but for congress to institute a searching inquiry into the abuses that prevailed, to ascertain whether any laxity of methods is permitted to continue, to make public the names of the officers, civilians, and contractors concerned in the abuses, and, where the circumstances warrant, to direct prosecutions, civil and criminal."

"In the light of these revelations, based upon official reports made by the general commanding the department and other army officers," says the Brooklyn *Citizen*, "the people will not rest satisfied until a thorough investigation is made of the scandals and the guilty brought to book. 'Imperialism,' 'world power,' are high-sounding phrases, but their glamor will not compensate the American people any more than the outer splendor of the third empire satisfied France for the inner corruption which eventually led to the 'debacle' of 1870." The Chicago *Record-Herald* disapproves of the secrecy with which the investigation was cloaked and which, it thinks, surrounds all the work of the war department at the present time. "The public is left largely to conjectures, newspaper stories are called sensational and exaggerated, when the public might be kept informed without even a momentary disadvantage to the service, and when the best way to prevent sensations and exaggerations would be to give out the whole truth. The policy that is pursued is a mistaken and harmful one which leads to an infraction of the rights of the people, of their legislative representatives and of the press."

CONGRESSIONAL SUMMARY: During the week the senate has been debating the Chinese exclusion bill passed by the house; and the house has busied itself about the Cuban reciprocity bill. The war revenue repeal bill passed both houses and was signed by the president. A bill to pension Mrs. McKinley passed the house by a unanimous vote.

IN UNION THERE IS STRENGTH.—*Minneapolis Tribune*

THE OX-TOPUS.—*Philadelphia North American*

AMERICAN, GERMAN, AND COLONIAL SCHOLARSHIPS ESTABLISHED AT
OXFORD

further issue of paper money. True, on March 20 the officially inspired announcement was made that negotiations for a loan had been abandoned as unnecessary. But at the same time, in the same utterance, it was admitted that the money was needed and was to be raised, in lieu of a loan, by sales of public property.

One of the most disquieting features of the case is the future outlook. It is well known that a large proportion of Chile's revenue is and for years has been derived from the great Tarapaca nitrate beds, which she took by conquest from Peru. The export duties on nitrates form more than 60 per cent of Chile's ordinary revenue. But that is not a permanent source. Its failure is now within measurable distance. When the nitrate beds are exhausted, that revenue will cease. When will that be? Some say in ten years, while the most optimistic do not venture to postpone the catastrophe more than thirty-five years.

The blame for Chile's financial plight is twofold. Some of it is to be laid upon government officials who have squandered funds. Thus *El Chileno* recently exposed the fact that the ministry of public instruction had, since 1885, purchased lands to the value of \$432,000, which had never been used, but were still occupied by private parties. This, it was said, was only one example of what had been widely done in various departments. As a result of the exposure, the president is now conducting an investigation into the matter. Still more blame is to be laid upon the state of "armed peace," for which Chile herself is responsible. For years her restless and belligerent disposition has entailed upon herself and her neighbors the necessity of maintaining costly armies and navies, and even now, in her present straits, she is considering the possibility of making further additions to her fleet. Unlike her neighbor, Argentina, she has no vast territories whose resources are to be developed and into which millions of immigrants may be welcomed. She has only a narrow strip between the mountain peaks and the sea. She has a limited wheat belt, some copper mines, and the nitrate beds. With such resources, unlimited expenditures are not to be countenanced. We may regard Chile as entirely solvent and as likely to enjoy a prosperous future.

On the Eve of the Elections in France

AT the approach of the French elections, the organs of the various political parties are discussing the "scrutin de liste" (vote by departments), which is violently opposed by the Republican majority. The *Lanterne* says: "With the 'scrutin de liste' the popular hero of the village will disappear. The electors will not vote for the candidate who will promise them appropriations for a few bridges and roads. They will have to deal with men possessing large ideas, fighting in the name of great generals." "Therefore," comments the *Figaro*, "hesitation is not possible. Hurrah for large ideas and great general principles, even if we do not understand them; if they are empty, they possess sonority. Being sonorous, they look to us like electoral ideas."

The same paper, commenting ironically on the recent law extending to six years the term of the deputies, says: "Shall we conclude that all the deputies who voted for the law will be reelected? Probably not, because egotism never took possession of the soul

of a deputy, but hope is forbidden to no one, and, as far as entertaining illusions is concerned, the prospects are more encouraging for six years than for four. They will discover on election day if they have made a mistake." *La Fronde*, the feminist organ, condemns the chamber in the following terms: "As soon as they are elected, the deputies think of taking a rest, and when the elections are to be held they try to do something great for the benefit of the electors. Conclusion: in the future, the deputies will only work once every six years. In a question like this the deputies should not have taken the part of judges and litigants. Such a vote is an attack on decency. It constitutes a fault against good taste, tact, and good education. It is inelegant to say the least." The *Journal des Debats* is quite skeptical in the matter. The editorial writer says: "With a term of six years there are chances that the chamber of deputies will work during four years. Possibly, also, the old system will prevail. We have no excessive faith in political institutions, and we know that a bad chamber can spoil the best interests put at its disposal."

Meanwhile the various political parties are at work. The *Independance Belge* believes that the Nationalists have no chance of being elected. "But," says the Belgian organ, "never a party, even during the Boulangerian era, faced the elections with so great pecuniary resources. In the department of the Nord the party has collected one and a half million francs. How much will it pour upon Paris? It appears that the prodigalities of 1900 will be surpassed. Already we can see in the streets of Paris many tri-colored proclamations bearing, according to the law, a very expensive tax stamp, the electoral period not being yet open. Nevertheless, the success of the Nationalists is very doubtful. The proof of this is the fact that they are talking of compromise with the moderate Republicans. Their official program, written by M. Jules Lemaître and M. Caraignac, can be summed up in one single word, anti-ministerialism. This will not attract the peasants, who want a reduction of taxes, or the workmen, who want reforms."

The Progressist (Republican) orators have opened their campaign, but not officially. The *Petit Marseillais* gives a resumé of the speech made by M. Ribot, at Marseilles. The speech referred to contains the salient points of the Progressist program. "Absolutely free schools, while protecting the prerogatives of the state; pension system for workmen, with the assistance of the benevolent mutual associations; opposition to the proposed revision of the constitution; a declaration that the constitution of 1875 is sufficient to realize all the reforms needed in the legislative and executive branches of the government."

FOREIGN ALLIANCES: The Berlin correspondent of the New York *Herald* announces that the conferences held in Vienna by Count von Bülow, the German imperial chancellor, have resulted in a decision that the Triple Alliance shall be renewed for another term of years. Count von Bülow's interviews with the Emperor Francis Joseph, Count Goluchowski, the Austro-Hungarian minister of foreign affairs, and Dr. von Koerber, the Austrian premier, resulted in bringing Austria-Hungary into an agreement, to which Italy has already given its adherence. Fresh terms of alliance will be drawn, embracing some of the concessions that Germany makes to Austria and Italy. These concessions will probably relate to trade questions. On the heels of this comes a dispatch from Paris to the London *Times* that the scope of the Franco-Russian agreement has been extended to include Russian support of the French policy in Africa. This was not included in the original text of the treaty.

Rioting in Brussels

SOCIALISTS DEMAND POPULAR SUFFRAGE

THE Socialists have long been at odds with the Belgian government over the question of the suffrage, and affairs have come to a climax of rioting and disorder during the past week. Gendarmes and troops have been called out in force, and several of the rioters have been killed and injured. The Socialists and Liberals have for a long time past been seeking to force the Clerical government to an issue on the question of the electoral law, modification of which will necessitate a revision of the constitution. At the present time any elector can cast from one to three votes, according to his qualifications. The Socialists and Liberals claim that workingmen can not obtain more than two votes, whereas the rich get three, and, moreover, that in the rural districts voters who are under the domination of the priests and who support the present government are often fraudulently given three votes, instead of the two to which at the most they are entitled.

The soul of the Socialist movement in Belgium is M. Van der Velde, a member of the chamber of deputies, who is a brilliant speaker and has great in-

fluence over the masses. He is tall and lithe, with a quiet manner. He recently married an English woman, who is also an active Socialist, and is president of the Women's Federation of Belgium. A representative of the Associated Press interviewed him recently. M. Van der Velde evinced the utmost readiness to explain to the American public the situation in Belgium. "We are determined to go on now," he said, "until we have secured revision. Under the present unjust electoral régime, the workingman has only 500,000 votes out of 2,000,000, whereas, under the one-man one-vote system we would have 400,000 out of 1,200,000. The general strike ordered will testify to the strength of the Socialist party. We count on 100,000 strikers in the mining and industrial districts, where our call will certainly be answered.

The suffrage in Belgium rests upon a peculiar basis. Nominal universal suffrage was adopted in 1893, the voting age being fixed at twenty-five years. Certain classes were given supplementary votes, married men with children getting two additional, owners of a certain amount of property one, and graduates of the higher educational and technical institutions two. This law has been cleverly manipulated by the Conservatives to the end of keeping themselves in power. The distribution of the representation in the chamber of deputies was another bone of contention.

SOCIOLOGICAL

Training Japanese Women for Social Service

ERNEST W. CLEMENT, in the April *Chautauquan*, Cleveland, O.
Condensed for PUBLIC OPINION

THE most remarkable occurrence in Japan in the opening year of the twentieth century was the establishment of a university for women. What does this mean? It means that the twentieth century is to be the century for women in Japan and perhaps in other parts of the orient, just as the nineteenth century was the century for women in the occident. This new university will be the center of women's activity, social, educational, economical (and perhaps political?), in the future. The *raison d'être* of this university for Japanese women was clearly set forth in Count Okuma's address at the opening ceremony. He pointed out that all countries, such as Turkey, Africa, Persia, and even China, which had attempted "to work with the male sex as the single standard" had "fallen signally behind in the march of progress," and that "Japan, by raising woman to her proper place, should provide herself with a double standard." He also emphasized the fact that the only effective medicine for social abuses was in

"a radical reform of family life through an improvement in the status of women." This university certainly grew out of the needs of the time, the sympathy of the nation at large, and especially the co-operation of the intelligent and thinking classes of the country. Its moving spirit has always been Mr. Jinzo Naruse. His character, his ideas, and his spirit have had a great deal to do in arousing the interest of the people in the higher education of women.

The school opened one year ago. The faculty number forty-six in all, among whom are several professors of the Imperial university. The president is, of course, Mr. Naruse, and the dean is Professor S. Aso, a Doshisha alumnus. There are also several women among the faculty, and it is the purpose to have as many women teachers as possible. There are two foreign teachers, Mrs. C. M. Cady, formerly of Kyoto, and Mrs. Leonard, of Tokyo. The chairman of the board of trustees is Count Okuma. There are three departments in the university course: 1 Department of Do-

From the *Chautauquan*

DORMITORIES OF THE WOMAN'S UNIVERSITY

mestic Science. 2 Department of Japanese Literature. 3 Department of English Literature. In each department there are twenty-one hours of required studies and seven hours of electives, per week. In the first department the greater part of the time is devoted to various practical branches of applied and domestic science; in the second and third departments the principal study is Japanese and English, respectively. Ethics, sociology, mental philosophy, and education (including child-study) are required studies in all departments, and drawing, music, and the science of teaching are electives in all cases. It was expected that there would be at first about thirty students for each department, but the number of candidates was very large, so that more than one hundred applicants were received for each of the first two departments—over two hundred in all—and then no further applications were accepted. There is also a preparatory department with about three hundred students. The total number at present is over five hundred and fifty, of whom two hundred and twenty are boarders. The boarding department includes seven "houses," each with a matron and a head cook. The girls live just as at home, and take turns in cooking the meals for the house.

The school is not, of course, to be compared with foreign universities nor with the Imperial university; nor is it a copy of the other universities, but it is intended to make this institution just suited to the needs of the time and the social conditions of Japanese women. The standard will be gradually elevated.

An Exhibit of Municipal Ownership

STATISTICS FROM THE "MUNICIPAL YEAR BOOK"

THE "Municipal Year Book" makes possible for the first time an accurate statement of the extent to which cities of the United States own their public utilities. The *Engineering News* condenses some of the facts given as follows:

Taking first a general view of the whole country, it appears that (excluding cities which do not have the services named) nearly every municipality owns its sewerage system, over half own their public water supply, one-eighth or more own electric lighting plants. Very few places own gas works, only one city owns and operates a street railway system, and not a single municipal telephone exchange is reported. There are, however, some municipal telephone fire-alarm, and possibly police, telegraph systems. Of the less common municipal services, a few cities own ferries, and a few others own conduits for underground wires, but none own commercial central heating stations.

The north central states lead with 65.3 per cent of their cities and towns having municipal ownership of waterworks, and 30.5 per cent of the electric light plants in the same category. The south central states make the smallest showing (39.5 per cent) for public ownership of waterworks, and the New England states, the smallest (9.7 per cent) for electric lights. Indian territory, New Mexico, Nevada, and Idaho have no public waterworks, and there are fifteen states and territories with no public electric light plants. Over 75 per cent of the places in Vermont, Massachusetts, Georgia, Michigan, and Colorado own their waterworks. Indiana, Michigan, and Minnesota are the only states in which over 35 per cent of the electric lighting plants reported are owned by the municipali-

ties, and in none of these does the percentage exceed 43.

Twenty-three municipal gas works and two plants under joint ownership are shown. The gas plants under full municipal ownership and operation range in size from the one at Richmond, Virginia, where the population is 85,050, to the one at Dunkirk, Indiana, which place has 3,187 inhabitants. Two of the cities, Anderson, Indiana, and Chanute, Kansas, report that natural gas is the commodity supplied, and probably the same is true of a few other places not mentioned in the list.

There has long been an occasional demand for a list of places having private sewerage systems. Such a list is here made public for the first time. It includes forty-seven places, in five of which there are also publicly owned sewers. Some at least, and probably a considerable number, of these sewer systems serve only small proportions of the population, but the same is also true of many of the sewerage systems classed as public. New Jersey, Texas, and Pennsylvania have twenty-two of the forty-seven private sewerage systems, and in these and a few other states it appears that formal franchises have been granted by the municipalities. Of the eighty-two cities reported as having ferries, some ten or twelve are said to be owned by the municipalities, including those at New York, which are leased to private companies, and those at Boston, where there are private ferries also. Of the 232 cities and towns which reported that some of their electric wires were underground, the ownership was divided as follows: Private, 228; some private and some public, 7; public alone, 7.

The "Municipal Year Book" also covers all highway bridges owned by companies and all instances of municipal bath-houses, markets, parks, playgrounds, gymnasiums, cemeteries, docks, and fire and police alarm telegraphs. Most of these have no direct bearing upon the struggle between municipal and private ownership, but indirectly their number and variety indicates that in the future franchise companies will be more and more frequently confronted with proposals for municipal ownership.

Two Ideals of the Gentleman

Harper's Weekly, New York. Condensed for PUBLIC OPINION

A RECENT interview with a great society personage has roused the public press, drowsing from its exhaustive vigils during the visit of Prince Henry, to a fresh effort in behalf of democracy and humanity. In this interview the great society personage said, or is said to have said, that no one without a college education could be a gentleman, and it is upon this point that the press has turned its fierce light with an intensity which has searched out its subtlest implications. In the sense which the great society personage meant, there can be no doubt that a college education is essential to the making of a gentleman, for gentlemen, in that sense, are, unlike poets, made, and not born. It is not the only requisite, and we shall try to make ourselves as offensive as possible by instancing several others—such as inherited riches, the habit of society from the earliest period, the custom of good clothes, intimacy with the abstrusest points of etiquette, familiarity with the fine world everywhere, and the pursuance of some sort of dis-occupation as the aim of existence. Servants, clubs, carriages, travel, dinners, balls, hunting, shooting,

sport of every kind, must form the atmosphere without which no man can be a gentleman in the sense intended; and without which he must stifle as in an exhausted receiver.

The gentleman in this sense of the word has always been in the world, since the world began to purge and live cleanly, though not always, some contend, to its advantage. They contend that his being a gentleman has never, in any society or at any period, prevented his being a blackguard if he chose. It has never, except in Anglo-Saxon countries, prevented his doing murder in duels, and it is within much less than a hundred years that in England and America the gentleman of this sort ceased to shoot and run other gentlemen through, as he now does in the continental countries of Europe. It has never prevented his betraying young girls or ruining wives, or killing dishonored husbands, if he could, when they demanded the satisfaction of a gentleman. It has never prevented his gambling, or cheating at cards so as not to be found out; or defrauding his tailor and shoemaker, or otherwise stealing from tradespeople; or running like a coward from the pursuing bailiffs. It has never prevented him from reaping the glory of the wars whose battles the enlisted men won, and from falsely figuring as the hero of fights where they did most of the dying; possibly because there were more of them. Through him, and the ideal of him, have been perpetuated, if not created, nearly all the sins, shames, crimes, and follies that dishonor civilization, and keep Christendom still pagan at heart.

In the progress of the democracy which he has always abhorred and despised, another ideal of the gentleman has been evolved, and now in the greatest democracy of the world the prevalent notion is that the man who behaves gently is a gentleman, and no other, however born or bred. It does not matter whether that sort of man has had the advantages of a university or not, or whether he works with his hand or his head. Some sort of work he must do in order to live gently, for the idler is always a savage, and can not live gently; he can only live selfishly; and if a man need not work for himself, he needs must work for others. This ideal of the gentleman has been almost as generally accepted by the graduates of our colleges as by the graduates of our mines and mills and foundries; and it is this ideal which our brethren of the press have so strenuously defended.

The Latest Phases of State Socialism

Sydney Correspondence of the New York Evening Post
Condensed for PUBLIC OPINION

SOON after the New Zealand government announced its intention of buying a "national coal mine," Sir Edward Grey, in the house of commons, asked the English ministry to purchase one of the Welsh coal fields. About the same time the Prussian government bought a coal mine near Koenigsberg for the supply of the state railways. The New Zealand purchase has now been completed. A mine in the south island has been bought for £150,000, and will be worked by the government. The premier alleges that a ring of owners and merchants maintains the price of coal 75 per cent above its due rate. Depots are to be set up in each of the four centers, and after the government railways are supplied, the surplus will be sold at low rates to private consumers. It is also proposed to establish cool stores in Cape Town and London, and the government looks forward to assum-

ing complete control of the frozen meat industry in both South Africa and England. It has also long been planning to take over the entire liquor trade of the colony. As a beginning, it has been authorized by the legislature to set up state hotels in tourist districts. While the New Zealand government is making this new departure, the government of South Australia is abandoning its depot in London for the sale of Australian wines. It has proved a total failure, and has incurred a loss of £26,000. The government of New South Wales, in order to put down the "sweating" that prevails in the clothing industry, has just been prevailed upon to set up a state tailory; and this at the very time when the problem is being solved in a rational manner, by means of an agreement between employers and employed that will effectually suppress sweating. Quite naturally, the government is now asked to establish a state boot factory. In nearly all these colonies state socialism is advancing by leaps and bounds.

The Watch and Ward Society of Boston

Boston Transcript. Condensed for PUBLIC OPINION

IF Boston, as we are glad to believe, is a cleaner city than New York or Chicago, the credit is due in no small measure to the persistent efforts of the Watch and Ward society. The object of this society is defined in the by-laws to be "the promotion of public morality and the removal of corrupting agencies." The society has effectually suppressed the open sale of immoral literature in Boston and other cities of New England. When the society was organized, highly objectionable books were sold everywhere. Now the agent declares that it is difficult to find anything on sale for which conviction could be secured. The society has also done a most important service in improving the standard of the cheaper theatrical entertainments. This work has required unrelenting vigilance. Says the agent: "We consider it an imperative duty, though not a desirable one, to visit these theaters frequently, to criticize the entertainment, and report objectionable portions to the proprietor, who cheerfully cuts out all we complain of, and we take pleasure in saying that he also coöperates with us, making his own lists of objectionable passages for elimination. These entertainments have also been generally more free from objection the past year than ever before; some of them entirely unobjectionable in character and of a high degree of professional excellence." The miscellaneous work of the society during the past year has been exceedingly varied. The agent states: "Over seventy cases have been investigated the past year, and an account of the investigations recorded. We have caused bill posters to be removed from the streets and pictures from windows, and one from an electric car on a road forty miles from Boston. We have reported to the superintendent of police or to the captains many complaints against disorderly houses, together with such evidence as we could obtain. We have in the work of the society visited thirty-nine cities and towns the past year."

THE CAUSE OF THE GLASGOW BARMAIDS, who have been prohibited by a city statute from serving drinks behind the bars, is being taken up vigorously throughout the United Kingdom. Lawyers have been engaged to look after their interests, and it is said that Glasgow city magistrates will not accomplish their aims without a bitter legal struggle.

LETTERS & ART

The Maeterlinck Cult

IS IT AN INSTANCE OF OVER-APPRECIATION?

EVERY good thing is spoiled nowadays by over-appreciation. A writer in the *London Academy* complains that the Maeterlinck cult has been overdone in England. "Too many of his plays have been rushed into translations; he has been too much quoted and staged by the young literary woman. To such a conviction a man may come who has read 'The Treasure of the Humble' in the French, and counted it one of the experiences of his life." The *New York Times Saturday Review* says that "all signs point to the formation of a Maeterlinck cult in America, with its attendant clubs, readings, and superficial misunderstandings of the man and his message." According to a writer in *Harper's Weekly*, the general appreciation of Maeterlinck seems to sum him up as a vague, unreal, medieval sort of person who is forever attempting to create an "atmosphere," especially in his early dramatic poems, by meaningless repetitions, and in all his work to "express the inexpressible" in beautiful and poetic phrases. On the contrary, says this writer, with Maeterlinck mysticism is only a phase. "It is wholly incidental. It neither expresses the real character of the man, nor does it more than hint at the untiring search for truth which is the keynote, the genius of his writings. To depict life—the very essence of it, its real meaning, the elemental feelings and passions that are the real, the hidden motives of every human act, such, for example, as fear in 'L'Intruse,' the blind groping of humanity for truth in 'Les Aveugles'—that is the task Maeterlinck has undertaken."

Personally, too, this writer says, Maeterlinck is as far from being a "mystic" as one can well imagine. "He talks little of the 'soul,' and he has yet to learn the art of the French literary *poseur*. At his home in Oostacker his life is the quiet life of the country squire. He has no regular working-hours, and he spends much of his time out-of-doors, working among his bees or in the big, rambling gardens of his estate. He knows all the peasants of the country, and much of his material for the studies of real life in his books has been gathered from his daily talk and intercourse with these most simple and, if the phrase may be used, almost elemental people. It is important to know something of the actual life and habits of the poet in order to understand the sources from which he draws his material. And the lives he knows best are the simple lives of the Flemish peasants. He is the poet of the absolute, primitive, elemental life, of which

MAURICE MAETERLINCK

these simple people have shown him the best type."

Maeterlinck's early love for the mysterious, the invisible, and the beautiful is the phase of his philosophy which seems to appeal most to his followers. His dictum, "what we know is not interesting," is the watchword of the cult. "It is what we divine that interests—the mysterious life just beyond our consciousness, of which we catch only a fleeting glimpse now and then. The mystery of life and death is everywhere. We are in the midst of it, and our senses are too gross to catch its meaning." In his later work, "Wisdom and Destiny," Maeterlinck applies his philosophy to actual life—to happiness, love, the things of every-day occurrence—with the same beauty, but with much greater clearness of thought and expression. Of happiness, for instance, he speaks as follows:

"If all who may count themselves happy were to tell, very simply, what it was that brought happiness to them, the others would see that between sorrow and joy the difference is but as between a gladsome, enlightened acceptance of life and a hostile, gloomy submission." And he warns us not to speak lightly of this happiness. It is all that life can give. This, even though it goes beyond the conception of material happiness, every one is able to comprehend clearly, and to recognize as truth.

The Southern Renaissance

THE SOUTH AS THE CONTROLLING FORCE OF AMERICAN LITERATURE AND LEARNING

THE announcement comes from Atlanta that a "general committee" consisting of representatives of each southern state will presently take in hand the task of "controlling the forces of literature and learning in America, as the south did fifty years ago." The chairman of this general committee mourns over the fact that the south and southern writers are ignored by publishers in other parts of the country. He says that this is the more extraordinary because "one of the leading statisticians of the south has asserted that we have today one hundred capable writers in the south to one a half a century ago." Furthermore, he declares that "the south has produced over ten thousand men of conspicuous talent."

The *New York Commercial Advertiser* thinks that the trouble with the south is that its people lack that sense of humor which enables its possessor to see

things in a correct perspective. It is not true, declares one of its editorial writers, that the south controlled the forces of literature and learning fifty years ago. "The south never did that. What the south did do was to give itself with tremendous intensity to the task of securing political domination, and to this end it devoted all its energies, intellectual and material. To this end, also, it sacrificed the higher learning; it sacrificed artistic culture, and it sacrificed, also, the spirit of charity and toleration without which any community must become narrow and intellectually unfruitful. For sixty years the people of the south succeeded in their one great aim. They did dominate the government throughout that period. But to accomplish this they isolated themselves from their fellow-countrymen; they shut themselves away from every sort of influence that made for breadth and true enlightenment, and after the war they found themselves not only poor in material things, but nearly a century behind the age in all that appertains to the intellectual life. Their particularism is only now beginning to be dissolved. Some phases of it are delightful, to be sure. Southerners seem almost like one family. All things are intensely local. When any member of a household writes anything or says anything or does anything, all the rest of the family sit around and admire and applaud. When the careless stranger comes along and sees nothing particularly remarkable in the achievement, and, in fact, thinks it rather flat and the attitude of the family more or less ridiculous, then they all turn on him and treat him as an enemy who is jealous because he himself is not capable of such cleverness. This is precisely the attitude of the south, and it will continue a long time."

The Literary Decline of History

FREDERIC AUSTIN OGG, in the *Chicago Dial*. Condensed for
PUBLIC OPINION

THAT there has been a decline in historical writing, as judged by the canons of great literature, some might possibly deny, but the most of us would readily concede. Just now we are in the age of extreme particularism in historical research and writing. In our study we are following the method of the anatomist rather than that of the artist. We are bent upon details rather than upon the general effect—dissecting rather than studying in perspective. We are curbing our ambitions and recognizing our limitations as never before. We are working under the conviction that a lifetime is none too long a time to give to any one of hundreds of brief periods or single phases of the historical field. Historical truth is being accumulated and put in imperishable form with unparalleled rapidity and discernment. We are too busy collecting the materials for the mosaic, to give much thought to the mosaic itself. We are too busy and too "scientific" to give much thought to the literary quality of the history that we write.

When all has been said, however, the fact remains that history and literature are bound together by ties impossible to be broken. Both are concerned primarily with the phenomena of human life, either as it has been or as it might be. The portrayal of human life, which is the ultimate business of the historian, can never be made a mere matter of black-and-white sketching. So subtle is life in its ramifications, so intricate in its relationships, so variegated in its meanings and influences, that nothing short of consummate literary skill can adequately present the shades and

colors of the picture. There is a dead mechanical way of writing history, which as a temporary expedient is all well enough, but there is also a living, artistic, forceful way, which must be taken advantage of when the time becomes ripe for it. Our need for literary art in the collection and classification of materials is slight; but not so when the materials thus gathered are to be given a sane, comprehensive, and illuminating interpretation.

Some day there will set in a movement to coördinate the results of our specialized effort, and then may be expected to appear once more the literary historian. Scholarship will not be less valued, nor truth less highly regarded; but the art of presenting truth will be given more attention. Nothing short of a transcendent genius, however, can ever again fill the place of the genuine literary historian. From our conscientious devotion to truth in the minute we shall never wholly recover; and of all historical writing we shall continue to demand absolute accuracy of detail—a standard which was unknown to Herodotus, Livy, Carlyle, and Macaulay. Thus the necessities which the literary historian of the future will have to meet grow greater with every passing day.

A German Aristophanes

EDWARD STOCKTON MEYER, in the *New York Nation*. Condensed
for PUBLIC OPINION

NOT since the days in which Aristophanes so mercilessly and so fearlessly lashed the demagogue Cleon and his political tyranny in "The Knights" and "The Wasps," has a dramatic author dared to present such keen political satire to the public as Ludvig Fulda did in his "Talisman." There can be no doubt as to who is meant by this king who claims the valor of all heroes, the wisdom of all sages, and says that the Almighty alone is his peer. Nor can we mistake the noble and valiant knight, invincible in the war against the Heathen (*sic*), who has been dismissed from the first office of the land since he frankly said he could not see the bright halo which a treacherous rival for the chancellorship persuaded the king ever gleams about his royal head.

There is a Hindu proverb which says, "Of the two kinds of blind men, he is most blind who is deceived by the material world." Fulda, like every true artist, soon saw that real ephemeral persons and events may be interesting enough, but that the verities of life and art, however often they may need restatement, are the same in all ages, and that art should deal with ideal types in their eternal relations. The German nature is naïve and lyric as that of a child, Berlin to the contrary notwithstanding—for Berlin is even less representative of Germany today than Paris is of France. The German nature has ever loved the fairy-tale beyond all others. The deepest and most suggestive of German sages, Herder, wrote: "No other form of poetic art knows how to say such fine and deep things to the human heart as does the fairy-tale." Fulda knew his countrymen well when he turned to the Märchendrama in the "Talisman." He took his plot from Andersen's charming tale, "The Emperor's New Clothes." The whole drama is thoroughly unconventional; it has none of the inevitable stock figures of German comedy. The satire is most subtle and the merriment exhilarating. Through all runs a clear vein of rich poetry and deep thought. The form is simply perfect; it would be hard to find in all dramatic literature more exquisite art.

Fulda's latest drama, "Die Zwillingschwester," a comedy in verse of Italian cinquecento life, is now being played night after night in Berlin, Vienna, Munich, London, Paris, and New York. It was first brought out by Agnes Sorma, on February 21, 1901, at the Lessing theater, in Berlin. The success was unprecedented; Fulda appeared several times before the curtain. He is now a tall, thin, ungainly man, with very dark eyes and black moustache. The most characteristic feature about him is his sarcastic smile. "Die Zwillingschwester" was produced in New York first in German by Herr Conried, at the Irving Place theater, the one theater with a real literary and artistic standard in this country. Its success was so great that it was at once adapted into English ("The Twin Sister") by Louis N. Parker, and put on at the Empire, where it is equally successful. "Die Zwillingschwester" is a play of pure fancy, entirely removed from this noisy work-a-day world; its success is a severe blow to the realists. The story has all the rich flavor of Boccaccio without his lubricity. No better comedy has ever been written than the scenes where Orlando falls so passionately in love with his own wife; the disclosure and reconciliation at the end are simply inimitable. In addition to excellent characterization, there is a wealth of rollicking merriment and epigrammatic wit. Let one example suffice:

Der Mann ist doch ein Mann, nicht nur ein Gatte.
A married man is still a man, not merely a husband.

What the realists have given us so much gratuitous filth to portray is here most deftly worked out. Fulda has a remarkably felicitous way of putting things. He may not have the deep poetic insight that Hauptmann once had, nor the great power of thought that Sudermann still has, but he is more of an artist than either. He has less to say, but he can say it much better than either.

The Irresponsibility of Artists

LEWIS F. DAY, in April *Macmillan's Magazine*, London
Condensed for PUBLIC OPINION

THERE is one theory of the artistic life which, sanely speaking, is not tenable—the theory of the artist's immunity from the duties of manhood and good citizenship. Irresponsible he is no doubt, in the sense that he does not recognize his responsibilities; but that does not absolve him from them. The prevalence of this incurable irresponsibility among artists seems almost to argue some insanity of the artistic nature or some depravity in the artistic life. There is a point of view from which a man of any principle, or self-restraint, or good repute, is thought to be quite lost to art. Art, it is contended, has nothing to do with morals. Your every impulse must run away with you, or it is a sign you have no passion, no temperament. To study seriously, to take a degree, to marry fairly, to earn your living, pay your rent, keep decent company—what is that but to confess, in acts each one more Philistine than the other, that you are not an artist? Art thrives upon disorder! It is spontaneous, free, the overflow of genius and originality!

The boast of irresponsibility on the part of men, some of whom at least were not without great gifts, has almost persuaded us to mistake it for a sign of genius. And they have a charming way with them sometimes. Who does not prefer "Dick Steele with all his faults to Addison with all his essays"? But the assumption that he was the better artist because

as a man he could not hold himself in hand, is worse than foolish. Pope was a far better artist, and a typical one, pursuing, it might be said, "art for art's sake" before ever the phrase was invented; and yet, so far from sacrificing to it anything of manly independence, he earned the wherewithal to live, and, having earned it, regarded it, to quote the words of Mr. Leslie Stephen, "as a retaining fee, not a discharge from his duties as an artist." That is not the Bohemian ideal of maintaining "a poet's dignity," but it is one to which Goethe and Shakespeare could have subscribed.

The artist who gives way to his weakness may plead the artistic temperament as an extenuating circumstance; but he is clearly guilty, and to claim any sort of artistic irresponsibility is something less than manly. It is not contended that artists lead less decent lives than the rest of the world, though they may take less pains to hide their lapses than some to whom respectability is a part of their stock in trade, but only that the plea of the artistic life is no justification of ill-living. The personal convenience of the artist (art is essentially personal) excuses nothing contrary to the general good. An artist is not exempt from the obligations of citizenship; and if the Bohemian's contempt for the Philistine implies that he is, then his taunt of Philistinism recoils upon himself. The claims of art and of life may not always be easy to adjust; but they are usually adjustable. If, peradventure, they should clash, it is not a case in which a man's judgment should desert him, nor an artist's sense of proportion.

Various Topics

LITERARY PING-PONG: Paul Bourget dedicates the title story of his latest book, "Monica and Other Stories," to Edith Wharton, an item of special interest just now in view of Mrs. Wharton's dedication of "The Valley of Decision" to "Paul and Minnie Bourget in memory of Italian days together."

THOMAS DUNN ENGLISH, who died recently at the advanced age of eighty-three, was known to the present generation chiefly as the author of the lyric, "Ben Bolt," sung by Trilby. An earlier generation knew him as the victim of Poe's ridicule, in the latter's "Literati of New York." Since 1859 Dr. English has practiced medicine in Newark, N. J., and from 1891-95 he represented his district in congress. Among his books are "American Ballads," "The Boys' Book of Battle Lyrics," "Jacob Schuyler's Millions," a novel, "Fairy Stories and Wonder Tales," and a volume of his verses, entitled "Select Poems."

A "REAL CONVERSATION" WITH WILLIAM ARCHER: *Life* neatly turns the tables on Mr. William Archer, who has been conducting a series of "Real Conversations" with various celebrities for the *Pall Mall Magazine*. Walter Satyr conducts a conversation with Mr. Archer beginning as follows:

W. S.: I suppose, Mr. Archer, that, inasmuch as you are the originator of the Real Conversation as a welcome variant on the old review, which, of course, would hardly have been consonant with the dignity of so distinguished a man of letters as yourself, you will have no objection to talking for publication through me in your most realistic style.

W. A. Certainly not, my dear Mr. Satyr. Indeed, I am most glad of the opportunity it will afford me—

W. S. (*interrupting*): I was sure you would be. Now, of course, you understand the method of procedure. I am to do most of the talking. I am to ask all the leading questions and answer them myself, to propose the final propositions and all that, and you won't mind being interrupted occasionally when a clever thought strikes me while you are having your say. For I surely do not need to remind you that it is the interviewer who is the important person in the Real Conversation, and that the person interviewed is merely a foil to set off to advantage his cleverness. Am I not right, sir?

SCIENTIFIC

Why Are Sea Birds White?

JOHN ISABELL, in the April *Longman's Magazine*, London. Condensed for
PUBLIC OPINION

THERE are five possible explanations of that whiteness which is so characteristic of sea birds—namely, first, that it is given them as a protection from their enemies; secondly, that it is due to that absence of elimination to which land birds dressed in an eccentric garb are subjected; thirdly, that it enables them more easily to procure their food; fourthly, that it is due to sexual selection; and, lastly, that it forms, in combination with dark wings or tail markings, a badge by which they may be recognized by their friends. The first explanation, which finds most favor with naturalists, the writer ventures to dispute altogether. Color may be either a screen, behind which its owner can safely live and freely move, or a signal of danger, like the warning red flag above a powder magazine. The tawny hue of the lion and of the gazelle, which assimilates them to their surroundings, and aids the pursuer and the pursued in turn, is an example of the first. As an example of the second we have the gaudy colors of many butterflies, and the black, white, and yellow of the magpie moth, which advertise the paradoxical fact that the insects are unfit for consumption. Sea birds live under totally different conditions. They have no snow as a background; they do not swim in milk, or fly in an atmosphere resembling that of a flour mill, and the supposed analogy between their circumstances and those of Arctic birds is a poetic figment. The normal hues of the ocean are blue, green, and gray. White upon blue is one of the most striking contrasts possible, and white upon green is little less distinctive. If gray in itself does not excite attention, white on a background of gray is thrown into instant relief. Upon the supposition that whiteness confers invisibility on sea birds, we are driven to the strange conclusion that the young, which are often gray or brown, are left without protection, although they need it most. Before coming to the conclusion that whiteness makes sea birds invisible to super-aquatic eyes it surely is desirable to face the question, Is protection needed? Protection against what? We can quite understand why white land birds are so rare. A white vegetable-feeder would not long escape the talons and beaks of birds of prey, and birds of prey which called attention to their presence by obtrusive raiment would soon find their larder bare. But what have sea birds to fear? They are clamorous, greedy, fierce, and pugnacious; capable of defending their own interests, and feeding almost entirely on fish.

It is a suggestive circumstance that the colors of sea birds correspond in one important respect with those of the fishes on which they feed. Almost invariably a fish is dark above and light beneath, this distribution of colors helping it to escape observation. Now, nearly all sea birds are black and white, or gray and white, the darker tints being found on the wings and back, and the white feathers on the breast and abdomen. It may be, and probably is, an advantage to aquatic birds to have their white feathers turned seawards, so that they may be less easily seen by the fishes they are in quest of, and the fact that the eagles which have taken to fishing are colored like their nautical colleagues lends weight to this consideration.

The tendency to whiteness once encouraged, whether by absence of danger or as an aid to the procuring of food, might well be intensified by sexual selection. Lastly, there can be little doubt that a potent influence in the decoration of birds is the necessity for marks whereby members of a species may recognize each other. These "banner colors," as they have been called, are shown in the wings and tails of many sea birds, black bars crossing the outer feathers of the gray or white pinions and of the expanded fans.

Such are the considerations which lead to the conclusion that the usual explanation of the whiteness of sea birds—namely, that it is a device to make them invisible to aerial enemies—is entirely erroneous. Why, then, are sea birds white? The answer is, for four cumulative reasons. First, they are white because flesh-eating enemies powerful enough to weed out whiteness are absent from the element which they frequent; secondly, because whiteness, and especially a white under-surface, facilitates their approach to the fishes which form their food; thirdly, because the preference of the sexes for each other, taking the line of least resistance, has accentuated the tendency to whiteness; and, lastly, because a white plumage forms, in combination with black markings, an excellent signal by which friend can recognize friend, and the whereabouts of food be quickly indicated.

Dr. Finsen's Red-Room Cure for Smallpox

Chambers's Journal, London. Excerpt

DR. FINSEN holds that no ray of light should ever be allowed to fall on a smallpox patient unless it has passed through something red; and his "cure" consists in confining sufferers from this disease in rooms from which all light, excepting red light, is carefully excluded. This is the beginning and end of the treatment he recommends; and it certainly would be difficult to conceive of anything more simple. Its very simplicity, indeed, is probably one of the reasons why it has not yet found acceptance among us; for we are all more or less Naamans. Still, simple though it be, its efficacy can no longer be doubted; for in no single case where it has been tried—and it has been tried in hundreds of cases—has the patient died; in no single case has the patient had the disease severely, nor has it disfigured him. This is a point on which continental doctors are practically all agreed.

Dr. Finsen has scientific reasons for his cure: it was after years of ceaseless work—hard study, minute investigations, experiments without end—that he made the discovery on which it is founded. Before he turned his attention to the subject it was already well known that light is injurious to smallpox patients. Again and again the fact had been established that in cases of smallpox light acts as an irritant; that it increases the inflammation of the skin and causes suppuration, thus adding, of course, to the fever attendant on the disease. The experiment had also been tried repeatedly of keeping smallpox patients in dark rooms; but this had always proved a failure, as the de-

pression entailed by being forced to pass their days in darkness did more harm to the patients mentally than their security from the irritating effects of light did them good physically. What Dr. Finsen set himself to do, therefore, was to devise some means of guarding persons having smallpox from the injurious action of light without entirely depriving them of light. In the course of his investigations he discovered—and an all-important discovery it has proved—that the harm done in such cases is done not by light, but by certain of the rays that go to make up light; that it is not light itself that acts as an irritant, in fact, but only the chemical rays in light—that is, the blue, violet, and ultra-violet rays. By a series of experiments, he obtained proof that if the chemical rays of light are intercepted, the remaining rays are innocuous, and that a smallpox patient may be exposed to them the whole day long without evil consequences. Thus, instead of excluding all light from the room in which the patient is lying, it is the chemical rays alone that need to be excluded. If this be done, the sufferer is practically secure from all danger of having the disease severely. Dr. Finsen lost no time in demonstrating that this can be accomplished quite easily; for, as blue, violet, and ultra-violet rays of light can not pass through anything red, they can not, of course, enter a red room. Once in a red room, therefore, the patient is safe from their pernicious influence.

Gas-Lighting Healthful

Cassier's Magazine, New York. Condensed for PUBLIC OPINION

IN one of the Yorkshire papers recently there appeared an extract from a London paper's correspondent as follows: "If gas dries the air, so much the better; the proper plan is to burn it very low all night. In cold weather it should never be put out; it should be raised or lowered according to the outside temperature." The advantage of having the temperature inside a room greater than outside is apparent for a variety of reasons. Justification for a gas light has not always been so clearly and intelligently recognized as in the foregoing paragraph. In accordance with well-known laws, it is imperative that heated air ascends. In rooms where it is the practice to allow the window to remain open a little at the top, this heated and foul air escapes, fresh air entering to supply its place. A common outcry and complaint against gas is that sometimes a slight sulphurous odor can be detected, though the quantity is very small. Considering the extensive adoption of the medical sulphur treatments all over the world in cases of consumption and other lung affections, one can not conceive that a small quantity of sulphur is injurious; indeed, on the contrary, it is strange if it is not even beneficial to the health. It is well known that gas works are regarded as first-class health resorts for children suffering from whooping cough. It is a fact that the action of sulphur upon disease germs is fatal to them, as demonstrated when sulphur is used as a disinfectant.

Sometimes in entering a room which is electrically lighted it is found that the air is heavily charged with carbonic acid, of which the occupants are oblivious, the complaints of headaches and depression being attributed to any other cause than the right one. The same conditions prevail frequently in churches, chapels, and large public buildings lighted by electricity, where the audience is sitting in an atmosphere sur-

charged with carbonic acid, due to the fact that the electric lamps do not emit sufficient heat to promote ventilation. The use of gas has been objected to on the ground that it sometimes contains traces of ammonia, which is foolishly considered injurious to health. Ammonia does not support combustion, and, therefore, if present in the gas, passes off direct into the room in which the gas is burnt; but so far from its presence being detrimental to health, it has been established beyond all dispute that a small quantity of it is actually beneficial.

Baldness Due to Muscular Inactivity

GEORGE ELLIOTT, M.D., in the *Journal of the American Medical Association*, Chicago. Condensed for PUBLIC OPINION

ANYONE who takes the trouble to examine and observe closely must be struck by the fact that baldness occurs on the top of the head and rarely if ever extends below the temporal ridges latterly, or even down to the superior curved lines of the occipital bone posteriorly. It will be noticed also that baldness extends lower in the middle line behind than it does an inch or so on either side of the middle line posteriorly. This, of course, corresponds to the fact that there are no muscular fibers in the middle of the occipito-frontalis muscle at its attachment to, or rather origin from, the external occipital protuberance and the adjacent parts of the superior curved lines. The skin of the scalp, therefore, overlying the epicranial aponeurosis, has no underlying muscles to exercise it, and has only to depend upon the action of the occipito-frontalis muscle to which it is closely adherent, and only moves when that muscle is put into action; and how often that muscle is moved in twenty-four hours, I leave anyone to conjecture. In no other region of the body is there such an extensive area of skin which does not receive adequate exercise either through underlying or adjacent muscles.

Baldness does not prevail in the female sex to anything like the extent it does in the male. Very few women become bald even in far-advanced life. This is generally put down to the fact that they give more attention to their hair, dressing and combing it night and morning; and their light headgear. The scalp in them is well exercised by the combing, plaiting, and throwing from side to side, movements which impart a good deal of exercise to the scalp. Women suffer from dandruff equally with men. If dandruff be the prime cause of baldness in men, why are its destructive effects not equally seen in women? Men comb and brush their hair in a minute, probably once, or twice, or thrice daily. There is no exercise to the scalp in these maneuvers of a minute's duration.

The foregoing being correct, the way to treatment is pointed out. Prevention through massage-exercise is nine points in the law of treatment. This should be begun in early life, at the time when the youth is gradually developing into the more sober man, when his occipito-frontalis muscle has become more and more subordinated to his will. Massage should be performed the same way as in other regions, first freeing the vessels farthest from the seat of trouble and gradually approaching the center. It should be done at night as well as in the morning, particularly at night, as gravity has little or comparatively little chance through the day. If the scalps of men received as much exercise as the scalps of women, there should be on the vaults of their craniums a luxuriant growth of hair.

Lightning Above and Below Water

PROFESSOR JOHN TROWBRIDGE, in the *Scientific American*, New York. Condensed for PUBLIC OPINION

BELIEVE that experiments show that lightning never strikes the surface of the sea. In studying the spectrum of water vapor, I have often endeavored to pass powerful sparks to the surface of water, in order to obtain a strong spectrum from the resulting volatilization. In every case sparks of high electromotive force resembling, as far as possible, lightning discharges, being with my apparatus six feet in length, refuse to strike the surface of a level basin of water, and pass to the edges of the containing vessel. Even if the terminal is brought close to the surface of the water, only a brush discharge manifests itself. It is also extremely difficult to pass powerful sparks from one stream of water to another. A step-up transformer, giving powerful discharges with a difference of potential of one or two hundred thousand volts, was connected to two vessels of water which delivered two streams of water. It was interesting to see the two streams approach each other under the effect of the alternating plus and minus charges. When the streams were attracted sufficiently near each other, a spark passed which, on account of the high resistance of the water, did not give sufficient light for spectrum

analysis. Lightning discharges which seem to strike the sea really pass from one region of the air to another, and it is only perspective which leads one to suppose that the discharges strike the water. It is remarkable that sufficient electric density can accumulate in the clouds to allow a discharge from one region to another. I have reason to believe, from my experiences with powerful discharges, that we underrate the quantity and voltage of lightning.

Having failed to obtain the water-vapor spectrum with the use of water terminals, I turned my attention to the production of the electric spark under water. Certainly in this case I should have the light of aqueous vapor in excess of the light of the metallic terminals. I found it was difficult to produce a spark under distilled water by the simple immersion of the terminals. It was necessary to seal platinum wires in glass tubes, and these wires should not emerge from the glass tubes to a greater distance than half an inch, and, moreover, should be immersed but a short distance below the surface of the water, if the water is contained in a glass tube of not more than two inches in diameter. The light of the electric spark under water is extremely brilliant, and resembles that of an enclosed arc lamp. There are no lines, however, in its spectrum. The spectrum, in other words, is continuous and like that of an incandescent solid, caused, probably, by the presence of the water vapor.

RELIGIOUS

The Bible as Literature

PROFESSOR RICHARD G. MOULTON, in the *Independent*, New York. Condensed for PUBLIC OPINION

A GREAT deal has been spoken and written, especially in late years, about the Bible as grand literature. What, exactly, does this mean? We are all of us eager to claim for the Bible all that is good; and it may be doubted whether those who join in the eulogium of Scriptural literature have always paused to consider the meaning of the terms they use. For example, there are many who extol the Bible as literature, and yet, apparently, are thinking only of its beauty of language and style. This would seem to be the case especially with those who emphasize the literary beauty of King James's version. Too much can not be said of that version so far as its language is concerned; its dignity of diction, force and felicity of expression; its rhythmic flow and wealth of imagery. But literature, in a stricter sense, is in the old version conspicuous by its absence. The fault lay, not with the translators, but with the attitude of their age to Holy Scripture. All through the centuries of rabbinical and medieval doctors the highest truth was conceived as a series of isolated propositions; and the translators labored to make each "verse" a thing of beauty. But the result is an accumulation of good sayings—literature cut into lengths—with the beauty not of a poem, but of a scrap-book.

The Bible is appreciated as literature only when the different parts of it are read in their correct literary form and structure. If we ask ourselves what is meant by Greek or English, or French or Latin literature, the answer will be in each case the same—a number of dramas, epics, lyrics, essays, histories, philosophical or oratorical discussions, in Greek, English, French, or Latin languages. If, then, we are to claim the Bible as "literature," it must be because the contents of Holy Scripture are made up of dramas, epics,

essays, histories, philosophical and oratorical discussions—of all these, or of most of them—or of special literary forms like these. And such is the fact, only it is hidden from most readers by the unliterary form in which our Bibles are printed. Even a casual observation will suggest that Job and the Song of Solomon are dramatic. But besides these large parts of the prophetic books involve dialogue and underlying movement; choruses of old men and of revelers and of priests and of husbandmen answer one another in Joel as in a modern oratorio. We have elsewhere dialogues between God and the prophet, or cries of the lost and the saved; we have changing scenes, and vision melting into vision like dissolving views.

We may go a step farther. Not only is the Bible truly literature, but it is *a literature*. The significance of this may be made clear by a comparison. The Koran is literature, and is said to be sublime in style by those who can appreciate Arabic sublimity. No one would call the Koran *a literature*, for it consists only of a single literary type, the outpourings of a single author. But within the bounds of our Bible we have some sixty different books, the product of almost as many different writers, coming from many different ages, and exhibiting examples of almost all literary types. Some of the books are in Hebrew, some in Greek; but the Hebrew books stand apart from the rest of Hebrew literature, the Greek books from the rest of Greek literature, and all from the vast accumulation of works in all languages which these canonical books have called forth. Thus, in a survey of the whole world's civilization, the Bible stands as a literature in itself. And it differs from all other complete literatures in the fact that its completeness is a spiritual unity. There is an underlying framework of history—the history of the people of Israel as pre-

sented by themselves; the history of the New Testament church as presented by itself. Into this are fitted stories, songs, prophetic and oratorical discourses, philosophical sayings, epistles, as modes of expression for the soul that animates the body of the history.

Children and Church Membership

SOME SUGGESTIONS FOR HOLDING THE CHILDREN

THE Congregational pastors of Massachusetts have recently received a set of questions relating to the decline of religious interest in the state. Mr. Frederick Lynch, writing for the *Outlook*, says that every pastor is uneasily conscious that the admissions to the church are lamentably few, especially from the ranks of the children of the parish. He asserts that "twenty-five of the big churches of Massachusetts, with Sunday-schools averaging five hundred pupils, received into their membership by confession in 1901 hardly more than ten each. Several churches with Sunday-schools much larger than this received only from fifteen to twenty. This is striking enough, but when one weighs over against this the fact that there were churches with schools registering between five hundred and a thousand that received hardly even ten, the figures are even more impressive. As to the rest of the churches, one has only to look at the year-book to satisfy himself that church after church with very large schools are receiving by confession a beggarly few of their many children. There is only one conclusion to come to—namely, that the great crowd of children that make up our schools slip through our fingers out into the great churchless world, while in the whole order of nature they ought to pass into the church as the boy passes from the grammar school to the high school."

Mr. Lynch goes on to say that the church membership of the future has got to be made up from these children. The membership of today was largely recruited from revivals of religion, but revivals seem to have had their day. Mr. Lynch offers the following suggestions for holding the children: "I believe with all my heart, both from observation, experience with children, and from the nature of things, that if some well-trained, religiously educated man, of consecrated personality, would take all the children of his parish who have reached the age of ten, never under any conditions waiting until they have passed that age, and meet these children frequently, in small classes, until they are fourteen, he would find that almost every one of these children would be ready to pass into the church naturally and easily. Let him take these children at ten and instill into their minds the idea that the church is just as much to be thought of as having a place in their future as the home or trade or profession. Make them think that they are born for the church just as they are born for the state, and that while the common schools are educating them for citizenship in the state, he is training them for citizenship in the church, and that one follows just as naturally as the other. But this training must have all the system and regularity of the public schools. Above all, the children must be taken at this early age and put through a regular course of training in religious things until at fourteen they are received into the church and become its efficient workers.

"My other suggestion is this, that every church that can possibly raise six hundred dollars ought to hire a young man from the seminary to devote his

time largely to this thing that I have suggested. In the smaller schools the pastor must do this work, and can do it most effectually. But in the larger churches it is, of course, utterly impossible for him in any thorough manner to educate his children in religious things. For the children's sake, as well as the churches, we must come to some such thing. I merely throw out this suggestion as a possible way of solution. I believe we shall soon come to it. It is what the Roman Catholic church has been doing for centuries, and it never makes any complaint of lack of supporters. When the Protestant church comes to such a point that it cares as much for the religious life of its children, it will, by vastly superior instruction, in some such way as I have here suggested, reach vastly greater results. The new revival of religion is going to come in this way."

Catholicism in Austria

New York Tribune. Condensed for PUBLIC OPINION

THE liberal Catholic movement in Austria has received a new impetus from the recent striking address of Dr. Leopold Wahrmund, professor of canonical law at Innsbruck university. The address, which was a severe arraignment of ultramontanism, was all the more noteworthy because Professor Wahrmund is not only a Roman Catholic in good standing, but on many occasions has defended the church by voice and pen. Just because he is a loyal son of the church, however, he now deems it his duty to say that the conservatives in the church are destroying its vitality. By their blind opposition to rational thought they have caused the church to lose its supremacy among educated people. Hence indifference, if not unbelief, is rapidly spreading among the higher and middle classes, while racial theories of socialism are alienating the masses in the cities from Christianity. So it comes about that the Catholic faith is in process of becoming a religion for rustics after the fashion of the declining paganism of the ancient world. It is useless to try to combat this state of affairs by processions and associations for prayer. Nor can the spirit of enlightenment and progressive culture be bludgeoned. Liberal Catholics can not fail to realize that there is an ominous gulf between reason and faith. They want to see that gulf bridged; but the conservatives, instead of helping to that end, seem anxious to make the gulf wider. Such a conception of Catholicism means petrification and stagnation, instead of life and progress.

Such is the gist of Professor Wahrmund's address as reported, and it is needless to say that it at once made a sensation. At the next sitting of the *reichsrath* the minister of education, in reply to a clerical interpellation, mildly criticized Professor Wahrmund for his utterances, but declined to issue a prohibition against such utterances in the future, as any such step would interfere with discipline in the university. Another indication of the growing strength of the so-called "emancipation from Rome" movement in Austria is the general condemnation of the recent reintroduction of religious exercises in the intermediate schools. Most of the newspapers, including strongly Catholic and anti-Semitic organs, criticized this step, which is approved only by the clerical organ *Vaterland*. Some of the leading Catholic organs of Germany also take the same ground, and the *Kölnische Volkszeitung* warns the church authorities against any attempt to force Professor Ehrhard, the leading repre-

sentative of the new spirit in Austria, from his chair in the Vienna university. Another indication of the growth of liberalism is the decision not to convene the Lower Austrian Catholic congress, which was to have met at the end of this month to discuss the best means of combatting the "emancipation from Rome" movement.

Methodists and Laziness

BISHOP FOWLER'S CHARGE

IN an address to the applicants for membership into the New York conference of the Methodist Episcopal church, Bishop Fowler made the statement that no other profession is so conducive to laziness as the ministry. "If during the six days of the week," he told the applicants, "you only put as much life, zeal, and energy into your work as the business man does, you will surely win." The New York *Sun*, comments as follows on the bishop's statement: "How do Methodist ministers find time to be lazy? The great city congregations bring a multifarious round of duties to their pastors, and we have heard more than one of these busy men regret without bitterness that he had too little leisure to give to his books and to keep his seminary learning from growing musty. 'The parson has a soft time of it,' says the village butcher, or the oiled clerk in the old red store. 'Why, he hasn't nothin' to do but write sermons.' Nothing to do but preach, go to prayer meetings and evening meetings and praise meetings and revival meetings and children's meetings, Bible meetings and business meetings and temperance meetings and meetings of the church societies and village improvement societies and sociables and Sunday-schools and sewing circles and funerals and so on. Nothing to do but to call on all his people regularly and visit the sick and look after the poor and entertain traveling clerical and semi-clerical visitors and serve on the school committee and take a prominent part in all town affairs and in heaven knows how many religious, charitable, educational, musical, and miscellaneous concerns and consider letters from all sorts of persons who have no business to bother him and always neglect to send stamps. Nothing to do but to be at the disposal of every crank, busybody, and bore, to go to conference and ministerial meetings, to hear long yarns from seedy impostors whom his heart distrusts but who seldom go away empty—the poorer the minister, the more he gives away in proportion to his means. Nothing to do but to be preacher, lecturer, almoner, unofficial overseer of the poor, man of business, general public character, counsellor and agent and everybody's friend and servant seven days a week for the love of God and \$300 a year on an average! Decidedly, if we had a lazy young friend we should advise him to enter the Methodist ministry. Bishop Fowler must have been joking."

Gentile Missions in Mormondom

AN ANTI-MORMON CRUSADE

AFTER our article of last week, setting forth the growth and dangers of Mormonism, as viewed by the Evangelical home mission societies, it is in order to present an excerpt from a recent article in the New York *Observer*, by the Rev. John D. Nutting, describing the work of the Utah Gospel mission. The reali-

zation of the necessity of carrying the war into the enemy's country led to the incorporation of this body at Cleveland, Ohio, in 1900. The actual work was begun in Idaho in June, 1901. The Rev. Mr. Nutting has been one of the workers in the field.

Up to February 1, with an average of only five men employed, the mission reached about 12,000 families, containing fully 70,000 people. In these homes about 10,000 religious conversations were had, and the people were supplied with nearly a million pages of specially prepared religious literature, besides much of ordinary character. Nearly every settlement and most of the scattered houses in a district comprising over 15,000 square miles have been visited, necessitating probably 3,000 miles of travel, of which nearly half was on foot. And the work is still in progress. The work thus far undertaken is along special colporteur lines, adapted as closely as possible to the special needs of the case. Its two essentials are helpful religious conversations and the supplying of religious literature prepared for this particular use, both of these being undertaken at each home. The writer made nearly eight hundred such family visits the past summer, gaining thus an insight into Mormon life and thought, for which he is profoundly grateful, as well as for the great opportunity of usefulness afforded. The workers travel and live in special Gospel wagons constructed for this work. The literature used was prepared especially for this work by a committee of experienced Utah men, ordinary literature being of small use for this field, where modes of thought are so peculiar. A second and essential part of the work has not yet been begun, for lack of means. This is likewise a wagon effort, but is evangelistic in character, its workers being especially qualified for such service and holding meetings for some time in each village, with personal work at the homes. This work is expected to follow the colporteur effort in each place, and to reap some benefit from the other as a preparation. In order to meet the Mormon objection to salaried religious workers, all the Utah Gospel mission workers serve thus far without salary, only the necessary expenses otherwise being provided; and the camp-wagon methods reduce these to the minimum, while conserving the health, comfort, and effectiveness of the workers. It apparently adds very largely to the moral force of the work: as also does the unsectarian character of the workers—the six men of the summer's force belonging to five denominations.

Various Topics

THE TOWN OF SHEMAKHA, which was recently destroyed by earthquake, was the headquarters of the Protestant movement among the Russian Armenians and a training ground for most of the young Protestant Armenian evangelists and schoolmasters who have settled in numerous parts of Transcaucasia and continue to carry on the mission work among members of the Gregorian Armenian church. There is great suffering among these Protestant inhabitants of Shemakha.—*Northwestern Christian Advocate*.

THE PHILADELPHIA TEMPLE—Grace Baptist church—is the largest protestant congregation in America, according to the statement made to the *Independent* by the pastor, the Rev. Russell H. Conwell. It has given a net increase of 4,800 members to its denomination and its present membership is over 3,000. It has spent as much as \$65,000 a year for purposes outside of its own maintenance. It has an orphanage, a hospital with a monthly average of 1,200 patients, and a school with 4,200 pupils now, and a total enrollment since the opening of 45,000.

THE NEWS OF THE WORLD

MONDAY, APRIL 7

DOMESTIC.—President Roosevelt and party left Washington for Charleston, South Carolina....The state of Washington, through its attorney general, asked leave to file a bill of complaint against the Northern Securities company in the United States supreme court....The inquiry into the Christmas charges of bribery, in connection with the sale of the Danish West Indies, was continued....The resignation of Terrence V. Powderly as commissioner general of immigration was placed in the hands of the president....Gen. Jacob H. Smith, testifying at the court martial of Major L. W. T. Waller, at Manila, denied that he gave orders to kill prisoners.

FOREIGN.—Lord Kitchener announced that Commandant Kritzingen had been acquitted by the court martial which tried him in Cape Colony; the Boer Commandant Erasmus was killed on April 3 in Orange River colony....Parliament re-assembled in London....The landsting at Copenhagen discussed the treaty ceding the Danish West Indies; the opposition made a new move, demanding a plebiscite before, instead of after, the ratification of the treaty....A third attempt was made in Moscow to kill the prefect of police, General Trepoff....Troops and a warship were sent from Kingston, Jamaica, to Montego bay to suppress a riot....Revolutionists in Hayti captured the town of Jacmel and released the prisoners there; in the fighting two men were killed and several wounded.

TUESDAY, APRIL 8

DOMESTIC.—President Roosevelt was given a cordial reception at Charleston, South Carolina....General MacArthur testified before the senate Philippine committee, taking a hopeful view of the future of the Philippines and denying charges of cruelty on the part of American soldiers....Adjutant-General Jasper N. Reese, of Illinois, died at Springfield, aged 60 years.

FOREIGN.—The Manchurian agreement was signed at Pekin....The severe Chinese indemnity tax has caused a revolt in southern Mongolia....A Simla dispatch says: Fifteen Sepoys were ambushed April 7 on the Mahmud frontier. Eight of the soldiers were killed and three wounded....Lord Kimberley, Liberal leader in the house of lords, is dead....Advocates of universal suffrage caused riots in Brussels....King Christian IX, of Denmark, celebrated his eighty-fourth birthday.

WEDNESDAY, APRIL 9

DOMESTIC.—President Roosevelt was the central figure of a big celebration at the Charleston exposition and discussed national topics in a speech....The war department made public an order issued

by General Smith, the commander in Samar, directing kindly treatment of the natives....Governor Yates's Boer relief fund committee asked for \$5,000,000 by popular subscription for the relief of reconcentrado camps.

FOREIGN.—The Danish landsting, in secret session, voted on the treaty ceding the Danish West Indies to the United States; the majority report, favored by thirty-five members, defers the ratification of the treaty until a vote is taken in the islands by the property suffrage; eight independents voted for ratification with a popular vote afterward, while twenty-one government supporters voted for ratification outright....In South Africa Lord Kitchener is collecting reinforcements for a series of "drives" of the Boers....The Chinese rebels were severely defeated by the imperial troops; a Chinese tribe attacked a Russian post in Manchuria, and were repulsed.

THURSDAY, APRIL 10

DOMESTIC.—Major Cornelius Gardner, civil governor of Tayabas province, Philippine islands, accused the military of "sowing the seeds of a perpetual revolution," and admitted that loyal sentiment among the natives is rapidly decreasing....Gov. Sanford B. Dole, of Hawaii, reports an unsatisfactory condition of affairs, financially and industrially, in the island....Miss Ellen M. Stone, the missionary who was held by Bulgarian brigands for ransom, arrived in New York.

FOREIGN.—All the Boer chiefs, including President Steyn and Generals Botha, De Wet, and De La Rey, have gathered at Klerksdorp, in the southwestern Transvaal, to confer on the peace terms of the British government....The burial of Cecil Rhodes took place on the Matopopo hills, in Rhodesia; native rites were performed around the rock tomb after the bishop of Mashonaland had conducted a church service; in London, at the hour of the burial in the Matopopo hills, a memorial service was held at St. Paul's cathedral and was attended by many prominent people....Owing to a publication in an anarchist paper at Berne regarding the killing of King Humbert, diplomatic relations between Italy and Switzerland have been ruptured....Diplomatic relations between France and Venezuela have been renewed....There were further riots in Brussels and other cities of Belgium....British and German warships were sent from Shanghai to Ning-Po, China, to suppress an anti-foreign outbreak.

FRIDAY, APRIL 11

DOMESTIC.—President Roosevelt returned to Washington from his trip to the Charleston exposition....The president has selected Eugene F. Ware, of Kansas, for commissioner of pensions, to succeed Henry Clay Evans....Wil-

liam Williams was nominated for commissioner of immigration at the port of New York, and James R. Garfield for civil service commissioner.

FOREIGN.—Rioting in Belgium was suppressed by troops....It was reported from Vienna that the dreibund would be maintained....Edinburgh university conferred the degree of LL.D. upon J. G. Schurman, of Cornell, and William James, of Harvard....The tariff committee of the German reichstag placed high duties upon meat.

SATURDAY, APRIL 12

DOMESTIC.—President Roosevelt signed the bill repealing the war taxes....Governor Taft of the Philippines made a statement regarding the arrest of editors for sedition at Manila, and the report of the governor of Tayabas province....A new political party, organized by labor leaders, has been formed in Connecticut....The governor of St. Thomas, Danish West Indies, entertained Admiral Higginson and the officers of the North Atlantic squadron.

FOREIGN.—An Edinburgh newspaper published terms of peace alleged to have been put forward by the Boers; there was a meeting of the British cabinet, which considered the peace negotiations and the proposals of the coming budget; at Utrecht, in Holland, a conference of Boer envoys was held; Dr. Leyds declared that peace could not be concluded without consultation with the Boer representatives in Europe....The rebel forces in Hayti, which recently captured Jacmel, were routed by the government army, and their leader, General Nicolas Baptiste, was taken prisoner and promptly shot....The text of the Manchurian convention between Russia and China was published in St. Petersburg....There was a lull in the disorders in Belgium, though the strikes throughout the country are spreading.

SUNDAY, APRIL 13

DOMESTIC.—Major Littleton W. Waller, of the 9th United States infantry, who was tried at Manila on the charge of killing natives on the island of Samar without trial, was acquitted, the court standing 11 to 2; merchants of South Camarines province, Luzon, have petitioned General Chaffee not to withdraw the American troops from that district, as the native police are unable to cope with the lawless element.

FOREIGN.—There was extraordinary official activity in London, due to the peace tidings from South Africa; Mr. Chamberlain had an audience with the king, lasting two hours, at Buckingham palace....The rioting in the streets of Brussels resulted in several rioters being killed and the hospitals filled with wounded; for the first time the police fired on the mob with rifles loaded with ball cartridges.

The Books of The Week

CHINA AND THE POWERS. A Narrative of the Outbreak of 1900. By H. C. Thomson. Cloth, pp. 285, \$4. New York: Longmans, Green & Co.

As a newspaper correspondent Mr. Thomson accompanied the relief expedition of the powers to Peking. He gives in his early chapters a rather belated account of the incidents of this memorable expedition, and in the later chapters discusses the terms of the settlement with China, and missionary and related problems. Mr. Thomson deplores the attitude of the western world toward China and declares that "the immediate outlook is black." In the north trade is ruined and in the south it has suffered severely. "The political aspect is not hopeful, the decentralization is proceeding apace. At any moment foreign intervention may once more become necessary." Mr. Thomson is an Englishman and his advice is addressed mainly to Englishmen. He declares that England the next time she sends troops to China must send them to enforce a more considerate policy. "Continue to treat China as we have treated her in the past and our trade will inevitably suffer. Until the legitimate desires and aspirations of the Chinese are respected there will be no security, and until there is security, trade will not flourish."

SCARLET AND HYSSOP. By E. F. Benson. Cloth, pp. 374, \$1.50. New York: D. Appleton & Co.

Mr. "Dodo" Benson, literary purveyor to the London smart set, has published another exposé of his clientele. With thinly-veiled celebrities for characters, marital infidelity as his theme, and a style of cynical cleverness, Mr. Benson's story partakes strongly of the nature of highly-spiced gossip, and herein lies the secret of his vogue. Looked at as a serious satire on London "high life," the picture presented is simply disgusting—a picture of shallowness, rottenness, and ostentatious vulgarity, of men without manners or morals, and women without decency or shame. The one good woman in the book only accentuates the sordid slime of her environment. Mr. Benson's cleverest work is displayed in his drawing of the shrewd old worldling, Lady Ardingly, who makes herself the leader of the set she thoroughly understands and secretly despises, ferrets out the secrets of indiscreet wives, scolds erring husbands, and fleeces everybody she meets at bridge whist.

THE 13TH DISTRICT. By Brand Whitlock. Cloth, pp. 490, \$1.50. Indianapolis: Bowen-Merrill Co.

As all men and some women in Illinois are politicians for at least three months in every two years, it is entirely right and proper that a story of Illinois life

JOHN LANE

THE BODLEY HEAD
67 FIFTH AVENUE

NEW YORK

None But The Brave—

By HAMBLÉN SEARS

THE moods of a maid and the adventures of a Revolutionary hero are here worked up into one of the most fascinating and exciting tales yet written about the stirring days of the Revolution. Merton Balfort, the hero, and his friends, John Acton and Robert Curtis are bound up together by both choice and circumstance much as were the "three guardsmen" of Dumas, and their adventures are no less thrilling and romantic than the deeds of those classic heroes.

Rarely has there appeared in fiction a maid of such versatile powers to charm and pierce the soul of a lover, as the tantalizing royalist, Deborah Phillipse, for whom the hero gets into trap after trap, risking life and honor for her sake, only to be ignored and insulted a few moments afterward, until—but that's the story; and a charming, graphic and original denouement it presents.

Every one who loves the scenes of galloping cavaliers, brave sword-play, desperate adventures and the flash and charm of a game of hearts, will want to read NONE BUT THE BRAVE.

At all bookstores.

Illustrated, \$1.50

Dodd, Mead & Company

Publishers

372 Fifth Avenue

New York

should be a discussion of politics, though this should not lead to the conclusion that the people of that state do not have other interests at times. In Jerome Garwood, Mr. Whitlock has given a good analysis of a certain type of unscrupulous, selfish, and weakly ambitious politicians, although the reader is left somewhat in doubt, in the conclusion, as to whether Mr. Garwood is destined for the penitentiary or congress again, after his misdemeanors shall have been forgotten. The most attractive figure in the story is the sturdy old county "boss," whose profane denunciation of his former protege after the latter has tricked and betrayed him, is the most refreshing thing in the book.

THE LIFE OF JESUS CHRIST. By Rev. Walter Elliott. Cloth, pp. 763. New York: Catholic Book Exchange.

FATHER ELLIOTT expounds the orthodox Catholic view of the life and work of Jesus. He is the same man who some years ago wrote the life of Father Hecker, which called forth the papal encyclical against "Americanism." The present work, bearing the *nihil obstat* of the Rev. Remy Lafort, *censor deputatus*, should earn for the author the highest eulogy from official quarters. The basis of the work is the narrative of the four Gospels aided by such suggestive bits as other parts of the New Testament contain. In the margin of the text are many excerpts from the Gospel narrative whenever such citations are likely to be useful in throwing light on disputed points. No fault can be found with the spirit of devotion with which the whole work is instinct, but it is very doubtful if Father Elliott's unquestioning acceptance of the traditional interpretation of the New Testament will commend his book to any but the thoroughly orthodox.

RED SAUNDERS. By Henry Wallace Phillips. Cloth, pp. 210, \$1.25. New York: McClure, Phillips & Co.

READERS of *McClure's Magazine* are already familiar with Red Saunders, having become acquainted with him as the "Red Haired Cupid," the best story in the present collection. As a type of the obsolescent plainsman, miner, and all-around boon companion, Red Saunders, as Mr. Phillips presents him, is an interesting figure and his pungent, epigrammatic slang is nothing if not amusing. His impecunious recklessness is very alluring, but it must be confessed that much of his charm disappears when he is dumped penniless out of a stage, in which he was beating his way in company with that poetic and adventurous soul, Agamemnon G. Jones, and lands on a sand bar crammed with gold only waiting for him; and as the good angel of the decayed New England village, the home of his boyhood, to which he returns, he is too much like a domesticated lion to appear to advantage.

THE POLITICAL FRESHMAN. By Bushrod Washington James. Cloth, pp. 569. Philadelphia: Bushrod Library.

Pocket Size Volumes

are so much handier than the bulky "old size" volumes, that the demand for the new Pocket Size Standard Novels in the

New Century Library

is ever increasing among book lovers in America and England.

Nelson's India Paper is the thinnest printing paper in the world, and makes possible a complete standard novel in a volume only $4\frac{1}{2} \times 6\frac{1}{2}$ inches and not thicker than an ordinary magazine, yet there are from 556 to 1000 pages in each volume of the works now ready—

Dickens Thackeray Scott

The type is as large and as easily read as that you are now reading.

These volumes are as handsome as they are convenient and make a choice library set. Thackeray's Works, 14 volumes; Dickens' Works, 17 volumes; Scott's Works, 25 volumes. Single volumes at the following prices: Cloth, gilt top, \$1 a volume; Leather limp, gilt top, \$1.25 a volume; Leather boards, gilt edges, \$1.50 a volume. Also sets in cases in special bindings. For sale by all booksellers or sent postpaid on receipt of price by publishers. Descriptive lists on application.

THOS. NELSON & SONS, Publishers
Dept. 6 87-81 East 18th Street, New York.

CAME IN HANDY

Said a successful business man: "The best investment I ever made was an endowment Life Insurance Policy. It matured at the beginning of the last panic and carried my business through the dark times."

May we send pamphlet explaining our endowment policies?

PENN MUTUAL LIFE INSURANCE CO.
PHILADELPHIA

NONE BUT THE BRAVE.— By Hamblen Sears. Cloth, pp. 309, \$1.50. New York: Dodd, Mead & Co.

STILL another romance of the American revolution, but as revolutionary romances go a fairly good one. The hero marries the heroine quite by accident in the beginning of the story, and in the last chapter marries her again because he has found the matrimonial condition altogether to his liking. Meanwhile he enters New York as a spy for Washington, kills Captain Hazeltine, a doubledealing traitor, discovers the plans of Sir Henry Clinton's expedition against Rochambeaux, fails in an attempt to carry off the traitor Arnold only because of the latter's departure from the city, and is treated to a very unpleasant experience as a prisoner in the old sugar house.

ENOCH STRONE. By E. Phillips Oppenheim. Cloth, pp. 293, \$1.50. New York: G. W. Dillingham Co.

THE THEME of this story is the old one of the self-taught laboring man entering parliament and instructing trained and experienced statesmen in the way of political life, but the plot is well developed and consistent. In a moment of jealousy and anger, the man marries a woman from his own class but beneath him in intellect and tastes. A woman of rank attracts him and almost persuades him to forsake his wife and follow the path along which his ambition points him, but at the last moment his duty to his wife draws him back.

ELEMENTS OF POLITICAL ECONOMY. By J. Laurence Laughlin. Cloth, pp. 384, \$1.20. New York: American Book Co.

PROFESSOR LAUGHLIN has prepared a revised version of his treatise on political economy published some years ago. The only additions are in the way of bringing the work down to date in the discussions of the tariff, bimetallism, and industrial combinations. The use of many practical illustrations in the elucidation of the current theories of political economy gives the book a distinct advantage over the average theoretical work for purposes of elementary instruction.

TWO WINTERS IN NORWAY. By A. Edmund Spender. Cloth, pp. 270, \$4. New York: Longmans, Green & Co. MR. SPENDER has given us quite a spirited account of winter life in Norway. He writes of Norway's Olympic games, the Holmenkollen sports; of the national theater of Norway and its actors and dramatists; of military training in winter, and of a visit to the Fjeld Lapps. The work is profusely illustrated.

A MILLIONAIRE'S LOVE STORY. By Guy Boothby. Cloth, pp. 268, \$1.25. New York: F. M. Buckles & Co.

A DETECTIVE story which begins at Beachcombe-on-Sea and ends in matrimony. All the time between these interesting points is taken up with the lover's attempts to find his sweetheart and prove her innocence of the murder of which she is accused.

If you want a powerful story, follow—

THE BLAZED TRAIL

This is the trail that STEWART EDWARD WHITE

has made into a land new to American fiction. It is a story of the pine forests of Michigan, of the lumberjacks and the logging camps, of the fight of man against nature and man against man. There is a love story in it too—just enough to spice it—a lovable woman and half a hundred dare-devil heroes.

ROBERT BARR, the author, writes:

"I know of little in fiction to compare with the heroic men in *THE BLAZED TRAIL*. They are Homeric. And to think that all that superb material has been lying there all these years!"

Critics say that this new novel is a finer work than Mr. White's previous success, "The Westerners."

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, April 12

Good news predominates in the business world, notwithstanding two somewhat serious drawbacks. Weather conditions have been unsatisfactory at many points, retarding retail distribution and delaying out-door work, while excessive rain has put southern planters behind with work in the cotton fields. Still more of a handicap is the strife between wage earner and employer. Not only the rate of wages, hours of labor or recognition of the union, but the number of looms and the use of time cards are among the causes of controversy. At some mills concessions have been made, but at other plants there has been a complete suspension of work. Manufacturing is exceptionally active in lines not disturbed by strikes, and there is a vigorous movement of goods through regular channels. Transportation is heavy, as shown by railway earnings in March 5.7 per cent larger than last year, and 14.8 per cent above 1900. Lake navigation has opened two weeks earlier than usual, which will greatly facilitate traffic at

the north. Although speculation has increased very materially, it is still far short of last year's aggregate, and bank exchanges at New York for the week were 17.5 per cent less than a year ago.

STEEL AND IRON

At the close of last week negotiations were concluded for a large sale of pig iron at \$16.50, furnace, deliveries beginning in October and covering six months. This price is in line with the avowed conservative intentions of the leading interests. Yet spot transactions are reported at \$1 higher quotations whenever buyers are so fortunate as to secure prompt shipment. Not only pig iron, but bars, billets, and structural shapes are all sold so far ahead that new business is comparatively light, although consumers would quickly absorb any early deliveries that might be offered. The situation may briefly be summed up in the statement that it is the exception when order books are not filled for full capacity well toward the end of 1902. Buyers are still placing contracts abroad, and on urgent business this will probably occur frequently during the remainder of the year.

COTTON AND WOOL

Firmness in cotton goods naturally follows the combination of light stocks and the interruption of work at some mills with threatened disturbances at others, together with the higher price of raw material. In many lines it is no longer possible to secure prompt deliveries, and buyers have practically ceased to ask concessions. Jobbers are preparing for the fall trade and duplicate mail orders sustain a fair volume of current business. Local retailers are held back by bad weather, but conditions at the west are reported satisfactory. Large transactions have been effected for export, mainly of sheetings for China. Clothing buyers are seeking to secure woolen goods to substitute for deliveries retarded by the strike, but find the market heavily over-bought, and many lines withdrawn or advanced in prices. Worst manufacturers are

busy, and there is a noticeable inquiry for yarns.

CORN AND WHEAT

More animation has appeared in the speculative markets for staples. Fluctuations were more irregular in corn, which broke sharply here and at the west, but made a partial recovery, although still remaining below the best price last month. Wheat moved within narrow limits, varying a fraction according to the preponderance of good or bad crop news. The most definite dispatches indicate a slightly lower condition in the southwest, but it is still too early for anything positive. Western receipts for the week were 1,722,542 bushels, against 2,968,042 a year ago, and the total for the crop year is gradually falling back to last year's figures. Lower prices stimulated exports for a time, but shipments of wheat and flour from all ports of the United States during the week were only 3,849,970 bushels, against 4,976,810 last year, and Atlantic exports of corn were only 159,213 bushels, against 2,020,349 a year ago.

FAILURES

Failures for the week numbered 198 in the United States against 203 last year, and 19 in Canada against 24 last year.

Financial

Bradstreet's, New York, April 12
THE MONEY MARKET

Last Saturday's unfavorable bank statement, showing that a number of institutions at New York were below the mark in their reserves, indicated clearly to the loan market that a curtailment of accommodations was in order. The effect of this was supplemented on last Monday by the somewhat unexpected announcement that \$2,500,000 gold had

A WHOLE FORTUNE

Good Food and Good Health

This food tale from a trained nurse is worth reading.

"I want to tell you of the curative properties of the good food Grape-Nuts, and will say they are a whole fortune to anyone suffering as I did for years with a stomach so rebellious as to be almost useless to me.

For years and years I was tortured with flatulency, heart burn, bloating, tenderness of the stomach, and many a time I cried bitterly because of my great distress.

One never to be forgotten day sister came up from Columbus to visit me. She brought a package of Grape-Nuts to see if the food would agree with me. I found the new food very delicious with cream, and it caused me no pain or disturbance whatever.

To make a long story short I have been using Grape-Nuts ever since. Have gained 20 pounds in five months and my health is perfect. It is a pleasure to be plump and healthy and feel well again. I am a professional nurse and naturally appreciate this change in my health." Lucy N. Richardson, Box 164, Logan, Ohio.

Can't Help

hearing about
Pearline. Pearline alone has reformed—made easy—the whole business of washing. Millions of thrifty women are using it in place of soap. Find out, in your own way, whether Pearline is the best and most economical washing medium. Ask about it. Test it. 665

Wash With It

PARALYSIS

Hopeless as paralysis seems to be, there is a strong chance of complete recovery, and you can surely ward off the danger of another shock and stop the advance of the disease.

I had paralysis of the legs and all the symptoms of locomotor ataxia. I got considerable relief in two weeks' use of the Electropoise. I can now (one year later) walk a mile or two without unusual fatigue and can attend to my business well."

JAMES F. McMANUS, West New Brighton S. I.

Cost no more than plain lamps

in most cases and cost less than plain lamps in many cases. **HYLO** lamps have two filaments, one of which takes so little current that it is remarkably durable. These two filaments will wear as long as three ordinary lamps. The first cost is higher, but the final cost is no more with **HYLO** than with common electric globes.

If you pay a fixed price per month for your electric lights you may not care about saving current, (the **HYLO** saves five-sixths), but you cannot afford to do without the comfort and convenience of a turn-down lamp. In halls, closets, bedrooms, bath-rooms, porch and parlor (meter or no meter) you need the

HYLO.

If your electrician is so far behind the times that he does not sell the **HYLO** send us 75 cents for sample by mail. Write for descriptive circular anyway.

THE HYLO COMPANY
8 State St., Detroit, Mich., U. S. A.

been taken for shipment to Europe by Tuesday's steamer. Demands for money still exist at interior cities, and the shipment of about \$200,000 to Cincinnati was one of the items of financial news in the early part of the week. Call loan rates stiffened at once, and though 4 per cent was quoted after the daily stock exchange requirements had been supplied, the bulk of the loans on call were at between 5 and 6 per cent, and on Wednesday as high as 7 per cent was recorded in a few instances. The offerings of money on call were curtailed, but, though the stock market was more active, no special pressure was seen and large sterling loans were effected, which relieved the money market and caused a decline in exchange rates. Time money is in fair supply, and the prevalent rates on mixed collateral are $4\frac{1}{4}$ @ $4\frac{3}{4}$ per cent. Commercial paper is dull, with limited offerings and a rather restricted buying demand, the rates for double names being $4\frac{1}{2}$ @5 per cent.

THE STOCK MARKET

Decided activity has prevailed in the New York stock market, interest centering in heavy transactions in, and a large advance of, Louisville & Nashville. Opinion is divided as to whether the movement is manipulation or buying for control. Fears of another corner like that of last May in Northern Pacific had some effect on speculative sentiment, but the market is generally strong, and advances have been seen in standard stocks, railroad specialties and some industrials. Bonds are very active, with advances in several semispeculative issues. Foreign exchange is weaker at 4.875% for demand sterling, owing to large sterling loans being made at New York. Early in the week high rates for exchange led to the shipment of \$2,500,000 gold to Paris.

BANK CLEARINGS

Bank clearings for the week ending with April 10 aggregate \$2,247,119,858, an increase of 14 per cent over last week's total, but a decline of 10 per cent from a year ago. Exchanges at cities outside of New York amount to \$784,449,408, a gain of 2 per cent over last week, and an increase of 5.8 per cent over last year.

Banking Growth Under the New Law

The current number of *Bradstreet's* gives the statistics recently prepared by the comptroller of the currency, showing the growth of the national banking system since the new currency and banking act went into effect. As it happens, the period covered by the statistics, which go down to March 31 last, is one of a little over two years, the new law having been passed on March 14, 1900. Since that date 919 banks were organized. Those having a capital of less than \$50,000 numbered 611 and had a total capital of \$16,004,000, while those having a capital of \$50,000 or over numbered 308 and had a total capital of \$34,265,000. In other words, one-third of the new banks held over two-thirds of the capital. Of the 919 banks enu-

merated, 121 banks, with a capital of \$8,595,000, represented conversions of state banks; 290, with a capital of \$15,130,000, represented reorganizations of state or private banks liquidated for that purpose, and 508 banks, with a capital of \$26,544,000, were primary organizations. It will be seen, therefore, that a little more than half of the new banks—55 per cent—represented primary organizations. At the end of March the banks in the national system numbered 4,422. They had an authorized capital of \$672,759,195, a circulation amounting to \$317,526,330, based on bonds deposited to the amount of \$319,526,330, and a circulation amounting to \$40,016,025, based on the deposit of lawful money.

Various Topics

Six thousand bituminous coal miners are idle in Indiana, pending settlement of grievances.

A Toronto stock exchange seat sold recently at \$14,000. Eight months ago they were selling at \$6,000.

Secretary of the Treasury Shaw has ordered an increase in the amount of government funds on deposit in the national banks to the extent of \$4,014,000.

English cotton spinners using American cotton are curtailing production. In southeastern Lancashire 10,000,000 spindles are idle, and 10,000 operatives are working on short time.

The New York Security and Trust company on April 2 declared a quarterly dividend of 8 per cent, which suggests 32 per cent yearly, 12 per cent over the dividend of 1901.

President James McMahon, of the Blast Furnace Workers of America, has ordered that on and after May 1, 1902, eight hours shall constitute a day's work at the same rate of pay the men are now receiving for twelve hours' work.

It has been announced that Speyer Bros., of London, Speyer & Co., of New York, and the Old Colony Trust company, of Boston have formed a syndicate for £5,000,000 sterling to take the shares of the Underground Electric Railway company of London (Eng.), Limited.

The value of the five principal articles of domestic export for the nine months ended March 31 shows a falling off of \$39,986,495 compared with the same period last year, and for the month of March a decrease of \$18,178,288 compared with the same month of 1901.

An advance of about 10 per cent in wages of the cotton mill operatives in the southern half of New England went into effect Monday in practically every mill town in the territory named, with the exception of Fall River, where the increase was given last month.

The board of directors of the United States steel corporation approved the plan for the retirement of \$200,000,000 of the preferred stock and the issuance of \$250,000,000 5 per cent bonds, declared dividends of $1\frac{3}{4}$ and 1 per cent, respectively, on preferred and common stock, and issued a statement showing net earnings for the year, of \$111,067,195.

WIT AND HUMOR

Why Not

I gardened in the evening shade,
And birds around me songed;
Indoors my friends, as sounds betrayed,
Ping ponged.

'Twas then that Jones came horsing by—
His steed was newly shoed—
He cordially "hulloa"-ed, and I
"How-doed."

He told me how his meadows grassed
And how his poultry egged;
His views how houses should be glassed
I begged.

So he opinioned till I tired,
And backed him from the theme,
And then of butt'ring cows inquired
And cream.

While thus we conversationed, Time
With ruthless footsteps onned,
It darked, we heard the Vesper chime
From yond.

At last we felt that we must part,
"Farewell, my friend," I cried,
And he with anguish at his heart,
"Good-byed."
—*London Chronicle.*

WIT AND HUMOR

Suggestions for a Popular Song
(Submitted to composers of touching and sentimental airs.)

By a cottage neat,
So trim and sweet,
Stood, once upon a time,
A maiden fair,
With jet-black hair,
And never mind the rime;
A youth came nigh,
With loving eye,
And fondly did he greet her.
The youth, mind you, had
Walked eleven miles to see her,
And never mind the meter!

Chorus:

Pretty Maggie O'Rafferty,
Ever so tender and true,
Poor young Patsy McCafferty
Is having a fit about you;
He's coming, I ween, and likewise I
trow,
I ask you, forsooth, to marry him
now,
And I've gone and rimed two of the
lines, anyhow,
Pretty Ma-ag-gie O'Ra-af-ferty.
—*Harvard Lampoon.*

Anticlimaxes

I stood on the bridge at midnight,
And the clock was striking the hour;
The hour rose up, indignant,
And struck back with all its power.
—*Life.*

We long for rest—for rest and play,
Our heart gives forth but weary throbs;
We long to rest, but never may,
Lest others come and get our jobs.
—*Chicago Record-Herald.*

You can not choose your earthly lot,
Nor right all seeming wrongs.
The clam likes not
The chowder hot;
But that's where he belongs.

Two Thousand Years of Missions Before Carey

By LEMUEL CALL BARNES, D.D.

Its Scope. This volume sketches the two thousand years of missionary activity before the time of William Carey. Christians generally know something of the missions of the last century, but are unfamiliar, for the most part, with the impressive missionary history of the preceding twenty centuries. One chief reason for this is the fact that the information has not been obtainable in any one volume or set of volumes, or in any ordinary library.

Its Plan. The book traces in an original and comprehensive way the continuity of missions. In the chapter at the beginning on "The Messianic Race Missionary," the author finds the missionary idea at the very tap-root of the Hebrew nation, and follows its development in a way not elsewhere so carefully worked out. The last chapter brings out a spiritual lineage in missions which no other author has traced through, but which is as unmistakable, when once pointed out, as it is stimulating to faith.

The Monuments and the Old Testament

Oriental Light on Holy Writ

By IRA MAURICE PRICE, Ph. D.

Professor of Semitic Languages and Literatures in the University of Chicago.

The Book. The records of the excavations, discoveries and decipherments fill scores of volumes, but this is the only single volume that attempts to cover the whole field in a systematic and chronological order.

Its Reception. The book is already in the third edition and has received the highest commendations of the press. Everybody concedes that Professor Price has successfully accomplished his purpose.

The Arrangement. The book is so arranged that students may read it alongside of their Old Testament history, and secure no: only a new background for that history, but also new and often marvelous contemporaneous testimony to the accuracy and veracity of the Biblical narrative.

The Illustrations. The volume has over 40 full-page illustrations, most of which are half-tones from original photographs by the author, or from other reliable sources, including two original maps, all of which form an exceedingly helpful accompaniment for the narrative.

The Third Edition of Each Book is Now Ready. 12mo, Cloth, Each, \$1.50 Net.

HOW to BREATHE for HEALTH, STRENGTH and ENDURANCE

The aim of every system of physical exercise is to invigorate and rebuild the internal organism—the Lungs, Heart, Stomach, Liver, Intestines, etc. By intelligently applied

Breathing Gymnastics

I accomplish this directly. My method enables the weakest woman to invigorate her internal organs as thoroughly as though she possessed the muscles and endurance of a Hercules. I first develop your lungs and teach you how to breathe deeply, causing an abundant supply of rich blood to flow through every vein in the body. Then, I develop your external body. Adopting any other method is like beginning at the end and working backwards. I guarantee unquestionable results. Let me send you my handsomely illustrated book, "Experience versus Experiment," descriptive of my course and methods. IT'S FREE.

P. von Boeckmann, R.S.
1153 Hartford Bldg., Union Sq., New York City

NOTE.—I publish a 64-page illustrated book on Breathing and Exercise, including a Chart of valuable Exercises for the development of the lungs and muscular system. It is the most instructive treatise ever published on this subject and is well worth ten times the small price asked. Sent on receipt of ten cents.

PUBLIC OPINION

Number 17
Volume XXXII

The Week

Thursday
April 24, 1902

CONGRESS has at last passed the Cuban reciprocity bill with the amendment offered by Mr. Morris, of Minnesota, abolishing the differential rate on refined sugar. In the vote on the amendment the curious spectacle was presented of the beet sugar men voting with the Democrats and the anti-protection Republicans for its passage. Chairman Payne holds that the amendment also does away with the countervailing duty on sugar from countries paying bounties. The general opinion is that the Democrats have scored on the Republicans in this matter in two ways: by presenting a united and reasonable opposition, and by supporting a measure that was demanded by the administration and by large numbers of people all over the country. The vote of the beet sugar men on the Morris amendment is explained by their desire to expose the sugar trust to as dangerous a foreign competition as that to which they are laid open. Meanwhile the Democrats are happy in the belief that they have divided the enemy and scored an important victory over both sections.

ANOTHER move is to be recorded in the new game of combining combinations. Six large transatlantic steamship lines have been brought together under a central control through the good efforts of that industrial Aladdin, J. P. Morgan. The lines concerned are the White Star, Dominion, Leyland, Atlantic Transport, American, and Red Star. The plan of organization is similar to that of the United States steel corporation. The new company will control a fleet of two hundred and eight vessels, about one-third of them being of American registry and the remainder of British. The capital stock will be \$150,000,000. It is announced that the registry of the boats is to remain as before, in order that their claims on subsidy grants may not be imperilled. Mr. Morgan has been in England only a week or two; it will be interesting to observe what happens when he has had time to get fairly started.

THE latest from the Philippines is the announcement of the surrender of the insurgent chief Malvar to General Bell and the collapse of the rebellion in the northern islands. Malvar was the virtual successor of Aguinaldo, and his capture opens the way for the establishment of some sort of civil government in the provinces within his sphere of insurrection. Malvar's greatest talent seems to have been in the way he could keep the American troops out of breath chasing him in one province while he was lying safely hidden away in another, rather than in any serious blows that he ever dealt our forces. Now those troops can be used for more fruitful occupations than running foot races with the clever Filipino and his men.

MEANWHILE the country is clamoring for an investigation of the investigation of Major Waller, referred to in the American Affairs department of this issue. The senate investigating committee is still hearing evidence on the conduct of our soldiers in the islands. Many witnesses have testified to the use of the water torture, and the case appears to be a strong one. The acquittal of Major Waller has in a measure cleared his skirts of the charge of abuse of power, but the outcry against him has turned into a demand for an investigation "higher up."

A NOTABLE event in university history was the inauguration last week of President Nicholas Murray Butler, of Columbia university. Dr. Butler is the twelfth president of Columbia, and a worthy successor to Low and Barnard. Graduating from Columbia in the class of '82, he has been for a number of years dean of the department of philosophy, and a recognized authority on education. A striking circumstance

of the ceremonies was the fact that among the guests of the university were the president of the United States, the governor of the state of New York, and the mayor of New York city, all of them former students at Columbia.

IOWA comes to the front again with another presidential appointee. This time it is Mr. James S. Clarkson, who has been named by the president to be surveyor of customs for the port of New York. One editorial critic denounces the appointment as "amazing and incomprehensible," because of Mr. Clarkson's record as a spoilsman and a bitter opponent of Mr. Roosevelt, when the latter was head of the civil service commission. If it is amazing and incomprehensible that the president should be able to recognize merit in a political enemy, then the whole career of Mr. Roosevelt hitherto has gone for nothing; if, on the other hand, the charges against Mr. Clarkson are true, the only reason that can be alleged for his appointment is the fact that he comes from Iowa.

BRITONS and Boers are still talking peace and fighting as doggedly as ever, when they can find each other. There have been many rumors, but the only authoritative announcement is that the Boer leaders have left Pretoria to arrange a conference of the generals in the field to consider the terms offered by the British. An armistice was asked for, but this General Kitchener refused to grant for military reasons. It is stated that the difficulty is over the return of the exiled prisoners and the amnesty to the Cape rebels. The Boers have expressed themselves as willing to accept the fact of incorporation into the empire if a measure of self-government is allowed them. The British have inaugurated a policy of "thorough" in Ireland in the shape of the Crimes act, applying to nine counties and providing for the partial suspension of trial by jury and change of venue in cases of alleged conspiracy.

LATE reports from Belgium indicate that the Socialistic uprising there is on the verge of collapse. The chamber of deputies refused to grant the desired revision of the constitution, and the leaders of the Socialists have advised the abandonment of the movement. The reason given by the Liberal leaders for the appeal to M. Van der Velde, the head of the Socialists, to put a stop to the agitation was that the public peace might become seriously endangered. The order for a general strike has been countermanded, although all the industries of the kingdom have been at a practical standstill for a week. Such regard for the public order on the part of continental Socialists is an inspiring sight, and it would be unkind to intimate that fear of ultimate defeat had anything to do with the decision to withdraw from the conflict.

THE demon of assassination is abroad again in Russia. A week ago the minister of the interior was shot by a student at St. Petersburg, and last Sunday's cables chronicled the assassination of M. Skinoff, the secretary of the government at Minsk, by a student at Warsaw university. These affairs are the direct result of the recent trouble between the ministry and the students at the various universities of the empire. As the popularity of the czar grows among his people, that of his ministers declines. The banishment of the student agitators to Siberia is laid at their door, and they are also blamed for the strictness of the press censorship. The mutual strife is cumulative. As the anger of the students grows, the rigor of the ministerial rule increases. If each decree of exile causes the assassination of a minister and each assassination brings forth another decree of exile, the logical result would seem to be to eventually land all the students in Siberia and all the ministers—somewhere else.

AMERICAN

American Troops Torture Filipinos

REVELATIONS AT THE TRIAL OF MAJOR WALLER

THE acquittal of Major Waller by the court-martial at Manila, on the charge of violating the rules of war by the torture and execution of natives in the province of Samar, instead of silencing criticism, has only served to open the whole Philippine controversy again. Major Waller's defense contained two points: (1) his acts were necessary to prevent the annihilation of his command, and (2) he was acting in obedience to the orders of his superior officer, General Jacob H. Smith, who had directed him to make Samar a "howling wilderness." Major Waller's testimony on this point was corroborated by Captains Porter and Bears and Lieutenant Helford, of the marine corps, but was denied by General Smith. Secretary Root has cabled General Chaffee, at Manila, to investigate the case, and, if the evidence seems to justify such a course, to court-martial General Smith. Witnesses before the senate investigating committee have testified to the use of the "water-cure" torture, the principal instance cited being that of the presidente of Igaras, in the province of Panay. Added to this is the report from Major Gardener, civil governor of Tayabas, that the inhumanities of the American troops have done much to alienate the natives of that province.

In the opinion of the New York *Evening Post*, a most strenuous and consistent opponent of the policy of the administration in the Philippines, "there has never been a more striking illustration of the fact that truth, like murder, will out." The Springfield (Mass.) *Republican*, another vigorous critic of the administration, demands the prompt trial of General Smith, although it thinks that American honor will not be fully vindicated until we "go back to American principles and adjust our policy in the Philippines to the Declaration of Independence. The vigorous tone of the orders to General Chaffee is all that could be desired, and the only cause for wonder is that our chief military authorities are apparently the last persons in the world to learn that there is anything to investigate or anything that warrants a series of court-martials." The New York *Tribune* (Rep.) joins in the cry for further investigation, but qualifies it with the statement that the crimes charged against the American

troops are not "because of, but in spite of, the government's general policy in the Philippines. The objects of that policy are not war and cruelty, but peace and humanity. If any men do wrong in trying to fulfill that policy, the penalty must fall not upon the policy, but upon those men. It is not for the government or for the nation to condone or to ignore evil deeds; neither is it to forsake, because of evil deeds, a righteous policy, but rather to 'strive on to finish the work we are in.'"

In the opinion of the *Pittsburg Gazette* (Rep.) the recent revelations justify the "declaration made by General Miles for which he was condemned in the last official communications that passed between him and the secretary of war." The *Boston Post* (Dem.) calls on congress to strip the "mask of 'benevolent assimilation' from this administration. Let the people have all the facts so carefully concealed and so unblushingly denied by the war department. Let them see what really has been done in their name in the torture of non-combatants, the murder of prisoners, the burning indiscriminately of all dwellings in villages where some few 'insurgents' have been found."

On the other hand, the *Boston Journal* (Rep.) defends Major Waller's action on the ground that "it was an iron emergency, and it could be met only in an iron way. Our own is the only military service in the world in which an officer who had done as Major Waller did would ever be brought to trial." The *Providence* (R. I.) *Journal* (Ind.) concurs in this opinion, calling it "one of those necessities of war

which it would be mere sentimentality to blame."

Major Waller's partial reliance upon martial law for his justification is criticized by the *Baltimore American* (Rep.): "Martial law, reduced to its simplest and most elementary form, means the absence of all law, except the will of the commanding officer. This presumes that the latter has the qualities entitling him to be trusted with such exceptional and grave responsibilities, and that he will use his power humanely and for the credit of his country. To inflict such a stigma upon the nation, under the pretense of administering law of any kind is a most shameful abuse of power and an inadmissible conception of a soldier's honor and duty."

GENERAL JACOB H. SMITH

Governor Dole Sustained*New York Evening Post*

PRESIDENT ROOSEVELT has followed the best advice in determining to retain Mr. Dole as governor of Hawaii. The attacks upon that official have been violent in the extreme, but have been made largely by the carpet-bagger element in the islands. Shortly after annexation, a set of political adventurers descended upon Hawaii, and boldly undertook, by use of the baser methods of American machine politics, to make themselves masters of the insular government. In alliance with the more ignorant natives, they have made all the trouble possible in the legislature, have got the judiciary into a turmoil, and have heaped the bitterest abuse upon Governor Dole for doing all that he could to thwart their schemes. They boasted that they would have his head, and, in fact, more than two months ago announced that he was to be removed from office, and that a creature of their own would be named in his place. But the president wisely decided to hear before striking, and after consulting with those best fitted to give him unbiased information, has concluded to keep Governor Dole where he is.

Washington Star

Governor Dole's visit to Washington was happily conceived. It brought into close contact two men who stand, as to Hawaii, for precisely the same proposition: the working out of the problems of government against difficulties for which neither is today responsible. The greater part of the friction which has developed in Hawaii during the past few years may be traced to the mistake of admitting the natives to unlimited suffrage, on a broader basis than that which prevailed under the provisional government of the Hawaiian republic, against which that government protested and which was committed before President Roosevelt entered office. It is the belief of the men at the head of the territory today that if the insular administration is stanchly supported for a few years by the federal administration, Hawaii can work out its own destiny even against the handicap of the unwisely liberal franchise. The president's decision means that Hawaii's future will grow steadily brighter. Had it been adverse to the Dole administration, it would have precipitated a period of carpet-bagging, place-hunting, factionalism, and intrigue, retarding Hawaiian progress and prosperity for many years.

Pension for Mrs. McKinley*Chicago Journal*

THE bill granting a pension of \$5,000 a year to Mrs. McKinley has been passed by the house of representatives. It had previously passed the senate. Incredible as it may seem, one representative was found ignorant enough and contemptible enough to oppose its passage. This was John C. Bell, of Colorado. This opposition was grounded on the demagogue's usual plea that many widows of poor soldiers had no pension, while the widow of the late president had independent means and needed no pension. Representative Richardson, the Democratic leader, and Representative Kleberg, of Texas, both rebuked Bell for his opposition and supported the bill, which was then passed unanimously.

The custom of pensioning the widows of the presidents began, we believe, with Mrs. James K. Polk, who received \$3,000 a year. After Mr. Lincoln's assassination, the same pension was paid to Mrs. Lincoln. Then came the death of President Garfield in 1881, and the question of a pension for Mrs. Garfield was brought before congress. At this time Mrs. Julia Gardiner Tyler, the widow of ex-President John Tyler, was living, and it was mooted whether she was not entitled to pension also. John Tyler died in 1862, having taken part with the confederacy and being a member of the confederate congress at the time of his death. After some discussion, congress passed a bill granting pensions of \$5,000 each to Mrs. Garfield and Mrs. Tyler and increasing the pensions of Mrs. Polk and Mrs. Lincoln to the same amount. After General Grant's death, a similar pension was conferred on Mrs. Grant. Thus the policy of granting pensions to the widows of ex-presidents has long been established, and ever since the death of President McKinley it has been assumed as a matter of course that a like pension would be given to Mrs. McKinley.

Chinese Exclusion in the Senate

THE PLATT AMENDMENT SUBSTITUTED FOR THE HOUSE BILL

IN the senate, the house bill providing for the exclusion of the Chinese has been shelved for the amendment offered by Senator Platt, of Connecticut, which practically continues the present law for the two remaining years of the existing treaty with China. The amendment extends the provisions of the law to all the island territory now under the control of the United States. The action of the senate is commended by the *Philadelphia Press* on the ground that the "present laws are severe enough. Under the treasury constructions that have become attached to them they are often oppressive. It would be well to curtail their asperities in some respects, and certainly the latter should not be aggravated by still more harsh provisions."

The *Indianapolis News* believes that "there is a good deal more politics—and of a rather disreputable kind—than there is business in this agitation for more stringent legislation. The people are little interested in it. There is no great demand for it, except as one has been manufactured. We all know that the number of Chinese in this country is falling off, and has been falling off for years." "The question of how far we should exclude the Chinese from admittance into this country is one of practical politics and economic expediency," says the *Pittsburg Gazette*. "We get on very well with the Chinese in many respects, because, being so few comparatively in an immense population, except in San Francisco and to a less extent in New York, they do not seriously affect the labor market. The country has expressed its determination through its representatives in congress not to let down the bars lower than they are under the existing law. But it is doubtful if the people as a whole are prepared to raise them any higher if by doing so it would prospectively prove detrimental to our future commercial relations and expansion in the greatest market of the eastern hemisphere."

The *New York Times* considers that, after the agitation for exclusion, an extension of the present law was inevitable, but concludes that "in view of all that we have done and insisted upon to protect our right to the open door in China, it would be a national dis-

grace and a national misfortune if the new law should carry the principle of exclusion to unreasonable and offensive lengths." The *New York Journal* takes the unconditional ground that the house bill "was framed by Pacific coast experts, who are best informed on the problem, and it has the endorsement of the men in congress and out of it, about whose desire to exclude the Chinese there can be no doubt. Should the bill be defeated outright, or so amended as to fail of its declared purpose—exclusion of the Chinese—real exclusion—the Republican party will have to bear the responsibility before the country."

It is the complaint of the *Philadelphia Record* that the "Platt amendment is silent as to the sections of the act of September, 1888, under the terms of which Chinese laborers who have once left the United States are forbidden to return. This law is based upon a treaty never ratified by China, and its validity, although affirmed by the solicitor of the treasury, is now in question before the federal supreme court. Should that tribunal decide adversely as to the legality of the enactment, a new channel of Chinese immigration, of unknown capacity and volume, would be created."

The New Pension Commissioner

EUGENE F. WARE, OF KANSAS, APPOINTED

THE appointment of Mr. Eugene F. Ware, "Iron-quill," of Kansas, to succeed Mr. Henry Clay Evans as commissioner of pensions, has aroused a diversity of comment. The *Boston Herald* (Ind.) looks askance at the appointment of a man from Kansas, "for Kansas has been the most prominent and persistent of all the states in opposing Commissioner Evans. The selection of his successor from that state, therefore, looks as if the president, in making the change, went to the locality in which Mr. Evans's policy was most disliked to find a man to take his place." The *Philadelphia Public Ledger* (Ind.) has not yet recovered from the resignation of Mr. Evans, and sums up its estimate of Mr. Ware by saying: "There is nothing in the story of his life to indicate that he will fail to make a good, law-abiding pension commissioner; nor is there anything in it to justify the removal of Commissioner Evans to make room for him. He will certainly not be any better than Mr. Evans, and he may be worse." The Democratic comment is tinged with bitterness. The *Hartford* (Conn.) *Times* predicts that "if Mr. Ware should turn out to be, after all, a plucky, honest veteran, like Mr. Evans, the men who have been demanding a change in the office will be utterly disappointed. But probably he will be neither an Evans nor a favorite of the pension sharks. He will doubtless pursue 'a middle course' and try to spread the idea that Theodore Roosevelt is the man the country needs in the White House from 1905 until 1909." The *Chicago Chronicle*, a violent anti-administration organ, attacks the appointment more bitterly. "The president had already made selections from his wide range of personal acquaintances, from romping broncho busters of New Mexico and shady reformed gamblers of Arizona, to fill offices of responsibility and trust," says the *Chronicle*, "and it was to be expected that he would sooner or later broaden out and pull in a few celebrities of purely literary distinction. For this latter class Kansas was kindly reserved, and the pension department of the government was singled out for the honor with nice discrimination as to the everlasting fitness of things."

Hill for President?

PROPOSED FOR PRESIDENCY IN 1904

A NOTABLE occasion in Democratic politics was the speech of David B. Hill at the Democratic club in New York, on the anniversary of the birthday of Jefferson. In the course of the dinner, Congressman Ball, of Texas, named Mr. Hill as the Democratic nominee for president in 1904 and assured him of the support of southern Democrats. The announcement has been received with considerable favor by Democratic organs. The *Brooklyn Citizen* says: "Whatever else may be said in disparagement of Senator Hill, in his political career he has lived up to Jefferson's dictum that money-making and public service are incompatible. As governor, United States senator, and party leader, Senator Hill has never had any entangling business alliances to come between him and the consideration of public questions solely from the standpoint of public and party policy. In this respect Mr. Hill is a true and, we may add, a rare disciple of Thomas Jefferson."

The *New York Times* concedes that "there are old-fashioned Democrats who will doubt whether Mr. Hill is just the sort of Moses to lead the Democratic party out of the wilderness. But if they will reflect upon the matter they will perceive that he has added many cubits to his stature since the days when he was the unquestioned boss and did things which the old-fashioned Democrats abhorred." The *Philadelphia Times* considers the time favorable for party reunion, since "on the issue of the tariff and its resulting 'trusts' there can be no difference of opinion among Democrats, and in pushing forward this issue, upon which Republican policy is falling into confusion, the Democratic party can get away from its temporary dissensions and present again a united front against the encroachments of protected monopoly. The coming together in New York is an encouraging example for the party everywhere, and the more so because of the desire shown by representative Democrats from the south to 'get behind and help along.'"

The *Indianapolis News* (Ind.) thinks the first and most important step is a plain declaration of the party's position on the fundamental issues. "The people must feel that the party really means what it says. The Bryan obstacle can be got over. So can the others in the way—but only by being brave and honest. There is no reason why the people should turn from the Republican party to the Democratic party, if the latter is going to adopt and apply Republican policies whenever certain of its members decide that money can be made by so doing."

A Mail Currency

Sioux City (Ia.) Journal

A COMMISSION representing the treasury and post office departments is investigating the merits of a scheme, proposed in congress, to supplant the money-order system of the latter department with a post-check system which shall also be a factor in the general currency. The plan has the endorsement of Third Assistant Postmaster-General Madden, and is understood to be looked upon with favor by officials in both post office and treasury departments. The scheme is an amazingly simple one. It is proposed

that all treasury notes, coin or silver certificates of the denomination of \$1, \$2, and \$5 shall be issued in the form of post checks. They would be similar in appearance to the notes as issued at present, and in the first place would be issued and circulated just as the notes are now. The important change proposed is that each note of the denomination mentioned shall be provided with blank lines which may be filled in, making the note payable only to a single individual, whose address is also to be placed on the note. Any

the cumbersome process of securing a money order. It would give towns where money-order departments are not maintained all the advantages of the money-order system. As it is at present, many persons send money by mail in preference to going to the expense and trouble of securing money orders. Thousands of dollars are lost annually in the mails in this way. By the post-check system money might be sent by mail as safely as a bank check, and the temptation to pilfer from the mails would be largely removed.

person wishing to send one of the notes by mail will be required to fill in the blank lines, giving the name and address of the payee. This done, a 2-cent postage stamp must be attached to the note and canceled, as in the case of the revenue stamps of recent experience. So arranged, the note becomes a post check, payable only to the person whose name is written thereon, and may be cashed only in the post office at the town named.

Many advantages are claimed for the post-check plan. It would do away with the maintenance of an elaborate money-order business by the post office department. It would save the sender of money the trouble of visiting the post office and going through

CONGRESS spent most of the week discussing the Chinese exclusion bill in the senate and Cuban reciprocity in the house. Both bills were passed. The Chinese bill passed by the senate was the Platt amendment substituted for the drastic house measure. In the Cuban debate in the house, Mr. Cushman (Rep.), of Washington, arraigned the speaker and the committee on rules for making legislation a matter of arrangement and bargain. The president, in response to a request, sent to the house the documents and correspondence relating to the shipment of British supplies from Port Chalmette, Louisiana. On Saturday, the Fortifications appropriation bill was passed by the house. The senate indulged in a little discussion of the Nicaragua canal, but there was slight interest. The publication of the new Colombian protocol had the effect of destroying what enthusiasm there was.

A New Inauguration Day

COMMITTEE RECOMMENDS THE LAST THURSDAY IN APRIL

THE national committee appointed to inquire into the most favorable date for presidential inaugurations has finally hit upon the last Thursday in April. The suggestion seems wise to the *Washington Star*, for the reason "that only thus can the embarrassment of inauguration day falling upon Sunday be prevented. Under this system, of course, the occasion of the induction of the president into office can not be designated by a specific date, as is now the case with 'the fourth of March.' It must become known as 'Inauguration Day,' on the same principle on which 'Thanksgiving Day,' another movable celebration, is thus designated. In this there will be a slight gain in dignifying the significant occasions of the nation's year with titles." The Duluth (Minn.) *News-Tribune* considers that the prime reason for changing the date of inauguration is not that better weather may be secured for the ceremony, but for the purpose of "extending the length of the second, or short, session of congress, which is too brief for the transaction of the necessary business of the nation, which presses harder and harder on congress."

The New York *Tribune* opposes the change for the following reason: "In case inauguration day should be changed to the last Thursday in April, the terms of future presidents would not be four years or of equal length, but would necessarily vary according to the calendar. Looking back over the last quarter of a century, we find that the last Thursday of April was, in 1877, the 26th; in 1881, the 28th; in 1885, the 30th; in 1889, the 25th; in 1893, the 27th; in 1897, the 29th, and in 1901, the 25th. If, therefore, the proposed change had gone into effect during the latter part of Grant's administration, thus prolonging his second term nearly eight weeks in order to initiate the new system, Hayes would have served two days more than four years, and Garfield, had he lived, two days more; Cleveland five days less than four years, Harrison two days more, Cleveland, again, two days more, and McKinley's first term would have been four days short."

Popular Election of Senators Sidetracked

SENATOR DEPEW'S AMENDMENT

POPULAR election of senators has received a severe shock in the amendment offered by Senator Depew, of New York, providing that the qualifications for suffrage in the election of senators and representatives shall be uniform in all the states, and giving the federal government power to supervise the registration and voting. In most places the amendment is regarded as a shrewd parliamentary move to kill the bill. The Rochester (N. Y.) *Democrat and Chronicle* approves of Senator Depew's action, but adds: "The senate will not be justified in regarding the amendment as a sufficient safeguard and passing the resolution as amended. Defeat of the resolution, amended or unamended, is the safest and best course." The Milwaukee *Evening Wisconsin* makes bitter reference to the effect of the proposition on Democrats. "The simple and manifestly fair and patriotic proposition added to the measure by Senator Depew acts upon Democratic appetite like poison in the broth.

The Democrats have depraved appetites. The trouble is with them and not with Senator Depew's amendment."

Since the southern voters would be most affected by the change, the expressions of southern papers are more important and pertinent. The Columbia (S. C.) *State* vainly prays for the defeat of the amendment, but pluckily declares that "defeated or not this time, the bill will appear again. The house has been quick to pass it more than once. And the house knows what the people want just as the senate knows what the railroads and the trusts want. It will be made an issue in every campaign until the constitution is amended." The Augusta (Ga.) *Chronicle* regrets to see "this evidence of an inclination to continue nagging at this subject. In reality, of course, it is a subject the investigation of which we need not dread, but it will cause a lot of bother and ill-feeling for which there is no necessity. We simply want to be let alone." The Birmingham (Ala.) *News* contends that there is no "logic in the contention made by Senator Depew that if the mode of selecting senators is to be altered that the basis of representation should also be changed. It serves its purpose, however, and the resolution may as well be abandoned."

Vote or Be a Juror

Chicago Chronicle. Excerpt

THE legislature of the state of New York that has just closed its session seems, from all accounts, to have accomplished considerable work, though whether all of it will stand the test of experience is a problem. One of the acts is of curious interest, because aimed at the much-criticized tendency among American men of cultivation and means to claim all the privileges of citizenship and yet shirk as many of its burdens as they can. This act provides that a list shall be made of all the citizens of New York city who do not qualify to vote by having their names registered and that this list of vote-dodgers shall constitute a special preferred jury list, from which all jurors required by the courts shall be drawn until it shall be exhausted before registered voters can be called on for jury duty. This puts the act of voting on the footing of duty as well as privilege, and declares, in effect, that competent men shall not shirk both duties of voting and serving as jurors. If they insist on evading the one they will incur almost a certainty of the other. The advocates of the measure estimate that it will add probably more than 10,000 to the city's registry, almost wholly of men of standing and intelligence who have heretofore escaped both duties by keeping off the registry list.

FATE OF SHIP SUBSIDY: There is good reason for believing that even before the announcement of the steamship consolidation the subsidy was very near to death, at least so far as this session of congress is concerned. In a quarter which is very close to Mr. Henderson it is pointed out that there are about six appropriation bills still to pass the house; that it has been decided that the Omnibus statehood bill, the Irrigation bill, the bill codifying the immigration laws, and several other important measures must be considered at this session; that the time remaining before adjournment is comparatively short; and that in view of all this it is very unlikely that the subsidy bill will come before the house. That all this furnishes the speaker with sufficient reason for killing the subsidy bill, if he wants a pretext, is indubitable.

FOREIGN

The British Budget Introduced

IMPORT DUTY ON GRAIN AND FLOUR RECOMMENDED

IN the British budget for this year, presented in the house of commons by the chancellor of the exchequer, Sir Michael Hicks-Beach, April 14, it was estimated that a deficit of £45,000,000 confronted the government.

The cost of the war in South Africa and the operations in China for three years have amounted to £165,034,000. The national debt now stands at £147,800,000. The estimated expenditures include £45,000,000 for the continuance of the Boer war. To meet the deficit, the chancellor proposes to increase the income tax one penny on the pound, making it one shilling three-pence, or within one-pence of the maximum limit; to double the present penny stamp tax on checks; to suspend the sinking fund; and to impose an import duty of three-pence per hundred-weight on all grain, and a correlative duty of five-pence per hundredweight on flour. The remainder of the deficit is to be met by a loan of £32,000,000 and drafts on exchequer balances. The chancellor explained the duty on grain and flour as in no sense a surrender of the free-trade principle, but merely a return to the "registration tax," abolished in 1868 by Gladstone and Lowe. The imposition of an import duty at this time he considered to be justified by the fact that sugar, tea, tobacco, and spirits, the prime objects of internal taxation, could not carry any heavier burdens of taxation than they already bore. The Opposition, through Sir William Vernon Harcourt, served notice on the government that they would fight the proposed duty vigorously as a tax on food and a surrender to protection.

The attitude of the London Conservative organs is that of a philosophical acceptance of a bad situation rather than a sincere support of the measure. The *Times* wholly approves of the grain duties, declaring that the chancellor of the exchequer acted on sound principles; but it regards the addition to the income tax as neither satisfactory nor necessary. Nevertheless, it does not anticipate that the income tax or the check tax will meet with serious resistance, despite the grumbling. The *Standard* says the budget can be described as heroic only in respect of the enormous sums with which it deals. The paper urges the chancellor to withdraw the check duty, which, though it could be borne meekly by the large banks and wealthy customers, would bear hardly upon the smaller banks and individuals transacting business on a modest scale.

The *Morning Post* thinks that the chancellor has shown a leaning toward a wiser and more equitable apportionment of the taxation on all classes and praises his boldness in disregarding prejudices. The *Telegraph* welcomes the grain duty as a "valuable step toward broadening the basis of taxation," and discounts in advance the "impassioned fustian about a 'dear loaf'" in which the Opposition will indulge.

Among the Liberal organs there is a diversity of opinion, but no encouragement for the government. The *Daily Mail* says it would have liked to have seen the duty on flour higher than five-pence. The *Chronicle* does not oppose the income or check tax, but condemns the grain tax as likely to "press ultimately, with the greatest severity upon those least able to afford it." The *Daily News*, the leading Radical organ, is unable to see anything in the budget but the duty on grain, and this it condemns unsparingly. "The staff of life, the elemental food of the British people, is once more exposed to the raids of every financier in search of a surplus, of every war minister in search of glory, of every interest in search of endowment. It is only a trifle of £2,650,000 this year, but what will it be next year, when the appetite of the exchequer has grown? Any thirst of the landed

From a Portrait by F. Sandys

SIR MICHAEL HICKS-BEACH

classes will be raised to fever pitch by the first draft from the national resources. A great principle is at issue. The Liberal party must rise to the height of the combat. Money must be obtained elsewhere, anywhere but from the food of the people."

The opinion of the American press on the probable effect of the corn duty on American grain exports is fairly represented by the *New York Tribune*. It says: "In the first place, Great Britain will have to keep right on buying about as much breadstuffs as before. It is simply impossible for this or any such tax to recreate British agriculture to such an extent that the islands will be anything like self-feeding. In the second place, this tax, if the budget be reported correctly, is to be placed upon all imported breadstuffs alike, with no discrimination between those from colonial and those from foreign sources. In that case we can not see why Great Britain should not have to keep on buying our grain, just as hitherto, with her own people paying the 'registration tax.'" In this connection it should be noted that the colonies have already begun to clamor for a preferential rate.

Germanizing Poland

April Blackwood's Edinburgh Magazine, Edinburgh (New York: L. Scott Pub. Co.). Condensed for PUBLIC OPINION

A SYSTEM has long been at work in Prussian Poland, whose aim, openly stated, is either to make Germans of the Poles or to drive them out of the land; each of its acts has added a little to the sum of bitterness felt by every Pole throughout the three empires; and the outbursts of recent months were but the accumulated resentment of fifteen years. At the very entrance into Prussian Poland strong signs of the struggle may be remarked. Even in the Russian provinces no restraint is put upon speaking Polish at the stations; but a Pole who crosses the frontier and ventures to use his own language is at once reminded that "here German alone may be spoken." This treatment extends to all classes, and to all circumstances. It is forbidden to speak Polish, not only in the various branches of the administration, but even where common humanity seems to require it—in druggists' shops. Doctors paid by government to prescribe for the poor often put up notices that, having no Polish, they require patients who do not speak German to bring an interpreter. This was complained of in the diet of 1898—of course without result. All Poles must know German, or take the consequences. Marriages between Poles and Germans are looked upon with disfavor. It is believed that a Polish family is somehow invariably the result of these; and whatever social or other influences can be brought to bear are employed to prevent them. Not one land-rath in all the eastern provinces is a Pole; a score at most have appointments in the civil service. In Posen, out of 130 burgomasters, there is but a sprinkling of Poles, and these are mostly Germans at heart.

So much for social and purely administrative vexations. The legal prosecution is yet more painful, because the outward forms of justice are strictly observed. By the authority of the law, and according to the will of the Pan-Germans, all Polish names of

places are Germanized until no one can recognize them. Wroclaw is turned into Breslau, Czczewo appears as Dirschau, Bydgoszcz is metamorphosed into Bromberg. Polish national songs are treasonable; and so are the airs: public orchestras are not allowed to play treasonable music.

The educational system, ever since the government took it in hand, has become the most formidable weapon for the destruction of Polish nationality. The schoolmaster is only a man paid to teach the children to think as the government pleases. By the ministerial rescript of 1887 not one word of Polish may be spoken during lessons in the elementary schools, even when the children do not know any German at all! The only exception made was in favor of prayers and religious instruction: this exception is now, in one school after another, gradually being disallowed, as was the case at Wreschen.

The Russian Minister of the Interior Assassinated

THE St. Petersburg correspondent of the London Times, commenting on the assassination of M. Sipiaguine, the Russian minister of the interior, April 15, says that he "was regarded as responsible for the severity of the means employed to crush discontent and also for measures which excited discontent. It is no exaggeration to say that in his two years of office M. Sipiaguine succeeded in making himself the best-hated man in Russia. He was regarded as an embodiment of the spirit of reaction, and his name was a synonym for distrust of all liberal measures and for belief in arbitrary government. To the popular hatred was added a certain amount of contempt. M.

Sipiaguine was universally regarded as shallow and stupid and as having no deep convictions. Charges of peculation were freely brought against him. The news of the murder did not create the sensation and reprobation such an

BELGIAN-HAIR RAISING.—Minneapolis Journal

A SHAKY FOUNDATION.—Minneapolis Tribune

occurrence would have caused in a western capital. It was seldom that indignation was expressed, while among the discontented classes the news was received with something like exultation. Admiration is openly expressed for the courage and coolness of the assassin."

The Philadelphia *Times* calls attention to the fact that the mildness and popularity of the present czar "does not alter the intense popular hatred toward his ministers, who are accused of misleading him constantly and of taking upon themselves acts that personally he might never authorize. The minister of the interior, being responsible for the direction of the police, has always stood as the chief target of attack. Recently more student agitators have been exiled to Siberia. It is probable that the assassin of Sipiaguine believed that his petition for reinstatement at his university, after he had been pardoned his participation in the outbreaks of 1901, would have been granted had it been allowed to reach the czar. Thus, in a way, the very esteem in which the latter is held works great peril for those who theoretically execute his will. This is the phase of newest interest in the internal situation of Russia."

Various Topics

THE SWISS-ITALIAN ROW: The diplomatic rupture between Italy and Switzerland, arising out of the Italian government's complaint that anarchistic publications are not adequately punished by the Federal authorities at Berne, has

necessarily stopped the negotiations for a new commercial treaty between the two countries. It has, moreover, caused such other grave inconveniences that both sides are already seeking for means to settle the quarrel by arbitration.

AN ANARCHIST LEGISLATOR: For the first time in the parliamentary history of Italy, an avowed anarchist, Pietro Calcagno, is a candidate for a seat in the chamber of deputies, with some chance of election. Calcagno, who was only recently released from prison on the ground of ill health, is living on a small island in the Mediterranean, which he is unable to leave without the permission of the Italian government. He was imprisoned several times, in consequence of his anarchistic principles, and has fled to England and America more than once to escape the police.

TO REGULATE DUTIES ON IRON: Herr Gothein, a radical-liberal member of the reichstag, makes a singular proposal in the current issue of the *Berlin Nation*. He suggests that the German government call an international conference to regulate the duties on iron, so as to prevent manufacturers from selling at lower prices abroad than they charge at home; in other words, to take action similar to that of the recent international sugar conference at Brussels by drawing up a convention providing for the imposition of countervailing duties. Herr Gothein says that the United States had gone further than other countries in this respect and had suffered less, because of its immense home market and large consumption; but, he claimed, economic depression, which even the United States was sure to experience, would bring to the United States sharper retribution than to other countries, and that country would feel the damaging effects of the system when the United States was forced to sell abroad at the lowest price possible.

SOCIOLOGICAL

The Settlement Idea in the Cotton Belt

PITT DILLINGHAM, in the *New York Outlook*. Condensed for PUBLIC OPINION

THE Calhoun Colored School" is a colorless title after all. Nothing in it hints at agricultural education going on in a great agricultural region; still less is there any whisper in it of Calhoun settlement work.

Calhoun stands for industrial education on broad Hampton-Tuskegee lines, and as such needs no explanation or justification. But as a social settlement in the cotton plantation country of Alabama, and in Lowndes county, where the Negroes outnumber the whites almost seven to one, it needs, perhaps, a word of explanation. And this all the more because, in its work as a neighborhood center, the selling of land to the Negroes has come about during the past five years, involving a so-called land movement.

On the economic side, Calhoun's scheme means buying a plantation at wholesale price, and breaking up the plantation into small farms, by a group of men who make advance payments and then finish buying by paying rent for a term of years. The fifty-acre farm means a basis for a new agriculture or intensive farming, also sharp individual responsibility of buyer, plus family life and labor and friendly coöperation of a neighborhood. The plantation, with its "quarters" and its renters and croppers who "stay" to make and pick crops but have no home—the plantation, the old, before-the-war economic unit, is transformed into an American neighborhood of farms and homes, within sound of school and church bell. This is the light set on the hill. As an investment for capital in the north, it has so far paid eight per cent, though two per cent of this is turned back by some of the creditors. In spite of hard times, with no single really prosperous year in the five since we started, the interest due

up north has been paid. Twelve families own their farms and homes; \$14,000 in all has been deposited, and of this, \$13,000 has gone toward the land. As Uncle Isaac puts it, "I done suffered for my home, but I's got my deed. 'Tis de fust time dat I ever felt like a man." Moreover, a new epoch has opened recently in the coming in of a group of young men, graduates and former students; there are ten of them in all now buying farms and helping to build the neighborhood life.

The farms and homes have a community center. An institutional object-lesson is placed there. Talk is not enough. The group of educated workers in residence, black and white, must together try to do things. They must put their hand to the plow, have a hearthstone of their own, a model county school (which teaches the love of nature and of work as well as letters, trains hand and eye and the soul, and not simply the tongue), and a village and county religious fellowship. This community center must draw in the old and young of the neighborhood for all sorts of purposes, and it must go out also in person to all things and persons round about. Hence Calhoun's farmers' conference, thrift society, fathers' and mothers' meetings, community night school, celebration of national and Christian holidays, village entertainments, annual county conferences, traveling libraries, and teachers' institutes, etc.

How far is this settlement method a practical one for the black belt? We do not know, but we think it is not too good to be practical. Common sense can modify and adapt. The essence of the gospel lies in attacking the black belt by counties, and building neighborhoods, and especially one central or leading

neighborhood. A single worker is easier to find than a group of workers, but the business of inspiring a neighborhood, especially at a point of greatest need, is a difficult one. The example of home life is of primary importance, but if married, the worker may, with reason, plead that he can not go where his children can not be brought up. As to cost, probably the equipment and cost of maintenance for Calhoun, modest as it is, could not well be justified except for county work. More and more it must as a central neighborhood penetrate its county with its influence and start other neighborhoods.

Hartford's Workingman Mayor

Providence (R. I.) Journal. Excerpt

MAYOR-ELECT SULLIVAN, of Hartford, Connecticut, is a labor man, being president of the Connecticut Federation of Labor, and having received his nomination at the hands of the Democrats only after the workingmen, acting through the machinery of organized labor, which had formed a body called the Economic league for the purpose of participating in the contest on broad grounds, had captured the Democratic convention. He goes into office bound by no ties to the Democratic party, but distinctly pledged to follow a certain policy mapped out for him by the Economic league, otherwise the members of organized labor in Hartford. In the case of Mayor Sullivan the character and the influence of the formal workingman's organization are decidedly significant. The voting clerks in stores as well as the members of shop unions earnestly upheld his candidacy. In the platform of the Economic league this varied body of supporters was careful to adopt no very radical demands; the league, moreover, particularly called upon voters to work for honest government and economic administration. Such facts show that little which is necessarily harmful abides in workingmen acting wisely in civic affairs.

The Work of the Prohibitionists

Harper's Weekly, New York. Condensed for PUBLIC OPINION

IF we take prohibition in its most liberal interpretation, we find that nearly half the population of the United States is living under local option or state prohibition laws regarding the sale of intoxicating drinks. In studying the figures given by the prohibition enthusiasts we find that at least five states have enacted prohibition or local option laws which cover every county and town. These five states, which have been the pioneers in this movement, are Maine, New Hampshire, Vermont, Kansas, and North Dakota. But other states are nearly as generally governed by the same prohibitory laws, the few exceptions hardly being sufficient to remove them from the same class. The whole of Georgia is under state prohibition or local option laws, with the exception of four cities; South Dakota, with the exception of a few cities and towns; South Carolina, with the exception of ten cities; and Iowa, with the exception of twenty-five cities. In Montana only a few counties have adopted local option or prohibition in any form; but in most of the other states there is a goodly array of towns, counties, and cities which have decided to reform themselves concerning strong drink. In New York state we have

some 700 cities and towns that have thus drawn the strict line of abolishing the sale of spirituous drink, and in Massachusetts, out of 353 towns and cities, 263 have fallen in line. Illinois has to her credit 650 cities and towns enjoying local option laws; Ohio, 500; Michigan, 400; Wisconsin, 300; Nebraska, 250; Minnesota, 400; New Jersey, 200; California, 175.

All the other states have moved in line to a more or less extent, many of them adopting local prohibition laws according to counties rather than by towns or cities. In Alabama, 50 out of 65 counties are reported to be under prohibition laws; in Arkansas, 50 out of 75 counties; in Florida, 30 out of 45 counties; in Kentucky, 90 out of 119 counties; in Louisiana, 20 out of 59 counties; in Maryland, 15 out of 24 counties; in Mississippi, 71 out of 75 counties; in Missouri, 84 out of 115 counties; in North Carolina, 60 out of 90 counties; in Pennsylvania, 60 cities and towns and 20 counties; in Tennessee, 70 out of 96 counties; in Texas, 120 out of 246 counties; in Virginia, 55 out of 106 counties; in West Virginia, 40 out of 54 counties; and in Washington, 50 cities and towns. Little Delaware has half the state under prohibition, and little Rhode Island 20 of its cities and towns. In these numerous cities, towns, and counties it is estimated that there is a total population of about 30,000,000.

A Social Museum for New York

AN OUTLINE OF ITS PRACTICAL ADVANTAGES

M. LEOPOLD MABILLEAU, president of the Musée Social of Paris, is here studying, for the benefit of that institution, the economical and social conditions obtaining in the United States. M. Georges de Leener, of Brussels, arrived in New York a few days ago on a similar mission for the Institut de Sociologie, established by M. Ernest Solvay in the Belgian capital. The investigations of these men have called attention to the movement for founding a social museum in New York, started by the League for Social Service, a few years ago.

The advantages of such a museum may best be understood by the following description of its scope, taken from the *New York Times*: "It would contain carefully collected data—books, reports, documents, photographs, charts, and the like—by which a comprehensive study could be made of the park systems, the public baths, the street cleaning and disposition of garbage, the light and water systems, fire department, the housing problem, etc., of any considerable city in the land, and of all the great cities in the world. Under a single roof the inquirer could study the municipal housekeeping of the best and worst governed cities in the world, thus obviating the expense and loss of time that a visit to various cities would necessitate. Fully set forth in print and picture would be shown what is being done in the matter of industrial betterment, what the wealthy employer is doing to improve the morals and intelligence of his workers, the most approved methods of hygiene in factories, the beautifying of the workingman's home, the progress of the movement for social betterment by the churches of all denominations, and the philanthropic societies in providing rational amusement by the establishment of gymnasia, bowling alleys, clubs, etc., and what municipalities are doing along the same lines with parks, playgrounds, and open-air gymnasia. Courses of lectures would be given, so that the institutions' resources might be exploited.

"The nucleus of a museum of social economy is in possession of the League for Social Service, in the shape of a valuable collection of books, reports, pamphlets, photographs, lantern slides, etc., collected by Dr. Josiah Strong and Dr. William H. Tolman. The value of the league's collection is recognized in many states of this country, and employers of labor on a large scale are eagerly availing themselves of the information at their disposal when founding new towns and industrial colonies, so that they may start right on the most approved lines. Thus the president of a \$60,000,000 company which is forming an industrial colony in the middle west recently requested information as to the best types of workmen's homes, and whether detached or semi-detached cottages were preferable; also, respecting flathouses and dwellings for single and married men and women; the space occupied by such structures and the cost of erection. Dr. Tolman was able to place at his disposal a large collection of photographs of such dwellings from Great Britain, France, Germany, (the Krupp houses), and even Hungary. In fact, so comprehensive and up-to-date is the collection that full particulars concerning Earl Grey's saloon trust scheme, which aroused such interest when the earl arrived in this country a few weeks ago, and which was praised by Bishop Potter as the best solution of the liquor problem yet presented, might have been obtained in New York a year before, together with the results obtained up to that time."

A Russian Woman's Work of Amelioration

TH. BENTZON, in the *Revue des Deux Mondes*, Paris, Translated and Condensed for PUBLIC OPINION

THAT the reformation of the Russian is not by any means solely in the hands of such workers as Tolstoy is fully demonstrated by Th. Bentzon, in the current issue of the *Revue des Deux Mondes*. Mme. Bentzon gives us the following account of the work accomplished during the last eighteen years, by a friend, a Russian woman of noble birth, of cosmopolitan culture and breadth, whose efforts may be considered typical of many other such efforts now being made for the development of the Russian serf:

When this attempt at reform first commenced, the condition of the peasant was worthy of pity. Without doubt the emancipation of the serfs was an admirable action, as were all of the actions with which commenced the reign of Alexander II; but the people, once delivered from serfdom, were really in a worse condition than in the past. The hour of reflection came quickly to my friend. Having made a longer visit than usual on her lands, she compared perhaps the joy of her habitual existence to the apparently incurable misery of the people who surrounded her. In the beautiful seigniorial home in which she was still surrounded by the accustomed luxury, she thought of a means to equalize the conditions of life. Her profound reading of former days returned to her, and she read in the four languages, which she speaks as fluently as her mother-tongue, all that concerned the recent progress of sociology in all countries, and little by little the most generous and reasonable plan was elaborated in her mind.

First she gave the right of pasturage on her lands to all the flocks, doubled the salary of the workmen whom she employed, procured the most improved

agricultural implements, and finally opened a bank without interest in order to provide for the most pressing needs. To all this she added but one condition, but that a rigorous one. "If we wish to succeed," she said, "we must be careful of our hygiene; consequently, we will close the wineshop, which will be replaced by a hospital." The dispensaries which are placed everywhere now did not exist then. One found in each village persons who cared for the sick partly by means of sorcery, herbs, or charms more or less doubtful; but the greater number of peasants died without having received the care of a real physician. At the home of my friend a hospital was opened, an experienced woman physician, whose philanthropy equalled her knowledge, cared for the sick and distributed medicines. Thus was the wine-shop closed. It has never been opened, and now more than one neighboring village asks spontaneously that this strong temptation be taken from them; but it must be understood that the closing of a tavern is a serious affair, inasmuch as the government possesses the monopoly of alcohol. Here we have two rare women, one learned in agriculture as one rarely finds persons of her sex, the other an accomplished scholar, who, without counting the trouble, pass all of their days, one in the school, the other in the fields. The most modern methods are employed to augment the productivity of the earth, and a nursery and an orchard such as have never been seen before have attracted the curious from afar. That which appears to me, however, the most remarkable is the profound faith of the scholars in the instruction which is given them.

The following are the principal results obtained: A sensible diminution of drunkenness. This single pleasure of the people has been replaced by the plays of the gymnasium and all sorts of outdoor exercises. Also, there has been developed a natural taste for music. Another triumph in an epoch where the tendency is to leave the country for the city,—the peasants of my friend's domain never leave their village. The course of instruction for adults created at the commencement of the experiment has accomplished marvels. These men, who had never had other instructor than the tavern, at least seemed to wish to learn to read. Quickly the authorities stopped this course, but the good was accomplished; a large number of young people were already capable of profiting more or less by a library annexed to the school, where they found the great Russian writers and translations of the best foreign writers.

The neighboring landowners, although blaming the too generous tendencies of their neighbor, have been almost compelled to ameliorate the condition of their workmen. My friend's agricultural enterprises have served as models, and at intervals which shall become more frequent a man worthy of the name will disengage himself under this influence from the horde of half-savages which the Russian peasants still remain. One knows that a small group only is necessary to influence others. Outside of Russia, even, someone, perhaps in hours of trial, will fix his eyes on the beacon of salvation which shines from the window of a little house lost in the midst of the snows of the steppe. After having given her days to all those who have need of her, this philanthropic woman consecrates a part of the nights to a disinterested effort at personal development, reading all that which will allow her to perfect her work. And she will perfect it by science, but first by confidence and love.

LETTERS & ART

Swiss Art and the Work of Charles Giron

ROBERT MOBBS, in the April *International Studio*, New York
Condensed for PUBLIC OPINION

THOSE who have studied the works produced during the last few years by Swiss landscape and portrait painters can not have failed to be impressed by one sign, amongst others, full of promise for the future of art in this country—viz., that the Swiss painter, instead of being carried away by the modern impulse for travel and “pastures new,” is turning more and more to his own wonderful land and its national types and customs for the subject-matter and inspiration of his art. This should not seem strange, considering the inexhaustible mine of artistic wealth that the natural beauty of this country opens to the artist. But it is noteworthy that while it is the fashion with not a few modern artists “to travel round the world, and to produce from their *notes de voyage* general aspects bearing neither stamp nor certificate of mileage—in other other words, pictures”—the artists of greatest promise and no mean achievement in the present Swiss school have set themselves to a fresh interpretation of the perennial beauty and grandeur of Alpine landscape and a new treatment of those characteristic features of Swiss life which, alas! are beginning to fade out of the framework of reality. It is impossible to study the landscapes of Hans Sandreuter, Gustave Jeanneret, Alexandre Perrier, Abraham Hermenjat, Gustave de Beaumont, Henry Van Muyden, Carl Theodor Meyer, Ernest Bieler, Giovanni Giacometti, Otto Vautier, David Estoppey, Alfred Rehfsous, Jacques Ruch, Charles Giron, or the portrait-painting of Fritz Burger, Charles Giron, or Albert Welte, without feeling that we have here a manifestation of art that is not only strikingly personal and sincere, but essentially Swiss. And these are but some of the members of that group of Swiss painters whose work deserves to be more widely known not only for its intrinsic merit, but for its national character and promise.

Amongst this group, Charles Giron occupies a deservedly distinguished position. Mr. Giron is at once a landscapist and portrait painter. In each of these branches of painting he has produced work of an unmistakably high order, and in each it is a Swiss landscape or a Swiss physiognomy in which he finds inexhaustible subject-matter for artistic treatment. Honors have come to him from Paris, Gand, and Munich, but he wears them lightly, his one absorbing passion being love of his art for its sake. He has worked quietly in his own country for the last ten years, ex-

hibiting from time to time in Paris, in Munich, and in Switzerland, the beautiful and mature results of his work. As a landscapist, his subject by predilection is the mountain in all its aspects, as seen through an ever-changing Alpine atmosphere. Perhaps nowhere does the essentially Swiss character of Mr. Giron's art come out more fully than in that delightful series of pictures he calls his mountaineers, viz.: “Les Vieux,” “La Lecture,” “L'Ardoisier,” “L'Accord,” “Fillette Valaisanne”; the numerous studies he has made of mountaineers for his “Fête de Lutteurs,” and in such a beautiful evocation of a national type as “Jeune Unterwaldoise.” There can be no doubt that Mr. Giron is one of the most remarkable of living Swiss portrait-painters, and in many of his portraits he has

caught and fixed with unerring knowledge, feeling, and power the characteristically Swiss physiognomy.

Whether we study the landscapes or portraits Mr. Giron has produced, we feel that we are dealing with the works of an artist intensely sensitive alike to the ever-varied beauty of form and color, one who is also absolutely sincere, and whose passionate desire is to make others see and feel with him all that is characteristically beautiful in his native land. He is one of a group of Swiss artists who, we

From the *International Studio*

“LES VIEUX,” BY CHARLES GIRON

venture to think, are laying the foundation of an essentially modern and national Swiss art, an art which shall be as much a part of Switzerland as are her rugged mountains and beautiful valleys.

The Passing of Schools in French Literature

M. GEORGES PELLISSIER, in *La Revue*, Paris. Translated and
Condensed for PUBLIC OPINION

THAT which appears at first the most significant character of our epoch is the definitive eviction of schools. It is true the literature which is now written, or is to be written, shall not escape the influence of previous works, which one calls the influence of the hour. But these debates which filled the literary history of the 19th century have had at least for final ending the abolition of the formulas by which each school had, up to this time, limited and regulated, in its fashion, the diverse literary forms. Everywhere there has been made a clean sweep; no convention, no arbitrary and fictitious discipline hampers personal originality or prevails over the free manifestation of temperaments.

In poetry, the liberation is as complete as possible. From a metrical point of view all the artificial rules which were observed even by Victor Hugo, the great revolutionist, our modern poets have abolished. In multiplying rules our classic legislators made discipline dominate over genius. Modern innovators, starting with the contrary principle, wish to leave to the poet the utmost latitude possible in the rhythmic expression of his personality.

In viewing the history of the theater during the last quarter of the 19th century, we will see that it ended likewise in the suppression of every school and every system. Our dramatic writers have given more ease to the action, more complexity to the personages; they have imitated as much as possible nature herself, and one returns in these latter days to the sincere study and the faithful representation of reality. At present no school exists, and breaking with all systematic affectation, our theater occupies itself alone with telling the truth.

With regard to the romance, psychology and naturalism have had their day, and as in poetry and the drama, romantic work is free from all arbitrary formulas. It is necessary now to write not naturalistic or psychological romances, but romances which portray human life in its integrity. That which the coming generation will bring to us, then, is a literature free from all formulas. Each writer will have his particular conception of art in accord with his temperament and the character of his mind and imagination. Art is neither idealistic nor realistic; it belongs to no school, and the greatest works exclude, by their resemblance to life, a scholastic definition. These are the works which we ask of the new generation and which we have reason to expect.

The Poetry of Illusion and Disillusion

PAUL ELMER MORE, in the *New York Independent*
Condensed for PUBLIC OPINION

IF one were asked to name in a word the distinguishing mark of decadence, he would probably say *illusion*—not the voluntary illusion of art, such, for example, as enables Milton to impose on the reader as a reality the ideal fancies of his Arcadian world, but the false illusion of life which from some degeneracy of the will makes it impossible for the victim to hold fast the distinction between the flesh and the spirit, which, in fact, loses sight of the spirit altogether and sets up in its place some poor masquerading of the flesh. It is an inner blindness and confusion; it is false because there enters into it no faith in the joy of things unseen, no knowledge even that such things exist; it is

From "*Poets of the Younger Generation*"

false because for the voice of the spirit it hears only the clamorous outcry of a man's lower personality which springs from the desires of the body and the perceptions of the body, and is in the end one with what is desired and perceived. At the first this false illusion is sweet, but soon it is troubled with the bitterness of satiety; and the awakening from it leaves only the emptiness of endless regret and self-tormenting. The inevitable disillusion is a discovery that the phantom which has masqueraded as the spirit is no other than a shadow of the body; it is a perception of the hollowness of the old illusion without the power of escaping from its thrall.

More than one writer has attempted to reproduce in English the peculiar modes of thought and emotion which we attribute to the French decadence, but always some poverty of execution or insincerity of

tone has marred the likeness. In Mr. Arthur Symonds, for the first time in English, may be seen the qualities and defects of that school developed to the highest degree, and for this reason alone his work would have extraordinary psychological interest for those who care to study the great movements of the day. Always while reading his poems, which are the first full and sincere expression of decadence in English, with their light and fair illusion passing gradually into the terror of disillusion, I have heard within my memory three lines of old John Ford, which contain the very essence of the right illusion of art (for art has also its true and necessary illusion of joy); they are like a breath of fresh air let into a murky chamber:

Since my coming home I've found
More sweets in one unprofitable dream
Than in my life's whole pilgrimage.

And yet, no matter what their sadness and morbidity may be, these poems stand quite apart from the ordinary versifying of the day. They have, whatever may be said, a great psychological interest, for Mr. Symonds is the most genuine and adequate representative in English of a widespread condition. And sincerity in verse is a quality of inestimable value. But these poems can never attain to any very wide popularity; nor can they ever have much weight with practical intelligences that shun the evanescent world of revery where the real and the unreal meet and blend together in indistinguishable twilight. For their atmosphere is one of indulgent brooding; their warp and woof are of the stuff of dreams woven by a mind that turns from the actual issues of life as a naked body cowers from the wind. The world is seen through a haze of abstraction, glimmeringly, as a landscape looms misty and vague through the falling, fluttering veil of the rain.

The Italian Novelist, NeeraM. IVAN STRANNIK, in the *Revue Bleue*, Paris. Translated and Condensed for PUBLIC OPINION

OF all the brilliant writers of Italy, the original and austere novelist, the indefatigable polemist, Neera, has perhaps the most complete power and a doctrine which is the most difficult to define. It is true that Neera is far from possessing the delicate tenderness, the pure idealism of Fogazzaro, the wild, realistic vision of Verga, the seductive, intoxicated, and sumptuous power of D'Annunzio, but she merits a special attention, for her work is an apostleship; she has the gift of profound convictions, of unswerving purpose, and she has also the talent of knowing how to make the world listen to her.

Neera sees in the whole of humanity only the feminine type, the masculine type being always secondary. According to her, the soul of the woman offers the largest and most varied domain for psychologic study. "The woman is, for analytical and feeling writers, the subject which is preferred above all others, the inexhaustible fountain of sympathy and art." In a book entitled "The Battle for an Idea," she discloses with lucidity, and without emotion or prudery, the rôle which she exacts for woman in society and the wrongs of society toward the woman. Neera is the partisan of the woman, but she is, in her way, reactionary and advanced at the same time. She is reactionary because she does not wish the emancipation of woman, she does not wish for her sisters that right to labor which renders them independent and free, and she only admits this labor in exceptional cases. "The greatest part of my literary work," she says, "is the study of woman's unhappiness, and it is simply because my work is sympathetic and patient, because I possess a knowledge of all the arguments which concern the subject; because, finally, my own convictions are firm that I know that women do not aspire naturally to the lawyer's gown, neither to the professor's chair, nor to the lancet of the surgeon."

Neera always restricts woman's sphere to the narrow circle of the domestic hearth, and her influence to the family. She praises their wide and all-powerful moral influence, for they are the ones who form the great men, who soften and ennoble life, and who inspire generous and lofty actions. Neera is advanced in that she blames the education which is given to women, and the character of the relations which exist in our day and in our society between the man and the woman. "The two sexes do not know enough of each other; they are not sufficiently together, and the union between their spirits which would be so salutary to both is lacking. The man and the woman never mingle except with the view of diverting themselves—to dance, eat, talk, which can only favor the desire for gallant conquests. They meet on a ground where imposture is continual, where they appear different from what they really are, and where their sole desire is for vain show."

The value of Neera's work as an artist is very unequal. When she is absorbed by her idea she expresses herself in the clearest way, and she finds for the feelings she loves an exact expression. The care of form, however, the regard to the harmonious phrase, the joy in elegant composition, appears to her merely secondary, and she almost blames Flaubert for his search for perfection, as with her the idea is all. Speaking of the beauties of nature, she writes: "I

have the taste for nature, but a taste entirely human, palpitating, vital. I love nature in its relations with men, with their loves, their sorrows. For myself the human being is all; the principal interest rests in the human being for itself, then in its relations with the rest of the world. Beyond this I understand nothing. I have a passion for a tear, a cry, the life which fills the air. Ah, how I understand this ferocious mania of children who break their playthings to see what is inside." Other works are assuredly more beautiful, more striking, more fascinating than these of Neera, but this writer, by her generous abundance, by her straightforwardness and her fresh sincerity, by her desire for the best and her clear-seeing simplicity, moves, captivates, and inspires a sympathy which is far deeper than admiration.

The Nature of English ComedyJOHN OLIVER HOBBS, in *London Stage*. Condensed for PUBLIC OPINION

A COMEDY must in the nature of things be either sentimental or romantic or satirical, and although we have had some brilliant examples of satire in English dramatic literature, both in the past and the present, it is not so natural a gift as sentimentality. English people of this generation are not satirists. Their view of life is for the most part serious and kind. Satire really seems to wound them as it does not wound audiences elsewhere. I don't know why this should be the case, but so it is. And authors sometimes find themselves attacked for presenting studies of humanity which are not violently sympathetic nor especially flattering to the race. So pronounced is this antagonism to satire that it is not the custom in England to criticize any presentation of character apart from its amiability. The drawing may be masterly, but if the personage presented is not pleasing the author's work is dismissed as something unworthy of consideration.

Now this brings me to examine the style which has been called epigrammatic, almost as a term of reproach. I believe I have traced this present dislike of the epigram to an idea that it comes from France, and represents a continental rather than an English habit of thought. But the truth is that the greatest epigrammatists have been Englishmen. The old English comedies, beyond any question, are the most epigrammatic productions in any language. Congreve has written more epigrams than all the French dramatic authors put together, and it is well known that Voltaire himself came to England in order to see the man who could write with such unsurpassed and dazzling brilliancy of phrase. Congreve was not a financial success, and the greatest comedy of manners in the English language was a failure because no audience could possibly think so quickly as that phenomenal genius. He condensed whole chapters of psychology into one paradox, whole family histories into one pithy speech. It makes marvelous reading, but I am afraid we must all call it a very difficult play. But the old comedy writers must not be judged by Congreve only. Wycherley, Farquhar, Vanbrugh, Sheridan, and Goldsmith were all masters of the epigram.

THE DEATH OF FRANK R. STOCKTON was announced April 20. This popular humorist was the author of sixteen stories. "Rudder Grange," published in 1879, was his first and, perhaps, his greatest success.

SCIENTIFIC

Occupation and Longevity

Medical Record, New York. Excerpt

DR. ARLIDGE, an English physician, has recently published the results of years of close study of longevity, quoted in the *Chicago Tribune*, and his conclusions are instructive and valuable. Dr. Arlidge has decided that the indolent rich are the shortest-lived of all classes, and gives as the cause of this seeming anomaly that they worry their lives away. The farmer stands at the head of the list of long livers; he generally has to toil hard, but his work is in the open air, and in an altogether healthy environment. Good digestion with him waits upon appetite, and he eats heartily of wholesome food, which nourishes his frame and makes good red blood.

Next in order of longevity are the clerical, legal, and medical professions. The clergyman in the country leads a life somewhat closely resembling that of the farmer; he is much out of doors, his hours are necessarily regular, and he is precluded by the nature of his calling from dissipated habits of a worldly sort. The lawyer's lines, so far as health is concerned, are not cast in such pleasant places. His life is a more strenuous one, generally full of excitement, with the brain kept for most of the time at high pressure, and the nerves on the strain. Of the three learned professions, the physician can calculate on the shortest life. A conscientious doctor must of necessity be the most self-abnegating of men; and, as a rule, he has little or no time to think of himself, as his mind is continually burdened with the responsibilities of his practice. In both town and country the medical man is compelled perforce to live under unnatural conditions; he is out in all weathers and at all times; and it may be truly said that a busy physician can hardly call an hour his own. Then he is constantly exposed to infection, and a large part of his life is spent in the depressing and devitalizing atmosphere of the sick-room. It, therefore, will be no matter for surprise to learn that, excepting artists, the largest number of suicides are recorded among members of the medical profession. Insanity, also, has wrecked the minds of many brilliant physicians.

Politics, according to Dr. Arlidge, is one of the most healthy of occupations. This fact has been proved time and again—Gladstone, Beaconsfield, Bismarck, and Thiers are conspicuous examples of the truth of this statement. Great brain workers are notoriously long lived, and among literary men, scientists, professors, and teachers, the mortality is far lower than among the industrial classes. Therefore Dr. Arlidge holds that activity of the mind, if bent in the right direction, has more to do with the health of the body than muscular exertion, but he thinks that a judicious combination of both forms of exercise brings about the ideal condition.

Employers of labor are especially subject to heart affections. Nervous complaints come second, apoplexy third, and consumption fourth. The commercial traveler is a man who seldom reaches the allotted term of years. Irregular hours, too much drinking and smoking, and poorly cooked food are the factors that tend to bring his existence to an untimely end. Policemen are, as a class, very healthy and live to an advanced age, due to the fact that they are chosen for

their soundness, and that their life is largely spent in the open air. Rheumatism is the affection with which the policeman is chiefly troubled. The mail-carrier is healthy on account of his outdoor life, but for the same reason is peculiarly subject to rheumatism. The miner, notwithstanding that for eight hours of the twenty-four he is working cramped in a coal pit, shut out from the sun and in an atmosphere thickly impregnated with coal dust, is, contrary to preconceived notions, a healthy man and usually lives to a green old age.

The Negro as a Surgical Subject

IN the *New Orleans Medical and Surgical Journal*, Dr. Lucien Lofton, who, in his own words, has had "a varied surgical experience, comprising many years, upon the Afro-American race," discusses what may be called the surgical tolerance of the Negro. He says that although the environments of the Negro are anything but inviting, surgically speaking, and while septic conditions abound on every hand, no more brilliant recoveries are ever seen than those which are found in Negro cabins and hovels. Sepsis really appears to be an unknown quantity with the Negro. In the first place, his ignorance regarding his own condition helps the course of recovery. Then, again, he is generally obedient; and further, he is by nature an optimist. Grease, dirt, and filth do not assert their septic influences in the colored patient as they do in the white, though the Negro is decidedly more susceptible to contagion than the white race, and contaminated blood is the rule rather than the exception in the Negro.

Being, as a rule, very phlegmatic, incisions and wounds of whatever description generally close rapidly by primary union. The generous blood supply and heavy pigment, no doubt, help nature in the process of repair. Rarely does a stitch abscess present itself. Wounds of the cranial, thoracic, or abdominal cavities do not produce in the Negro the amount of shock noticed in white subjects. He cites several instances, among them that of a Negro farmer who was shot by another Negro with a pistol ball of a 0.32 caliber, just above the left superciliary ridge which glanced around the skull and imbedded itself behind the ear. The blow did not render the recipient even "sick at his stomach." On the contrary, he remarked: "If it had not been for the blood flowing in my eyes, I would have fixed him."

While the soft parts heal with great rapidity in the colored race, the bony structures unite less readily. The average Negro is inclined to be meddlesome, "to see if the bone has knit." Dr. Lofton records a case in which a Negro train hand had received an ugly comminuted fracture of the femur, a transverse fracture of the humerus, besides a crushed frontal bone, who thought it a test of his "nerve" to ascertain daily the amount of weight he could lift with a broken arm, and compare strength in his lower extremities; in fact, the splint applied to his broken thigh bone was util-

ized in making a "rabbit box." Not being in a position to use his head as a battering ram, the frontal bone healed without interruption. In spite of all, the man was walking without assistance in about twenty-seven days, while the splint which supported the arm was kept in position only about ten days. Negroes rarely suffer from appendicitis, unless during an epidemic of influenza, when they are peculiarly liable, while malignant disease, with the exception of osteosarcoma, is very unusual. Negroes are, however, especially prone to neuromata and keloid growths. The immunity from sepsis enjoyed by the Negro may, Dr. Lofton thinks, be due to profuse and continued excitement of the emunctories, and in some degree to the cold food he eats, and the airy clothing he wears.

The Evolution of the Sense of Color

F. W. EDRIIDGE-GREEN, in the *April Nineteenth Century*, London
Condensed for PUBLIC OPINION

THE facts of color-blindness throw a good deal of light on the evolution of the color-sense. Cases of color-blindness may be divided into two classes, which are quite separate and distinct from each other, though both may be present in the same person. In the first class there is light as well as color loss. In the second class the perception of light is the same as in the normal sighted, but there is a defect in the perception of color. It is with this second class that we are specially concerned in this article. Color-blind individuals belonging to this class can be arranged in a series. At one end of this series are the normal-sighted, and at the other the totally color-blind. It is evident that the degree of color-blindness which just precedes the totally color-blind will give us an idea of the perception of color when the color-sense was first developed. I had an exceptional opportunity of studying a case of this kind, as the patient was color-blind with one eye. On examining him with the spectroscope I found that he saw the two ends of the spectrum tinged with color and the remainder gray. Neither the red nor the violet appeared of the nature of a primary color, but gave the impression that they were largely diluted with gray. It will be seen that the color perception of his right eye was limited to two colors, namely, those which present the greatest physical contrast to each other, red being produced by the largest waves of light and violet by the smallest. This is exactly what we should expect; it being most probable that those physical stimuli which were most dissimilar would first be perceived as different.

As the color-sense developed, it would not be necessary that the rays should be so far apart before a difference was seen; so the gray band would gradually diminish until it entirely disappeared and the two colors met in the center of the spectrum. A third color, green, then appeared at the central point. Then yellow appeared, making four colors; then blue, making five; and finally orange, making the normal six. These predictions are borne out in the minutest detail by the facts of color-blindness, and I have classified the color-blind in accordance with the number of colors which they see in the spectrum. If the normal-sighted be designated hexachromatic, those who see five colors may be called pentachromatic, those who see four tetrachromatic, those who see three trichromatic, those who see two dichromatic, and the totally color-blind monochromatic. It will be noticed that the colors appear in a definite order and exactly as we should theoretically expect—that is, at the points of greatest difference.

Popular Errors in Meteorology

Scientific American, New York

PROFESSOR GANNETT, of the United States geological survey, has a paper in the bulletin of the American geographical society which treats of popular errors in meteorology and geography. A few of his points are summarized in what follows:

Forests and Rainfall: An example of the persistence of error is the idea that the presence or absence of forests has an influence on the amount of rainfall. Some keen observer long ago detected the fact that forested regions enjoyed a heavier rainfall than those not forested, and jumped to the conclusion that rainfall was produced by forests, and that the removal of forests diminished the rainfall. Looking over the earth, he found many treeless desert regions and forthwith instanced them as frightful examples of men's wastefulness. Syria, northern Africa, parts of Italy, are often quoted as illustrations of man's destruction of climate. In reply, man can certainly plead not guilty. The geography of this Mediterranean region, the configuration of land and water, and the direction of the prevailing winds, are such as to give it a light rainfall—forests or no forests. The situation is really this: Want of rain prevents the growth of trees; want of trees does not prevent rain.

Forests and Floods: Another persistent error is the belief that floods in our rivers are more frequent than formerly because of the cutting down of forests in their drainage basins. It is probable that the clearing of land by cutting away forests and undergrowth does change the regimen of streams, increasing their flood height and diminishing the flow at low stages. In other words, water probably runs off or evaporates more rapidly from bare ground than from ground covered with forests. But where the forests are cut away the ground is seldom left bare; it is cultivated or quickly becomes covered with bushes which hold the water quite as effectively as forests. The main fact is, however, that the floods in our rivers are no greater or more frequent now than in the past.

Climates and Ocean Currents: The well-known mild climate of the northwest coast of America is commonly attributed to the Japan current. The Gulf stream is supposed to have the same influence on the western coasts of Europe, etc. But can it be supposed that the Japan current, however warm it may be when it leaves the tropics, retains any appreciable excess of heat after a journey of six thousand miles in northern latitudes? As a matter of fact, no trace of this current reaches the shores of North America. In the north Atlantic the condition is much the same. The Gulf stream disappears as a current long before the British isles are reached.

DIPHThERIA DUE TO FOWLS: The declaration has been made that cats can disseminate both scarlet fever and diphtheria to men. Now the suggestion comes from a remote part of Wales, that there may be some connection between a disease which is frequently epidemic among fowls and known as roup and diphtheria. According to the *Sanitary Record* (London), Dr. Herbert Jones, medical officer of health to the Rhondda district, when investigating fresh outbreaks of diphtheria, in different localities, found that in several instances there had been, immediately preceding and running concurrently with a diphtheria outbreak, a very fatal epidemic among fowls.

RELIGIOUS

The Methods of a Popular Preacher

COMMENT ON THE CAREER OF THE LATE DR. TALMAGE

COMMENT on the remarkable career of the late T. De Witt Talmage occupies conspicuous space in the religious press of the week. The *Independent* regards him as "the typical sensational preacher in America." He had, says this writer, the merits and faults of his class. "He was a lovable, kindly, brilliant, irresponsible man, who said many good things and doubtless did much miscellaneous good, but who left behind him no permanent influence of value. He had gathered the largest Presbyterian church in the country, and after his last fire the church collapsed like a soap bubble; it had no substance."

"Dr. Talmage was the prince of advertisers," says the Boston *Congregationalist*. "He drew large audiences, using sensational methods, both in the sermons he preached and in his ways of delivering them. He soon became in great demand as a lecturer, receiving as much as \$500 for an evening; and he also found a ready market for his sermons, many of which were prepared with all the appearance of spontaneity as extemporaneous utterances, and sold some time in advance of their delivery to a syndicate of newspapers. When he went to the Holy Land, his sermons which he left behind were announced as having been sent by cable, as delivered in Jerusalem, Nazareth, and other places, and appeared regularly on Monday mornings in many papers in the United States. On visits to Europe he secured interviews with the czar of Russia and with Mr. Gladstone, and his conversations with them were described at great length in American papers. His own personality was effectively displayed against theirs as a background. Three tabernacles were built under his leadership in Brooklyn, and were successively destroyed by fire. The whole country was appealed to for money to build the last one, but without success. Twenty-five years ago Dr. Talmage went through a sensational trial before his presbytery on charges of untruthfulness. The charges were not sustained, though the final vote was divided."

The editor of the New York *Christian Advocate* (Meth.), describing the pulpit methods of "this extraordinary spectacular pulpit and platform orator, whose strident voice was heard round the world," cites the following characteristic instance: "Dr. S. L. Baldwin and Dr. Talmage were born near each other, and were friends from boyhood. Once when Dr. Baldwin returned to this country from China, he went in to hear his old friend. His text was, 'Hath the rain a father?' Catching a glimpse of Dr. Baldwin in the congregation, without any connection whatever with the rest of the sermon Dr. Talmage exclaimed, 'Has the rain a father? I had a boyhood friend who gave himself to the missionary cause; he went across the stormy sea, a voyage of one hundred days or more, to China, about the time I entered the ministry, and God protected him, and He has brought him back, and he is in this congregation.' And then, raising his head toward heaven and stretching out his hand, he exclaimed in his deepest and heaviest tones, 'Has—the-rain—a-father?'"

The Pittsburgh *Presbyterian Banner* strenuously denies that Dr. Talmage was "a mountebank, a mere

verbal trickster, as some thought him." "He had deep convictions that were born of the Holy Spirit, a divine message that fits the human heart. He made religion a thing of life, of flesh and blood. He preached as the Master did, in the language of every day and made religion as real and practical as ploughing and reaping, as business and bread."

Both the religious and the secular press in general agree that Dr. Talmage's sermons have been more widely read than those of any other American preacher of his time (it is estimated that they reached 30,000,000 persons each week), and that they have done a great deal of good. One of the best things said of them is a report in the *Congregationalist* of a conversation overheard between some anarchists, one of whom said that Dr. Talmage was a great obstacle to the spread of their doctrines, because so many people read his sermons and were made hopeful and contented by them.

The Abbe Loisy and the Roman Biblical Commission

AUSTIN WEST, in the *Contemporary Review*, London
Condensed for PUBLIC OPINION

FOR nearly eighteen months past there has been pending in Rome, before the Congregation of the Index and that of the Inquisition—commonly known as "The Holy Office"—a case of exceptional interest, fraught with weighty consequences for the future of Biblical criticism within the Roman communion. Abbé Alfred Loisy, D.D., of Paris, who for some years has figured among the front rank of living exegetes in the Roman Catholic church, and whose scholarly attainments in every branch of Semitic lore have won him more than European fame, has been accused before the Roman tribunals by Cardinal Richard, as one who, by his active sympathies with modern critical science, is a troubler of the Catholic Israel.

And now, when extreme old age and failing mental vigor had seemed to preclude all likelihood of his personal activity in the matter, it is Leo XIII who, with characteristic masterfulness, has interfered to suspend the newly threatened condemnations by the Congregations of the Index and the Inquisition, and who has now finally withdrawn the Abbé Loisy case entirely from their jurisdiction. Realizing the broader issues which that case involves, the pope, as long ago as August 30th of last year, signed the documents which gave official existence to an International Pontifical commission for the special study of modern Biblical problems. This commission is to be a permanent one, like that for the reunion of the churches. The representatives chosen will not necessarily assemble frequently in Rome for their deliberations, but each will receive the reports and weigh the statements sent in by Catholic scholars and others in his own country, and act as local secretary and adviser to the head office. The specimen *schema* of questions published to the commissioners for their guidance covers all the leading questions of the "higher criticism," and brings into the field of free discussion the doctrinal sufficiency of the papal teaching itself, as embodied in the *Providentissimus Deus*. Cardinal Parocchi has

been named president by the pope himself; and although that cardinal would certainly not endorse the claim to being "a high authority upon all questions connected with Biblical exegesis," recently made on his behalf by the *Tablet*, he is undoubtedly the most learned of those cardinals resident in Curia. To him the pope committed the choice of two cardinal assessors. The career of Cardinal Ciasca, the only Biblical Orientalist of repute in the Sacred college, is unhappily at an end; and in appointing Cardinal Francesco Segna, prefect of the vatican secret archives, and the young Spanish Capuchin, Cardinal Vives y Tuto, the president has singled out non-partisans of ability. The "company of the twelve" commissioners are, for the most part, distinguished specialists, and, moreover, men who in their time have had, like Catholic thinkers generally, to suffer from narrow-minded churchmen in authority, as suspects of so-called "Liberal Catholicism." The majority of them have been denounced to the Roman tribunals for alleged rationalism.

The Practical Christ

"JESUS AS A PENOLOGIST"

IN a paper read before the recent National Prison congress, the Hon. Samuel J. Barrows, commissioner of the United States on the International Prison commission, made the statement that "the principles enunciated and the methods introduced by Jesus stamp Him as the greatest penologist of any age." Mr. Barrows says that these principles and methods are now recognized in modern law and modern penology. He shows that Jesus deals with the offender rather than with the offence. "He gave a practical illustration of the principle of the suspension of sentence. He applied it to what was even a capital crime in His day: 'Go and sin no more.' Such a principle can only be applied when it is admitted that it is more important to save than to destroy. On the old primitive theory strictly enforced probation was impossible. A study of the forces and agencies which are making for the prevention of crime shows that one of the most important things to avoid is the making of criminals out of first offenders. Imprisonment should not be the first resort, but the last." Mr. Barrows further holds that Jesus was not an advocate of salvation by legislation. "No codes and statutes can take the place of that education into moral and social duty which develops into the highest justice and the most perfect brotherhood." He enumerates the following as the essential elements in the penology of Jesus: "The rejection of the theory of social vengeance; the substitution of a theory of personal and social salvation; the adoption of curative instead of a merely punitive method; the application of the penalty to the offender rather than to the offence; the adoption of the suspended sentence or 'probation'; the recognition of the fact that the great forces of nature are necessary for moral as well as physical results; the divinity of labor; the application of the moral and spiritual forces; the potency of love as a redemptive agent; the necessity of moral surgery for moral cure; the importance of child-saving; the visitation of the prisoner; the establishment of personal relations and the bringing to bear of personal forces, and finally, restitution as one evidence of the reformation of the prisoner. The pivotal point in the penology of Jesus is that which makes the regeneration of the individual the key to the regeneration of society."

Religious Life in Kansas

ERNEST HAMLIN ABBOTT, in the *New York Outlook*. Condensed for PUBLIC OPINION

IT is the quality of piety in Kansas to thank God that you are not as other men are—beer-drinkers, shiftless, habitual lynchers, or even as these Missourians; you work six days in the week, and pay taxes rather than let saloons pay licenses. This illustrates the contrast between Kansas and the contiguous southwest. The difference is not that between the dogmatic and the undogmatic. In the southwest, religious life is marked, as I have described in a previous article, by doctrinal dogmatism. In Kansas, religious life is marked by dogmatism also; but it is not doctrinal, but moral. There is another difference. In the southwest religious dogmatism is a choppy sea; for doctrines of one sect conflict with the doctrines of another. In Kansas, religious dogmatism is a strong current, for church people of all names are practically agreed as to what moral courses are unquestionably Christian. It is true that Kansas is not by any means wholly free from the dogmatism of creed. It is also true that one of the most relentlessly dogmatic assertions as to moral conduct which I have ever heard was made in Arkansas. But in the main the "higher criticism" is the representative heresy of the southwest, while that of Kansas is beer. When I inquired what the churches were doing to supply a substitute for the saloon, I could find no positive information. As in doctrine, so in morals; it is much easier to combat a heresy than to construct a faith.

An opportunity I valued highly was afforded me in a conversation with a man who, through his position, had intimate acquaintance with the intellectual, moral, and religious life of the state. He was full of racy and brisk expressions. Mr. Sheldon, who gained wide repute a few years ago as setting forth the question, "What would Jesus do?" as the supreme interest of the Christian, he cited as typical of the state. "As soon as Mr. Sheldon gets the tugs on he wants to get them hitched to a cart filled with 'niggers' from Tennesseetown. He wants to switch men off from speculative questions to the practical—from 'are there few to be saved?' to 'strive to enter in at the strait gate.' It's a mean man that would suspect his motives." This I found corroborated in the brief interview I had with Mr. Sheldon. Personally he was extremely modest, but in his moral convictions absolutely confident as to just what Jesus would drink, just how Jesus would conduct a newspaper or manage a church. Indeed, he has the courage of his convictions, and has been willing to undertake to show to others by his own actions just what particular things the Christian life involves. In Kansas, this is saved from being pharisaism by the fact that Kansas people think in the concrete and accept this method as the normal way of expressing truth. There is nothing abstract about Kansas. Even ideality there becomes concrete. There are signs of an approaching time when Christianity there will be identified with motive and spirit rather than with precept. In the meantime those ministers and laymen who are magnifying specific reforms as the substance of Christianity are serving a highly useful purpose, for they are using concrete terms, which everybody who hears them understands, and making them religious. Even the most talkative Kansas idealist can always be found to have his idealism firmly fastened to a peg driven deep into the earth.

THE NEWS OF THE WORLD

MONDAY, APRIL 14

DOMESTIC.—A number of soldiers testified before the senate committee on the Philippines regarding the infliction of the "water cure" on Filipinos. President Roosevelt sustained the administration of Governor Dole of Hawaii. The United States supreme court heard arguments in the suit of the state of Washington against the Northern Pacific merger. The president renominated Robert A. Sharkey as naval officer at the port of New York, and appointed Archbishop Ryan a member of the board of Indian commissioners.

FOREIGN.—Sir Michael Hicks-Beach made a statement in parliament regarding the budget for the ensuing year; the plan proposed will work a great change in the former plan of free trade. The Socialists have precipitated a great strike in Belgium, and some violence is reported; the king has 35,000 troops under arms, and all precautionary measures have been taken to preserve the peace.

TUESDAY, APRIL 15

DOMESTIC.—Secretary Root ordered an inquiry into the allegations against General Smith at the Waller trial, and also into the "water cure" charges. The government notified steamship lines that they will be held responsible for the escape of Chinamen held at San Francisco for deportation. Attorney General Knox wrote to the house judiciary committee that he had not been requested to take any action against the beef trust and had no legal evidence of the existence of a trust. The commissioner of internal revenue rendered a decision on the collateral loans tax, sustaining his former ruling that the tax must be paid. Santiago Iglesias was acquitted at San Juan, Porto Rico, of conspiracy to raise the price of labor.

FOREIGN.—The resolution providing for a loan to be raised by an issue of 2¾ per cent consols was passed in the house of commons. Millers in England made a large advance in the price of flour. M. Sipiaguine, Russian minister of the interior, was assassinated in St. Petersburg by a student. Boer leaders asked for an armistice while the peace negotiations are in progress. Eleven men were killed by the bursting of a gun on the British battleship *Mars*. The Belgian strikers received large accessions. Jules Dalou, a prominent sculptor, died in Paris.

WEDNESDAY, APRIL 16

DOMESTIC.—General Chaffee reported the surrender of Malvar, the insurgent leader in Luzon, to General Bell, and the resumption of peaceful conditions in the northern Philippines; General Chaffee reported an expedition to punish Moros of Mindanao island for the

murder of American soldiers. President-elect Palma talked of his plans and outlined his first message to the Cuban congress.

FOREIGN.—The British cabinet met to discuss a message from Lord Milner giving the first clear idea of the peace terms demanded by the Boers; after the meeting Lord Salisbury called at Buckingham palace and had a long audience with the king; Lord Kitchener reported the capture of 135 Boers in the Klerksdorp district since April 11. The half of the new British war loan offered to the public was ten times oversubscribed; there was a further advance in the price of grain and flour in England. Debate on revision of the Belgian constitution began in the chamber of deputies at Brussels. Three sections of the Crimes act have been put in force in Ireland.

THURSDAY, APRIL 17

DOMESTIC.—Gonzales has agreed to obey General Malvar's order and surrender; there are now no insurgents left in the provinces of Laguna and Batangas; General Chaffee has assumed a firm attitude towards the dattos of Mindanao, and is determined to have American authority respected. The secretary of war has cabled to General Chaffee for the complete record, including the testimony, in the case of Major Waller.

FOREIGN.—There were open threats of civil war in the Belgian chamber of representatives. Six thousand textile workers at Vienne, France, went on strike and troops were summoned to disperse rioters, several persons on both sides being wounded. Chinese rebels held 30 towns in Kwang-Si province. Don Francisco d'Assise, Duke of Cadiz, once King of Spain, died.

FRIDAY, APRIL 18

DOMESTIC.—The terms of the Colombian protocol providing for the lease of a strip of land for the Panama canal to the United States were made public at the state department. In the absence of Secretary Root President Roosevelt has taken personal charge of matters relating to the Philippines. The return of troops from the Philippines and Cuba has made a number of changes in stations necessary. The cholera epidemic at Manila is unabated; the totals for the city were 332 cases and 253 deaths; for the provinces, 651 cases and 430 deaths.

FOREIGN.—The Belgian chamber of representatives voted down the proposition for universal suffrage. Senator von Plehwe, secretary of state for Finland, has been appointed Russian minister of the interior. More troops to suppress the revolution in Colombia reached Colon.

SATURDAY, APRIL 19

DOMESTIC.—Dr. Nicholas Murray Butler was formally installed as president of Columbia university before a large gathering of prominent men, including President Roosevelt, many college presidents and professors, and men of other professions. The necessity of expansion and reciprocity was urged at a banquet of the Chicago Bankers' club by W. V. E. Ingalls, president of the Big Four railroad company. An address on "Government by Injunction" was issued to the wageworkers of the country by the executive council of the American federation of labor.

FOREIGN.—Bocas del Toro, Colombia, was captured by the Liberals after a sharp engagement; a government expedition under Governor Gomez sailed from Colon for the purpose of retaking the post. There was an extensive observance of Primrose day in England. The meat and provision trades in Great Britain are in a disordered condition, owing to the operations of the Beef trust in America. The dock strike at Copenhagen is spreading. Pietro Calcagno, an avowed anarchist, is a candidate for a seat in the Italian parliament. An attempt to start a demonstration against President Loubet in Paris resulted in the arrest of the originator of the effort, which failed. The rebels in China have captured Nan-Ning, an important city in Quang-Se province.

SUNDAY, APRIL 20

DOMESTIC.—General J. Franklin Bell has received the congratulations of President Roosevelt and General Chaffee on his conduct of the campaign in Batangas and Laguna provinces, Luzon, P. I.; General Jacob H. Smith defends the conduct of the campaign in Samar by the American troops as humane; surrenders of insurgents to the American troops continue daily. General Palma, president-elect of Cuba, landed at Gibara, Cuba, and was welcomed with great enthusiasm by the people of that and other cities. Frank R. Stockton died at Washington.

FOREIGN.—In a conflict on the Bulgarian border eight Bulgarians were killed by Turkish soldiers. There was rioting at Annatto bay, Jamaica, where police and coolies had a conflict. Emperor William and Count von Waldersee took part in the ceremony of unveiling a monument to General von Rosenberg at Hanover.

Ef Gabrul wuz ter blow his trumpet ter-morrer, some er de fault-finders would rise en tell 'im dat his musical eddication had been neglected.—*Atlanta Constitution*.

BOOK REVIEWS

"The Empire of Business" *"The Lady Paramount"* *"Democracy and Social Ethics"*

THE EMPIRE OF BUSINESS. By Andrew Carnegie. Cloth, pp. 345, \$3. New York: Doubleday, Page & Co.

MR. CARNEGIE'S widely announced new book is in a measure a disappointment, since it contains no new matter. All the chapters have appeared before as magazine or newspaper articles or addresses. But it is safe to say that the interest in the mental processes of Mr. Carnegie is sufficient to justify the republication of most of the matter in the book. Of course, the author pays his respects to the blessings of poverty as a spur to ambition, and to the desirability of a modest "competence" as the goal of human effort. For a college education as a business training he has small use. For a man who has the money and leisure to cultivate the graces and gentle incidentals of life, it is all very well to have spent four years within the college walls, but to the man who must make a living and bear his share of the world's industrial burdens it is only a hindrance. Mr. Carnegie's expert testimony on the subject of trusts is entitled to a respectful hearing. No trust is so strong that it can afford to disregard competition is his dictum, and in the existence of competition, actual or potential, lies the safety of industry. This controverts the opinion first advanced by George Stephenson that where combination is possible competition is impossible. In the matter of the tariff he stands sturdily for a high rate on articles of luxury, but can not refrain from putting in a plea for the infant industry. The interests of labor and capital are to his mind identical. He does not explain how two parties, each desiring as large a share as possible of a given product, can have identical interests when the time comes for the division of the property, but perhaps this is a mere matter of detail. His advice to young men is eminently sound, and if young men were not by way of receiving so much good advice from all sides, there would be reason to believe that it would have a good effect. The chief prerequisites to success in life—which, being interpreted, means a modest "competence"—are industry, sobriety, thrift, honesty, abstention from speculation, much study of useful books, and more industry.

THE LADY PARAMOUNT. By Henry Harland. Cloth, pp. 292, \$1.50. New York: John Lane: The Bodley Head. It is seldom that one comes upon so flawless a piece of work as "The Lady Paramount." It is a free flight into the realms of fancy,—a pure romance, unalloyed by any mixture of the historical, analytical, or psychological element,—a love story which follows the smooth course of an ideal love unhampered by any tiresome acti-

alities. Yet, though this idyll is as far removed as one could possibly imagine from everyday experience, it is warmly human and fairly sparkling with the exuberance of life and youth. The simplicity of true art and the restraint of the genuine artist are displayed both in construction and expression. Two scenes supply the "atmosphere" of the story: the imaginary island of Sampaolo, somewhere off the coast of Italy; and an estate somewhere in the heart of England. Only five characters are required for the cast: Susanna, Countess of Sampaolo, and a second Portia in humor and vivacity, character and decision. Alive, alert, wayward, and provoking, but generous and loyal, the lovely Susanna would be worth while if the rest of the book were naught. In

HENRY HARLAND

her shadow lurk her gruff old guardian, the Commendatore Fregi, and her duenna, a delightful little Englishwoman, as sharp as a needle, as bright as morning, though seventy-four years of age. The hero is Anthony Craford, squire of Craford Old Manor, and, but for a trick of fortune, Count of Sampaolo. He is a thorough-going patrician, with an air of "indolent melancholy, a kind of unresentful disenchantment, as if he had long ago perceived that cakes are mostly dough and had accommodated himself to the perception with a regret that was half amusement." Closely associated with him is Adrian Willes, by vocation a composer and singer of songs, and—"contrapuntally," as he would explain—Anthony Craford's housemate, monitor, land-agent, and man of business.

The theme of this delightful story is a woman's whim. The romantic Susanna gets the notion into her head that her English cousin, whom she has never seen, is the rightful heir to Sampaolo. Since the law can not overlook "the accident of birth," that makes it her own, she decides upon another method of restoring it to him. Assuming the identity of Madame Torrebi-

anca, "a rich, charming, dashing, not-too-disconsolate widow," and accompanied by the faithful Miss Sandus, she goes to Craford Manor as a tenant of her cousin Anthony and prepares to lay siege to his heart. He surrenders before the first gun is fired, and Susanna, somewhat terrified by the suddenness of her success, begins to retreat from the consummation that she devoutly wishes. After a brief summer of the most ideal love-making that English lanes and gardens and the delicate assistance of a watchful friend and duenna can afford, Susanna puts her lover to this test. Fate has clearly decreed that he marry the countess; he must go to Sampaolo, look upon the lands and the countess that might be his, then, if he is willing to renounce all these for love's sake, she will listen to his suit. One can easily guess the rest of the story, but one can not guess the charm with which these closing chapters are invested, nor the delicious bit of comedy at the end of the story.

DEMOCRACY AND SOCIAL ETHICS. By Jane Addams. Cloth, pp. 277, \$1.25. New York: Macmillan Co.

MISS ADDAMS speaks from her long and varied experience as the head of Hull House, the great social settlement of Chicago, and her dicta are reasonable and acceptable. Her plea is for a fuller recognition of the claims of the community as against those of the individual and the family, and for a larger development of the social consciousness. The place which she assigns to the family is not that of an end in itself, but as the basic unit of the larger community which surrounds it. On this point she does well to call attention to the conflict of ideals existing between those of the generation now coming into activity and their fathers and mothers, who were taught, and still believe, that the claims of the family are preëminent. The greatest difficulty which she has found in the way of the average charity worker is the failure to comprehend the difference in the ideals of the helpers, and those whom they would help. Chief among these is the economic interdependence of the poor which justifies the taking from the children, by the parents, of the wages which the children have earned, and the expectation of the parents to be supported by the children when the former have become unable to support themselves. A weighty charge which she brings against modern charitable effort is the failure to recognize the practical activities of the laboring man in the attempts to educate him. The whole aim of the scheme of education of the poor seems to be not to make better workmen of them, but to bring them to the point where they shall no longer need

to be workmen. In consequence, we are forced to be content with pitifully inadequate results for the great educational labors which we undertake, and the great mass of the poor come off with little or no sense of their importance as an integral part of a social and economic whole. "We constantly hear it said in educational circles," she says, "that a child learns only by doing and that education must proceed through the eyes and hand to the brain; and yet for the vast number of people all around us who do not need to have activities artificially provided, and who use their hands and eyes all the time, we do not seem able to reverse the process." The sum and substance of Miss Addams's plea is that the salvation, and the glory, of democracy lie in the education of the individual to merge the sense and the desire of personal achievement in the activities and the welfare of the many.

MONICA AND OTHER STORIES. By Paul Bourget. Cloth, pp. 289, \$1.50. New York: Charles Scribner's Sons.

We are indebted to Mr. William Marchant for his excellent translations of four characteristic stories by Paul Bourget: *Monica*, *Attitudes*, *Gratitude*, and *Three Incidents of War*. He has translated the author in spirit as well as in letter, showing the same care for minutiae, the same love for *finesse* in every detail. In the title story, which occupies half the volume, we have a little domestic drama handled with exquisite feeling. A Paris cabinet-maker, an artist-workman of the old school, adopts a foundling left on his doorstep, and trains her in his shop to weave tapestry. Her beauty and talent and her complete sympathy with the aims and ideals of the wood-carver arouse the jealousy of his wife and daughter, and the latter vents her hatred by throwing upon *Monica* the suspicion of theft. The little affair, which takes a serious turn for a while, ends happily, and an old carver, the dean of the workshop, philosophizes as follows on the situation: "Franquetot thought he could make a family with a *Monica* and a *Gote*. *La Monica* is the walnut, a fine wood, pretty, a wood for art and display; the other one is the whitewood. Do you see now why his plan did not succeed? And thus, whatever wood we are, we are cut and sawn and planed, and, in the end of everything, eaten by worms, like this arm-chair. There is this difference, however, that with care a piece of furniture can be set up again, no matter how bad it is; while a man too much broken—you may set him on his feet, but it's no use; he can't stand."

A DOUBLE-BARRELLED DETECTIVE STORY. By Mark Twain. Cloth, pp. 179, \$1.50. New York: Harper & Brothers.

We have a shrewd suspicion that this is a joke, and the suspicion is reinforced by the assurance of the author that that is what he intended it to be. In the young man with the bloodhound's power of scent, acquired by prenatal influences, he fairly outdoes

Conan Doyle at his weirdest. The introduction of Sherlock Holmes into a western mining camp is unexpected and not ineffective. Nevertheless, it will be difficult for the average reader to see where the joke comes in; perhaps that's the joke. It is too tame to be a burlesque, and too far-fetched to be humorous. For instance, in describing a California landscape, the author mentions a "solitary oesophagus" floating in the air. This may be funny, but few would discover it. The publishers were wise when they confined themselves to the statement that it was a "novelette in which the author enters upon a field that is entirely new."

THE WESTCOTES. By A. T. Quiller-Couch. Cloth, pp. 289, \$1. Philadelphia: T. Coates & Co.

It is doubtful if any story-teller of to-day is better qualified to wear the mantle of Stevenson than Mr. Quiller-Couch. His entire sincerity and honesty, his scorn of all showman's tricks and paradiings, his eye for the truth and the tragedy in weak human nature, and, above all, his enlightened industry in the pursuit of his art, are all reminiscent of that other man who could count all lovers of a good story as his friends. The present tale is of the love of a gentle English spinster for a French prisoner captured in the wars of Napoleon. The man rewards her scrupulously enough, but proves to have something of the poet and the gentleman in his makeup after all.

THE CAPTAIN OF THE GRAY HORSE TROOP. By Hamlin Garland. Cloth, pp. 415, \$1.50. New York: Harper and Brothers.

We are advised by the publishers that this is an American novel of love and adventure in the west and that it gives a most vivid picture of frontier life on the plains and in a western army post. This is all a mistake. The book is a plea for better treatment of the Indians. Captain Curtis, formerly of the Gray Horse Troop is the model Indian agent. He has no army and no army post. He is detailed as an Indian agent and renders splendid services in that capacity, converting or overcoming the opposition of all who are ranged against him, including Miss Brisbane, whom he not only converts, but marries as well.

CAPTAIN JINKS OF THE HORSE MARINES. By Clyde Fitch. Boards, pp. 167, \$1.25 net. New York: Doubleday, Page & Co.

As a play "Captain Jinks" is not much; it is one of the sort that Mr. Fitch writes with his left hand while he is engaged upon something really important with his other. But the publishers have made a very attractive little book out of it that should find favor with those who have seen and admired Miss Barrymore as "Madam Trentoni."

DISTINCTIVE MARKS OF THE EPISCOPAL CHURCH. By John Newton McCormick. Cloth, pp. 52, 25 cents. Milwaukee: Young Churchman Co.

THE STROLLERS. By Frederic S. Isham. Cloth, pp. 499, \$1.50. Indianapolis: Bowen-Merrill Co.

THE tour of a strolling company from New York to New Orleans during the middle of the last century furnishes Mr. Isham with a series of lively adventures. The leading lady, the lovely Constance Carew, attracts the attention of two men at a country inn, Ernest Saint-Prosper, soldier of France, an exile by the revolution of '48, and Edgar Mauville, lord of a patroon estate in the Shadengo valley. These men, for love of the maid, follow the strollers to New Orleans, the soldier attempting to win her regard by honorable means, the lord by abduction and various other wicked wiles. The vicissitudes of the strollers and the battle of lovers are related with vim and force. The disclosures at the end of the story are full of neatly contrived surprises. "The Strollers" commends itself to all who like a good plot, plenty of action, original devices, and telling climaxes.

MEN AND MEMORIES. By John Russell Young. Cloth, pp. 484. New York: F. Tennyson Neely.

MR. YOUNG had a delightful circle of acquaintances among men of all ranks and callings, and he has many interesting anecdotes to tell of them. From the civil war to the time of his death, three years ago, there was hardly a man of any prominence in the country with whom he was not at least slightly acquainted, either as a newspaper man or as the librarian of congress. Some of the most interesting memories are those of incidents which occurred during the tour of General Grant around the world, on which Mr. Young accompanied him. The striking feature of the "Memories" is the fact that they are invariably pleasant ones. On not a single page is there a word of disagreeable criticism or of fault-finding. Either Mr. Young was very fortunate in his friends or very charitable in his recollections of them.

THE HEROINE OF THE STRAIT. By Mary Catherine Crowley. Cloth, pp. 373, \$1.50. Boston: Little, Brown & Co.

LIKE this author's previous work, this book deals with the early history of Detroit, the principal events being the surrender of Detroit to the English by the French and the siege of the place by Pontiac. The story is well developed, the character drawing is clear and concise, and the author has a knowledge of her material that makes the book more than a production of mere fancy.

SELECTED ESSAYS AND ADDRESSES BY SIR JAMES PAGET. Edited by Stephen Paget. Cloth, pp. 445, \$5. New York: Longmans, Green & Co.

ALL of the lectures in this volume are on purely technical subjects, and will naturally be of small value to the lay mind. If any laymen do take up the book, they will be charmed with the clearness and simplicity with which the great surgeon treated the most difficult subjects.

COMMONWEALTH OR EMPIRE. A By-stander's View of the Question. By Goldwin Smith. Cloth, pp. 82, 60 cents. New York: Macmillan Co.

It is the opinion of Professor Goldwin Smith that the American people, and in fact the whole Anglo-Saxon race, are on fire with the lust for gold and glory. Plutocracy, imperialism, and militarism possess us to the exclusion of more gentle and humane ideals and considerations. The hope that the English tongue shall bye-and-bye become the universal language of the civilized world, he condemns as a trader's idea. Just why that should be a term of reproach when the majority of the people of that world are traders of one sort or another, he does not make clear. His plea for the integrity of the smaller nations on the ground of their social and intellectual usefulness is a timely one.

DOROTHY SOUTH. By George Cary Eggleston. Cloth, pp. 453, \$1.50. Boston: Lothrop Pub. Co.

A RATHER common-place love story springing from the soil of the novelist's happy hunting ground—Virginia before the war. Mr. Eggleston attempts to throw an air of mystery over certain developments of the plot that are perfectly apparent from the beginning, and it would have been better to have led up to these things in a simple, natural way rather than to reserve them for forced climaxes. The secret of Dorothy's birth and Madame Le Sud's identity, for instance, are known before the author chooses to reveal them. The best thing in the book is the author's description of how the hero and heroine fight a fever epidemic on a Virginia plantation.

THE COAST OF FREEDOM. By Adèle Marie Shaw. Cloth, pp. 466, \$1.50. New York: Doubleday, Page & Co.

THE BOSTON of Sir William Phips and Cotton Mather is the place of this pleasing romance of Puritan times. Sir William and the hero rescue the heroine from pirates, from a scheming relative, and from the witch-baiters. The plot is complete and promising, but the development of it is rather too sketchy and superficial to make the most interesting reading. The romantic elements are well handled, but the atmosphere of superstition and murderous panic that enveloped the witchcraft trials is not shown as effectively as it might have been.

OF GARDENS. An Essay by Francis Bacon. Cloth, pp. 29, 75 cents. New York: John Lane.

A QUIET reproduction of the text of Bacon's famous essay beginning, "God Almighty first Planted a Garden, and Indeed, it is the Purest of Humane Pleasures."

NONSENSE FOR OLD AND YOUNG. By Eugene Field. Cloth, pp. 58, 50 cents. Boston: Henry A. Dickerman & Son.

A FEW sketches, originally published in the *Denver Tribune*—fair samples of Field's occasional horse-play.

The Powell Correspondence System

ADVERTISING INSTRUCTION

Young Men and Women Earn Big Salaries and Business Men Save Thousands of Dollars.

Every business man, bookkeeper, clerk, salesman or professional man with a desire to earn double the present income, should take advantage of this opportunity to learn advertising writing. Mr. Powell is to-day considered by those best competent to judge, as one of the most skillful writers of advertising in America. Some of his achievements are notable.

Entering the field in 1891, he quickly revolutionized bicycle advertising, and set a pace that was never equalled. Later he astonished patent medicine men by demonstrating his ability to float a new article and make it highly profitable the first month.

About three years ago Mr. Powell established himself in New York, and besides making thousands of dollars from another proprietary article of his own, he has helped scores of others to win through up-to-date publicity.

As a counselor and planner of advertising campaigns Mr. Powell stands first among experts and he is paid the highest fees by scores of our largest advertisers with whom he is in constant touch.

Send for the Powell Prospectus, a beautiful booklet shedding much light on the scientific study of advertising, and giving highest endorsements from successful students of note and from famous authorities. Address

GEORGE H. POWELL, 125 Temple Court, New York City.

Puck, the great comic weekly, says: "Mr. Powell is one of the very few really great men in the advertising business."

Mr. G. A. McClellan, Sec'y and Treas. *Daily Star*, Muncie, Ind., writes, Feb. 8, 1902: "Our local advertising manager, Mr. J. A. Harvey, in accordance with my recommendation, has taken your Course of Instruction, and as a result has secured the advertising management of three large retail stores. Naturally he is more than enthusiastic in his praises of your school, and is willing to give you the strongest possible recommendation. I desire to congratulate you on the splendid results attending your efforts. I have personally investigated, and am convinced that yours is the most thorough and practical system extant."

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, April 19

Weather conditions have been potent for good during the past week. Retail distribution was greatly accelerated, which in turn enlarged jobbing trade and brought more pressure on manufacturers for prompt shipment; agricultural work was facilitated and building operations made rapid progress; traffic increased at the interior as the condition of country roads improved, which made collections better. Some labor controversies were settled and others were averted. Complaints are still heard regarding tardy deliveries, but freight is less congested, and business has increased to the extent of 6.9 per cent larger railway earnings for April thus far than last year, and 16.3 per cent over 1900. Dealings in securities reached the greatest aggregate for any week this year, yet there is still a large decrease compared with 1901, to which may be attributed part of the 23.6 per cent loss in bank exchanges at New York. Compared with the corresponding week in 1899 there is an increase of 26.1 per cent. At other leading cities there was a decrease of .3 per cent from last year's clearings, and a gain of 34.0 per cent over 1899.

IRON AND STEEL

Quotations of iron and steel can not yet be considered inflated, but the mar-

A BURNING BLACKSMITH

Changed Food and Put Out the Fire

Even sturdy blacksmiths sometimes discover that, notwithstanding their daily exercise and resulting good health, if their food is not well selected trouble will follow, but in some cases a change of food to the right sort will quickly relieve the sufferer, for generally such active men have fine constitutions, and can, with a little change of diet, easily rid themselves of the disease.

I. E. Overdorf, Vilas, Penn., a blacksmith, says: "Two months ago I got down so bad with stomach troubles that I had to quit my business. About ten o'clock each morning I was attacked by burning pains in the stomach, so bad I was unable to work."

Our groceryman insisted upon my changing breakfasts and using Grape-Nuts Breakfast Food instead of the ordinary breakfast of meat, potatoes, etc. So I tried and at once began to mend. The new food agreed with my stomach perfectly, and the pains all ceased. I kept getting better and better every day, and now I am able to follow my business better than before in years. I am a thousand times obliged to the makers of Grape-Nuts for the great benefits the food has given."

ket is following a natural course, despite the efforts of leading interests to maintain a conservative position. Supply and demand must in the long run govern prices, and, in this industry, needs are greater than available stocks, although productive capacity has largely expanded. Pressure for pig iron is very great, but furnacemen have contracted for their output far into the future, and consumers who want prompt delivery are willing to pay premiums. Similarly as to steel rails, the regular price of \$28 has become nominal on current business, an advance of \$5 a ton being readily paid for immediate delivery. This is especially noticeable on urgent trolley construction. Specifications for new buildings promise abundant additional contracts for structural material, while some mills have already sold their entire output for 1902. Machinery and hardware lines share in the exceptional activity, and are doing a brisk export business in spite of high prices.

COTTON AND WOOL

Cotton goods have not followed the fluctuations in the raw material, although its strength has contributed to the steadiness of the finished product. The feature of the week was the increased inquiry for export, and mills catering to this trade are sold far into the autumn. In the domestic trade many bids slightly below ruling prices were not considered, and it is evident that supplies are in strong hands. Deliveries are being made more promptly, yet there is no fear of accumulation. Woolen goods are in less urgent demand, purchasers having secured most of the cloth which the American company was unable to furnish owing to the strike.

CORN AND WHEAT

There was some logical explanation of the advance in corn, interior receipts falling to 857,500 bushels for the week, while Atlantic exports rose to 384,803 bushels, an unusually large total for recent times, although small by comparison with the corresponding week in preceding years. Wheat was sustained by

THE MONEY MARKET

Increased activity in the stock market seemed to have an effect on the New York loan market at the beginning of the week. For a moment at least the fear of trouble in connection with Louisville & Nashville developments seemed to create decided conservatism among lenders. This, however, soon passed away, and it was recognized that a repetition of last spring's complications in Northern Pacific was impossible. The inquiry for money for Wall street also seemed to have increased, but the supply is larger, and it is noted that the gold shipped from New York to San Francisco some little time ago is now beginning to return to the former city. Another favorable bank statement is expected soon, the banks having apparently gained about \$2,000,000 cash and reduced their loans somewhat. Call money ranged from 3½ to 6 per cent, but most of the business was at 4½ per cent. Time money was in moderate demand, but there was a liberal supply, the rates being 4@4½ per cent. Commercial paper was in limited supply,

A CHINA HEAD

Comes From Tea Drinking

A lady writes from Shanghai, China: "In the summer of '98, Husband and I were traveling through Southern Europe and I was finally laid up in Rome with a slow fever. An American lady gave me some Postum Food Coffee which I began using at once. It was my sole breakfast and supper. In a short time the change in my physical condition was wonderful to see. I will never travel again without Postum.

When we arrived in Shanghai we were in an English community and found ourselves in the midst of the four o'clock tea custom. Before long we began to have sleepless nights and nervous days as a result of our endeavors to be amiable and conform to custom.

As soon as it could arrive from San Francisco we had a large supply of Postum Food Coffee and began its use at the four o'clock tea table. I cannot tell how popular the coffee table became for afternoon callers. In fact a number of the business men, as well as missionaries, use Postum now wholly in place of tea, and the value of the change from coffee and tea cannot be estimated." Name given by Postum Co., Battle Creek, Mich.

and the buying demand is also restricted, though there is a tendency toward improvement in this respect.

THE STOCK MARKET

Greater activity in speculation marked the week at the stock exchange, with higher prices in many portions of the share list. The satisfactory adjustment of the Louisville complications by placing the road in the hands of J. P. Morgan & Co. creates confidence that other important deals may be brought out. The Southern railway was especially strong, but reacted on statements that no merger with Louisville was contemplated. The anthracite coal stocks were very strong on rumors of a settlement of all differences with the miners. The reduction of the Amalgamated Copper dividend to $\frac{1}{2}$ per cent quarterly, or 2 per cent per annum, had no particular effect. London has shown a disposition to buy American stocks, and the new issue of consols for war purposes there has been well received, \$25,000,000 of the amount being allotted to American subscribers. The general bond market at New York is active, with further advances in semi-speculative issues. Foreign exchange is steady and dull, demand sterling being 4.87 $\frac{1}{2}$.

BANK CLEARINGS

Bank clearings for the week ending with April 17 aggregate \$2,541,841,707, an increase of 13 per cent over last week's total, but a decline of 16 per cent from a year ago. Exchanges at cities outside of New York amount to \$838,523,119, a gain of 6 per cent over last week, and an increase of 2 per cent over last year.

The Latest Railroad Consolidation

In discussing the recent acquisition by J. P. Morgan & Co. of a controlling interest in the Louisville & Nashville railway, the Springfield (Mass.) *Republican* says: "The affair not only further magnifies J. P. Morgan as much the greatest personal factor in the American railway world, but marks another long step in the consolidation of the steam mileage of the country. The Southern railway interest now controls directly or indirectly over one-half of the railroad mileage to be found in the section south of the Potomac and Ohio rivers and east of the Mississippi. The only considerable companions within that territory now lying outside of this practical consolidation of the Louisville and Southern railway systems are the Illinois Central, on the west, and the Atlantic Coast line (which is now taking over the Plant system of railroads) and the Seaboard air line, on the east. The Chesapeake & Ohio and the Norfolk & Western, which run across the territory on the north, are properties affiliated with the Morgan interest. Thus the consolidation of the railways of the south comes near to being complete for all practical purposes; and the merging of railway control over the country proceeds rapidly along lines making for the creation of three great groups of con-

Announcement of the Mergenthaler-Horton Basket Machine Company

60 Cents for Basket Shares

A Further Advance to 70 Cents a Share is Announced to Take Effect on or before Saturday, May Third

Other Advances Will be Announced Immediately Thereafter

THE Mergenthaler-Horton Basket Machine Co. is making constant progress. Its plans are being realized so rapidly that its shares must be sold at par within ninety days.

Statements made in this Company's announcements may be relied upon as exact, and shareholders will more and more clearly understand that the Company's prospects have not at any time been overstated.

THE PROPOSITION

The proposition which The Mergenthaler-Horton Basket Machine Company presents is not a mechanical novelty or a fad, which may be popular for a few weeks or months and then take an insignificant place. It is not a speculative offering of problematical value, like an undeveloped mine or an alleged oil well producing an unmarketable product; it is a proposition of soundest and most enduring commercial strength, containing within its ownership and control the means of revolutionizing a great and growing industry.

The proposition presents to the public, in these offerings of its shares, the opportunity which has always heretofore been given to a syndicate. It presents the well known principle of great saving of labor and provides automatic machines for the making of baskets—machines which save two or three times as much labor as any of the sensational money earners, like the Sewing Machine, the Cotton Gin, or the Mechanical Typesetter.

With one of its machines one girl does the work of twelve men.

RIGHT AND TITLE

This Company's presentment is logical throughout. It takes its name from the fact that one of its automatic machines was invented and made by Ottmar Mergenthaler, the inventor of the Mergenthaler Linotype; and two of its automatic machines were invented and made by Emmett Horton.

All of the inventions and the sweeping patents on the basket machines invented and made by these men are owned and controlled by the Company, which combines the two names in its title.

All the experimental work in connection with these automatic machines was carried on and brought to a successful conclusion by a company called The Horton Basket Machine Co., which has been absorbed by the great organization known as The Mergenthaler-Horton Basket Machine Co.

UNDER EMMETT HORTON'S EYE

This Company owns about fifty machines and is making plans for the manufacture of several hundred more. These new machines will be constructed exactly similar to present machines, under personal supervision of Mr. Emmett Horton, to whom is due the full credit for the original primary inventions in basket-making machinery, to the perfecting of which he has devoted his life.

It is a fact that with the exception of the few millions of baskets made by the machines owned by this Company, every one of the billions of baskets required every year to market our fruit crops has been made by hand.

The baskets turned out complete by these machines from raw material are superior in every way to those made by hand labor, and some idea of the immensity of the industry which now exists in basket making may be gathered from the fact that there are at present in this country

Announcement of the Mergenthaler-Horton Basket Machine Company**OVER NINE THOUSAND FACTORIES**

making baskets by hand-labor, each factory employing from six to three hundred men and women.

MACHINE BASKETS BETTER

The superiority of the baskets made by these automatic machines over the baskets produced by hand labor has been thoroughly demonstrated by the educational methods of the Robison Basket Co., of Painesville, Ohio, during the past three years, which company has during this period operated from 25 to 35 of these machines (owned and controlled by the Mergenthaler-Horton Basket Machine Co.), and stands ready to exhibit them to all who will go to Painesville to see the immense basket factory in operation there.

IN THE PUBLIC EYE

Recognition of the great merit and permanent commercial solidity of the proposition of this Company has been instant. From its first presentment in January down to the present the interest has been steadily growing, and the plan of offering shares to the public from the very beginning has been closely watched by financiers everywhere. The history of the great success in securing popular subscriptions for these shares shows that a praiseworthy enterprise need not be given over to the hands of a syndicate for financing if the truth concerning it is made sufficiently clear to the general public.

THREE BIG FACTORIES

This Company is arranging to locate three new large basket factories in the territory east of the Mississippi River, and so conserve the cost of its lumber supply that, in addition to the great saving in labor made by its machines, it will effect a like saving in raw material.

PROFIT \$8.50 PER 1,000

No basket business in the world is carried on as this one will be, and the present definite calculations show that doing the business on the scale contemplated will save fully \$3.00 per thousand grape baskets in raw material, and \$3.00 per thousand grape baskets in labor. This added to the natural profit of the business, which averages at lowest wholesale prices about \$2.50 per thousand, and we have a total profit of \$8.50 per thousand for a commodity which sells at an average wholesale price of \$17.00 per thousand and the demand for which is almost unlimited. This profit, too, is made on a superior article.

One-half the present volume of business in grape baskets and berry baskets will earn a

Profit of Over \$4,000,000 Annually

When some technical matters regarding extensive purchases made by this Company are completed, the financial provision for which is already ample, the price of shares will be quickly advanced to par and beyond. The allotment at 50 cents has just been closed, and the volume of subscriptions was a substantial increase over any previous allotment. The present allotment at

60 Cents a Share (Full-Paid and Non-Assessable)

will be closed on or before Saturday, May 3d, and the price then advanced to 70 cents a share.

NOTICE

It is but fair to state to those who have been making preparation to purchase shares of this Company that the allotment at 60 cents per share may be closed several days earlier than the present announcement. This was the case with the 50 cent allotment, just closed, which was announced to close on May 1st, and then on April 24th, and finally on April 19th.

The Capital of the Company is Ten Millions, and its officers are H. H. Warner, President; Charles R. Barlow, Treasurer; Sidney B. Whitlock, Secretary.

Checks for subscriptions should be made payable to order of Charles R. Barlow, Treasurer.

THE MERGENTHALER-HORTON BASKET MACHINE CO.

solidated properties—the trunk line group to include all roads east of Chicago and north of the Carolinas; the transcontinental group, embracing all roads to the northwest, west, and southwest of Chicago, and the southern group to include all lines of a general northward and southward trend within the territory between the Ohio, Potomac, and Mississippi rivers. And these groups are just as rapidly falling under the control of men disposed to act in concert."

Various Topics

The supreme court of Illinois has held unconstitutional the law taxing foreign insurance companies doing business in Illinois 2 per cent on gross premiums.

The world's locomotive speed record has been broken in a run of 14.8 miles on the western division of the Chicago, Burlington & Quincy railway, when an average of nearly 100 miles an hour was made by a regular passenger train.

Railroads entering Chicago have voluntarily increased the wages of freight handlers. The advance varies in the different departments, but the total increase is \$25,000 per month and affects 8,000 men employed in freight depots of Chicago.

Commissioner of Internal Revenue Yerkes has made public his decision in the collateral loan tax matter. It sustains his previous decision requiring a stamp of 2 cents on \$100 to be paid on the memoranda of stock transactions in cases where certificates are pledged as security for payment of loans.

Dun's index number of the course of prices, with due allowance for the relative importance of each commodity, was \$99,222 on April 1, compared with \$101,593 a month previous, and \$94,910 a year ago. The fall of 2.3 per cent during March was the logical result of the advancing season which brought higher temperature and expanding production of many articles of food.

At a special meeting in Albany recently stockholders of the New York Central & Hudson River railroad company authorized an increase in the capital stock of the company from \$115,000,000 to \$150,000,000. The new lease provides for an issue of \$10,000,000 in 3½ per cent bonds, of which \$6,400,000 will be used to retire old bonds bearing interest at 4 and 5 per cent and the balance for improvements and enlargements.

The London *Daily Mail* reports that negotiations are afoot for the formation of a huge European iron combination, the purpose of which will be to keep up prices. In view of the American demand for pig iron and steel, there are many difficulties in the way of the formation of such a combination, and the matter has not yet developed. According to a dispatch from Brussels, the principal Belgian and German firms are not inclined to join the combination, because the fall in prices enables them to compete in the American markets.

PUBLIC OPINION

Number 18
Volume XXXII

The Week

Thursday
May 1, 1902

WASHINGTON is after the meat trust in good earnest. Not only have bills been framed in congress abolishing the tariff on all kinds of meat, but Attorney General Knox has, after investigation, instructed the United States district attorney at Chicago to enter restraining suits. These proceedings strike at the fountain head of the trust, if such there be, and afford the public a quick means of relief from the complained-of exactions of the meat combination. It is given out that the department of justice has collected evidence showing the existence of a conspiracy in restraint of trade in meat, and that the millionaire butchers are somewhat alarmed at the prospect is shown in the reduction of meat prices that has taken place since these proceedings were threatened. Many localities have taken matters into their own hands and there are numerous local boycotts of "trust meat."

ACTION on the Cuban reciprocity measure has received another setback in the form of a resolution offered by Senator Teller and aimed to bring some light to bear upon the charge that the sugar trust controls the entire sugar crop of the island, and would be the sole beneficiary of the tariff reduction bill passed by the house. The inquiry into this subject will take some time, and after it is concluded there will yet remain the difficulty raised by the amendment abolishing the differential duty on refined sugar. The senate, everyone agrees, will not accept this amendment; the bill shorn of this feature can not, it is also agreed, pass the house, and a deadlock is almost certain to result which will still further postpone the relief of which the Cubans are said to be so sorely in need. If they are in such straits as they are said to be in, what congress does now will not make much difference to them.

THE Philippines supply their usual quota of material for discussion this week. Major Waller's defense against the charges of inhumanity in Samar was that he merely carried out the orders of General Jacob H. Smith. General Smith admits the impeachment, but it is hinted that he will in turn pass the responsibility on to someone higher in authority—General Chaffee, for instance. Some of the cartoonists will surely take advantage of the opportunity to resurrect the familiar Tweed cartoon, putting Philippine generals in the place of the circle of boddlers, each pointing to the man next to him, but retaining the old caption, "It was him." The senate has devoted most of its time during the past week to discussion of the Philippine government bill, but nothing has been done beyond the manufacture of a little campaign material for use next fall.

THE Indiana Republican state convention last week was the first state convention of the year, and for various reasons its platform is important as an indication of Republican policy in the immediate future. The platform contained no surprises; it is noteworthy only in that it holds so tenaciously to the current Republican doctrine of the past few years. Indiana Republicans at least are still steadfast for protection with the usual reciprocity attachments that never come to pass. Reciprocity with Cuba, however, is specifically approved, and the convention declined to take water on the Philippine question, holding out squarely for continuance of the present policy—an evidence of shocking depravity we are assured by the "anti-imperialists."

A VERY interesting political situation has developed in Pennsylvania. Senator Quay has ordered Attorney General John P. Elkin out of the race for the governorship, and that most "stalwart" of Republican newspapers in Penn-

sylvania, the *Philadelphia Inquirer*, says that the senator has "split his own friends and is being criticized most roundly by Republican leaders everywhere." Even his enemies have always admitted that Quay never deserted a friend; this characteristic has frequently been advanced in explanation of his unbroken political success. Now he throws over the man who more vigorously than any other has supported Quay's leadership. The most reasonable explanation of this strange proceeding is that Quay knows that his antagonism is now worth more than his support, and that he has taken this round-about method of securing Elkins's nomination and election.

ON this side of the water the so-called transatlantic steamship combine engineered by Mr. Morgan did not in the beginning cause any excitement, perhaps because, as Mr. Bryan puts it, it did not affect the stomachs of the people as the meat trust does. But in England, people, press, and ministers appear to view the latest achievement of Mr. Morgan with considerable alarm. British naval supremacy is slipping away, says one; we shall be compelled to fight for our very existence, says another, if this sort of thing continues. But as a matter of fact the British tonnage controlled by the new combination (the White Star line is now said not to be included in it) is but ten per cent of the total tonnage of the British merchant marine, and so far as anyone now knows the flags on the ships in question will not be changed for the stars and stripes.

IT is manifest that the truce between the warring elements in Belgium can be only a temporary one. The Socialists have made friends abroad and presumably at home by their moderation and unwillingness to throw the country into a state of turmoil in order to force immediate action on their demand for such a revision of the constitution as would prevent one man from casting three votes while his neighbor casts but one or two. The fight against plural voting will without doubt be renewed in the near future, and the Socialists have every reason to expect that their second attempt will meet with success, having shown a strength of 64 against 84 votes in the chamber of deputies, besides demonstrating that they can bring the industrial and commercial life of the country to a standstill whenever they choose to exert their power.

POLITICS in Denmark appear to be very much like politics in every other part of the world—a reflection that is sure to follow a reading of the accounts of the manner in which the sale of the Danish West Indies is being handled. The landsting, in defiance of the government's wishes, has voted to make the ratification of the sale conditional upon the affirmative votes of the property owners. The lower house takes up the treaty of sale this week, and without attempting to say just what course will be adopted, it is fairly safe to assume that the sale will finally be approved. The opposition, such as it is, is purely for home consumption.

FROM the date of her first appearance in the rôle of a monarch, Queen Wilhelmina has been the object of something resembling affectionate admiration the world over. The reports of her marital sorrows excited a remarkable amount of indignation, and, inspired by the same feeling of interest and good will, people everywhere have felt no little concern over the reports of the queen's serious illness. Unless the royal physicians are more diplomatic than truthful, this concern may now give way to a belief that the life of Holland's little monarch will be saved, for such are the latest assurances from The Hague.

AMERICAN

Steamship Companies "Morganized"

SIX TRANS-ATLANTIC LINES UNDER ONE MANAGEMENT

THE latest feat of J. P. Morgan & Co. is the combination of six of the trans-Atlantic steamship lines. The particulars of the organization were described briefly in our last issue. Later reports have it that a working agreement has been entered into with the large German lines. The *New York Times* looks to see the community of interest existing in the American railway world "extended to include the new steamship combination. We may expect to see freight rates made from western points all the way to Liverpool; and conversely bills of lading will be issued at Liverpool upon through shipments of merchandise to Chicago, Omaha, and possibly San Francisco, under one rate. If this is to be the case, we should say that the Erie canal might as well be filled up."

The *Boston Herald* says: "If anything were needed to indicate the utter uselessness of the pro-

ALL'S FISH THAT COMES TO HIS NET—*Brooklyn Eagle*

posed shipping subsidy bill in order to induce American capital to enter into the ocean carrying trade, this recent proceeding of Mr. Morgan would supply whatever evidence was required." Against this should be placed the protest of Mr. Cramp, of the Cramp yards, who brands the movement as unpatriotic and inimical to American ship-yards. The only paper that has been found to support Mr. Cramp's contention is the *Rochester (N. Y.) Times*, which considers that the "situation brings out strongly the need of an efficient ship subsidy bill for the upbuilding of American shipping." The *Springfield (Mass.) Republican* has no fear that American yards will suffer. "This Morgan capital is heavily interested in American steel and iron production, and iron and steel are the great material out of which the modern steamship is constructed. The steamship combination is interested in the American steel combination and may be called an auxiliary concern. And in so far as American capital controls the steamship trust, it will naturally lean in favor of the American ship-yard, in making contracts for new construction."

The *Baltimore American* refers to the liability of many of the ships to service in the British naval reserve, and declares that "it would be something infinitely worse than the irony of fate to have these ships, owned by our citizens, turned and used against

us in war times. Yet this is the calamity we face—a calamity as certain as war is always probable. The demand which this combination voices is, therefore, for such an overhauling of our antiquated and outrageously restrictive navigation laws as will permit the transfer of the fleet to American registry, and its adoption, under our flag, as an auxiliary to the navy of the United States." The *Cleveland Leader* has no such gloomy forebodings, but thinks rather that the new combination will make for peace, for the reason that "an international difficulty threatening war between two or more great maritime powers will at once involve the interests of powerful capitalists having channels of influence leading straight to the seat of government in several countries of the first rank."

The *New York World* quotes the statement by President Griscom, of the International Navigation company, that the company will bring about a "just distribution of traffic over all American and Canadian seaports." "The 'just distribution of traffic' now furnished by railroad 'mergers' has built up other Atlantic cities by unfair 'differentials' at New York's expense," says the *World*; "and the thought that our port must hereafter be 'developed'—or the reverse—not by the enterprise of its people or by its natural advantages, but at the nod of a few irresponsible dictators, is not soothing to the pride or reassuring as to the welfare of the 3,500,000 people of this city." The *Syracuse (N. Y.) Post-Standard* takes the comfortable view that "this ship trust is a remarkable example of a trust that can never under any circumstances be a monopoly. The Atlantic itself is very wide and there is no exclusive right of way in any part of it. Under these circumstances, monopoly is impossible, and without monopoly the trust loses half its terrors."

Foreign comment is not cheerful. The *London Chronicle* points out three reasons why the steamship trust is a menace to British prestige. The first is that the supremacy of the British mercantile marine is practically annihilated. The second is that there is good reason to believe that the Morgan party were forced into the shipping business in order to save their other undertakings, and that overcapitalization may some day bring a collapse which would seriously involve the British trade. The third is the disadvantageous position of England in the event of a war with America. The *Daily News* says: "We are very good friends with the United States, but we do not want to be swallowed by them. We are much more likely to be good friends if Great Britain wakes up and earns the respect of the United States by friendly but effective competition." German critics are more bitter. The *Deutsche Tages Zeitung* calls on the government to interfere. It asserts that the combine is formed as an adjunct to American railroads, mines, and iron works. Whatever moderation may be exercised at first, says that paper, the steamship lines will inevitably discriminate against German industries. The *Kreutz Zeitung*, discussing W. T. Stead's ideas in regard to "the Americanization of the world," defines Americanism as an incessant, exclusive, and reckless striving for wealth.

The Republicans Divided

CUBAN RECIPROCITY BILL CREATES DISCORD IN THE HOUSE

IN the vote in the house on the Cuban reciprocity bill the Republican side of the chamber was divided. The occasion of the disagreement was the Morris amendment abolishing the differential rate on refined sugar. The beet-sugar men voted for the amendment, which passed in spite of the efforts of the Republican leaders. While it is acknowledged that the action of the beet-sugar contingent was prompted by revenge and the hope that the amendment would lead to the whole measure being killed in the senate, yet there is a note of exultation in the comments of the Democratic and anti-protection papers. For instance, the *Philadelphia Times* (Ind. Dem.) says: "The surprising action of the house of representatives upon the Cuban tariff bill is of political rather than of practical significance. It emphasizes the widening differences among the Republicans upon economic questions and shows the Democrats capable of united and effective action. The removal of the differential duty upon sugar, though carried by the votes of the most selfish and sordid group of protectionists, is distinctly a Democratic measure. It is the first breach that has been made in the tariff wall." The *Indianapolis News* (Ind.) thinks that "we have here a revolt against the house leadership, and a demonstration of the fact that the Republican congressmen are weary of the tyranny which has prevailed so long in that body."

The *Philadelphia Record* (Ind. Dem.) applauds the Morris amendment and finds in its passage "co-gent and convincing demonstration of a lack of solidarity in the party of protectionist rapine and trust spoliation. The political rogues are falling out, and honest men may thereby and thereafter come all the sooner to their own again." The vote on the bill is a source of encouragement to the *New Orleans Daily States* (Dem.) "by reason of the fact that a very considerable number of Republicans have shown their manhood by revolting against a trust, which for years

has dominated their party in congress, and taking the side of the people. The fact can not be questioned that the overthrow of the house leaders has produced a serious breach in the Republican party which threatens to result at an early day in the downfall of the high tariff system."

The *Boston Transcript* (Ind. Rep.) admits that the action of the Democrats was consistent and legitimate, but declares that the "thirty or more Republicans who, on the critical stage of the bill, voted with the Democrats against President Roosevelt, against their committee on ways and means, and against their own house organization, will yet, we believe, realize that they have much to answer for to their party and their country." The *Chicago Chronicle* (Dem.) rejoices because the vote "demonstrates the fact that the Democratic members of the house have 'got together.' Still, Democrats may be warned that not too much can be expected in immediate results from the dramatic events which occurred in the house. The Republican 'insurgents' have given the Republican 'regulars' a terrible shock. Probably the 'regulars' will come to terms. A peace will be patched up. But it will be a hollow peace." The *Washington Star* (Ind.) does not think the situation critical. "As one swallow does not make a summer, why should one failure lead to a rout? Surely the Republicans of the house, with so much business still before them, are not going to abandon the field because of this one upset."

The Work of Secretary Root

L. A. COOLIDGE, in the *May Ainslies*, New York. Condensed for PUBLIC OPINION

SECRETARY ROOT came into the cabinet as a constructive lawyer of approved business capacity. His special mission was to aid the administration in working out the problems arising from our control of new territory. Not only has he achieved much in his own particular province, but he has made himself felt in every branch of governmental work. Before President McKinley died, Secretary Root had

THE SKELETON BREAKS OUT OF THE CLOSET

—*Minneapolis Journal*

CONGRESS—"That's a very steep hill. Permit me to relieve you of this."—*New York Herald*

become the great force of the administration. He is no less a force under President Roosevelt, who turned to him for counsel the moment he was sworn into office. His attitude of mind is like that of Secretary Olney, whose position in the Cleveland administration resembled somewhat Root's position now. Olney was a lawyer. He said that he regarded the United States government as the most important client he had ever served. He worked for the government exactly as he would have worked for a man or a corporation by whom he had been employed. Root has much the same feeling. The task has fallen to him which falls to few men in history, of creating a nation—for that is what he has set out to do in Cuba, following the injunctions of congress and carrying into effect the pledges of the United States. Every step which has been taken in the regeneration of Cuba since Mr. Root became secretary of war has been

ELIHU ROOT

taken under his direction. Secretary Root's work in the Philippines is still incomplete and must remain so for years to come. But the policy he has pursued there has been without a shadow of turning. He has kept steadily in view two things from the beginning: First, to pacify the islands, quell the insurrection, and insure the preservation of order; second, to establish civil government there and make the people of the islands fit for it. When Secretary Root came to the war department he knew little about military administration. He was sure that something was wrong somewhere, but just what it was he could not have told. He turned his attention to a typically thorough study of the entire army system. He discovered that there was lack of unity and coöperation among the several bureaus which have control of supplies and transportation, and he set out to rectify that fault. Briefly, he has succeeded already in putting our comparatively small army on a foundation which, as time goes on, will enable it to compare favorably in effectiveness with the army of any one of the great military powers. He has developed a plan which, if it shall be adopted, will make our army one to be patterned after by all the armies of the world. He has already secured legislation by which the old system will gradually be displaced and by which there will be intelligent coöperation all along the line. The greatest reform of all is the establishment of a war

college by means of which the army will be turned into a great university for military instruction. In addition to all this, Secretary Root proposes to bring the national guard into close coöperation with the regular army. He has submitted an elaborate plan by which the national government shall have supervision over the state militia. There will be camps of instruction where officers and men of the national guard may take part with the forces of the regular army in annual encampments and military maneuvers, so that when war comes—as it will—our volunteer army can spring full panoplied into the field. Secretary Root is an ideal cabinet minister. He would be less successful as a legislator. It is doubtful whether he would have any success at all if he were to appeal to the people as a candidate for office. Somebody has said that Root has no proper place in a republican form of government. He is so imperious, so unswerving, and so indifferent to popular opinion. That is an extravagant statement, but it has a kernel of truth.

Our Future Relations with Germany

WOLF VON SCHIERBRAND, in the *May World's Work*, New York
Condensed for PUBLIC OPINION

THE development of the last five years has inspired in the German manufacturer and merchant a fear of the overpowering strength of American competition. It has become plain to him that a country which, twenty years ago, exported forty million dollars' worth of goods, or 5.8 per cent of the total to Germany, and now sends 250 million dollars' worth, or 17 per cent of the total, while taking, practically, no more of German goods than it did ten or fifteen years ago, is a country with which trade relations urgently need adjusting. And that is really at the bottom of the German government's desire to bring about a commercial treaty. The trade relations between the United States and Germany have so far been based on the old treaty of 1828 between Prussia and this nation. By this treaty neither Prussia nor the United States could admit other nations to more favorable terms of commerce without admitting at once the other contracting party to the same terms, and this without previous negotiations. This, at least, has been the German interpretation.

The still-existing German tariff is frankly protectionist, and is, with some subsequent alterations, the one framed under Bismarck when that statesman became converted from his free-trade views. It is, however, when compared with the Dingley tariff, very moderate, showing an average of 13 per cent, as against the Dingley tariff's 54 per cent. The pending bill would raise that percentage to about 17 or 18 per cent, but many items on it, and particularly some touching American goods, show a much higher percentage—up to 50 and 60. It is a measure largely framed for the express purpose of either forcing the United States into a special commercial treaty, or else to diminish American imports into Germany, for not only are heavier duties laid on such leading articles of American export as cereals, copper, petroleum, meats, and nearly all other foodstuffs, but also, and mostly much heavier ones, on such American manufactures as within recent years have begun to compete with German industries, like bicycles, shoes, labor-saving and tool machines, leatherware, furniture, locomotives, stoves, electric appliances, etc.

The German government is, however, not in as strong a position in this whole matter as would at first appear. The vulnerable points may be summarized thus: Germany must do her utmost to preserve her markets, for she, like England, must largely export in order to live. German agriculture does not now produce, and is not likely to produce in the future (even under a new and more favorable system of commercial treaties or tariffs), enough food for the nation. By enhancing the price of foodstuffs by higher duties, Germany renders competition for her industry yet more difficult, and is liable to precipitate a severe industrial crisis. A tariff war between the two countries would fall with much more crushing force upon Germany, for the simple reason that while Germany absolutely needs for her industry or for her laboring population the more important items in her list of American imports, the United States would suffer no very appreciable discomfort if no German imports whatever should reach this country. In Germany now, according to the latest official census, fifty-seven out of every hundred people are engaged in industrial or commercial pursuits, and only forty-three in agricultural and allied employments. The overwhelming interests are industrial. About one-third of the foodstuffs consumed in Germany today comes from beyond her frontiers.

Senator Beveridge Defends Trusts

OUTLINES THE REPUBLICAN POLICY

IN a speech at the Indiana state Republican convention, last week, Senator Albert J. Beveridge gave in outline what he considered the proper policy to be pursued by the Republican party. On the question of trusts he said in part: "When combinations of capital attempt to arbitrarily raise prices from motives of mere greed, or unjustly reduce wages merely to increase dividends, they must be prevented, punished. But apply a remedy—do not administer a medicine of death." As to the tariff, the "Republican party proposes to rearrange our protective tariff only where

changes will continue or increase American prosperity, and not otherwise. But the opposition would annihilate protection with one single, sudden, violent act." He also defended our recent territorial expansion as in line with our historical policy.

The Cleveland (O.) *Leader* (Rep.) resents the charge that the Republicans are to make the "praise of trusts" a part of their national policy, but admits that the "Republican party will not make hysterical or reckless war upon great corporations in control of industries of extreme importance to the American people." "The important thing," that the Detroit (Mich.) *Free Press* (Ind.) sees in the speech "is that the country, sooner or later, must begin to consider the trust question politically from the standpoint that the economists have already taken, and that a few politicians like Senator Beveridge are beginning to take. It must be done with a trifle less rhetoric, with fewer adjectives, and a great deal more common sense; but it must be done. Both political parties must abandon the hypocritical nonsense of threatening to destroy the trust." The Baltimore (Md.) *American* (Rep.) does not take so cheerful a view of the situation. "The doctrine Mr. Beveridge preached was that the trusts are here, they are a modern institution, and instead of being hounded they should be encouraged as factors in our prosperity. Only when they flagrantly transgress would he have them interfered with, and then the interference must be gentle and considerate. This is indeed a pretty doctrine to preach to a people so woefully trust-ridden. What good does it do the American people if the steel trust and the railroad mergers employ more men at higher wages, if those same men are to be robbed by the trusts that control the foodstuffs and the ordinary commodities of life."

The New York *World* (Dem.) quarrels with the senator's statement of the Republican position on the tariff and reminds him "that the Republican party in congress, so far from 'proposing to rearrange our protective tariff,' refuses absolutely to touch one single schedule—even those that notoriously protect monopolies and promote trusts. And, of course, he can not name one Democrat in congress who would 'annihilate protection with one single, violent act.'"

THE BEEF TRUST—"Don't shoot, I'll come down."

—Minneapolis Journal

THE NEW "WATER CURE" FOR ARMY OFFICERS

—Chicago News

General Funston Silenced

CAPTOR OF AGUINALDO REBUKE FOR HIS LOQUACITY

THE latest military man to receive the presidential censure for his much speaking is General Funston. In a speech in Denver, the general said that Senator Hoar was suffering from an "overheated conscience." This remark called forth an emphatic request from the president that he refrain in the future from public discussions of political questions, and a reminder of the impropriety of so characterizing a senator of the United States.

The New York Times suggests that the general "take Lord Kitchener as his model and never say a word." The Philadelphia North American sees in the rebuke "another distinct reversal of Root. If the military elocutionist had been detailed by the secretary of war as special advocate for the policy of hydraulic pacification and instructed to go about the country repeating his speeches, he could not have been more diligent in denunciation of all Americans who retain their belief in the Declaration of Independence and deplore the drift toward imperialism and world piracy." That Funston has been "let down" gently is the opinion of the Brooklyn Eagle, "and for this he should be duly grateful and abstain hereafter, while holding an army command, from commenting too freely upon the work which is being done by men as good as any who ever came out of the Sunflower state." The Syracuse (N. Y.) Post-Standard compares this case with the rebuke administered to Captain Coghlan, and remarks: "Everybody thinks just as much of Coghlan, and everybody will think just as much of Funston, but there will be a little more decorum in his behavior hereafter." The Washington Post regrets that the "administration is without a sense of humor. It sees in Funston only an impertinent and tiresome conceit. We lament his occultation as a loss of joy."

Extermination in the Philippines

WHO IS RESPONSIBLE FOR WALLER'S ACTS?

IN the court martial of General Jacob H. Smith, in Manila, the counsel for the accused admitted at the outset that he had ordered Major Waller to make Samar a "howling wilderness," and to kill all the natives over ten years of age. The readiness with which the admission was made is explained by the evident tendency to carry the responsibility back to General Chaffee, and, perhaps, even to the war department. This is the view of the New York Herald's Washington correspondent, who says: "Because General Chaffee sent to the war department copies of instructions he issued, which were directly or tacitly approved by the department, political opponents of the administration and friends of the army officer seek to transfer the responsibility to the shoulders of Secretary Root. General Smith's line of defense indicates that he proposes to show that he acted under instructions, and General Chaffee, having had his policy approved, has no reason, it is said, to fear that he will be officially criticized by the secretary of war. On the war department copy of the letter of instructions to General Hughes regarding the character of warfare which should be waged by General Smith in

Samar, General Chaffee wrote an endorsement in which he made suggestions regarding the transfer of troops of his command in order to control the situation in Samar. It is stated that after reading General Chaffee's letter and endorsement, formal approval of his action, as he requested, was given by the war department. The drastic campaign which General Smith conducted in Samar has a counterpart in that carried on by Brigadier-General J. Franklin Bell in the provinces of Laguna and Batangas. General Bell furnished General Chaffee, and the latter the war department, with copies of his reports and instructions. The results of the campaign were effective so far as forcing the surrender of the insurgents was concerned, General Malvar, the insurgent leader, and his followers recently surrendering. Upon being advised of the surrender the president, through Secretary Root, sent a cable message to General Chaffee congratulating General Bell on the success of his military operations."

Congressional Summary

CONGRESS DAY BY DAY

APRIL 21.—The river and harbor bill was passed in the senate, and the Philippine civil government bill was discussed informally. Consideration of the military academy appropriation bill was begun in the house, but the debate was chiefly on the race question in the south.

APRIL 22.—The senate entered upon the formal discussion of the Philippine government bill, Mr. Rawlins, of Utah, opening in opposition to the measure. The house, by a vote of 75 to 72, rejected claims attached to the omnibus claims bill by the senate aggregating \$1,800,000, and on the heels of that action non-concurred in the whole senate amendment and sent the bill to conference. The military academy appropriation bill was passed after the limit of costs of the improvements at West Point had been reduced to \$5,500,000.

APRIL 23.—In the senate, Mr. Rawlins, of Utah, continued his speech opposing the Philippine government bill. Senator Deboe introduced a bill creating a commission to inquire into the condition of the colored people of the United States. The house began consideration of the senate amendments to the oleo bill; Representative Richardson, of Tennessee, introduced a resolution instructing the ways and means committee to investigate the question of the recent increase in the price of beef, etc., and, if practicable, offer some measure of legislation for relief.

APRIL 24.—A bill for the repeal of all duties on meats was introduced in the senate by Mr. McLaurin, of South Carolina; Representative Livingston, of Georgia, introduced a bill repealing that portion of the tariff law of 1897 providing a duty on meats.

APRIL 25.—Mr. Carmack, of Tennessee, spoke against the Philippine civil government bill in the senate, and attacked General Funston; Mr. McCumber, of North Dakota, spoke in favor of pure food legislation. In the house, the day was devoted to private pension legislation and debate on the agricultural appropriation bill.

APRIL 26.—The senate discussed the ownership of sugar lands in Cuba, and the Philippine temporary government bill was taken up. Mr. Carmack (Dem. Tenn.) continued his speech opposing it. The house spent the day on minor bills and resolutions.

FOREIGN

The Japanese Invasion of China

FROM JAPANESE AND ENGLISH POINTS OF VIEW

AN article by Vicomte Nagooka in the last issue of the *Kyōi-Ku Kaho* (Tokyo) is a very interesting report of a recent trip he made through China. His impression is that the "Chinese soul is slowly but surely being transformed under Japanese influence." The Japanese educational society, "To-a-Sobun," has established a large number of schools which are intended "to initiate the Celestials into the mysteries of occidental civilization." For instance the "Nan King-Dobum-Shoin" educates a good many Japanese and Chinese students. The Japanese study the Chinese language while teaching their own to their former enemies. "The greatest harmony prevails between the two oriental peoples and the Chinese receive with the greatest docility the teachings of the Japanese, being convinced of the absolute necessity of acquiring modern knowledge to keep in check the appetite of the old world." At Na King there are now eighty Japanese students; their number will be two hundred in 1903. At the military school of Ning-po the main instructor of the Chinese is no other than the celebrated Japanese Captain Saito. Besides drilling the eighty Japanese students, he has to instruct two hundred and fifty Chinese soldiers. According to Vicomte Nagooka, "these soldiers are progressing rapidly, and compare favorably with the Japanese." Viceroy Lin relies a good deal upon the Japanese to rehabilitate China, and he devotes all his efforts to the creation of a military school at Kang-Sa, under the management of the Japanese. In the province of Wuchang, the military schools are flourishing, and most of the instructors are Japanese. The weapons used, however, are of European make. In former times the Chinese were quite partial to German military instructors, but since the last invasion of China by foreigners they have changed their minds on the

subject. They hold Count Waldersee responsible for the wholesale looting of the allied armies which were under his command; hence their new policies. Furthermore, they took notice that the Japanese were the most orderly troops during the last war. In the estimation of Comte Nagooka, Japan alone is able to regenerate China. Japan has had experience in the matter and in no distant future China will have made immense progress toward civilization.

Mr. Stafford Ransome, in the April *Fortnightly Review*, considers the likelihood and the effects of a Chino-Japanese alliance from an Englishman's point of view. "There is an impression," he says, "that between the Chinese and the Japanese there exists a violent hatred. This is not the case. There is that racial antagonism which must always be found in times of peace between two neighboring nations, and which sometimes leads to actual war between them. That antagonism, however, at once becomes a bond of friendship when both are menaced by a common foe. Japanese statesmen have told me over and over again that in the future they hope to be able to make an alliance with China, for, while at the present day Japan can not be said to resent foreign interference in Chinese matters, she resents very much the muddle that the western nations have made of the far eastern question generally, and she resents, above all things, Russian aggression. Japan, like ourselves, has had to choose between two alternatives; either she must have as neighbors a China which has been largely absorbed by Russia and other western nations, or a modern China which will always be at loggerheads with Russia. She has chosen the latter, and her selection has been a wise one. To effect her purpose, she has temporarily allied herself with the nation which seems the most likely to thwart Russia and to oppose the dismemberment of China, and which is in

"VEN VAS A PEACE PROPOSAL A PROPOSITION!"

 VAY UND DON'T OXPECT TO GET IT!"
 —Cleveland Plain Dealer

THE BOERS DRIVE JOHN BULL TO THE LAST DITCH

—Minneapolis Journal

the best position to aid her practically in making such dismemberment an impossibility.

It may be urged that, when Japan has accomplished her work of enabling China to become a military power, she will, by that very fact, have raised up a dangerous enemy against herself. This may be so, but, at all events, it is the lesser of two evils. In any case we have the satisfaction of knowing that the possibility of enmity between China and Japan should tend to prolong indefinitely a satisfactory understanding between Great Britain and Japan. We must not forget that Japan has before her, as an object-lesson, the history of England and the continent of Europe, a lesson which her statesmen have absorbed very thoroughly. Japan sees no reason to fear China any more than we have to fear continental nations. It is true that, owing to Europe being divided up into many countries, our safety has often owed its existence to the impossibility of a common accord between them. As a set-off against this, however, Japan is fully aware that, for years, and perhaps for centuries after China has become modernized, that country's hostile energies will be taken up by difficulties on the Russian frontier. Then Japan will be able to play Russia off against China, as we have, from time immemorial, played one nation off against another on the continent of Europe.

The Situation in Belgium

THE CENTER OF EUROPEAN SOCIALISM

AT the present time the Conservative party seems to have the upper hand in Belgium. The Socialist demand for the revision of the constitution has been denied by the chamber of deputies, and the Socialists have to choose between the alternatives of submission or proceeding to the last resort of revolution. Mr. A. M. Simons, editor of the *International Socialist Review*, reviews the situation from the Socialist point of view in the *New York Independent*.

The very storm-center of the Socialist movement, not only of Brussels, but of the world, at this moment, is the *Maison du Peuple*, of Brussels. It is the headquarters of the International Socialist bureau, the committee which serves as a connecting link and means of communication between something over seven million Socialists scattered throughout the civilized world. Besides being the headquarters for all the trades-unions of Brussels, it contains the great department store, with meat shop and grocery attached, of the coöperative to which the building belongs. There are about 30,000 members of the co-operative of the Brussels *Maison du Peuple*, and as each member is generally the head of a family, it means that almost the entire laboring population of the city are connected with this organization. The trades unions, too, are closely affiliated with the Socialists, so that almost every Belgian laborer, in the industrial centers at least, is at once a member of the union of his craft, of his local coöperative, and of the *parti ouvrier*. This condition gives a peculiar stability to the Belgian Socialist movement unknown in any other country.

About eleven years ago they began their movement for universal suffrage. After an agitation of about two years, this culminated in a general strike. It took only four days of this to force the government to grant a limited and complex franchise, which was

accepted as a compromise and which still exists. Coupled with a plan for proportional representation, there is a cumulative system of balloting by which the wealthy and professional classes can cast three votes each. About two years ago the Socialists determined to start an agitation for "one man one vote." The actions of the Clericals, however, soon caused them to change this to "one man or woman, one vote." The overwhelming majority of the women of Belgium, being illiterate and ignorant, are completely dominated by the Catholic clergy. Hence the Clericals thought the Socialists would not dare to advocate the enfranchisement of women and so announced that the Clericals were in favor of universal suffrage regardless of sex. As it has always been a fundamental principle of the Socialist doctrines that there should be no distinction of sex in political matters, the Socialists at once accepted the condition and took up the cry for "Le Suffrage Universelle" without regard to sex.

At the beginning of the campaign the Socialists issued a campaign document that is unique in history. They deliberately laid down the following steps or lines of action which they proposed to pursue until victory should be assured, for, as will be seen later, defeat is well-nigh impossible: First, extensive educational propaganda and agitation; second, gigantic petitions for universal suffrage; third, memorials to the chamber of deputies from Socialist municipalities and organizations; fourth, introduction of a bill by the Socialist deputies providing for universal suffrage, to be followed by parliamentary obstruction; fifth, universal strike; sixth, revolution. This program, they complacently informed the government, could be interrupted at any point by the granting of the ballot on equal terms to all Belgian citizens. Otherwise it would be carried out to the bitter end, and the same result attained amid the destruction of the Belgian monarchy.

The men who are at the head of the Belgian Socialist movement are men of recognized ability and broad educational training. Emile Vandervelde, who is, perhaps, the most prominent of them, is one of the ablest thinkers and scholars of the present time. William De Greef, a sociologist of international reputation, is another prominent worker. Edouard Anseele, the Socialist deputy from Ghent, is a weaver by trade, but has shown himself the equal in debate of the cleverest parliamentarians of Belgium, while his management of the *Vooruit*, the great coöperative of Ghent, has shown him to possess in a high degree the faculty for industrial organization often so painfully lacking among the laboring class.

Taxation and Business in Italy

HOW THE ITALIAN REVENUES ARE RAISED

WOLCOTT CALKINS contributes to the *May Forum* an article on the methods of taxation in Italy. In 1901 the national debt amounted to \$2,580,000,000. The revenue for the same year was \$285,000,000. Mr. Calkins turns his attention first to the state monopolies. "The net profits on tobacco are \$35,000,000. A great deal of complaint is heard against the quality of the cigars and tobacco furnished, but nothing can be said against the principle of taxing this article heavily. The wonder is that other monopolies are not taxed or monopolized. Instead of selecting the extravagant expenditures of the rich for the heaviest imports, Italy has always con-

ducted two monopolies which are draining the slender resources of the poor. One of them is the most astonishing business ever conducted by a civilized government. This is the notorious Italian lottery. It brings into the treasury a net profit of \$6,500,000 a year, and takes out of the people, and largely out of the poor, \$15,000,000. But everybody is complaining loudly of the third monopoly. In 1901 the people of Italy paid for the salt they used \$15,000,000. This salt cost the government, for its manufacture, transportation, and sale at retail, \$1,200,000, leaving a net profit, from this "tax on health," of \$13,800,000. The direct tax on farming land varies from a dollar and twenty cents an acre on the most profitable farms in Lombardy to less than twenty cents an acre in Tuscany. The average is about twenty-seven cents per acre for the whole country. Next to the land tax comes the direct tax on all business transactions, chiefly by means of stamps and registered paper. In detail, in annoyance, and in proportional amount, it has far exceeded the worst which we ever suffered in America under our war assessments. Everything to which stamps will adhere, from match-boxes up, bears an impost. Finally, over and above tariffs, monopolies, land taxes, and the assessments on business transactions comes the income tax. Nobody is trusted to make a sworn return of income. The government finds out, by detailed investigation, the income derived from business, from investments, and from salaries,

and collects a direct tax. But the indirect tax remains. In 1901 imported grain paid a revenue of \$14,859,000. Petroleum, which is not produced at all in Italy, pays duties every year amounting to nearly \$20,000,000. I venture to enumerate a few articles with the percentage of increase over their normal cost: Salt, 1,300 per cent; sugar, 350 per cent; petroleum, 337 per cent; wine, 120 per cent; coffee, 75 per cent; wheat flour, 62 per cent; meat, 10 per cent.

"There can be no doubt that all business enterprises are making some advances. Agriculture is in the worst condition, as bad cultivation and lack of fertilizing reduce the yield of wheat to an average of 12 bushels an acre, against 16 2-3 in France, 22 in Belgium, and 24 in Holland. But coöperative societies, selling fertilizers and implements at cost price, and traveling schools, teaching better methods of cultivation, are working some improvements. The more profitable use of land for poultry and dairy products is doing still more good. Manufacturers suffer from two wants sorely felt in Italy. (1) There are no natural supplies of fuel. Vast quantities of coal and over six million dollars' worth of wood are imported annually. (2) Technical training for skilled labor is also far behind that of competing countries. The state government has recently taken from the provinces the control and support of the higher technical schools, and great improvement may be expected in the near future."

SOCIOLOGICAL

The Sandringham Cottages

QUEEN ALEXANDRA'S CARE FOR HER TENANTS

THE tenants of King Edward's country estate at Sandringham are a privileged class, according to the account of a writer in the current *Pearson's Magazine*. They are well lodged, well cared for, and their needs met almost before they are felt. The many benefits they enjoy are due to the practical solicitude of Queen Alexandra. At her orders the four villages on the estate were thoroughly remodeled, many new cottages built, and others altered. One row of cottages, here reproduced, bears her majesty's name, and these, says the writer, may be taken as typical of the whole. "They have the most charming exteriors, Gothic in style, and with walls almost covered with ivy, creepers, and roses. Each cottage has its own piece of land, the front portion of which is gay with sweet-smelling flowers; that in the rear being devoted to vegetable gardens. The interiors are just as delight-

ful to see; the arrangements being such as would give pleasure to any good housewife. In the five capacious rooms which comprise the house, nothing has been forgotten for use and comfort."

The queen's solicitude for the tenants of the royal estate did not end with the erection of suitable dwelling-places for their occupation. "Social improvement, rational recreation and amusement, and the education of the children were subjects which also received deep consideration, and, in course of time, a variety of schemes were set on foot—every one of which has prospered exceedingly. There are capital schools on the estate. I may say that Denmark holds a foremost position in technical education, and the queen had, therefore, in her own country, the opportunity of seeing the immense advantages of the system. Hence, her majesty determined to introduce it at Sandringham, and the result of the innovation has

THE ALEXANDRA COTTAGES

more than justified her most sanguine expectations. Glance, first, at the girls' school, a place where Queen Alexandra may often be seen. Here I have watched girls busily employed in an up-to-date model kitchen, turning out all sorts of tempting-looking comestibles, fit either for their cottage homes, or for the tables of the families with whom they will, after a time, take service. In another department, the young students are busy with scissors or needles, for here they are being scientifically instructed in dressmaking. Plain and art needlework, knitting, etc., also come in for a share of attention, and even spinning and weaving are items, and important ones, too. Her majesty has given due consideration to the fact that many girls are not strong enough, or otherwise qualified, for domestic service, and so has caused these lighter employments to be taught in order that the girls may thus be prepared for suitable situations, or may even follow the crafts in their own homes. The boys' school is just as well equipped, and some of the carving and pyrographic-work they turn out is highly creditable."

Two clubs for men have been established on the estate, with libraries, reading-rooms, recreation parlors. Refreshments are served here at a small cost. There are no saloons on the Sandringham estate. The queen has inspired keen competition among the housewives by inaugurating an annual system of prize-giving for the best-kept cottages. All the people—men, women, and children—share in the festivities of the royal family. At birthdays, Christmas, and weddings, the poor are remembered in the way of dinners, teas, distribution of gifts, Christmas trees, and all sorts of entertainments.

Marriage as a Just and Honorable Partnership

FIVE NECESSARY REFORMS IN ENGLAND

TO place marriage in England on a more just foundation, to foster peace and happiness, and add honor to married life, five reforms are necessary, says Miss Harriett M. Ilquham, writing for the *Westminster Review*. These reforms are: (1) omissions or alterations in the marriage service of the Church of England; (2) a legal claim for the wife and children to share in the husband's property after death; (3) a defined proportion of the husband's earnings or income for the support of the home; (4) equality between husband and wife in the laws of intestacy; (5) equality in the law of divorce.

This writer urges that "untruthful symbols" be eliminated from the marriage service. "Who giveth this woman away?" might be dispensed with, it being but an historic reminder of the time when the "chattel daughter" was handed over to be a "chattel wife," liable to be moderately chastised and locked up if her lord and master so willed it. An English girl comes of age at twenty-one, and even before that age is generally supposed to have had some freedom in the choice of her husband; but the giving away becomes positively ludicrous in the case of widows and women of mature age. The wearing of the wedding-ring would seem a slight matter, but it is not beneath notice, for it has tended toward the recognition of an unequal standard of morality in marriage. But far more pertinent to the purpose of this paper is the absolute untruthfulness and opposition to facts contained in the words uttered by the bridegroom, "With all my worldly goods I thee endow!" The most igno-

rant man knows when he utters them that such a promise means next to nothing, and has no legal value beyond the meanest maintenance, and that there is no provision in English law to make him even half fulfill it."

Neither the position of wife, nor the fact of motherhood, long domestic service, or help as bread-winner for the family, says this writer, give the wife any legal claim on the property of the deceased husband. "He may even will away from her the business which has been their joint work and their joint source of income. In Scotland if the husband has means he must leave a suitable provision for his wife and family; surely this justice might extend below the border. Just as the English wife has no legal claim on her husband's property after death, unless he dies intestate, so has she no defined claim when living with him to any share of his earnings or income. The records of our police courts give ample proof that the absence of such a legal claim is a fruitful source of marital misery. Case after case might be cited where destitution and even death have resulted, not because the husband and father was not earning good wages, but because he failed to supply a fair sum for home purposes. This injustice goes on, week after week and year after year, and women and children suffer a mental and bodily deterioration which legislation could moderate if not entirely avert."

The writer concludes as follows: "That many marriages miss felicity is greatly due to the fact that we have yet to make marriage a just and honorable partnership. It is 'an honorable estate' to which is yet needed many 'an added honor.' At present we start with a ceremony untruthful and objectionable in many particulars. If report speaks truly, the Norwegians are already superseding it by a new ritual. We secure no substantial guarantee from church or state that our young and inexperienced girls who enter marriage shall have the best provision made for them and their children, either in married life or widowhood. When troubles arise, as they too frequently do, through pecuniary injustice, we grant judicial separations, on the misery of which it is not the object of this paper to dwell. We have given remedies freely to the cure of disease. Would it not be well to begin to try preventive medicine?"

Are Americans Economical?

HUTCHINS HAPGOOD, in the May *Ainslie's Magazine*. Condensed for PUBLIC OPINION

WE are regarded in Europe as an extravagant race. American wastefulness is almost proverbial there. The housewifely German or Frenchman looks with a mixture of envy and contempt at the Yankee tourist who seems to throw his money away, who rides first-class, lodges first-class, buys the best seats at the theaters where he does not understand the play, over-fees the servants, and makes his purchases at shops especially designed for him and with prices double the ordinary. Still more shocking to the foreigners is what they deem the waste involved in the position of American women. They seem to them to have no economic function in society. They are flatly useless, highly extravagant, and, moreover, are taught to be so by American men. Certainly waste is hateful to the soul. Certainly it is an intellectual absurdity to pay more for a thing than it is worth. Nothing can be said in defense of mere waste. But are Americans, in reality, when compared

with the people of other countries, wasteful? Rather, are they not, in a vital way, really more economical than any other race?

American economy is the economy that consists in doing things on a large scale, in producing much rather than in saving little. The old system of economy consists in picayune retrenchment. "Take care of the pennies and the dollars will take care of themselves" is, from a modern point of view, as false as it is trite. That one hundred French families can live on what one American family throws away is an exaggeration, but were it not, it would indicate the soundness of American economy, not the lack of it. Whence comes the tremendous energy of our nation in business, in production, in growth generally, in practical improvements and inventions? It comes from a high standard of living. To do much work much nourishment is necessary, and who are so well nourished as Americans? What nation consumes so much good food, in what other country do the people demand so many luxuries? Where do they demand so much from life generally, in social equality, in full opportunity for work, pleasure, and education?

Nobody is stupider, more avaricious, and more economical in a small way than a French peasant or a German *hausfrau*. Nobody is more intelligent, less avaricious, and more economical in a big way than a great American inventor, financier, or business man. Through his brains production becomes cheaper and consequently more abundant; and more good to the common people thereby accrues than by all the small savings ever saved since civilization began. It is better to be able to make than to save, and to make much, a large outlay in money, energy, and brains is necessary. To save pennies is a sign of commercial incompetence and national decline. When an individual or a nation begins a system of housekeeping on a small scale it is a sign that the life-blood is ebbing. Old people, drier and less resourceful than young people, are notoriously more economical. They, like old nations, want to hang on to what they have, rather than strive for more.

The Social Secretary

MAUD NATHAN in the *May World's Work*, New York. Condensed for PUBLIC OPINION

IN olden days, manufacturers and merchants were more in touch with their working people; factories and stores had not developed into the mammoth business enterprises which they are at present. The head of the firm controlling a huge department store can not be on friendly terms with his hundreds of employees; he is too busy to take a paternal interest in them. Their private griefs and troubles are a sealed book to him, their physical and moral condition in a great measure unknown. The far-seeing, progressive employer is beginning to find a satisfactory solution of the problem by engaging a social secretary to look after his employees for him. Thus there can be restored something of the old-time personal touch. The position of social secretary is a responsible one, and is an agreeable one for women of broad sympathies who desire to uplift their fellow-women. There are as yet but eight or ten such secretaries employed in factories and stores, although more than a hundred firms are reported to have accepted recommendations made by them. These social secretaries have succeeded in bringing about many improvements which have added to the health and comfort of working

girls, with the result of securing better service for the employers. The results achieved serve as an example of enlightened business enterprise.

One social secretary whom I know began her work by looking after the health of the saleswomen. She studied hygiene and the principles of sanitation. She was thus able to teach the girls how to keep their bodies and their homes pure and wholesome. She was their constant adviser, warning them against imprudence. Among her first tasks was to see that they were provided with a comfortable retiring-room, where, in the event of a headache, or sudden faintness, they could recline on a couch for a short time, and after the rest return to their work refreshed. She insisted upon proper protection from draughts, cold vestibules, and damp basement floors; and she saw that seats were provided and that floorwalkers or overseers permitted the girls to use them.

It was owing to the suggestion of another social secretary that a gymnasium was fitted up in one store, where girls who lived at a distance and rode to and from their work obtained needful exercise. This social secretary succeeded in obtaining a free hospital bed for those employees who might need it. Many girls who would have objected to going to a hospital under ordinary circumstances were willing to do so owing to the secretary's promise to visit them regularly and see that they were well looked after. The same social secretary succeeded in securing the services of three physicians to watch over the health of the working girls. They were paid out of the fines which went into the benefit fund. To some social secretaries has been entrusted the disposition of the moneys in the benefit fund, their duty being to see that it was distributed wisely. They have felt it their duty to 'keep in touch with working girls' vacation societies, so that those girls who had no place to go for a summer's outing could secure accommodations.

Unfortunately, the salesgirl is often exposed to the temptation of giving up her exhaustive struggle and toil, hardship and suffering, for a life that appears to be a life of ease. Underpaid, overworked girls must constantly resist the temptation to accept the wages of sin. Merchants and manufacturers who offer girls less than living wages are responsible for much of the vice that exists in our cities. The social secretaries have endeavored to interest the girls in their work; they have endeavored to teach them good business methods, so that eventually they may appreciate that labor is ennobling when it is pursued with high motives. They have taught them to realize that there is something more in doing a day's work than merely earning their living from it. The testimony of the firms who have tried the experiment of employing social secretaries is that a better standard of health exists among their employees, that fewer days are lost on account of illness, and that a greater interest is taken in their work.

FACTORIES AS MORAL AGENTS: At a recent public meeting called in Evanston, Illinois, to discuss the new anti-factory ordinance, a professor of Northwestern university maintained that unless Evanston has more factories, "the sons of the present citizens will grow up to be snobs," and that the classic suburb "would be a better residence city if there were more laborers' homes in it," one alderman ranked factories as moral agencies second only to the Young Men's Christian association; a former alderman said it was simply a question of factories or more jails, and a prominent physician said he would just as soon live near a factory as a church.

LETTERS & ART

The Literary Women of Germany

M. CHARLES SIMOND, in *La Revue*, Paris. Translated and Condensed for PUBLIC OPINION

M CHARLES SIMOND says "Germany has always possessed literary women of talent, at times of immense talent." In support of his contention, M. Simond gives a long list of German literary women, among them Sophie de la Roche, Victoria Kulmus, the wife of J. C. Gottsched, the poet, Anna Louise Karschin, Duchess Ann-Amelia von Saxe-Weimar, Countess Hahn-Hahn, Elizabeth de Medem, Baroness von Recke, Ann Annette, Baroness von Droste-Hulshoff, and many others whose names figure in the list of dead literary celebrities. The work of these women has amply demonstrated that they have created a separate style of German feminist literature "which is not the result of an accident, as in other countries." The main cause of this is to be found in the character of the educated German woman, who is essentially progressive. The object of new schools is to expose to light new social conditions; through them feminism has been asserted.

At the present time the German critics are particularly partial to Madam Ebner von Eschenbach, although her works are hardly read by the public. The same thing may be said of Marie von Bunsen, whose novel, "Gegen den Ström" (Against the Current), published in 1893, was considered by the critics to be a masterpiece, but was not read by the German people at large. The German readers want something out of the ordinary. Gabrielle Reuter understood this when she published, in 1895, "Aus Guter Familie," which stirred all the feminine souls. As a woman she wrote what a woman alone could feel. Gabrielle Reuter gave a sequel to her revelations in a series of novels, but never did she find the force of conviction which prevails in her *chef d'œuvre*. Others have followed her example and their feminine confessions have been eagerly received. Still others have submitted to no other rule than their fancy; among them may be quoted Holde Kurz, Marie Janitschek, Countess Ballestrem, Countess Baudissin, Mmes. Bonin, Dohm, von Hillern, Gemberg, and Gensichen.

German literary women have also "used the scalpel to dissect the flesh of modern life," according to the bold expression of the review. Laura Marholm

opened the way, followed by Megede, Reichenbach, and Olga Wohlbruck. Finally, it may be said that the "ethnographic novel, suggested by the multiplicity of relations, by exotism and cosmopolitanism," has been successfully handled by feminine writers, such as Emma Louise Vally, Ilse Frapan, Nite Kremnitz, L. Westkirch, Eschricht, Frieda von Bülow, Riedel-Ahrens, Zoller-Lionhardt, Klauss-Rithand, and the talented Schulze-Schmidt. "At their head, however, should be placed Clara Viebig, who leads as a writer of German novels, her books selling better than the books of Georges von Ompteda and Sienkiewicz. Born in Trieste in 1860, she published in 1897 a book of short stories, "Die Kinder der Eifel," in which she describes with inimitable mastery of style and observation the spirit and the local color of her native country." Her admirers blame her because she came to Berlin, where she lost her originality under the influence of Gabrielle Reuter and Helene Boehlan. Nevertheless, "she is the queen of the day. 'Das Tagliche Brot' is in demand all over Germany, and is being read by all classes of people; the 'Wacht am Rhine,' which appeared lately, will have the same success; the title is sufficient to induce the vogue."

The Roman Poet, Belli

M. E. HAGUENIN, in the *Revue des Deux Mondes*, Paris. Translated and Condensed for PUBLIC OPINION

G IUSEPPE GIOACCHINO BELLI, the poet who created the Roman literature of dialect, is gradually coming into his own, says M. Haguenin. "Since his death, over twenty-five years ago, his work has rendered to all other Italian writers of dialect a force of life and of fecundity which will not soon be exhausted." Belli is now beginning to enjoy a European vogue outside of Italy, due to the recently published book of M. Ernest Bovet, of the University of Zurich, on "Belli and the People of Rome." M. Haguenin thus characterizes the work of the Roman poet: "The 2,142 sonnets of Belli are not full of himself, but of the little adventures, the conversations, the manner of acting, of thinking, and of speaking of

MR. DOOLEY

er, the satire in face of danger, all is there, all is mingled and lives again in this work immense and varied, as in a mirror which shall have conserved and reproduced without cessation the flux, the eddies and collisions of a continually changing crowd. Belli is a world, I will not say like Shakespeare, for I do not wish to exaggerate, but like La Fontaine. One wanders in his work as through life, one recognizes the types, one divines their thoughts, reconstructs their existence, dreams of their adventures—and one forgets the artist as he has forgotten himself. Nothing of that which surrounds him escapes. The very platitudes of the daily life are reproduced by him with an art which gives them a sort of comic relief. It is easy, without doubt, to be true when one depicts the foolish, but Belli is not only true, he is amusing. He fixes the lightest shades of the ridiculous with a sort of delicious buffoonery; he has divined, after Rabelais, perhaps, the art of Henry Monnier, of the Jules Renard and the Courteline."

Martin Dooley on Books and Reading

FINLEY P. DUNNE, in the *May Century*, New York. Condensed for PUBLIC OPINION

TH' longer th' wurruld lasts, th' more books do be comin' out. Day be day I r-read in th' papers announcements iv new publications that look like th' delinquent tax-list. They's a publisher in iv'ry block, an' in thousan's iv happy homes some wan is pluggin' away at th' romantic novel or whalin' out a pome on th' typewriter upstairs. A fam'ly without an author is as contimptible as wan without a priest. Is Malachi near-sighted, peevish, averse to th' suds, an' can't tell whether th' three in th' front yard is blue or green? Make an author iv him! Does Miranda presint no attractions to th' young men iv th' neighborhood, does her overskirt dhrag, an' is she poor with th' gas-range? Make an' authoreen iv her! Fortunately, th' manly instinct is often too sthrong f'r th' designs iv th' fam'ly, an' manny a man that if his parents had had their way might have been at this moment makin' artificial feet f'r a deformed pome is l'adin' what me fri'nd Hogan calls a glad, free, an' timperymintal life on th' back iv a sthreet-car.

But lithrachoor is th' gr-reat life-wurruk iv th' modhren woman. Th' conthrol is passin' into th' hands iv th' fair sect, an' th' day will come whin th' wurrud book will mane no more to an able-bodied man thin th' wurrud gusset. Women write all th' romantic novels that ar're anny good. That's because

iv'ry man thinks th' thrue hayroe is himsilf, an' iv'ry woman thinks he's James K. Hackett. Women writes all th' good romantic novels, an' reads thim all. A woman's readin' is niver done. Hardly a day passes but some lady fri'nd iv mine stops me on me way to catch a car, an' asks me if I don't regard Morse Hewlett as th' gr-reatest an' mos' homicidal writer iv our time, an' what I've got to say about Hinnelly's attack on Stevenson. "Madam," says "I w'u'd-n't know Morse if I was to see him goin' down th' sthreet ax in hand, an' as f'r Hinnelly, his name escapes me, though his language is familiar to anny wan who iver helped load a scow. Stevenson," I says, "doesn't appeal to me, an' if he sh'u'd, I'll revarse th' decision on th' ground iv th' bad prevyous charackter iv th' plaintiff, while," I says, "admittin' th' thruth iv what he said. But," says I, "th' only books in me libr'y is th' Bible an' Shakespeare," says I. "They're gr-reat f'r ye," says she. "So bully f'r th' style. D'ye read thim all th' time?" she says. "I niver read thim," says I. "I use thim f'r purposes iv definse. I have niver read thim, but I'll niver read annything else till I have read thim," I says. "They sthand between me an' all modhren lithrachoor," says I. "I've built thim up into a kind iv breakwather," I says, "an' I set behind it ca'm an' contint while Hall Caine rages without," says I.

"Readin', me fri'nd, is talked about be all readin' people as though it was th' on'y thing that makes a man better thin his neighbors. But th' thruth is that readin' is th' nex' thing this side iv goin' to bed f'r restin' th' mind. With mos' people it takes th' place iv wurruk. A man doesn't think whin he's readin', or if he has to, th' book is no fun. Believe me, Hinnissy, readin' is not thinkin'. It seems like it, an' whin it comes out in talk sometimes, it sounds like it. It's a kind iv nearthought that looks ginooyne to th' thoughtless, but ye can't get annything on it. Manny a man I've knowed has so doped himsilf with books that he'd stumble over a carpet-tack. Be hivins! that la-ad Carnaygie knows his business. He's studied th' situation, an' he undhersthands that if he builds libr'ies enough an' gets enough people readin' books, they won't be any wan left afther a while capable iv takin' away what he's got. Ye bet he didn't learn how to make steel billets out iv "Whin Knighthood Was in Flower."

Am I again' all books, says ye? I'm not. If I had money, I'd have all th' good lithrachoor iv th' wurruld on me table at this minyit. I mightn't read it, but there it'd be, so that anny iv me fri'nds c'u'd dhrop in an' help thimselves if they didn't care f'r other stimylants. I have no taste f'r readin', but I won't deny it's a good thing f'r thim that's addicted to it. In modheration, mind ye. In modheration, an' afther th' chores is done. F'r as a fri'nd iv Hogan's says, "Much readin' makes a full man," an' he knew what he was talkin' about. An' do I object to th' pursuit iv lithrachoor? Oh, faith, no. As a pursuit 't is fine, but it may be bad f'r anny poor man that happens to catch it.

MR. HENNESSY

The Meaning of Music

DANIEL GREGORY MASON, in the New York *Outlook*
Condensed for PUBLIC OPINION

EVERY one to whom music makes any genuine appeal must have noticed frequently and with wonder its extraordinary power to tranquilize the heart, to instill a peace quite magical and beyond explanation. It soothes while it excites; and more wonderful than its ability to stimulate our emotions is its power to reconcile and harmonize them. And this it does without the aid of any intellectual process; it offers us no argument, it formulates no solacing philosophy; rather it abolishes thought, to set up in its stead a novel activity that is felt as immediately, inexplicably grateful. It is just at these moments, when the mind momentarily fails in its unequal struggle with reality, that we discover the deep meaning and the supreme service of art. For art is the tender human servant that man has made himself for his solace. He has adjusted it to his faculties and restrained it within his scope; fashioning it from the infinite substance, he has impressed upon it finite form. It is a voice less thunderous than nature's, a lamp that does not dazzle like the great sun. It simplifies the wealth that is too luxuriant, and makes tangible a fragment of the great ethereal beauty no mortal can grasp. Thus art is visible and audible rightness; it is the love of God made manifest to the senses, a particular symbol of a universal harmony. When we are too weary to be comforted by the remote, abstract good that religion promises, art comes with its immediate, substantial, caressing beauty. Seeking to prove nothing, making no appeal to our logical intellects, requiring of us no activity, saying nothing of aught beyond itself, it is supremely restful. Finding us defeated in our search for rationality, it says, "Search no longer, puzzle no more; merely listen and look; see, here it is!" Its beauty answers our problems never directly, but by gently making them irrelevant.

That music is beyond all the other arts directly expressive of man's deeper passion life, scarcely needs theoretic proof; the fact is in the experience of every one who has listened to a military band, to a homely song lovingly rendered, or to a ragged Hungarian with a violin. These things take a physical grip upon our emotions, they stir our diaphragms, galvanize our spines, and compel us to shiver, laugh, or weep. Combined with such physical affections, moreover, are ideas of indescribable vividness and poignancy. Joy and grief, hope and despair, serenity, aspiration, and horror, fill our hearts as we listen to music. They come in their pure essence—not as qualities of something else. And this is what is meant by the familiar statement that the other arts are representative while music is presentative. Poetry, painting, and sculpture show us things outside ourselves, joyful or grievous things perhaps, hopeful or desperate or beautiful or ugly things, but still *things*. But music shows us nothing but the qualities, the disembodied feelings, the passion essences. And since this passion life is the deepest reality we know, since our inner emotions constitute in fact the very essence of that world-spirit which is but projected and symbolized in sky, sun, ocean, stars, and earth, music can not but be a richer record of our ultimate life than those arts which deal with objects and symbols alone. It is the penetration, the ultimacy, of music that gives it such extraordinary power.

The Humor of Topsy-Turviness

COMMENT ON THE WORK OF THE LATE FRANK R. STOCKTON

IN the comment on the work of the late Frank R. Stockton, there is a noticeable attempt to analyze the element of fantastic humor, which, all writers agree, was his most salient quality and no small part of his charm. "The formula of it," says the New York *Nation*, "was the simplest in the world, although for this most American kind of humor the best expression, *pince sans rire*, has been found in France. The secret of it all is that in the most ludicrous situation the characters themselves must maintain the perfect gravity of unconsciousness, while the author must assume a perfect impassivity. For the reader alone is reserved laughter, and the joy of comprehending the situation. This is very different from the rib-tickling tactics of the professed humorist, who gives fair warning that he will have a laugh from you, and nudges you constantly lest you miss a point. Mr. Stockton, and the dry-humorists generally, approach you with guile, and have you in the grip of a whimsical situation before you are aware of the trap set for your wits. The suddenness of it is irresistible; one laughs at himself quite as much as at the delicious Mrs. Aleshine. Literature has taken little account of the whimsical idealism of which the average prosaic American is capable. Not far below the surface of most, there is a craving for adventure, and a contempt for the conventional standards to which outwardly they conform. Stockton's people merely act upon these instincts. In his most amazing flights we see, after all, only a kindly caricature of that quality of imagination which makes the American try half a dozen trades, dream of impossible inventions, take up with eccentric religions. It is this visionary streak, running curiously parallel in the American with a strong, practical intelligence, which Mr. Stockton, exaggerating it skilfully for his own ends, has in all essentials rendered with rare fidelity. In what seems most fantastic in his humor we believe will be found an additional title to be considered more of a realist than those who profess to be such. A study of his technical methods would show really striking analogies to those of French realists, like Maupassant."

"The all-pervading friendliness of the genial fairy-tale was distinctive of Mr. Stockton's humor," says the New York *Sun*, "and it was partly due to his art and method, but chiefly to personal temperament and attitude toward men and things. His mind was inventive of novelties of situation, of pleasant paradoxes, of exaggerations never overstrained, and of ingenious perversions of the laws of nature and of human probability. His inborn refinement kept him always on the safe side of the frontier, short of coarseness, and burlesque. A gentle spirit, a whimsical imagination, a delicate perception of the humor of topsy-turviness, and an absolute freedom of soul from malice or bitterness, were the qualities which made Frank Stockton one of the most admirable and widely beloved of American entertainers during the fourth quarter of the last century."

The *Independent* says that Stockton's "clean and delightful fantasies have done not a little to create what has become known as American humor—a *something* that is very real but very hard to define." The *Outlook* says that it was characteristic of his humor that, being American, it should be cheerful.

SCIENTIFIC

Man as a Machine

H. W. WILEY, in the *May Everybody's Magazine*, New York. Condensed for PUBLIC OPINION

IN what do the functions and movements of the human body resemble the workings of a machine, and in what do they differ? In the first place every movement of the human body or any of its parts is purely mechanical, and can be measured in intensity and duration as easily as the motion of a watch or a locomotive. Whatever the unit of mechanical measurement may be, whether a foot-pound or a kilogram-meter, it can be applied with equal facility both to man and a machine. You stoop and lift a two-pound weight from the floor to the table, three feet above. You have expended an energy of six foot-pounds. Attach the same weight to a crane and lift it the same distance—the amount of energy exerted is precisely the same. In lifting the foot to walk, the whole weight of the foot and leg and half the weight of the thigh are lifted a certain distance vertically, and transported the length of the step horizontally, and this process is purely mechanical. Both with man and with the machine, in so far as we know now, heat is the original and common enemy of inertia. In the case of man the heat value of the food he eats and digests is an exact measure of the energy exerted by him. This heat value of the food of man can be determined with the greatest accuracy by combustion in oxygen and the measurement of the heat produced. The heat generated in the body can also be just as accurately measured in a calorimeter, and this has been repeatedly done in this country by Dr. Atwater and his assistants at Middletown. Thus man and the machine are perfectly comparable in regard to the calorific character of the fuel which drives them and the disposition of the heat generated.

The heat value of human food is measured in the laboratory exactly as the value of coal and wood are determined. Of the various elements of foods the fats have the highest heat value, the proteids or albumenoids next, and the sugars and starches the lowest. The heat value is expressed in terms of units of weight and units of rise of temperature. This resultant term is called a calorie, and varies in value according to the system of weights and temperature used. The quantity of heat required to raise one kilogram of water at ordinary room temperature one degree in temperature is called a calorie. In round numbers one gram of sugar or starch will, when burned, generate a quantity of heat sufficient to raise one kilogram of water four degrees Centigrade in temperature. The albumen of an egg, the gluten of wheat, or the muscular tissues of meat furnish about 5.6 calories, and butter, fat, tallow, lard, or vegetable oil about 9.2 calories.

In respect of economy of operation, man as a machine has a wonderful advantage over the machine

pure and simple in the quantity of fuel required for the exertion of a given energy. The calorific value of dietaries in different countries has been determined in many instances, but it is difficult to determine any general average. The poorer laboring classes of Europe live often on rations that afford scarcely two thousand calories per day. The average for full-grown men in Europe is probably somewhere between twenty-five hundred and three thousand calories. The ration for women is about eighty per cent that for men. The English seem to be better fed than the other nations of Europe. For American men the calorific value of the ration for twenty-four hours is thirty-five hundred, and for women three thousand.

The machine has the advantage over man, however, in the cost of fuel for the same calorific power. Six pounds of gasoline in this country cost about ten cents, while the quantity of rice required to give the same calorific equivalent would probably be many many times that sum. Anthracite coal is six dollars a ton, while wheat is worth nearly thirty dollars, a ratio of nearly five to one. A ton of coal is equivalent to eight million calories, while a ton of wheat represents only four million, five hundred thousand. For mere heating purposes, therefore, the relative prices of coal and wheat are about six to sixty. Comparing man and the machine in the light of the above facts, it is seen that the man-machine is better adapted to service, works with less friction and loss of power, requires less fuel, but at higher prices, and can do more work for a given outlay of energy.

How the Voice Looks

EDWARD WHEELER SCRIPTURE, in the *May Century*, New York. Condensed for PUBLIC OPINION

THE voice issuing from a person's mouth consists of vibrations of the particles of air; these vibrations represent the entire effect of thought and emotion that pass from the speaker to the hearer. As everybody knows, the voice-vibrations can be recorded and reproduced by talking-machines, like the phonograph and the gramophone. With the gramophone recording-machine the vibrations strike a diaphragm which registers them by drawing a wavy line side-wise on the soft, waxy surface of a disk. The voice having been caught, it is next necessary to find an accurate means of studying it. Passing by the methods previously used for studying it, we decided to enlarge and trace off the records of gramophone plates so that they could be accurately measured. A machine was built for the purpose by means of much labor, many failures, and considerable expense.

The first disk traced by our machine was one con-

CURVE OF THE PRONOUN "I"

CURVE OF A SOPRANO VOICE

taining the "Sad Story of the Death and Burial of Poor Cock Robin." It contained the pronoun "I" many times repeated. The record of "I" is given in the figure. What does this curve reveal of the action of the voice? Note that the vibrations come in groups, that each group consists of a strong vibration gradually dying away, that in all groups these vibrations are of the same length (horizontally), and that the groups come at successively shorter intervals. The time from the beginning of one group to that of the next corresponds to the time of one vibration in a tone of the same pitch as that on which the vowel is being spoken. This tone we know to be that of the vocal cords; therefore each entire group represents one vibration of the cords, and the small vibrations are those aroused in the mouth cavity. The shortening of the group shows that the cord tone is steadily rising in pitch. The fact that the small cavity vibrations do not change in length shows that the mouth tone is of fixed pitch and does not change as the cord rises.

Perhaps the most interesting result of the study of speech-curves is the application to the system of training in vocal music based on a series of suppositions known as the Helmholtz theory. This theory assumes that the vocal cords resemble membranes or musical strings, and that they produce notes composed of a fundamental and overtones with the pitch-relations 1: 2: 3: 4, etc.; it also supposes that the vocal cavities (chest, mouth, etc.) reinforce certain of the overtones by resonance. In the chest-register the current of air from the lungs squeezes them apart like two cushions. This produces a series of puffs of air, which is heard by the ear as a note. There are no overtones for the vocal cavities to resonate to. Each explosion from the cords strikes a blow on the air of the vocal cavities and arouses the cavity tones. The voice-curves show conclusively that for male voices, in the chest-register, vowels consist of a series of more or less sharp puffs of air; that the cavity tones are rarely of a pitch that would enable them to coincide with overtones of the cord note, even if such overtones were present; and that these cavity tones vary in pitch with complete disregard of the cord note. For the head-register, and for female voices, data have not yet been obtained. Strangely enough, the newer view of the action of the vocal cords is the same as that stated over twenty years ago by the great vocal teacher Garcia, the inventor of the laryngoscope. He could furnish no proof of his theory, and it seems to have been generally neglected.

Food for Fishes

FRANK H. SWEET, in the *May Lippincott's*, Philadelphia Condensed
for PUBLIC OPINION

THE sea, except in the shallow water-fringe along the shore, is devoid of vegetable matter. It contains, in general, no growth of weeds and plants to harbor swarms of possible food creatures with their eggs and larvæ, and where such vegetable growths do occur, as in the floating weeds of the Sargasso sea, a race of fish and crustaceans at once appears, limited to that locality and obviously fed from that source alone. Neither does the sea, except in certain areas, greatly abound in vertebrate fish. A bucket of Atlantic water is to the eye simply a vessel of transparent brine, unfouled with weed, void of fish, and in most cases not visibly infested with any form of floating marine organisms. Yet at any moment shoals of fish

numbering millions of individuals may elect to enter this apparently foodless waste. The herring shoals disappear into the deep Atlantic and return in good condition, oily and exuberant, and the whales find sufficient food to make them the "fattest" creatures in creation. Many of the whales are carnivorous. Some, including the "right" whale, have long been known to live on small sea crustaceans, which were supposed to be found in exceptional numbers in the Arctic seas. But the case of the typical "shoal" fish, such as pilchards and herrings, offered special difficulties.

It is just possible that previous to spawning the fish can for a time abstain from food, but it is equally certain that after spawning their numbers are the same and that they must require food, and that in large quantities, in an area no greater than that occupied by the herring or pilchard shoal, so long as the fish remain in that formation. The explanation is that the microscopic creatures which are in parts of the Atlantic massed so thickly in the water as to discolor the surface and give abundant food for the whale are present, not so thickly, but in numbers comparable to the motes in the air, in all parts of the sea. For the purposes of the herring and countless other vertebrate fish, shell-fish, and zoöphytes, the upper waters of the sea are in fact a nutritive soup, teeming with food exactly suited to their needs. These microscopic creatures are the basis of all the larger life of the ocean, and in a great degree of the growth and increase of fresh-water fishes. Some of these tiny creatures are water-fleas, others are like carapaced shrimps, others occupy shells like miniature bivalves, others are forms of the one-eyed microscopic monsters of the ponds, the cyclops. All are of prodigious fecundity and proof against astonishing changes of temperature, and the eggs and young, the microscopic offspring of the water-midgets, pervade every drop of the surface-ocean, the rivers, and the ponds. Dead vegetable and animal matter feed these entomostraca, and they are converted without further machinery into the food-fishes of the world, or at one remove, when these are eaten, as food for other fish, such as the tunny, the cod, and the mackerel, which follow the herring shoals. Nothing short of assimilation in the digestive organs of fish seems to kill these entomostraca.

The trout is the most easily fed of all fish, being greedy, omnivorous, and not afraid of artificial food, such as bread or paste. But the kind of food with which it is supplied makes a vast difference in its growth. Experiments made on trout showed that when fed upon worms only they grow slowly; others fed on minnows did better; but a single fish fed upon insects weighed twice as much at the end of the experiment as a pair of those reared upon worms and minnows respectively. For feeding all young trout, the microscopic food is now admitted to be the best of all. In a recent lecture on fish a practical man dwelt on the necessity for making separate pools, full of weeds and plants, in which the millions of entomostraca might increase and serve as food for the young trout below. Carp were formerly believed to be vegetable-feeders, and the carp-ponds of Germany used to be drained and planted with rye as carp food. So it was, but only as being itself food for the microscopic millions. The carp chews the water-weed, sucks off the insects, and then spits it all out again. It may be doubted whether there are any of our common food-fishes, except the gray mullet, which are vegetable-feeders. Contrary to the rule among birds, the animal-eating fish have the best flavor.

RELIGIOUS

Our Need of Spiritual Unity

A HIDDEN WEAKNESS IN OUR DEMOCRACY

IN the current issue of the *Atlantic*, Miss Vida D. Scudder deplores the lack of what she terms "spiritual unity" in our democracy. "A nation," she says, "to be, in any real sense, a democratic organism, must possess spiritual unity; its sons must share, in invisible ways, a common life. Grant such a common life, in which thought, desire, emotion, circulate freely, and material inequalities and disasters will matter little; deny it, and the nation falls to pieces—no world but a chaos—the forms of political democracy that seem to bind it in one, chains woven of shadow. We have denied it. The American people today are united only in outward seeming. To devout Catholics, indeed, and to orthodox Hebrews, religion, that supreme world-poem whereof the entire race is author, comes as a liberating force, with its august and undying assurance that the poetic is the true, and the invisible the only enduring reality. But to vast sections this assurance has become a mockery, and the material aspects of a civilization in which these aspects are perhaps emphasized more exclusively than ever before shut out all else. Is this a light matter? Or is it easy to achieve true fellowship and vital intercourse with men and women who have never entered the inner world wherein our spirits have moved from childhood?"

The absence of a common ethical consciousness is, to Miss Scudder, a still more serious weakness. "Nothing is more suggestive to the student of our civilization than the strange and interesting variations in ethical type among differing social groups. Already moral science deals less with theory than it did in old days, more with observation; as time goes on, it must pass beyond the study of the ethical individual, and consider also the subtle and significant differences in moral type developed by differing conditions of race and class. Such an investigation, it may be said in passing, will not start out with the assumption that the atmosphere of wealth, privilege, and the wisdom of this world is best for the development of the moral nature; indeed, if the ethics of the New Testament continue to be accepted as the high-water mark of ethical idealism, the assumptions may well be the other way. Assumptions aside, however, we may expect rich and perhaps startling results from this hitherto undeveloped and hardly conceived science of distinctly social ethics. Such results can not be anticipated by the amateur observer; yet our explorer will become more and more keenly aware, the longer he lives among working people, of certain significant characteristics in their moral outlook. How may we secure unity of moral trend in a nation where differences are so fundamental? The rich man sees the poor man improvident, shifty, dishonest; the poor man sees the rich man hard-hearted beyond belief. Each judges the other bitterly; both, according to the ancient manner,

Compound for sins they are inclined to,
By damning those they have no mind to.

Yet, if one is sinner, the other can not cast a stone; and if one follows, often at a sacrifice, the high white light of an ideal, a like quest is not denied to the other, though one guiding star differeth from its fellow in

glory. And perhaps both stars are planets, revolving round the central sun, unseen by mortal eyes, of the perfect right.

"Sorrows enough we all have to witness, heaven knows, in whatever social group we happen to be born; but how the tone of the spectacle darkens if we live, for instance, in a city tenement-house, where the children of our neighbors die of contagious disease or lingering starvation; where young girls known to us take to the bad as much from the dreariness as from the difficulty of sustaining an honest existence, and where the high light of life among our neighbors is the possession of a 'steady job' at some dull trade! Such an environment generates just what we should expect: listless opportunism or dangerous rage among those of inferior moral fiber; an attitude of loving helpfulness among the more sensitive; and among all a sense, recognized or not, of strange and bewildering injustice in the social order. Were it not for the title of democracy, and for all it implies, we might perhaps not murmur: we might accept the existence, on a common soil and under common political forms, of groups possessing no common consciousness, as part of the natural order of things. As it is, only two possibilities present themselves to the thoughtful mind: to abandon our assertions, retreating upon the aristocratic theory which in that case will ultimately mold our institutions, or to consecrate ourselves, collectively and individually, to the development of a common spiritual life."

The Bogie of Orthodoxy

IS IT THE CAUSE OF THE DEARTH OF CANDIDATES IN THE
ANGLICAN CHURCH?

THE dearth of candidates for holy orders in the Anglican church has recently been much discussed by the London press, both secular and religious; and widely different opinions have been expressed as to its causes, and various remedies suggested. The unattractiveness of the church as a profession, clerical poverty, and the general eagerness for money-making, are some of the causes put forward. A writer in the current *Contemporary Review*, who has gone carefully over the whole situation, says that the most serious reason for the falling off in the numbers of the clergy is the unsettlement of mind in matters of faith. He accounts for "this silent dissatisfaction with the accepted standard of orthodoxy," as follows: "Our attention can hardly fail to be arrested by one significant characteristic presented by the sermons of the day. We are struck by the authority they universally concede to experience. The preacher makes no demand upon his hearers which would not be supported by a monitor within their own breasts. His claims are only the formulated utterances of their own nature in its highest moments. The limitation of our faculties, and the presence in the universe of insoluble mysteries, find a ready acknowledgment everywhere, and nowhere a readier than among those who busy themselves with religious problems. The miraculous is rejected only when it is understood in such a way that its acceptance would

involve a breach of continuity. Those who framed our formularies were not prepared to concede anything like this authority to experience. For them, what followed death was of infinitely greater importance than what came before it. The real life began then and not now. And the words of Scripture regarding the unknowable future were not thought to need the warrant of experience.

"Here, then, is the onerous task that awaits every clergyman who seriously tries to speak to his hearers in their own language. He has to give new expression to ancient words without emptying them of their religious contents. Those who succeed are rewarded by the lively gratitude of those they benefit. Those who do not perceive the necessity of any such re-translation, or who are unequal to it, are said to be 'out of harmony with the age,' or are blamed in some of the other phrases which have been freely applied to the clergy in this discussion. But it is hardly to be wondered at that a young man of twenty-three should shrink from a problem which he may easily believe incapable of solution. He may be one whom the church needs and whom she would gain could he only be brought to believe that the problem, difficult as it is, is being solved by many. But he may very probably dismiss all thought of holy orders without letting anyone know that he had ever had any idea of offering his services to the church. The real remedy is hardly to be looked for at once. As time passes, experience, we may believe, will be more and more universally recognized as the ultimate court of appeal in matters of faith. The real nature of the task awaiting the clergy as religious teachers will then be disclosed. And we may feel sure that, once this task is plainly seen and admitted, volunteers will not be found wanting for so honorable a service. The worst evil that could befall the church would be that she should decline this heavy task, or, by her inability to undertake it, leave it to others.

Ecclesiastical Bullying

New York Outlook. Condensed for PUBLIC OPINION

THE report in the New York press that the presbytery of New York had "rejected" a candidate for the ministry for disbelief in the historical character of Adam, and dissent from traditional views of the fifty-third chapter of Isaiah, went somewhat beyond the truth. Underneath all the fiction in the story there was, however, no little of regrettable fact. The candidate's Christian character is excellent, and his statement of his theological beliefs aroused no disapproval. On all the cardinal points of Christian doctrine, the Trinity, the Deity of Christ, the inspiration of the Bible, the Atonement, the retributions of the world to come, he was explicitly orthodox. The denial of the absolute inerrancy of the Bible as we have it, furnished the desired starting-point for the hostile operation known in England as "heckling," which requires coolness and self-possession in the subject of it to endure with success. Lacking these, the candidate was involved in quite a tangle, the unraveling of which was referred to a meeting between him and a committee—no other action in the case being taken by the presbytery. So far as we have been able to reach the facts, he dissented from traditional opinions on points of Old Testament criticism in holding that "Adam" signifies man in general rather than an individual, and that the fifty-third chapter of Isaiah, though typical

of Christ, refers primarily to the pious Israelites exiled in Babylon.

We do not raise the question, though it has been and will be raised, whether this treatment by a company of Christian ministers and elders of a candidate for the ministry who fully meets the prescribed conditions of acceptance is creditable to the presbytery. We refer to it as illustrating the wrong of which Professor Briggs so justly complained—the encroachment on the liberty of opinion that the Presbyterian standards allow, which a party in that church is disposed to perpetrate by insisting on extra-confessional tests of fellowship. We do not believe that in the present case this will be allowed to go further. It is more probable that the committee, in their conference with the candidate, will unravel the tangle caused by the "heckling," so that the presbytery will overrule the presbyters of the fixed idea, and accept him without further controversy, if he perseveres in his application. But, considering the annoyance, disappointment, and mortification to which this young man has been gratuitously subjected, his treatment by elder brethren in the church is quite too similar to that treatment of small boys by big boys which is generally condemned as bullying.

The Church and Its Unwilling Doubters

London Spectator. Excerpt

DOES any good to the church as a whole spring from the pain and weariness of its unwilling doubters? We believe that it certainly does. Is it not possible that they may be, as it were, the instrument by which God from time to time puts Christendom in tune? There are two ways by which faith degenerates. One is by assuming to be right, and the other is by becoming indifferent. The evils of indifference are evident; the evils of a hard-and-fast certainty—an appropriation by religion of the methods of argument proper to arithmetic—are likewise provable. A church which believes itself the sole repository of saving truth will persecute if it has the chance, and persecution is more subversive of Christ's teaching than any amount of mistakes in dogma. Again, a church which presents to its children a cut-and-dried plan of salvation, a bargain with which they must close or perish, will end by killing the spirit of true religion in its adherents. At such crises as these, if Christianity is to be preserved in its spiritual purity the church must again be "put in tune." The certainty which has corrupted faith is shaken for a time, and men are again required "to serve God for nought." The fact that there are to be found in every age those who will do so, those who, while doubting their "interest in the Celestial Country," yet keep in the narrow way of righteousness, and pursue the ideals of the Great Interpreter, is simply an instance of the power of the divine attraction, and a refutation of the common, if tacit, theory that the dogmatic assurance of man is required to maintain the all-pervading power of God.

A REMARKABLE BIBLE CLASS: Perhaps there is no more remarkable Bible-class to be found in any church or in any denomination than that conducted by Rev. Frank Swainson, of the Church of England, in All Saints' church, Sheffield. It has a membership of sixteen hundred, most of whom are "workmen" of the best type. But at a recent service six "publicans," keepers of drinking bars, occupied contiguous chairs, and the attendance of policemen in citizens' dress was quite marked.—*Interior.*

THE NEWS OF THE WORLD

MONDAY, APRIL 21

DOMESTIC.—The court martial to try General Jacob H. Smith was named at Manila....The United States supreme court granted the application of the state of Washington for leave to bring suit to annul the Northern Pacific merger....The senate Philippines committee heard further testimony regarding the infliction of the "water cure"....The American Social Science association began its annual meeting in Washington.

FOREIGN.—M. Blehr has formed a new Norwegian cabinet, with himself as premier and minister of the interior; M. Ovam, ex-minister of justice and police, becomes minister of state at Stockholm....There was a general resumption of work by strikers in Belgium....There was sharp fighting between Cossacks and the police and the populace of Helsingfors....There is a recrudescence of the plague at Port Elizabeth, Cape Colony; ten cases have been reported, five of which proved fatal.

TUESDAY, APRIL 22

DOMESTIC.—Two engagements were fought with the Moros on the island of Mindanao by the American troops....The court martial to try General Chaffee was changed, so that it was appointed by the president, instead of General Chaffee, to avoid complications....The war department made public an official report from General Chaffee on the situation in the Philippines....Republican leaders in the senate decided to frame an entirely new bill for reciprocity with Cuba, ignoring the bill passed by the house....President Baker, of the Atlantic Transport company, told the terms on which his company entered the steamboat combination.

FOREIGN.—The British house of commons voted to impose corn duties....A member of the firm of J. P. Morgan & Co., in London, appeared before the house of lords committee and explained the plan for the proposed underground transit system, giving ample evidence of ability to finance the corporation....The Belgian chamber of representatives rejected an interpellation by a Socialist member in regard to the killing or rioters at Louvain by civic guards; work was resumed at the places where the greatest disturbances occurred....General Uribe-Uribe, the Colombian revolutionary leader, has been overwhelmingly defeated.

WEDNESDAY, APRIL 23

DOMESTIC.—Orders were sent to General Chaffee directing him to use every honorable means to avert war with the Moros, of Mindanao....The president has withdrawn the prohibition of General Davis's military expedition against the Moros, and authorized him to use his discretion....The president reprimanded General Funston for criticizing Senator

Hoar, and directed him to stop public discussion of the Philippines question....Captain Charles E. Clark declined appointment as naval representative of the United States at the coronation of King Edward, and Rear Admiral John C. Watson was chosen for the mission by the president....The United Confederate Veterans, in session at Dallas, Texas, re-elected Gen. John B. Gordon commander-in-chief.

FOREIGN.—Exciting scenes took place in the Danish upper house, where a vote to sell the West Indian islands to the United States was passed by a small majority....Bocas del Toro has again been taken by the troops of the Colombian government....At a meeting of the Dublin corporation it was decided to send no representatives to the coronation....Many riotous acts by strikers are reported from Russia....M. Vanovsky, the Russian minister of education, has resigned because the czar refused to sanction his bill for the reform of intermediate schools.

THURSDAY, APRIL 24

DOMESTIC.—The capture of Sultan Pualo's fort has had a salutary effect, and the Dattos are submitting to American authority; Colonel Baldwin has been ordered to cease operations against them....Attorney General Knox announced his decision to take legal proceedings against the so-called beef trust, having become convinced by investigation, he said, that a combination of big dealers in restraint of interstate commerce exists....General Funston said he would no longer discuss Philippine matters.

FOREIGN.—In the house of commons Hugh O. Arnold-Forster, secretary of the admiralty, declared that the admiralty was considering the whole subject of ship subsidies to define the rights of the admiralty in such contingencies as the suggested shipping combination. Bitter criticism of Emperor William has been aroused among the old German aristocracy by his marked attention to untitled business men; the fear is expressed that this will lead to the adoption of "the American idea" at the German court....Venezuelan government troops were defeated by revolutionists and General Ramon Castillo was killed....The pope received 20,000 pilgrims at St. Peter's.

FRIDAY, APRIL 25

DOMESTIC.—Canal propositions were discussed by the cabinet, the president expressing anxiety that congress shall choose between the Panama and Nicaragua routes at the present session....The secretary of war sent to the senate a cablegram received from the president of the assembly of the presidentes of Occidental Negros, P. I., asking a reduction of 75 per cent on the duty on

sugar imported into the United States from the Philippines....Nearly forty thousand Porto Ricans contributed to the McKinley memorial fund.

FOREIGN.—Questions in the house of commons elicited information showing that the government is taking steps to cope with the situation caused by the steamship combination which is officially considered detrimental to Great Britain....Chinese imperial troops fought and scattered a body of rebels near Wu-Chow....A correspondent at St. Petersburg telegraphs that a general strike of workmen has been announced for May 1; the men demand ten hours' labor a day....The Russian minister of the interior has gone south to investigate the disorders in southern Russia.

SATURDAY, APRIL 26

DOMESTIC.—General Chaffee was shown to be responsible for the character of the warfare in the Philippines by his orders to Generals Hughes and Smith....Successful tests of Professor Reginald A. Fessenden's system of wireless telegraphy were made on Roanoke Island, N. C.

FOREIGN.—The first prosecutions were made under the proclamation issued recently by Earl Cadogan, the lord lieutenant of Ireland, putting in force three sections of the Crimes act in many districts of the country....The Socialists in Germany are advocating placing restrictions on child labor in factories, and have presented statistics to the reichstag, showing that a million children under fourteen years of age are thus employed.

SUNDAY, APRIL 27

DOMESTIC.—Guevarra, who succeeded Lucban as leader in Samar, has been taken by the expedition under General F. D. Grant....Representative Fowler announced that copies of the majority report on the house banking and currency bill were being sent to more than a million persons—an unprecedented record....The war department issued a statement giving the military record of Senator Elkins, whose right to membership in the G. A. R. has been questioned....J. Sterling Morton, who was secretary of agriculture under President Cleveland, died....Officers of the U. S. S. *Chicago* were arrested and imprisoned in Venice for fighting in the streets.

FOREIGN.—The polling for the election of new members to the French chamber of deputies took place, and resulted in the loss of several seats for the ministerial party....The financial situation in London and Berlin showed improvement....The uprisings among the Russian peasants have grown serious....Reports from The Hague state that Queen Wilhelmina is improving as well as the usual course of the disease permits.

The Books of The Week

THE HISTORY OF THE WORLD: A SURVEY OF MAN'S RECORD. Edited by Dr. H. F. Helmolt, with an introductory essay by the Right Hon. James Bryce. Vol. I., pp. 628, \$6.00. New York: Dodd, Mead & Co.

A NEWER and broader conception of history than has before stimulated historical effort is the basis of "A History of the World," the first volume of which has just been issued. Nature is the basis for the newer interpretation of history. We are no longer to confine ourselves to legends, to the songs of bards, the narratives of kings, the exploits of world figures. No concrete department of human activity, such as religion, social institutions, economic conditions or political institutions, is broad enough for a world-history basis. Instead of contrasting man with nature, he is studied as a part of nature. His body is formed of material constituents, subject to the laws that govern matter. He needs air, water and food. He is limited by climatic conditions. The evolution of the uses of clothing, the discovery of fire, make him less helpless. A knowledge of food, and how to so utilize nature that the most may be obtained from her, renders him more and more independent, though he never can get away from the fact that he must work with nature and not against her. The relation of man to his physical environment is therefore the more comprehensive view-point, from which the present work is prepared. Whether the conception was ready for the man or the man ready for the conception matters little.

In 1894 Prof. H. F. Helmolt suggested the preparation of a universal history along these lines. The first volume is issued simultaneously in England, Germany, and the United States. The introduction by Prof. James Bryce is a scholarly essay which leaves the reader with the feeling that no other historical work approaches the present undertaking. He points out how the discoveries of the last century, and more particularly those of the latter half of the last century, have opened up new sources which throw much light on what has hitherto been considered prehistoric times. He calls our attention to the fact that geographical discoveries have brought the entire habitable world under our survey. We are able as never before to study for comparative purposes the different phases and stages of peoples. "Universal history has to deal not only with the great nations, but also with the small nations; not only with civilized, but also with the barbarous or savage people; not only with the times of movement and progress, but also with the times of silence and apparent stagnation."

It is quite impossible in a brief re-

view of such a work as this to do more than point out some of the main features. Dr. Helmolt contributes The Idea, Universal History. Prof. J. Kohler discusses First Principles of a History of the Development of Mankind. The most interesting contribution is, perhaps, Friedrich Ratzel's Man as a Life Phenomenon on the Earth, in which he launches his reader upon the principles of Anthro-po-geography—the thread which is to run through the entire eight volumes. Some of our long-established ideas are upset by Johannes Ranke in Part IV, which is devoted to Prehistoric Times. America, and The Historical Importance of the Pacific Ocean comprise the two remaining parts of this volume. The plates and maps, done in many instances in colors, are most helpful. It is almost needless to say that these volumes promise to be one of the most valuable contributions to historical study in all departments that has ever been attempted.

THE HOUND OF THE BASKERVILLES. By A. Conan Doyle. Cloth, pp. 249, \$1.25. New York: McClure, Phillips & Co.

MR. DOYLE has resurrected Sherlock Holmes for the purpose of unraveling a ghostly tragedy of Devonshire. The family of the Baskervilles is troubled with a ghostly hound, the legacy of a fast-living, unscrupulous ancestor, who brought a mysterious death upon himself by his pursuit of a village girl. A descendant, Sir Charles Baskerville, is found dead almost at the door of his own home, and by his side is the track of a gigantic hound. His successor appeals to Holmes to solve the mystery and save him from a similar fate. It is needless to say that the obliging detective does the trick with a proper display of acumen and sang froid. The crime is traced to the son of a renegade Baskerville, who would inherit the estate and title in the event of the death of the last of the direct line. The identity of the real criminal is cleverly concealed until the moment of the exposure, and the various steps by which his rascality is laid bare are skillfully taken. In many ways, however, Mr. Holmes seems to have suffered from his fall in the Alps, which was supposed to have ended his life. There is not the active matching of wits, the following of blind trails into all sorts of impossible places, the unexpected implication of all sorts of people in the details of the plot, that marked his earlier escapades. In this adventure, he has played a waiting game, sending down his friend Watson to keep watch on the hound and coming into the play himself only when the critical time has arrived. Even then the chances are so even that the last Baskerville almost falls a victim to the hound. It was not the way of the earlier Sherlock Holmes to leave his quarry even the remotest chance of success when the denouement came. All in all, the tale is too passive, too lacking in active effort on the part of the famous detective, to convince the readers that it is the real Sherlock Holmes come to

NOW READY

Mr. Carnegie's Great Book on modern business and how to succeed.

Two editions printed before publication.

THE BY ANDREW CARNEGIE Empire of Business

A very handsome royal octavo volume of 345 pages, with photogravure frontispiece, bound in buckram, with gilt top. Sold exclusively by subscription. Full particulars on application. Special representatives (men and women) required everywhere. Those now in the field are making big money.

"The statements of a man who has amassed untold millions will be read with great attention, and Mr. Andrew Carnegie's 'The Empire of Business' (Doubleday, Page & Co.) is sure to sell well."—*N. Y. Sun*.

"Will surely rank among the 'best books of 1902.'"—*Buffalo Express*.

"Easily at the head of the week's list is Mr. Carnegie's 'The Empire of Business,' which is an addition to any bookshelf."—*N. Y. Herald*.

"We hope every youth in the land may be induced to read the first chapter on 'The Road to Business Success.'"

"The crisp, homely philosophy of his pages would well entitle Mr. Carnegie to be called 'Our Later Franklin.'"—*Brooklyn Citizen*.

"What he says carries the weight of a man who has seen and thought, and whose seeing and thinking and doing have made his success one with few parallels."—*N. Y. Tribune*.

"This book of almost four hundred pages records throughout the thoughts and impressions of a practical man, dealing practically with present conditions."

"Mr. Carnegie has tried to account for his own success and to tell young men how to succeed as he has done."

"The most valuable thing about the book is its common sense."—*N. Y. Journal Editorial*.

life. The real Holmes is still dead in the Alps, and if Mr. Doyle is wise he will let him stay there.

THE OPPONENTS. By Harrison Robertson. Cloth, pp. 355, \$1.50. New York: Charles Scribner's Sons.

It has already been demonstrated that a political campaign in Kentucky is fraught with more dramatic incidents than an ordinary war. In choosing this field for his latest story Mr. Robertson has insured his readers plenty of action. The "opponents" are rival candidates for congress and for the hand of the same woman. They represent two characteristic Kentucky types: the conservative old "states-rights" school, and the aggressive boomer of the new south, who boasts that he is an American first and a Kentuckian afterward. The campaign waged by them, though mild in comparison with the "real thing," brings out clearly some latter day political methods and ends with the death of one of the "opponents." The story opens in a telling manner with a tragedy, which hangs like a shadow over the rest of the story, and is cleared up in an unexpected fashion at the last. The heroine, Margaret Helm, is one of the new women of the south who blend the charm of the old regime with the self-reliance of the new. In "The Opponents," as in "The Inlander," Mr. Robertson shows that he has a keen eye for the dramatic values of the life about him and for interesting types of men and women.

MANY WATERS. By Robert Shackleton. Cloth, pp. 372, \$1.50. New York: D. Appleton & Co.

A STORY of newspaper life in New York that is to be commended for its accuracy and directness. The author talks simply and without undue adornment of the things with which he is evidently familiar. The title of the book is a duplex pun; the young man and the young woman with whom the author is most concerned are in danger of being separated by the many waters of one of the city dams in Westchester county, and also by a civil engineer named Waters. But many waters can not quench love, so dam and man are both unavailing. It is long since a story of newspaper life has appeared that bore upon its face such unmistakable marks of genuineness. There is no attempt to draw on the sympathies of the readers or to construct a sensational tale out of the many weird materials that an experience on the staff of a daily paper offers. The conception is almost entirely objective, and while it never rises to great heights, yet it never falls below the level of uniform excellence.

THE ASSASSINS. By N. M. Meakin. Cloth, pp. 426, \$1.50. New York: Henry Holt & Co.

In "The Assassins" the reader can find romance, chivalry, deeds of heroism and deep-laid plans of siege and battle. The story is laid in the time of the crusades, and deals with the plot of Sinan, the sheik, grand master of the secret order of the Ismailians, otherwise known as

McClure's Magazine

TWO SERIALS of unusual interest to readers of *Public Opinion* will be published in McCLURE'S MAGAZINE during the balance of 1902. These added to the interesting, timely articles, and the vivid, stirring stories that are always characteristic of McCLURE'S, will make it, beyond all question or cavil, *The Best Magazine at Any Price.*

Beginning in the May Number:

Miss Stone's Own Story Six Months Among the Brigands

The only complete account of this memorable affair, of which but an inkling has reached the public. Here for the first time it is set forth in all its terrible detail by the only one who can tell it completely. You will be held breathless in the spell of these amazing experiences, surely the most astounding that any living woman ever endured. The sudden onslaught upon the missionaries and their capture; the slaying of the chance witness; the wild flight over the Bulgarian mountains by secret paths; the cruelty, not wanton but inevitable, of the forced marches; the constant menace of death; the silent escapes where life hung on the break of a twig—all these make up a human document more thrilling in its simple truth than are the wildest reaches of the imagination. The account of Mrs. Tsilka's baby and of the council of the brigands to determine its fate has been written by Mrs. Tsilka herself. It is going to be the greatest story of the year. The mother's heart seems to cry out with tenderness that cannot be described.

Beginning in the June Number:

Booth Tarkington's New Novel

Booth Tarkington's first book, "The Gentleman from Indiana," put its author unchallenged in the front rank of American novelists. Some of the best critics ranked him at the very top. Then followed "Monsieur Beaucaire," the wittiest, daintiest novelette of eighteenth century men and manners in American literature. Even after three years of extreme popularity these works are still sold by thousands of copies. The new serial entitled

"The Two Vanrevels"

is another story of Indiana, laid in the early history of the State about the time of the Mexican War, in the fresh joyful days when the people of the State were settling down to the peaceful conquest of the country their pioneer fathers had won for them with the axe and the rifle. It is a romantic love story, healthfully alive with the bustle of manly progress and endeavor which marked the beginning of the greatness of the land beyond the Alleghenies. Its characters typify all that was finest in that age. The illustrations by Henry Hutt will be a feature.

Assassins, to kill his rival, Saladin, sultan of Turkey. The grand master is a very old man, full of craft and cunning, but when he chooses Hassan to be his secret tool for the murder of the sultan he makes the great mistake of his life. For Hassan has noble blood in his veins, and comes at last, through suffering, to recognize a law of right in his own soul, higher than the command of the grand master. Meanwhile, the pageant of history sweeps by; Richard, the Lion-Hearted, with his army and his French and Austrian allies, besiege Acre; battle after battle between Moslem and Christian is fiercely waged. The descriptive passages are vivid and full of gorgeous pictures.

ANALYTICAL PSYCHOLOGY. By Lightner Witmer. Cloth, pp. 277, \$1.50. Boston: Ginn & Co.

THE author states that his aim has been to produce a work which shall comprise a series of experiments "that can be performed by untrained students of psychology without supplementary explanation on the part of the teacher and without costly and complicated apparatus." This aim has been admirably fulfilled, the present volume being clear, concise, and exhaustive. The materials for the work are all inexpensive, the illustrations excellent, and the instructions simple and concrete. The usual form of a book on psychology, especially physiological or analytical psychology, precluding study except in a laboratory, is entirely lacking here. Professor Witmer has written so simply that the book may be readily understood by the young student, and yet is entirely suited to an advanced course of study.

THE WINDING ROAD. By Elizabeth Godfrey. Cloth, pp. 359, \$1.50. New York: Henry Holt & Co.

THIS is a story of a soul possessed by the spirit of unrest, one in whom the desire to wander has come to be, both by the inheritance of gypsy blood and by habit, the ruling passion. With an Orpheus-like gift, this wanderer, who is known simply as Jasper, charms all who hear him by the magic power of his violin-playing. He can win, with his wonderful playing, food, shelter, rescue from danger, and even the personal devotion of all manner of folk. A woman falls in love with him, a woman who is all faithfulness and tenderness. For him she leaves home and breaks all family ties. But trouble comes and life ceases to be the gay holiday it was. It is here that the moral power of the heroine is touchingly and strongly portrayed. The closing chapters are full of fine pathos.

GARDEN-CRAFT OLD AND NEW. By John D. Sedding. Cloth, pp. 215. New York: John Lane: The Bodley Head.

THE late John D. Sedding, an artist-gardener, and quite a remarkable man, if we can judge from the memoir prefacing this volume, here presents his reflections on old gardens and some suggestions for copying their best effects in new ones. To quote the author's own

The Pocket Balzac

The above illustration shows the difference in size between our new pocket edition of the *Comedie Humaine* of Honore de Balzac and the library edition.

THE POCKET EDITION comprises the well-known exact and literal translations of Katharine Prescott Wormeley, the result of 15 years of study.

This handsome and convenient edition of the great French novelist's best writings is printed in large, clear type, on thin but opaque paper, illustrated with photogravure frontispieces from original pictures by noted French artists, and superbly bound in cloth or limp leather.

IN THIRTY VOLUMES

Price, in cloth, \$1 per vol. In limp leather, \$1.25 per vol.

**"The Madman
of the North"**

Are you familiar with the times, wars, and ambitions of Charles XII. of Sweden? He was a picturesque, almost an heroic character, and he filled Eastern Europe with the turmoil, which furnishes the setting of

**Monsieur
Martin**

By WYMOND CAREY, net \$1.20.

"A romance of the great Swedish War. The character of the boy King Charles XII. is finely drawn with discrimination, vigor, breadth, subtlety and a most admirable fineness. With the spirit of the true dramatist, that remarkable character is not displayed in description but unfolds itself in action. . . . Nothing could be better than the stirring picture of the gay, reckless and intriguing life at Dresden. The story hums and sparkles with real life."—Chicago Post.

G. P. Putnam's Sons NEW YORK**Mountain and Lake Resorts**

The Lackawanna Railroad has just issued a handsomely illustrated book describing the various lake and mountain resorts reached by its line. If you are looking for a place to spend the summer this book will tell you where to go, how to go and cost of board. Send 5 cents in stamps, to cover cost of mailing, to T. W. Lee, General Passenger Agent, Lackawanna Railroad, New York City.

Pioneer Suspender Co. 718 Market St. Philada.

words, the work is a collection of "errant thoughts, jotted down in the broken leisure of a busy life, grown solid unawares, and expanded into a would-be serious contribution to garden literature." The book is handsomely made, and will delight all who love beautiful gardens or own a passion for gardening.

THE MISDEMEANORS OF NANCY. By Eleanor Hoyt. Cloth, pp. 213, \$1.50. New York: Doubleday, Page & Co.

The creator of Nancy has brought a most winsome young woman into the world of fiction. She has endowed her with such beauty and wit that we can readily believe that every man she met, from a French cook to an English duke, went down, like a nine-pin, before her first glance. Her sprightly misdemeanors are related with engaging vivacity.

LOST ON THE ORINOCO. By Edward Stratemeyer. Cloth, pp. 320, \$1.00. Boston: Lee & Shepard.

The beginning of a new series for boys by this well-known writer. The present book tells of the various sights and adventures which five American boys see and experience in a voyage from New York to the Orinoco. Needless to say, there is plenty of excitement of a healthy kind and instruction as well.

WHAT GREAT MEN HAVE SAID ABOUT GREAT MEN. A Dictionary of Quotations. Compiled by William Wale. Cloth, pp. 482, \$2.50. New York: E. P. Dutton.

A VALUABLE collection of quotations giving the opinions of the greatest writers of all ages on five hundred of the world's greatest men. The volume is well arranged and well indexed.

STUDIES IN THE LIFE OF CHRIST. By Thomas Eddy Taylor, S. Earl Taylor, and Charles Herbert Morgan. Cloth, pp. 226, 75 cents. Cincinnati: Jennings & Pye.

THESE studies make up a year's course of thirty-five lessons divided into sections for daily study.

A WRITER OF ATTIC PROSE. By Isaac Flagg. Cloth, pp. 221, \$1.00. New York: American Book Co.

SELECTIONS from the writings of Xenophon, arranged with a view to teaching the principles of Greek prose composition.

GRADED WORK IN ARITHMETIC—EIGHTH YEAR. By S. W. Baird. Cloth, pp. 159, 25 cents. New York: American Book Co.

THE last of a series completing a grammar school course in arithmetic.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION

THE GENERAL SITUATION

Dun's Review, New York, April 26

Versatile weather has produced erratic fluctuations in prices and affected business very differently, according to locality. The extremes were blizzards and oppressive heat, with every intermediate variety. As the future prosperity of the railways is more or less dependent upon the crops, the vagaries of the weather were quickly reflected in the markets for securities as well as in the option sales of grain and cotton. Retail distribution of merchandise has maintained a good average, losses at some points being offset by gains elsewhere. Manufacturing plants are well employed, except where wage disputes interrupt. Coffee and silver touched low record prices, but the average of commodities advanced. Transporting interests maintain their wonderful record, railway earnings thus far reported for April exceeding last year's by 5.2 per cent and those of 1900 by 15.3 per cent. Speculation still makes the comparison with last year's clearings unfavorable at New York, where there is a decrease of 14.0 per cent for the week; but compared with 1899, the largest preceding year, there is a gain of 58.0 per cent. The increase in legitimate trade is shown by gains at other leading cities of 6.0 per cent over last year's bank exchanges and 26.0 per cent over 1899.

STEEL AND IRON

Most large consumers of pig iron have provided for their needs well up to the end of the year, and consequently there is little change to report in the situation except as to small orders that appear from time to time. The very high premiums paid where early delivery is desired indicates that the market has lost none of its strength, while the scarcity of available supplies has sent many urgent buyers into foreign markets. Quotations received by cable indicate that pressure in the United States has produced a decided advance abroad, and imports, after paying duty and freight, are extremely expensive. Movement of partially manufactured and finished steel products continues on a large scale, and there is some fear that new enterprises may be abandoned, as the date for beginning work is repeatedly postponed by the delay in delivery of materials.

COTTON AND WOOL

Manufacturers of cotton goods are still behind with deliveries, and active machinery is assured for some time to come. Labor disputes have been temporarily adjusted, making the output very heavy as compared with recent weeks when the strikes were causing interruption. New orders are small, the recent liberal export demand being checked, it is thought, by the fall in sil-

ver. Jobbers have received requests for more prompt delivery, retail trade having expanded with the warmer weather. Quotations of cotton goods are firmly held, the strength of the raw material giving support. Independent woolen mills are working night and day. Stocks of certain grades are low and deliveries delayed, but others are in ample supply. Wool moves slowly, and in some instances prices are shaded, but as a rule holders insist on full figures.

CORN AND WHEAT

While the prospects for a full yield of wheat are less bright than they were a week ago, the sharp rise in price must be attributed in part to skillful manipulation by interests recently prominent in the stock market. Lack of moisture has checked growth in the southwest, and snow has retarded farm work in some spring wheat states, but it is probable that there is the customary exaggeration of damage reports for speculative purposes. A year ago there was a sharp advance in price on gloomy reports, yet the final yield promises to be a record breaker. Exports from all ports of the United States, including flour, were 4,041,614 bushels, against 3,433,987 last year, shipments being mainly of wheat purchased before the advance. Exporters made few new contracts at the higher prices. Corn was attracted to market by the better terms offered, receipts for the week reaching 1,394,479 bushels, against 1,138,308 a year ago, but Atlantic exports fell off to 340,237 bushels, against 1,275,156 in 1901.

anticipate a continuance of easy money because they have been voluntarily marking down the loans of their regular customers the past day or two, which they certainly would not do if they anticipated an increased demand. Call loans ranged from 3 to 5½ per cent and time money from 4 to 4½.

THE STOCK MARKET

Intense heat and hot winds brought the first crop scare of the season, and, coupled with the action of the supreme court in allowing the state of Washington to become a party to the suit in the Northern Securities matter, checked what looked like the most bullish stock market for a year. Liquidation ensued, which lowered quotations of the high-priced grangers and Pacific stocks, but the continued ease of money, liberal foreign buying on balance by arbitrage houses, and reassuring advices later on of rains in the afflicted sections, induced a recovery. Early in the week the highest prices ever recorded were reached in many securities. Heavy buying of Reading was a feature throughout, and proved a strengthening feature, while the favorable Lake Shore report induced buying of trunk-line stocks. Activity in industrial stocks was a feature later in the week, and the upward tendency of the market generally appears to have been resumed. United States Steel advanced previous to the issuance of the circular dealing with the proposed readjustment of the capitalization. Money was firmer abroad this week, and foreign exchange hardened perceptibly.

BANK CLEARINGS

Bank clearings for the week ending with April 24 aggregate \$2,685,159,526, an increase of 5 per cent over last week's total, but a decline of 8 per cent from a year ago. Exchanges at cities outside of New York amount to \$792,584,699, a decrease of 5 per cent from last week, but a gain of 7 per cent over last year.

Domestic Trade

Domestic trade movements for the first quarter of 1902, compared with those for the corresponding period in 1901, are reported in the March summary of internal commerce by the treasury bureau of statistics. These figures seem to indicate a continued increase in the volume of representative branches of commerce. The receipts of wheat at eight markets in the interior for the year 1901 up to April 1 amounted to 181,783,965 bushels, compared with 196,632,766 bushels for the corresponding period of 1902. There is thus a gain of 8.1 per cent to the credit of the current quarter. The live stock movements exhibit the same general tendency with some exceptions. For the first quarter of 1900 the receipts of five kinds of stock at the five leading markets of the interior were 7,412,703 head; for the first quarter of 1901 the receipts amounted to 7,646,572 head, and for 1902 7,831,882 head. Traffic on the great lakes for March was marked by the opening of local operations on the lower lakes and the clearing of a few cargoes of ore and wheat from the up-

per lake ports during the last week of the month. Receipts for March were 251,293 tons of freight, compared with 183,913 tons in March, 1901. The March lake statement further shows that the domestic shipments of hard coal during the season of 1901 amounted to 3,310,323 tons; soft coal, 5,976,231 tons, and that 1,758,238 tons of coal were loaded for vessels' consumption at 121 lake ports by 126 different firms. The exports of coal from northern lake districts in 1901 amounted to 4,412,285 tons, compared with 5,054,158 tons during the calendar year 1900. The total shipments of coal on the lakes, including coastwise and foreign, for 1901 amounted to 15,457,077 tons, compared with 12,026,841 tons in 1900. On the north Atlantic seaboard the receipts of flour and grain at New York for March amounted to 8,311,242 bushels, including flour and meal reduced to bushels, compared with 11,367,957 bushels in March, 1901. Grain and flour receipts at Boston for the three months ending with March of this year were 6,504,507 bushels, including flour and meal reduced to bushels, compared with 12,254,249 bushels for the corresponding period of the preceding year. At Philadelphia the receipts were 3,331,626 bushels of wheat, corn and oats, against 10,387,862 bushels for the corresponding quarter of 1901. At Baltimore 3,510,757 bushels of wheat, corn, oats and rye arrived, compared with 18,929,301 bushels during the first three months of 1901.

Various Topics

Traffic on the Erie canal has opened with a 4 per cent rate on grain from Buffalo to New York.

Yarn mill owners from various southern states, in convention at Charlotte, voted in favor of a consolidation of their mills. The proposed capitalization of the new combination is placed at \$60,000,000. Commissioner of Internal Revenue Yerkes has decided that where a testator citizen of the United States, died abroad, leaving property in the United States, his estate is prima facie liable to the legacy tax.

Stanley G. Flagg & Co., of Pottstown, Pennsylvania, have advanced the wages of their 350 employees 10 per cent, which makes 32 per cent in eighteen months. The Warwick Iron and Steel Company, of the same place, have also advanced wages 10 per cent.

The National Civic Federation has succeeded in bringing together in an amicable conference representatives of the National Founders' Association and of the Iron Molders' Union of North America, and thereby avoiding a labor conflict all over the country.

Reports say that the committee representing the National Asphalt Company has tentatively approved a reorganization plan involving the formation of a new company with \$10,000,000 preferred stock and \$10,000,000 common stock. The Asphalt Company of America 5 per cent bonds will take up nearly all the new preferred stock.

WIT AND HUMOR

All Hail the Microbe!

Go draw the curtains, sister, and stop
up all the chinks,
For microbes and bacilli are kicking up
high jinks.
Go sterilize the water and disinfect the
cook—
The germ is grimly stalking like some
pursuing spook!
And while you're doing these things,
You'd better do 'em twice—
And when you've got 'em finished,
Go down and boil the ice!

Be careful of the mutton (oh, guard ye
well the meat!)
It's full of varied microbes we would
not care to eat!
And trace the antecedents of that seduct-
ive stew—
We know not how much danger is lurk-
ing in the brew!
Go vaccinate the oatmeal
And sulphurize the rice—
And once again, dear sister,
DON'T fail to BOIL the ICE!

Ah! knowledge all upsetting! Once we
were blithe and free,
And didn't build our fears on microbes
we couldn't see;
But science has exposed 'em, and now
they're everywhere—
They're poisoning the stuff we eat,
they're masters of the air!
If we neglect to heed 'em,
They'll have us in a trice.
So, sister, dearest sister, after you
have finished reading that romance
in three acts, entitled "The Deadly
Germ; or, The Scientific Solar
Plexus," and after you have drawn
the curtain, stopped up the chinks,
sterilized the water, disinfected the
cook, examined the mutton and se-
cured the history of the stew,
GO DOWN AND BOIL THE ICE!
—Baltimore News.

PUBLIC OPINION

Number 19
Volume XXXII

The Week

Thursday
May 8, 1902

THIS has been a dull week at Washington. The house has been busy with long-neglected affairs of the District of Columbia, but these affairs do not interest the country at large. In the senate the Philippine government bill offered by the Republicans has been under fire off and on during the entire week, the Republicans having so far left the debate on the measure to their opponents, in accordance with a concerted plan. It was reported on Saturday, however, that the administration supporters did not intend to ignore the criticisms which have been heaped on the bill, but would rally to its support this week. The oleomargarine bill has finally gone to the president for signature, and it has been agreed to extend the present Chinese exclusion laws to cover the remaining life of our existing treaty with China.

IT was understood at the time of the resignation of H. Clay Evans as commissioner of pensions that he would receive as a reward for his services in that office "something equally as good." This something is his nomination to be consul general at London, in succession to William McKinley Osborne, whose five years' service at the London post was recently terminated by death. Mr. Evans's resignation was not taken kindly by the independent and Democratic press, nor were Republican critics timid about expressing their disapproval. And now these critics refuse to be pacified by the "promotion" of Mr. Evans to one of the most sought-after positions in the gift of the government. Some newspaper comment on this subject will be found in another part of this issue.

PRESIDENT ROOSEVELT addressed the graduating class of the naval academy at Annapolis on Thursday, and in the course of his remarks introduced some arguments in favor of naval preparedness which bore definitely upon the navy bill just introduced in the house. "A battleship can not be improvised," the president said, and his address throughout was an amplification of this indisputable proposition. "In modern naval warfare," he said, "the chief factor in achieving triumph is what has been done in the way of thorough preparation and training before the beginning of the war." But an even deeper sense of responsibility must have been felt by the young officers when they were told by the president that, in case of war, "if the navy fails us, then we are doomed to defeat, no matter what may be our material wealth or the high average of our citizenship."

WHETHER or not we are to have an extensive coal strike is to be decided this week. On Monday neither side was willing to make any positive prediction, but it was acknowledged that the conference between the mine operators and the representative of the unions had been without results. So far as the public knows, the recognition of the miners' unions was the point on which all the negotiations hinged; what the miners intended to demand after their unions had been recognized has not yet been told. President Mitchell of the United Mine Workers claims to be able to call out 147,000 miners if the executive committees of three anthracite districts should decide in favor of that course of action. There are many influences working for peace, however, and a strike may be averted in spite of the dogged attitude assumed by both sides immediately after the failure of last week's conference.

■ ■ ■

CLOSING arguments were made on Saturday in the court-martial of General Smith for his orders relative to the devastation of the island of Samar after the massacre of our troops at Balangiga. Colonel Woodruff, for the defense, con-

tended that the evidence introduced proved that the written orders of General Smith did not authorize any unnecessary killing or destruction of property. Colonel Woodruff claimed that General Smith, at the close of forty-one years' service, had been called on to face a court-martial "in deference to noisy public sentiment, fostered for unknown and ignoble purposes, until hysteria was produced." The impression at Manila is that General Smith will be acquitted. At all events the editors who have been preparing to hang this officer may as well put away their rope for future use.

AMOS J. CUMMINGS, who died at Baltimore last week at the age of 61, was blessed with many friends and admirers, who now join in a remarkably fervent eulogium to his memory. He achieved fame and honor both in war and in peace; he was a participant in the Walker filibustering expedition in Nicaragua, and received a medal of honor from congress for recovering a gun at Fredericksburg. After the civil war he filled editorial positions on the *New York Tribune* and *Sun*, but it was his signed writings and his "Ziska Letters" that made him honored among journalists. Another claim to distinction is that he successfully defied the power of Richard Croker and yet retained his political power, dying in harness as representative from the tenth New York district, which he had represented from 1887.

NO further light is thrown upon the progress of the peace negotiations in South Africa, but the *Times's* correspondent calls attention to the fact that the *London Standard's* correspondent at Pretoria, who is believed to be especially well informed, and who has the friendship of General Kitchener, has sent very hopeful reports of the outlook, indicating, in the opinion of the *Times*, that the result of the negotiations is "likely to be favorable." The same correspondent says that no weight should be attached to the continental intimations that the peace rumors are manufactured for the purpose of creating an atmosphere of satisfaction during the coronation, and another correspondent discounts the stories that President Kruger can, as he says, block the steps toward peace that are now being taken by the Boers in the field.

THE most reliable reports from Russia, and these, it is to be remembered, are none too trustworthy, state that the disorders in the southern provinces do not appear to be part of or indicative of a general revolutionary scheme. They are isolated uprisings due to local conditions, causing hunger and destitution. If, however, as is stated, hundreds of estates have been burned and sacked by the peasants, and if the agitation among the workingmen and students of the cities continues to keep pace with the agrarian uprising against the landlords, the movement may easily develop into a serious revolution. Then the question presented by one of our cartoonists—Will Russia have to play on the constitutional timpan in order to hive the bees?—will become very pertinent.

HOW Frenchmen regard the results of the recent elections we do not yet know, except in a general way. The conservative elements of the nation appear to be well satisfied; the radical elements are such that satisfaction has no place in their makeup. Disinterested English and American comment is unanimous in praise of the good judgment the great body of French electors have shown in voting to support the sane and safe policy of M. Waldeck-Rousseau. The first reports of the results of the elections made it seem doubtful if the government had retained its majority, but the result as announced by the ministry of the interior shows that 248 Ministerialists and 163 anti-Ministerialists have been elected.

AMERICAN

The Naval Appropriation Bill

\$77,659,386 FOR THE NAVY, \$29,500,000 OF WHICH IS FOR NEW SHIPS

THE naval appropriation bill reported to the house last week carries \$77,659,386, which sum includes appropriation for ships, docks and yards, and the enlargement of the naval academy, the appointment of 125 additional cadets each year for four years being authorized. Accompanying the bill is a report by the house committee stating that of the 138 vessels, built or being built, in the navy, our "naval prowess lies almost entirely" in but 47 vessels. Of the other 91 "comparatively few have any real fighting value. Ships of the battle line practically alone determine the naval strength of a nation." Accordingly the committee proposes the construction of two great battleships, two first-class armored cruisers, and two gunboats, and it enforces the argument by a reference to the rapid increase of the German navy in line-of-battle strength. The secretary of the navy is directed to build one or more of the new ships in government yards.

"Assuredly," says the *New York World* (Dem.), "if we are to have a navy we wish it effective. But if two-thirds of even our newer vessels are not effective, and if, as some experts hold, the greatest warship, when menaced by the perfected submarine torpedo-boat, is only a more expensive mass of junk, the case in favor of heavy immediate expenditure is not so strong as the committee might wish." The *New York Times* thinks that the chief novelty in the present bill is the increase in the size of the battleships to something approaching the 16,500-ton class of the British navy; 12,500 tons has been our limit heretofore. Notwithstanding the decrease from last year's estimates of \$100,000,000, the *Times* believes that "the bill undoubtedly represents, without real diminution, the demands of the department and of the service. We are by no means under such tremendous bonds as Great Britain to maintain a fleet which shall be able to keep the salt-water highways to our shores open, in war as well as in peace. But we are quietly building or buying up a merchant fleet which will presently give us a greater commercial stake in the waterways than we have had before in forty years. And the ambition of our naval officers to keep on even terms with Germany in naval development seems to be both rational and in a fair way of execution." The *New York Press* (Rep.) thinks that we should have more ships, but in view of the peculiarities of "up-creek congressmen," it is grateful for the ships recommended; "and let us hope that the machinations of those statesmen who are afflicted with ingrowing foresight will not avail against the little that has been conceded to the navy's imperative demands."

The *Philadelphia Ledger* (Ind. Rep.) finds that "the rate of progress is satisfactory, and meets our legitimate needs. The new American navy stands for efficiency, and Americans generally will support the policy of increasing the navy gradually, but there need be no haste to build more warships than any other power. We should have a navy sufficient for our own requirements, and we are building it." The *Pittsburg Gazette* (Rep.) does not altogether agree with this view: "The German shipbuilding program, which began in 1898, is expected by 1908 to give the kaiser's

navy 38 battleships, 52 cruisers, and 96 torpedo-boats. Compared with this, the American proposals are exceedingly modest, while our need for a strong navy is quite as imperative as Germany's."

It is acknowledged that ships built in government yards cost more and take longer to build than do those constructed in government yards, but, says the *Brooklyn Citizen* (Dem.), "even if it should be found that the government-built vessel cost more than the one built in a private yard, something of great value to the country would result in the steady employment by the government of experts and workmen who would be on hand in case of an emergency, in the nearer knowledge of a ship to be acquired by men who sail her or in her and in the certainty that combinations of shipbuilders, like that of the armor-plate makers, of wring extortionate prices from the government, would be fruitless."

Secretary Shaw's Pittsburg Speech

CRITICISMS OF HIS MAIN CONTENTIONS

THE speech of Leslie M. Shaw, secretary of the treasury, at the Pittsburg banquet of the American Republican club, in commemoration of the birthday of General Grant, has drawn forth a considerable amount of criticism, aimed at three different parts of the speech.

The *London Globe* is greatly perturbed by that part of the speech in which the secretary dwelt upon the necessity of an enlarged merchant marine. "Whether this will be accomplished through government aid or by American patriotism, and American capital, and American energy, is immaterial," the secretary said. "American wealth, American energy, plus Hawaii, which is ours; plus the Philippine islands, which are ours; plus the isthmian canal, which we will surely construct; plus a merchant marine, which we will surely build, transfers the sovereignty of the Pacific ocean from the union jack to the stars and stripes." The *Globe*, in reference to this statement, says: "We are not greatly concerned either for the threat or the crude vulgarity which causes Mr. Shaw to apply it to a particular power; but what impresses us with a sense of American decadence is the manner in which the absurd speech was received. Were an English minister of Mr. Shaw's position to make a similar allusion to a foreign power, all the chancelleries of Europe would be convulsed. But England heeds it not a whit, and the rest of the world shrugs its shoulders and talks about diplomacy in shirt sleeves." The *Washington Post* (Ind.) dissembles woe that the *Globe* should have been offended, but it adds in good earnest: "The *Globe* may rave to its heart's content, and the chancelleries of Europe throw as many fits as they like, but Mr. Shaw spoke on that occasion for practically the whole American people, and the sooner the fact is understood abroad, the better for all concerned."

The *Philadelphia Press* (Rep.) dissents from another of Secretary Shaw's statements—that in refer-

ence to the Spanish-American war, of which he said: "Disguise it as we will, deny it as we may, the element of self-interest was a factor in the equation in 1898. We were masters of our own markets and were reaching out for new ones. Yes, commercialism, if you please, had touched us, and so it was that our self-interest as well as our unselfishness was appealed to." The *Press* "begs leave to deny this proposition: It would not, indeed, have been strange if it had been true. It would only have illustrated the motive on which nations generally act. But as a matter of fact the commercial element was not 'a factor in the equation.' If it was, tell us where. Not with reference to Cuba, for congress went out of its way to pledge her independence and our abstention from her conquest. Not with reference to Porto Rico, for it was too small to be taken into account. Not with reference to the Philippines, for not one man in a million before the war was declared stopped to look half way around the globe and think we should acquire them, or what we should do with them if we did." The *Baltimore Sun* (Dem.) plainly agrees with Mr. Shaw, but it asks that we be left to our illusions: "The country doesn't want any unpleasant reminders of its proneness to drive a bargain when it is in its most heroic mood. We like to think that we are capable of making, and have made, a sublime sacrifice. Go away, Mr. Secretary, and cease to revile us. We know we are 'all right' on the altruistic side of our national character, and we can not and will not be disillusioned."

The *Detroit Journal* (Ind.) finds still another subject for criticism in the secretary's response to the toast "Governmental Evolution." Secretary Shaw asserted that the trend of thought and events is toward a stronger central government. He cited as evidence of the decline of jealous protection of state sovereignty the suit in a federal court begun by the attorney-general against the Northern securities company, of New Jersey. The *Journal* says the comment of Mr. Shaw "misses the mark. The attorney-general is not attempting the coercion of a state. He is not even attacking a right of property resting in citizens of New Jersey. He is simply preparing to test, by

application of the Sherman anti-trust law, the legality of the merger of two railways which are not in New Jersey and about which New Jersey cares nothing at all. The decisions of the supreme court of the United States since the war have generally been in support of the doctrine of state rights. Singularly enough, too, the decisions have been written in the main by the Republican judges, while the dissenting opinions have frequently been by judges supposed to be Democrats politically. The power of the national government has increased under expansion of territory, but as to the permanency of such increase there is doubt. At any rate, the power of the individual state is not thereby diminished or encroached upon."

The Public Buildings Bill

\$17,000,000 APPROPRIATED BY THE HOUSE BILL

IN commenting upon the public buildings bill passed by the house last week, the New York *Evening Post* quotes the remark made by Representative Creamer, "Oh, well, I see everybody has got some pork in the barrel"; and his point of order against it was overruled by a great chorus of noes from both sides of the chamber, "telling the whole story about the log-rolling job. The bill makes appropriations for public buildings in 138 places, of which 37 have each a population of less than 20,000. Two towns in Arkansas, for example, with only 1,551 and 2,327 inhabitants, are to receive \$50,000 and \$75,000; one of 3,833 people in Nebraska, \$100,000, and so on. When both parties and all sections are provided for in such lavish fashion as this, opposition seems hopeless in congress. Moreover, the president can not use his veto power as Mr. Cleveland repeatedly did when separate bills were passed, because Mr. Roosevelt must treat the measure as a whole, and approve or disapprove of all 138 items at once."

"In passing the omnibus bill for public buildings up to the senate, the house of representatives once more this session throws on the upper house a responsibility that should have been borne by itself," the

WHO IS RESPONSIBLE?—Philadelphia North American

THAT HORRIBLE TORTURE—THE WATER CURE
—Minneapolis Tribune

Pittsburg *Gazette* says. "In the omnibus bill good and bad propositions are intermingled, and stand or fall together unless the senate weeds out the bad from the good. Unless the senate does this, all will fall when they reach the president. Places that have no need of a government building are given thousands of dollars in the bill, some of them as much as \$50,000. Congressmen who had meritorious propositions feared to antagonize the vicious ones for fear of the effect on the fortunes of their own desired buildings. Therefore, all passed. This is wrong. Grants of money for public buildings should be made on a well-defined principle that will make the establishment of a government building dependent on the need for it, and that will make the cost bear some relation to the use to which the building is to be put and the magnitude of the interests it is to serve. At present the strength of the congressional pull is the largest determining factor, and much money is voted where little or none should be granted, while the public service may be made to suffer in other directions for lack of needed improvements."

The Detroit *News* notes the change that has come over the methods of securing appropriations for public buildings. "In former days of prosperity, it was the custom for each member to introduce his own little bill for a postoffice building, and privately purchase such support for it as he could get by trading in his vote for some other fellows' bills. The clearing-house system is much more businesslike. The bills are merely thrown together and then, without any special negotiations or personal understandings, each man is bound to support the whole because his part is in it. Of course, being public money, the \$17,000,000 won't pay for more than \$8,000,000 or \$9,000,000 worth of buildings, but that is a difficulty to which taxpayers are accustomed in their city halls, their courthouses, their state capitals, asylums, and school structures, and they will comfort themselves with the reflection that it is a permanent investment, and that they would be gouged in rents if not in bricks, mortar, lumber, and steel."

The Death of J. S. Morton

COMMENT ON THE CAREER OF THE FOUNDER OF ARBOR DAY

THE death of Julius Sterling Morton, April 27, has called forth general and favorable comment on the work of his life. Mr. Morton was born in New York state in 1832, but moved to Nebraska early in the fifties. His experience as a farmer there gave him the idea of Arbor Day, now observed yearly in most of the states of the union. His efforts to improve farming conditions in the prairie states won for him the appointment as secretary of agriculture in the second Cleveland administration. Of late years he has been the editor of a weekly paper, the *Conservative*.

As the Chicago *Record-Herald* says: "He was a typical educated farmer, of wide and liberal culture, who loved the soil and his books. To the pursuit of agriculture he brought the equipment of a well-trained mind, enriched with the refinements of college culture and dowered with the courage and hardihood that made of him a western pioneer." The Brooklyn *Daily Eagle* thinks that "while he was really more conspicuous, because of his political failures, than because of his successes, he will always deserve credit among conservative Democrats for his manifestation

of a lively hatred for Bryanism and for all the heresies that the name implies."

"Though a lifelong Democrat," says the Pittsburg *Chronicle-Telegraph*, "Mr. Morton was always a sound-money man, and in spite of the persecutions of some of his western party associates, bravely stood for this principle during the exciting Bryan campaigns." The Indianapolis *News* speaks of him in terms of high praise. "An excellent speaker, a close and careful reasoner, and a forcible writer, there was no cause that he championed that was not strengthened by his advocacy. His integrity was above reproach. It was of that character which made it impossible for him to compromise on a matter of principle, to follow a leader whom he did not trust, or to advocate political doctrines in which he did not believe. And that sort of integrity is not so common as we like to think."

Naval Officers in a Bratw at Venice

THE following cablegram from Captain Dayton, of the *Chicago*, dated at Venice, April 29, was the first official information bearing on the arrest of the officers named for the part they played in a street fight while on leave from their ship: "Doddridge, Wynne, Ledbetter, Kress, and one marine, on leave, arrested. Principal charge, resisting police. Serious under Italian law. Sentences: Wynne, four months ten days. Remainder, three months each. Have not yet their full statement or a report from court, but applied for. Resisting arrest largely due to pressing in of crowd and not understanding language." All the men were pardoned by King Victor Emmanuel on May 1.

The additional facts cabled by the newspaper correspondents lead the New York *Sun* to say that the circumstances, so far as known, "are heavily against the men involved. After having been put out of one café for creating a disturbance, they became disorderly in another café, and then resisted the police—in the Italian eye an offense of the gravest character, and very properly so. It looks very much like a case of apology to the Italian government, rather than a suggestion of reparation; and if this impression should be confirmed, punishment of the severest kind at the hands of our navy department should be meted out to all concerned. Navy men visiting abroad must be gentlemen first, last, and all the time." The *Tribune* also takes a serious view of the affair: "Officers of the navy have almost invariably conducted themselves as 'officers and gentlemen,' and the present deplorable episode attracts the more attention because it is so striking an exception to the general rule of the service. Upon the individuals who erred in becoming intoxicated, and then in resisting the police instead of invoking the protection of the latter against what appears to have been a viciously aggressive mob, it may be necessary to place grave censure. Upon our navy as a whole no dishonor will fall from this unhappy episode."

The New York *Evening Post* makes this characteristic comment: "The rowdiness of certain officers of the United States navy and marine corps in a public place in the city of Venice has drawn upon themselves the attention of the police and upon the United States that of other nations. Is it possible that this outbreak is one of the signs of our newly acquired dignity and standing as a world power?" In reply

to the *Post's* question, the New York *Times* facetiously answers: "Sure. Never a doubt of it. Up to the time when the deadly virus of imperialism was emptied into our veins an American bluejacket on shore leave was the model and example of correct behavior, pointed at by leading divines the world over in their Sunday exhortations. It was never 'Have another glass, mate?' but a tug at the forelock and 'Could you tell me, sir, if there is a Presbyterian chapel handy by?' That is what the old jackies were like, and fine, devout lads they were, too. If our retention of the Philippines has emboldened our officers and marines to indulge in such revolting practices as the tipping over of tables and the smashing of decanters in the cafés of the Mediterranean, it is time we pulled down our flag and brought it home. As a symptom of incipient national decay this unprecedented incident is grave enough to make it incumbent upon us all to sit up nights and think about it." But the *Times* admits that in pardoning the offenders the Italian king has outdone us in politeness.

The Moros of Mindanao

AS DESCRIBED BY JUDGE TAFT

AT the present time the activity of the American forces in the Philippines centers in the province of Mindanao, where the Mohammedan Moros are causing a great deal of trouble. Judge Taft gives a brief description of the Moros of Mindanao and the causes of the present insurrection, in the New York *Independent*:

The Mindanao Moros are generally to be divided into the Zamboangan Moros, who live on the peninsula of Zamboanga, the southwestern part of the island; the River Moros, who live in the very rich valley of the Rio Grande del Mindanao; and the Lake Moros, who live on the shores and in the neighborhood of Lake Lanao, which is situated in the north of Mindanao. The Zamboangan Moros are under the

dattoship of Mandi, who lives at the town of Zamboangan. He is exceedingly friendly to the Americans, and anxious in every way to promote the prosperity of his people by continuing peaceful relations with the American people. The River Moros, above mentioned, are the most numerous of the divisions. All the River dattos are very respectful toward American authority, and anxious, at least apparently, to conciliate the American government. The non-interference with their religion by Americans and the encouragement which they have received in the matter of trade have shown to them the advantage of American sovereignty over that of Spain.

The remaining division of Moros, the Lake Moros, are the Moros with whom we are having the present difficulty. These Moros have resented the coming into the Lake Lanao district of any strangers whatever. They have been less amenable to civilizing influences than any Moros in the archipelago. There are said to be 250,000 of them living in and about Lake Lanao. General Kobbe, who was in charge of the department at Mindanao and Jolo for two years, was quite hopeful of bringing the Lake Moros under more civilizing influences, through the instrumentality of markets established on the north and south coasts of the island, one at Iligan, about thirty miles from Lake Lanao, and the other at Parang Parang, about forty miles from the lake on the south side. It is certain that the attendance of the Lake Moros at these weekly markets increased perceptibly, and their love of trade and love of money were reasonably counted on as motives for seeking more communication and more association with the American authorities and Chinese and other merchants. The murder by five or six of the followers of Lake Moro dattos of four or five American soldiers, members of the signal corps, engaged in erecting telegraph wires, has precipitated the present trouble, and General Chaffee has demanded the surrender of the perpetrators of this outrage (whose names are known), that they may be punished. The territory where the murder was committed was not within the jurisdiction of any civil government in the island, but was under the control of the military commander of Mindanao.

WORKINGMAN: "It's raining soup all right, and I've got the same old fork to eat it with."—*San Francisco Bulletin*

ANOTHER SAN JUAN HILL

—*Detroit Journal*

Of course, it is of the utmost importance not to bring on a war with the Lake Moros, if it can be avoided, and the official dispatches between the war department and General Chaffee show the sincere effort which is being made to avoid any such result. On the other hand, it must be borne in mind that a failure by the military authorities properly to resent such a crime, and to punish it, would mean a loss of prestige to the American government, which, in the future, would produce complications much more disastrous and much more expensive, both in blood and treasure, than prompt action is now likely to cause. Prophecy is dangerous, but my judgment is that what has been done will probably lead to a satisfactory adjustment between the dattos and General Chaffee.

Mr. Evans's Promotion

NOMINATED FOR CONSUL-GENERAL AT LONDON

“THE appointment of Commissioner of Pensions Evans to be consul-general at London must, we suppose, be taken as the ‘promotion’ which is expected to close the incident of his removal from the post which he has occupied so long and with such conspicuous fidelity and efficiency,” says the *New York Times* (Ind. Dem.) “It is an illogical termination of a most unfortunate transaction.” The *Washington Post* (Ind.) has observed that it has now become a custom for our government, when it sacrifices one of its officials to any public clamor, whether righteous or insensate, to assuage the sorrows of the victim by promotion. “The expedient is stuffed with virtue, for in this way the administration satisfies the kickers and earns the everlasting affection of the kicked. One makes friends thus ‘a-comin’ and a-goin,’ and rosy lights envelop the prospect of the nominating year.”

The *Boston Advertiser* (Rep.) claims that “the appointment as consul-general at London is a promotion in more ways than one. Thus it will be considered by the country. Those pension attorneys who have quarreled with Mr. Evans will not reckon as a victory for themselves a transfer which multiplies four or five times the amount of his official stipend.” The *Boston Post* (Dem.) has an eye only for the main facts: “Roosevelt weakens and unloads the official who has been too faithful, and the special friends of Roosevelt and the pension sharks ask the public to applaud because Evans has been given a better place. What is it but an admission by the president of his unconditional surrender?”

The *Kansas City Journal* (Rep.) examines the Evans appointment from the standpoint of those who opposed his administration of the pension office. “In effect,” the *Journal* says, “it is telling them that Evans treated pension applicants exactly right, and that he is to be rewarded for the services which they found so objectionable. Naturally, this will nettle the veterans, and although they can not complain at having an urgent request granted, they will still have a feeling that their victory lacks some of the essential elements of being a satisfactory one.”

IT IS WHEN General Funston forgets that there is a difference between a mauser and a mouther that we object.—*Chicago Post*.

A SATISFACTORY EXPLANATION: “Do you mean to say that you wouldn’t fight for your country if she needed your help?” “Me? Certainly not. I’m from Springfield, Mass.”—*Cleveland Plain Dealer*.

Congressional Summary

CONGRESS DAY BY DAY

APRIL 28.—The senate agreed to the house amendments to the oleomargarine bill, and the measure was sent to the president; Mr. Simmons (Dem., N. C.) addressed the senate in opposition to the Philippine government bill. Consideration of the sundry civil appropriation bill was begun. The house concluded the general debate on the agricultural appropriation bill; Representative Sibley (Rep., Pa.) created something of a sensation during the debate by severely denouncing General Jacob H. Smith for the orders he issued in the Samar campaign.

APRIL 29.—There was a lively debate on the Philippine civil government bill in the senate, Mr. Teller (Sil. Rep., Colo.) attacking the administration and Mr. Lodge (Rep., Mass.) defending it. The omnibus public buildings bill, carrying about \$17,000,000, was passed by the house. President Roosevelt signed the Chinese exclusion bill.

APRIL 30.—In the senate, there was a warm discussion over the action of the Philippine committee in refusing to summon as witnesses in the pending inquiry Major Gardener, Aguinaldo, and others suggested by the minority. The house passed the agricultural bill, and began discussion of the District of Columbia appropriation bill, the last but two of the regular supply measures.

MAY 1.—Debate continued in the senate on the refusal of the Philippine committee to call Aguinaldo. The day was spent in the house in consideration of the District of Columbia appropriation bill. The senate confirmed the nomination of R. M. Winthrop, of Massachusetts, to be secretary of legation at Brussels.

MAY 2.—There was a lively debate in the senate on North Carolina politics between Senators Pritchard and Simmons, of that state. The anti-conspiracy bill, the bill providing for diplomatic representation in Cuba, and the District of Columbia appropriation bill were passed by the house.

MAY 3.—There was a spirited debate on the Philippine question in the senate, turning chiefly on the case of Major Cornelius Gardener, Senators Lodge, Spooner, and Foraker answering charges made by the Democrats; resolutions on the death of Representative Cummings were adopted. The death of Representative Cummings was announced in the house, and resolutions of regret were adopted.

Various Topics

KEPT HIS WORD: Mr. Roosevelt said he would keep Mr. McKinley’s cabinet officers, and he has—kept them going.—*Commoner*.

FOREIGN

The French Elections

THE GOVERNMENT RETAINS ITS MAJORITY

WHILE the results of the French elections can not yet be exactly stated, it is positively known that the government has retained a safe majority in the chamber of deputies. The premier, M. Waldeck-Rousseau, for whom the result of the balloting of April 27 is, on the whole, a personal triumph, is well satisfied. He is reported by a Paris correspondent to have said: "Notwithstanding intense agitation, local influences, and anti-Ministerial coalitions, it was found impossible to create a hostile current in the broad masses of the electorate. I shall transfer the house to my successor in better condition than when I took it over three years ago, and he will not be obliged, as I was, to make important repairs and changes among the tenants."

In Paris, all the Ministerialist candidates were de-

feated, but the reballoting on May 11 will probably result in a gain by the government of at least ten deputies. A majority, not merely a plurality, vote is necessary to elect. If, at the regular election, one of the candidates does not receive a majority of all the votes cast, then a subsequent election is held on the Sunday following, or the Sunday a fortnight later, and at this subsequent election the candidates to be voted for are restricted to the two who at the regular election received the largest number of votes, and at the second election only a plurality is necessary to elect.

The opponents of the government generally adopted the Nationalist label, which, in the words of the Paris correspondent of the *Pall Mall Gazette*, "covers the most heterogeneous collection of political parties it is possible to imagine. It is a Joseph's coat for color; Royalists, Bonapartists, the Clerical party, anti-Semites, various complexions of so-called Republicans, Radical-Socialists, and, in fact, everybody with any sort of grievance against the government." There were from three to five candidates for each of the 581 seats in the chamber.

The issues of the campaign were almost numberless, but they all related to M. Waldeck-Rousseau and his policies. Outside of France, at least, these policies are looked upon as being most enlightened and most beneficial to the country. We find, therefore, many

papers commenting in the strain adopted by the Philadelphia *Record*, which says: "The success of M. Waldeck-Rousseau in building up for the first time in the history of the French republic a working parliamentary majority is of the highest significance. The reign of factions and short-lived ministers appears to have come to an end, and the French electors seem to have acquired the knack of uniting on essential matters of policy and disregarding minor points of disagreement, which is the first requisite to success in representative government through the instrumentality of political parties." It was the "rabble," the Chicago *News* says, that carried Paris. "But the country districts have remained firm for the ministry. It is not in Paris, but in the country, that the conservative, level-headed, patriotic French citizen is to be found, and this wholesome and democracy-loving element seems to be still strong enough to maintain the republic against the assaults of the reactionary parties."

The Paris *Temps*, a paper which does not suffer from the chronic Parisian epilepsy, expresses the belief that as a result of the balloting "it has become possible to form a majority and constitute a cabinet strong enough to dispense with the coöperation of the extreme Left, as well as the Right." This means, in the opinion of the Hartford *Times*, "that the French

republic is now stronger than at any time during its thirty years of previous existence. Its disruption has been predicted a hundred times, but somehow it goes on, and its roots seem to strike a little deeper all the time in the affections of the French people out-

M. WALDECK-ROUSSEAU

side of Paris." The Paris correspondent of the New York *Tribune* says that the opinion of persons likely to be best informed is that when M. Waldeck-Rousseau tenders his resignation and that of his cabinet, as is customary after an election, and when urged by the president of the republic to remain in office, he will consent to do so a little while longer, until the new chamber has been well started, and then, considering the work he undertook in a critical time completed, will resign, to enjoy the repose for which he yearns. As it is he has enjoyed the longest term of office of any prime minister of the republic.

English Rule in Egypt

London Spectator. Condensed for PUBLIC OPINION

LORD CROMER'S report on the finances, administration, and condition of Egypt and the Soudan in 1901, if looked at superficially, may easily be regarded as a not specially interesting "white paper." It covers a great variety of subjects, and necessarily touches but briefly on any one of them. Lord Cromer has steadily set himself to consider the welfare of the population which, under the modest title of "British Agent and Consul-General," he really governs. This, and this alone, has been the aim of his whole administration, and the effects are visible in the changed condition of the Egyptian peasantry. Their land has been irrigated, with the result that in 1899, "in spite of an exceptionally low Nile, the harvests were abundant." Their taxes have been lowered, yet it has been found safe to estimate the revenue for 1902 at £360,000 above that of 1901, and Lord Cromer has little doubt that this estimate will in turn be largely exceeded. Nor is it only in having to pay less in taxes, and in receiving more benefit from what they do pay, that the condition of the peasantry has improved. Between October, 1900, and September, 1901, the National Bank of Egypt lent to the fellaheen £276,000, repayable in part within one year, and in part within five years. In the former class there were thirteen thousand and thirty separate advances, of which more than half were for sums below £5; while in the latter class more than half were for sums below £20. There is bad news in this report for the anti-vaccinators. Not only is vaccination compulsory in Egypt—that might be only an instance of English tyranny—but it acts as a prophylactic against smallpox. The experience of Port Said in 1901 is a shocking example of this. The town contains thirty-five thousand natives and twelve thousand five hundred Europeans. We might have expected to find the deaths among the natives, with their greater disregard of sanitary precautions, far more numerous than among the Europeans. Instead of this, among the thirty-five thousand natives there were eighteen deaths, while among the twelve thousand five hundred Europeans there were thirty-eight deaths from smallpox.

We have taken these particulars, almost at random, because they show the comprehensive care which is taken to improve the condition of the Egyptian population alike in health and in sickness. We have heard a good deal of late of the supposed superiority of private over public enterprise even in the matter of government. When the Chartered company first took a large area of South Africa into its hands all manner of contrasts were drawn between its expected successes and the proved inefficiency of Downing street. The expected successes have now been realized, and we have the means of comparing the condition, say, of the Matabele with that of the Egyptian fellaheen. The difference between the two is simply a difference of motive in their rulers. Chartered companies are formed primarily for the benefit of their shareholders. No doubt in Lord Cromer's report this element is present. He is constantly stopping to show that under his administration the Egyptian government has made two ends meet and has a handsome surplus into the bargain. But what is the object alike of his economies and of his expenditure? The good of the Egyptian people. All his efforts are directed to make

them prosperous. Could the agent of a chartered company make a similar report to his directors?

But even assuming, for the sake of argument, that chartered companies have just as beneficent aims as direct representatives of the despised Downing street like Lord Cromer, let us at any rate hear no more of the incompetence of imperial rule and the success of chartered enterprise. We were told when the rebellion broke out in Rhodesia that such incidents were inseparable from the acquisition of new territory. Yet when the imperial government annexes a much vaster province, inhabited by a much better armed, much more numerous, and quite as brave race, no insurrection takes place. This talk about the incompetence of the imperial government to deal with imperial problems is "cant" of the worst and most dangerous kind.

Coercion in Ireland

1,500,000 PEOPLE PLACED UNDER A SPECIES OF MARTIAL LAW

THE coercion act of 1881 has been proclaimed in nine counties and the cities of Waterford and Cork, in Ireland, in consequence of disorders and boycotting affecting 2,000 people at most, according to the statement in parliament of the chief secretary for Ireland. The proclamation deprives about 1,500,000 people of the right of trial by jury, suspends the writ of habeas corpus in the proclaimed districts, and places it under a species of martial law.

The Chicago *Evening Post* believes that "the government has been influenced by the shrieks of the *Times* and the threats of a rabid minority in the cabinet. The war is really against the United Irish league, the powerful organization which is but three years old, but which has achieved an astonishing degree of success. The league stands for home rule and 'universal compulsory purchase' of Irish land for the occupying tenants. It has been accused of reviving the old land league's 'plan of campaign,' and there is undoubtedly some ground for the charge. But will coercion under the crimes act prove a remedy?" The *Post* thinks not. "Proclamations will act like a breeze on burning heather," is the way the *Freeman's Journal* greets the government's announcement that the crimes act is to be enforced in Ireland with renewed vigor. And, true to their faith, the Nationalists in parliament, while denouncing the policy of coercion, welcome the new order of things because it promises to revive agitation of the Irish question in a way which has always reacted to the benefit of their cause. "Now that the government has declared war, it may look for reprisals," says the Philadelphia *North American*. "Thinking people will agree with John Redmond that the effect of coercion will be to foment crime. Ireland and England will both suffer by the experience, but unless history belies itself, England will be the first to weary of a state of rebellion, and in the end some partial measure of redress will be wrung from her."

The Minneapolis *Journal* is convinced that the British government has made a mistake and that the measures taken will only inflame the people. This is the general opinion, as already indicated, and it receives further support from the New York *Times*, which says that "It seems at least safe, judging by the past, to say that agrarian crime, and especially intimidation, will steadily increase under the operation of the coercive measures applied by the British government."

What Shall Be England's Policy Toward Russia?

THIS subject is likely to be met with in almost any English periodical at almost any time; lately the *Edinburgh Review* and the London *Spectator* have been indulging in a controversy over it. The *Review* is in a very uncompromising humor. It instances three possible policies of dealing with the Muscovite: "Inveterate and unyielding hostility to Russian expansion; opposition, followed by graceful concessions; and compromises on mutual interests in Asia." Of these, it has countenance and use only for the first. The *Spectator* reminds its contemporary that such a course would mean a long and wearying diplomatic struggle, during which all progress in Asia would be paralyzed, to be followed at some moment, surely not the most convenient one for England, by a costly and exhausting war, from which Great Britain could gain nothing, even if victorious.

"As to Persia," the *Spectator* asks, "which is the *Edinburgh Review's* great subject, what, unless we fight Russia in Europe, can we do? We can not enter the Caspian, which is a Russian lake, by a fiat with which we can not interfere; and we can not, without an irrational amount of exertion, hold the southern provinces in defiance of Russia by force." It says that south Persia is not wanted as territory, and as for trade, by improving the means of communication and especially the rivers in India, more trade can be obtained than by building up ten Persias. "If profit is the object," it says, "why not develop our own estates first?"

The London sage thinks that talk of the kind indulged in by the *Review* renders it very difficult to justify sane imperialism and the great naval and military improvements which are now obtaining a hearing among the people. "There are men among us," it adds, "who seem unable to sleep because we are not ruling at Peking and on the Yangtse-Kiang and in southern China and in Siam and in Persia and Anatolia, and in every part of Africa that is not French.

We have not the means to set up a three-quarter universal monarchy of that kind."

The Boston *Transcript* agrees with the *Spectator*, and adds that "There is still another reason, and perhaps the best of all, why the counsel of 'inveterate and unyielding hostility to Russian expansion' is not wise counsel, which is, that such opposition can not prevent Russian expansion. Russia herself could not prevent it. Nothing short of the destruction of the national vital principle can prevent it. As well put a boy in a strait-jacket and say that he shall not expand. In time the jacket gives way or the boy dies. Russia is not going to die."

Unrest in Russia

SIGNIFICANCE OF RECENT OUTBREAKS

A SERIOUS view of the internal situation in Russia is taken by most of the correspondents of the English newspapers and some of those who represent the continental press, and it is from these sources that all the information we possess is derived. Conservative opinion holds that while there is undoubtedly serious unrest among the lower classes of Russia at the present moment, there is reason to believe that the English press takes an exaggerated view of its extent and significance. Charlemagne Tower, the United States ambassador to Russia, who is sojourning in London for a few days on his way to the United States, does not regard the Russian situation as alarming.

Most American papers join the Philadelphia *Press* in ridiculing the comparison made between Russia of today and France preceding the revolution. "The land is in an evil case," the *Press* admits: "Crops have failed. Famine is near over wide regions. Manufactures have been started in speculation and under various bounties and are facing loss. The cost of Chinese military operations has brought a deficit. The entire Russian economy is in disturbance and disorder. Very serious consequences may be near, but in the end the czar, army and bureaucracy will remain in absolute control."

SOCIOLOGICAL

The Southern Educational Conference

THE WORK OF THE GENERAL EDUCATION BOARD

IN our issue of April 3, we outlined the aims of the recently organized General Education board. There is now evidence that its theories are rapidly being put into practice. Mr. John D. Rockefeller has contributed \$1,000,000 to the cause. Mr. Robert C. Ogden has conducted a party of northern men, philanthropists and educators, through southern communities to enable them to see the conditions with their own eyes. At the recent meeting of the Southern Educational conference, held at Athens, Georgia, the gifts of the board to the cause of southern education were announced. The correspondent of the *New York Nation* says that the women of Georgia having raised fifty scholarships of \$50 each for the state normal school of Athens, the board announced that it would duplicate those for three years. Furthermore, it pledged itself to give a similar three-year scholarship for every one raised by the women of Georgia up to the number of fifty. Finally it subscribed \$4,500 to the Winnie Davis hall, for which \$6,000 has already been raised by the Daughters of the Confederacy, provided that the \$4,500 additional needed to build this dormitory is forthcoming. These gifts, which will call for a total expenditure of \$19,500, were extremely significant of the way in which this new board will proceed to make itself felt in the southern educational field. The first principle behind its giving is that every dollar shall bring in at least another dollar from some other source, and the second is that the whole matter of giving is to be decided strictly upon business lines. Thus its first gift was one of \$4,000 to the public schools in Guilford county, near Greensboro, North Carolina, contingent upon the raising of a similar sum by the citizens of the vicinity. Not only was this done at a single meeting, but as a result of the enthusiasm thus aroused a neighboring community, composed of only forty taxpayers, has raised the sum of \$1,200, and will soon increase this to \$2,000.

The school which the general board selected as the recipient of its second benefaction is a state institution, a part of the University of Georgia. The *Nation* correspondent thus describes it: "Tuition is free, and is open to men and women who have teachers' certificates, or are seventeen years of age, with common-school training, and who have at least \$20 with which to begin the work at the institute. The northern reader unfamiliar with southern conditions will doubtless take it that this \$20 is for purposes of matriculation or for equipment requisites. It is for neither, but is full and absolute payment for *ten weeks'* board and

From the World's Work

ROBERT C. OGDEN

lodging in the school dormitories. When Chancellor Hill, of the University of Georgia, announced that students were boarded in the college commons for \$8 a month, the northern part of his audience gasped in amazement. But here in the normal school the same sum includes dormitory charges as well. And the looks of the students testify that this plain living and high thinking are neither too plain nor too high to impair the physique. Last year the doctors of Athens received but \$25 in fees from the entire student body of 305 scholars. It is a teachers' school, or more truly a fitting-place for home missionaries, for such must be the instructors who go forth to the rural districts of the south, carrying the banner of light and learning into outlying corners, where prevails the darkness of prejudice and ignorance as of past ages. If there are no entrance examinations, a high standard of work is insisted upon, and if a student shows a lack of capacity, he or she must withdraw. But there are not many cases of this kind, and there is no necessity for the enforcement of discipline. Here co-education is a success, for men and women starve and slave and toil without end to gather together the wherewithal with which to enter the doors of the school; and, once admitted, they are afire and aflame with eagerness for knowledge, for the power to go forth equipped to teach and to be the leaders of their people."

The Concentration of Wealth

ITS SOCIAL VALUE AND PERILS

THE *Independent* declares that no other fact of modern life is of more immediate interest than the progressive concentration of wealth. "Politically it threatens the subversion of our American traditions. Socially it is creating an arrogant aristocracy. In art it is exalting a stupendous materialism—mere monstrousness—to the throne of beauty. In morals it is frankly substituting strenuousness for conscience. Altogether it is a phenomenon gigantic, resistless, remorseless, sinister." Consequently, the *Independent*, in its issue of May 1, prints a symposium by seventeen writers, giving a noteworthy discussion of all phases of the subject of the concentration of wealth. The social aspect of the question is discussed by Harry Thurston Peck, Ernest Howard Crosby, Paul Elmer More, and Mrs. Reginald de Koven.

According to Professor Peck, the purely social benefits of concentrated wealth are perfectly obvious. "Upon the wealth of a nation," he says, "depend the comfort and the happiness of all its citizens. Labor less grinding, pleasure more easily attainable, a greater decency of living, and a more genuine self-respect—these things are to be noted in every community precisely in proportion as its material prosperity increases." Professor Peck further claims that the possession of enormous wealth will, by another generation, "have exercised a sobering influence and will have created a strong sense of civic responsibility in the possessors. In the second place, the fierce zest of acquisition will in another generation have been succeeded by the soberer desire for conservation. We have, as a nation, no definite standards of living, no criterion of manners, no instinctive knowledge of the amenities and graces of human life. On all sides, save the purely material, we are living from hand to mouth, thinking cheap thoughts, admiring cheap things, and striving for cheap ends. When time shall have done its work, our country will possess a distinctive class whose concentrated wealth will raise it above the level of self-seeking, whose opportunities and traditions will have refined it, and whose training, coupled with the tendencies of our civilization, will have given it that sense of obligation to the whole community which is the crowning glory of the aristocracy of England."

Mr. Crosby also sees in the concentration of wealth the founding of a new aristocracy, but he does not regard it in the light of "a crowning glory." Wall street, he says, is the true plutocratic capital, and the new aristocracy is naturally taking shape in the city of New York. "Like all truly vital processes, the growth is but the evolution of a previous organism—namely, the old local society of the Empire City. The Knickerbocker aristocracy of half a century ago has adapted itself to its new environment, and Wall street has triumphed over Fifth avenue. Wall street, be it remembered, is no local thoroughfare; it is a national institution. And so Fifth avenue has become a national institution, where the multi-millionaires of Oshkosh and Kalamazoo have begun to crowd out the more or less authentic escutcheons of New Amsterdam. Father Knickerbocker, with a golden spoon, is taking the cream off the millions of the whole country." Mr. Crosby believes that a state of society in which one particular caste rises to the surface, involves the stratification of all the inferior groups. If wealth is the measure of fitness for the highest rank, wealth is likely to be the test also for the lower grades. The stratification of society on a scale of wealth with fixed and rigid classes, is, to Mr. Crosby, a menace to the free development of the individual and to a natural and spontaneous society. "Of all grounds of distinction, wealth is the most material and sordid, and by applying the single gold standard to men and women, we attract into the field of money-making the most ambitious and virile of our young men. Literature, science, art, will of necessity be left to the weaklings and failures, and their professors will be chained to the car of Mammon. Imitation will take the place of originality and vulgarity supplant self-respect. Supercilious conceit will reign on one hand and servility on the other, and the worst of it all will be that society will be founded upon a lie. Beneath all the superficial smoothness and elegance of such a society will smoulder the envies, jealousies, and heart-burnings which a system of caste always engenders."

Mr. More, writing of the effects of concentrated wealth upon culture, says that its influence is "to convert art into the mere veneering and amusement of life, into a tasteless covering of luxury that hides the rapacities of a Wall street life." Mrs. De Koven, who discusses the influence of great riches upon the rich themselves, declares that the effect of wealth upon the children of the wealthy presents many unfortunate examples. "Many a spendthrift son dissipates his father's fortune, with the result that a third generation rarely survives to show the advantages of money turned to the gracious enjoyment of stable fortune with all its evolution of refinement and gentle breeding. Worse than this, the consolidation of the great fortunes in our largest city develops an idolatry of money in the society of that city which is sometimes shocking in its frankness, and in the ignoring of the higher ideals of refinement and character to the furthering of which money alone should be utilized."

Prohibition in Canada

THE REFERENDUM CONTEST

THE many and persistent efforts which have been made for the prohibition of the liquor traffic make an interesting chapter of Canadian history. For forty years or more the movement has been in progress, with varying degrees of success. The Rev. John P. Gerrie writes in the *Review of Reviews* of the latest phase of the movement, the referendum contest in Ontario. A referendum will be taken on December 4, and to become valid not only must there be a majority, but the votes for prohibition must be more than one-half of the votes cast at the forthcoming provincial elections. In the event of a favorable verdict, the question of compensation will be an after consideration, and the measure made law in 1904. The provisions of the referendum are similar to the now defeated Manitoba liquor act, which aimed at closing all places where liquor was sold, both by glass and in bulk, except drugstores, where it could be procured under the certificate of a physician. The manufacture of liquor for export was not forbidden, but free drinks and the dispensing of liquor by the flask or bottle to friends was prohibited. The penalty for violating the act was severe, the first offense calling for a fine of not less than \$200, nor more than \$1,000; and the second, imprisonment for three months, with hard labor.

Mr. Gerrie says that whatever may be the result of the vote, it is quite clear that the cause of temperance in Ontario—and, indeed, in the whole dominion—will not deviate from its onward march. "Side by side with the long-continued prohibition agitation have been successful efforts in bringing about a greater stringency in the license laws. Strong restrictions have been made in the sale of liquor as it applies to certain persons, hours, and legal holidays. The reduction of licenses during the past quarter of a century has also been most marked. In Ontario, during this period, tavern licenses have been reduced from 4,793 to 2,621, shop licenses from 1,307 to 308, wholesale licenses from 52 to 21, and vessel licenses from 33 to none. This decrease represents 1 license to 700 people, as against 1 license to 278 people twenty-five years ago. Of the 756 organized municipalities, 141 have no tavern license, 435 have not more than two, while 625 are without a shop license. These facts will undoubtedly have a bearing on both sides of the referendum contest."

Wage-Earning School Children in England

THE committee of the home office have given out the total figures of child-workers in England as follows:

Factories and workshops—children employed as half-timers	45,000
Home industrial work	15,000
Shops	100,000
Domestic work, allowing for deficiencies and half-timers	50,000
Agriculture	50,000
Street sellers	25,000
Miscellaneous occupations	15,000
	300,000

Mr. Thomas Burke, who contributes an article on this report to the *May Forum*, has made a special study of the wage-earning children of Liverpool which he submits as being characteristic of the state of things all over the country: "Under seven years of age, 131; seven years, 1,120; eight years, 4,211; nine years,

11,027; ten years, 22,131—making a total of 38,489 children between six and ten years of age who were employed in some form after the school was ended for the day, instead of being permitted the recreation so much needed for such tiny scholars. The following are the figures for ages above ten: Eleven years, 36,775; twelve years, 47,471; thirteen years, 18,556; fourteen years, 1,787; ages not stated, 817—making a total of 104,589 employed in a similar way to the above-mentioned. The rate of pay for the child-worker is very interesting reading, and tells its own tale. A total of 17,084 children earned sixpence per week each; 47,273 sixpence to a shilling; 40,240 thirteen pence to two shillings; 19,757 two to three shillings; 4,927 three to four shillings; 1,813 four to five shillings; and 805 five to six shillings. Sometimes a meal would be added. It will be seen that nearly three-fourths of these children earned less than half a dollar per week. The hours of labor as ascertained by this inquiry, though open to grave doubt as to their accuracy, are as follows: 39,355 children were said to be employed under 10 hours per week; 60,268 from 10 to 20 hours; 27,008 from 21 to 30 hours; 9,778 from 31 to 40 hours; 2,390 from 41 to 50 hours; and the remainder from 50 to 80 hours."

LETTERS & ART

The Life and Morals of the Modern Painter

M. CAMILLE MAUCLAIR, in the *Revue Bleue*, Paris. Translated and Condensed for PUBLIC OPINION

THE present discussions on the reorganization of the salons prove abundantly that painters, as individuals, are not the same as they were formerly, and that their character has profoundly changed. The public has known of this change by the evidence of the transformation in ideals during the past fifty years. We have seen the academic painting, the realism of Courbet, the impressionism and modernism of Manet and of Degas, the delicate, rural painting of Millet, the archaic dreams of Moreau and of Chasseriau, the realism of Bastien-Lepage, the enchanting coloring of Monet and of Besnard, the historical creation of Laurens and of Rochegrosse, the sensitive elegance of La Gandara or of Helleu, the religious or pagan dream of Puvis de Chavannes, and the ironic fantasy of the actualistic designers, Willette, Lautrec, or Steinlen.

Of the painter's character, however, the public has known nothing new since the publication of the "*Vie de Bohême*," a book destined to create a lamentable misunderstanding between the artists and the public. The artist which the book depicts is happily today a fossil, a bizarre archetype made to take a place in the museum of moral curiosities. The "rapin" is also a specimen which has disappeared, although there are a few pupils of certain schools who persist in wearing the uniform, the fluffy hair, large hats, and zouave trousers. The painter of today, however, is an entirely different being.

The old "rapin" has given place almost without exception to men whose inclinations are altogether modern, and who are influenced by contemporary cares. As individuals the majority of artists are men of learning, correct, quietly dressed men of the world, and although they do not believe in mundane formalism, they practice it by vital necessity. Among the majority of the artists of today there is a constant increase of the wish to be other than mere painters.

Formerly they willingly affected to end with this narrow conception of their vocation and to consider themselves free after having painted a figure or a sky. To impressionism has succeeded a generation of profound and discreet minds. Observe the group which seems today to unite the most essential traditions of the free French school, Messrs. Menard, Simon, Cottet, and others, and we find them men who are strict, courteous, sober, and whose lives are calm and thoughtful, the "intellectuals" in the best sense of the term. Nothing in them discloses the "artist" except their work and their conversation, and the more daring their art the more irreproachable is their personality. It is rather among the docile disciples of academism who paint the wise Ledas and the timid allegories that one finds still the people of large felt hats, great cravats, and jeering manner. The others have comprehended the gravity and extent of the duty of the artist and the new attitude which social life imposes upon him. They have comprehended that art is not a luxury dispensed to a minority, but a mission, and that this enviable career, which is apparently brilliant, is in reality a painful study, a sad obligation, a duty much more difficult and profound than many others, and a constant preoccupation which does not permit repose of thought even when the hand is idle, for present art is intimately mingled with social life; it follows all its manifestations and shares all of its anxieties. The jests of the studio, the practical jokes, the vulgar frivolities disappear more and more.

Modernity wills its style and forms its creatures, and the grimacing specter of Cabrion and of Schaunard haunts no more the studio in which today we find a free man, open to all the arts and, above all, preoccupied with this more and more urgent thought, that character corresponds to the work, the work demonstrates the character, and without moral height there can be no work done on high.

Le Roux and Daudet

THE AUTHORSHIP OF "LA BELLE NIVERNAISE"

M. HUGUES LE ROUX, the French lecturer, recently declared to an audience of students at the University of Chicago that he was the author of one of the best-known short stories printed over the name of Alphonse Daudet. Daudet, he said, had contracted to write the story, but was too busy. Le Roux, who was a struggling secretary at the time, took the work from Daudet's hands and sent "La Belle Nivernaise" to the publishers. "Such practices are not uncommon," said M. Le Roux. "Daudet was anxious to send a story to an American magazine, to which he had promised a short piece of fiction. He came to me and asked if I had anything that would do. I did not have anything at the time, but I had something in mind and wrote it. The story was well received, and Daudet was given considerable praise."

The New York Times, commenting on the above, says: "By claiming, at this very late day, the authorship of 'La Belle Nivernaise,' M. Hugues Le Roux has raised a question of veracity between himself and a dead man—a proceeding extremely safe from some points of view, but terribly dangerous from others, perhaps more numerous. So far as we are aware, Daudet's right to whatever of fame was due to the writer of the charming little story has never been impugned before. Certainly it has been everywhere recognized as his, not less because his name appeared on the title page of the various editions, French and English, but because in style and quality, in merits and defects, it harmonizes perfectly with the other works credited to Daudet—the works which M. Le Roux has not—yet—claimed as his. Whether Daudet would or would not have been guilty of so contemptible a transaction as that with which M. Le Roux charges him—it amounts to nothing less than obtaining money under false pretenses—must, of course, be left for decision to those who knew the man as well as his books, and even his nearest friends can not determine the matter absolutely, since the task imposed upon them, if they would refute the accusation, is the impossible one of proving a negative. The situation thus created is a very painful one."

The Chicago Record-Herald dismisses the case with the laconic remark: "Daudet is dead. So are Dickens and Thackeray. Here are two fine chances for other people to win literary fame."

An American Comedian

COMMENT ON THE CAREER OF THE LATE SOL SMITH RUSSELL

THE many tributes paid to the memory of Sol Smith Russell, whose death was recorded April 28, honor both the man and the actor. The Boston Transcript says: "Mr. Russell was possessed of a personality which drew people to him irresistibly, and his art was of that true quality which not only compels appreciation of itself, but which also makes us feel kindly toward the artist, to regard him as a dear friend. In his particular line, Mr. Russell held a high place in his profession; in certain quiet touches which he gave to his delineations of character he was perhaps without a peer. In the intermingling of humor

and pathos he was especially effective; he made us laugh through our tears, or shed tears in the midst of our laughter, as he willed. His characterizations were ever true to life, only sufficiently exaggerated to bring out traits that helped to illustrate the motive of the play, and he never resorted to mere clownishness or to horse-play. His work was always artistic, consistent, and very human.

Mr. Russell was never very popular in New York, and the praise accorded him by the New York press is, for the most part, rather faint. The Evening Post says: "His pathos was not always convincing, but was an efficient foil to his humor, which never failed of popular appreciation. His performances were very pleasant, clean, and wholesome, and he will long be held in the

SOL SMITH RUSSELL IN "A BACHELOR'S ROMANCE"

kindly remembrance of those indebted to him for some merry hours." The Sun is more enthusiastic: "Mr. Russell always confined himself to parts requiring the exhibition of simplicity and gentleness, and his apparently natural quaintness was in reality the result of an extremely artistic and finished method of acting. Outside of New York his work was estimated at its true value and sincerely appreciated."

It was in Chicago that Mr. Russell was best known and best loved, and the following from the Record-Herald is characteristic of the warm appreciation of the Chicago press: "Here was a man who, like Hamlet's Horatio, for thirty years took fortune's buffets and rewards with equal thanks, rejoiced when things were coming his way and bade them begone with an all-conquering smile when they treated him despitefully, as for many years they did. Upon the stage he never played a part, but made every part Sol Smith Russell. And yet he was an artist to the tips of his

long, slender, expressive fingers and by every line in his speaking face and movement of his body and limbs. He was beyond compare the American comedian; this was the opinion of Sir Henry Irving."

The Columbus (Ohio) *Dispatch* points to the unique place Mr. Russell held on the American stage: "He belonged to a school of acting in which he was the only member. There was no other just like him. In 'A Poor Relation,' 'Peaceful Valley,' 'A Bachelor's Romance,' and 'The Hon. John Grigsby,' he appeared to the people in a way peculiarly his own. He controlled the sympathy and admiration of those who saw and heard him as few actors can."

The Best Fifty American Poems

THE COMPILATION BY FREDERIC LAWRENCE KNOWLES

"It would be a matter of gratification to many Americans," says Mr. Frederic Lawrence Knowles, writing for the Boston *Transcript*, "if we could have an anthology which should contain not more than fifty or one hundred short poems, but all of these untinctured by the least suspicion of mediocrity." With full knowledge, he says, that he may have very few supporters, Mr. Knowles submits the following tentative table of contents for such a compilation:

- | | |
|--|------------------|
| 1. Thanatopsis..... | W. C. Bryant |
| 2. To a Waterfowl..... | " " |
| 3. Israfel..... | E. A. Poe |
| 4. To Helen..... | " " |
| 5. The City in the Sea..... | " " |
| 6. The Haunted Palace..... | " " |
| 7. To One in Paradise..... | " " |
| 8. The Sleeper..... | " " |
| 9. Annabel Lee..... | " " |
| 10. The Raven..... | " " |
| 11. Divina Commedia..... | H. W. Longfellow |
| 12. Nature..... | " " |
| 13. The Skeleton in Armor..... | " " |
| 14. The Discoverer of the North Cape..... | " " |
| 15. The Problem..... | R. W. Emerson |
| 16. Days..... | " " |
| 17. The Rhodora..... | " " |
| 18. Concord Hymn..... | " " |
| 19. The Humble Bee..... | " " |
| 20. Each and All..... | " " |
| 21. Skipper Ireson's Ride..... | J. G. Whittier |
| 22. Telling the Bees..... | " " |
| 23. In School Days..... | " " |
| 24. Ichabod..... | " " |
| 25. The Eternal Goodness..... | " " |
| 26. My Playmate..... | " " |
| 27. Hebe..... | J. R. Lowell |
| 28. She Came and Went..... | " " |
| 29. To the Dandelion..... | " " |
| 30. Auspex..... | " " |
| 31. The Courtin'..... | " " |
| 32. Peace. (Selection from Biglow Papers, Second Series, X; from "Under the Yaller Pines I House" to "A Nation Saved, a Race Delivered.")..... | " " |
| 33. The Chambered Nautilus..... | O. W. Holmes |
| 34. The Last Leaf..... | " " |
| 35. The Living Temple..... | " " |
| 36. Old Ironsides..... | " " |
| 37. When Lilacs Last in the Dooryard Bloom'd..... | W. Whitman |
| 38. Out of the Cradle Endlessly Rocking..... | " " |
| 39. The Marshes of Glynn..... | S. Lanier |
| 40. Bedouin Song..... | B. Taylor |
| 41. Abraham Lincoln: An Ode..... | R. H. Stoddard |
| 42. Battle Hymn of the Republic..... | Mrs. Howe |
| 43. On a Bust of Dante..... | T. W. Parsons |

- | | |
|---------------------------------------|--------------------------|
| 44. The Venus of Milo..... | E. R. Sill |
| 45. Columbus..... | J. Miller (C. H. Miller) |
| 46. Echo Song..... | T. B. Aldrich |
| 47. Sleep (sonnet)..... | " " |
| 48. Unguarded Gates..... | " " |
| 49. Sesostris..... | L. Mifflin |
| 50. An Ode in Time of Hesitation..... | W. V. Moody |

A writer in *Harper's Weekly* says that there is hardly one of the American poets ignored in his selection who could not have made a better list, even if confined wholly to his own works. "What we have chiefly to complain of in Mr. Knowles," this writer continues, "is not that he has made a bad choice, but that he has made any. In doing this he has done not only an idle and fatuous thing in a world already overfull of folly, but has flown in the face of judgment, and has darkened counsel in an insufferable fashion. There is no such thing as the best fifty, or fifty best, American poems, and there can be no such thing as the best fifty, or fifty best, poems in the world. This is so, not because critics must always differ among themselves, but because they must differ within themselves, each critic, as to the value of any given poem. The prosperity of a jest lies not more in the ear of the hearer than the life of a poem in the mind of the reader. This is not saying that there is nothing absolute in beauty. There is; and beauty is as much a matter of proof as truth is. But there is something yet more intimate than beauty in a poem, and it is this which charms, and which makes it of not only immediate but lasting delight. To say what this more intimate thing is would be to say what poetry is, and that is what no one has ever been able to do. To attempt it would be to venture on a fatuity of the nature, if not the measure, of Mr. Knowles's. This more intimate thing, however, is something that may coexist with imperfect beauty; it will endure in spite of what the artist acutely feels to be defective form. It is not something that pleases for the time, but for all time, and still the cup which holds this exquisite essence may be wanting in the absolute grace which we imagine by the name of beauty."

The National French Salon

PARIS CORRESPONDENT, New York *Tribune*
Condensed for PUBLIC OPINION

It was just twelve years ago that a group of independent artists, including Meissonier, Puvis de Chavannes, Carolus-Duran, Roll, Dagnan-Bouveret, Cazin, Duez, Besnard, Jean Béraud, Montanard, Ger-vex, Rodin, and Dalou, cut themselves loose from the cast-iron academic traditions of the official "salon," or "Society of French Artists," under the lead of Bouguereau, Jean-Paul Laurens, Bonnat, Henner, Jules Lefebvre, Benjamin-Constant, Edouard Détaillé, Gabriel Ferrier, Tony Robert-Fleury, Raphael Collin, and the sculptors Paul Dubois, Barrias, Mercié, Frémiet, Falguière, Carlier, and Bartholdi. The secession, or rather the emancipation, was strongly encouraged by public opinion. The revolution resulted in an institution, and after twelve years of solid progress the salon of the National Society of Fine Arts, popularly known as the salon of the Champs de Mars, has become an indispensable manifestation of the intellectual life of Paris.

The dominating tendency of the painters of the National Society of Fine Arts, or, as they term themselves, the "younger and more advanced school," is

melancholy, verging upon decadence. There is no Rabelaisian mirth nor Gallic gayety. Sentimentalism is expressed in soft, graceful lines, hazy compositions, and subdued anæmic color-tones. With few notable exceptions, vanishing twilight appeals to them more than the noonday sun, and they prefer the orchid to the rose. These qualities have never before been so prominent as in this year's salon.

What can be more melancholy than Cottet's procession of Brittany fisherfolk, attired in black, with only their backs visible, tramping slowly toward a cold, gray church, across a cold, gray path, while in the distance is a cold, gray sea, and overhead a cold, gray sky? It is, nevertheless, a beautiful picture, evoking purity of feeling, and disclosing a marvelous variety of delicate grays and a profusion of shaded reflections of blacks, but it is, after all, a supreme expression of sadness. This is also applicable to Lucien Simon's three sable-clad Sisters of Mercy, seated near a closed black piano talking to a middle-aged lady attired in a black gown, entitled "*Les Queuteuses*"—a picture that justifies the judgment of the French critics who have pronounced it a masterpiece, and which is a nobler work than the same painter's "*Procession*," which was last year purchased by the government for the Luxembourg gallery.

Whistler's exquisite portrait of a woman wearing an immense white lace ruffle, called "*Ivory and Gold*," Whistler's "*Blue and Silver Open Sea*," Whistler's

"*Phryne, Who Built Temples*," in shades of pearl grays, are distinctly sad. Carrière's six cameo-like heads of the same woman, but each with different expressions, are mournful. There is something funereal about Roll's "*Drama of the Soil*"—a page of Zola on canvas—a peasant girl stretched at full length, face downward, in a village street, with a streak of blood indicating a wound on the temple inflicted by a stone.

Other Men's Motives

ELEANOR HALLOWELL ABBOTT, IN THE MAY Outlook
 When the poor, tired Worldling comes to die,
 He thinks that now, At Last, he shall know Why
 His streams ran blood, his fields were choked with tares,
 His every pleasure clogged with carking cares.
 When the poor, tired Wordling comes to die,
 He thinks that now, At Last, he shall know Why
 His Love was false, his Friend estranged, his Foe
 The only constant factor in his woe,—
 Poor, puzzled Wordling, yearning through his pain
 For God's full promise to make all things plain,—
 Yet when that Worldling at the Judgment Day
 Stands up to share the solving of the way,
 And hears the searching, awful edict pealed,
 "*The Secrets of All Hearts shall be Revealed!*"
 Then that same Worldling, clutching at his breast,
 Flees like a madman tortured and possessed.
 "The secrets of all hearts? Yes, thine, and thine,
 But oh, for Christ's dear sake, not mine, *not Mine!*"
 Poor, selfish Worldling, with his zeal to ken
 The hidden motives of the Other Men!

SCIENTIFIC

The Venom of Snakes

SUMMARY OF THE RESULTS OF THE MOST RECENT INVESTIGATIONS

"INDIA is the paradise of snakes," writes M. Antoine Fureteur, in the *Monde Moderne*, Paris. The fact is that in India "snakes are more dangerous to men than men are to snakes," if we are to believe the statistics which show that twenty-two thousand people die yearly in India from snake-bites. As a rule, the natives are the victims, because they walk barefoot. The snakes of India may be divided in three categories: the aspics, the false vipers, and the true vipers. The most dangerous are the karait and the cobra. "The venom of the cobra is identical with the venom of the rattlesnake used by the Indians of North America to poison their arrows." This venom, however, is harmless when ingested through the stomach, providing there is no lesion of the mucous membrane. "The Hindu physicians who use the venom of the cobra in the composition of their medicines enclose one of the reptiles with a banana in an earthen pot, which they place on the fire. The cobra becomes enraged and bites the banana. When he is dead, the banana is removed and carefully exsiccated, to be used as a tonic in the shape of a powder." Dr. Calmette, of the Paris institute, who has made a special study of venomous snakes, collects the venom of the cobra on cabbage or lettuce leaves, which he gives to the reptile to bite. "This venom, when fresh, is colorless or slightly yellowish; it can be kept for a long time in hermetically corked bottles, providing they are not exposed to the sun, in which case it would lose its toxic properties. Dessicated, the venom has the appearance of yellowish gum, and it remains indefinitely virulent. A queer thing is that the composition of the venom of the cobra is identical

with the chemical composition of egg-albumen. We find in albumen from 21 to 23 parts of oxygen, 7 parts of hydrogen, 15 to 17 parts of nitrogen, 51 to 54 parts of carbon, and 2 to 3 parts of sulphur. In the venom of the cobra the proportions are: Carbon 52 parts, hydrogen 7.05 parts, nitrogen 19.20 parts, oxygen and sulphur 21.33 parts."

The largest snake of India is the hamadryas, which belongs to the karait and cobra family and is also venomous. Three other varieties of snakes are no less venomous than the cobra; they are the daboia, the etchis, and the sea snake, which sometimes ascends the Hooghly and reaches Calcutta.

There is no animal refractory to the venom of the snake; Dr. Calmette has discovered, however, that the snake is proof against its own venom and the venom of other snakes. Basing his researches on this fact, he has found in the virus of reptiles a serum which is not only a remedy but a positive vaccine-lymph. He experimented at first on cobayes and rabbits, later on larger animals, with the venom of snakes of various countries; the cobra, the aspic of Egypt, the viper of Europe, the viper of Gabon, the horned-viper of London, the rattlesnake of America, the blacksnake and the tigersnake of Australia. Dr. Calmette inoculated the animals and exposed them to the biting of the snakes; when not treated with his serum—in which case they escaped—they generally died inside of two hours. In inoculating rabbits the doctor prepares a progressive quantity of pure venom, reaching a weight of 26 milligrams, or 64 times more than is necessary to cause the death of the animal. In this way he secures a series of serums of graduated strength, the weakest of which cures a rabbit twenty minutes after

being bitten and the strongest an hour and a half, or half an hour before the time when death should naturally occur.

Resistance in man is at greater variance. It has been observed in India that out of one hundred people who died from cobra bites, 22 succumbed in less than two hours, while 24 survived from four to six hours, 23 from 12 to 24 hours, and 21 longer. This is due undoubtedly to the nature of the bite, and to the degree of strength of the individual. At all events, the serum prepared with the venom of the cobra is efficacious against the venom of all other snakes. This will readily be understood, because all poisons act similarly on the blood: the globules are deformed and the coagulated blood does not circulate. Hence the paralysis of the bitten limb which at times remains when the venom has not been strong enough to produce death; that is, to entirely paralyze the lungs and stop the circulation. Microbes have no part in the process, which is entirely chemical and physiological. Therefore, it is absurd to pretend that alcohol has curative properties; it may stimulate the individual bitten by the snake, but it will not neutralize the venom or even impede its action on the blood." It is known, however, that the hydrochlorides of sodium and lime and the chlorides of gold can stop the coagulation of the blood. Chloride of lime, injected under the skin, gives the best results.

The Heart and Surgery

Dr. R. ROMME, in *La Revue*, Paris
Translated and Condensed for PUBLIC OPINION

"**N**OTHING can be done for a wound in the heart; the proposition of closing it by a suture does not even merit mention." Thus, M. Riedinger, one of the most brilliant of German surgeons, expressed himself at a surgical congress some five years ago. Today a surgeon who crosses his arms before a wound in the heart made by a pistol ball or a knife-thrust is lacking in scientific knowledge and does not do his duty, for today we possess many "observations" in which a surgeon has opened the chest of a sufferer, exposed the bleeding heart, and arrested the hemorrhage by closing and sewing the wound with a needle and thread as he would do for a deep cut in the skin. It is through this method that in a good number of cases the surgeon has succeeded in saving the patient who had been condemned to a certain death.

These operations are very wonderful. As all know, the heart is not found near the skin, and in order to see the wound from which the blood is gushing, it is necessary to open wide the chest and cut a "volet thoracique," as the surgeons say. This being done, one has before him the lungs which mask the heart; pushing them to right and left, one perceives the fibrous sack, the pericardium, which surrounds the heart, and this sack being cut, we behold the heart, which appears in the midst of clots in a veritable sea of blood. Introducing the finger into the wound and exploring carefully the cardiac muscle, the surgeon tries to *feel* the rent, the hole, left by the ball of the revolver or the blade of the knife. The situation of the wound once determined, it is now necessary to close it with a needle and thread. This is relatively easy when the wound is on the exposed side of the heart, the surgeon being thus permitted to see what he does. It is not, however, always thus, for sometimes the wound is found on the inner side of the heart, and in this case the surgeon takes the heart boldly in his

hands, raises it, draws it to him, and thus succeeds in accomplishing the suture of the wound and of arresting the hemorrhage.

During the course of these operations it has been shown that it is possible to manipulate the heart much more than one might believe. One may judge of this by the following case published by Dr. Podrez. A girl of fifteen years shot herself in the pericardial region. She was taken to the hospital with all the signs of a serious hemorrhage, and at any price it was necessary to stop the flow of blood. Without hesitation a "volet thoracique" was cut, the lungs were pushed aside, the pericardium was cut, and on the exposed face of the heart, near the point, was found a wound one centimeter in length. At this place the ball had entered, and it was now a question of getting it out. To do this, there was introduced through the wound a fine needle with which the cavities of the heart were explored in all directions. This exploration gave no result. "Then"—I cite Dr. Podrez literally—"the heart was taken between the two hands, the left hand placed behind, the right hand before, and the heart was energetically palpitated to try and feel the resistance of the ball; but this, also, gave negative results. The heart thus compressed, drawn forward to such a degree that the point projected from the thorax, did not cease at any time to contract; only the rhythmic contractions were replaced by an undulatory movement."

A surgeon who in face of a wound of the heart sews this wound up, after having opened the thorax, only exercises his profession. We can admire his cleverness, praise his skill, but what is much more original—for the moment at least—and much more daring, is the attempt to treat surgically a medical affection of the heart. An attempt of this kind has been made in the last few days by M. Tuffier, who has communicated to the surgeons' society the first case of aneurism of the heart treated by ligature of the sack. The patient was a woman, and the tumor appeared beneath the skin of the thorax, under the collar-bone, and threatened to break at any moment. The medical treatment did not even diminish the intensity of the pain caused by compression of the nerves, and to wait longer would have exposed the patient to certain death by hemorrhage. M. Tuffier cut the "volet thoracique" and found at once the aneurism, the extremely thin walls of which were mingled with the lungs, the ribs, the muscles, etc. With many precautions, millimeter by millimeter, he succeeded in isolating and detaching the bloody tumor from the neighboring organs; then, taking it between the two hands, he gently compressed it and made the blood which it contained pass little by little into the aorta. He had then an empty sack in his hand, which, by an opening, communicated with the aorta. A thread was passed around the neck of the sack and solidly tied, and the communication between the aneurism and the aorta being thus interrupted, the operation was terminated. For ten days the patient was considered definitely cured, but the eleventh day she died from a hemorrhage which it was impossible to check. The autopsy disclosed the cause of death to be from gangrene. The empty sack which had been left in place had become gangrenous, and the gangrene having extended to the neck, the thread which had been placed at this point fell away and the aorta was opened. Everything, however, pointed out, says M. Tuffier, that if the sack had been cut away instead of being left in place, the patient would have been entirely cured.

The Scarcity of Platinum

Staats-Zeitung, New York. Translated and Condensed for PUBLIC OPINION

THE history of platinum, which was discovered about the middle of the 18th century, differs from that of other rare metals in that the increased demand has not been met by repeated discoveries of new deposits. Hence the price of platinum has risen enormously. In 1822 platinum was worth \$1,000 a pound, in 1870 \$900, this slight decrease being due to the discovery of the Ural deposits in 1822. In 1895 the price per pound had risen to \$2,700, and in December of last year to \$4,800. Platinum was first found in South America and regarded as a variety of silver. Hence the name, from the Spanish *plata*, silver. It occurs as platinum dust in Colombia, Brazil, Hayti, and also in Borneo, but the Ural region is the chief source of supply. The annual output of the Ural mines is about 8,000 pounds, while the rest of the world furnishes only about 1,300 pounds. The mining of platinum has, therefore, been developed almost entirely in Russia, and a suspicion has arisen that the output is restricted purposely, in order to enhance the price; but this supposition seems to be without foundation. The Russian government, indeed, is said to be contemplating the recall of coins minted before 1850, which contain platinum, for the purpose of reclaiming the metal. Most of these coins, however, disappeared from circulation long ago, having been melted by chemists and technicians in search of platinum. If no new source is discovered, the scarcity of platinum will soon be felt seriously in many industries.

Some Unusual Food Plants

JULIA DAVIS CHANDLER, in the May American Kitchen Magazine, Boston. Condensed for PUBLIC OPINION

I BEGIN my list of the more novel food plants with flowers. Nasturtiums or Indian cress, while grown for their beauty, are used by many in salads, both flowers and leaves, and the seeds are pickled as mock capers. Acacia and apple blossoms were used for fritters abroad, also comfrey and the cowslip or clary for fritters and for wine. The flowers of the English cowslip or clary were also crushed and used in a sponge-cake pudding a century ago. When chrysanthemums were very costly, a young California Lucullus had a salad made of them. They may also be served hot in white sauce. The *chef* of an American of wealth arranged violets on a lettuce salad dressed with old Burgundy, and pronounced it *vraiment lyrique*. Candied violets ornament all fine boxes of confectionery nowadays, and a sirup of them is made in parts of the south, also violet soda, violet jelly, violet fritters, etc. Where flowers are used in fritters they are first steeped in brandy. In Italy, near Naples, squash blossoms are dipped in batter and fried. In Germany, elder-flowers are used the same way, and to flavor wine and vinegar. The use of the elderberries for wine and pies and preserves, mixed with apples, green grapes, etc., is much more common here. Cloves and cassia buds are the flowers of tropical trees, and, sugar coated, were a favorite candy in old times. Jasmine is one of the many flowers from which to make a flavoring, mentioned by Jules Gouffé, *chef* of the Paris Jockey club, and author of "Livre de Cuisine." He, alas, does not say which jasmine, and some are poisonous. Presumably, in France, where

they are cultivated for perfume, the information on this point is more general. In fact, noted French cooks use a few drops of finest strong cologne, which contains jasmine and other flowers, on a lump of sugar dissolved in the wine with which they dress mixed fruits. In an old French book many flowers are mentioned from which to make flavoring extracts or sirups, as poppy, jonquil, and the lime or linden. Old English books give recipes for clove-gilly flowers and peach-blossom sirups.

The stalks of angelica *arkangelica* are candied, and are of a beautiful green color. We are familiar with it in fine cakes often contrasted with red candied cherries. I presume some have thought it very green citron. The barberries along our New England coast make a brilliant scarlet and not unpleasantly acid jelly and a decorative scarlet pickle as well, left whole in bunches to surround green gherkins. I have heard of mountain ash berries being used for jelly. Of the many haws, one variety especially is used for jelly and sold in far southern markets. The carrageen, or Irish moss, makes a delicious, nourishing blanc mange, and a soothing beverage in illness. The Iceland moss, a lichen, not a seaweed, is used also for the sick. The dulse, a seaweed much esteemed in Ireland as food, can often be seen by the barrel in American cities. Basil, burnet, or pimperl, and borage are little known, though I have found basil in Alabama markets and have raised borage. Borage has pretty blue flowers, and is used in salads and soups and in a few punches where some epicures of today substitute a slice of cucumber.

Sirup of poppy flower I have spoken of, but not of the seeds, which are much used in Europe and here wherever we have German bakers, as in Philadelphia, Cincinnati, and Chicago, where we see the black "mohn" or poppy seed used more than the white on rolls and twists. Tamarinds are beneficial as a drink or a whey in illness, and baked with shad in old Maryland for those not invalids. The flowers, leaves, and tender seeds of the ben are used in curries. This plant is grown in our southern states. The Negroes used to mix the not unpleasant oily seeds with cornmeal, and they are referred to in old southern recipes for soup. In India the blossoms of the ben and coconut are made into *hors d'œuvres* with other plants.

Fatigue as a Cause of Consumption

London Hospital. Excerpt

WRITING on the etiology of pulmonary tuberculosis in the *Practitioner*, Dr. Burton-Fanning draws attention afresh to the long time which may elapse between the reception of the infection and the manifestation of symptoms of such gravity as to suggest the existence of tuberculosis. It is usual, he says, for an indefinite length of time to elapse between the lodgment of the tubercle bacillus in the body and the manifestation of symptoms of consumption. In some cases nothing may have occurred to show, even in the light of subsequent events, that the patient was previously the subject of tuberculous deposit. In the larger number, however, we may elicit by questioning, clear evidence of the existence of tuberculosis prior to the date which the patient gives as that of the commencement of his illness. Thus we may explain and reconcile the long-standing difference between pathologists and clinicians in regard to the in-

fectivity of the disease. The clinical histories of many patients point to the fact, Dr. Burton-Fanning says, that early in their life the tubercle bacillus gained an entrance to their bodies. It then secreted itself in a lymphatic gland or portion of lung, and lay dormant for any number of years.

This is a view which, if thoughtfully worked out, must have far-reaching influence upon our practical dealing with patients, and especially with convalescents. It has long been considered that those who have been, as the saying is, "pulled down" by illness, overwork, or exhausting influences are more particularly liable to be attacked by tuberculosis. They are, in modern parlance, "fit soil" for the growth of the bacillus, and we are all accustomed to insist that until the health of such patients becomes reestablished, they shall be carefully protected from exposure to infection by tuberculosis. According to the view so ably reinforced by Dr. Burton-Fanning, we must go much further than this. Accepting the statement that some 40 per cent of the population have a more or less marked tuberculosis deposit hidden away somewhere or another within them, we may at once assume that anyone who has in previous years shown any "delicacy" is likely to be one of this tuberculous host, and that in dealing with such a patient everything must be avoided which might bring this latent tuberculosis into activity. This brings us to a point which is more particularly raised by Dr. Burton-Fanning,

namely, the influence of overwork and anxiety in the etiology of consumption. Physical over-exertion he believes to be a most powerful determining cause of the breakdown of the system's limiting or protecting agencies against tuberculization. In 10 per cent of his cases he attributed the occurrence of manifest pulmonary tuberculosis to over-fatigue. Even a single excess in this respect may do the mischief; thus one of his patients was said never to have recovered from the exhaustion consequent on a whole day's bicycling in very hot weather and without previous preparation. Over-indulgence in tennis, dancing, climbing, and hunting have also seemed to be sufficient to bring into activity an unsuspected latent tuberculosis. In the management of convalescence from acknowledged tuberculosis, over-exertion is to be especially avoided.

A WEIGHING AND COUNTING MACHINE has been invented by Joseph S. Cortelyou of New York city. This device, the operation of which is based on well-known laws of the lever and fulcrum, provides a scale in which the point of application of the weight as well as that of the force is made variable at will thus increasing the range of the scale when weighing and making it possible to obtain readings in any and all systems such as avoirdupois, troy, metric, etc., by the simple turn of a milled head. When used for counting material, it is only necessary to set the scale for that material by a turn of the same milled head, then proceed as in weighing and the scale will indicate the number of pieces instead of pounds or ounces.

RELIGIOUS

Legislation for Churches

GEORGE JAMES BAYLES, in the *Church Economist*, New York. Condensed for PUBLIC OPINION

DURING the past three years there has been legislation in thirteen states concerning churches, either as new law or as amendments to the provisions of existing statutes, and these enactments are very necessary features of our church economy. I can at this time consider but briefly the leading features of these new provisions. In 1901 Indiana provided that any diocese of the Protestant Episcopal church within the state may form a corporation and manage property for the benefit of religious, charitable, or educational institutions. Another statute of the same year provides for the incorporation of missionary societies. Maine, in 1901, amended her laws relating to the incorporation of churches and extended the suffrage on certain questions to those who help support the church. Michigan, in the same year, passed some interesting laws. The "Free Methodist churches" within the state may be incorporated with from three to nine trustees. The civil corporations connected with Congregational churches may be consolidated with the church by a two-thirds vote of the members of the church. This last is a good illustration of the general tendency seen throughout civil church law to do away with the distinction between the church body and the incorporated society.

In 1901 Minnesota legislated that on the dissolution of religious societies any property remaining is to be transferred to the next higher governing or supervising body of the same denomination. In 1900 New Jersey enacted that her chancellor may appoint receivers for religious corporations that apply for dissolution; also that lands bequeathed to religious societies which have not the power to sell may be sold on

the approval of the chancellor. North Dakota, in 1901, enacted that religious corporations may make by-laws providing for officers and directors; trustees, vestry, or other like body to constitute boards of trustees. Perhaps the most striking feature of legislation in New York of recent years was enacted in 1901, providing that the trustees of incorporated Protestant Episcopal churches can not sell or mortgage real estate consecrated or used for religious services without the consent of the bishop and standing committee of the diocese. Tennessee legislated in 1901 providing that "companies may incorporate to own and maintain tabernacles." Wisconsin, in 1901, directed that the articles of incorporation of churches are to be recorded in the office of the register of deeds, as well as in that of the secretary of state.

I may mention, in addition to these pieces of statute legislation, that recently the state of California has swung into line with all the other states of the union, and has provided, by constitutional amendment, for the exemption from taxation of property used exclusively for religious worship. Such exemption is now the prevailing policy of our state governments, yet by many a reaction is looked for in the near future.

Speaking generally, with reference to the recent development of legislation for churches, it may be said that there is a marked tendency toward special denominational legislation, by which certain features of particular ecclesiastical politics are made objective in the statute law, and thereby become more rigid and less liable to change. To this development belong the provisions found upon the statute books of many states, by which purely ecclesiastical functionaries, such as presiding elders, superintendents, bishops, and

archbishops, may be constituted ecclesiastical corporations sole and thereby exercise the functions of civil corporations by virtue of their ecclesiastical offices. And this leads to a final observation with reference to our legislation for churches. All denominations are now coming up to the senate legislatures for enactments that will project into the civil business affairs of the churches the essential features of particular politics, congregational, synodical, or episcopal.

President Roosevelt on the Bible

THEODORE ROOSEVELT, in the *Liberia*, Washington
Condensed for PUBLIC OPINION

AS all of you know, there are certain truths which are so very true that we call them truisms, and yet I think we often half forget them in practice. Every thinking man, when he thinks, realizes what a very large number of people tend to forget, that the teachings of the Bible are so interwoven and entwined with our whole civic and social life that it would be literally—I do not mean figuratively, I mean literally—impossible for us to figure to ourselves what that life would be if these teachings were removed. We would lose almost all the standards by which we now judge both public and private morals; all the standards toward which we, with more or less of resolution, strive to raise ourselves. Almost every man who has by his lifework added to the sum of human achievement of which the race is proud, of which our people are proud—almost every such man has based his lifework largely upon the teachings of the Bible. Sometimes it has been done unconsciously, more often consciously; and among the very greatest men a disproportionately large number have been diligent and close students of the Bible at first hand.

Sometimes, in rightly putting the stress that we do upon intelligence, we forget the fact that there is something that counts more. It is a good thing to be clever, to be able and smart; but it is a better thing to have the qualities that find their expression in the Decalogue and the Golden Rule. It is a good and necessary thing to be intelligent; it is a better thing to be straight and decent and fearless. You may look through the Bible from cover to cover and nowhere will you find a line that can be construed into an apology for the man of brains who sins against the light. On the contrary, in the Bible, taking that as a guide, you will find that because much has been given to you, much will be expected from you; and a heavier condemnation is to be visited upon the able man who goes wrong than upon his weaker brother who can not do the harm that the other does, because it is not in him to do it.

The immense moral influence of the Bible, though, of course, infinitely the most important, is not the only power it has for good. In addition, there is the unceasing influence it exerts on the side of good taste, of good literature, of proper sense of proportion, of simple and straightforward writing and thinking. The Bible does not teach us to shirk difficulties, but to overcome them. That is a lesson that each one of us who has children is bound in honor to teach these children if he or she expects to see them become fitted to play the part of men and women in our world.

A NEW RELIGIOUS SECT has been discovered in Greece. Its adherents advocate the abolition of the Orthodox Greek church and the destruction of images.—*British Weekly*.

Worcester's Welcome Mission

REV. E. W. PHILLIPS, in the *Congregationalist and Christian World*, Boston. Condensed for PUBLIC OPINION

THE city of Worcester, Massachusetts, has a population of 120,000, fifty-five per cent of whom are of foreign birth or parentage. The city is conspicuously religious, having seventy Protestant churches, seventeen of which are Congregational and seventeen Catholic and Jewish churches. It is a decidedly conservative city of high moral tone and the best of municipal good order. And yet this dignified, conservative old New England city has its east and west side problems. On the east side are all the saloons, most of the foreign population, and a few small churches doing a heroic work. Here is most of the squalor and disorder. On the west side are no saloons, all the strong churches and the homes of comfort and culture. Numerous efforts have been made to reach the neglected. Usually it has been the opening of a mission hall and holding gospel services. Occasionally lunch and lodging accommodations have been added, but never industrial features until the Welcome mission was established in November, 1893. This has been the largest, most successful, and permanent of all the mission efforts. Mr. William E. Oakley, the superintendent of Welcome mission, is peculiarly fitted for his work—genial, optimistic, sympathetic, spiritually in earnest, of tireless energy, quick to read character, and with great versatility and executive talents. Himself a reformed man, his sole aim is to help other fallen men back to manhood.

The hard times of 1893 filled the cities with idle and homeless men. Mr. Oakley and some friends engaged the ground floor and cellar of a block where five streets center, which formerly had been a famous saloon, and opened the Welcome mission, with lunch, lodging, and industrial features. For five cents a man can get a night's lodging, or a meal consisting of a big plate of soup, a rousing cup of coffee, and all the bread he can eat. If he has no money he can go to the cellar and saw or split a certain amount of wood in payment. No one is ever turned away if he is willing to work and will behave himself. The place was at once crowded with men. An appeal was made to the local union of Christian Endeavor societies for aid. The response was hearty, and from that day to the present the Christian Endeavor forces have been loyal supporters of the mission, contributing several hundred dollars annually, and furnishing helpers in the gospel services four nights in the week, beside serving annually a bountiful Thanksgiving dinner.

Gospel meetings are held every night. The first year and a half 17,000 lodgings were furnished and 27,000 meals served, two-thirds of which were paid for in work. In this time 650 men had professed confession and a Christian Endeavor society was organized. Beside the wood yard, considerable land is cultivated every season, raising produce for the use of the mission. An employment bureau has been a successful feature. A board of directors composed of leading business and professional men has been elected, the mission incorporated, the entire building rented, and good board and lodgings provided for men who have secured permanent occupations, of which there is a large number. Recently the mission has changed hands, and is now under the management of the Volunteers of America, but will be conducted as formerly.

Boston's Occult Faiths

MYSTICISM REVIVED AS A MODERN RELIGION

THERE are about a dozen comparatively new occult faiths flourishing in Boston, says Mr. George Willis Cooke, in an article in the *Boston Transcript*. "They are somewhat difficult to classify, but they agree in having no denominational connections. Perhaps the oldest of these societies is the Church of the Higher Life, and the youngest may be that which takes the name of Universal Religion. Then there are meetings devoted to Harmony Through Music, New Testament Study, and others that are announced under the name of the speaker who addresses the meeting. With these societies may be classed the Independent Church, as having important common characteristics. With them also may be enumerated the two Theosophical societies, which agree with them in some particulars, at least. These societies and meetings agree in being unsectarian, and in being independent of one another. They are all 'liberal' in the sense of being without a creed, and also in fostering freedom of utterance. They are individualistic to a large degree, and magnify the worth of personal thought and utterance. The members agree not to agree with one another, and each establishes his own creed. It is true of the members, also, that each has some cherished notion of his own, to which he is trying to convert his fellow-worshippers. Reforms of all kinds are advocated in these meetings, but by individuals rather than by societies."

Mr. Cooke says that the youngest of these faiths, the Universal Religion, is pure mysticism. "The leader is more of a philosopher than most of the speakers I have discussed, and he has developed a form of extreme idealism of his own that is largely influenced by the great mystics of the past. In this sect (that may number a hundred persons) the great word is realization. Mental healing is not brought forward so conspicuously as in the other societies, but the occult is much more pronounced. Hypnotism and mental suggestion are largely made use of and there is a strong theosophical tendency. In a word, mysticism is revived to do service as a universal solvent of religious problems. There is a more distinctly religious phase to this movement than to the others of which I have spoken, and the worship of God as a practical aid in healing is given a much greater emphasis. Prayer also seems to have a recognition not given it by the other societies. The Universal Religion is not six months old in Boston, but a division has already taken place. The chief disciple of the mystagogue has rebelled, as a woman always has a right to do, and has gone off to set up her own sect. I do not know what she calls her religion or whether its score of advocates will be universal or not."

The Growth of Seventh Day Adventism

New York Commercial Advertiser. Excerpt

THE Seventh Day Adventists are among the more energetic of the smaller religious sects in this country, and are rather rapidly increasing their membership. There are some 1,500 churches, with about 60,000 members, in the whole country. In New York there are eight churches, with a total membership of nearly 1,000. The founder of the sect here was

James White, who commenced his preaching up in Maine somewhere in the early forties. Some ten years later their headquarters were removed to Battle Creek, Michigan, where they have since remained. There is at this place at present a large and well-equipped sanatorium, where all diseases are treated by hygienic principles, including the adoption of a vegetarian diet. There is a large factory at Battle Creek where vegetarian combinations are put up. Nearly all Seventh Day Adventists are vegetarians, though this is not an essential article of the creed. Beginning with abstention from pork, various sanitary regulations, such as frequent bathing, were next adopted, and some thirty years ago vegetarianism was taken as one of the chief articles of their faith. There is no code of beliefs in this religion: They believe absolutely and literally in the Bible, and claim that although the privilege of eating flesh was accorded to Noah after the flood, yet it was distinctly stated that the result would be enmity between man and beast.

Their desire to follow the dictates of the Bible has caused them to adopt the seventh day as the Sabbath. Their argument in favor of this is as follows: It has never been stated in the Bible that Sunday is to replace Saturday; the regular days of the week have never been confused or forgotten since the time of the decalogue; the early Christian church kept the Sabbath on Saturday, and the adoption of Sunday was due to a papal decree alone. Historically, that standpoint seems unassailable. But the chief point of their religion is the belief, based upon Daniel and Revelation, that the world is now approaching the end. "The generation shall not pass away until I come," the words uttered by Christ, they hold applicable to the present. The historian will recognize in this singular belief a revival of the idea so current at the end of the tenth century, when men abandoned their work in preparation for the second advent.

Various Topics

A "CHRISTIAN COLONY": The latest proposition to establish a Christian colony comes from Chicago. A divinity student of Chicago university, backed by a professor in the department of sociology, is the leader of the movement. The stock yards district has been selected as the field of operations. Several families have already agreed to take houses in that locality.

POPE ON THE INDEX EXPURGATORIUS: According to the Paris correspondent of *Le Christien Francaise* Pope Leo actually has the honor of having had one of his works entered on the list of forbidden books. It is a volume written in 1874, when he was archbishop of Perugia, on "The Very Sacred Blood of the Holy Virgin." The congregation of the Index smelt heresy in this work, and therefore placed it among the writings which good Catholics must avoid. It is still on the Index, but the author's name has been removed. It is doubtless considered undesirable that one who is now held to be infallible should be known to have at one time gone seriously astray in doctrine.—*Christian Work*.

SABBATH LABOR WASTEFUL: An important contribution to scientific data bearing on the necessity of Sabbath rest from labor has been made by a Pennsylvania railroad official. He selected two groups of laborers from the working force of a certain freight house controlled by his road. He measured the working capacity of each group in terms of tons handled daily for a week. On Sunday one group rested; the other worked as usual. On the following Monday the men who had been continuously at service showed a decrease of ten per cent in efficiency as compared with the previous Monday and each day after their comparative delinquency became greater. The men who had their Sunday respite on the other hand were as valuable to the company the second week as the first.

THE NEWS OF THE WORLD

MONDAY, APRIL 28

DOMESTIC.—Captain R. F. Wynn, of the cruiser *Chicago*, was sentenced at Venice to imprisonment for four months and ten days; the other Americans arrested were sentenced to three months' imprisonment....The city of Memphis presented to Rear Admiral Schley, retired, a silver service....Sol Smith Russell, the well-known actor, died in Washington....The government's naval program for the next fiscal year embraces the building of four great battleships and armored cruisers....The Heinze interests and other copper mines have been merged into the United Copper company, with \$80,000,000 capital....Rear Admiral Crowninshield surrendered the direction of affairs in the bureau of navigation to Rear Admiral Taylor.

FOREIGN.—Bulletins from Castle Loo announced that Queen Wilhelmina's condition was improving....Another revolution has broken out in San Domingo....The British admiralty court has awarded the British freight steamer *Malinhead* \$11,500 for salvaging the German steamer *Neckar* in February last.

TUESDAY, APRIL 29

DOMESTIC.—United States Consul General William McKinley Osborne died in London....The resignation of Governor Murphy, of Arizona, to take effect June 30, was received in Washington....The California limited train on the Atchison, Topeka and Santa Fe railroad was ditched at Cama, Missouri, and five persons were killed; twenty others were injured....The court of appeals denied the application of John Most for a certificate of reasonable doubt on his conviction and sentence for a year for publishing inflammatory matter....A tornado at Glenrose, Texas, killed eight persons and wounded fifty-seven....The lower house of the Danish parliament voted to ratify the sale of the Danish West Indies if the islanders vote in favor of it.

FOREIGN.—The lower house of the Hungarian diet ratified the Austro-Hungarian commercial and consular treaty with Mexico, which lapsed in 1867....Captain Albers of the *Deutschland* died suddenly on the steamer near Cuxhaven....The Liberal peers chose Earl Spencer as their leader....The Austrian military attaché, Major E. Muller, left St. Petersburg as a result of disclosures in regard to the traffic in army secrets there....President Loubet opened the art exhibition of the old Salon in Paris.

WEDNESDAY, APRIL 30

DOMESTIC.—Favorable reports were made by the senate committee on foreign relations on all the reciprocity treaties except those with Jamaica and the Argentine republic....Eight girls were killed in a panic caused by a false alarm

of fire in a cigar factory in Philadelphia....The conference of mine owners and employees in New York referred its differences back to the National Civic Federation....The annual congress of the National Society of the Sons of the American Revolution met in Washington.

FOREIGN.—The fourth monthly installment of the Chinese war indemnity, amounting to 1,820,000 taels (\$1,292,200), was paid at Shanghai....Sergeants Heckel and Marten were acquitted at Gumbinnen, Germany, of murdering Captain Krosigk, a cavalry officer....Princess Radziwill was sentenced at Cape Town to two years' imprisonment for forgery....France protested against the sending of Siamese troops to Mekong.

THURSDAY, MAY 1

DOMESTIC.—Henry O. Havemeyer testified before the senate investigating committee that the sugar trust did not control the sugar crop of Cuba, and owned no land in the island....William H. Moody took the oath of office as secretary of the navy, succeeding John D. Long....The president nominated Thomas Nast, the once famous caricaturist, for consul general at Guayaquil, Ecuador....President Roosevelt ordered the trial by court martial of Major Edwin F. Glenn, who is accused of administering the "water cure" to Filipinos....The imprisoned officers of the *Chicago* at Venice were pardoned by the king of Italy.

FOREIGN.—Peasants in Russia burned the chateau of the Duke of Oldenbourg and ruined his estate; the troubles in Russia are growing more and more serious....A meeting of electors at Lubeck, Germany, proposed that Prince Henry of Prussia should be adopted as the joint candidate for the reichstag of the parties representing the middle classes....A tornado devastated the city of Dacca, in India, and adjoining towns, 416 persons being killed....The libel suit brought by Lord Suffield against Henry Labouchere, editor of *Truth*, was compromised in court, Mr. Labouchere withdrawing the imputations made in his paper....Xavier Aymon de Montepin, the French playwright, and novelist, died in Paris.

FRIDAY, MAY 2

DOMESTIC.—Republican leaders in the senate framed a program to support the administration's measures, and to thwart the plans of the proposed anti-administration alliance....Officers of the sugar trust testified before the senate investigating committee confirming Mr. Havemeyer's statement that reciprocity with Cuba will not benefit the trusts....President Roosevelt presented the diplomas to the cadets of the graduating class at

Annapolis....Congressman Amos J. Cummings, of New York city, died in Baltimore.

FOREIGN.—Commandant M. Botha, a nephew of the Boer leader, has been taken by Colonel Barker....King Edward's second court was held at Buckingham palace; nine American women were presented....Premier Waldeck-Rousseau is taking steps to restrain French priests, whom he accuses of interference in the recent elections....Students' riots have occurred in Portugal, and a cabinet crisis is regarded as imminent....Russian troops who have refused to fire on street crowds are being punished.

SATURDAY, MAY 3

DOMESTIC.—The trial of General Jacob H. Smith at Manila was ended; General Davis's troops in Mindanao attacked and captured a Moro fort, more than a score of Americans, including Lieutenant Wagner, of the 14th infantry, being wounded....President Roosevelt received a letter from President Loubet accepting the invitation to the French government to take part in the Rochambeau statue dedication, and expressing warm friendship for the United States....The president nominated Henry Clay Evans, commissioner of pensions, to be consul general at London.

FOREIGN.—The Dunderland Iron Ore company, formed in England to work mines in Norway, has issued its prospectus....Princess Beatrice, daughter of Don Carlos, the Spanish pretender, attempted to commit suicide in Rome....Prince George of Hohenzollern, a cousin of Emperor William, and author of many dramas under the pseudonym of G. Conrad, died in Berlin.

SUNDAY, MAY 4

DOMESTIC.—More particulars were received of the storming of the Sultan of Bayan's fort in Mindanao; of three hundred defenders of the fort only eighty-four survived, all the leading dattos, including the Sultan of Bayan, being killed; the American casualties were an officer and seven men killed and four officers and thirty-nine men wounded....Potter Palmer died in Chicago....Congressman Peter J. Otey, of the sixth Virginia district, died at Lynchburg.

FOREIGN.—Senor Severo, the Brazilian aeronaut, made a successful first trial with his airship at Paris....The pope received a pilgrimage from Brooklyn and New York, who presented to him \$10,000....A syndicate of German bankers is offering the new issue of the North German Lloyd line, 20,000,000 marks, to the old stockholders at 104½....At the Parc des Princes, Paris, "Tom" Linton, the English bicyclist, won the eighty kilometer race in 1:09:50 3-5, making a world's record for the distance.

BOOK REVIEWS

"William Black, Novelist" "Poets of the Younger Generation" "The Kentons"—"Dorothy Vernon"

WILLIAM BLACK, NOVELIST. By Sir Wemyss Reid. Cloth, pp. 352, \$2.25. New York: Harper & Brothers.

SIR WEMYSS REID has drawn a kindly, genial portrait of a successful man. Broadly speaking, William Black knew neither failure nor disappointment. His life was a steady advance through journalism to fiction. At the early age of thirty (1871) he, a comparatively unknown member of the staff of the *Daily News*, was discovered to be the author of "A Daughter of Heth," the talk of the hour. Two years later there was in England no more popular writer than the author of "A Princess of Thule." Henceforward till the day of his death he had apparently all that a man could desire—home, friends, wealth enough, leisure for his salmon-fishing in the spring and for his Scotland holiday in autumn. He realized the ideal of the novelist's life—to spend the months of the year when the country is loveliest amid scenes to be used in a forthcoming novel, reserving the winter months for writing.

It was in the *Glasgow Weekly Citizen* that William Black's first work appeared, but it gave no indication of the bent of his mind. He was doing the all-round work of the journalist, and the chief benefit he derived from it was the habit of writing good, nervous English, and of making his epithets suit the objects to which they were applied. It was in Glasgow that Black found the publisher of his first book, "James Merle," a tale that had no success, and that its author regretted writing before the ink on its printed pages was dry. Shortly after this an episode abruptly terminated his life in Glasgow and sent him to London to seek his fortune. It was the old story of a boy's youthful passion for a woman many years his senior, of the love of Arthur Pendennis for the Fotheringay. His biographer says that there is nothing in the story which any friend of Black's can deplore, nothing of which he, in his sensitive chivalry, needed to repent.

When William Black arrived in London, he was warmly received by his fellow-countryman, Robert Buchanan, as a fellow-lodger and a fast friend. It was not long until he was established on the staff of the *Morning Star*, and writing regularly for the London reviews. During the Seven Weeks' war (1866) he followed the Prussian army in its advance into Austria, presenting to the *Star* some of his descriptions of the scenes he witnessed under the guise of fiction. He came back from Prague, where he had his headquarters, an ardent admirer of German song, German letters, and German music, a liking very noticeable in his books. He gave up his post on the *Morning Star* to become

assistant editor of the *Daily News*, and in the discharge of his new duties found time to write "In Silk Attire," "Kilmeny," and "The Monarch of Mincing Lane." These early works found little favor with either the public or the critics. Being a severe judge of his own work, he quietly accepted the verdict. But when he wrote "A Daughter of Heth," he was convinced that he had produced something that was almost equal to the standard he had set for himself. Accordingly, he resolved that he would use this new book for the purpose of that experiment upon which he had determined when stung by the acrid sneers of the *Saturday Review*. Anonymously the story was published in the *Glasgow Herald*, and anonymously it was given to the world in 1871 in the orthodox three-volume novel. The stratagem succeeded beyond Black's wildest hopes. The first trumpet-note proclaiming the unanimous verdict of the critics in its favor was that sounded by the *Saturday Review*. From this time on till about ten years before his death, Black enjoyed the enviable position of being the most popular novelist of his day. His successful career was not very eventful, but his biographer has made it very readable. He has selected the episodes having the greatest human interest for the reader as well as the strongest influence on the novelist's work.

We commend Sir Wemyss Reid quite as much for what he has left out as for what he has put in. Out of the thousand letters that passed into his hands he has printed a mere handful. It is true that Black's letters lacked all distinction, but, colorless as they are, a less tactful biographer would have printed more of them. In his correspondence with Mary Anderson there is some gusto, some slight self-revelation, but in most of his letters there is little about men, books, or himself. Among his intimates Black was a jovial and good comrade, and his biographer strives to bring out this side of his character in describing his entertainment of his friends at his home, in his wanderings, at the luncheon-table of the Reform club, or in his sky-high chambers in the Strand. But, in spite of flashes of *camaraderie*, the successful novelist remained "a silent man, an observer, a brooder, a consumer of his own smoke."

POETS OF THE YOUNGER GENERATION. By William Archer. Cloth, pp. 564, \$6.00. New York: John Lane: The Bodley Head.

APPRECIATION is the end and aim of Mr. Archer's work; he so informs us in his introduction, and the sketches which follow confirm the statement. He has defined and appraised the talent of indi-

vidual poets, hoping to advance the reader's estimate of the value of contemporary poetry as a whole. Mr. Archer ignores what he terms the "invidious and unessential distinction of minor poet." The surest way, he affirms, to check the growth of a rising talent is to affix to its possessor the sneering label of "minor poet." All the thirty-two writers dealt with in this work are, in Mr. Archer's estimation, "true poets, however small may be the bulk of their work, however unequal its merit." He makes the term, "of the younger generation," include only poets born since 1850—poets, that is to say, who have lived entirely within the half century which has just come to an end. His choice has been guided by another consideration more essential than the mere accident of age. He has dealt only with those poets who still seemed to be more or less on probation—whose position was still in some degree a matter of doubt. This principle excluded not only the great poets of the older generation, Mr. Swinburne and Mr. Meredith, but such admirable writers as Mr. W. E. Henley, Mr. Robert Bridges, and Mr. Austin Dobson. Mr. Archer admits "I have regretfully omitted other writers for no better reason than that their work does not happen to chime with my idiosyncrasy. Intellectually, I can recognize its merit; but it does not touch my emotions; it leaves me cold." The greater number of the poems quoted have been written within the past ten years.

The most familiar names on the list of Mr. Archer's chosen thirty-two are those of Kipling, Stephen Phillips, William Watson, Bliss Carman, Richard Hovey, Richard Le Gallienne, Arthur Symonds, and William Butler Yeats. On Kipling, Mr. Archer suspends judgment. "Again and again," he says, "in reading Mr. Kipling's work, I have said to myself: This is remarkable, this is powerful, this is even beautiful—but is it literature? Is it not journalism raised to its highest potency?" Following a habit acquired in his "Real Conversations," Mr. Archer thus answers his own question: "Kipling is the Shakespeare of special correspondents. He has opened his eyes, pricked up his ears, and set his imagination to work in depicting the doings and sufferings of his tribe throughout the world, with a breadth of vision and intensity of realization hitherto unapproached."

Mr. Archer converses with himself on the subject of Stephen Phillips, as follows: "Is he Shakespearean? His style is too deliberately ornate. Is he a Racinean? His action is too rapid and external. Is he a Hugoesque Romantic? His psychology is too delicate and searching. . . . He is a totally new phenomenon in English drama—at once

an inventor of situations and a master of language. Moreover, Mr. Phillips's imagination is not only dramatic, but scenic. He has the instinct of stage effect, in which our Victorian poets have been so notably deficient."

In his "appreciation" of Richard Le Gallienne Mr. Archer says: "There is such a thing as looking a part too well; and Mr. Le Gallienne's eminently poetical exterior, taken along with his liquid and exotic name, have done some injustice to his real talent. Such a name and such a physiognomy are hard to live up to. . . . But Mr. Le Gallienne is not a man to be dismissed with a grimace. His talent, his faculty, are real and rare. He has an instinctive perception of the beautiful in life, nature, and art, and no common power of giving beautiful form to the thoughts and feelings engendered by this perception."

The selections from the works of the "thirty-three" are well made, and presented with a running comment on their merits or faults, as the case may be. Mr. Robert Bryden's woodcuts are quite successful in the case of Richard Hovey and one or two others, but wholly unsatisfactory in several instances, notably the portraits of the women on the list. Taken altogether, the volume is one of great value to the student of contemporary English poetry, and one of interest to the general reader.

THE KENTONS. By W. D. Howells. Cloth, pp. 317, \$1.50. New York: Harper & Brothers.

THERE is much ado about nothing in "The Kentons," but that "much ado" is very well done. For down-to-the-ground truth in every possible detail of commonplace and uninteresting facts, Mr. Howells has gone no farther than this. The Kentons are a typical family of the middle west, comfortably well off, and well satisfied with themselves in their position of influence in a pleasant Ohio town. Their life moves along smoothly and uneventfully until invaded by an outsider, in every sense of the term, by the name of Bittridge. He is a young man of "push" and very little else, utterly lacking in modesty or reverence, and offensive to the last possible degree. He succeeds, however, by sheer effrontery in establishing himself as a family friend to the Kentons and an admirer of their daughter Ellen, a serious-minded young woman, who has heretofore rather awed more worthy men of less nerve. When Judge Kenton and his fond wife discover that Bittridge has exerted such an influence over the girl that she believes herself in love with him, they close up the dearly loved old homestead and take their family to New York. When the objectionable young man pursues them, they fly to Europe. Aboard ship they meet an attractive young minister, who eventually marries the deluded Ellen, and the homesick Kentons joyfully return to their lares and penates. This story comes to us chiefly through the boudoir conversations of the anxious father and mother, and the indignant brother and sister. It is a family romance, in which

every one seems to take a larger hand than the heroine herself. It goes without saying that Mr. Howells's characters are photographically true to life, and that the story as a whole is a faithful portrayal of a very American family. There is a good deal of quiet humor in it, and plenty of amusement in the escapades of the flirtatious Lottie Kenton, and in the mad infatuation of young Boyne for the little Queen of Holland.

DOROTHY VERNON OF HADDON HALL. By Charles Major. Cloth, pp. 369, \$1.50. New York: Macmillan Co.

MISTRESS DOROTHY VERNON is a very close novelistic relative of "A Lady of Quality"; she is equally tempestuous in love, equally beautiful, and a close second in other respects to Mrs. Burnett's famous heroine—a comparison that is made because it is a convenient way to suggest the character of this newer Clorinda. The story is told by an important, though, comparatively speaking, minor personage in the incidents of Dorothy's courtship of Sir John Manners. Sir John is not altogether backward, but Dorothy only occasionally gives him a chance to play the part of a wooer. Of course, the greatest stumbling block in the way of the happiness of the pair is the historic feud between the house of Rutland and Vernon, and, as though this were not enough, Mr. Major has provided others that must be overcome before the inevitable denouement is reached. The chronicler of this romance not infrequently admits that he is a prodigiously long-winded raconteur, and this can not be truthfully denied. On the whole, however, the story progresses with a reasonable degree of rapidity, and its interest can not be disputed. Mr. Major's greatest fault is that he underrates this interest to such an extent that he deems it necessary constantly to lead the reader on by promissory anticipations, annoying both because they are superfluous and because they break the thread of the story which the reader feels competent to carry and which he is willing to carry for himself.

THE BLAZED TRAIL. By Stewart Edward White. Cloth, pp. 413, \$1.50. New York: McClure, Phillips & Co.

WE have already seen in the work of Frank Norris and other members of the younger fraternity of novel writers that there is nothing antagonistic in modern industrialism and romance; that is to say, romance may be found and very effectively portrayed amid the most material surroundings. This story again demonstrates the possibility we have mentioned. It deals with the people, the scenes, and the incidents of logging in Michigan. Its love story is almost idyllic, and as for its heroic side, Jimmy Powers in the log jam reminds us irresistibly of that hero of the Crusades, Gilbert Warde, who tossed his helmet into the cul de sac swarming with the infidel, and swept down upon his enemy with a smile on his face. The only difference is that Jimmy Powers's helmet

is a battered old felt hat, which he threw "defiantly full in the face of the destruction hanging over him," and with a cry of "So long, boys," was buried beneath the tortured waters and tossing logs of the flooded jam.

A TALE OF TRUE LOVE, AND OTHER POEMS. By Alfred Austin. Cloth, pp. 136, \$1.20. New York: Harper & Brothers.

MR. AUSTIN prefaces this latest collection of his poems with a defense of the poet laureate's position (in regard to which there has been no controversy so far as we have observed, although there has been some question of Mr. Austin's ability to uphold successfully the traditions of the office), and he also reminds us that whatever expression he may have given to the racial sentiments of the English people, he must have, at the same time, expressed the sentiments of the American people—an obvious fact. The volume contains twelve poems, *A Tale of True Love* being the longest and at the same time the least sensitive, musical, and natural of the collection. An ode to Robert Louis Stevenson and one or two other poems, however, are springs of pure, musical feeling and spontaneous perception.

PHILIP LONGSTRETH. By Marie Van Vorst. Cloth, pp. 396, \$1.50. New York: Harper & Brothers.

IT is a common saying that we have no class divisions in free America. The author of this entertaining story sets herself to prove the contrary, and it must be admitted that she makes a strong presentation of her case. Ordinarily, the young factory owner marries the factory girl and lives with her more or less happily forever—or for some time—after. Philip Longstreth finds the prejudices of his class too strong for him, and the girl acquiesces in admitting the existence of the barrier. The picture of life in a factory town is brutal, but perhaps true. The author has managed very cleverly in playing off against each other the two women of the story, both beautiful and attractive, but separated by the intangible but insurmountable wall of caste.

ROMAN BIZNET. By Georgia Wood Pangborn. Cloth, pp. 280, \$1.50. Boston: Houghton, Mifflin & Co.

A MIXED German and French-Canadian ancestry, an inherited musical genius, and an artistic temperament are the endowment of Roman Biznet. Given these elements, the task of the author is to discover their reaction in life. The study is careful and thorough, and free from the disagreeable qualities that figure so largely in many of the analyses of abnormal temperaments. The case of Kitty, his cousin, who runs away with the coachman on the eve of her marriage to Roman, is an interesting one of reversion to type. A unique comparison of personal characteristics is secured by placing the characters of the story in the village of St. Regis in the midst of a conglomerate population of Yankees and French-Canadians.

THE MASTER OF CAXTON. By Hildegard Brooks. Cloth, pp. 411, \$1.50. New York: Charles Scribner's Sons.

THIS story is an excellent illustration of the author's ability to make a good tale out of rather unpromising material. The girl born of a poor white family in the south, adopted by a rich northern woman and returning to the south again after the death of her patroness is the embodiment of the spirit of northern enterprise and impatience with the leisurely methods of the people of the south. The legal complications of the plot are rather far fetched, but not unreasonable or improbable. The author has placed all readers under a great obligation by omitting to harp on the "lost cause" and the essential superiority of southern men and women to all the other members of the human race whatsoever.

MOSAICS FROM INDIA. Talks About India, Its Peoples, Religions, and Customs. By Margaret D. Denning. Cloth, pp. 296, \$1.25. New York: Fleming H. Revell Co.

THIS is a series of Indian vignettes, intimate, written in close touch with the life of Hindustan, high and low, squalid and beautiful. The missionary standpoint is more or less in evidence at all times, but this detracts little if at all from the interest or value of the book to the general reader; it is, indeed, corrective of many misconceptions general among those who are familiar only with the point of view of the English traveler, never a sympathetic and seldom an entirely fair authority on things Indian. The illustrations are from photographs of many interesting buildings, scenes, and portraits.

FIELD BOOK OF AMERICAN WILD FLOWERS. Being a Short Description of Their Character and Habits, a Concise Definition of Their Colors, and Incidental Reference to the Insects which Assist in Their Fertilization. By F. Schuyler Mathews. Cloth, pp. 547, \$1.75. New York: G. P. Putnam's Sons.

THE title and subtitle of this volume leave us little to say of it, except to assure the reader in advance that he will not be disappointed. We can confirm Mr. Mathew's assertion that the book was written in the fields, in spirit if not altogether in fact, and it should be carried back to the fields as Mr. Mathews intended. The illustrations, many of them in the natural colors of the flowers, are carefully drawn and well reproduced.

IN THE COUNTRY GOD FORGOT. By Frances Charles. Cloth, pp. 328, \$1.50. Boston: Little, Brown & Co.

MISS CHARLES has written a story quite out of the ordinary. It is badly put together, but contains unmistakable signs of promise. The barrenness and desolation of "the country God forgot," the monotony of its life, and its effect upon those who are acclimatized, are admirably sketched. The characters are strongly individual, and are placed in

telling situations. The men and women with whom the story is chiefly concerned have not lived in Arizona long enough to be identified with the "natives." They are mostly fortune seekers from the east, who play out an interesting human drama in a strange country.

FINLAND. By N. C. Frederiksen. Cloth, pp. 306. New York: Longmans, Green & Co.

PROFESSOR FREDERIKSEN has given us a work which is a model of its kind, and a genuine contribution to the literature of its class. The events of the past few years have brought Finland vividly before the public, and although the present book is not entirely timely, it is none the less interesting. In many respects, Finland, like Sweden, is similar to certain sections of the United States. At present the chief wealth of the land exists in its forests, but there are vast possibilities of agricultural development. One who reads the book can not fail to obtain a thorough and compact knowledge of the people, customs, institutions, wealth, and government of the country.

A DAMSEL OR TWO. By F. Frankfort Moore. Cloth, pp. 371, \$1.50. New York: D. Appleton & Co.

MR. MOORE here tries his hand on a present-day romance with not ill success. The story is placed in England, and an unscrupulous "Napoleon of finance," the daughters of one of his many victims, and the man who finally pulls the family out of its slough of despond, occupy the center of the stage. The South African war provides a minor scene or two, but the principal incidents of the story are those of everyday life, or what is supposed to be everyday life, Mellor and his methods of finance being a caricature rather than a true presentment of even the worst of the now well-known type of London promoter.

THE LAW OF GROWTH AND OTHER SERMONS. By Phillips Brooks. Cloth, pp. 381, \$1.25. New York: E. P. Dutton & Co.

THE ninth volume in the series of Phillips Brooks's sermons is full of the inspiring messages and invigorating truths that we are accustomed to look for in the utterances of this great preacher and teacher. In the twenty-one sermons here collected, the everyday duties of life are set clearly before us, together with the inspiration to do them, and the compensations for fulfilling them. The initial sermon, "The Law of Growth," gives the keynote of the whole volume, which is practically a series of suggestions for the development of character and sterling worth.

THE GOD OF THINGS. By Florence Brooks Whitehouse. Cloth, pp. 288. Boston: Little, Brown & Co.

A CHRONICLE of Americans transplanted in Egypt. The burden of the tale is the old problem of divorce and remarriage. The Protestant and the Catholic ideas of divorce are contrasted, and the girl who holds to the Catholic view firmly

refuses to surrender her principles even at the cost of her happiness. It is not quite clear why the characters should have been dragged away to Egypt, since the story is American in everything save location. Such a performance is not unlike pasting foreign labels on luggage that has never been outside Sandy Hook.

HOHENZOLLERN. By Cyrus Townsend Brady. Cloth, pp. 288, \$1.50. New York: Century Co.

MR. BRADY had the material here for a long short story, and nothing more; told rapidly and vividly, or, in other words, as the events occurred, "Hohenzollern" would have made a very effective tale. As we get it here, the suddenly determined rivalry of Barbarossa, Henry of Saxony, and Count Hohenzollern for the hand of the Countess Matilda of Vohburg is dragged out to such an extent that one's first interest is well-nigh exhausted. Mr. Brady is unfortunate, too, in the fact that his illustrator has represented his heroes as club-footed, or spavined, or both.

COMMENTS OF A COUNTESS. Cloth, pp. 222, \$1. New York: John Lane: The Bodley Head.

"It is as necessary for a peeress to write nowadays as it is for an American millionaire to have a fortune," says the anonymous author of "Comments of a Countess," by way of introduction and apology. But the sprightly comments that follow need no apology. Whether the "countess" writes of charity, or cricket, or rest-cures and Christian Science, or the degeneration of man, she is always gay, good-humored and charitable even in her railery at the foibles of fashionable London. Beneath her airy remarks lies the sound philosophy of common sense.

SONGS OF ALL THE COLLEGES. Including Many New Songs. Compiled and Arranged by David B. Chamberlain and Karl P. Harrington. Cloth, pp. 280, \$1.50. New York: Hinds & Noble.

EVERY college man will find songs in this volume which are endeared to him by memories of days which he would not willingly forget. There are here songs typical and not generally known outside of the colleges that gave them birth, and besides these there are the songs in common use wherever college men are gathered together. The plan of the book and the manner in which it has been carried out are alike praiseworthy.

THE PRINCIPLES AND PRACTICE OF WHIST. By Lennard Leigh and Ernest Bergholt. With Examples, Illustrative Deals, Critical Endings, Mathematical Calculations, etc., Including an Essay on Probabilities, by William H. Whitfield, M. A. Cloth, pp. 511, \$1.50. Philadelphia: Henry T. Coates & Co.

THIS treatise will be found to be simple enough for the novice and sufficiently advanced and scientific for the most exacting. It is unusually complete, but its best feature is the explanation or reasoning which accompanies each rule.

ANGELOT. A Story of the First Empire.
By Eleanor C. Price. Cloth, pp. 464,
\$1.50. New York: T. Y. Crowell &
Co.

THIS is, to be sure, a story of the first
empire, but not the sort of story one
expects of that period. It is none the
less agreeable on that account, however.
The action taking place far away from
the storm centers of the time, the love
story, which consists of the contest be-
tween one of Napoleon's generals and
a provincial youth for the hand of a
certain Helene of abundant charms, has
a chance to keep the stage to itself.

NEXT TO THE GROUND. By Martha Mc-
Culloch-Williams. Cloth, pp. 384,
\$1.20. New York: McClure, Phil-
lips & Co.

"A RECORD at first hand of much that
comes to pass between the time of the
summer fallows and the gathering of
next year's grain," is the author's desig-
nation of her chronicles of country life.
She devotes chapters to Ploughing,
Wasps and Ants, the Hog, the Possum,
the Horse, the Cow, Feathered Folk and
Insects, and various other creatures that
are next to the ground or up the trees.

AMONG THE NIGHT PEOPLE. By Clara
Dillingham Pierson. Cloth, pp. 221,
\$1.00. New York: E. P. Dutton &
Co.

THESE are very brightly written stories
of night prowlers of all sorts, two-leg-
ged, four-legged, and winged. The
muskrat, the red fox, the raccoon, the
deer-mouse, the hawk-moth, and the
humming-bird are some of the people
whose characteristics are described here.
The illustrations by F. C. Gordon are
as good as the text, which means that
they are very good indeed.

THE CARPENTER PROPHET. By Charles
W. Pearson. Cloth, pp. 288. Chi-
cago: H. S. Stone & Co.

A LIFE of Christ in which the super-
natural is carefully discarded. The
book is a clear, concise, and sympathetic
presentation of the author's view of the
life of Jesus.

WHEN LOVE IS KING. By W. Dudley
Mabry. Cloth, pp. 431, \$1.50. New
York: R. F. Fenno & Co.

A STORY which pleads for more love and
charity in human lives. The construc-
tion has been made subservient to theme,
but there is good plot and good narra-
tive.

KING FOR A SUMMER. By Edgar Picker-
ing. Cloth, pp. 400, \$1.00. Boston:
Lee & Shepard.

THE SCENE is laid in Corsica, and deals
with the revolution of 1735.

THE NEW CENTURY BIBLE: HEBREWS.
Edited by A. S. Peake, M. A. CO-
RINTHIANS. Edited by J. Massie.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, May 3

Two large strikes scheduled to commence on May 1 were averted, at least temporarily, and a number of smaller ones were settled, but many new controversies have begun. This labor factor is the only seriously unfavorable one in the industrial situation, exerting considerable influence over the volume of transactions, and also tending to unsettle confidence. In seasonable merchandise, especially dry goods and clothing, warmer weather has stimulated dealings, while out-door work is prosecuted vigorously. Collections are more prompt as a rule, fewer extensions being asked. Shipments are less delayed by traffic

PUZZLED

Hard Work Sometimes to Raise Children

Children's taste is oftentimes more accurate in selecting the right kind of food to fit the body than that of adults. Nature works more accurately through the children.

A Brooklyn lady says, "Our little boy has long been troubled with weak digestion. We could never persuade him to take more than one taste of any kind of cereal food. He was a weak little chap and we were puzzled to know what to feed him on. One lucky day we tried Grape-Nuts. Well you never saw a child eat with such a relish, and it did me good to see him. From that day on it seemed as though we could almost see him grow. He would eat Grape-Nuts for breakfast and supper and I think he would have liked the food for dinner.

The difference in his appearance is something wonderful.

My husband has never been known to fancy cereal foods of any kind, but he became very fond of Grape-Nuts and has been much improved in health since using it.

A friend has two children who were formerly afflicted with the rickets. I was satisfied that the disease was caused by lack of proper nourishment. They showed it. So I urged her to use Grape-Nuts as an experiment and the result was almost magical. They continued the food and today both children are well and strong as any children in this City, and, of course, my friend is a firm believer in the right kind of food, for she has the evidence before her eyes every day.

When I have some task to perform about the house and don't feel very strong, a saucer of Grape-Nuts and cream stimulates me and I am able to do the task at hand with ease.

We are now a healthy family and naturally believe in Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

congestion, and railway earnings thus far reported for April exceed last year's by 7.2 per cent, and those of 1900 by 17.7 per cent. A year ago bank exchanges at New York were distorted by the heaviest speculation in stocks ever recorded, sales being three times those for this week, which fully accounts for the decrease of 21.0 per cent in clearings. Compared with 1899 there is a gain of 22.2 per cent.

IRON AND STEEL

Consumers of finished steel products are compelled to place orders subject to the convenience of manufacturers, and it is the exception when any near-by deliveries are promised. An unprecedented amount of railway work is being done, assuring greatly improved facilities and enhancing the value of the properties, while the erection of new buildings would be much more extensive if material were available. This structural work is on a record-breaking scale, and promises relief to the situation hereafter, since many of the plants under construction will add to the productive capacity when completed. In the light of the nation's growth during the last decade, however, there is little occasion for anxiety regarding over-production, particularly as the leading interests have thus far held prices at a reasonable position. Pig iron has worked up to a higher point, Bessemer commanding \$20 at Pittsburg on deliveries within six months, owing to the full contracts held by the furnaces. Foreign dealers have shown much wisdom by making concessions in this market.

COTTON AND WOOL

Jobbers in dry goods have felt the effects of good weather, and a brisk trade has been done at steady prices, although no general advance has followed the rise in raw cotton or the restricted operations at woolen mills. Weak silver has continued to militate against exports to China. Overtime work at independent mills is partially neutralizing the effect of the weavers' strike.

CORN AND WHEAT

Cereal prices have been less inflated by speculation than they were last week, yet a high level was maintained and only slight reactions occurred. The general tenor of crop news was more encouraging, aside from Kansas dispatches which indicate that wheat needs moisture, although corn and oats have good prospects. Good foreign crop conditions were calculated to weaken the tone, yet exports of wheat from the United States, flour included, amounted to 5,579,037 bushels, against 4,132,357 a year ago. Recent attractive prices have brought corn to market more freely than in preceding weeks, but receipts of 1,686,050 bushels for the week fall far short of the 2,378,564 in the same week last year. The comparison as to Atlantic exports is still more striking, only

AN HONEST FRIEND

Cleared Away the Family Troubles

There is not one thing on earth that could enter a family and do as much honest good and bring as much happiness as in certain cases where coffee drinking is left off and Postum Food Coffee used in its place.

A family in Iowa Park, Texas, furnishes a good illustration. The mother says, "I want to tell you what happened in our family when we left off coffee and took up Postum. About eight months ago we made the change. I had been, for quite a while, troubled with rheumatism in my right hip and shoulder, swimming of the head, and fluttering of the heart, so I thought I had heart trouble.

Sometimes in walking my head would swim so that I would be obliged to sit down. I had other disagreeable feelings I cannot describe but they will be readily understood by coffee drinkers if they will confess it.

My family were also more or less ill and were all coffee drinkers. Well we gave up the coffee and started in on Postum Food Coffee; husband, myself and four children. Even the two year old baby (she had been puny since having the grip) had her coffee along with the rest of the family. When we made the change to Postum she began to fatten and now is perfectly healthy and fat as a pig.

My boys, ten and twelve years of age, are so stout and muscular that people remark about them and ask what makes them so. I do not have any more trouble with rheumatism or with my head, neither does my husband, who was troubled much in the same way. We are all in better health every way than we have been before in years and we are always glad of an opportunity to recommend Postum. I hope what I have said will lead others to make the change." Name given by Postum Co., Battle Creek, Mich.

Financial

THE MONEY MARKET

Bradstreet's, New York, May 3

The heavy interest and dividend payments maturing on May 1 caused more or less shifting of balances, and would partly account for the hardening of call-loan rates in the New York loan market. At the same time, the fear of gold exports causes conservatism on the part of banks and other lenders, and it was also thought that the uncertain position of some of the inflated industrials and other speculative stocks creates a desire on the part of lenders to curtail the accommodations extended to speculators interested in such securities. Call money hardened decidedly on Wednesday and Thursday, the rates rising to 15 per cent, with most of the business at 6 per cent, or higher. There was also more or less discrimination in regard to collateral of certain kinds. On Friday, however, the pressure diminished, the extreme rate on that day being 10 per cent, and 6 per cent was the ruling figure, the general feeling being that the flurry would soon subside. Time money was offered with moderate freedom at 4@4 1/2 per cent for all periods. Commercial paper was dull, with small offerings of prime names and a restricted buying demand, there being no practical change from last week's rates.

THE STOCK MARKET

In spite of high rates for call money and sensational breaks in manipulated specialties, the general stock market at New York was strong and advancing. Better advices regarding the crops lend encouragement to the bullishness on the grangers and southwesterns, and, although a settlement of the anthracite coal labor troubles is delayed, an adjustment is expected. New high-price records were made in a number of leading stocks, but the market on Friday declined in consequence of the fall in various specialties and "curb" stocks. Bonds were very strong, with speculative activity in low-priced issues. Foreign exchange has been strong at around 4.87 3/4 for demand sterling, and gold shipments are deemed liable to occur, although such operations are checked by the high rates for money here and a rise in sterling rates at Paris. Silver has been weak, making another low-record price both in London and New York.

BANK CLEARINGS

Bank clearings for the week ending with May 1 aggregate \$2,572,025,676, a decrease of 4 per cent from last week's total and a decline of 15 per cent from a year ago. Exchanges at cities outside of New York amount to \$804,493,359, an increase of 1 per cent over last week and a gain of eight-tenths of 1 per cent over last year.

Northern Pacific railway directors have declared a dividend of 1 1/2 per cent. This compares with 1 per cent quarterly heretofore paid on each class of shares. The present dividend is declared simply as a dividend, without specification as a periodic payment.

NEW-SKIN
TRADE MARK
REGISTERED
WATERPROOF COURT PLASTER

Heals Cuts, Abrasions, Hang-Nails, Chapped and Split Lips or Fingers, Burns, Blisters, etc. Instantly relieves Chilblains, Frosted Ears, Stings of Insects, Chafed or Blistered Feet, Callous Spots, etc., etc.

According to the sensitive parts will protect the feet from being chafed or blistered by new or heavy shoes.

Applied with a brush and immediately dries, forming a tough, transparent, colorless waterproof coating.

Mechanics, Sportsmen, Bicyclists, Golfers, Etc. are all liable to bruise, scratch, or scrape their skin. "NEW-SKIN" will heal these injuries, will not wash off, and after it is applied the injury is forgotten, as "NEW-SKIN" makes a temporary new skin until the broken skin is healed under it.

Pocket Size, 10c ea. (Size of Illustration)
Family Size, 25c ea.

WIT AND HUMOR

Subsequent Remarks of Thomas Atkins

You shipped me down to Africky, a feel-in' kind o' queer.

The burgherman he ups an' says "We want no Tommies here."

He shot me thru the kidneys then, an' when I didn't die,

I ups into an ambulance an' to myself says I:

O, it's "Tommy brave" an' "Tommy bold" an' "Tommy, you're a beaut,"

But it's late lamented Atkins, when the Boers begin to shoot,

When their guns begin to shoot, my lads, their guns begin to shoot,

It's late lamented Atkins, when their guns begin to shoot.

You talk about "brave men in red mis-managed in the field,"

Of Boer's brutal stubbornness, an' foes that ought to yield,

"Why don't they clean those farmers out, why don't the fracas close?"

But Tommy's been against the game, you bet that Tommy knows.

So it's Tommy this, an' Tommy that, an' Tommyrot to boot,

But it's "last sad rites for Tommy" when the guns begin to shoot.

When their guns begin to shoot, my lads, their guns begin to shoot,

O, it's "last sad rites for Tommy," when their guns begin to shoot.

—C. L. Edson in the Automobile.

The Epidemic

Lady met a brigand,
Captive she was took;
People raised a ransom—
Goin' to write a book.

Love-sick girl got jilted,
Sought a distant nook;
Brooded on her troubles—
Goin' to write a book.

Man, he thought he'd travel,
Took a flying look
At some foreign countries—
Goin' to write a book.

Fellow took a fancy
To be turning crook;
Trampin' didn't pay him—
Goin' to write a book.

Millionaire and pauper,
Valet, maid, an' cook,
Everybody's got it—
Goin' to write a book.
—Washington Star.

"The difference between my husband's club and mine," said the pretty woman in the turquoise colored toque, looking at her watch, "is that mine lasts from two until six, and his lasts from six until two."—Life.

Number 20
Volume XXXII

The Week

Thursday
May 15, 1902

NOT since the eruption of Krakatoa, in 1883, has any part of the world been visited by disaster so appalling as that which has overcome the French island of Martinique, and which has extended to several of the neighboring islands. Making every allowance for overstatements of the loss of life and destruction of property, the holocaust caused by the eruption of Mont Pelée, overwhelming the town of St. Pierre and the country surrounding it, is still so terrible in extent that it must be ranked with the great catastrophes of which Pompeii, Antioch, Yeddo, Lisbon, and Calabria are the historic types. It is hoped against reason for hope that the Martinique disaster may not be so great as it at first seemed, and, eagerly awaiting further news from the stricken islands, all peoples join in sympathy for the dead and ready aid for those who have escaped with the loss of everything but life.

THERE have been fresh gusts this week in the whirlwind caused by the reports of cruel practices by our soldiers in the Philippines—the famous charges of Major Cornelius Gardener relative to atrocities committed by officers and soldiers in Tabayas have been made public, Senator Lodge and Senator Tillman, among many other senators, have made speeches which do little to clear the situation, and Secretary Root has assured the senate that there are on record no orders issued by General Smith or any other Philippine officer which are not in conformity with General Order 100. The senate Philippine committee is every day bringing out far more interesting information than the Gardener report, which is indefinite when it is not absurd, and sooner or later the country will have material upon which to base some positive conclusions. "This investigation," as Senator Hoar said last week, "is still on the threshold."

VERY little is known of the causes of the revolutions which have almost simultaneously displaced the presidents of the republics of Hayti and San Domingo. Financial and industrial depression is thought to be at the root of the trouble in both the islands—a distinct improvement over the more familiar type of revolution fostered solely by the ambitions of someone who has been able to gather a few hundred ragged troops about him. Little bloodshed occurred in either island, and the lives of President Jiminez of San Domingo and of President Sam of Hayti are secured, pending the more or less peaceful choice of their successors. These two states are the only independent islands in the West Indies, and the sort of liberty that prevails in them affords a matter for thought.

PRESIDENT-ELECT PALMA'S speeches during his tour through Cuba have made a good impression at home and in the United States. "Politics" has not entered into his program at all; instead, he has discussed the necessity of economy, of the encouragement of agriculture, and of the continuance of the sanitary and educational reforms introduced while the island has been under our control. Of immediate interest to us, also, are his statements that he will firmly object to a United States naval station either at Havana or at the Isle of Pines, and that he will make no commercial treaties with us unless a tariff reduction of much more than 20 per cent is granted to the island. Senor Palma has given notice, in short, that Cuba is to be a self-respecting and self-sustaining nation if its people will support his plans and endeavors in their behalf.

AFTER a week's discussion, the house has passed the bill admitting the territories of Arizona, New Mexico, and Oklahoma to statehood, a step which does not meet with general approval. This was recently shown in a summary of

press opinions on the subject, the principal argument against the proposed admissions being that the experiment of placing comparatively raw and undeveloped communities on the same footing with such states as New York, Pennsylvania, Ohio, and Illinois, had been far from successful, and that the same mistake should not be repeated. It is expected that in the senate many obstacles will be placed in the way of the bill, partly on the grounds just outlined, and partly because the senate as now constituted would naturally object to the addition of six new members, all of whom are likely to be Democrats.

THE answer of the Northern securities company to the bill filed against it by Attorney-General Knox is a very adroit document. The answer of course denies that the company seeks to form a combination in restraint of trade; conspiracy is also denied. It is admitted that James J. Hill and other stockholders of the Great Northern, "severally and each acting for himself alone, and without any agreement to that effect with any other stockholder," sold their stock to the securities company, but this stock was \$26,000,000 less than a majority of the stock of the Great Northern. The government is thus called on to prove the commission of acts in restraint of trade, and, furthermore, to show that the action of individuals, "each acting for himself alone," in the disposal of their property is in the nature of a conspiracy. It is not remarkable that lawyers should declare that the attorney-general has a task of extraordinary difficulty before him.

SENATOR TILLMAN professes to be quite unmoved by the fact that he was left a man without a party in the senate last Wednesday, his fellow Democrats ostentatiously absenting themselves when the South Carolina senator began his speech on the Philippine bill. However this may be, the Republicans are delighted over their success in "drawing" Tillman, and the Democrats are disgusted at the prospects of having Tillman-made ammunition used against them at every available opportunity. Few go so far as the Brooklyn *Eagle*, which asserts that Tillman "has damaged the Democracy to a degree that can not yet be accurately measured," but all realize that Tillman has done just what the Republicans wanted him to do—admitted and bragged of the fact that what is called oppression in the Philippines is common practice in the Democratic south.

LORD SALISBURY'S Primrose League speech is criticized by some and ridiculed by others. Speaking of the war, the prime minister said that no regret was harbored by the government in regard to the course it had pursued, and that the same action would be again taken in the same circumstances; that the conflict had added to the prestige and glory of the empire, and that the attitude of the government in the matter of peace terms remained absolutely unchanged. These statements are so completely at variance with the general idea that Great Britain entered lightly into a war of aggression since bitterly repented, that it is no wonder that many commentators accuse the minister of trying to "bluff" the world into thinking that he is well pleased with the result.

THE French government, as was expected, gained materially in the reballoting of Sunday, May 11, securing at least nine of the disputed seats in the chamber. Even when the Nationalists concentrated their efforts, as in the district where M. Millerand, minister of commerce, was running for reelection, the anti-government party was unsuccessful. Another almost equally fortunate incident of the rebalot was the defeat of all the anti-ministerialists in Algiers.

AMERICAN

The Death of Admiral Sampson

HIS CAREER—THE FAMOUS CONTROVERSY

REAR-ADMIRAL WILLIAM T. SAMPSON died at Washington, May 6. He was 62 years old. Reared on a New York farm in the midst of poverty and hard labor, William T. Sampson's ambitions were nevertheless cherished and pursued from boyhood. His early education was gained largely by his own efforts, but at 17 he entered the naval academy, and graduated four years later, 1861, at the head of his class. In the civil war he rendered distinguished service at Fort Sumter, and received his commission as lieutenant-commander in 1866. His services at the naval academy as an instructor, and his aid in the design of ships and yards, are reckoned as second only to his services at sea. During the Spanish war the admiral was in command of the United States warships at the bombardments of San Juan, Matanzas, Cardenas, and the Santiago forts. He was also technically in command of the ships which destroyed Cervera's squadron, but he did not get nearer than four or five miles to the enemy while the battle was in progress, having departed on his flagship for Siboney, eight miles from Santiago, before the Spaniards emerged from the harbor. The controversy over this battle between those who bestow credit for the victory upon Sampson and those who insist that the next in command, Admiral Schley, is entitled to all the glory, has raged ever since the news of the victory was received. The majority of the Schley court of inquiry decided against Admiral Schley, and therefore, inferentially, in favor of the claims put forth by the partisans of Sampson. But this decision had little effect on public opinion.

Nearly all the commentators on the death of Admiral Sampson touch upon its tragic element. "For nearly twenty years, whenever the navy department needed an officer for a special, delicate, and dangerous duty, requiring a mingling of courage and knowledge, technical training, and a high standard of character, he was selected," says the *Philadelphia Press*. "But when, his career run, his work done, no duty neglected and no achievement unfulfilled, the rewards which great masses of his countrymen gave him were deferred hopes, broken health, the eclipse of reason and an untimely death." The comment of the *Philadelphia Record* is in much the same words: "The weary brain, worn out in planning for national honor and

defense, knows no more the scourge of pain nor the stings of acrimonious controversy. It is for the historian of the future to write the story of William T. Sampson's life of heroic public service; it is for those of this generation who survive to reverence his memory."

In touching upon the controversy that raged around Admiral Sampson regarding the Santiago fight, very few papers go so far as does the *Baltimore American* in accusing Sampson of "encouraging the persecution of Schley"—an "act which the people of the country could never condone." The editorial of the *New York Times* is more nearly typical of the

general opinion: "The fount and origin of that trouble was the ill-fortune of the commander in being absent from the blockading station on the morning chosen by the Spaniard for his sortie; and it would never have attained the proportions of a national scandal had not the flames of resentment been industriously fanned by reckless partisans of Admiral Sampson, whose activities must have far outrun his wish and purpose. The errors of his friends are not to be charged against him, an able, brave, and resourceful commander whose triumphs adorn the annals of our navy." The *Tribune* fears that "the admiral has departed, not in the conscious assurance of un-

From a drawing by Cecilia Beaux

By permission of the Century Co.

WILLIAM T. SAMPSON

fading renown; but we entertain no doubt that his services will be more and more gratefully appreciated by his countrymen as the years pass, and that his place in history near the front rank of great commanders is secure." The *Sun* reminds its readers for the last time that "Sampson enjoyed the recognition and the praise of his commander-in-chief, the president; the love and the admiration of his subordinates, the captains and the sailors of his fleet, and the consciousness that there was no stain upon his honor. In comparison with those, the dishonesty and the meanness of rivals, and even the thanklessness of political prejudice, which to impartial onlookers made his later years a tragedy, were trifling."

The *Boston Post* appears to have said the "last word" in the following paragraph: "Now that death has drawn the curtain upon this long and honorable career, we can well afford to forget all controversy and to honor this hero as he will be honored in the pages of impartial history which record the glories of our republic."

As to the Flag Staying "Put"

PRESIDENT ROOSEVELT COMMITS HIMSELF

WITH not much reason the New York *Evening Post*, speaking for the anti-imperialists, has claimed that President Roosevelt was not committed to the retention of the Philippines, and so the *Post* has entertained hopes that he would at a favorable opportunity support the efforts of those who would give the islands independence, or otherwise dispose of them. All such hopes must have been dashed by the speech:

THE SOLDIERS: "Maybe some people think this is fun."
—Chicago Record-Herald

of President Roosevelt at the Sons of the Revolution banquet at Washington. We leave to another anti-imperialist authority the statement of the president's remarks as to the flag staying put in the Philippines: "The president did not say at the Washington banquet that the flag shall stay 'put' in the Philippines; what he did say was that 'I think you make it evident that you intend that the flag shall stay put'—this in response to the applause which greeted his toast to the army in the eastern tropics. But there is no essential difference in the two quoted expressions, and we have President Roosevelt, at this precise moment of revelation of a hell of hate and torture and mutual murder of our creation in the Philippines, resuming the conscienceless, and, as so many believe, unrepugnant, slogan of 'who will haul it down?'"

This is the version of the Springfield *Republican*. The Chicago *Inter Ocean* (Rep.) quotes the president as saying: "The republic has put its flag in those islands, and the flag will stay there. The flag will stay put!" The *Inter Ocean* adds that "if any of our soldiers, in dealing with barbarous Malays, has exceeded the legitimate usages of warfare with savages, he will be punished. The republic's justice and the government's power will take care of him. But the flag will stay there. The president did well to voice the feeling of the nation before a gathering of men who take pride in their descent from those who fought to make this republic. His words are filled with the spirit of '76 and of '61. The flag is in the Philippines. The American people sent it there, and they will keep it there." This and the comment of the Omaha *Bee* is typical of Republican editorials on the

speech: "The speech of President Roosevelt was an answer to those who demand that the government shall abandon its policy toward the Philippines, regardless of what the consequences might be. He says to such that no proposition of this kind can receive any consideration from his administration; that the policy thus far pursued will be strictly adhered to. That his position will have the approval of all save those who are seeking to make political capital by assailing the Philippine policy of the government and the insignificant number of so-called anti-imperialists, can be confidently asserted."

Democratic comment is scarce; one paper intimates that Congress, not the president, has the last word to say as to the flag "staying put," while another thinks the president selected a poor time to indulge in enthusiastic remarks over the retention of the Philippines—a reference either to the cruelties of the warfare there or the renewal of fighting in Mindanao, or both.

The Fighting in Mindanao

ONE OF THE MOST GALLANT PERFORMANCES OF AMERICAN ARMS
IN THE PHILIPPINES

THE expedition against the Moros of Mindanao was begun in earnest on May 3, when the American troops under Brigadier-General George W. Davis stormed and captured the native fort at Bayan. So stubborn was the defense that only eighty-four out of the 300 defenders appear to have survived. The American loss was eight killed and forty-one wounded. General Davis telegraphed that he had "never seen or heard of any performance excelling this in gallantry and grit." The president wired his thanks to General Davis and Colonel Baldwin, and added, rather significantly: "Your fellow-countrymen at home will ever honor the memory of the fallen, and be faithful to the brave survivors who have them-

UNCLE SAM: "These Cross and Crescent crusaders weren't in my class for a minute."—Detroit Journal

selves been faithful unto death for their country's sake."

"The president tells the absolute truth," says the Cleveland *Leader* (Rep.). "The American people are not represented by the political demagogues who abuse and vilify every American soldier who does his duty in the Philippines. Those who uphold the stars

and stripes always have had and always will have the support and encouragement of the American people." The New York *Evening Post* (Ind.) takes a different view of the president's cable: "Other world powers do not get so excited when a few of their soldiers at the ends of the earth are killed in a trifling action. That is part of the regular business of imperialism. We ought to have sufficient imperial dignity to take such news with a more royal *aplomb*. And if we waste all our superlatives on a skirmish, what shall we have left for a real war, if one ever comes?"

Whatever the merits of President Roosevelt's telegram of congratulation, there is only admiration for the victory, great or small as it may be. "Without regard to what one may think about the Philippine situation, there are few Americans who will not join in President Roosevelt's congratulations to the soldiers who showed such splendid courage and fidelity in the fight with the Moros," the Philadelphia *Ledger* (Ind. Rep.) thinks. "This fighting in the open, it should be observed, is a very different thing from killing everything over ten, or from torturing helpless prisoners, either as punishment for their crimes or to extort confessions from them. The American people will never approve such practices, no matter what excuses may be made; but they will honor the soldiers, who, in the discharge of duty and in open fight, exhibit the daring shown by the assault upon the fort of the Moros." The *Press* (Rep.), of the same city, is more enthusiastic: "The American flag and American troops did at Bayan what both have been doing for a century on this continent. They won a victory for order and civilization over savagery and violence. There is nothing better to do in all the world's work by the day or by the year."

Senator Lodge's Speech

HIS ANSWER TO ATTACKS ON THE ARMY IN THE PHILIPPINES

SPEAKING on the Philippine government bill in the senate last week, Senator Lodge answered those who have attacked the war department and the army in the Philippines, basing their criticism on the recent disclosures as to cruelties practiced on the Fili-

pinos by our soldiers. "I did not arise to defend, in the remotest way, any cruelties practiced upon helpless prisoners," the senator said. "I regard them as bitterly as anyone can. But as I have listened to this debate I confess I have felt shocked beyond measure at the attacks made upon the army of the United States. Their honor is our honor. Don't let us condone a single proved offense. But let us be just at least to our own. Let us remember, living here in sheltered homes, far from the sound and the trials of war, not only their sufferings, but their temptations, their provocations, their trials."

The speech, in the opinion of the Pittsburgh *Chronicle-Telegraph* (Ind. Rep.), "was the utterance of a patriotic American, whose soul has been stirred within him by the bitter attacks of men who have lost no opportunity to heap opprobrium on the American army and upon the United States government. It was a dispassionate review of the facts. The speaker did not condone cruelty or palliate torture, but he presented extenuating circumstances which carry great weight with all except men who are determined to make political capital out of isolated cases." The speech presents itself in a very different light to the Springfield *Republican* (Ind.). "It has three aspects, first, 'you're another'; second, the army is being attacked; third, this is for political effect. It is true, he says, that our army, in some instances, has adopted cruel and inhuman methods of warfare, but the Filipinos have been more cruel and inhuman. It seems hardly necessary to say," the *Republican* adds, "that even when in contact with actual savagery, civilization must still be civilization if it is to make good its claim to superiority."

The same difference of opinion runs throughout the Republican and Democratic press, notwithstanding the fact that all admit that this is not "a political question." Thus the Troy *Times* (Rep.) claims that "Senator Lodge made it clear that the sweeping charges against our army are unwarranted; that the whole course of our government thus far and the purpose underlying the proposed legislation for the Philippines, have had in view the permanent good of the people of those islands, through the promotion of civilization and intelligence, the promotion of industry

A SICK EAGLE.—Philadelphia Record

SPIKED.—New York Tribune

and commerce, the development of natural resources, the maintenance of peace and order and the guarantee of the happiness and welfare of all concerned. These are objects which the American people will heartily endorse, and from the policy aiming at these results, they will not be persuaded to depart by the partisan and unpatriotic misrepresentations of either Democratic statesmen or the latter's friends and allies, the antis whose sympathies are wholly with Malay savages rather than with brave and honorable Americans." The *Louisville Courier-Journal* (Dem.), on the other hand, accuses the senator of changing front now that the facts regarding the cruelties perpetrated by our troops can no longer be concealed. "Only the other day," the *Courier-Journal* says, "the men the senator is now defending were saying that there were no cruelties, were rebuking all those who were even hinting at the possibility of cruelty or outrage. What has brought about the change? Has the war department obtained information of a character not before in its possession? No, but the people have. The authorities at Washington were willing to stand for the cruelties until the people found them out and expressed their resentment. The policy of suppression has been continued as long as it was possible. Now there is apparent a disposition to hide behind the army, but this is a palpable dodge."

War's Profit and Loss

IN THE PHILIPPINES AND SOUTH AFRICA

WHILE the war department is working overtime to compile the figures, demanded by the senate, showing the cost of the Philippine war, Mr. Edwin Atkinson has offered a computation showing that up to June 30, 1902, the total cost of our five years of war, first with Spain and since with the Filipinos, was \$660,000,000, about one-half of which was spent on warfare in the ceded islands. The cost of our operations in the Philippines for the fiscal year that ended June 30, 1901, was \$144,000,000—or \$1.86 per head for the entire population of the United States. On the credit side of the account, as the total

offset to this annual expenditure, Mr. Atkinson places our increased exports to the islands, which now amount in value to the "magnificent total of a little over \$3,500,000," or not quite five cents per head for the total population of our country. These exports, Mr. Atkinson thinks, "may pay a profit of one cent per head of our population"—say \$760,000. Spending \$144,000,000 a year to get back \$760,000 precisely expresses, therefore, the business results of our expansion in Asia. The movement is certainly not profitable from a business point of view.

"Can anyone point out how we have been benefited as a people or a nation in any way by the Philippine war?" asks the *Pittsburg Post* (Dem.) "In posting the books is not the balance all against us? And yet it is the boast that this is the commercial age, and money-making the law and the gospel of the American people. And then what have we gained in national honor and glory? That calls up the heart-sickening part of the whole business."

The *New York World* is moved to ask similar questions regarding the war in South Africa. "Sir Michael Hicks-Beach's hope that the cost of the Boer war will be repaid 'from the wealth of the Transvaal' is a cool confession that the purpose of this effusion of blood is conquest and plunder," says the *World*. "The remark also exhibits an almost childlike optimism. By his own figures the war has already cost \$825,170,000; the coming year will add \$225,000,000, besides \$92,000,000 for gratuities to the soldiers and for bringing them home—if they can be brought home so soon. Englishmen estimate the indirect cost at \$150,000,000, and the Boer peace proposals may call for another \$50,000,000 for restocking farms, etc. Altogether there will be a total of not less than \$1,340,000,000—just half of our own national debt in July, 1865, at the close of the civil war. The two perhaps-conquered republics are a trifle larger than California; they contain 107,817,600 acres of parched veldt and rock kopje. Britain is paying over \$12 an acre for 'eminent domain' in this barren land—besides the price in blood that 'staggers humanity'—and the cost will rise to \$20 before she is through. Will the chancellor explain how these enormous sums are to be repaid 'from the wealth of the Transvaal'?"

WILL HE COME INTO OUR KINDERGARTEN?
—*Minneapolis Journal*

AN UNKIND CUT FOR THE LAND-STEALING INDUSTRY
—*Brooklyn Eagle*

Our Representatives in Cuba

MINISTER AND CONSUL-GENERAL APPOINTED

IT is gratifying to the *Chicago News* (Ind.) "that President Roosevelt, instead of selecting mere figureheads to hold the positions of minister to Cuba and consul-general to Havana, has picked upon men who have high ability and positive force. Herbert G. Squiers, who will be the first minister to Cuba, is thoroughly familiar with diplomatic usages. He has enjoyed special training which will fit him to meet emergencies with tact and discretion. As secretary of legation at Peking he amply demonstrated his usefulness by his cool-headedness and good judgment. Prior to taking the position at Peking he had a valuable continental experience, doing much to win the esteem of the German emperor and to promote friendly relations with Germany. General Bragg, a Democrat, of 'Iron brigade' fame, is a man of wide experience, positiveness, and courage who may be depended upon to give the Cubans a favorable impression of American promptness and fairness in business dealings. President Roosevelt's appointments show an admirable appreciation of the fact that there is great and important work to be done in Cuba. In no sense can they be regarded as political appointments."

The *Boston Journal* (Rep.) says that "in choosing our two representatives in Cuba, President Roosevelt exemplifies the high ideals of the public service which he has so long and earnestly taught in written and spoken words. There is no 'politics' in either of these nominations. They both go to men of high character, proved ability, and practical experience in diplomatic work." The *Providence Journal* (Ind.) fears that "the president's selections for minister to Cuba and consul-general at Havana will not be hailed with delight by the crowd of place-seekers which has been after the two offices. But those who do not view the selection of Mr. Squiers from the partisan side will agreeably recall that he was with Minister Conger during the siege of Peking, and that he took a prominent part in the defense of the legations. As he was appointed to China from New York, it may be supposed that the president knows the man and deems him competent to perform the delicate responsibility of maintaining fitting relations between the United States and the new republic of Cuba."

Congressional Summary

CONGRESS DAY BY DAY

MAY 5.—Senator Lodge defended the administration's policy in the Philippines. The house adjourned soon after convening, in memory of Representative P. J. Otey, of Virginia.

MAY 6.—In the senate, a lively debate on the Philippine question was started by Mr. Beveridge, who accused the Democrats of distorting the testimony regarding alleged atrocities by American soldiers; others who spoke were Senators Rawlins, Carmack, Turner, and Hoar. The death of Representative Salmon, of New Jersey, was announced in the house.

MAY 7.—During the discussion of the Philippine government bill in the senate, Mr. Tillman made a sensational speech in which he defended "shotgun"

and other forcible methods to subdue the Negro in his state and prevent Negro domination; while Tillman was speaking most of the Democratic senators left the chamber. The house began consideration of the bill to enable the people of Oklahoma, Arizona, and New Mexico to organize a state.

MAY 8.—The Philippine debate continued in the senate, and there was a sharp exchange of personalities between Mr. Carmack, of Tennessee, and Mr. Dolliver, of Iowa. The bill admitting Arizona, New Mexico, and Oklahoma to the union as states was again under consideration in the house.

MAY 9.—Mr. Lodge (Rep., Mass.) tried to have a date set for a vote on the Philippine bill in the senate, but was opposed by the Democrats. The house passed the bill admitting Arizona, New Mexico, and Oklahoma as states.

MAY 10.—The senate passed the army appropriation bill and also a bill appropriating \$100,000 for the relief of the Martinique sufferers; the latter was held up in the house on account of the objections of Mr. Underwood (Dem., Ala.).

Various Topics

ANGRY CATTLE RAISERS are now violently protesting against the strenuousness of the president. When the cattle barons, not content with using the public domain as grazing commons, began to fence in the land and to forbid others to trespass on it, the patience of the interior department became seriously taxed. The president, on hearing the report of this from Secretary Hitchcock, said, "Put them off." So the ejectment orders went forth, occasioning wrath in many parts of New Mexico, Colorado, Wyoming, Nebraska, Kansas, and Oregon.

NOW that the president has abandoned his purpose of forcing the retirement of General Miles, let us have peace in the war department. General Miles, if he can not forget, can afford to forgive. His course may not have been vindicated by the people, but his declaration about the "severity" of the warfare in the Philippines has been more than justified. Secretary Root, in turn, ought to be perfectly willing to bury the hatchet. He has come out of the contest decidedly second best, to find his department on the defensive before the country, which, moreover, feels that it has not been frankly dealt with by Secretary Root.—*Boston Transcript*.

COUNT DE ROCHAMBEAU, whose statue, presented to us by the French people, will be unveiled with great ceremony at Washington, was one of those gallant Frenchmen who fight, as it were, by instinct. He entered the French army when only sixteen years of age, and at twenty was appointed aide to the Duke of Orleans. When, after a distinguished military career, he came to America as lieutenant-general of a force sent to fight with Washington against the British, he had reached the age of fifty-five. He was decorated on his return home, and a few years later he became a marshal of France. In 1804 he was pensioned by Bonaparte, and received from him the cross of grand officer of the Legion of Honor.—*Harper's Encyclopaedia of United States History*.

BETTER THAN MONEY: Secretary Long, the day before his retirement, wrote the following letter to Captain Charles E. Clark. It explains itself: "My Dear Captain—The president has advised me of your declination of the appointment to act as naval representative at the approaching coronation of King Edward. I appreciate your reasons for declining this honor. There is something very pathetic to me in the fact that such an eminently deserving officer, of the very highest merit, who has served the country with a distinction that records his name high upon the historic roll, has so little of this world's goods that he is unable to accept such an honor. I feel it so much that I can not help writing you, as I have just written the president, saying that the one redeeming feature in it all is the infinite delight of thinking that there is something else still in the old republic besides money, and better than money."

FOREIGN

The Unrest in Europe

London *Expansionist*. Excerpt

A GLANCE at the condition of Europe suffices to show that coming events are casting their shadows before. The strikes and rioting, the social unrest and commercial strife, are but the twentieth century counterparts of the nationalist and political agitations in the nineteenth century that culminated in the movements of 1848. The great difference is that the causes of the present upheaval are not local but universal; not political but social. They are found in the condition of the masses, and are due in large part to the system of militarism that weighs upon the European nations and devours their substance. The manifestations, however, differ in some respects in the various countries, although they have a common cause. In Italy they are connected with the efforts of the papacy to recover its temporal power as well as with the economic situation of the people; and in Spain they spring from Carlism, which still has its adherents in the north, and from religious and economic causes. In Austria, race, religion, and poverty are at the bottom of the ferment which threatens to rend the ill-assorted union between Austria and Hungary and dissolve the empire of the Hapsburgs, unless it is propped up by either a Russian or German alliance, the former seeming for the moment the more likely.

But it is to Germany that we have to look more particularly, for the reason that though the commercial conditions are much disturbed, the perfect military organization of the empire makes it by far the most important factor in the European polity. There the Socialist movement is more powerful politically, and in spite of all the government has done to repress it, is better organized than in any other country in Europe. In Russia, everything is in a state of transition, and the outcome is not very clear. The contest in that country is between the autocratic bureaucracy and the developing intelligence of the more well-to-do class allied to the socially awakening labor class in the great industrial centers. The movement, such as it is, is both social and political; but is not yet sufficiently powerful or organized to interfere with the expansion policy of the government which, amid internal troubles and through external opposing obstacles, is pushing the borders of the empire steadily toward the sea in several directions. Of Great Britain, little need be said; the conditions are exceptional in many ways, and unlike those of other countries. The political, social, and commercial developments have been along individual and separate lines, and only quite recently has there been anything like a fusion or alliance between them which has taken the form of a feudal-commercialism grafted on a cosmopolitan financialism. Lastly, there is republican France. Through the free exercise of the suffrage and the second ballot, Socialism and Radicalism have become more permeating than revolutionary forces in French politics, so that the democratizing of France goes on without violent material friction; and the tendency is rather to level-up than pulling down.

London *Spectator*

The governments, though determined, do not want disorder, and excessively dislike using their conscript

troops against the people of their own cities. Furthermore, the workers have votes, and to arouse the bitter hostility of masses of voters seems to governments, to party chiefs, and to the whole upper class, exceedingly unwise. They are always dreading lest the peasantry should be converted, or should come to terms with the artisans, when there might be a cataclysm most menacing to property. Above all, the great burgesses, who have to live in the cities, and who are held responsible by opinion if authority is overthrown, are most anxious to restore quiet without exciting, it may be forever, fierce anger among the most numerous section of their constituents. We anticipate, therefore, as an outcome of the existing ferment, a distinct development of the desire for compromise, a disposition to increase wages, and a collapse more or less sudden of the resolution to adhere to the traditional stint of work. It is there that compromise is easiest. Men have energy which, when overworked, they will not put out, and in half at least of the trades of the world as much can be got out of a man in nine hours as he will voluntarily give in twelve. The increase of wages is more difficult, but it will, we believe, be secured in part by the use, as in America, of better machinery, and by a more determined resistance to all taxes on food. At all events, the trend of events is toward a greater readiness to listen to the complaints of the class which everywhere throughout the continent is showing a growing determination to make its cries more audible.

Maxime Gorky as an Agitator

THE RUSSIAN NOVELIST IN A POLITICAL ROLE

M. E. SEMENOFF, in the *Revue Blanche* (Paris), comments on the political career of the Russian novelist, Maxime Gorky, beginning with his election to the section of *belles-lettres* of the imperial academy of sciences of St. Petersburg. This action was quickly followed by the announcement in the *Official Messenger* that "owing to circumstances which were unknown to the members of the imperial academy, the election of Alexei Maximovitch Pechkow (pseudonym, Maxime Gorky), prosecuted in conformity with article 1035 of the criminal code, is declared void." This prosecution was the result of Gorky's participation in the riots which took place last year at St. Petersburg, Moscow, and elsewhere. The union of Russian writers was dissolved at that time and the prosecution of Gorky followed.

Gorky is said to be the first Russian to write a book of which 30,000 copies were sold in Russia. The critics fail to explain his popularity, probably because they are not at liberty to do so. The anti-Semitic papers, however, agree that he is a demagogue, a revolutionist, and a Marxist. Mikhailovski describes the creed of Gorky as "a glorification of force and beauty, a necessity of harmonious thought, including all the manifestations of life, and an effort toward the suppression of certain narrow forms of life to make place for more comprehensive forms." The *Revue* writer

for one is convinced that Gorky's popularity as a novelist is due to his position as a political agitator, and his method of playing this rôle is very clever. In his "Waulachian Legend," published in the *Journal of Kharklov*, he violently blames Russian society "for its miserable manner of living when it might be looking for the fairy." The allegory is so plain that the Russian reader understands perfectly what the author means; his heart vibrates when he reads in "The Declaration of the Life Worker," "You shall not ask for but take the things to which you are entitled and which you need."

Just now there is circulating in Russia, in many dialects, a letter which Gorky wrote to a Zionist of St. Petersburg, and which was published in *Die Welt*. In this letter he says: "I am told that Zionism is an Utopia. I do not know; but this idea shows an unquenchable and passionate thirst for liberty. Therefore it is for me a reality that is life. I hope that the Jewish people and the whole human race will use all their moral strength for the realization of this dream; that they will fight for it without being discouraged; that they will vanquish everything which is unjust."

"Unlike his predecessors," the writer in the *Revue Blanche* says, "Gorky does not seclude himself in the serene regions of success; he comes into the valley of tears and lamentations, and devotes all his strength to the struggle for emancipation."

The Future of Albania

VIENNA CORRESPONDENT *London Times*

SOME of the parties interested in the Albanian question are busy counting their chickens before they are hatched. Fresh candidates for the future Albanian throne are already being discussed, and it is evident that some people look upon an independent Albania as one of the certain consequences of pending events. The *Neues Wiener Tagblatt* informs its readers that Don Juan Aladro Castriot, described as former Spanish minister at The Hague, has recently been canvassing support among the Albanian colonies of south Italy, and has been endeavoring to impress them

with accounts of his descent from the Albanian hero George Castriot, better known as Scanderbeg. Some of the Albanian notables, however, dispute his title, and contend that he is merely indirectly descended from that personage. In the course of an interview, Don Juan Castriot remarked that Italy and Austria should emancipate Albania from the Ottoman yoke. He expressed regret at the pacific attitude of Greece, caused, according to him, by the fear of losing Epirus.

The news-sheet *Information*, which gives Don Castriot the title of prince, contains further particulars of his recent tour, and states that he made a number of speeches advocating the solidarity of the Albanians of Italy with those of the mother country, and soliciting their support for his own candidature for the Albanian throne. He met, however, with two dangerous rivals—one the Marquis Auletta, or John Castriot Scanderbeg, and the other Baron Fossacena, or Philip Castriot. Both are prominent Neapolitan citizens, and declare themselves on documentary evidence to be directly descended from the great Scanderbeg, whereas Prince Castriot can only boast of his descent in the female line. The prince has accordingly proceeded to Montecassino to hunt up in the celebrated library documents proving his right to the throne, which he intends to put before the Albanian congress to be held at Naples. The other two candidates will also endeavor to establish their claims, and a conflict between the three pretenders seems unavoidable. According to the *Information*, if the candidature of Marquis Auletta should be preferred by the congress, it will also meet with the approval of Italy, he being a Neapolitan, whereas Prince Castriot is a Spaniard.

It seems extraordinary, and not altogether of good omen, to hear the Albanian question discussed as if a partition of European Turkey were within measurable distance. All that is officially known is that there is great dissatisfaction among the Albanians, who are in a state of more or less open disaffection and on a few points have resorted to armed resistance against the Turks. But it is scarcely a secret that foreign influence is actively at work among the Albanians, and as long as that continues to be the case there is very little prospect of the restoration of order.

WATERFRONT, ST. PIERRE

ST. PIERRE, MARTINIQUE

The West Indian Disaster

THIRTY THOUSAND LIVES DESTROYED IN MARTINIQUE

THIRTY thousand human lives and millions in property have been destroyed in the French island of Martinique by the eruption of the Mont Pelée volcano, standing five miles from St. Pierre, one of the principal towns of the island. According to the meager details so far obtainable, the volcano (on May 8) discharged a mass of molten rock, cinders, and flame which swept town and people out of existence almost without warning, giving them no time or opportunity for refuge. In a few minutes St. Pierre and its roadstead and shipping were engulfed in flame and flying lava. The waters near the shore were at boiling point, cutting off what might have been a means of escape for hundreds. Only one ship escaped, and it is from her captain that most of the news at hand is obtained. Describing the eruption, one of the few survivors from the steamship *Roraima* says: "First of all a great pillar of flame from the volcano rushed straight up in the air, then it opened out wider than the mountain itself and came roaring down out of the sky upon us. Some of us rushed to the fore-castle head to heave the anchor, and as we reached the ship's head the fiery cloud was upon us. Red-hot stones, scalding mud, and red splashes of flame dropped and clattered all over the ship. When I looked at St. Pierre the sight was terrifying. The town was gone and in its place was a long stretch of gray, smoking, flaming dust."

Four days after the eruption broke forth it was impossible to approach the devastated districts. Fort de France, the capital, escaped the first results of the eruption, but dispatches from that point on Monday say that the whole northern side of the island is being gradually engulfed by the streams of lava that pour ceaselessly from Mont Pelée. The entire region is a waste.

On the neighboring island of St. Vincent another volcano has erupted, covering Kingstown with ashes, causing the death of many, and destroying vegetation and property. Kingstown lies at one extreme of the island and the volcano, La Soufrière, at the other, eighteen miles away, so that a repetition of the Martinique disaster is unlikely.

"The awful story of the destruction of the city of St. Pierre," says the *Boston Advertiser*, "is so grue-

some in its outlines, so appalling to the imagination, so unprecedented in the history of the western hemisphere, and in nearly all modern history, that a reader's mind finds difficulty in grasping the story as anything more substantial than a hideous dream. But there is too much reason to fear that when the whole truth is known, so far as it can ever be known to mortal men, the certainty will be found substantially as bad as was indicated in the first stunning and seemingly incredible announcement." The *New York Times* discusses another aspect of the calamity: "We are so in the habit of bragging about man's conquest of nature, and that conquest has been so wonderfully advanced in our own time, that we are prone to forget how far from complete it really is. When a convulsion of nature occurs which we are unable not only to predict beforehand, but satisfactorily to account for even after the event, and in the face of which modern civilized man is as helpless and as powerless as a savage or a child, we are compelled for the time to moderate our exultations."

The *New York Evening Post* can not doubt that the "horror and the sympathy which this unparalleled calamity arouses may find occasion to express itself in practical beneficence. An appeal for aid would undoubtedly meet a ready response. Reports of similar volcanic disturbances in the islands of St. Vincent and Santa Lucia are most disquieting. The economic distress of these colonies is already extreme, and disaster by fire or flood would fill the measure of their misfortune." The *Philadelphia Times* shows the probability of famine and pestilence in the island, and calls attention to the fact that all means of sustenance have been destroyed, adding that "it would be an act of the highest humanity to give earnest to the people of a generous fellow-feeling, as welcome to many, perhaps, in its moral as in its material effect."

The *Boston Post* fears, and these fears find expression in many quarters, a spread of volcanic disaster in the West Indies: "The volcanoes in the Windward islands have resumed activity; earthquakes have been of frequent occurrence there of late; in Guatemala, on the mainland, 600 persons were killed or injured in a disturbance of this sort about two weeks ago; in Salvador the subterranean forces have made themselves evident by earthquakes and tidal waves. All these things are a part of the great disturbance which has wrought such destruction in Martinique. We may reasonably fear that the end is not yet." The *London Standard* announces the same belief.

SOCIOLOGICAL

The School as a Socializing Institution

THE EXPERIMENTS OF ILSENBURG AND BEDALES

IN the May issue of the *New England Magazine*, there is an account of two unique schools, one in Germany and one in England, founded upon the principle of a social and socializing institution, where all are learning to work constructively. The German institution is situated in the midst of the Hartz mountains, at Ilsenburg, the English one at Bedales. The ideal which is being realized in both institutions is the following: "A school in the country where hardihood of life can be cultivated amid fresh air, open windows, and cold water, where life is simple and varied and the evils of excessive subdivision of labor are avoided. A school where masters lead a common life with the boys, dressed like them for practical activity in the field—working at gardening or ploughing, directing the boys at work with them. A school where the child is not isolated from the society of adults out of lesson time, and where adults find a real and not a pretense or toy occupation in utilizing the child's force as far as it goes in work which is useful for the establishment. In such a school work consists of interchange of occupation, continuous but varied, some lighter, some severer, some taxing muscle, some brain. In such a school there is established a collective, corporate life, in which, however juvenile, each member learns self-reliance and individual responsibility and constant adjustment of the relation of self to other people. The virtue that here grows up will not be negative, as of those who are good because they are constrained to be good by force external to themselves, but active virtue, such as springs from having lived in a society where good lives are lived and where a good life has been lived, thanks to the environment of a well-organized community."

At Ilsenburg, gardening and farming play an important rôle and provide a variety of occupations. The factory furnishes an object-lesson for the study of manufacturing processes and of industrial conditions. Other features are thus described: "On a knoll beneath the trees, was a group sketching from nature. In the yard, an arithmetic class was estimating the cost of painting the house by computing its superficial area. Two of the boys had already begun

the painting. In the shops, hard by, still others were busily employed, not slavishly following a prescribed course, but making such articles as a boy delights in—sleds, a case for books, a mineral cabinet, a spring-board for diving. The general arraignment of German boys that they lack initiative can not be true of these youngsters."

The school at Bedales is contrasted as follows with the one at Ilsenburg: "Recall all that has been said of Ilsenburg, making, of course, generous allowance for the less idealistic, more practical character of the English mind; substitute for the forty German boys some sixty English lads, more vigorous and enterprising than their German cousins, with an inherited fondness for sports and life in the open air; include girls, freely participating in the life—the studies, the outdoor work, the excursions, and many of the sports of the boys, an extreme form of co-education; put in charge of them a fine-grained, scholarly gentleman, aided by a corps of assistants, devoted men and women who believe in him and in his educational ideals, and count no sacrifice of time or effort too great to be made for the school's success; leave out all cramming for examinations and early specialization for scholarships, the bane of English schools; give due weight in your thought to the refining influence of woman in this community, something which is wholly lacking in Dr. Lietz's school; and finally, imagine as the setting for this somewhat rare combination of circumstances, a stately English manor house, commanding far-away stretches of English landscape, and surrounded by the greenest of close-clipped lawns, by boxwood hedges and fine old trees, and you must admit that the conditions for such an experiment in education are ideal."

The most unique feature of the Bedales, and the greatest innovation from the English standpoint, is the presence of girls among the boys. The head-master says: "I believe in co-education. We need the girls. The school was counted a success before they came, but we were not satisfied. I am convinced that ideal conditions can exist only when boys and girls are educated together. It is natural and right that they should be so educated. Life in our little community

From *New England Magazine*

A LESSON IN MILKING AT ILSENBURG

A CLASS IN SURVEYING AT BEDALES

is less abnormal since the girls came. They save our boys from undue rudeness, and the girls are themselves the gainers for the freer life they are leading. The best of good comradeship exists between them. Our experiment is only a year old, but thus far it has been a splendid success."

A Work for Rich Men

New York Independent. Condensed for PUBLIC OPINION

RICH men have shown a praiseworthy desire to minister to the suffering and the needy; to encourage art and science; and, above all, to promote education. All these are worthy objects. They are not, however, the noblest objects toward which man can strive. A good conscience, mankind has often remarked, is better than riches. Personal and civic honor are more to be desired than a reputation for an easy-going generosity. And one thing there is that nations need more than they need culture. Better than prosperity, better even than elegant attainment, is *justice*, that rugged social virtue without which no degree of prosperity or of refinement can bring happiness to a people, or ensure the staying power of a nation. Now here, assuredly, is a field for the rich man who desires to make a use of his wealth that will benefit mankind in the highest degree. Of all possible benefactions which the people of this American republic may hope to receive from the Almighty or from His promising creature, the "magnate"—the establishment of justice would be inconceivably the greatest. And the very foundations of justice are laid in the law and in the administration of taxation. Therefore, nothing that the rich man could possibly do would be so glorious, so helpful, so commendable on every account as a consecration of his wealth to the rectification of taxation.

He could begin by requiring the assessors to hand him a true bill of his own obligations to the public. He could continue the good work by persuading the collector to accept a check for the whole amount. This would make but a small draft upon his total accumulations. A further considerable sum he could wisely devote to paying the salaries of honorable lobbyists, who should labor with legislative bodies to secure the enactment of just laws, which would relieve hard-working farmers, struggling shopkeepers, mechanics trying to pay for mortgaged houses, and widows who have received a few thousand dollars of life insurance money, from their present obligation to support the courts, the militia, and other organs of government that protect the rich man's property and enable him to collect his bills receivable.

Women's Clubs and Social Betterment

WORK OF THE NATIONAL FEDERATION

THE papers and reports read at the recent meeting of the National Federation of Women's Clubs, at Los Angeles, California, indicate that the most active and practical efforts of women's clubs in America are in the line of social betterment. One of the important features of the convention was an industrial session presided over by Miss Florence Kelly, of New York. The chief speaker was Miss Jane Addams, of Hull house, Chicago, who made a plea for uniformity of child labor law in our different states in an address on "The Social Waste of Child Labor." Another

speaker, Miss Jean Hamilton, of Oswego, New York, presented the valuable social service that is being rendered by the club movement among working-women. The coöperation of women's clubs and the Consumers' league was also emphasized.

In the report of the committee on education, Miss Ellen Sabine, president of Milwaukee Donner college, said: "The first and most general activity of the clubs has been very properly directed toward coöperating with the established agencies of education for the general good of society. These undertakings include examination of physical conditions as to hygienic aspects of buildings and grounds with respect to ventilation, lighting, cleanliness, overcrowding toilet-rooms, and so forth. No more earnest and intelligent effort has been made than in the direction of developing patriotism and promoting good citizenship. Interest in local history has been created, and historic places have been preserved and marked. The state

WHAT IS HOME WITHOUT A CLUB WOMAN?

—Minneapolis Tribune

reports show that the club-women have exerted influence in legislation affecting educational interests. They have worked successfully for the passage of a compulsory school law in Iowa. They have encouraged and secured the election or appointment of women on school boards and on boards of education and philanthropic institutions. They have widely disseminated the principles of civil service reform, and have presented a united front of objection to the spoils politician when he seeks to control the public school. They have worked for a truancy school for girls. They have sought to effect changes in laws that will harmonize the legal ages of child labor and of compulsory education. They have presented to legislatures the advantages for rural schools of the township system, with township graded and high schools over the country district school system."

Mrs. Philip Moore, of St. Louis, president of the Missouri federation, read a report relating to a memorial which it is proposed all club-women shall erect at the St. Louis exposition. It is desired that a Hall of Philanthropy, which shall be permanent headquarters not only for philanthropic societies, but for the general federation, shall be established on the World's Fair site, and, moreover, during the exposition shall be the Women's building.

Early Marriages and Poverty

A STUDY OF ENGLAND'S GIRL-WIVES AND BOY-HUSBANDS

MR. A. MONTEFIORE BRICE, writing for the *London Daily Mail*, says that in London there are 13,000 married persons who are twenty years of age or under. The latest report shows that in the metropolis there are ten wives aged fifteen, twenty-three wives and widows aged sixteen, 164 wives and widows of seventeen years of age, 971 aged eighteen, 2,712 aged nineteen, and 6,672 wives and widows at twenty years. The husbands are naturally fewer. Yet there are 787 husbands from sixteen to nineteen years old, and 2,022 just twenty years of age.

Mr. Brice says that the proportion of these boy and girl marriages is invariably greatest where the social state is least advanced. "The majority of such marriages are contracted in absolute poverty. Not a sovereign—no, nor half a sovereign—has been saved. The few 'sticks'—and sticks, indeed, they are—are obtained on the hire system—one shilling down. The girl-wife can neither cook nor sew; to sweep and scrub she is averse as well as unaccustomed. Reared in some squalid, two-roomed home, she has passed in the street the time she could steal from school. So, too, with the boy-husband. The overcrowded home, with its want of welcome, throws him on the street. His life, reacting on an unawakened mind, makes his

days deadly dull. He craves for excitement—society—change. As he grows from boyhood to adolescence he needs a companion. And so, partly from natural sexual selection and partly, as his age and wages increase, because he associates more with men, he seeks a wife. For his new estate he wants a cook and a washerwoman, and he marries to find he has got neither the one nor the other."

The latest census showed that there were about 2,000 husbands under age, who were not living with their wives. Mr. Brice says that the majority had deliberately separated. "Distant work had taken some away; poverty and crime had divorced others. Among the inmates of London's workhouses are husbands, wives, widowers, and widows of fifteen and sixteen years of age! In London prisons I find that out of a total of 850 persons under age, more than 200 are married. And out of 1,284 under twenty-five years of age, no fewer than 576 are married."

Taking the country at large, under the latest census there were in all 56,398 married persons under age to be found in England and Wales. "The police courts, the workhouses, and the prisons are eloquent of such early marriages," says Mr. Brice. "It seems established beyond controversy that they strew our social life with wreckage. The philanthropists and reformers rage violently against them. The doctors speak ominously of the new generation these child-marriages will produce. All unite in agreeing that they impair the efficiency of the nation."

LETTERS & ART

Francesca da Rimini

SARAH BERNHARDT APPEARS IN MARION CRAWFORD'S NEW PLAY

FRANCESCA DA RIMINI," an historical drama in five acts with a prologue, by Marion Crawford, was produced for the first time at the Sarah Bernhardt theater, in Paris, April 22. Mme. Bernhardt took the part of Francesca, with MM. Mase and Pierre Magnier as Giovanni Malatesta and Paolo Malatesta. From the numerous criticisms published in the Parisian newspapers, among them *Le Temps*, *L'Eclair*, *Le Journal*, *Le Matin*, *Les Debats*, *Le Figaro*, *Le Gaulois*, and *L'Intransigeant*, it may be asserted that the *premiere* has been a brilliant success for Marion Crawford, as well as for Sarah Bernhardt. Eugene Silvain, the poet's actor-friend of the Comédie Française, commenting upon the production of the drama, summarized in an interview largely reproduced by the press organs the general opinion of the house of Molière, saying: "As a theatrical production, 'Francesca da Rimini' is an unqualified, almost unprecedented, success; the selected public of the *premiere* has given its approval. We must now wait for the opinion of the general public, M. Tout le Monde (Mr. Everybody), who has more sense than anybody else and is the judge of last resort. There is little doubt, however, that Marion Crawford's drama will live to be applauded."

Nothing has been neglected from an artistic point of view to captivate the public, according to the *Figaro*; even the theatrical posters, which are signed "Sarah Bernhardt," are masterpieces of art. The great actress suggested that each one of the four great painters, Detaille, Jambon, Clarin, and Laligne, should design a poster. This was done at a supper

given by Laligne at his house; the four posters were then "harmonized in one," so to speak, by Detaille, and it is this symposium which has adorned the Paris "kiosques" to advertise the drama. To settle the question of priority, which has been in dispute for some time, the *Gaulois*, as well as the other papers, has published an authoritative note giving to Marion Crawford all the credit he deserves in the matter. This note reads: "Last year, in June, Marion Crawford and Marcel Schwab brought to Sarah Bernhardt, in London, their new drama. Sarah Bernhardt read it and accepted it with enthusiasm. At that time no one in France or Italy had ever heard of 'Francesca da Rimini' by D'Annunzio."

The Parisian critics, among them the critic of *Le Temps*, after stating that Marion Crawford's version materially differs from "El Dante," think, in justice to the author, "that his drama should be considered as one of the historical dramas of Dumas *pere*, which are to be heard regardless of historical truth. In fact, the Italian critics should have no complaint to make on the subject, because they are the ones who have originated the motto, 'Traduttore Traduttore' (a translator, a traitor), thus permitting the translator to wander from the path of absolute truthfulness." Furthermore, Mr. Crawford "used a legitimate privilege of the dramatist in adding to the legend, made immortal through the lines of 'El Dante Inferno,' some unexpected developments which are calculated to increase the intensity of interest in his drama."

The true story of Francesca da Rimini is well known. She married Giovanni Malatesta by proxy, under the impression that Paolo, a handsome youth

and the brother of Giovanni, who acted the part of ambassador to bring her to her husband, was the very image of his brother. Giovanni, on the contrary, proved to be ugly, deformed, a physical monstrosity. The young bride fell in love with Paolo, and Giovanni stabbed them with a dagger when he discovered his misfortune. In Marion Crawford's version new dramatic elements are added so as to create a climax at the end of each act. The real point of the drama, however, is to be found in the *denouement*, which is reached naturally and without effort. In the prologue, is related, through women's gossip, the story of the marriage of Francesca by proxy, as well as the deception of which she is forced to be the unhappy victim.

The consensus of opinion expressed by the critics is that "Francesca da Rimini," in its broad lines, constitutes a drama of the first order, well constructed, concise, simple, yet filled with dramatic situations. The action is developed steadily and without a hitch, the events taking place through a process of natural evolution; the dialogue, also, is well adapted to the situations which unfold before the eyes of the audience." The only defect, if it can be so called, "is that the lovers' duos are too long." But, as it has been said by a competent authority on the subject, "lovers' duos always appear to be long to those who do not play a part in them." The interpretation of Francesca da Rimini was faultless, Mme. Bernhardt receiving the highest compliments of the critics, who said "that it is very hard to eulogize her, all the words of the vocabulary having been exhausted a long time ago, when it comes to complimenting the great tragedienne on her talent." The French critics naturally consider her performance an advance in art over Duse's Francesca.

A Literary Pioneer

THE WORK OF THE LATE BRET HARTE

THERE have been a few cases on record where a young writer has at once gained a great success with his first books and perpetuated his memory through his juvenilia. This was the fortune of the late Bret Harte. The numerous writers who have commented on his work in the daily press agree that he never did anything better than the poems and stories of 1869-1871, written when he was just turned thirty. The *New York Evening Post* says: "These sketches and poems of western life had an engaging youthfulness and freshness. He carried over to his Jack Hamlins a kind of frank humor and ingenious

sentimentalism which was much in the air in the sixties." The *Commercial Advertiser* points out that the particular type of fiction with which Bret Harte's name is identified has long since lost its novelty. "In 'The Luck of Roaring Camp' he was venturing upon a bold innovation and unconsciously becoming a pioneer in the school of sectional novelists who have since produced much of what is artistic and enduring in American fiction. Yet, though the type of these mining stories is common, the delicate art back of them is not. Many a writer can depict the brutality, the repellent details of the life, but few can add the touch of pathos and of human interest which makes us see the deep and genuine humanity beneath the coarseness and the squalor. Bret Harte had, to a high degree, this artistic instinct."

Permission of Houghton, Mifflin & Co.

FRANCIS BRET HARTE

"No American writer has put more of the soil into compositions," says the *New York Tribune*. "In his first and best volumes he laid down for himself a rule from which he rarely departed, to reproduce his types and situations with the naturalness and simplicity of life itself. That is why the rise of Mr. Kipling and the inevitable comparisons that ensued left the wiser admirers of both men undisturbed in their loyalty to the American." "Harte was Kipling's literary ancestor," says the *Providence Journal*. "He could draw a scene and people it with living figures in a few easy and vigorous touches; and his chief characters never faded from the recollection of his readers. A novelist in the highest sense Bret Harte was not; he showed his limitations very distinctly in 'Gabriel Conroy.' But in his shorter tales his touch was inimitable."

According to the *Brooklyn Eagle*, he was a liberating influence. "He proved the value of national color in literature. He taught men to look about them for subjects instead of looking into distances of time and space. He brought east and west together in the liking for his stories. He rescued letters from the primness that threatened them. He introduced new backgrounds in the looming peaks and mysterious forests, and humanized their wild denizens, thus carrying men's minds to nature. He gave new currency and stimulus to native humor. He broadened foreign appreciation of American work. He was a more definite and valuable factor in our letters than many of wide scholarship, because his scenes were new, his impulses strong, and his sense and purpose tolerant and manful." "One thing only can militate against his obtaining a permanent place in literature," says the *Hartford Times*, "and that, of course, is the fact that most of his work involves the use of a dialect that is understood now, but will not appeal to those who come one or two generations later as answering to

anything within their familiar knowledge. Therefore, the essential truth of the sketches will not appeal as it does to us. He did that for which he was most eminently fitted, but the very nature of the work imperils its chance of endurance."

The *Washington Post* gives Bret Harte a prominent place in the group of men who wrote the classics of American character and life. "Like Hay, he sang of true manhood, simple faith, unconscious chivalry. He chronicled, with a grace and eloquence for which we find no fitting words, the quiet courage of the martyr, the noble self-abnegation that dwells beneath a rough exterior, the loyalty that knows no hesitation. He pictured the brave and silent men who made the vanguard of our splendid march."

The severest critic of Bret Harte is the *Chicago Evening Post*, which declares that "his death brings no serious loss to the literature of America and the world. Since 1880 Mr. Harte neglected literature for other pursuits and expatriated himself at a time when new conditions, new developments, and new currents in the great territory he was so familiar with should have marked a new advance in his career. He preferred to settle in London and live on his past, repeating himself in faint copies and imitations of his best work. Of all American writers, Bret Harte could least afford to abandon the sacred fount of natural inspiration, contact with life and humanity."

A Promising French Composer

M. H. IMBERT, in the *Revue Bleue*, Paris. Translated and Condensed for PUBLIC OPINION

CLAUDE DEBUSSY is without doubt one of the young musicians most in the view of the new school, and his opera, "Pelléas et Mélisande," a piece in five acts after the drama of M. Maeterlinck, will place him in the full glare of criticism. But slightly attentive to the music of others, above all to those of the past, indolent as a creole, refined, sensual, lightly enigmatical, desiring comfort without giving himself too much trouble to obtain it, loving solitude although living a Parisian, according but a careless curiosity to all that which exists outside of his particular art and beyond a certain literature, going through life in a sort of a dream, M. Debussy is solely attracted by the vanguard of poets and prose writers whose troubled or troubling works he can use for his musical creations, searching to realize in music that which the impressionists—as Monet and Sisley—have executed in painting.

What are the poets which inspire this musician? Dante Gabriel Rossetti in "The Blessed Damosel," Baudelaire and Verlaine in "Poemes Lyriques," Stéphane Mallarmé in the "Prélude à l'après-midi d'un Faune," Pierre Louys in the "Chansons de Bilitis," Maeterlinck in "Pelléas et Mélisande." This enumeration suffices to indicate the very manifest tendencies of our musician for mysticism, dreams, and also for sensuality, and it is in erotic subjects as the "Chansons de Bilitis" that he seems to find the most pleasure.

Such is the rapid sketch of this artist's personality, as original as he is restless, who fascinates even by his boldness. Musician-poet, colorist, handling rather the crayon of the pastel worker than the brush of the painter, will his talent, which up to this time has completed itself in symphonic and vocal creations of short dimensions, be able to unfold itself to the extent of producing a scenic work of important development which seems to demand special aptitudes?

The Proposed American Academy in Rome

JAMES McMILLAN, in the *North American Review*, New York
Condensed for PUBLIC OPINION

IN 1894, the year succeeding the Chicago fair, there was established "The American School of Architecture in Rome," the object being to enable American students of architecture to develop their powers under the most favorable conditions, as to both instruction and surroundings. So certain was the success of the experiment, and so rapid the improvement of the students, that, three years after the foundation of the school, the promoters enlarged its scope to include the allied arts of sculpture and painting. In this way it came about that there was established in Rome an American academy on the general lines of the French academy, which, since the days of Louis XIV., has trained for France the men who have given direction, unity, and lasting distinction to the artistic activity of that nation.

During the years since its opening, the academy has been supported by the voluntary gifts of its founders, and the money raised has represented, in the main, the self-sacrifice and devotion of men in the active pursuit of their professions. Without endowment of its own, the villa has offered its hospitality to the holders of various scholarships, such as in architecture, the Rotch traveling scholarship, Boston; the Columbia traveling scholarship, New York; the traveling scholarship of the University of Pennsylvania; the two scholarships for sculptors under the will of William H. Rhinehart, of Baltimore, and administered by Henry Walters, one of the most liberal and steadfast friends of the academy; and the scholarship established for the study of mural painting, by Jacob H. Lazarus, under the charge of the Metropolitan Museum of Art, New York. An exhibition held at the American Fine Arts Galleries, in New York, during the December of 1896, first attracted public attention to the high quality of the work done by students of the academy, and proved beyond question the desirability of supporting such a school.

The bill for the incorporation of the American academy in Rome, now before congress, contemplates no more than such an official recognition of the project as shall give to its students the privileges accorded to students of the national academies of other nations; no financial aid is contemplated. The persons named as incorporators are among the leading architects, painters, and sculptors; the great universities and technical schools are represented by their presidents; the secretaries of state and war, the librarian of congress and the supervising architect, and a considerable number of men known for their interest in art and art education, have given their countenance and support to the enterprise. A few weeks ago, the king of Italy sent for the director, Mr. S. A. B. Abbott, and expressed great interest in the idea that the people of the United States were about to place their school on the same financial basis with the French academy. He asked all manner of questions denoting his sympathy with the project, and offered to attend the exhibitions of student work. With so much interest, both in this country and in Rome, and with such a strong demand for men of the widest and deepest training, the future of the American academy in Rome would seem to be assured. In the judgment of the founders of the academy it will be of highest advantage to our students of art.

The Late Paul Leicester Ford

HIS WORK AS NOVELIST AND HISTORIAN

THE career of Paul Leicester Ford, which was brought to so sudden and tragic an end, was in many respects an extraordinary one. Of frail physique, and in the face of many other deterrent circumstances—among them the possession of sufficient wealth to render easy a life of idleness—he labored hard as a student of history and of historical sources until he gained considerable reputation as an historian, and was a recognized authority on Americana in particular. Turning to fiction, he achieved a genuine literary success in “The Honorable Peter Stirling” and a popular triumph in “Janice Meredith.” The *New York Times* says that “The Honorable Peter Stirling” was, and still is, “quite without a parallel in our fiction. It was woven on a warp of personal experience and observation that no one before or since had had the wit and the fortune to use. It was packed with material enough for a half dozen stories, but the main conception of it, and the thing that took the mind of the public, was the portrayal of the human elements that enter into the composition of the successful ‘boss,’ and the demonstration that the opportunities and gifts of this remarkable type may be employed for good ends wholly unattainable by men of the best intentions who neither spring from the ranks of the common mass nor understand the impulses and tendencies that control that mass. That, as we say, was an original conception, and it was wrought out with an energy, a keen sympathy, and a boldness that were the proofs of a singular and vigorous mind.” The *Commercial Advertiser* says: “The book is a serious book in its purpose; and its pictures of our political life are nearer to the real thing than what one finds elsewhere. The very general belief that Mr. Cleveland was the unconscious model from which Ford drew the character of Peter Stirling gave a certain piquancy to the narrative.” The *Brooklyn Eagle* recalls the fact that the book fell flat on publication, and was only rescued from oblivion by San Francisco, where an intelligent bookseller read it and began to sell it upon his own personal recommendation. Then the sales began in Michigan and the middle west, where knowledge of the conditions portrayed was least. Then the reviews and eastern readers took up the book, and it achieved a large sale for a novel of its solid and serious character.

“As an historian,” says the *Brooklyn Eagle*, “Paul Leicester Ford has done work that will preserve his name. His ‘Many-sided Franklin’ is a strong, sound biography, giving a vital picture of a man so remarkable that he has been considerably misunderstood. His ‘True George Washington,’ an essay in a broader and more difficult field, has not attained so wide recognition, but it is a creditable work. His ‘Writings of Thomas Jefferson,’ in ten volumes, is the authoritative edition of the work of that statesman. His ‘Writings of John Dickinson’ and bibliographies of obscure and scattered documents of the colonial and constitutional period was of even greater usefulness, although it is a work unappreciated save among historical students whose labors Mr. Ford lightened.” The *Hartford Times* says that “taken altogether, the record of work Mr. Ford has given to the public is very large for a man of his years, especially when the research involved in the preparation of the historical

books and the high quality and finish of the novels are taken into account. It is all so recent that the cyclopedias and books of biography issued as late as 1895 do not contain his name.”

The *Times Saturday Review* says that “Mr. Ford had not only literary faculties, but what is rare in men of letters, keen business sense. He knew what the people would buy and knew in what form it ought to appear—whether in popular low-priced editions or in expensive ones, and thus may be said never to have failed to hit the mark.”

The Compromises of Art

ARTHUR SYMONS, in the *London Academy*. Excerpt.

ALL art is a compromise, in which the choice of what is to be foregone must be left somewhat to the discretion of nature. When the sculptor foregoes color, when the painter foregoes relief, when the poet foregoes the music which soars beyond words, and the musician that precise meaning which lies in words alone, he follows a kind of necessity in things, and the compromise seems to be ready-made for him. But there will always be those who are discontented with no matter what fixed limits, who dream, like Wagner, of a possible, or, like Mallarmé, of an impossible, fusion of the arts. These would invent for themselves a compromise which has not yet come into the world, a gain without loss, a readjustment in which the scales shall bear so much additional weight without trembling. But nature is not always obedient to this too autocratic command.

Take the art of the voice. In its essence, the art of the voice is the same in the nightingale and in Melba. The same note is produced in the same way; the expression given to that note, the syllable which that note renders, are quite different things. Song does not in itself require words in order to realize even the utmost of its capacities. The voice is an instrument like the violin, and no more in need of words for its expression than the violin. Perhaps the ideal of singing would be attained when a marvelous voice, which had absorbed into itself all that temperament and training had to give it, sang inarticulate music, like a violin which could play itself. There is nothing which such an instrument could not express, nothing which exists as pure music; and, in this way, we should have the art of the voice, with the least possible compromise.

The compromise is already far on its way when words begin to come into the song. Here are two arts helping one another; something is gained, but how much is lost? Undoubtedly the words lose, and does not the voice lose something also, in its directness of appeal? Add acting to voice and words, and you get the ultimate compromise, opera, in which other arts as well have their share, and in which Wagner would have us see the supreme form of art. Again something is lost; we lose more and more, perhaps for a greater gain. Tristan sings lying on his back, in order to represent a sick man; the actual notes which he sings are written partly in order to indicate the voice of a sick man. For the sake of what we gain in dramatic and even theatrical expressiveness, we have lost a twofold means of producing vocal beauty. Let us rejoice in the gain, by all means; but not without some consciousness of the loss, not with too ready a belief that the final solution of the problem has been found.

SCIENTIFIC

The Relative Stopping Power of Large and Small Bore Rifles

JAMES H. KIDDER, in the *May Outing*, New York. Condensed for PUBLIC OPINION

AS the relative "knock-down and stay-down" powers of the large and small bore bullets is a subject of much interest to the sportsmen of the present day, it will be the object of this article to show the effects of different bullets which were fired into what is probably the hardest game to kill we have in North America. Formerly the rifle I used with excellent results was the .50-100-450, but as I was unable to buy .50-caliber cartridges in an out-of-the-way place in which I was

Cut A

Present Weight, 177 Grains 193 Grains

two years ago, I was forced to buy a .30-40 Winchester. So marked was the improvement in my shooting that when I made a seven-months' shooting trip in western Alaska last year, I determined to use the .30-40 even upon the large bears of the Kadiak islands and the Alaska peninsula. A friend who made this journey with me used entirely the .45-70, with 405-grain soft-nosed bullets. My native hunter, who always carried my .50-100-450, had strict orders not to shoot unless we were following up a wounded bear in thick brush, but I found this rule hard to enforce during the early part of my trip. The result was that several times I had a chance to compare the shock of the .50 and .30-caliber bullets on the same bear. In addition to nine bears which fell to my .30-40, I had a chance also to study the effects of the .45-70 bullets fired by my friend into five more. All but one of these bears were of the large brown variety. We used, in the large as well as the small caliber, metal-patched bullets with soft lead points.

On May 15, with the .30-40 rifle, I killed, with three bullets, my first Kadiak bear. I placed my first bullet down through the lungs and heart. The bear kept her feet and dashed ahead, and I fired a second shot, which entered close beside the first, and also passed through the lungs and heart. She still kept her feet, and was plunging on through deep snow when, with the next shot, I broke her back, and she dropped, having gone twenty-five yards through deep snow after my first shot went home. Cut A is a photograph of the two bullets which lodged side by side under the skin of the chest. They entered back of the shoulder, both struck ribs, and passed down through the heart and lungs, but did not knock the bear off her feet. It will be observed that one of these bullets had begun to leave its jacket.

On June 20 I killed a small female bear. My first was a quartering shot behind the shoulders through the lungs, and the bullet was well placed. This shot did not knock the bear over, and as she started off my native fired, hitting her behind the shoulder with the .50 caliber, when she dropped like a stone. Upon ex-

amination, I found that my first shot from the .30-40 struck a rib, but the bullet tore away from the jacket and expanded to such an extent that it lacked greatly in penetration. In fact, the bullet and jacket lodged side by side against the backbone, and although they had only passed through one lung they did not have sufficient force to break the backbone, or even cut the tissue around it. This was next to the smallest bear I shot. I also observed that where the bullet entered there was a large and jagged hole; it had evidently flattened out on impact. Cut B shows bullet, both front and back view; also the jacket. It will be observed that after leaving the jacket the entire bullet had flattened out.

Of the .30-40 bullets which I have recovered from heavy game killed, nearly half had torn away from their jackets, and in four cases the bullets, on coming in contact with big bones, were torn into such small particles that I was unable to recover any of the lead, and but minute fragments of the jackets. On coming in contact with heavy bone, the large caliber bullets nearly always retained their jackets, although at times the entire point was worn off. Cut C shows bullets which were fired from the .45-70 by my friend into bear and struck bone. It will be observed that, although their entire points have disappeared, they retain their jackets. There was, therefore, good weights of bullet left, which had momentum, and consequently the power to go on and continue to do their most important work. This work is, I believe, if it could be proved, the force we mean when we use the

46 Grains
Jacket

Rear View

term "knock-down and stay-down" force. The knock-down force of the .45-70, as used by my friend on these bears, was, we both considered, far ahead of the .30-40, while the .50 caliber, with its 450 grains of lead, was noticeably more powerful than the .45-70.

Now, I do not wish to give the impression that the .30-40 rifle, with soft-nosed bullets, will not kill the heaviest

game which we have in North America, for it will, and at times as cleanly as the .45-70, but I have been reluctantly forced to believe that these bullets do not always act in a uniform manner. Personally, I am inclined to think that the mushrooming principle has been overdone, and that too soft lead is used in bullets of this small caliber. In the .45 and .50 calibers the proportion of bullets which retained their jackets after striking bone was much greater than that in the .30-40. Therefore, the results of the larger caliber were more uniform.

The Repulsive Power of Light

GARRETT P. SERVISS, in the May *Cosmopolitan*, New York

THE Swedish chemist Arrhenius has recently put forth a comprehensive theory which explains a great many of the standing mysteries and puzzles of astronomy upon a single principle. This principle is "the pressure of light." Clerk Maxwell showed mathematically that, according to the electro-magnetic theory of light, every ray of light must exert pressure upon any surface where it impinges. The actual existence of such pressure has recently been proved by the experiments of Arrhenius and others, and its amount turns out to be very close to that predicted by Maxwell. Since light exerts pressure, it is evident that in the case of sunlight the direction of the pressure is away from the sun; that is, in opposition to the sun's gravitation. Upon bodies of appreciable mass the influence of gravitation so far exceeds that of the light-pressure that they fall swiftly toward the sun. But, inasmuch as the force of gravity varies with the cube, and the light-pressure with the square, of the diameter of the body concerned, there must be a point where both will be equal, and if the size of the body diminishes beyond that point, the light-pressure will exceed gravitation, and then the body or particle, for by this time it must have become an invisible speck, will fly away from the sun instead of falling toward it.

Broadly speaking, any particles less than one-thousandth of a millimeter in diameter will be driven off by the pressure of light from the sun. This fact being established, it is only necessary to suppose, with Arrhenius, that the vaporized particles of a comet's tail are below the critical size, in order to see that they must be driven away from the comet's head as the latter approaches the sun, and thus is explained the origin and phenomena of comets' tails, which always point away from the sun, no matter what the position of the head may be. In a similar manner, upon the hypothesis of particles swept off by the pressure of light, we have an explanation of the coronal streams that surround the sun. Such particles, bearing charges of negative electricity and entering the upper regions of the earth's atmosphere, produce the luminous banners and streamers of the aurora borealis. All suns in an active condition must drive off swarms of electrified particles or atoms. These, plunging, like an incessant rain into the vast masses of cold gases that we all call nebulae, cause an electric glow resembling that in a vacuum tube, and thus, according to Arrhenius, is explained the luminosity without heat that characterizes the nebulae.

Chemistry of Confectionery

Scientific American, New York. Excerpt

IN flour confections or cakes—not sugar confections or sweets proper—the principal substances used are flour, milk, eggs, and sugar. For confectionery, the weaker and softer flours, containing much starch and little gluten, are preferable. Milk is used as a moistener instead of water, because of its richness, average pure new milk containing 4.0 per cent of fat, 3.6 per cent proteids, 4.5 per cent sugar, 0.7 per cent ash, 8.8 per cent non-fatty solids, and 78.4 per cent of

water. It is not only the fat in the milk that is of service to the confectioner, but also its proteids, which, though like the white of eggs, have no very pronounced taste, yet confer a fullness of flavor which a simple solution of lactose in water would not possess. In baked goods the proteids of milk produce a moistness and mellowness of character, and new milk therefore gives to confectionery richness through its fat, sweetness through its sugar, and mellowness through its proteid.

Next to milk, eggs are one of the most important moistening agents to the confectioner. In composition the white of eggs consists of proteids dissolved in water, while the yolk contains, in addition to the proteid, fat and coloring matter. The white of eggs may be viewed as a solution of one part albumen in seven parts of water, while in the whole egg about two-fifths of the solids consist of fat and three-fifths of proteid, while the water of the whole egg amounts, roughly, to three-quarters of its weight. Another moistening agent used by confectioners is glycerine.

Many aerating agents are used by confectioners, the chief of them being ammonium-carbonate, usually called "ammonia," or volatile sodium bicarbonate, tartaric acid, and cream of tartar. The chemical action of these on the confectioner's paste is to change the sugar present by fermentation into alcohol and carbon-dioxide gas, which has the mechanical effect of distending and lightening the dough. When tartaric acid and sodium bicarbonate are mixed with flour in equivalent quantities, the result by moistening with water is that the acid attacks the carbonate, liberating all its carbon dioxide and forming normal sodium tartrate. The latter salt is comparatively tasteless, and the presence of the quantity produced as a residue from the amount of acid and soda necessary for the aeration of an average dough is not sufficient to injuriously affect the flavor of the resultant goods.

Masurite, the Latest High Explosive

Cassier's Magazine, New York

MASURITE is the name of the latest high explosive put on the market. It appears to be in every sense a safe explosive, failing to detonate under the most trying conditions that are ever likely to be brought about accidentally, and yet affording admirable evidence of great destructive power at the right time. It takes its name from its inventor, Mr. F. L. M. Masury, of New York, under whose supervision a number of very striking tests on a working scale were recently carried out. These tests demonstrated in a satisfactory way that masurite was insensible to shock, concussion, heat, or cold, as far as its liability to explode by any of these means was concerned, and that it could be exploded in the proper manner only by means of a double-strength exploder. One of the tests consisted in striking a quantity of the explosive with a hammer and a sixteen-pound sledge and in allowing a fifty-pound weight to fall twenty-five feet upon a masurite cartridge—all without other effect than breaking up the cartridge and scattering the explosive. Masurite in cans was then shot through with steel-jacketed bullets and even heated by burning coal and then shot through, without exploding. Red-hot irons were run through the powder, both loose and in cartridge form, the result being simply to fuse and burn it while in direct contact with the heated surface, the powder going out upon removal of the iron.

A bundle of parlor matches ignited in masurite had their flame immediately extinguished. Black and smokeless powder were set off on top and below a heap of masurite, and merely blackened it. Electric sparks were made to play in contact with the material, and no explosion resulted. For friction tests, masurite was rubbed to dust between sandpaper and emery cloth.

To show that masurite does not freeze at low temperature, a cartridge of masurite was placed in a freezing mixture at six degrees below the Fahrenheit zero for three hours. When taken out it was found to be entirely loose, and was immediately exploded with great violence by means of an electric fuse. To show the relative force of masurite for rock work, a large boulder, in which were placed twelve cartridges in two bore holes, was blown to pieces. The masurite used in all these tests had a strength equal to forty per cent dynamite, and this can be increased or decreased, as desired, in making the explosive. A notable feature of masurite is the flameless character of its explosion. This was particularly evident when dynamite and masurite were exploded together, the former giving off a vivid flare of light. In this absence of flame, according to Mr. Masury's claims, lies the great value of masurite for coal-mine work, as it will not ignite coal gas or dust in the neighborhood.

Various Topics

TOO MUCH BATHING is harmful, as it tends to maceration of the superficial part of the epidermis, which is too frequently removed, and occasions probably too rapid a proliferation of the cells of the malpighian (lowermost) layer.—*London Lancet*.

SALICYLIC ACID IN STRAWBERRIES: Portes and Desmoulières have succeeded in isolating crystallized salicylic acid from strawberries. The *Gas. Med. Belge* mentions this curious fact, and observes that it is important in the study of adulterating substances in preserves, syrups, etc., containing strawberries.

TEMPERATURE OF THE SUN: Prof. Charles Wilson has announced to the royal society a new determination of the temperature of the sun. His figures are 6,200 deg. C. (11,192 deg. F.). It is stated that the absorption of the sun's atmosphere probably makes this temperature equivalent to 6,600 deg. C. at the surface.—*Scientific American*.

SNAKE VENOM IN THE TREATMENT OF PLAGUE: Hem Chandra Sen considers the fresh venom obtained from strong, young black cobra (keuta variety) the most powerful stimulant in plague. Fortunately, it is an irritant to the bowels, and a hepatic stimulant, so that most of it is thrown out and the danger of poisoning is thus lessened. The author prefers its administration by the mouth, mixed with bile or arsenic, to giving it hypodermically, as in the latter case it is liable to cause disintegration of the red blood cells, which are already in danger of disintegration from the plague itself.—*Indian Medical Record*.

RELIGIOUS

The Death of Archbishop Corrigan

HEAD OF THE CATHOLIC CHURCH IN NEW YORK PASSES AWAY

MICHAEL AUGUSTINE CORRIGAN, archbishop of the Catholic diocese of New York, died at his home in New York city, May 5, in the sixty-third year of his age. Archbishop Corrigan was born in Newark, New Jersey, August 13, 1839. He was a doctor of divinity at the age of twenty-five. When he was thirty-four years old he was a bishop. Six weeks after his forty-first birthday he was coadjutor bishop of New York, with the right of succession. The calendar date of this event is September 29, 1880. Five years later, on October 10, on the death of Cardinal McCloskey, he became archbishop at the age of forty-six.

The New York *Evening Post* says of him: "The archbishop had made himself known to all New Yorkers, not merely as a type of the Christian walk and conversation, but as a man of nobility in every aim and endeavor that human life is capable of. He was a man who never did a thing or said a word for effect or to win applause." "To those who had the privilege of knowing Archbishop Corrigan personally," says the New York *Tribune*, "he showed a side of his character that the general public did not suspect him of possessing. He was an accomplished and a delightful conversationalist, with a keen though

Photo Anderson

MICHAEL AUGUSTINE CORRIGAN

quiet sense of humor. Conservative churchman though he was, he was not bigoted or bitter toward those who could not conscientiously accept the claims of his church." The New York *Times* has high praise for the archbishop's character and ability, but questions the wisdom of his course in two cases, the disciplining of Father McGlynn for his espousal and advocacy of single tax, and his tacit opposition of Cardinal Gibbons and Archbishop Ireland in the matter of the "American" movement. Of the latter, the *Times* says: "It seems to us a grave error for any prelate of the Roman Catholic church to encourage the belief that a Catholic, layman, or priest, is less an American for being a Catholic. In so far as Archbishop Corrigan gave countenance to that belief, therefore, it seems to us that he marred his otherwise brilliant record of successful administration."

His manifold services for his diocese and for the city at large are reviewed by the Philadelphia *Press*. "A diocese, the mass of whose membership was drawn from Ireland, was transformed into a cosmopolitan array of many tongues and more than one rite. All was brought to order, regularity, discipline, and usefulness. There is no discerning man who can have failed to recognize the inestimable service done by Archbishop Corrigan in his conduct of the duties and

authorities of his office in training, educating, directing, and preserving from moral declension and personal license the great flood of immigrants of his faith who pour into New York in a ceaseless tide." The Brooklyn *Times* pays him a high tribute. "There has never been a better type of the ideal Catholic prelate than Archbishop Corrigan. He was a man of pleasant manners and wide culture, but he was absolutely consecrated and devoted to the service of the church in every fiber of his being, and neither personal friendship nor personal enmity, the thirst for applause and advancement, nor the dread of public censure, had the power to swerve him by a hair's-breadth from what he conceived to be his duty to his church or what was demanded by fidelity to the vows he had taken."

The Brooklyn *Eagle* calls attention to the debt which the community owes to the dead prelate. "He discouraged agitations which had Socialism or Agrarianism in the state and schism or rebellion in Roman Catholicism for their basis. He was morally and intellectually full an hundred times better than some who antagonized him in his order."

The New York *Freeman's Journal* (Rom. Cath.) says: "When it is stated that in his archdiocese there are a million two hundred thousand Catholics whose spiritual wants have to be attended to, we can form an estimate of the magnitude of the labors that devolved upon Archbishop Corrigan. Never shirking them, he spent the last seventeen years of his life in laying deep and broad foundations on which his successors will be able to build."

Churches Not Declining

PROPORTIONAL INCREASE IN MEMBERSHIP AND INCOME

AS an offset to the current reports of the decline of interest in churches and church work, Mr. E. M. Camp, president of the Church News association, furnishes statistics in the *Church Economist* (New York) which go to show that the reverse is the case. The first question he answers is: "Does church membership growth keep pace with population growth?" This he answers as follows: In 1860, not to weary by going further back, the population of the United States was 31,443,321, and in 1900 76,303,387. Here was an increase of not quite two and one-half times. We look upon that increase as phenomenal; as a nation we boast of it. Congregationalists are one of the bodies that have, of late, been pointed to as not keeping up their end; some have asked if they were losing. The same has been asked of Methodists north. In 1860 Congregational membership was 253,765, and in 1900 633,349. Here is a ratio of growth almost exactly equal that of the phenomenal population growth—a fraction greater. But now add the Presbyterian growth. In 1860 Presbyterians north numbered 276,306, and in 1900 1,025,388. Together these two religious bodies grew a little more than threefold, as against the population a little less than two and one-half. In 1860 the number of Episcopalians was 146,600, and in 1900 714,575. These three bodies together were to the population growth as three to two; that is, their growth was three and one-half times, nearly. Now add the Lutherans. In 1860 there were 232,780, and in 1900 1,665,878. Here is four and one-half fold, as against the population less than two and one-half. If, now, the Baptist, the Methodist Episcopal, the Disciples of Christ, and the Roman Catholic growth be added, not to mention smaller

bodies, all of which, save Unitarians and Quakers, have held their own or grown proportionately, it will be found that growth in church membership during the last forty years of the nineteenth century stands to the phenomenal population growth in round numbers as sixteen to five."

Then he turns to the question: "Do people give as they used to do?" This, also, he answers in the affirmative. Presbyterians gave to missions in 1825 \$12,517, in 1850 \$406,672, in 1875 \$2,723,068, and in 1900 \$4,186,288. In 1850 the total gifts of Presbyterians north for all purposes were \$1,462,023, in 1875 \$9,625,594, and in 1900 \$16,338,376. In 1892 Lutherans gave to missions and benevolences \$829,000, and in 1902 \$1,285,775. Young Men's Christian Association work of this country cost last year \$10,000,000, which was \$2,000,000 in advance of any previous year, and people gave enough to enable the year to be closed without debt. While the fashion of the moment is to give outside the churches, after the pattern set by Mr. Andrew Carnegie, yet the income of church causes is not declining. Look at the great gifts to education just now, to hospitals, and the rest. This year is going to be a record-breaker. Mr. J. Pierpont Morgan gives \$1,000,000 to a Boston hospital, Mr. Rockefeller \$1,000,000 to southern education, Miss Helen Gould \$1,000,000 this year through the Y. M. C. A. Be good enough to note that these and almost everybody known as liberal givers are church people. Yet I happen to know that the three persons named are giving more to strictly church causes than they ever gave before. Mr. Rockefeller has given, this year, \$100,000 to the American Baptist Missionary union, \$90,000 to the Baptist Home Mission society, \$55,000 to the Baptist Educational society, \$150,000 to Brown university, and \$100,000 to Newton theological seminary. Speaking generally, he is slowly increasing his gifts to Baptist objects. Speaking of the whole country, about \$38,000,000 will go, as I figure it, into new churches, parish homes, and manse this year.

Biblical Criticism in the Sunday-School

A SYMPOSIUM

THE place of Biblical criticism in the Sunday-school is discussed by a group of writers in the May number of the *Biblical World*. A. E. Dunning, editor of the *Congregationalist*, asserts that the "main conclusions of Biblical criticism are now accepted with practical unanimity by all scholars who have given patient attention to them," but thinks that the "Sunday-school is not the place to follow or to work out the processes by which these conclusions have been reached; still less the place to controvert them. But the results of criticism, so far as they correct false theories of the Bible and illumine its revealed truth, should be known and used by the teacher to increase the power of his teaching." Willis J. Beecher, of the Auburn theological seminary, doubts the advisability of such study for the reason that a "class which devotes one half-hour in the week to class study is not a favorable place for settling problems that are either intricate or disputed." Camden M. Coburn, of the St. James Methodist Episcopal church, Chicago, regards the use of the results of Biblical criticism as necessary in the Sunday-schools to point out the fundamental truths of Christianity. "It preserves the child from the impression that Christianity is founded

on the backbone of Jonah's whale, and that the value of the Bible as God's Book of Salvation hinges upon the quality of Hebrew spoken by Balaam's ass, or upon the absolute inerrancy of the chirography or of the memory of the Bible writers, or their miraculous knowledge of universal history or twentieth-century science."

The place of criticism in the Sunday-school of St. Michael's church, New York city, is described by the rector of the church, Dr. John P. Peters. He says: "Biblical criticism, as such, does not enter our Sunday-school. We try to give a certain amount of definite, distinct teaching, which shall put the children in possession of the essential facts and doctrines of the Christian religion; then we encourage and instruct them, so far as we can, to read and study the Bible intelligently. We give opportunities to teachers and older scholars to learn the best results of modern scholarship; but we never consciously present the negative or critical side." That the time has not yet come when it is possible to secure teachers able to teach and apply the new criticism is the view of Dr. Amory H. Bradford, associate editor of the *Outlook*. He thinks, therefore, that "the work of interpreting the principles of criticism had better be left to the pulpit, and the Sunday-school confine itself to teaching the contents of the Bible, and to impressing such truths as may be essential to daily living."

"Destructive criticism" is denounced by H. Clay Trumbull, editor of the *Sunday-school Times*. "Seeking to show that truths which have been held precious for ages, and which are worthy of being studied and profited by, have no basis for acceptance or belief, is not to be tolerated in the Sunday-school." "In so far as Biblical criticism is a method of study, historical research, scientific investigation, rigidly loyal to facts and relentless in rejecting fancies, the sincere effort to treat the Bible honestly, there is need for it in every school, and it should hold the supreme place," says W. C. Biting, of the Mount Morris Baptist church, New York city.

Various Topics

• **CHRISTIAN SOCIALISM IN ITALY** invites the severest denunciation from the vatican, and Cardinal Rampolla, the papal secretary of state, has issued a circular letter to the bishops, instructing them not to meddle or make with it, "and never to employ expressions which might cause the people to regard the upper classes with aversion."

MORE BUDDHISTS THAN BAPTISTS: It appears from a recent government bulletin that British Columbia has more Buddhists than Baptists, more Confucians than Congregationalists, and nearly as many pagans as Lutherans. Classified by religions, there are 40,672 members of the Church of England, 6,506 Baptists, 10,027 Buddhists, 4,804 Confucians, 1,197 Congregationalists, 5,332 Lutherans, 25,021 Methodists, 4,556 Pagans, 34,176 Presbyterians, and 34,227 Roman Catholics. The Mormons number only 125, faith healers 4, fire worshippers 3, Dowieites 48, and Mohammedans, 6.

CALL TO PRAYER FOR THE JEWS: A call to the universal church to unite in prayer for the conversion of the Jewish people to faith in their great Kinsman has been issued. The first ten days of May are the period designated for this union of petition. The signers of the call include such well-known evangelical leaders as J. Wilbur Chapman, of New York; W. G. Moorehead, of Xenia; A. T. Pierson, of Brooklyn; C. I. Schofield, of Northfield, and a number of earnest men like Thos. M. Chalmers, of Chicago, who are devoting their lives to the reclamation of the Hebrew race through special missions in the larger centers of population. The call expresses the belief that the Hebrews as a class are to-day better disposed toward the gospel than in all the Christian centuries past.

Biblical Love Songs

PAUL HAUPT, in the *May Open Court*, Chicago. Excerpt

THE so-called Song of Solomon is not the work of one poet but a late post-Exilic collection of popular nuptial songs and love-ditties which may all have been sung at Hebrew weddings, although they were not originally composed for this purpose. They were probably compiled in the neighborhood of Damascus after the beginning of the Seleucid era (312 B.C.). In Palestine the autumn is the usual time for weddings; after the harvest, says Dalman in the introduction to his *Palestinian Divan*, the young men have leisure and also money to pay for the brides, but in the country east of the Jordan, especially in the neighborhood of Damascus, the majority of the weddings take place during March, which is the most beautiful month of the year. This Springtide of Love is described in the beautiful poem which we find in the second chapter of the Song of Solomon, and from which I quote a single stanza:

Hark! dearest mine,
behold, he is coming,
Over mountains leaping,
over hillocks skipping.
Behold, he is standing
behind our wall there!
From windows I peer down,
through lattices peeping.
Arise, my darling!
Ah, come my fair one!

The most beautiful poem of these Biblical love-ditties is contained in verses 6 and 7 of the last chapter, which must be preceded by the beginning of the third chapter:

At night, as I lay on my pillow,
for him whom I love was I longing,
I will rise and fare forth through the city
both through streets that are wide and are narrow.

For Love as Death is strong,
and Passion as Sheol unyielding.
Its flames are flames of fire,
its flashes are flashes of lightning.

Nothing is able to quench it,
Neither can any streams drown it.
If one should resign for it all his possessions,
Could any man therefore condemn him?

If the Song of Solomon is nothing but a collection of profane love-ditties in praise of sensual love, some might raise the question whether the Song of Songs is not out of place in the Bible. It is nowhere cited in the New Testament. The great Hebraist, J. D. Michaelis, of the University of Göttingen, omitted the Song of Songs from his critical translation of the Bible. Prof. Franz Delitzsch, of Leipsic, one of the foremost Biblical scholars of the nineteenth century, and one of the most devout Christians I ever met in my life, stated in the introduction to his commentary on the Song of Solomon that this book was the most difficult book in the Old Testament, but the meaning becomes perfectly plain, in fact too plain, as soon as we know that it is not an allegorical dramatic poem but a collection of popular love-ditties which must be interpreted on the basis of the erotic imagery in the Talmud and modern Palestinian and other Mohammedan poetry.

THE NEWS OF THE WORLD

MONDAY, MAY 5

DOMESTIC.—The first Cuban congress assembled in Havana and was addressed by Governor-General Wood; President-elect Palma in a letter to the residents of Santiago voiced his gratitude to Americans....An American company has purchased the wrecks of the Spanish warships *Almirante Oquendo* and *Viscaya*....The eighty-four Moro prisoners captured in Sunday's fight broke from their guards, and in the pursuit thirty-five of them were killed, nine captured, and the remainder escaped....Henry O. Havemeyer testified again before the senate sugar investigating committee....In deciding two Chinese exclusion cases the supreme court holds that they did not involve a constitutional question....The president has selected H. G. Squiers, secretary of legation in China, to be minister to Cuba, and General E. S. Bragg, of Wisconsin, to be consul-general at Havana....Archbishop Michael A. Corrigan died.

FOREIGN.—Ambassador Meyer delivered to the king of Italy President Roosevelt's message in recognition of the royal courtesy in the Venice affair....The French battleship *Gaulois* sailed from Toulon for the United States, having on board the members of the Rochambeau mission.

TUESDAY, MAY 6

DOMESTIC.—President-elect Palma made known the subjects he will discuss in his first message to congress....The charges against soldiers made by Major Cornelius Gardener were received by the war department and laid before the senate committee on the Philippines....General Chaffee has cabled the war department that he has rescinded the order for concentration camps in Laguna and Batangas....The president nominated Alexander O. Brodie to be governor of Arizona....Rear Admiral William T. Sampson, retired, died at his home in Washington, the immediate cause of death being cerebral hemorrhage....Bret Harte died at his home near London.

FOREIGN.—The landsting approved the proposal to submit the question regarding the sale of the Danish West Indies to a vote of the inhabitants....The trade union congress at Copenhagen declared the dock laborers' strike at an end, as it was no longer serving any purpose.

WEDNESDAY, MAY 7

DOMESTIC.—General Chaffee has sailed for Mindanao, and will hold a conference with the chiefs of the island....Colonel Henry Sharpe, assistant commissary general, has been relieved from duty in Washington and ordered to Manila, where he will become chief commissary of that division, relieving Colonel Charles A. Woodruff.

FOREIGN.—Lord Salisbury made an important speech at the meeting of the Primrose league....Lord Kitchener reported a capture of Boers near Lindley, Orange Free State.

THURSDAY, MAY 8

DOMESTIC.—The Salvador arbitration commission gave a judgment for over \$500,000 in favor of the United States; after the verdict had been rendered there was a stormy scene between Chief Justice Strong of Canada, a member of the commission, and the Salvadorian representative....Asuncion Esquivel was inaugurated president of Costa Rica; he succeeds Rafael Iglesias....The senate committee on commerce decided unanimously to report favorably the nomination of H. Clay Evans, to be consul-general to London....Mrs. Dimies T. S. Denison was elected president of the General Federation of Women's clubs.

FOREIGN.—The British steamer *Rodam*, badly wrecked and having lost eighteen of her crew, returned from St. Pierre, Martinique, to St. Lucia, bringing the news of the destruction of St. Pierre, as a result of volcanic disturbances in the island, with all of its inhabitants; all the shipping in the port was destroyed, including the Quebec Steamship company's steamer *Roraima*, from New York, which was lost, with all on board; in all, it is believed over 40,000 persons perished.

FRIDAY, MAY 9

DOMESTIC.—H. Clay Evans, who was confirmed as consul-general at London, denied that he had been forced to retire from the pension office; the president nominated Eugene F. Ware, of Kansas, for commissioner of pensions....The funeral of Rear-Admiral Sampson took place at the Church of the Covenant in Washington, and his body was buried with naval ceremonies in Arlington National cemetery....The funeral of Archbishop Corrigan was held in St. Patrick's cathedral, New York city....President Henry Morton of Stevens Institute, Hoboken, died in a private hospital, New York city, from the effects of an operation performed on him on April 15.

FOREIGN.—A schooner which reached the island of Dominica, West Indies, from Martinique, reports that 40,000 people are supposed to have perished on the last-named island as the result of the volcanic eruption there on May 8; the French warship *Suchet* returned from St. Pierre to Fort de France, Martinique, bringing about thirty survivors of the disaster, who report that a rain of fire from Mont Pelée fell on St. Pierre, destroying the place and its inhabitants....President Sam of Hayti resigned....Ex-President Jimenez and his ministers of San Domingo have left

the foreign legations in that city, where they had sought refuge.

SATURDAY, MAY 10

DOMESTIC.—Attorney-General Knox made public the government's petition for an injunction against the Beef trust, which was filed in the United States circuit court at Chicago....The secretary of the navy ordered the cruiser *Cincinnati* to Martinique to afford any relief possible to the sufferers there, and orders were also given to have the *Dixie*, at the Brooklyn navy yard, prepared for the same service....Secretary Root explained the mission of Governor Taft to Rome, where affairs in the Philippines will be discussed with the vatican authorities....Mrs. Catherine Soffel, who released the Biddle brothers from the Allegheny county jail last January, was sentenced at Pittsburg to two years in the penitentiary for aiding and abetting in the escape of prisoners.

FOREIGN.—Dispatches from the West Indies describe the situation in Martinique as growing worse, and relief vessels are unable to go near the destroyed city of St. Pierre; direct communication has been established with Fort de France, Martinique, where hopes are expressed that the mortality is not as great as was thought; the town of Morne Rouge, near the volcano of Mont Pelée, was spared; the eruption of the Soufrière volcano, on St. Vincent, B. W. I., continues, and about thirty people had lost their lives on that island at last accounts.

SUNDAY, MAY 11

DOMESTIC.—General Chaffee was received by General Davis on the island of Mindanao, P. I., and started for Lake Lanao, in the interior....President-elect Palma arrived at Havana on the steamer *Julia* and was welcomed with enthusiasm; the Cuban flag was hoisted over Moro castle for the first time....Lieutenant-Governor Jesse Stone of Wisconsin died in Milwaukee.

FOREIGN.—Communication with the island of St. Vincent, B. W. I., ceased; at last accounts, sent the day before from Kingstown, the Soufrière volcano was in terrific eruption, and the number of dead was believed to be about five hundred at that time; owing to the continued eruption of Mont Pelée, on Martinique, it is still impossible to approach St. Pierre, but active measures are being taken at Fort de France and other places to give aid to any living refugees, of whom about five thousand cover the hills in the vicinity of the volcano....Second elections for members of the chamber of deputies were held in Paris; the Ministerialists gained nineteen seats....There was a demonstration against the new corn tax at Hyde Park, London.

The Books of The Week

MEDITATIONS OF AN AUTOGRAPH COLLECTOR. By Adrian H. Joline. Cloth, pp. 316, \$3. New York: Harper & Brothers.

THIS is a very cleverly written book. It is just such a book as one would expect from a collector whose enthusiasms had been tempered by years, and whose years had been enriched by experience and rich acquaintanceship. Mr. Joline appears to have a fine collection of autograph documents, letters, and notes, and what he does not himself possess he knows about. He tells you anecdotes of all sorts, some of them deal with autographomania and some are merely suggested by a bit of memorabilia that has fallen into the author's hands. Many of his manuscripts are quoted, and not a few are reproduced in facsimile, thus adding considerably to the interest of a volume which could very well afford to stand or fall upon the entertaining quality of its text.

CHIMMIE FADDEN AND MR. PAUL. By Edward W. Townsend. Cloth, pp. 382, \$1.50. New York: The Century Co.

THE Fadden family has increased by one, and Mr. Burton has dropped out of the story, but in all other respects the dramatis personæ of the Chimmie Fadden comedy is the same as before. Mr. Townsend has fallen into the now common habit of discussing current topics through the medium of his puppets just as Mr. Dunne uses his puppets, Dooley and Hennessy. Chimmie, Mr. Paul, "his Whiskers," Miss Fanny, "the Duchess," and now and then "Wily Widdy," discuss everything, from "L'Aiglon" to the latest political issue. Chimmie is quite as amusing as he ever was; perhaps more amusing because here he has an opportunity to show the diversity of his mind and the full scope of his vocabulary. If one has missed any of these skits as they appeared in *Harper's Weekly*, or if he has not read them at all, he has some amusing half-hours before him.

MORPHINISM AND NARCOMANIAS FROM OTHER DRUGS. Their Etiology, Treatment, and Medico-legal Relations. By T. D. Crothers, M. D. Cloth, pp. 351, \$2. Philadelphia: W. B. Saunders & Co.

THIS work is a summary of a clinical experience of over twenty-five years of active treatment and care of narcomaniacs. It could not have a better recommendation either to laymen or the profession. Its treatment of the subject is quite comprehensive, covering morphinism and opium-taking in full, and paying attention to cocaineism, chloral-ism, chloroformism, coffee addiction, tea inebriety, tobacco and ether inebriety, as well as less common addictions. The treatment of each class of narco-

maniacs is discussed not only from the standpoint of the patient, but with a view to the welfare of the public, the interests of the latter being so considerable as to make this a very important feature of the book.

UNCLE SAM, TRUSTEE. By John Kendrick Bangs. Cloth, pp. 342, \$1.75. New York: Riggs Pub. Co.

MR. BANGS's book is not of great permanent value, but it is a good one to read at the present moment when the trusteeship of Uncle Sam in Cuba has come to an end, and it is proper to review his work, see what he has done, and pass judgment upon his stewardship. Mr. Bangs gives a history of the island from the date of its discovery, but his main purpose is to show what has been accomplished within the past three or four years by the representatives of Uncle Sam. This was a unique trusteeship, and as Mr. Bangs tells the story our record is one that we may be justly proud of, the "carping, cavilling, bilious editors," to whom Mr. Bangs refers, to the contrary notwithstanding.

THE MINORITY. By Frederick Trevor Hill. Cloth, pp. 406, \$1.50. New York: Frederick A. Stokes Co.

THIS is a New York story, dealing with Wall street, trusts, promoters, and other dark and evil things. The author does not hesitate to call things by their right names. For those who find New York attractive, the book may produce heart throbs; for others it may have but small interest. From a realistic standpoint, the book is excellent, the description and elaboration being clever and acute.

NOMINATING SYSTEMS: DIRECT PRIMARIES VERSUS CONVENTIONS IN THE UNITED STATES. By Ernst Christopher Meyer. Cloth, pp. 501. Madison, Wis.: Published by the Author.

IN spite of the detailed and often tiresome exposition of unimportant matters, there is much in Mr. Meyer's thesis to command attention. It is, in the main, an argument for the system of direct nominations. The laws adopted in various states and cities are quoted, a chapter being devoted to the plans of Governor LaFollette in Wisconsin.

THE GAME OF LOVE. By Benjamin Swift. Cloth, pp. 314, \$1.50. New York: Charles Scribner's Sons.

A MISER, a thief, a flower-girl, a poor poet, an eccentric physician, a priggish elder son, a spendthrift younger son, and a fair English girl, make up the cast of characters in Mr. Swift's "Game of Love." Love, however, is a mere incident in the story; its interest is centered in the scramble for the miser's gold. The author has made a good deal of his material; he has given us a fairly good story and a few really excellent pictures of London street scenes.

NATURE STUDY AND LIFE. By Clifton F. Hodge. Cloth, pp. 514, \$1.50. Boston: Ginn & Co.

IT is difficult to compute the value of this book to the teacher. We have no instruction here which is only suitable

Broadway & 19th St.
NEW YORK.

for adults, no unpronounceable names, no creatures that are out of the ken of the child, no stones or rocks that have no meaning to the young mind, but the animals, the birds, the trees, the insects the child has always known, the barnyard things that represent to him the marvels of the universe.

THE SPORT OF THE GODS. By Paul Laurence Dunbar. Cloth, pp. 255, \$1.50. New York: Dodd, Mead & Co.

MR. DUNBAR has here told, in a simple and quiet way, the story of a respectable negro family, driven from their southern home on the suspicion of theft. While the father of the family serves a term in prison, the mother and two children suffer indignity and disgrace in New York. The wrong is eventually righted, but not in time to patch up the broken lives.

FLOWERS AND GARDENS. By Forbes Watson. Cloth, pp. 204, \$1.50. New York: John Lane: The Bodley Head.

THIS is a timely reprint of a book first published some thirty years ago—timely in the sense that the appearance of any beautiful thing is always timely, always welcome. It is one of the books in the English tongue that is instinct with love, thought, sympathy, and knowledge. It should be among the treasures of every lover of the woods, the flowers, and the fields.

MARGARET TUDOR. By Annie T. Colcock. Cloth, pp. 169, \$1.00. New York: Frederick A. Stokes Co.

THIS is a touching little story that will appeal to its readers for its delightful simplicity. Mistress Margaret Tudor, with her "dear love," are captured by the Spaniards when Spain ruled at St. Augustine, and what with a Spaniard dark and handsome who loves Margaret, duels, and escapes, the story is no laggard.

SAMUEL DE CHAMPLAIN. By Henry Dwight Sedgwick, Jr. (Riverside Biographical Series). Cloth, pp. 126, 65 cents. Boston: Houghton, Mifflin & Co.

A **VERY** acceptable sketch of the great explorer and colonizer, to whose intrepidity and statesmanship, more than to any other force, was due the establishment of French empire on this continent.

IN THE DAYS OF GIANTS. By Abbie Farwell Brown. Cloth, pp. 259, \$1.10 net. Boston: Houghton, Mifflin & Co.

NORSE stories are peculiarly congenial to American temperaments and ideals, and this explains why any collection of these stories should be welcomed by parents who wish to select sturdy and healthy literature for their children. The present collection is excellent in every way.

THE CORRESPONDENT'S MANUAL. A Proxis for Stenographers, Type-writer Operators, and Clerks, Comprising Some Practical Information on Letter Taking and Letter Writing—Hints How To Do It and How Not To Do It. By William E. Hickox. Cloth, pp. 128, 50 cents. Boston: Lee & Shepard.

Warren J. Lynch, W. P. Deppe,
Gen'l Pass. & Ticket Agt. Asst. Gen'l P. & T. Agt.

CINCINNATI, O.

CARPENTER'S GEOGRAPHICAL READER—
EUROPE. By Frank G. Carpenter.
Cloth, pp. 456, 70 cents. New York:
American Book Co.

WHAT Mr. Carpenter hasn't seen of the earth's surface isn't worth seeing; his unusual opportunities for observation, combined with his journalistic experience, make him unusually well qualified to write an interesting book on the geography of Europe for popular or school use.

BIRDS AND MAN. By W. H. Hudson, F. Z. S. Cloth, pp. 317, \$2.25. New York: Longmans, Green & Co.

EVEN if the reader of this book is not able to raise himself to the height of enthusiasm from which it is written, he will nevertheless understand, appreciate, and in a measure share the spirit of the author and thus add another member to the great family of intelligent nature worshippers.

MARY GARVIN. By Fred Lewis Pattee. Cloth, pp. 383, \$1.50. New York: Thomas Y. Crowell & Co.

A STORY of rustic New Hampshire life, the nature of which may be guessed from the following headings of a few chapters: "Containing Maple Sugar and Other Sweetness," "In Which there is Poor Hay Weather," "Touching Upon the Mysteries of the Game Known as Post Office."

MORE EX-TANK TALES. By Clarence Louis Cullen. Cloth, pp. 245, \$1.00. New York: J. S. Ogilvie Pub. Co.

THIS reprint of stories published in one of the New York newspapers is well advised and entirely to be commended. The "Ex-Tanks" are those who no longer look upon the wine when it is intoxicating. The stories they tell are of the time when their actions were different.

AMERICAN CITIZENSHIP. By David J. Brewer. Cloth, pp. 131, 75 cents net.

New York: Charles Scribner's Sons. THIS is a course of lectures delivered at Yale by Judge Brewer, and includes what he considers the fundamental requirements and virtues of citizenship. Good character, service, obedience, and effort toward the betterment of the life of the nation are to him the things most essential.

THE DOWDEN SHAKESPEARE: THE TRAGEDY OF JULIUS CAESAR. Edited by Michael Macmillan. Cloth, pp. 179, \$1.00. Indianapolis: Bowen-Merrill Co.

THE fourth volume in this edition of Shakespeare is quite up to the high standard of the preceding volumes. The introduction and notes are scholarly and helpful, and the same excellent features of make-up are preserved.

THE BEAU'S COMEDY. By Beulah Marie Dix and Carrie A. Harper. Cloth, pp. 319, \$1.50. New York: Harper & Bros.

A CLEVER little tale of an Englishman of fashion of the eighteenth century, who disappoints the matchmakers and the husband seekers who are ogling him, by fleeing to America, where he finds adventures and a bride.

If it isn't an Eastman, it isn't a Kodak.

The Kodak Girl.

'Tis Kodak Simplicity

and Kodak film convenience that have made pocket photography possible. Not only does the Kodak go inside the pocket, but inside the Kodak goes the film—all becomes one compact, self-contained mechanism.

Kodaks, \$5 to \$75.

A new folding Kodak for the pocket—almost for the vest pocket, at \$6.00.

EASTMAN KODAK CO.

THE "VELVET GRIP" PATENT HAS BEEN SUSTAINED BY THE U. S. CIRCUIT COURT

"It Talks Like a Gentleman"

That's what Archibald Spooner, Esq., proprietor of the Belvidere Estate, Antigua, British West Indies, exclaimed when addressed in Spanish through the Language Phone. Accustomed to hear Spanish gentlemen speak, he at once recognized the "real thing." That's

What the Gentleman Hears and Reads in his First French Lesson

Que voulez-vous faire ce matin ?

(What do you wish to do this morning ?)

Je voudrais partir par le premier train pour Paris, mais malheureusement, cela est impossible, car j'attends un ami de Chicago et dois rester à Boulogne jusqu'à ce que le vapeur arrive.

(I should like to leave by the first train for Paris, but unfortunately that is impossible, for I expect a friend from Chicago, and must stay in Boulogne until the steamer arrives.)

What everyone competent to judge, feels and knows when listening to the Marvelous Language Phone Records

in French Spanish or German

What one hears is spoken with purest accent and intonation.

THE LANGUAGE PHONE METHOD

The gentleman in the picture is studying French, and will quickly learn to talk like a French gentleman. He is learning just as he would if living among cultured foreigners, only much faster, because he not only *hears* the language spoken, but at the same moment *reads* the sentences in the original with the English translation.

NOT A TOY, BUT A TEACHER

THE NEW YORK WORLD SAYS: *The ordinary talking-machine has heretofore been little more than a toy, but now it has become a valuable teacher, the phonographic principle having been applied with complete success to something really useful—the study of modern languages.*

Hundreds of professional and business men and women, teachers, and students will tell you that this is the way to make the mastery of French, German, or Spanish easy—even delightful. You have the voice of the living teacher always in your ear when you care to listen; a *natural* voice, not metallic or rasping, speaking slowly or fast at your will; bringing out every syllable and accent to a nicety; repeating words, phrases and sentences a hundred times if necessary, until they are *photographed upon your memory* and become as easy for you as your mother tongue.

You learn French, German, or Spanish just as a foreigner learns English—by hearing it spoken.

The Language Phone Method is controlled exclusively by the International College of Languages, and full particulars will be cheerfully sent to those really interested in quickly and easily learning to speak and understand **French, Spanish, and German.**

To be able to converse even fairly well in a single one of these languages is not only an elegant social accomplishment, but a distinct business aid.

The *old* way of language-study, as all know, has never proved entirely satisfactory, yet all who have thus gained some knowledge will progress much more rapidly in the *new* way. You do not have to unlearn anything, but on the contrary the Language Phone Method enables you to turn to practical use what you have already learned.

A Specimen Lesson in either French, German, or Spanish will be sent free on request.

Our free booklet will explain to you exactly what the Language Phone Method is, and also what is thought about it by leading newspapers and well-known people throughout this country and in Europe.

INQUIRY BLANK

International College of Languages:

I am interested in your Language Phone Method, and would like to be fully informed how I can learn to converse in *French, Spanish, or German* quickly, easily and at little expense.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, May 10

At a time when consumptive demands surpass all previous records in the nation's history it is unfortunate that production should be curtailed. Yet that is the present situation. Fires, labor controversies, and a tornado stopped work at many points, greatly reducing the output, and many more wage disputes must be settled before the end of the month or furnace fires will be banked and wheels cease to revolve. Losses by the elements have been severe, and the largest tinplate plant in the world has been rendered idle probably for a month, while many foundries and shops were totally destroyed. Prices of commodities on May 1, as shown by *Dun's* index number, rose to the highest point in recent years, gaining 6.3 per cent over the corresponding date last year, but this week there has been

AN APRIL BRACER

Grape-Nuts Food Gives Spring in the Spring

Teachers require nourishing food more than the average person, for their work is nerve destroying, and unless the food taken will surely rebuild the lost gray matter nervous prostration will set in.

A lady teacher writes, "For the benefit of my fellow teachers and all brain workers who expend daily an amount of nerve energy I want to tell just what I know personally about Grape-Nuts Breakfast Food.

When I was teaching in a boarding school at P— in '08 one of the day teachers ate Grape-Nuts regularly for breakfast and supper, and appeared so well and strong in all her work.

Miss R— used to beg me to join her and give the food a trial, but for some reason I never would try it until the spring of the present year. Then one day in April when I was very much in need of something bracing and was on the point of buying the usual tonic, she prevailed upon me to begin using Grape-Nuts. So we ate Grape-Nuts together from then until June.

Previous to that, every spring I had been compelled to take bottle after bottle of tonics and then go home much run down, but this year June found me well and strong after a most trying month of work, with never a thought about tonics other than the nourishment received from Grape-Nuts. Naturally I believe heartily in the merits of the food.

Since leaving that boarding school, I learn that nearly every teacher in the school from the principal down uses Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

a material decline in some products, notably grain. Distribution through retail channels continues very heavy, seasonable weather exerting a most helpful influence. Railway earnings are steadily gaining, full returns for April exceeding last year's by 10.6 per cent, and 1900 by 25.0 per cent.

IRON AND STEEL

The feature in iron and steel is the scarcity of supplies of pig iron and the strength of the demand for finished products, particularly structural materials, what few rails are available and whatever tonnage can be secured of bars and plates. Some scattered lots of standard rails have brought \$31 per ton this week, against the nominal price of \$28 per ton. Structural material sales have been very heavy this week at Pittsburg, and the mills are reported to have orders six months ahead. Bessemer pig iron is active, and quick deliveries will easily bring \$20, while steel billets are selling at \$33.50. The only branches of the trade which are approximately up with demand are the tinplate and sheet industries.

COTTON AND WOOL

Heavy liquidation occurred in cotton, the technical position of the market apparently favoring that, but strong basic conditions reasserted themselves later, with the result that a large part of the decline was regained, and the loss on the week is not a serious one. The feature in the dry-goods trade this week is the improved demand at retail and the large reorder business, coupled with rather better buying for the fall season. Prices of the manufactured textiles remain as strong as ever. The situation of wool at the east is affected by the interruption caused by strikes, but stocks are low there. Wool is active at a higher range than a year ago at the west, and at London a further advance is noted, so that the ending of the present labor troubles contains important possibilities for the raw material.

Wheat exports July 1, 1901, to date (forty-five weeks) aggregate 219,167,062 bushels, against 179,895,699 bushels last season. Corn exports aggregate 126,755 bushels, against 128,679 bushels last week and 1,583,831 bushels last year. July 1, 1901, to date corn exports are 25,655,619 bushels, against 157,017,542 bushels last season.

FAILURES

Business failures for the week number 179, as against 174 last week, 193 in this week last year, 174 in 1900, 169 in 1899, and 250 in 1898.

Financial

Bradstreet's, New York, May 10

THE MONEY MARKET

Interest rates in the New York loan market continued to rule high this week, although a positive scarcity of funds or stringency can not be said to exist. The financing of several large bond and stock issues, however, created more or less expansion of loans last week, although the condition of the bank reserves and the happenings in the stock market tended to create conservatism on the part of bankers. The absorption of money by the treasury is looked on as a leading factor in existing money-market conditions, and it is noted that though money has been shipped to New York from nearby cities the interior still shows a demand for funds, a shipment of \$400,000 having been made this week to New Orleans. The advance in interest rates, however, weakened foreign exchange sufficiently to negative again fears of gold exports at present. The principal pressure was in connection with call loans, the restricted offerings causing rates to advance early in the week to 20 per cent, though the bulk of the business at the stock exchange and the banks was at from 7 to 10 per cent. Time money has also been firmer and less plentiful, and rates on railroad collateral advanced to 4½@5 per cent for all dates, loans on industrial securities being quoted at 5@5½ per cent. There is little or no local buying demand for commercial paper and out-of-town buyers are not doing much, while the offerings of prime names are also limited, rates being based on 4½@5 per cent for double names.

THE STOCK MARKET

The New York stock market is quieter, being affected by the renewed prospect of an anthracite coal-miners' strike. Quotations previously displayed marked tendencies to improve, largely on manipulation, although high money rates, coupled with further violent breaks in specialties and the failure of three stock exchange houses, caused some temporary unsettling of the market. Better crop advices from the west led to renewed speculative manipulation of the grangers and Pacific stocks. Bonds have been firm, a feature being the ready absorption of various new issues. London was a moderate purchaser of American stocks throughout the week. Foreign exchange declined under the influence of firmer money, demand sterling receding to 4.87½, and gold exports

are for the time being impracticable. Silver prices rallied somewhat this week in London and New York on the indisposition of holders to sell at low figures.

BANK CLEARINGS

Bank clearings for the week ending May 8 aggregate \$2,952,007,841, an increase of 14 per cent over last week's total, but a decline of 13 per cent from a year ago. Exchanges at cities outside of New York amount to \$877,650,713, an increase of 8 per cent over last week and a gain of 7 per cent over last year.

Various Topics

In a letter to the *New York Journal of Commerce* O. K. Lyle estimates the Kansas wheat crop at 42,600,000 bushels.

The statement of the British board of trade for April shows an increase of £1,505,500 in the exports and a decrease of £65,700 in the imports.

The directors of the Standard Oil company have declared a dividend of \$10 a share, payable on June 16. This dividend declaration compares with \$20 a share paid for the March quarter, \$8 for the December (1901) quarter and \$8 for the September quarter.

INSIDE THE GROCERY

Some Facts Made Known

It is often thought that grocers really have very little care regarding the food value of the articles they sell, but the real facts are that grocery keepers of the right sort are extremely particular as to what they recommend.

One of the fraternity relates a tale. "The highest priced coffee on the market I introduced to my customers and used myself. I began to have bilious attacks, and after a little observation attributed them directly to coffee. Every time I left off drinking it I got better, but I felt the need of a warm drink for breakfast.

Along in '95 a wholesale grocer urged me to put in some Postum Food Coffee in my store, which I did with considerable misgiving, for, at that time, the now famous Postum was not so well known.

He urged me to try it myself, which I did, and was disgusted with the flat, tasteless beverage; so was my wife. I remembered the wholesale grocer said something about following directions carefully, so I took the package and studied it. I at once discovered that we had not boiled it long enough, only three or four minutes, but it must be boiled 15 minutes at least, so we tried it again, with the result that we got a perfect cup of coffee, a delightful and healthful beverage. I have continued the use of Postum in my home ever since. We use it for breakfast, dinner and supper.

My bilious attacks quickly left and I am free from them altogether. I began to explain to my customers something of the value of Postum Coffee and now have a very large trade on it." Name given by Postum Co., Battle Creek, Mich.

WIT AND HUMOR

The Blessings of Poverty

O Poverty, I sing thy praise!
There's nothing half as sweet
As toiling on through dismal days
With not enough to eat;
The damp, the cold, the want, the ache—
Ah, these fair blessings help to make
The toiler's joys complete!

O Poverty, how kind of thee
To spread so far around!
How fortunate that wealth may be
In few, few places found;
'Tis well that weary millions fret
For rest they ne'er may hope to get—
How sweet their wailings sound.

O Poverty, with all thy pains,
Thy weary nights and days,
Thy broken hearts, thy clouded brains
And unrelenting ways,
How glorious it is to be
Where one may look far down at thee
And loudly sing thy praise!
S. E. KISER in *Chicago Record-Herald*.

How It Is Done

One day the Turtle announced that he could Walk on the Water, and that he would Do It at a Certain Date and Place. The Turtle was Known as a Good Mixer, being equally at Home in the Dry and in the Wet. He also had a Record with the Sporty Boys on account of a Certain Affair with the Hare, wherein he had Won Out. So he had a Lot of Friends who were anxious to see if he could Get There. When the Day came, all the Fish assembled at the Place, while the Frogs sat on the bank and croaked. The Turtle stood on the Shore and Watched the Assembling of the Multitude, which at last Filled the Stream. Then he approached the Water, and Calmly Walked Across on the Heads of the Suckers, Side-stepping Occasionally to get his Foot On To a Lobster.

Moral.—That's the way it is in Politics.—*Indianapolis News*.

The Yankee]

The Yankee exhibits about three stages of spiritual development, viz.:

1.—THE PURITAN. He believes that all men and some angels are elected to destruction. Accordingly he has pie for breakfast, and invents the Parker House roll.

2.—THE UNITARIAN. Rationalistic squalls throw him on his beam ends. He shifts his ballast and takes a skeptical list. He talks of eating to live.

3.—THE AGNOSTIC. The germ theory is his religion. The balanced ration is his Eucharist. Salvation is a matter of proteids and phosphates. Sin is starch. There is no hell outside the liver. The principle of evil is a paralogism of the intuition, proceeding from the perversion of the gastric peristalsis.—*Life*.

PUBLIC OPINION

Number 21
Volume XXXII

The Week

Thursday
May 22, 1902

LATER information from the devastated islands of Martinique and St. Vincent confirmed the first reports of the extent of the damage wrought by the volcanic eruptions which began on May 8 and continued with destructive force for a week. Relief measures were so promptly taken that we already hear that there is danger of great waste of money and effort in this direction. It speaks well for the world's generosity that United States Consul Ayme was able to report to this effect as early as May 17, a little more than a week after the first news of the disaster was received. It is difficult to see, however, how the distress, destitution, and want of a large part of the population of Martinique, numbering nearly 200,000, and of St. Vincent, numbering 50,000, could be so quickly relieved. If no further relief is needed, the conclusion must be that the distress was less than it has been reported to be.

AN examination of the press comment printed in PUBLIC OPINION in the fall of 1900 confirms our recollection that in the coal strike of that year the miners had general public sympathy and support. We are also confirmed in our recollection that it was to this circumstance that the success of the strikers was attributed. This year the conditions are changed. The public, that is to say, the press, is not convinced that the miners have sufficient reasons for striking, nor do they point to such grievances as would generate public sympathy in their behalf. If, indeed, the conditions under which the miners work are as stated by the most reliable mining journal in the country in this issue, the public will wonder more than ever why a strike was ordered, and if the rule of 1900 works both ways, it should not be difficult to forecast the outcome of the strike which began last week.

THE volcanic eruptions in the West Indies, together with reports of similar disturbances in Nicaragua have been put to good use by advocates of the Panama canal route, the danger of the destruction of a canal by earthquakes or eruptions in Nicaragua being enlarged upon to a rather absurd extent in order to enhance the desirability of Colombia as a canal site. While the controversy between the advocates of the different routes is going on, treaties have been agreed upon which open the way for the building of either a Panama or Nicaragua canal, and the country is impatiently awaiting some action by congress. There is considerable sentiment in favor of Mr. Hoar's bill, which leaves to the president the task of choosing the better route.

NEW YORK's East Side women have adopted a very strenuous method of protest against the high price of meats. They quite approved of the retail butchers' course in closing their shops in order to escape the exactions of the packers' combination, but when the butchers weakened and opened their shops their customers retaliated upon both retailer and wholesaler by raiding the meat stores and throwing into the streets as much of the high-priced eatable as they could lay hands on. The leaders in these proceedings promptly found themselves in jail and after a few days the popularity of raiding the butcher shops declined, but not before the raiders had provided some texts for newspaper editorials which could hardly have been pleasant reading even for the most hardened of the "robber barons" engaged in the meat business.

A LAY observer has, perhaps, no business to comment upon such a subject as the revision of the Westminster confession, now before the Presbyterian general assembly in the

form of a report by the committee of revision. It is a dangerous as well as an abstruse subject, and so, avoiding any expression of opinion as to the merits of the proposed amplification of the creed, we may say that it impresses one merely as an effort to accomplish an impossible task—that of reconciling "up-to-date" Presbyterianism with that of the past. Accordingly, as one commentator puts it, "the revisers have satisfied neither fashionable evolutionism nor old-time creationism." However, the fate of the new exposition of Presbyterian belief is still in doubt, only the election of Dr. Van Dyke as moderator suggesting the dominance of the liberal wing of the church.

FURTHER evidence of Emperor William's determination to be on the best of terms with us is shown in his offer to erect at Washington a statue of Frederick the Great, who "maintained a friendly attitude toward the American republic during the course of her formation." President Roosevelt's acknowledgment of the emperor's proposal was more than cordial, and congress is expected to receive the gift in the same spirit. With what reason we do not know, the statue is said to be offered in evidence of the kaiser's appreciation of Prince Henry's reception in the United States, and while all allegations regarding Frederick's friendship for the American republic have failed to stand the test of critical examination, the gift of his statue is none the less welcomed as a further evidence of German good-will.

ALFONSO XIII took up the reins of the government of Spain last Saturday, having reached the constitutional age of sixteen. He was not crowned, as so many of the newspapers insist, he merely assumed the full powers of the kingship which was proclaimed on the day of his birth. All witnesses of the ceremonies attending this event agree that they presented the strongest evidence of the perfect attachment of the people to the monarchy and every promise of a happy continuance of the reign of the last of the Bourbons—that remarkable line of rulers, who, though unable to learn anything or to forget anything have occupied the greatest thrones in the world for a thousand years.

IT has been a dull week in British politics, the abandonment of the proposed bank-check tax and the defeat of the Conservative candidate in the Bury election being the only incidents worth mentioning. The first incident indicates, however, that the often hinted differences in the cabinet are wide enough to force the chancellor of the exchequer to abandon a pet scheme of taxation and the transformation of a long-standing Tory majority into a Liberal majority in Bury is taken as an indication that the outcry against the "bread tax" is made in good earnest. That the Salisbury government will long outlive the coronation and the end of the South African war is considered very doubtful by the closest observers of the recent trend of politics in England.

ANOTHER week has passed without bringing peace in South Africa. The commissioners appointed to communicate the British terms to the burghers have visited all the commandoes, and are now located at Vereeniging, where a very deliberate discussion of the matter is supposed to be going on. Mr. Chamberlain said at Birmingham on Friday that he was hopeful but not sanguine of peace, and the position of the Briton at home seems to be that as peace is certain within a short time there is no use worrying over a week or a month more or less.

AMERICAN

The Government's Bill Against the Meat Trust

IN the bill filed by the United States against the beef trust it is alleged that the packing companies composing it are engaged in interstate commerce; they control sixty per cent of the business of buying and selling fresh meats; they prevent free and unrestrained competition therein; they have conspired together to control the cattle markets of the country; they arbitrarily control the price of meats; they manipulate and control railway rates, and for years past have been in

From Puck, May 14. By permission. Copyright, 1902, by Keppler & Schwarzman.
PUCK: "You'll never hurt that animal until they give you this ax!"

combination and conspiracy with each other and with the railway companies to obtain a monopoly of the supply and distribution of fresh meats throughout the United States. An injunction is prayed against them that they be enjoined from continuing these unlawful proceedings.

The *Chicago Chronicle* (Dem.) thinks that criminal prosecutions under the Sherman anti-trust law "would be far more prompt and effective for the relief of the victims of the injury than the injunction remedy is proving to be. Why, then, may we suppose the injunction was preferred as the remedy? Was it because it was the least offensive to the packers? Was it because it might serve as an obstacle to future proceedings under the criminal provisions of the statute? Was it because it would afford the administration an opportunity to pose as the stern minister of justice and champion of the people with the least possible damage to a prolific source of political campaign supplies? Such suspicions are suggested when the mode of procedure which would obviously be most effective is very carefully avoided." The same opinion is held by the *Indianapolis Sentinel* (Dem.). "Even if successful," the *Sentinel* points out, "an injunction would

only stop violations of the law in the future and not punish the offenders for past violations. Why should they not be punished as other law-breakers? Why not enforce the law? These men care nothing for injunctions or litigation. The only thing that would affect them is imprisonment. Why do not the authorities treat them as other law-breakers?" The *Chicago Post* (Rep.) discusses the same issue from another point of view: "As to its method, public opinion will approve the decision to resort to the injunction rather than to criminal prosecution. There may be sound objection to the employment of the injunction, but the supreme court has upheld the use of the writ in a similar case, and it is folly to contend that the executive department ought to be more conservative in the matter of 'government by injunction' than the supreme court, which is the special guardian of the constitution and the rights of the citizen under that charter of liberty."

The *Omaha Bee* (Rep.) thinks that "those who have professed to doubt whether the federal authorities were in earnest in this matter may now be assured that their intention to have judicially determined the question whether the packers have been violating the anti-trust law is serious, and there is every reason to expect that the proceedings which have been instituted

"THE FIGHT IS ON IN EARNEST."—*Indianapolis Sentinel*

will be pushed by the government with all possible energy." The *Savannah News* (Dem.) admits the truth of this claim: "Intimations were thrown out sometime ago that the government was not in earnest in bringing suits against the railroad merger or trust and the beef trust, but that after public clamor had subsided the prosecution of the suits would not be very vigorous, if not entirely abandoned. It looks as if this view were wrong."

Referring to the report that the packers will demur to the government bill against them and make

the point that the shipping of meats to an agent in another state under a certain agreement is not interstate commerce, the *Louisville Courier-Journal* (Dem.) says that "the notion seems to be that all that is necessary to evade the laws regulating interstate commerce is to refuse to sell outright to the people of another state, but to send the goods to an agent to be sold within the state itself. Whether the meat trust can be restrained under the Sherman anti-trust law remains to be seen. So many others have escaped that it is altogether better not to be too sanguine. But as to the power of congress to regulate interstate commerce by suitable legislation there is no doubt at all, and it would be strange if the law could be annulled by so transparent a device as shipping goods to an agent under a certain agreement."

The Coal Strike

THE ANTHRACITE MINERS OUT

BY a majority of 111½ out of a total vote of 811 in the convention at Hazelton, Pennsylvania, last Thursday, the anthracite coal miners finally decided in favor of a general strike involving 145,000 men. President Mitchell, of the united mine workers, thus sets forth the miners' demands: "The miners ask for an eight-hour day which shall apply to all men employed in and about the mines. It affects the miners and laborers the same, as all classes of labor work ten hours a day. It is not true that the miners work only five hours a day, as they are, as a rule, in the mines ten hours. The miners also ask for a 20 per cent increase in wages for men performing contract work and an eight-hour day at the present rate of wages for men employed by the day or week. The miners also prefer annual wage agreements. The demands are uniform and apply to all anthracite miners in the field, except the demand for the weighing of coal, which applies only to the Lackawanna and Wyoming and part of the Lehigh district."

The operators, who have refused these demands, claim that there are no "tangible reasons for a strike," and speaking for them, the *Engineering and Mining Journal* says: "Contrary to general belief, the work of the miners themselves, the most influential of the rank and file of the union, is not hard and is very well paid. Most of the miners, at least in the Wyoming and Lackawanna fields, work on contract, getting so much per car of coal mined. A miner goes to work at, say eight o'clock, tells his laborer, whom he hires, where to put in certain shots, and looks on. The laborer drills the holes, lets off the blasts, and then shovels the coal into the mine cars. The miner may be all through by ten or eleven o'clock, and for the time spent below ground he may get \$3, while his laborer works perhaps ten hours and gets \$1.75. One of the reasons for the present agitation over an increase of wages and an eight-hour workday is that the laborers are becoming restive under their treatment by the miners, and the latter are seeking to have the companies guarantee wages which they themselves are not willing to pay. There is not the slightest excuse for a general strike in the anthracite regions at present."

The New York *Evening Post* (Ind.) says: "Of course, a labor union is perfectly within its rights in attempting to increase the wages of its members. If the leaders of the anthracite coal miners think that the general state of trade, with the rising trend of

prices and of wages, warrants them in asking for an advance in wages at this time, no one will dispute their right to try it on, and to test the matter by a strike, if they consider that resort one to win with. But they certainly can not look for the public sympathy which would be given them undoubtedly if they were able to point to intolerable conditions of life under the prevailing system. This they have not done. Their strike, therefore, if they now order one, as it seems likely that they will, must take its place simply as one more effort of organized labor to better itself. It will greatly inconvenience the public, but can not be expected to arouse popular opinion in any excited way." The *World* (Dem.) thinks that "the action of the miners in declaring for a strike against the advice of President Mitchell and the district leaders, can not but cause both regret and concern. Whatever the merits of the miners' claims that higher wages should be given to enable them to meet the enhanced cost of living, a strike which their own leaders regard as ill-advised is a hazardous experiment." The *Journal* (Dem.) applauds the action of the miners and expresses the belief that the strike was brought on because the "criminal coal trust" felt itself to be in a position to resist just demands and to make out of the public whatever losses are caused by the stoppage of mining.

The Philadelphia *Press* (Rep.) believes that the Hazelton convention acted in disregard of the advice of the more level-headed leaders: "There is evidence that the judgment of conservative leaders was against it, and it is certain that the operating and carrying corporations are much better prepared to try out the issue now than at any former time, and the season of the year is favorable to them. They have shown their confidence by refusing to yield to any of the miners' demands, and the miners have shown equal confidence by refusing anything themselves. With such a disposition on both sides, the struggle may be a long one." The Philadelphia *Times* (Ind. Dem.) thinks that the miners acted inadvisedly, but it also believes that "it was a humane duty, and, moreover, a simple act of business expediency, for the operators to grant the comparatively small concessions which the miners sought. They have few weapons with which to cope with capital. The most potent is that which they have chosen, and the end, whether it come soon or late, can not be made the subject of a clear forecast."

"The knife of the coal trust cuts both ways," says the Boston *Traveler* (Dem.). "It gouges the miner and it gouges the consumer. The difference is the increased profits of the most oppressive of all trusts. And the bloated and arrogant monopoly refuses to submit the present question to the most responsible labor tribunal that the world has ever seen. The coal trust and the beef trust are brothers in crime, inasmuch as they are both unlawful and criminal conspirators against the prosperity and happiness of the people." The Chicago *News* (Ind.) is equally vehement: "It is this grab-all trust that works the miners at starvation wages and refuses to consider their reasonable requests. It is the capsheaf of trust criminality, the most conspicuous of all the robber combines. It is impossible that the government can continue to let this trust enjoy fair weather. The anthracite coal road outrage calls for prompt and effective treatment and can not be ignored or put aside for attention at some later time. It should be attacked by the government at once."

The Coronation Embassy

RENEWED DISCUSSION OF THE PROPRIETY OF THE EMBASSY TO THE CORONATION OF KING EDWARD

DISCUSSION of the propriety of the sending of special representatives to the coronation of King Edward has been brought on by the resolution offered in the senate by Mr. Bailey, of Texas, and reciting "that it is contrary to the policy of the United States to accredit to any foreign government any ambassador, minister, or other diplomatic officer or agent especially to represent the United States at the corona-

U. S.—"No more Coronations for me."—Chicago News

tion of any hereditary prince or potentate." The Chicago Journal (Ind.) "can not see why it is contrary to the policy of the United States to send to foreign governments ambassadors or other representatives to be present at great celebrations or other functions of national importance to them. It is merely a friendly act, and a token of our interest in their welfare. It is high time the people of the United States were getting away from this narrow, backwoods notion that any special exhibition of friendship or interest in the welfare of other nations detracts from our democracy, and that we must be constantly on the alert or the despotism of the old world will swallow us up. It is time that the Elijah Pograms and the Jefferson Bricks subsided." The Chicago Chronicle (Dem.) takes the opposite view, and would extend the Bailey resolution to cover the Reid embassy. "There is no denying," the Chronicle says, "that the special coronation flunkism is repugnant to the self-respect of the country. The administration wants to get out of a bad scrape. But instead of taking the frank and straightforward course out of it, administration apologists want a precedent set now that there shall be no special embassies after this year. A resolution to this effect is proposed in both house and senate. This is Mr. Roosevelt's way of 'saving the face' of the administration. The country will not acquiesce in so transparent a subterfuge. Neither this year nor any other year should this democracy be represented by a special embassy at any coronation." The Chicago Post (Rep.) concurs in this opinion, but on different grounds: "The objection is not to the sending of a special embassy, but to the absence of reciprocity from this display of international civility. The inauguration of a president is of as much importance to us, to

say the least, as the coronation of a king or queen is to the British. No nation has sent embassies to represent it at our inaugurations, and there is no reason why we should pay any special attention to these coronation ceremonies."

The Washington Star (Ind.) thinks "it absolutely certain that had Great Britain, in preparing for the coming event, signified in some way a wish that this republic, because of our form of government, should take no note of the coronation, the sentiment of the people of the United States would have been that of surprise and indignation. Some of the very men now loudest in their denunciation of monarchies and their flummery would have led the chorus against so flagrant an affront to international comity and good-fellowship. Very properly and politely, we are expected to be present. To decline on the score that we don't approve of that sort of thing would be to beg the question—to be guilty of a sort of impertinence. To refuse the invitation, with the view of trading on our virtue for partisan advantage at the polls here at home, would be to belittle ourselves in the eyes of the world."

The Admission of Oklahoma, New Mexico, and Arizona to Statehood

SINCE this subject was last discussed in PUBLIC OPINION, a change of sentiment has taken place regarding the admission of Oklahoma, New Mexico, and Arizona to statehood, as provided in the bill recently passed by the house. The questionings as to the wisdom of this step find expression only in such comments as this by the Boston Herald (Ind., Dem.): "We confess to having to exercise faith in the views of those who have looked into the subject in order to be reconciled to the admission of Arizona, but our impression is that it is better to run the risk in this direction than to reject the applications of Oklahoma and New Mexico for admission. The influence of states, even in the senate, is more from their character than from the number of the votes they cast there." The New York Herald (Ind.) concurs: "Arizona and New Mexico should be admitted, and before the world's fair is held to celebrate the Jefferson purchase all the territorial governments within its limits should be obliterated by providing for the Indian territory with Oklahoma. Let us add the three new stars to the flag."

THE KIDS: "Say, Pop, isn't it time we were wearing pants?"—Detroit News

"By the passage of the bill the house has again testified to the compelling potency of public sentiment as controlling the action of that American body," the *St. Louis Republic* (Dem.) says. "The truth of the situation should not be lost on the American public. Popular sentiment in favor of the enactment of the omnibus statehood bill into law should be so distinctly voiced as to force the senate to a definite issue of obedience to the people in a matter of vital moment." The *Denver Republican* (Rep.) also thinks that "to keep these territories out any longer than may be necessary for them to adopt constitutions and otherwise comply with the conditions of the enabling acts would be a great wrong and injustice to their inhabitants, who are today deprived of the right of self-government. They are fully equipped in population and the valuation of taxable property for the maintenance of state governments, and no good purpose whatsoever would be served by excluding them any longer."

Mr. Nixon's Retirement from the Tammany Leadership

LEWIS NIXON resigned the position which made him the so-called leader of Tammany Hall on May 14. He resigned "peremptorily, unalterably, and to take effect at once." That done, he left the assemblage to which he gave his resignation, asking them "to pass no resolutions of confidence, of thanks, or of regret." He said that "he could not with self-respect hold the leadership," because his orders were not obeyed, that he was expected "to be only a figure-head," appeals from him and behind him being regularly cabled to Richard Croker in England, involving protests against him. His directions did not count unless Mr. Croker approved them, and he was, in fact, undermined constantly by a "kitchen cabinet headed by Andrew Freedman, with Peter F. Meyer as a court of review"—one the intimate friend and the other the business partner of Croker.

The *New York Times* (Ind. Dem.) thinks that "it is much to Mr. Nixon's credit that he has failed to qualify for the place to which Croker raised him. He is quite too much of a gentleman, too decent, too honorable, and has too much character to be acceptable to the vile and venal men who reject his leadership. Nixon could not get down to the level of these fellows, and they knew it. That is why they rejected him. It is more plunder, more opportunities for

blackmail, more of the money of the gamblers, rum-sellers, and dive-keepers that they want, not reform or fine pretenses." The *World* (Dem.) declares that Mr. Nixon "was not, and under the existing conditions could not be, the real representative of the men who hold Tammany in their grip. They are a grafters' combination in restraint of decent Democratic government in this city, a conspiracy with no motive or object but 'their own pockets all the time.' It is desirable always that representative men should represent. Mr. Nixon was misrepresentative of the men behind and around him. He goes, and gains in public respect by going. They remain, and the popular

BLOWS OFF ITS HEAD.—*New York Tribune*

judgment of them remains also." The *Brooklyn Citizen* (Dem.) applauds Mr. Nixon's resignation of "a fictitious leadership," but is mainly interested in the effect of conditions in Tammany on the fall elections. Of this it says: "The Tammany eruption is purely a local disturbance, and will not in the slightest affect arrangements already under way to bring out the full Democratic vote this fall. The policy of the Tammany organization in the state campaign will undergo no change, no matter who becomes Mr. Nixon's successor. The policy of Tammany is to efface itself, and to leave the direction of affairs to the up-state Democracy."

The *Tribune* (Rep.) believes that Mr. Nixon tried his best "to give Tammany a respectable character. Tammany has no use for respectability, and Mr. Nixon found this out in time to save his reputation." The *Sun* (Rep.) says that nothing in Mr. Nixon's term of office so became him as does his resignation.

Congressional Summary

BOTH houses of congress, on Monday, May 12, voted an appropriation of \$200,000 for relief of sufferers from the Martinique and St. Vincent disasters; Senator Foraker spoke on the Philippine bill, defending the conduct of the war in the islands. The senate, on the 13th, in accordance with the president's recommendation, appropriated an additional \$300,000 for relief of destitution in the West Indies; the agricultural appropriation bill was passed; the house took up the navy bill. No important business was transacted in either house on the 14th. On Thursday the fortifications bill was passed by the senate.

A Ruinous Tug of War.—*Brooklyn Eagle*

FOREIGN

The West Indian Disaster—II LATER IMPRESSIONS OF THE DESTRUCTION WROUGHT IN MARTINIQUE AND ST. VINCENT

GEORGETOWN, ST. VINCENT

FORT DE FRANCE, MARTINIQUE

THE first persons to enter St. Pierre, Martinique, destroyed by a volcanic eruption on May 8, describe the place where the town stood as a mass of ruins which bear a striking resemblance to those of Pompeii. In the lower part of the town, called the Mouillage, the outlines of the streets can be made out and in places here and there are stretches of walls of houses several yards long which are still erect, but battered and crushed in at the top. This is all that is left. The number of the victims was so great in places that in the great heaps of commingled dead identification of individuals was very difficult. The odor of the putrifying bodies made the work of handling them not only horribly offensive, but dangerous to the searchers as well. A week after the eruption, however, soldiery and a regularly organized relief corps had taken charge of affairs, burning the remains of the dead and saving such property as had not wholly disappeared. The whole island has suffered to a greater or less degree, and for miles around St. Pierre the country is a chaotic waste. Great changes in submarine depths around Martinique have occurred. A number of little islands have entirely disappeared. A depth of 2,600 meters is now found where formerly there was only 60.

Thousands of refugees crowd Fort de France, and the attention of the world is now turned from the first horror of the disaster toward the relief of the destitution of those who escaped. Contributions have been made by the people of every civilized country, the United States congress appropriating \$200,000 to be spent under the direction of the president in relieving distress not only among the people of Martinique, but among the sufferers from the eruption of the Soufrière volcano on the island of St. Vincent, eighty miles from Martinique, and separated from that island by St. Lucia.

It was not until several days after the arrival of the news from Martinique that the extent of the St. Vincent disaster was realized. Fewer lives (not more than 2,000) were lost on the British island, but a greater territory is laid waste and there is at least equal destitution. The eruption of the volcano, which stands 4,000 feet high at the northern end of the island, and which had been somnolent for ninety years, continued violently for three days, burying the north-

ern portion of the island in lava, stones, and dust, and showering missiles over Kingstown, fifteen miles away. New craters opened from time to time, and the streams of lava flowed into the sea within one hundred yards of Georgetown, midway on the eastern coast between Kingstown and the volcano. The entire island is covered with ashes and débris to an average depth of eighteen inches, varying from a thin layer at Kingstown to two feet near Georgetown. Many sugar estates are ruined and not a green thing can be seen north of Georgetown. Many of the former supplies of water have disappeared. Rivers that were running bank full before the explosion of Soufrière are now dry. Lakes have evaporated, and only in the south half of the island is there any living water that can be reached. The injured, of which there are hundreds, are horribly burned by the hot sand and grit which was driven through the air with tremendous velocity. Mild earthquakes and the expulsion of smoke, steam, and a small flow of lava from the Soufrière continued up to the 17th, and it was then that the most horrifying details of the condition of the Carib country, where thousands of cattle and hundreds of human corpses lay in a state of decomposition for several days during the agitation, were revealed. Although the number of deaths in the island, due to the disaster, is estimated, judging from the missing inhabitants, at two thousand, up to the night of May 13 only 1,268 bodies had been buried. The undiscovered bodies are probably covered with lava and hundreds will never be found.

On Saturday Secretary Hay received a cable dispatch from United States Consul Ayme at Fort de France announcing that the relief supplies then afloat were sufficient for the Martinique sufferers, and suggesting that, while St. Vincent may be in need, the public subscriptions in the United States should cease at once. A dispatch to the Paris *Matin* from Fort de France thanks the United States for the prompt assistance rendered to the volcano sufferers, but says that the fear of a famine is groundless. However this may be the New York relief committee claims to be well informed as to the necessities of the case and their activity is to be continued until it becomes perfectly plain that nothing remains to be done.

Later comment upon the disaster is confined to discussion of the needs of the people of the devastated

islands. Dr. Soper, who superintended the cleaning up of Galveston, writes in the *Medical News* of the sanitary aspects of the situation. The living refugees, not the dead victims, are to be feared as possible originators of a pestilence, he says. Most grave of all the conditions promotive of unhealthfulness are unsanitary habits and the congestion of people weakened by mental and physical suffering in the cities of refuge. Martinique contained about 170,000 previous to the eruption, representing nearly 500 persons to the square mile. The worst feature of the situation is that the bulk of this population has been driven from the vicinity of the comparatively healthful hills of the north coast to the insalubrious lowlands around Fort de France. Dr. Soper suggests the deportation of refugees to other islands and their prompt distribution in camps under strict hygienic supervision until such a time as their return to their former vocations shall be possible and their dependence upon aid from without shall have ceased.

France and Italy

FRENCH INDUCEMENTS TO ITALY TO ABANDON THE TRIPLE ALLIANCE

NOTWITHSTANDING the positive announcement by Count von Buelow of the renewal of the triple alliance, newspaper discussion of the subject continues to regard the matter as unsettled. Russia and France appear to be particularly anxious to impress upon Italy the unwisdom of again joining hands with Germany and Austria.

The triplique expires May 6, 1903, and it has been generally understood that a year's notice was required to cancel or modify it. The *Rome Tribuna* (official) states, however, that the year's notice clause does not exist. The treaty may be renewed up to the last minute of its life. Italy's principal concern is thus expressed by the *Tribuna*: "We believe that they are right who assert that Italy is not quite decided to give a renewal of its political pledges without receiving assurances which will make her commercially secure"—a reference to the tariff barriers which Germany has in preparation. The *Popolo Romano* also says that "it would be foolish to rely upon the goodwill of the contracting parties. Furthermore, the treaty should be modified so as to give France no cause for offense." This opinion, is, of course, endorsed by the French papers, among them the *Temps* and the *Debats*.

The Paris *Figaro* reminds Italy that the German reichstag is busy increasing duties on all Italian products, and M. Charles Girardeau, writing in the *Revue Bleue*, claims that Italy is and ought to be tired of playing the part of a dupe of Germany and Austria. She is conscious of her interests; she is tied politically to Germany and Austria, but the vainglory of being an ally of the German emperor does not make her blind to the probable consequences of the policy of the German agrarians. "Italy," continues the *Revue* writer, "is done with the historical declarations of sympathy bestowed upon her by England; she has listened to the wise admonitions of Visconti Venosta. She knows that without France she would have to resort to unspeakable financial transactions or go into bankruptcy." As a parting shot, M. Girardeau, who is attached to the French foreign office, remarks that "the wind that is blowing around the quirinal does not come from the shores of the Spree. Victor Emmanuel has not yet paid a visit to his allies, but it is said that he will go to St. Petersburg. Queen Helena is from Montenegro; two French princesses are at the royal court of Italy; Germany is closing her commercial frontiers to her allies; Crispi is dead, and we have at Rome an ambassador who will not allow anything to slip by him."

The St. Petersburg *Novosti* backs up the French arguments against a renewal of the triple alliance by Italy and hints that Russia, as well as France, would welcome her to warmer friendship.

The French Elections as Viewed at Home

Translated for PUBLIC OPINION

THE general result of the French elections has already been given in PUBLIC OPINION, together with the comment of our newspapers thereon. We now have the opinions of the Parisian journals, all of which, without regard to party, claim the victory for their side. The *Journal des Debats* stubbornly insists that the vote "signifies a firm resolution to get rid of the policy of the last three years," but it admits that "it is certain that the country has resisted and escaped from those who wished to draw it toward extremes, and a second fact which is plain is that the republic has never been less menaced than at the present time. Socialistic and radical journals seek to create the impression that the country was forced to repulse the furious onslaught against the republic.

KINGSTOWN, ST. VINCENT

SUGAR PLANTATION, ST. VINCENT

This, however, is not true, for there has not been, since our great revolution, a government which has been less contested than ours. It is, then, time to finish with the pretended republican defense; it has already lasted too long. The new chamber will not present itself with a ready-made majority; one may regret it, but one can not be astonished. There have been sown in this country the germs of hate, and one reaps a chamber where these divisions and hatreds are necessarily found again."

To the *Figaro* it appears established that "the current is not toward excessive opinions, and that France is less revolutionary than has been believed."

La Lanterne remarks that "a swallow no more makes the springtime than Paris makes France, and the colossal effort of Nationalism ends in nothing, or nearly nothing." *Le Radical* regrets that Paris allows itself "more and more to be won by the virus Cæsarean," but concludes that "the important thing is to know with whom rests the definitive victory, and from now there is no doubt that it is the republican republic which is victorious." The *Gaulois*, on the other hand, calls the example of Paris "magnificent." *Le Matin* affirms the success of the reaction in Paris, but is consoled by the fact that in the country "the bodies which heaped the field of battle find themselves on the side of the opposition."

Le Petit Journal neglects the country and praises Paris, which "has taken with extraordinary vigor the head of the National movement," claiming that "the unanimity of the manifestation in Paris demonstrates the electoral situation. *L'Aurore* says that "the Parisians demand a king, an emperor, a czar, or a grand-Turk. Such is the sense of the vote, and what is the use of dissimulating?" *L'Autorité* brands the vote as corrupt, and declares that "all will be bad so long as the vote is not by ticket."

La Fronde sees in the elections "a feministic triumph which seems a political check from a republican point of view. For the first time in France women have engaged in active political work, and the reactionary parties, comprehending better than the government of the republic the force these women represented, have flattered them, placed them in movement, and finally have obtained coöperation in influence and money. Thanks to the women, the Nationalists have received large sums of money and a large number of indifferents have been shaken from their accustomed inertia. Naturally the profuse expenditure of money and the inspiring of a zeal to vote has been strongly felt at the ballot-box."

The Succession to the Throne of Turkey

Translated for PUBLIC OPINION

FROM time to time it is reported that Rechad-Effendi, the heir-presumptive—not apparent—of the padishah, has met an untimely death. This is due, according to the Paris *Figaro's* Constantinople correspondent, to the fact that Rechad is rarely seen in public. He is neither dead nor sick. He lives in retirement not very far from Pera, outside of the Yildiz Kiosk, the palace of the sultan. Masselack, his residence, is located on the road to Therapid, and he devotes most of his time to gardening and arboriculture. It is said by those who know him best that he accepts philosophically the consequences of his position as heir-presumptive.

The Turkish law provides that the oldest male

member of the imperial family shall succeed the defunct sultan, and *Islam* (Paris) calls attention to the fact that at the present time the oldest son of Abdul-Hamid (Selim, born January 11, 1870) occupies the eighth place in the order of succession. Ahead of him are four brothers of the present sultan, two sons of Sultan Aziz, and the insane son of Mourad. Furthermore, *Islam* adds, "it must be remembered that the sultan can not marry women of noble birth. His four mikialy, or legitimate wives, must be slaves; children born of djurie slaves raised to the rank of kadine (princess), are as legitimate as the children of the mikialy. Abdul-Hamid, however, following the example of his predecessors, has never married; he selects the mikialy from the kadine when a mikialy dies. From this it may be inferred that the presumptive heirs to the throne of Turkey have but little Turkish blood, the djurie being of a rather mixed origin, Circassian, Bulgarian, and Macedonian slaves.

Government by Striking in Sweden

A PRESS dispatch from Stockholm, last Thursday, said that the general strike decreed by the Social Democratic party in support of the suffrage bill, the debate on which began in parliament on the 15th, was carried out as arranged, and the tie-up of business was practically complete. Traffic, generally, is suspended. The street cars, cabs, vans, carts, and steamers are not running, and no work is going on in any of the factories or shops. The printers have also joined the strike, which will last throughout the parliamentary debate.

The New York *Tribune*, in commenting upon this occurrence, says that "Government by striking is merely a reversion to mob law and to the rule of brute force. The theory of modern representative government is that the people are to choose their legislators and administrators, and then attend to their own industries and commerce while the men they have chosen conduct the work of government. There seems to be little use in electing representatives if all the people are to join, town-meeting fashion, in all the work of government. For a mob to surround the senate house, threatening and dictating, and thus controlling legislation, would be commonly recognized as intolerable. But it is little different for the people to stop all business, industry, and commerce as a means of coercing their legislators. It is not thus that the best governmental results are to be obtained." Forgetting the recent trial in Belgium of practically the same means of compelling the enactment of desired legislation, the New York *Commercial Advertiser* describes the strike in Sweden as "probably unique as an organized threat to compel legislation, and a surprising testimony to the thoroughness with which a political party has identified itself with the labor interests. The result will be awaited with great interest. It looks as if the Social Democratic victory were a foregone conclusion. To be able to do before the parliamentary refusal of a law what other political parties or labor organizations usually attempt after it, is a demonstration of strength out of the usual course of constitutional agitation. The present situation implies that the majority of Swedes capable of voting are thoroughly radical, and foreshadows a political change of general interest and importance."

SOCIOLOGICAL

The Foundlings of New York City

ROBERT E. MACALARNEY, in the *May Abused's*, New York
Condensed for PUBLIC OPINION

VERY few people know what becomes of New York's considerable foundling population, although scarcely a day passes in which one does not read of the discovery of some helpless infant, wrapped in blanket or quilt and left in an area, vestibule, or dock-shed. New York's streets produce yearly over a hundred foundlings. These are babies, regarded by the charities people as real foundlings. The term "foundling" as used by the average person is a misnomer. The ordinary foundling asylum is not a foundling asylum at all, but, instead, a shelter for destitute and abandoned children. The real foundling is a child under five months, minus the slightest clew of parentage. Four years ago all of New York's foundlings were first taken to Bellevue hospital, and then to the Infant asylum, on Randall's island. On the island despite the best of care and nursing the waifs died like flies. The mortality leaped up the scale until it reached almost one hundred per cent. The foundlings were first rescued, then practically annihilated. Some years it was a bit better, and some years it was a bit worse. It was this horrifying infant mortality that finally caused an investigation by a joint committee from the State Charities association and the Association for Improving the Condition of the Poor. A change was effected. It was decided that thereafter the babies should be taken to Bellevue and partially reconstructed, but from Bellevue they should go to individual homes for nursing, the homes to be supervised and selected by special agents employed for that sole purpose. The first report under the change was made in 1899. It showed that the death rate had fallen to fifty-five and nine-tenths per cent. The second report, in 1900, showed a still further decrease to thirty-one and one-tenth per cent. At the present time the percentage of foundling deaths is below fifteen per cent.

The first stopping-place in the career of the foundling is the police station. From the police station the foundling is hurried to Bellevue, where it begins life in earnest. First, it is named. Agents of the State Charities association and the Guild of the Infant Savior visit the Marquand pavilion daily. Each of them asks the same question: "Any more foundlings today?" On an average of three days a week, there are. The new foundling announced, nurses and agents examine the ledger of baptisms to see whether this particular baby is to be reared in the Catholic or Protestant faith. It is an important moment for

the foundling, although, of course, he does not know it. Strict alternation is the rule at Marquand. Protestant-Catholic-Protestant-Catholic is the rotation, unvarying, immutable. Now and then, as might be expected, the smudge of features upon the infant's face indicates that he is of Hebraic blood; but the Marquand rule knows no deviations, and Catholic or Protestant the child will be reared. The choice of religions having been made for him, the foundling's name is next decided upon. Both the Catholic and Protestant organizations keep regular name lists, in two columns, boys and girls. Here, again, strict precedent is followed. The name below the one previously used

is taken, and the foundling is baptized. While the baptism has been going on, his temporary home has been selected from the list of nurses on the books of the two organizations. Until he is weaned, his career is mapped out. It consists simply of making up for lost time and becoming well and happy. When the foundling is weaned he is ready for inspection and possible adoption.

Perhaps the greatest difficulty with which the state charities and guild agents have to contend is the convincing of desirable foster-parents that the real foundling is not tainted either with disease or with criminal instincts. The very word foundling seems to accentuate this impression. As a matter

of fact, ninety per cent of the foundlings are the possessors of indubitably good constitutions. And as for inherited criminal instincts, the agents pooh-pooh the theory that the parents of the average foundling are habitual criminals. No infant that develops the slightest physical taint by the time it reaches the age of two years, the term which must expire before it may be legally adopted, is allowed to remain with its foster-parents. It is sent to the hospital for diseased children on Randall's island, where it remains.

It is surprising to discover what a rushing mail-order business for babies could be transacted. Inquiries for babies come to the State Charities association and the Guild from all over the country. Recently the mayor of a flourishing Massachusetts city wrote for a baby, enclosing plans and specifications for the same, which included "blue eyes, light hair, girl, anywhere from fifteen months to two years old." From a colored family in Pittsburg was received a request for "a boy anywhere under two years, not black. Must be light-colored." From as far west as Denver and as far south as Alabama come the requests for babies to be taken into families.

A GROUP OF TYPICAL FOUNDLINGS

No. 1 was found in an ash can. No. 2 was stumbled over by a policeman, in the darkness of a side street, shut up in a dilapidated satchel. No. 3 was found on the roof of a West Side tenement, and No. 4 was rescued from the promenade of Brooklyn Bridge at night. All the other babies were found in vestibules or alleyways.

Wages Since 1850

SHOWING AN INCREASE IN THE COMPENSATION OF LABORERS

A TABLE published recently in the New York *Financial Chronicle* shows the changes in the compensation of laborers from 1850 to the present time, according to the census reports. In the table given below the average wage per person for the successive census years is shown:

1900.....	\$438
1890.....	445
1880.....	347
1870.....	377
1860.....	289
1850.....	247

The Boston *Transcript* calls attention to the "decline which appears to have taken place during the last decade," and explains it by the "fact that certain classes of salaried employees previously included as among the wage-earners were excluded in the last census. Not only, moreover, have money wages risen; real wages, represented by purchasing power, have also increased, owing to the decline in the prices of commodities. Of course, these census figures are not to be taken as absolutely accurate. But the general fact here shown, that the average rate of wages is higher now than it was fifty years ago, can not reasonably be disputed. The only point open to question is the precise extent of the increase that has taken place. The optimist is quite warranted in asserting that the status of the American laborer is improving. Arguments drawn from wage statistics are not likely, however, to have much effect in allaying popular discontent with existing conditions. The claims of the working class, in consequence of a rising standard of living, are advancing even faster than their wages."

The Worst of Being Poor

Harper's Weekly, New York. Condensed for PUBLIC OPINION

IT is the fear of want which is the worst of poverty, and want itself, when it comes, is something like a relief. Then charity steps in, first in the guise of the poor neighbors who are always in the same shadow themselves, and later in the authorized shapes which like time to ascertain merit in the case of destitution, and which are not to blame for not knowing what the poor neighbors know. Want can be very easily confronted and overcome. The community has amply the wealth and the will for that. It is the fear of want, the lurking fear, the hidden fear, which can not always be met, and which remains through all the struggle of life to harass and hamper the victim.

Yet it is somehow this very fear of want which has juggled itself into the place of several virtues in the minds of the old-fashioned economists, and got itself recognized as one of the highest incentives to industry. It is considered almost sacred, and worthy of at least as much veneration as capital punishment. To many, it still seems the corner-stone of civilization, the foundation of liberty itself. We have been so anxious to keep it that when, a few years ago, there was talk of abolishing poverty, casuists and economists rose together to frustrate the scheme, as if some attack upon the fear of want had been threatened.

Yet it might be shown that the fear of want is not

essential to the development of the individual or the growth of the community. It might be not impossible to prove it the prime blunder of human progress, the stumbling-block which humanity is always reaching and always falling back from into real adversity. It lies at the very heart of prosperity; it is the cloud that darkens the good times; it is the year of famine which is always advancing to devour the year of plenty. As long as the poor suffer from this worst evil of poverty, the state is sick with a disorder which sooner or later must declare itself. It is idle to pretend otherwise; one feels it banal to affirm a fact so plain.

How, then, shall we try to cure the poor of it? In other countries, like the French republic and the German empire and the Belgian kingdom, they are trying old-age pensions for workmen as a means of keeping the poor from the fear of want. The anomalous commonwealths of Australasia go much farther, and help a steady man to a house and farm, and provide him with the means of securing himself against the fear of want; these states forget him at no moment of his honorable career. All such efforts seem good and desirable to the poet and philosopher whom the economist has been getting to be; and it would be well for us to take them all into the consideration, now while the fat kine are feeding fatter, and the hour seems impossibly far when the lean kine shall come up to dine from their succulent steaks.

Play as a Social Factor

M. L. GERARD-VARET, in the *Revue Scientifique*, Paris. Translated and Condensed for PUBLIC OPINION

THE play of men and of animals may be divided into two contrary categories, according as it is the base of action or of dreams. The characteristic element of the first is struggle. This is observed among young animals and among domesticated animals. With the first it is the employment of functions still incomplete and ignorant of their rôle, it is imitation; with the latter it is the employment of accumulated and unused energies. This assumes all forms, struggles of force, of cleverness, of quickness, and of surprise. In this species of play animals are brought together, they vie with each other, and go in groups which are at the same time friendly and antagonistic, at peace and at war. Play under this form is a socializer. It may be said that there are cases in which animals play alone, as the cat with the ball, the dog with the slipper; but it must be understood that they have no choice, since they are separated more or less from their species, and, moreover, they create a society with their plaything which becomes for a time a sort of rival.

In man, as among animals, play as the base of action takes the form of struggle and offers a common social phenomenon. The fact is striking in infancy. The child without companions invents obstacles for itself; it climbs trees, throws the sling, and shoots arrows; but what a contrast with the time wherein he has comrades! On the one side, we have a narrow circle of rare distractions, difficult to vary where the initial enthusiasm is quickly exhausted; on the other, with companions, among the children of the fields, of the streets, of the schools, civilized or savage, there is unlimited variety, inexhaustible luxuriance, in which one joyfully vies with his fellows in tests of strength, of resistance, of suppleness, of agility, or of craftiness. The same contrast, if not with as much force, at least

with as much clearness, reappears in the adult. The part played by the dream disappears altogether and the social tendency opens to the full light in all games where man struggles with his fellows as in racing, fencing, billiards, or cards. Then, if religious or political sentiments are mingled therein, the groups enlarge, the crowds fill out with the influx of the curious, and pompous fêtes are organized, regattas, the tournaments of chivalry, or Olympic games.

Now, in regard to the dream which isolates. One has an example of this in the child who is easily fatigued in solitude by those games which have struggle for base, but amuses itself interminably with imaginary scenes which it creates. Proceeding by imagination, it transfigures all, itself first, then the objects and the surroundings. It is, as has been observed, a comedy wherein the child is at the same time the author and the actor. The example of the doll is the most striking. The same tendencies, always with imitation for base, are manifested in the adult who, with more complicated methods and more ingenious arrangements, brings forth a whole world, the world of art, dance, and song among the savages, of music and painting among the civilized.

There are, then, two antagonistic forms of play, and if they are opposed in tendency they resemble each other in allurements. The play of action has manifold causes, some primitive and common to all sorts

of play, others peculiar to each one of the two principal species. The first are known, and it suffices to indicate them. A satisfactory state of health, a mind free from worry and without absorbing cares, energies in reserve ready to respond to the first call, and finally, after the daily labor, the desired relaxation and the necessary diversion. Play as the base of dreams has for its essential instrument, imitation.

Various Topics

EXPERIMENTS WITH CHILDREN: Children of wealthy parents are to be the subjects of food experiments by scientists in a splendidly equipped home known as the Chicago hospital school for nervous and delicate children, says the *New York Medical Journal*. Only the well-to-do can afford to send their children to the school. The home can accommodate only fifteen children.

FREE LODGINGS IN CHICAGO: A municipal lodging house opened in Chicago contains new single iron beds to accommodate 225 men. Lodgers are required to register, to give a concise account of themselves with a statement of occupation, where and when last employed, with references. They are given supper and breakfast of bread and coffee, but no dinner is served, and they are not allowed to remain at the lodging-house during the day. The men's statements are investigated as far as practicable, and the man who convinces the management that he is honestly endeavoring to secure employment may remain at the lodging-house four nights, after which he can not be admitted again for a month. An employment bureau will be conducted at the lodging-house.

LETTERS & ART

An Artist of the Realistic School

M. LUCIEN SIMON AS AN INTERPRETER OF BRETON LIFE

THE art of M. Lucien Simon, the painter of Breton and Bohemian scenes, is the subject of a very laudatory article by Gabriel Mourey in the *International Studio*. "M. Lucien Simon is a masterly realizer," the author says. "Precise and sober, energetic and sane, he knows exactly what he desires and whither he is going; one imagines him armed with a firm will, ever conscious and conscientious, ever master of himself. His portraits, his studies of bourgeois life, his Bohemian scenes, are all absolutely authentic documents. In carrying out the task which he has imposed on himself—or rather, which has been imposed on him, in the first place by his temperament, and secondly, by the direction his labors have taken—M. Lucien Simon combines with a sure method and a bold fancy for experiment the qualities of an enlightened physiologist. For this reason his work will appear to some people coarse and exaggerated, while others will be shocked at the keenness of his drawing, and the unswerving fidelity of his brush. There is nothing astonishing in this. Others, again, will blame him for being cruel, for pursuing his investigations too far, and will regret not to see him—gifted as they know him to be—devote his talents to the representation of the brighter side of things. Instead of that wild, brutal, grimacing, half-animal Brittany, whose strange, coarse nature, haunted by superstitions, hostile to progress, mentally rudimentary, he probes with a perspicacity so penetrating, why does he not show us a comic-opera Brittany, with bright costumes and joyous scenery!"

"The name of Gustave Flaubert has occurred to me in this connection. However arbitrary it may appear to compare a painter's method of work with that

of a writer—to say nothing of the results that spring therefrom—I nevertheless can discover the most striking analogies between the author of 'Madame Bovary' and the painter of the 'Retour de la Messe à Penmarch,' the 'Luttes dans le Finistère,' the 'Cirque Forain,' the 'Marguilliers,' and the 'Procession.' Their manner of feeling appears to me identical, as is their mode of reproducing their sensations. Both are equally bent on reality, both equally keen on discovering good 'documents'; nothing deters and nothing alarms them in their researches; they do not fear to go as far as caricature even, provided it be human and real. Like Flaubert, again, M. Lucien Simon proceeds by dint of elimination. From out a *scene de mœurs*, a face, a bit of nature, he will retain only just so much as it is important to retain, neglecting all the rest; but he will have observed it all; and thus it is that his pictures, which, so to speak, are reduced and concentrated to the minimum, are really so replete with force and expression."

Given such a love for the genuine and tragical in human nature, it is natural that M. Simon should be attracted to the desolate parts of Brittany for his subjects. "Nowhere else are to be seen human kind in more perfect accord with their surroundings. The *bigoudens*, as they are called, are short and heavily built, with an impassibility of feature quite Asiatic. They are at once mystics and brutes, deeply religious and basely passionate. Look at them in M. Lucien Simon's pages, with their instinctive gestures and expressions, with soulless glance, furtive and dull, with features strongly accentuated, the frontal arch of no depth, the nose flat, the head overbroad. See them, a motley crowd, curiously picturesque, in 'La Disette de bonne Aventure.' These qualities are to be found

"La Procession"

"La Disceuse de Bonne Aventure."

BY LUCIEN SIMON

in equal intensity in the portraits painted by M. Simon and in his studies of provincial and Parisian *bourgeoisie*."

Of "La Procession," reproduced here, the author declares that it must be regarded as a group of portraits. "What variety of thought in the expressions on these faces! How the gestures of each figure accord with his manner of being! Everything has its significance; there is nothing superfluous; here we have life expressed in characters of admirable precision, with a freedom and a suppleness altogether marvelous. The face of the sailor carrying the processional cross; those of the *cure* and his acolytes; the rhythmical movement of the crowd that follows them; the sort of religious passiveness marking all these faces; the composition and the grouping—all this, in truth, is the work of a master, and a great master."

The Unreality of Heroines in Fiction

A CHARGE AGAINST MODERN NOVELS

A WRITER in the current number of the *Independent* complains that the heroines of fiction are too often endowed with powers that are obviously outside the limitations of a woman's capacity. The shortcomings of women in the large affairs of real life are those of an "inferior personality rather than of an inferior intelligence, proving that she is short, not of sagacity, but of executive ability." The author admits that "there is the occasional Amazon—a woman in real life with a male fanaticism upon some subject, a little red-winged anarchist, or the priestess of some new religion. And all of these have their part in the comedy rather than in the higher art of literary expression where the standard of excellence calls for something graver than the portrayal of hysteria in perverted human nature. But after all there are no female Napoleons nor women popes to justify the existence of some warrior and rabbi women whom we meet in novels. For women lack, not the ferocity which crimson battlefields, but the power to create military situations or to cope with them. And none of them are endowed with the papal dignity of infallibility, which is the essential characteristic of every religious leader. On the other hand, they have the mystic temperament which fits them better for the literary trances of spirituality."

But it is the impossibly heroic woman of the historical novel that arouses the writer's ire. "The doings of these virago heroines and swashbuckler heroes have filled more pages in the historical novel than any other two characters known to readers of fiction. And even this might be endured if we were convinced of the sincerity of the author's representations. But the sequel invariably shows that the hero was only strutting for the time being before his lady love, and that the female firebrand who claims to come as a prophetess with messages from God will coquet with 'Judas Maccabeus' while she is delivering them, and finally surrender, divine call and all, to the blandishments of the Arab hero of the desert."

"If we are to acknowledge these stories as a permanent feature of literature, let us have more psychological accuracy in the development of the types portrayed. The personalities of men and women do not vary so much from age to age as do the manifestations of it. Human nature, after all, is the only constant quantity in the evolution of the world. Unquestionably new dimensions have been added to the minds of both sexes; but neither of them has ever yet been able by taking thought to add one cubit to the human stature or change the laws which govern their relations to each other. And writers of fiction may as well undertake to outwit the immutable laws of sex as to attempt to magnify the female character beyond the fairy rim of its own sphere."

An American Tone Poet

THE COMPOSITIONS OF MR. EDWARD MACDOWELL

IN the current issue of *Harper's Weekly*, a high tribute is paid to Mr. Edward MacDowell, the head of the department of music of Columbia university, as "one of the most notable exemplifications in modern art of the romantic spirit in its frankest and most imaginative estate." The reason for referring to Mr. MacDowell at this time is the recent publication of his "Three Songs" and a volume of pianoforte music, both of which admirably illustrate his view of the function of the composer. Mr. MacDowell combines in himself the qualities of the romanticist and the realist, "for his art is directly and most intimately correlated with life, and invariably he composes 'with his eye on the object.' We prefer, nevertheless, to

regard him—so far as our present purpose is concerned—as a romantic, for, true to the deeper genius of his art, he concerns himself, in his practice of it, with essences rather than with details, with impressions rather than with documents, with the imaginative expression of emotional substance rather than with literal representation; which is merely to say that his truth is no less truth because it is reflected through beauty, and beauty that is at times to the last degree incalculable and ærial. He is, in fact, primarily and fundamentally a poet—one is, indeed, almost tempted to say that he is paramountly a poet, to whom the supplementary gift of musical speech has somehow been miraculously vouchsafed. His standpoint is, in the last analysis, that of the poet rather than of the typical musician; the standpoint of the poet intent mainly upon a vivid embodiment of the quintessence of personal vision and emotion, who has elected to utter that truth and that emotion in terms of musical beauty.

"It is this in his work—its pervadingly poetic impulse—that sets it in a place apart among the productions of native-born composers. There is little in its accent to remind one of the familiar voice of contem-

Mr. MacDowell's work that one must seek its unique and final excellence; its range and eloquence as an expressional instrument. If he is, in a singularly complete sense, the poet of the natural world, he is scarcely less the poet of purely human emotion. If one is, at times, inclined to praise the former in him at the expense of the latter, it is because he is, constitutionally, Celtic of the Celts, with the Celt's intimate vision of natural things, and his magic power of poetically vivifying them. If, in our delight in Mr. MacDowell's poetry of nature, we are in some danger of ignoring his musical humanity, the danger ceases to be imminent so soon as one recalls such songs of his as the early 'Deserted,' the 'Four Songs,' 'Constancy,' and 'Sunrise'; the 'Eroica,' the 'Norse,' and the 'Keltic' sonatas, and the later symphonic poems."

The Washington Novel

WHY HAS IT NOT BEEN WRITTEN?

A PROPOS of the numerous attempts to write a novel that shall faithfully portray the political and social life of the national capital, the *Washington Post* inquires: "Is it possible to write such a thing as the Washington novel? Why has it not been written? These are questions which will obstinately present themselves to the literary observer. Those who have attempted the Washington novel have belonged to three classes—those who can write novels; those who can write, but can not write novels; those who can not write at all. With the last two classes we have nothing to do, but it might be well to point out wherein those of the first class have failed. The primary cause is that they have always put the cart before the horse. They have come to Washington with the same shadowy ideas possessed by the new member who has promised his constituents that he will reform the government. In most instances they have no plot in mind. They are going to get the 'atmosphere' first. Several weeks or months are spent in gathering material. The author haunts the galleries of the senate and house, goes to a White House reception or two, attends a few social 'functions,' meets some people at dinners and talks with folks who have views. Gradually the plot is evolved, and when the novel is written we find that it is all 'atmosphere,' 'color,' and what not, but it is not a novel. The author has allowed Washington to overwhelm him. We are treated to an endless series of pictures, a diplomatic reception, a debate at the capitol—usually the senate—in which the hero does some wonderful things and 'electrifies' the country. In fact, we have nothing more or less than what a good reporter could do better—descriptions of events in the social and political life of the capital. The plot is merely a slender thread which ties these pictures together.

"Then, there is another sort of Washington novel, the problem variety, where the author seeks to teach a great lesson, and gets his 'color' here. Neither of the two will ever land the prize. 'The Washington novel' is not a will-o'-the-wisp, nor is it as unreal as the pot of gold at the end of the rainbow. But it will not be written by people who come to make a brief survey of conditions and trot confidently home to jot down their impressions. In the first place, the author must have a story, and a strong one. The 'atmosphere' and the 'problem' must be secondary considerations."

EDWARD MacDOWELL

porary music, either American or European, and in its purpose and effect it has few points in common with the work of Professor Paine, or Mr. Foote, or Mr. Chadwick, or even Professor Parker and Mr. Huss, who are nearer akin to MacDowell than are their more academically minded brethren. Both in theory and in practice, Mr. MacDowell is of the extreme right—that is to say, he stands uncompromisingly for music that is, of intention, broadly picturesque and delineative in the finer sense. Thus his themes are Lancelot and Elaine, Arthur, the Gaelic Cuchullin, a deserted farm, a water-lily, meadow brooks and will-o'-the-wisps, starlight, a haunted house, a wild rose; and he is native to a remote, enchanted, extra-mundane region of dryads and gnomes, of elfin moonshine, and magical, haunted forests. To his sense, music is nothing if not articulate; he will have none of a vague and merely decorative beauty; and it is in this element in

SCIENTIFIC

The Causes of Volcanic Eruptions

AN EXPLANATION OF THE LATEST THEORIES

DISCUSSING the causes of volcanic outbreaks in general, Professor Charles R. Dryer, in one of the latest textbooks covering this subject ("Physical Geography," 1901), says that "the most impressive and terrifying displays connected with volcanic eruptions are plainly due to the explosion of steam within the crater; but this does not account for the origin or existence of the liquid rock, nor for eruptions which are not explosive, like those of Hawaii and the lava flows of the Colum-

CINDERS & SCORIA
LAVA
ROCK BENEATH CONE

IDEAL SECTION OF VOLCANO

bia plateau and the Dekkan. It is necessary, also, to account for the steam itself.

"The fact that volcanic eruptions generally occur in regions where elevation and folding have recently taken place or are still going on, indicates that both upheaval and volcanism may be due to the same general cause. If the rock, at a depth of twenty or thirty miles below the surface of the earth-crust, is hot enough to melt, but is kept solid only by pressure, it seems probable that a comparatively slight relief from pressure would be followed by immediate liquefaction. The upfolding of the strata above, or the occurrence of a fissure extending downward from the surface, would give the rock below more room; the pressure at that point would diminish, and, driven by the greater pressure all around, the now melted rock would rise. The water which the rock originally contained, or which it might meet on its way upward, would expand into steam, and still further assist the rise of the lava column, as the steam formed in a kettle of boiling mush or molasses causes it to rise and overflow. If the lava is thick and viscid, the steam escapes with explosive violence; if it is thin and liquid, the steam passes off more quietly."

The volcanic eruptions in the Windward islands have been explained upon the general theory set forth above—a theory which is explained at greater length by Professor N. S. Shaler in the *International Magazine* (January, 1900), a part of the article being given in PUBLIC OPINION for January 4, 1900. Referring to the fact that the average increase in heat is at the rate of one degree for each fifty feet of descent, it is seen that a blanket of one hundred thousand feet of rocks would, in time, bring about a heat of two thousand degrees in the lowermost beds of the section. "Acting on the water contained in these rocks," Professor Shaler says, "the effect would be to give this a tendency to pass with explosive violence into the state of vapor. The straining to the state of expansion would be comparable to that of fired gunpowder. So long as this heated water was held in by a compact covering of overlying beds, this interstitial fluid would

be likely to remain in the state of repose; but if, in any way, a path were opened for its escape to the surface, it would rush forth, and, in its going, would force along with it the rock in which it was enclosed. At the temperature of even 2,000 degrees, these rocks, though essentially solid, owing to the pressure of materials above them, would become at once softened when the pressure was partly removed, so that they would be driven on by the expanding vapors contained in their centers. As soon as they began to move, they would become essentially liquid—in fact, lava. Coming quickly to the surface, without the chance for the vapor to part from the molten mass, the whole of the discharged matter would, by the expansion of the water in its interspaces, be blown to bits, as we see it is in the beginning of an ordinary eruption. Later on, when the most of the tension is relieved, the lava melts up slowly so that the vapor has a chance to escape from the mass, permitting it to flow away as a stream. Finally, the discharge of vapor is lessened to a point when it can no longer force the molten rock to the surface, and the particular eruption is over, perhaps to recommence when other masses of steam have found their way to the channel of escape."

Although Professor Shaler here considers only the rocks commonly known as "stratified" to be the source of volcanic tensions, there is reason to believe that this increase of heat, due to their deposition, takes effect more generally in the old crystalline productions of the earth than in the overlying stratified beds which induce the rise in temperature. "It is well known," he says, "that probably all the crystalline rocks contain some water, either in small cavities or in the state of intimate and irresistible combination. On these rocks,

MAP SHOWING DISTRIBUTION OF VOLCANOES

the effect of the imposition of stratified deposits would be to induce explosions in the manner above described. It is, indeed, altogether probable that the greater number of eruptions arise from the expansion of vapors in this part of the crust, where, if the rocks have ever been stratified, they have lost all trace of the water-laid forms. Although in this, as in most geological actions, there is some doubt as to the applicability of the particular theory to all the facts which come in the given class, it seems tolerably certain that it is generally true; no other view begins to account for so large a part of the phenomena exhibited in volcanic action."

A New Acetylene Generator

A GERMAN INVENTION COMBINING SAFETY AND PRACTICABILITY

IN answer to inquiries from the United States, Consul-General O. J. D. Hughes, of Coburg, reports, April 18, 1902, that Mr. Erik Cornelius, chemist at the carbide factory at Trollhattan, has invented a new acetylene generator. This generator, says the consul-general, is described as being much simpler in construction than any yet placed upon the market, and occupies but little space. In its operation, the falling of the carbide into the water is automatically regulated by a hollow rubber ball, which, as soon as it is filled with gas, closes the valve between the carbide and the water. When the volume of gas decreases, the rubber ball contracts and the feed valve again permits the carbide to drop. The gas is stored partly in the rubber ball and partly in the space between the funnel-shaped carbide magazine and the water. If more than the normal amount of gas is generated, it secures more room by forcing the water through valves into the water-jacket in the sides of the apparatus. A separate gas tank is therefore not needed. Should too much gas be produced, both the water and the gas escape through a safety valve. Common carbide is used; no cartridges. The gas is dried by being allowed to pass through the carbide magazine, where the carbide absorbs the moisture. As there is no gas tank, and as the quantity of gas thus stored is insignificant, it is considered that the fire-insurance companies will, without raising the premiums, approve of the apparatus, even when it is placed in dwelling-houses.

Fresh-air Tablets

EMILE GAUTIER, in the *Figaro*, Paris. Translated and Condensed for PUBLIC OPINION

IN following the line of scientific investigation indicated by the discoverers of acetylene, M. Georges Joubert, professor of chemistry at the Ecole polytechnique and director of the *Revue Scientifique*, has ascertained that the peroxide of calcium or of potassium, compressed under certain conditions, and put in presence of a permanganate, an hyperchlorite, and some salts of copper or nickel, possesses also the property of being decomposed without heat, in contact with water, emitting a gas exactly like the carburet of calcium. The gas, however, instead of being acetylene, is oxygen chemically pure (99.9 per cent). Through this discovery we are able to have in our possession portable oxygen, or, so to speak, oxygen tablets, one kilogram of the peroxide (aerogen stone, as it is called), furnishing from 150 to 250 liters of oxygen. As a result of this discovery we can remain, without having our lives endangered, inside of a submarine boat or in a caisson, providing we take along a supply of oxygen tablets to be dissolved in water when needed.

Aside from the secondary elements, argon, neon, helium, etc., which play only an insignificant part, respirable air contains 79 per cent of nitrogen and 21 per cent of oxygen, the oxygen being alone utilized in respiration. Admitting that 21 per cent of oxygen has been absorbed by the lungs, the 79 per cent of nitrogen remains, and it would only be necessary to replace the oxygen in order to restore the atmosphere to its original elements. It is precisely

this automatic work that is performed by the aerogen stone as fast as the oxygen is absorbed.

It is true that the air becomes vitiated in contact with the lungs, and that the products of interpulmonary decomposition which are expelled through the mouth contain, besides nitrogen, itself a poison, carbonic acid gas, water vapor, and many volatile poisons and toxic miasms. Therefore, it is not sufficient to reoxygenate the air to make it respirable. Fortunately the fresh-air tablets possess the property of absorbing carbonic acid gas through a process analogous to vegetal respiration. "Fire purifies everything," says an old proverb, and fire is nothing but oxygen in action.

As stated, M. Joubert's discovery enables us to carry in our pockets, in tablet form, a sufficient quantity of pure air to be very useful in the hospital, in a closed carriage, at the bottom of a mine, or in a submarine boat. It is possible to add to the tablets iodine, coal tar, or any other aromatic or microbicide substance.

The Mysteries of Life

Harper's Weekly, New York

ONE by one the mysteries of the life processes disappear. A young man at Columbia university has been doing a noteworthy piece of work that goes along with all the revolutionary researches of Loeb and others in showing that what has long seemed so baffling and inexplicable may not be so in reality. This young biologist, Mr. Gary N. Calkins, has kept alive a line of little animalcules through 400 generations without resort to those conjugations or fusions of cells which, with the lowest forms of animal life, take the place of the ordinary forms of reproduction in the higher types. Just what these striking results mean will best be appreciated by biologists, but they need not escape others. The mystery of life may nowadays be resolved into two functions, which are alone peculiar to living matter. The first is the ability of protoplasm to assimilate food materials and grow; the second, that it can reproduce. All other bodily functions seem to find their counterparts in the world of inanimate things. With lower forms, in what is known as asexual reproduction, any two cells of a species might come together and unite, and from this union of forces a series of cell divisions, or splitting in two, would result. This dividing and redividing goes on for a certain time, often with the result of producing millions of beings from the parent pair thus fused in one. But always the rate of reproduction gets slower and slower, until at last, if all the cells are carefully kept from a fresh conjugation, one with another, the process comes to an end. The line is extinct. For the continuance of the species new fusions are essential. In some fashion, the intervention of the vital forces seems needful.

The "vital forces," in this instance at least, seem reducible to a change of diet. Mr. Calkins started with a tiny animalcule, called *paramecium*, and fed it on infusions of hay. Each time the animal divided to make two of itself, which happened about once a day, one was kept, the other thrown away. There was, therefore, no chance for a pair of the descendants to come together and conjugate. When the rate of reproduction began to slow, Mr. Calkins fed his microscopic pets on beef tea. They revived at once. He has now been doing this for over a year. Had all

the descendants of the 400 and more generations now reached been kept alive, the total number would be represented by a figure 5 with 120 ciphers after it. Though the *paramecium* be so small, tons upon tons of inanimate, lifeless material would have been made up into living matter under the influence of this single parent cell; and all this without the interference of any other "forces" than those originally resident in the beginner animal. A human being, for example, is but a cluster, a colony, of billions of microscopic cells, leading, for the most part, a very independent existence. They seem, in some sense, to grow old together. Why? That is the problem, the senility of the cells, which is now engaging the restless and indefatigable mind of the distinguished Professor Metchnikof, of the Institut Pasteur, at Paris. No doubt others, too, are at work; we hope some in America, besides Mr. Calkins. It is the sort of question which passions everybody, as the French say. Nobody wants to grow old. It seems as if a concerted work might be begun, in which all our lavishly endowed universities might take part. In the interim those who care for such matters and would like to learn more, will find interest in a book on the protozoa, or lowest life forms, which Mr. Calkins has just publisher in the Columbia biological series, issued by the biological department of the university.

Various Topics

CURIOUS CIGARETTES: Coffee cigarettes are the latest form of smoking. They are supposed to cure a person of the smoking habit. The cigarette is made of the leaf of the tree, not a compound of the ground bean.—*Medical Record*.

HEART STAB NOT FATAL: Stabbed through the heart has hitherto been synonymous with fatally wounded, but modern surgery has stepped in, and it is now possible to recover from this injury. Dr. Fontan, a Toulon surgeon, had a young soldier brought to him suffering from a knife wound piercing the pericardium, causing a lesion of the heart. Dr. Fontan opened the cavity and applied three stitches in the heart. The gash was on a level with the left ventricle. The patient has now entirely recovered.—*New York Herald*.

ELECTRO-MAGNETIC GUN: Several severe experiments have recently been made in Christiania with a new electro-magnetic gun invented by Professor Birkeland. The electric connection between the battery and the gun is made in less than a second by the aid of a current breaker. The feature of this weapon is that no noise accompanies its firing. In the trials the electric spark was first seen, followed by a loud report, which was caused by the impact of the projectile, a one-pound shell, on a wooden target, which was penetrated. The gun works magnetically. The shell is drawn out of the bore and not, as hitherto, impelled by gunpowder. The use of magnetism as a motive power, according to Professor Birkeland, will enable 1,000-pound shells to be hurled much farther than by the old-fashioned methods.—*Scientific American*.

RELIGIOUS

Presbyterian General Assembly in Session

DR. HENRY VAN DYKE ELECTED MODERATOR

THE one hundred and fourteenth general assembly of Presbyterians north began its sessions at the Fifth Avenue Presbyterian church in New York city, May 15. The first session was taken up with the sermon of the retiring moderator, Dr. Henry C. Minton, of California, who spoke on "The Enduring Mission of Presbyterianism." Dr. Minton spoke strongly for the maintenance of the historical position of the church. "It is idle to deny that strong counter currents have set in against this position. Doctrine is belittled and creed decried, and many echoes are sounding out that the function of a church in these last days is to cultivate piety and to quicken the generously ethical impulse of men—and to stop there. On the other hand, we devoutly believe that the call is made all the louder by this very tendency, for the witnessing work of a confessional church."

The election of a moderator was hotly contested and resulted in the choice of Dr. Henry van Dyke. Other candidates were: The Rev. Dr. James D. Moffat, president of Washington and Jefferson college; the Rev. Dr. Wilson Phraner, of the Board of

DR. HENRY VAN DYKE.

Home Missions; the Rev. Dr. Howard Duffield, of New York city; the Rev. Dr. Richard S. Holmes, of Pittsburg, and the Rev. Dr. David R. Kerr, of Nebraska. The *New York Tribune* ascribes Dr. van Dyke's election primarily to "his work on the revision committee." The *New York Evening Post*, on the other hand, thinks that it "must be taken as a graceful tribute to literature and to personal charm."

The most important matter before the assembly is the question of amending or revising the Westminster confession of faith. The report submitted by the special committee on revision, Dr. Minton, chairman, contains suggested amendments to Chapter III, Of God's Eternal Decree; Chapter X, Of Effectual Calling; Chapter XVI, Of Good Works; Chapter XXII, Of Lawful Oaths and Vows; and Chapter XXV, Of the Church. The committee also submitted a "supplementary statement" of the reformed faith for the purpose of giving fuller information as to the doctrinal beliefs of the church. A notable omission in the report is the celebrated reference to the pope as Anti-Christ. On the subject of infant damnation under the head Of Effect-

tual Calling, the committee says: "We believe that all dying in infancy are included in the election of grace, and are regenerated and saved by Christ through the Spirit, who works when and where and how He pleases." Good works done by "unregenerate men" (Chap. XVI), "because they proceed not from a heart purified by faith, nor are done in a right manner," are declared to "come short of what God requires" and not to "make any man meet to receive the grace of God." The original creed made such good works sinful, although their neglect was held to be "more sinful." The doctrine of election is neither denied nor affirmed. The proposed amendment to this chapter (Chap. III) sets forth that the "doctrine of God's eternal decree is held in harmony with the doctrine that God desires not the death of any sinner, but has provided in Christ a salvation sufficient for all, adapted to all and freely offered in the Gospel to all; that men are fully responsible for their treatment of God's gracious offer; that His decree hinders no man from accepting that offer, and that no man is condemned except on the ground of his sin." The supplementary statement says: "We believe that God, from the beginning, in His own good pleasure, gave to His Son a people, an innumerable multitude, chosen in Christ unto holiness, service, and salvation; we believe that all who come to years of discretion can receive this salvation only through faith and repentance." The report was made special business for the session of May 22.

Moral Instruction in German Schools

AS ADVOCATED BY THE GERMAN ETHICAL SOCIETIES

WHAT the ethical societies of Germany are trying to do in the way of displacing formal religious instruction in the public schools by moral teachings is described by Mr. F. W. Foerster in the May *Ethical Record* (New York). Mr. Foerster says, in part: "As is well known, all children in Germany must share in the orthodox religious instruction that obtains in the public schools, unless they receive religious teaching from some parish-school recognized by the state. In consequence of this obligation, it happens that the children of free thinkers are forced to accept a public school training in a religion which their parents reject, or perhaps even ridicule. Free thinkers have until now struggled against this preposterous condition of affairs in vain, because they have contented themselves with denying, but offered nothing positive instead. Yet a new and positive proposition had become imperative, inasmuch as the state had made religious instruction obligatory, not only as a result of the tyranny of orthodoxy, but also because the state believed itself the guardian of the moral as well as the intellectual and technical education of the growing generations.

"The German ethical societies are consequently devoting themselves to demonstrate by spoken and written words, in widespread propaganda, that the problem of public school ethical instruction can be solved far more successfully by means of a teaching whose sanctions do not depend on beliefs or unbeliefs, but are based on common spiritual experience. Unfortunately, we Germans are not able to substantiate this theory by a successful experiment, as has been done in New York. Schools that replace dogmatic religious teaching by moral instruction are forbidden in Germany. Hence the German ethicists can only point to

the example of America, and must content themselves with arranging courses in moral instruction in near-by Switzerland. During the summer such a course is to be given at Zurich for teachers of both sexes."

A Review of Presbyterian Home Missions

IN connection with the meetings of the Presbyterian general assembly now being held, it is of importance to note that this is the centennial of the founding of the Presbyterian board of home missions. The secretary of the board, Dr. Charles L. Thompson, reviews in the *Interior* (Chicago) the work being done by the board in different parts of the home territory.

Our church, at the present time, has over 2,300 missionaries in the field, and about 400 teachers in mission schools. They are in nearly all the states and territories of the union. Nearly 1,400 of these missionaries are under the care of the board of home missions; the rest are in synods that are doing their own home mission work. Of the total number of our home missionaries, only two hundred are east of the Mississippi river. One of the most interesting of all our mission fields is that among the mountains of the four states of Kentucky, Tennessee, North Carolina, and West Virginia. We have only about forty missionaries in that region among a population of perhaps two millions, most of whom are Presbyterians by a long inheritance. There are about seven hundred missionaries in what may be called the states of the plains, reaching from the Mississippi river to the foot of the Rocky mountains. Our church has more than two thousand church organizations in that region.

The mountain regions of the west, including the ranges of the Rockies and the Nevadas and the valleys between them, furnish, if a less responsive, a scarcely less important missionary field. One hundred and sixty of our missionaries are going up and down those mountain canyons. In the heart of these mountains is the Mormon hierarchy—bold, defiant, aggressive still. It threatens to get political control of the states and territories of the west. Our mission work there in schools and churches is pushing steadily on. On the Pacific coast we have about two hundred missionaries. There are only a few millions of people there now, but scarce anywhere else in the country are there so many strategic points, or is the general situation, in the light of recent events, so commanding and appealing as along that coast. Our church went to Alaska soon after it passed under the stars and stripes. No other church has done so much for the natives as has ours. We have twelve stations among them, extending all the way from Saxman, in southeastern Alaska, to Point Barrow.

The remaining new mission ground of our country is in the islands of the sea, and among those by common agreement the Philippines have been assigned to the foreign board, and Cuba, Porto Rico, and other islands that may come to us in the Caribbean sea to the home board. Porto Rico was the first field occupied by us. Our missionaries have been there a little less than three years. The results have been remarkable. The churches are rapidly growing; the schools are full of children; the nascent medical hospital at San Juan is waited for by a sick and anxious multitude of poor people, and every door of opportunity flung wide open for our advance. We are occupying

now about a dozen stations. It is not much different in Cuba. Our missions there are only a few months old. We are occupying four stations—two in Havana, one at Guines, and one at Sancti Spiritus.

The Christian Basis of Citizenship

JOHN CARLISLE KILGO, D.D., in the *South Atlantic Quarterly*,
Durham, N. C. Excerpt

WHAT should be the attitude of the Christian citizen to political parties? That will depend upon the character, methods, and aims of the parties. One thing is forever true, he can not be a partisan in the ordinary sense of the term. The Christian faith does not allow such a spirit. Intolerance, arrogance, and assumption are not only non-Christian, but anti-Christian. Political parties will exist in a government like ours, but they are not greater than, nor equal to, the government. Taking care of a party is never the same thing as taking care of the government. What may be deemed wise party policies may be, and frequently are, dangerous civics. No sincere citizen can ally himself with a party that fails to recognize itself to be the means, not the end, of government. The Christian citizen may support a party upon the sole conditions that it is sincere in its character, wise in its policies of government and puts forward worthy candidates for the people's suffrage. A lack of either condition will require a repudiation of the Christian citizen's belief as to the origin and aim of government, and his ideals of truth and honor. No Christian citizen can trade his civic conscience, his social conscience, his domestic conscience, or his business conscience to an executive committee or to a board of directors to be used in any sort of transaction.

But civic duties refer to the ordinary tasks of the state and obedience to its laws. In these things the Christian citizen is instructed to set an example of fidelity. In material support, in loyal regard, in matters of progress, and in matters of executing justice his duty is clear. The supreme product of Christian ethics is an ethical conscience that makes justice a surety and righteousness a pleasure. If there be any superior value in the Christian doctrines, it lies in the fact that they build all hopes upon a regenerated individual whose moral qualities secure the integrity of society, not by outward restraints, but by inward dispositions. Such a philosophy must furnish the true theory of the final civilization. It will be constructed upon character, and not upon force; it will be permeated by a spirit of life, not by the strength of arms; it will grow by virtue of an inward vigor, not by reason of an outward multiplication of things, and it will have its stability in truth, not in fortresses. Christian citizenship has its type, its strength, its growth, its faith, its hopes, and its final products in these resources.

The Sale of the Bible

Presbyterian Banner, Pittsburg. Excerpt

TWENTY-FIVE years ago Robert Ingersoll declared in a public lecture that the Bible was an exploded book, that its sales were bound to fall off rapidly, and that within ten years it would be little read. The ten years have passed and fifteen more, and yet the Bible is not only still being sold, but is being sold in enormously increased numbers. Within

the last twenty-five years six great Bible houses have been established and the sales of the book have more than quadrupled. The authority for this statement is Mr. Frowde, the head of the American branch of the Oxford University press. A book that sells up to a hundred thousand and beyond in these days is heralded as a tremendous success. But how small do all these figures seem in comparison with the sales of the Bible! The American Bible society alone issued more than 1,500,000 Bibles last year, and in the same year the British Foreign Bible society turned out more than 5,000,000 Bibles. Other Bible companies show correspondingly large outputs. If the total number of Bibles in English alone, produced in a single year, were all added up, the number would evidently be upwards of 10,000,000. This is probably a greater sale than that of any other hundred books combined.

Several years ago the competition in selling Bibles forced them below cost, and there were rumors of a Bible trust. No such trust was formed, but prices were adjusted and no Bible house went out of business. These prices have been going down for twenty years through improved processes of production, but increased cost of manufacture has recently caused a slight rise in price. The British Bible society sells a complete Bible for sixpence, or twelve and a half cents, and a New Testament for a penny, or two cents. The American Bible society sells a Bible for fifteen cents and a New Testament for five cents. From these low figures, that put the Bible within the reach of the poorest, prices run up to sumptuous copies that cost many dollars. The secret process of making the famous Oxford India paper, so thin and tough and opaque, which came into use about 1875, has revolutionized the manufacture of Bibles that are compact and handy volumes. The Oxford press turns out 20,000 of these Bibles a week. More than 40,000 sheets of gold are used in merely lettering the volumes, and the skins of at least 100,000 animals go into Oxford Bible covers each year.

Not all of these Bibles published in England and America are in English, although these statistics do not include those published in other Christian countries. The British and Foreign Bible society prints the Bible in 400 languages, and the American Bible society also prints the Bible in many languages. The field in which the American Bible society shows the most marked development is the Philippines. For three hundred years before the American occupation the Bible had practically no circulation in these islands, but during the first year of American rule 10,700 Bibles were distributed in them. The Bible is now being translated into five Filipino dialects. It was to be expected that China would show a large falling off in the sale of the Bible after the Boxer insurrection, but the reverse has been the case and more than 428,000 Bibles formed the issue for China last year.

IN DEFENSE OF THE THEOSOPHICAL SOCIETY: Mr. J. H. Cutler, of San Francisco, protests against the "false, malicious, one-sided, and absurd statements" made in the article in our issue of April 10 on the Discord in the American Theosophical Society. Mr. Cutler asserts that a renegade member of the society inspired the dispatches on which the article was based, and he emphatically denies that there are any dissensions in the Universal Brotherhood. "On the contrary," he says, "there have never been such solidarity and harmony as exist today. The statement that the number of lodges has dwindled to about a dozen, was made in ignorance of the facts which are, on the contrary, that the number has largely increased."

The Books of The Week

INDUSTRIAL DEMOCRACY. By Sidney and Beatrice Webb. New Edition. Cloth, pp. 929, \$4. New York: Longmans, Green & Co.

THE PRINCIPAL additions which the Webbs have made to their analysis of trade unionism in this new edition is a result of the new body of laws and legal decisions made since the issue of the original edition, in 1897. The most revolutionary change of this character that has taken place of late years is the workmen's compensation bill, introduced by Mr. Chamberlain and passed in 1897, but too late to permit any consideration of its workings in the first edition. The point that is most likely to strike the eye in reading this work is the very evident drift of trade unions away from a pure democracy and toward an oligarchy. The authors show that the use of the initiative and referendum has visibly declined, and that its place is being taken by a representative body that tends more and more to become permanent and exclusive. But this loss is, perhaps, offset by an increasing realization of the solidarity of all trades and the existence of a general industrial community of interest. In connection with this must be considered the exclusion of non-union laborers from all work in which union men are engaged, and the modification of the apprenticeship rules to take in the great body of unskilled workers steadily drifting from country to town. This has been necessary to keep the unions from becoming submerged by the vast body of workers outside their ranks.

In the matter of arbitration, it can only be used, according to the conclusions of the Webbs, when there is substantial agreement between the parties to the quarrel as to the proper standard of wages, hours of labor, and general conditions of employment. Given this agreement on the fundamental points, the merits of the particular cases in dispute can be determined by an outside and impartial arbiter, but not otherwise. In the course of such a long discussion there are naturally many interesting descriptions of the substantial benefits that trade unions, acting as a body, have obtained for their individual members. Shorter hours, a better rate of wages, more sanitary conditions in factories and mines, a more nearly satisfactory delimitation of the spheres of activity of workmen of kindred trades working side by side on the same job, and the thorough enforcement of the laws for the benefit of laborers are among the advantages that have been gained by concerted action. The wisdom of putting so much matter in one volume may be doubted, but the general appreciation of this work, as shown by its appearance in a cheaper edition,

should be gratifying to the authors. It will rank as the standard authority for students of trade unionism for a great many years to come.

THE AMERICAN BUSINESS AND ACCOUNTING ENCYCLOPEDIA. A Standard Reference Book for Accountants and Business Men. Profusely Illustrated with Hundreds of Special Forms and Tables. Compiled by E. H. Beach and W. W. Thorne. Commercial Law Department by A. E. Rouech. Leather, pp. 1090, \$10. Detroit: The Book-Keeper Publishing Company.

THIS is a comprehensive summary of information relating to the science of accounts, advertising, promoting, and business management generally. It is evidently the aim of the compilers to put out a volume that shall be more than a mere dictionary of commercial terms; the discussions are ample, and deal with the fundamental principles of business transactions, as well as the manner of conducting them. For example, the different heads under which the items of income and expenditure in all sorts of enterprises are entered are given, and the exact reasons for entering the particular items under the appropriate heads are set forth. Another valuable feature is the review of the laws of the different states of the union, as well as the federal legislation, on all subjects of interest to business men. All the different forms of commercial documents, ledgers, card indices, time cards, vouchers, etc., are explained and illustrated by means of diagrams. The arrangement of the book is alphabetical with the important subjects as the keywords, but for the convenience of the readers the index is divided into six parts: Accounting Systems for Different Businesses, Special Accounting Methods, Forms and Tables, Auditing, Commercial Law, and General. The book is to be recommended for its thoroughness and convenience of arrangement. Any man or institution engaged in any sort of business will find here much that is new and valuable.

THE RESCUE. By Anne Douglas Sedgwick. Cloth, pp. 243, \$1.50. New York: The Century Co.

"THE RESCUE" is in many respects an unusual book. It deals with a difficult situation in a thoroughly competent manner. Eustace Damier, a man of the modern world, susceptible and fastidious, idealistic and skeptical, is haunted by the perfection of a photographed face until compelled to seek the original. He finds her a woman fifteen years his senior; a fine, delicate creature, who corresponds exactly to the promises of her picture. The disparity in years does not disenchant. The only barrier that rises between them is Madame Vicand's daughter, Claire. This young woman has inherited from a vulgar, though brilliant, father, all of his tawdry cravings without his genius. She is beautiful, showy, but repellent. Damier recognizes that Madame Vicand is suffering again through her all that she suffered through a brutal husband, and re-

solves to rescue Claire from following her inclinations to her ruin. He succeeds, by a hard, cold, cash bargain, in bringing her back within the pale of respectability. There is a rare distinction in Miss Sedgwick's method. The difficult situation she has presented is never allowed to become absurd or overstrained. Her characters are unusual, but without a taint of bizarre. The strongest feature of the story is her reading of the mother's heart in the agony of realizing that her daughter is unworthy of her lover.

ABROAD WITH THE JIMMIES. By Lillian Bell. Cloth, pp. 302. Boston: L. C. Page & Co.

To go abroad with the Jimmies is to have many amusing experiences and to meet some interesting people. They are in England at the time of the Henley regatta, and have the opportunity to show their patriotism in good, aggressive fashion. Then they go touring over the continent, exploring out-of-the-way corners of Germany, and in-the-way corners as well, attracting and distracting some handsome Austrian officers whom they receive as couriers of the emperor, calling on Tolstoy, and returning to London to show the English shopkeepers how a real Yankee can drive a bargain. The point of view from which they see Europe is distinctly American, and therefore derogatory to the cherished institutions of the old world, but the lightness with which the story is told robs the narrative of every sting.

POEMS. By Charles G. D. Roberts. Cloth, pp. 222. New York: Silver, Burdett & Co.

MR. ROBERTS has two qualities of mind or temperament that show clearly in his poems, and constitute their fullest claim to praise and a long life; the one is an inborn musical sense, and the other is a sane, healthful love for the open air. It is in the poems of nature and the things of the out-of-doors that he appears to the greatest advantage. When he attempts the philosophical or the mystical, he becomes vague and confused. He does not appear to have thought such problems out to their ultimate solution. Some of the historical ballads have the true ring to them, barring an occasional commonplace line, as in "The Keepers of the Pass," where the constantly recurring line, "But we shall not return," with its slight variations, falls flat after the stirring lines that have preceded it.

SOCIAL SALVATION. By Washington Gladden. Cloth, pp. 235, \$1. net. Boston: Houghton, Mifflin & Co.

THE essence of Dr. Gladden's plea is the higher community of interest of all classes in society and the duty of the church in solving the problems that arise in society by virtue of this solidarity. The church can not avoid participation in the wide movements now going on for the betterment of society and the uplifting of the submerged portions, and the only question now is as to the

How to Breathe for Health, Strength and Endurance. • • • • •

The aim of every system of physical exercise is to invigorate and rebuild the internal organism—the Lungs, Heart, Stomach, Liver, Intestines, etc. By intelligently applied

Breathing Gymnastics

I accomplish this directly. My method enables the weakest woman to invigorate her internal organs as thoroughly as though she possessed the muscles and endurance of a Hercules. *First* develop your lungs and teach you how to breathe deeply, causing an abundant supply of rich blood to flow through every vein in the body. *Then*, I develop your external body. Adopting any other method is like beginning at the end and working backwards. *I guarantee unquestionable results.* Let me send you my handsomely illustrated book, "Experience versus Experiment," descriptive of my course and methods. **IT'S FREE.**

NOTE.—I publish a 64-page illustrated book on Breathing and Exercise, including a Chart of valuable Exercises for the development of the lungs and muscular system. It is the most instructive treatise ever published on this subject and is well worth ten times the small price asked. Sent on receipt of ten cents.

P. von BOECKMANN, R. S.
1155 Hartford Building
UNION SQUARE NEW YORK CITY

manner and extent of the participation. Now as ever, the obligation is laid upon the minister to preach a divine religion but from this as a starting point he must go on to the consideration of all economic and social matters that concern the welfare of the individual. Among the practical problems considered in these lectures, which were delivered before Yale divinity students, are the aid of the poor, the unemployed, and the criminal, the development of public education, and the redemption of the cities.

EDUCATION AND THE HIGHER LIFE. By C. H. Henderson. Cloth, pp. 386, \$1.30 net. Boston: Houghton, Mifflin & Co.

WHEN the things of the world are so much with us in matters of education, it is a great relief to find an author who speaks a word for an education that is not expected to have a direct practical result in dollars and cents. "The outer aspect of education is knowledge, the inner aspect is development." This it is that Mr. Henderson stands for—the upbuilding of the finer and higher parts of the nature, without regard to the effect on man as a productive machine. This sort of teaching will not militate against material development in the long run, but will rather tend to its proper and full growth by giving to it its true value and place in the scheme of civilization, and by showing what lies behind it. To read Mr. Henderson's book is to gain a truer idea of the meaning of that much-abused word, culture.

SARITA THE CARLIST. By Arthur W. Marchmont. Cloth, pp. 425, \$1.50.

New York: Frederick A. Stokes Co. A HIGHLY romantic account of the adventures of an Englishman in Spain at the time of the Carlist troubles just before the war with America. The Englishman unravels the schemes of the Carlists, foils an ambitious and unscrupulous minister, saves the young king's life, and marries the young lady who was responsible for much of the Carlist agitation. Pretty sharp work this for a foreigner and a stranger in the land, but indulgent readers will remember the "Prisoner of Zenda" and be thankful that the feats performed are not more wonderful. The young king is a very attractive figure and a convenient character to have around in such a story.

THE CLAYBORNES. By William Sage. Cloth, pp. 404, \$1.50. Boston: Houghton, Mifflin & Co.

THE aspect of the civil war that has appealed to Mr. Sage is the division of families and the arraying of brother against brother. One Clayborne is in the Union army and two others, father and son, are with the Confederate forces. Miss Regina Bowie, a charming young woman acting as a spy for the south, nearly frustrates the plans of Grant and Sherman in the west and creates havoc in the hearts of the Union officers. The style of the book is too constrained and heavy; the characters act and talk like automatons.

Nature Portraits

containing 15 superb plates ready for framing, and 48 large pages of text (size 12 x 18 inches) by the editor of *Country Life in America*, with over 100 half-tones

Earthquakes

Pp. 131, VOL. II.

VOLCANOES, GEYSERS, HEAT, LIGHT, SOUND, ENERGY, VIBRATION, EXPLOSIVES being studied.

Cincinnati, May 8, 1892.

Gentlemen: The Committee (Dr. Berry, Chairman) decided to use Vol. III, but I have persuaded them that the thing for us to do is to take the second volume this year. I have your quotation for 8,000 copies, and you may accept that number as our order. We have already had our run on Vol. I, taking about 9,000. Yours truly, H. C. J.

By Western Union

Cincinnati, May 12, 1902.

FORDS, HOWARD & HULBERT, Bible House, New York: Proceed to print eight thousand Volume II "Nature's Miracles," and ship at earliest moment. Jennings & Pye.

By Postal Telegraph

Cincinnati, May 16, 1902.

Increase our order from eight thousand to nine thousand. Jennings & Pye.

"NATURE'S MIRACLES," by DR. ELISHA GRAY, appeals to both mature and youthful inquirers into all natural phenomena.

"I have been fairly amazed at the penetration of Dr. Gray's insight into all the subtle interconnections of the various sciences with each other."—Prof. Fred'k C. Wright, author of "The Ice Age in America."

Vol. I. World Building and Life.

Vol. II. Energy, Heat, Light, Explosives.

Vol. III. Electricity and Magnetism.

Cord cloth, laid paper, 60 cents per volume, net, postpaid; sets in boxes.

CRITICAL OPINIONS sent on application to the publishers, Fords, Howard & Hulbert, Bible House, New York; or better yet, form your own opinion of this most fascinating and familiar acquaintance with nature's great laboratory.

A LA MODE COOKERY. By Mrs. De Salis. Cloth, pp. 242, \$2. New York: Longmans, Green & Co.

A good compilation of popular recipes arranged in order of a course dinner. There are also miscellaneous recipes and household hints. Sixteen color plates suggest some of the decorative effects that may be obtained from well-served dishes.

OPENINGS IN THE OLD TRAIL. By Bret Harte. Cloth, pp. 332, \$1.25. Boston: Houghton, Mifflin & Co.

NINE short stories, written in Bret Harte's earlier vein, full of breezy, mountain humor, and rough, elemental pathos, make up this volume in the complete uniform edition of Bret Harte now being issued by Houghton, Mifflin & Company.

GERTRUDE DORRANCE. By Mary Fisher. Cloth, pp. 430, \$1.50. Chicago: A. C. McClurg & Co.

THE story of a young girl whose life is largely made up of a dearth of riches and a plethora of lovers. The book is a town novel, and contains a good portrayal of that which we know too well, the city and the life therein.

ROCKHAVEN. By Charles Clark Munn. Cloth, pp. 384, \$1.50. Boston: Lee & Shepard.

A TALE of love in a stone quarry and the machinations of two shameless stockbrokers in New York. In the end virtue is rewarded and vice shown to the door in the good old-fashioned way.

SHAKESPEAREAN SYNOPSSES. By J. Walker McSpadden. Cloth, pp. 320, 45 cents. New York: T. Y. Crowell & Co.

A USEFUL little volume containing clear and comprehensive outlines of each of the thirty-seven plots of Shakespeare's plays.

A HERO, JEAN VALJEAN. By William A. Quale. Cloth, pp. 43, 25 cents. New York: Eaton & Mains.

AN essay on heroes ancient and modern. It is written in a clear and vigorous style that makes it attractive and forceful.

CIVIL GOVERNMENT IN THE UNITED STATES. By George H. Martin. Cloth, pp. 335, 90 cents. New York: American Book Co.

A REVISED edition of a text-book that has had many years of well-deserved popularity.

THE SIN OF JASPER STANDISH. By "Rita." Cloth, pp. 340, \$1.50. New York: R. F. Fenno & Co.

SEDUCTION, murder, theft, lying, with a lot of attendant minor evils, made up the sin of Jasper Standish, arch-villain in this drama of Irish country life.

MICHAEL ROSS, MINISTER. A Novel. By Annie E. Holdsworth. Cloth, pp. 331, \$1.50. New York: Dodd, Mead & Co.

THE NEW CENTURY BIBLE: THE ACTS. Edited by J. Vernon Bartlett. Cloth, pp. 394. New York: Henry Frowde.

THE NEWS OF THE WORLD

MONDAY, MAY 13

DOMESTIC.—The war, navy, and state departments, under the personal direction of the president, are taking energetic measures for relief of the sufferers in Martinique; a bill appropriating \$200,000 for their relief was passed by both houses....The president issued a proclamation opening to settlement the Fort Hall Indian reservation in Idaho....J. P. Morgan & Co. distributed \$10,000,000 additional profits to the members of the syndicate that underwrote the steel trust....All collieries in the anthracite coal district in Pennsylvania were closed by the miners' strike....Twenty-four persons were killed and a hundred and fifty injured by an explosion at Sheridan, Pennsylvania.

FOREIGN.—Searching parties succeeded in reaching St. Pierre, Martinique, which was found to be a smouldering heap of ruins, covering the distorted and charred corpses of thirty thousand victims of the eruption of Mont Pelée; the work of burning the bodies was begun; relief work among the survivors is in progress....The Haytian congress met in Port-au-Prince to elect a successor to President Sam, but adjourned because of an outbreak of fighting in the streets, which resulted in the formation of a provisional government, with ex-President Boisrond Canal as president....The British government completed a new subsidy agreement with the White Star line....Severo, the Brazilian aeronaut, and one of his assistants, were killed by the explosion of Severo's airship in making a trial trip near Paris.

TUESDAY, MAY 13

DOMESTIC.—President Roosevelt ordered a change made in the Cuban law of criminal procedure, so that the case of Rathbone may be reviewed by the supreme court of the island....Walter N. Haldeman, president of the Louisville *Courier-Journal*, and one of the oldest newspaper men in the country, died in Louisville, Kentucky....Attorney-General Davies, of New York, started an independent campaign against the beef trust by securing the appointment of a referee to take testimony preliminary to an attack on the trust....Eugene F. Ware, of Kansas, took the oath of office as commissioner of pensions.

FOREIGN.—The reports from St. Vincent indicated that two thousand persons had been killed, and that volcanoes in several West Indian island cities were in eruption....No diminution in the loss of life has been shown in reports from Martinique....The British captured many burghers in the Lichtenberg district....The French president started on his visit to Russia....The Servian government notified the sultan that it holds Turkey responsible for the recent frontier affrays between Servian guards

and Albanians, and threatens reprisals if they are repeated....Señor Canalejas, Spanish minister of agriculture, resigned.

WEDNESDAY, MAY 14

DOMESTIC.—President Roosevelt laid the cornerstone of the McKinley Memorial Ohio college of government at the American university, near Washington....Land was purchased in Pennsylvania for a Chinese cemetery, the only one east of the Rocky mountains....Henry A. Havemeyer gave \$20,000 to Bryn Mawr college....Lewis Nixon resigned the leadership of Tammany Hall....The seventh annual conference of the Presbyterian Foreign Missionary board began....Bishop O'Gorman, a member of the Taft mission to the vatican, was received in audience by the pope.

FOREIGN.—Governor Llewelyn of the Windward islands reported to the British government that he found conditions on the island of St. Vincent worse than had been stated; probably sixteen hundred people had been killed, and the northern part of the island laid waste....In London Secretary Chamberlain has asked the lord mayor to open a Mansion House fund....Socialists have proclaimed a general strike in Sweden in order to force the passage of the general suffrage bill.

THURSDAY, MAY 15

DOMESTIC.—Secretary Hay sent isthmian canal agreements with Colombia, Nicaragua, and Costa Rica to the senate....Ambassador Cambon presented to Secretary Hay a message expressing the gratitude of the French government for the efforts of the American people to relieve distress in Martinique....The anthracite coal miners, through their delegates, decided to continue the suspension of work....Dr. Henry van Dyke was chosen moderator of the Presbyterian general assembly in session in New York city.

FOREIGN.—The queen regent and king of Spain received in audience the special foreign envoys sent to attend the accession of Alfonso....Ex-President Sam sailed from Port-au-Prince on a French steamer; the Haytian navy has sided with General Firmin, the presidential candidate of north Hayti.

FRIDAY, MAY 16

DOMESTIC.—President Roosevelt nominated Herbert G. Squiers for minister to Cuba and General E. S. Bragg for consul-general at Havana....The Montreal authorities successfully resisted the efforts of the Quebec officials to obtain custody of Colonel Gaynor and Captain Greene....Attorney-General Davies announced in court at Albany that he had been unable to locate the New York representatives of the Chicago beef houses, and consequently his inquiry into the beef trust had to be adjourned....Attorney-General Crow,

of Missouri, has instituted ouster proceedings against the Schwarzchild & Sulzbacker Packing company, alleging that it is a member of the beef trust.

FOREIGN.—The German emperor proposes to commemorate Prince Henry's visit by presenting to the United States a bronze statue of Frederick the Great, to be erected in Washington....The third court of the king of England was held at Buckingham palace....The preliminary ceremonies for the week of the accession of the king of Spain took place at the capital....Relief measures are actively going on in France and other countries in aid of the sufferers in the West Indian islands.

SATURDAY, MAY 17

DOMESTIC.—At a meeting of White Star line shareholders in Liverpool it was reported unofficially that the agreement with the Morgan shipping combination was ratified....The body of General William S. Rosecrans was reburied in Arlington National cemetery, addresses being made by President Roosevelt and Speaker Henderson....The members of the executive and financial committees for the Democratic congressional campaign were announced by Chairman Griggs, Lewis Nixon and E. M. Shepard being among them....Rioting took place in Atlanta, in which four white police officers and two Negroes were killed and several other persons were wounded....The Count and Countess de Rochambeau, M. de Billy, Vicomte de Chambrun and others arrived on the steamer *La Touraine*, to attend the unveiling of the Rochambeau statue at Washington.

FOREIGN.—The accession of King Alfonso XIII of Spain took place in Madrid....A difference of opinion as to whether the war indemnity shall be paid in silver, regardless of the rate of exchange at the time of payment, has arisen at Peking between the Chinese government and the foreign ministers....Universal suffrage having been voted by the rigsdag, the strike in Sweden was declared off.

SUNDAY, MAY 18

DOMESTIC.—General Chaffee returned to Manila from the island of Mindanao, P. I., where he had satisfactory interviews with a number of dattos; over twenty-seven hundred Americans attended the farewell reception to General Lloyd Wheaton in Manila.

FOREIGN.—A plot to kill King Alfonso by throwing dynamite cartridges at him while he was on his way to the cortes to be sworn, was discovered in Madrid; many arrests were made....Kingston-on-the-Thames, England, is celebrating the millennial of the coronation of King Edward the Elder, son and successor of Alfred the Great.

Low Grade Ore the Most Profitable

RECENT CHANGES IN METHODS IN THE BLACK HILLS MAKE MINING A MANUFACTURING PROPOSITION.
BY M. E. MCINTOSH, WESTERN CORRESPONDENT "WALL STREET JOURNAL."

A LONG with the prairie schooner, the greased and painted Indian, and the Buffalo, there has passed from view the old-time miner of the West. Instead of a bearded pioneer, panning his gold at the brink of a creek, we have the skilled operator of a pneumatic drill, at work far under ground; instead of the picturesque "diggings" of the California Forty-Niners, substantial cities, to which the term "mining camps" seems badly applied. The chemist and the mechanic have taken the place of the man who hunted nuggets, fought Indians, gambled and died with his boots on. There is less romance in mining than of old, perhaps, but more profit.

Nowhere in the world has scientific mining reached a higher stage of development than in the Black Hills. Here the production of precious metals has been reduced to a basis so exact and certain of profitable results, that it is relieved entirely of the element of risk which in the past has been suggested to many people whenever

process, first used in South Africa in 1889 and since then tested, improved, and developed in America, has solved the problem.

It is in the fine Kildonan mill, at Pluma, S. D., that the Horseshoe Company is using cyanide on its low grade ores. Here is a complete ore-crushing plant, with such valuable adjuncts as a foundry, machine shop, chemical laboratory and assay office, and here have been built the great tanks in which the ore is "leached," as the miners say. The Horseshoe Company began to use its cyanide plant on April 1, with the most satisfactory results. The company has millions of tons of refractory ore that will run \$6.00, \$8.00, and \$10.00 in gold—values that insure a large profit on every ton treated in the cyanide tanks. The plant is being added to as rapidly as workmen can ply their tools, and by midsummer the daily capacity will be 1,000 tons. This will yield a profit of \$5,000 a day.

Meanwhile the shipments of rich smelting ore go steadily on and without waiting for the full development of the cyanide plant, the Horseshoe is already earning at the rate of 10 per cent per annum on its capital stock. In one of its mines alone, the Lucille, the company has enough of this smelting ore blocked out to keep up shipments of 150 tons a day for two years.

The deep mining that will come with the further development of the Horseshoe is certain to bring added rich returns. What enormous ore reserves are available beneath the deposits from which shipments are now being made, is strongly set forth in a letter recently written to the general manager of the Horseshoe Company by R. W. Rodda, the mine superintendent, who has for years worked on these properties and who knows every foot of the ground. In this connection it may be said that no mining man in the Black Hills stands higher than Mr. Rodda, as regards ability and character, and any statement that he makes can be implicitly relied on. During the past winter he caused a cross cut to be run in the lower level, 120 feet beneath the company's present workings, for the purpose of demonstrating the extent of a free milling quartz ledge which is encountered at that depth. This conservative miner did not make his report until he was absolutely certain of the facts respecting the quartz ledge, and when he finally wrote to inform the company of the result of his operations, the information which he gave was this: The cross cut proves the ore body to be 300 feet wide. The north exposure is 3,500 feet from the cross cut, showing the quartz deposit to be 300 feet wide and 3,500 feet in length, with 2,400 feet of ground to the south, in the course of the ore chute that is undeveloped. While the depth of the ledge is unknown, the present depth of the Homestake is 1,000 feet and this can be taken as a basis of calculation, as the geological conditions are identical.

Three hundred feet by 3,500 feet and 1,000 feet deep would yield more than Eighty Million Tons of ore. Concerning the quality of this ore Mr. Rodda says that its grade is better than 50 per cent of the Homestake cross cuts run under the same conditions.

In all seventeen different properties have been consolidated under the control of the Horseshoe Company. While they would have continued to pay well as smelting ore propositions, these properties could not have been made to yield the rich returns which are now being won from their ores except by means of more ample capital, and a broader scale of operations.

One million shares of the stock of this company are offered to the public at par—\$1.00 per share. There is no preferred stock, the shares are non-assessable, and the company has no bonds. All who purchase the stock are on an equal footing, and will participate equally in the dividends.

This is the first public offering of a mining stock of so substantial a character. It will not appeal to those who expect something for nothing and put their money into get-rich-quick schemes, but it should engage the attention of cautious and thrifty people with money to invest, in either large or small sums, in a profitable, legitimate, and stable business.

Ask your banker about the men who control the affairs of the Horseshoe Company.

The officers and directors are:

Mr. D. E. Murphy, President, who is the General Agent of the Northwestern Mutual Life Insurance Company of Milwaukee.

Mr. John Johnston, Treasurer, who is Vice-President of the Marine National Bank of Milwaukee.

Mr. E. M. Holbrook, of Chicago, is First Vice-President and General Manager of the Company.

Mr. A. N. McGeoch, of Tracy & Co., Bankers and Brokers, New York, Chicago, and Milwaukee, is Second Vice-President.

Hon. Robert Mackay, President of the Montreal Harbor Board, Vice-President of the Bell Telephone Company of Canada, and director in two of the largest and strongest banks in Montreal.

Mr. George Sumner, of Hodgson, Sumner & Co., Montreal.

Mr. Charles Allis, President of the Allis-Chalmers Company, of New York, Chicago, and Milwaukee.

Mr. F. R. Bacon, President of the Cutler-Hammer Manufacturing Company, of New York, Chicago, and Milwaukee.

Mr. W. B. Frisbie is Manager of the Chicago office, which is in the Merchants' Loan and Trust Building.

Mr. W. K. Murphy, of Milwaukee, is Secretary of the Company. The offices of the Horseshoe Mining Company are in the Herman Building, Suite 54, Milwaukee, Wis.; Merchants' Loan and Trust Building, Suite B D, Chicago, Ill.; New York Life Building, Suite 132, Minneapolis, Minn.

This famous Mule has been in the Horseshoe Mines eight years. He will push a car of ore but not pull it. This typifies the split of the management of the company. They are all pushers.

the word mining was mentioned. When applied to the great deposits of low grade ores found in this rich mineral field, the cyanide process placed mining on a plane comparable in respect to safety with that of the most solid manufacturing industry.

There is something that appeals to the imagination in the fact that it is a deadly poison which has proven the most successful agent in searching out the shining gold that is hidden in the stubborn Black Hills rock. Cyanide of Potassium must be handled with care, and yet there have been very few accidents resulting from its use at the mines, for the plants are invariably in charge of expert and scientific men.

While the technical details of this process chiefly concern the chemist and the mining expert, the economic results interest the whole world. The cyaniding of low grade Black Hills ores has furnished one of the best opportunities for investing money to be found anywhere. The first cost of a cyanide plant is less than any other process, and when economy is practiced in manipulating the mining mill, the ore can be worked into bullion for not to exceed \$2.50 per ton. Some cyanide plants in the Hills are doing it for \$1.00 or less. On ore that averages \$10.00 per ton gold, the profits are very great.

The successful experiments on very low grade ores have demonstrated that millions of tons can now be treated at a profit by the cyanide process, which in the past would not have paid the cost of mining and milling, and as a result of these successful experiments capital will be liberally invested.

A great corporation that has adopted the cyanide method in the treatment of its low grade ores is the Horseshoe Mining Company. Ranking next to the Homestake in the extent of its holdings and the value of its output, the Horseshoe Company now owns nearly 2,000 acres of the richest mining ground in the Hills. The developed portions of the property have paid handsomely for years, and of late have yielded a daily net profit of \$2,500 from smelting ore alone. Gold to the value of over \$2,500,000 has been taken from these mines. To realize the full possibilities of the property, however, means had to be found to treat the practically unlimited supply of low grade, refractory ore, which would not yield its gold under the processes first employed in the Hills. The cyanide

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, May 17

Weather and wages continue the only seriously disturbing factors in the business situation. Excessive moisture and low temperature made the crop outlook more uncertain, and much depends on a continuance of prosperity in the agricultural sections. Work was suspended in the anthracite coal mines on Monday, and, although the interruption may be terminated at any time, it involves a vast army of men, including transporting interests and others closely allied. On the other hand, record-breaking distribution of pay in the Pittsburgh region accelerated retail trade, while resumption of woolen and other mills added largely to the active force. Transporting lines continue to make splendid exhibits, railway earnings for the first week of May exceeding those of a year ago by 6.2 per cent and surpassing the same week's earnings in 1900 by 19.9 per cent. Bank exchanges do not reflect the increased volume of legitimate trade at this city, owing to the fact that last year's clearings were distorted by a stock speculation about three times as large as during the past week, but leading cities outside New York show a fall of only 4.3 per cent compared with 1901.

IRON AND STEEL

As was indicated by weekly reports, pig iron production attained a new record for the month of April at 1,503,326 tons, and the weekly capacity of furnaces in blast on May 1, according to the *Iron Age*, was 352,064 tons, far surpassing all previous high-water marks. Such an enormous production would suggest accumulation of supplies, but

FAT VS BRAINS

Food That Makes Brilliant Newspapers

Nervous prostration cannot continue if the right kind of food is used, but food that will build fat does not always contain the elements necessary for rebuilding the soft gray matter in the nerve centers.

A lady tells how she got well from using Grape-Nuts Breakfast Food. "I was treated by several physicians at the hospital. My disease was pronounced neurasthenia (nervous prostration). The doctors gave me various nerve tonics without producing any beneficial results. I finally got so weak that I could not work either physically or mentally.

About two years ago I began the use of Grape-Nuts and a marked improvement set in at once. In eight weeks I had regained my strength and could do my old work even better than before, that of writing for the press. All honor to Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

consumption easily keeps pace, furnace stocks showing a decrease of about ten thousand tons during April to much the lowest point in recent years. With about twenty more furnaces in course of construction or contemplated, an annual output of twenty million tons is no longer considered remote, while the current year may exceed eighteen million tons if no serious labor controversy or other calamity interferes. Quotations continue to vary widely, according to date of delivery, and there is less spot business owing to scanty supplies and to the growing tendency of consumers to place orders for future delivery. There is now very little evidence of buyers holding off for a break. Rails and structural supplies are ordered freely for delivery next year.

COTTON AND WOOL

In the dry goods market there is evidence of increased buying for fall and next spring, but only small supplementary orders for the present season. Cold weather has retarded jobbing trade at many points. Domestic trade in cotton goods is steady, with supplies in strong hands, but export business is dull. More liberal deliveries of woolen goods are reported, showing that fewer looms are idle. The best demand is for staple lines of men's wear and medium grades of fancy woolsens.

CORN AND WHEAT

While it is generally agreed that there has been much improvement in the winter wheat states since the opening of the month, prices became somewhat firmer upon the publication of the official report of condition on May 1. Based on the average of 76.4, the produce exchange statistician estimated the yield at 341,498 bushels. This is considerably less than the record-breaking production last year, but compares favorably with earlier crops. Since these figures were compiled there have been abundant rains in Kansas and Nebraska, where the need was most urgent, yet, on the other hand, a considerable acreage in spring wheat sections has been abandoned because of excessive moisture. Exports for ten months of

is not always possible, but you can insure against loss of income while disabled by taking out

An Accident Policy in THE TRAVELERS OF Hartford

the oldest, largest and strongest Accident Insurance Company in the world. These policies guarantee a weekly income while disabled, and large amounts for loss of legs, arms, feet, hands or eyes. If death ensues, a stated sum is paid. \$27,000,000 have been distributed among 376,000 policy holders or their families, for injuries or death.

A LIFE POLICY in The Travelers Insurance Co.

provides safe insurance at a lower guaranteed net cost than mutual companies. Mutual companies charge for insurance and give such a share in the profits as they may see fit. THE TRAVELERS charges for insurance only. The net cost of a policy in THE TRAVELERS is therefore guaranteed and known beforehand and the difference in cost is in your pocket first to last.

Agents in every town; or write for interesting literature.

The Travelers Insurance Co. Hartford, Conn.

(Founded 1863)

the crop year assure the heaviest outgo ever recorded, even if the last two months make poor exhibits. For the past week exports were 3,499,764 bushels, flour included, against 4,023,246 a year ago. Corn advanced on lighter receipts and reports of slow progress in planting.

FAILURES

Failures for the week numbered 228 in the United States, against 177 last year, and 17 in Canada against 19 a year ago.

Financial

Bradstreet's, New York, May 17

THE MONEY MARKET

Stock market interests at New York have this week transferred a considerable amount of loans to Berlin and London. Part of these borrowings are understood to have been made directly in those cities, the securities which are collateral for the same having been shipped to the other side. There has also been a number of large sterling loans made, and the selling of bills against such transactions caused a sharp decline in exchange rates. At the same time, out-of-town holders of funds have been lending to an increased extent in New York, being attracted by the high rates prevailing at that city. The consequence of this was the appearance of a much better tone and an easing off of rates for both call and time money, the supply showing a marked increase. Demands were also somewhat curtailed,

GAS FACTORIES

In People Who Do Not Know How to Select Food and Drink Properly

On the coffee question a lady says: "I used to be so miserable after breakfast that I did not know how to get through the day. Life was a burden to me. When I tried to sleep I was miserable by having horrible dreams, followed by hours of wakefulness. Gas would rise on my stomach, and I would belch almost continually. Then every few weeks I would have a long siege of sick headaches. I tried a list of medicines and physicians without benefit.

Finally I concluded to give up my coffee and tea altogether and use Postum Coffee. The first cup was a failure. It was wishy-washy, and I offered to give the remainder of the package to anyone who would take it.

I noticed later on in one of the advertisements that Postum should be boiled at least 15 minutes to make it good. I asked the cook how she made it, and she said, 'Just the same as I did tea, being careful not to let it steep too long.'

I read the directions, and concluded Postum had not had a fair trial, so we made a new lot and boiled it 15 or 20 minutes. That time it came to the table a different beverage, and was so delicious that we have been using it ever since.

My sick headaches left entirely, as did my sleepless nights, and I am now a different woman." Name given by Postum Co., Battle Creek, Mich.

owing to the pronounced dullness of the stock market, and there are no more large syndicate operations in progress which call for the employment of considerable sums. Time loans were dull, owing to the requirements of Wall street being now well supplied, and borrowers are also disposed to wait for lower rates. Commercial paper is quiet, with a limited buying demand and a light supply of prime names.

THE STOCK MARKET

Although the New York stock market has been relieved by the easing of rates for money through the making of large loans on stocks abroad, speculation is very dull and depressed, owing to the strike declared by the anthracite coal miners. Early in the week speculative operators covered shorts, causing advances throughout the list, this movement being due to easier money and favorable accounts of existing crop conditions. Union Pacific was active and higher, and Amalgamated Copper tended to improve on the advance in the price of the metal. The anthracite coal stocks have reacted considerably on the strike news, despite support shown Reading and others of the group. London was in the main a buyer of American stocks this week. Bonds continue firm, with increased activity. Foreign exchange broke on the offering of sterling loan bills, demand sterling declining from 4.87½ to 4.86½, with a rally to 4.87.

BANK CLEARINGS

Bank clearings for the week ending May 15 aggregate \$2,384,503,279, a decrease of 19.2 per cent from last week's total, and a decline of 30 per cent from a year ago. Exchanges at cities outside of New York amount to \$823,604,906, a decrease of 6 per cent from last week and a loss of 2 per cent, as compared with last year.

Gold Bricks in Wall Street

Brooklyn Eagle

What are known as curb securities in Wall street recently descended in a hurry. Prices went down with a rush and several failures were reported. The crash was not exclusively confined to curb stocks, but they sustained the greater part of the shock. A day or two later came the announcement that, a warrant having been issued, somebody was to be arrested. On Wednesday a broker was taken into custody. The allegation against him is that he created a fictitious value for a railroad stock, causing it to sell at 120 when, as a matter of fact, it was worth about half of that figure. Transactions of this description are described as "wash" sales. In such sales there is no actual transfer, no real change of ownership. The seller is the buyer. To all outward appearance, however, the sale is genuine. When hundreds of shares thus seem to change hands at rising figures, outsiders are tempted to invest. When the inevitable break comes the outsider finds himself in the possession of a gold brick. This is the experience to which

THE ELECTROPOISE

is a beautiful scientific instrument. When applied, it causes the system to absorb oxygen. It thus gives new life and vitality and enables nature to combat disease and throw it off. Electropoise restores the balance of the nerves and gives one restful sleep when all else fails.

GENERAL DEBILITY

"For a run down and weakened condition of the system, nervous prostration, or paralysis, I consider Electropoise has no equal."

Mrs. H. A. WINTER, Barnum, Iowa.

SLEEPLESSNESS

"Suffered from sleeplessness two years; tried everything. Electropoise helped me marvelously. Has done wonders for some members of my church."

Rev. J. N. SHORT, Lowell.

"I can conscientiously indorse the Electropoise as the most marvelous health-giving agent of which I have any knowledge. I was going down hill at a rapid rate; suffered from insomnia and nervousness; appetite very poor. To-day I sleep soundly, enjoy my food, my nervousness is gone, and a rheumatic and kidney trouble is steadily improving."

Mrs. A. J. DARWOOD,
1317 S. 47th St., Philadelphia, Pa.

RHEUMATISM

"The Electropoise has worked wonders in my household. I introduced it to Mrs. Cuthbert last March as a remedy for rheumatism, and since then she has laid aside sticks and crutches and is able to attend to all her household duties."

Rev. LUCIUS CUTHBERT,
Aiken, S. C.

PARALYSIS

"I had paralysis of the legs and all the symptoms of locomotor ataxia. I got considerable relief in two weeks' use of the Electropoise. I can now (one year later) walk a mile or two without unusual fatigue and can attend to my business well."

JAMES F. McMANUS,
West New Brighton, S. I.

We direct the use of every Electropoise free of cost. Write for illustrated book of information. State your symptoms and we will advise you regarding your case. Address:

MOTHERS AND DAUGHTERS

You can make summer cooking a pleasure by using our

STEAM COOKER WITH DOORS

Entire meal cooked over one burner. Saves fuel, labor and provisions. Used on any kind of stove. Only cooker made with steam condenser and copper tank. Sold on 30 days trial. Get it for your home and summer cottage.

AGENTS WANTED. Liberal terms. \$50 and \$40 a week can be made by agents. Write for territory at once. Don't delay, as largest sales are made during summer months. Illustrated circulars free.

Ohio Steam Cooker Co.

51 Ontario Bldg., Ontario and Jeff. Sts., Toledo, Ohio.

plaintiff says he was subjected, hence he invokes the power of the law.

The matter should be thoroughly sifted. Proof of guilt should be followed by punishment prompt and severe as the law permits. That the plaintiff will ever get his lost money back, however, is far from likely. Perhaps he has an idea that his case is unusual, but it ought not to be difficult to deceive him. What he complains of is done, perhaps not so flagrantly, every day in Wall street. Operators whose reputation is above reproach make a specialty of a certain stock. They either throw large blocks of it on the market or buy all that is offered. The object is to influence quotations. It is regarded as perfectly legitimate. Intrinsic values have practically nothing whatever to do with the matter. What is intrinsically worth 10 may be driven up to 50; what is really worth 50 may be battered down to 10. Those who buy at 50 get a gold brick; those who are forced to sell at 10 are in the same predicament. Each has had a disagreeable experience. But methods of this description will prevail in Wall street until that famous thoroughfare is closed.

The officers of the stock exchange adopt rules by which purchases and sales are governed. Violation of these rules may be followed by expulsion or suspension. The object of the regulations is to protect investors. About every safeguard the exchange can devise has been provided. It is not enough. Rules can not be enough. They can not compel good faith. They can stipulate that stock purporting to be sold shall be actually delivered, but such forms when observed do not necessarily prove good faith. The investor must take care of himself.

Various Topics

The *Daily Stockholder* computes May disbursements for interest at \$21,420,919, against \$19,181,399 last year.

It is officially announced that the Canadian Pacific railway has taken over the Ottawa Northern & Western railway.

The postmaster general of Great Britain has issued a notice to the effect that on and after May 1 the rate of postage to China will be one penny to all points maintaining British post offices.

Returns of shipbuilding on the Clyde for the first four months of the current year show the aggregate tonnage launched was 132,000, which is the heaviest total in four years.

The Venezuelan government has decided to use the United States mints instead of the Paris mint, as formerly, for the coinage of bolivars (silver coins worth about 20 cents). About 2,000,000 bolivars are to be coined.

According to the London *Daily Chronicle*, Americans have now secured a virtual monopoly of the Swiss coal market, ousting their British and German competitors, and they have also gradually obtained control of the steel and boot trades, which have hitherto been in the hands of British firms.

The Octopus Again

"How's this?" asked the customer in the bookstore. "Last week the prices on Bacon and Lamb were only \$1.25, and now you have marked them up to \$3."

"Well, you see," explained the bookseller, "since the Meat Trust began cornering supplies—"

But the customer hurried away to secure matinee seats for "A Texas Steer" before the prices went up at the theater, also.—*Baltimore American*.

Undue Familiarity

"Let me see—this is May, isn't it?" said the man of business, preparing to begin the dictation of a letter to a country customer.

"No, sir," frigidly replied his new typewriter girl. "This is Miss Gumbford."—*Chicago Tribune*.

Book of Vacation Stories

The Summer Book just issued by the Lackawanna Railroad contains a series of delightful vacation stories entitled, "The Experiences of Pa." Everyone who is seeking a place in which to spend the summer months will be interested in these amusing sketches. The book is handsomely illustrated, and describes some of the most attractive resorts of the East. It will tell you where to go, how to go, and the price of board; it is called "Mountain and Lake Resorts of the Lackawanna Railroad," and will be sent on request, accompanied by 5 cents in stamps, to T. W. Lee, General Passenger Agent, New York City.

The Week

Thursday
May 29, 1902

REPORTS purporting to describe the conditions existing in Martinique and St. Vincent contradict each other from day to day. By one correspondent we are informed that eruptions continue with such force that no part of the islands is habitable and that there is grave talk of their abandonment as human habitations, while another report has it that conditions steadily improve and that the fear of further disaster is wearing away. Part of these contradictions is of course due to the fact that conditions vary from day to day, periods of activity, on the part of Mount Pelée at least, succeeding days of comparative calm. At one time last week St. Pierre could not be approached by the relief parties, while on other days no dust or stones fell. It is not surprising in view of the continued activity of Mount Pelée and La Soufrière that there should have been an exodus from the islands of all those who could depart, and it is doubtful if the islands can ever be restored to their former happy state.

THE list of the disasters of the month given in the American department this week is proof sufficient that misfortunes never come singly, and to this long list of death-dealing catastrophes might be added the Guatemala earthquakes of last month, details of which are only now at hand. Pictures of the ruins of San Sebastian, Quezaltenango, San Marcos, and the rich estates of the Costa Cuca and Costa Grande districts show an appalling state of ruin in which thousands lost their lives and which caused losses amounting to millions of dollars. Such a calamity could only have been overshadowed by the greater one in the Windward islands, but even after giving due consideration to this fact it is difficult to understand why the Guatemala disaster has engaged so small a share of the world's attention and sympathy.

A GOOD many things have happened in the period of years between the surrender of Yorktown and the present to momentarily lessen the friendship of France and the United States, but the manner in which the Rochambeau mission has been received here, the memories evoked by the ceremonies in connection with the unveiling of the monument to the man who more than any other lent aid to the struggling colonists, these things have shown that France is still held in a degree of affectionate regard that Americans do not feel for any other nation; they have shown that Washington spoke truly when he said that the aid rendered the colonies by France had "made the nation very dear to us and formed ties and left impressions which neither time nor circumstances can destroy." Rochambeau often expressed the same sentiments.

IT is significant of the changes worked by time that while the British embassy was preparing to participate in the Rochambeau memorial ceremonies, its head, Lord Pauncefote, should pass away. For Lord Pauncefote had come to be regarded almost in the light of an American, and so far from there being any remains, except in cheap politics, of the animosities of a century ago, Lord Pauncefote was universally popular because he was credited with bringing about an era of unusually good feeling between the British and the American people. The promptness with which was dismissed the story that Lord Pauncefote had occupied an unfriendly attitude toward us during the Spanish war is the latest proof of the belief entertained here in the sincerity of his friendship for this country. Lord Pauncefote is succeeded as dean of the diplomatic corps by the German ambassador, Herr Von Holleben.

SUBJECTS connected more or less closely with the Philippine government bill have occupied the senate throughout another week. The Democratic senators did the best they could, but it is admitted that the most impressive speech in opposition to the administration measure and Philippine policy in general was made by Senator Hoar. The reason why this speech is not made the subject of comment in PUBLIC OPINION now is simply that it is in all important respects the same speech that the senator has delivered once or twice before, the first occasion being when the treaty of Paris was under consideration in the senate. He opposed the treaty at that time, and he still insists that in order to set up non-representative government in the Philippines we have had to "repeal the declaration of independence"; he is consistent, but he affords another example of "the sad tautologies of lavish passion," and so his speech does not make so deep an impression as it did at the time of its first delivery.

WHETHER or not the treaty providing for the sale of the Danish West Indies to the United States shall be confirmed appears to have been made the principal issue in the campaign for members of the Danish senate, and as this campaign does not end until next September and the time limit within which the treaty must be confirmed expires July 1, an extension of time will have to be agreed upon if the transfer is not to be abandoned. Patriotic objections to the alienation of national territory are easily understood; such a proposal would make a political issue anywhere in the world, and there is no disposition to hurry the Danes, particularly in view of the fact that we have considerable undigested island territory already.

AT one time last week the dispatches from London gave the impression that peace had at last come to pass in South Africa. By Sunday the cables had adopted a vaguely optimistic tone and details of the agreement supposed to have been reached were altogether lacking. It is doubtful, however, if a member of the government would without good and sufficient reasons have committed himself to the statement that "everything is practically settled and the war is at an end. It may be, nevertheless, that several weeks will elapse before a definite announcement can be made; we want to give the Boer leaders every chance to confer with their followers and that takes time." And then there remains the question whether or not the followers will follow.

M. WALDECK-ROUSSEAU, as is customary in France after the election of a new chamber of deputies, has tendered his resignation as premier, and it is said that this tender is not merely perfunctory, but is indicative of the premier's intention to step aside now that he has accomplished the task that he set for himself three years ago. If this proves to be the case there will be an interesting contest over the choice of his successor who is likely to be either M. Delcasse, minister of foreign affairs, or M. Bourgeois, who was compelled to resign from the ministry six years ago, because of the deadlock between the chamber and the senate over his progressive income-tax bill. Neither of these candidates for the office has yet proved that he is fitted to carry forward the work of strengthening the republic so ably begun by M. Waldeck-Rousseau. There is no doubt of their statesmanlike qualifications, but there is doubt of their ability to handle the political materials with which they would have to work in parliament.

AMERICAN

Cuba Libre

CEREMONIES ATTENDING THE TRANSFER OF SOVEREIGNTY TO THE CUBAN PEOPLE

THE official report of the transfer of the island of Cuba from the United States to the representatives of the Cuban people was contained in the following report from Governor General Wood to President Roosevelt, dated Havana, May 20: "I have the honor to report to you that, in compliance with instructions received, I have this date, at 12 o'clock sharp, transferred to the president and congress of the republic of Cuba the government and control of the island, to be held and exercised by them under the provisions of the constitution of the republic of Cuba. Documents sent to me were read, and Mr. Palma, in accepting the responsibilities on behalf of the island, expressed himself in kind and endearing words and thanks, and thanked the republic of the United States and its officials for all that has been done for Cuba and for the fulfillment of promises made. The ceremony was most impressive. I embark on the *Brooklyn* with my staff for the United States."

The newspaper correspondents give a more graphic description of the event, the *New York Tribune* despatch saying: "On Morro Castle as the sun rose to its meridian the first gun was fired at Cabanas in the national salute of forty-five to the American flag, the last of which was to be the signal for the lowering of the standard of the United States. Morro Castle was crowded with the patriotic Cubans, whose lives' ambition was to see their flag float alone from the fortress which so long before held aloft the flag of Spain. At the conclusion of the national salute and simultaneously with the raising of the flag on the palace, where the inauguration ceremonies were in progress, the American standard was lowered in token of the nation's good faith and honor. The opposite side of the bay was crowded to the water's edge with a mass of people, who seemed to shout with one voice. The bay resounded with 'Viva Estados Unidos!' 'Viva Cuba Libre!' From the house tops crowds of enthusiastic Cubans waved small flags of the new republic, as if impatient to see it float, and all over the bay small sailing vessels and tugs carried a mass of people shouting and screaming vivas."

The *New York World* says that the people can read these despatches with pleasure and pride. "Our flag has been gloriously hauled down. Another free nation has been born under its sheltering folds, and it is hauled down in honor and glory everlasting." The same thought is expressed by the *Boston Globe*: "The American flag was never more highly honored than when it was 'hailed down' by General Leonard Wood from the government building at Havana. The work

which culminated in the transfer of the government of Cuba to the Cubans is without parallel in the history of the world. Never before has such a rich territorial prize been won by a nation powerful in war only to be turned over to the free possession of its inhabitants."

Charity, says the *Springfield Republican*, should mark our attitude toward the new republic. Mistakes will be made, but "National greed for annexation and studied fault-finding with Cuban administration ought not to distinguish American journals and public men. If American principles are precious to us, then this experiment in self-government in the 'ever-faithful isle' should have our sympathy and good-will, both politically and commercially—perceiving which the

Cuban people will repay us through countless generations with their affection and esteem." We have done more than we promised to do, the *Philadelphia Ledger* claims: "We have not only turned over the island to the government of its own people, as we declared we would do when we entered upon the war with Spain, but we have created a nation and given it a start. Schools have been established and municipal improvements made that have banished some of the scourges that afflicted the great cities, while a financial system has been provided that should render the island self-supporting, so far as the government is concerned, from the beginning. The one

thing we have failed to do, but hope to accomplish, is to establish trade relations that will bring prosperity to the planters."

The *Philadelphia Press* declares that "If congress fails to give Cuba reciprocal advantages in our trade, all that has been done goes for naught. If this is done our foreign relations will have no more golden deed than that which gives Cuba freedom and independence." The *Chicago News* agrees in this view: "The important question for Americans just now is whether the work which has been carried thus far so successfully is to be destroyed by a failure to grant the trade privileges which the island absolutely must have if its industrial interests are to flourish."

The *Pittsburg Post* draws "an impressive lesson" from the birth of the Cuban republic: "We give happiness and prosperity and freedom to the Cuban people. We have kept the faith. America is honored in all parts of the world. We have lied to and deceived the Filipinos. We have let loose the engines of a cruel and desolating war. We have killed and tortured, burned and destroyed. We have lost 7,000 of our own kin. If we had declared the policy as to the Philippines that we did as to Cuba, not one of these

TOMAS ESTRADA PALMA

The first President of Cuba, was born on the island and has taken a prominent part in its affairs since the revolution of 1868. He was delegate-at-large during the last revolution.

lives need to have been lost, and we would have had the friendship and gratitude of the native people as we have of the native Cubans. What a lesson in the Philippines! What a lesson in Cuba!"

The Beef Trust Injunction

A TEMPORARY ORDER GRANTED

BY the order granted at Chicago, last week, on the application of the federal government, the firms and individuals composing the so-called meat trust were enjoined from "entering into or performing any contract, combination, or conspiracy the effect of which will be a restraint of trade in fresh meats, either by directing or requiring their agents from refraining to bid against each other in the purchase of live stock, or by arbitrarily raising or lowering prices, or fixing uniform prices at which meats shall be sold, either directly or through their respective agents, or by curtailing the quantity of such meats shipped to such markets and agents, or by imposing penalties for deviations from prices; or establishing and maintaining uniform rules for the giving of credit to dealers, or by imposing uniform charges for cartage and delivery of meats to dealers and consumers, or by any other method or device the purpose and effect of which is to restrain trade." The order is returnable on the fourth of next August.

The *Chicago Journal* (Ind.) thinks "The country will now have an opportunity to observe to what extent this combination of packers has been able to counteract and control the law of supply and demand, and whether the high prices of fresh meats today are due to legitimate or to artificial causes. It is not likely the effect will be noticed at once, for the agents of the packers have so long been accustomed to act on tacit understandings that a wink may still be as good as a nod." The *Brooklyn Eagle* (Ind. Dem.) says that "The fact that such an order was entered without protest is an indication that the meat packers are tired of their game; that the protest of the public, which has cut down the demand for the higher priced and more profitable meats, has proved effective even be-

fore the courts got to work on the case at all." Referring to the fact that the packers made no fight against the issuance of the injunction, the *Boston Post* (Dem.) says that "The simple facts of the situation are that the Chicago beef trust does not care a copper for the suit brought by the attorney-general, for the reason that it will be years before it can be settled, and that meantime the American people will be at its mercy."

The *Pittsburg Chronicle-Telegraph* (Ind. Rep.) looks upon the injunction as "A distinct victory for the government, and a proof of the power of law in the hands of an able and fearless administrator who represents the people through the regularly organized channels of government. The whole question is now up to the beef barons, and they are put under proper legal restraint until they make their reply to the present proceedings, which must be not later than August next." The *Baltimore American* (Rep.) grants the force of the injunction, but declares that at best the remedy afforded by the courts is inadequate. "To really strike these trusts a serious blow, the club used must be the tariff. A special message from President Roosevelt urging the repeal of all tariffs on foodstuffs would just now go to a congress well disposed to act upon the suggestion. With the tariffs abolished, the beef and all other foodstuff trusts would almost instantly disappear. By this method full relief might be accorded in a few days, whereas months may be necessary by appealing to the courts."

The Rochambeau Memorial

ITS UNVEILING AN OCCASION FOR THE RENEWAL OF FRENCH-AMERICAN AMITY

THE statue of Marshal Rochambeau, presented by the French nation to the United States, was unveiled at Washington last Saturday with fitting ceremonies, France being represented by a special embassy including descendants of the Rochambeau and Lafayette families, and the United States by President Roosevelt and members of the government. At the unveiling, President Roosevelt said: "I am sure that I have given utterance to the sentiments of every

citizen of the United States, of every American to whom the honor and the glory of our republic in the past as in the present are dear, when I say that we prize this fresh proof of the friendship of the French people, not only because it is necessarily pleasing to us to have the friendship of a nation so mighty in war and so mighty in peace as France has ever shown herself to be, but because it is peculiarly pleasant to feel that, after a century and a quarter of independent existence as a nation, the French republic should feel that in that century and a quarter we have justified the sacrifices France made on our behalf."

The *Baltimore Sun* says that "The ceremonies are in commemoration of the most important event in American history after the declaration of independence. The opportune arrival of Rochambeau and his army, accompanied by the French fleet, made independence a reality. The colonists might possibly have continued the struggle in a languishing way year after year until their foes had been worn out, but that is mere speculation. The presence of Rochambeau and his army decided the issue. It was the greatest service ever rendered to this country by any nation—in fact, the only substantial favor of any magnitude ever bestowed by a foreign country." The *Baltimore American* notes especially "the remarkable modesty of the French people with regard to the important part played by their country in the war of the American revolution. While they have exhibited the liveliest gratitude for the honors extended to their countrymen by Americans—notably on the occasions of Lafayette's two visits—they have never vaunted the part played by France, but have seemed to retain throughout all vicissitudes the strong friendship for the United States so practically exhibited by their ancestors."

Emperor William's Offer

OF A STATUE OF FREDERICK THE GREAT

GENERAL opinion in regard to the acceptance of Emperor William's offer to erect a statue of Frederick the Great at Washington, is voiced by the *Omaha World-Herald* when it says that "William's notion is a good one. Old Frederick was a hero and he liked us at a time when the friendship of a strong, commanding character like he was especially valuable. He ought to have a monument at the nation's capital." This, as we have said, voices the general opinion. Nevertheless the *Chicago Chronicle* asserts that "There is no conceivable difference of opinion among the people of the United States concerning acceptance of a king's statue to be officially erected on a site belonging to this nation. There is no room here for king monuments." The *New York Sun* is of the opinion that "Washington would be just as well without a statue of Frederick. Prince Henry's visit was in every way pleasant, but when it comes to commemorating it by a great statue, occupying one of the capital's most precious possessions, it is another matter." The *Washington Star* can not understand these objections: "We can receive royalty as a guest, accept the hospitality of royalty in return, make room on our soil for a statue of royalty to celebrate an international friendship, without damaging the bloom on our high republican aims and ends. We are pretty firmly on our pins now, and see our way pretty clearly. Why should we shy at a king or a prince when he advances with a friendly hand outstretched?"

The Tragedies of a Month

MAY'S RECORD OF DEATH AND DESTRUCTION

HARDLY a day has passed this month without leaving a record of death or destruction in some part of the world, the following list giving only the more important disasters:

May 1. A tornado devastated the city of Decca, in India, and the adjoining country, killing 416 people, and ruining the crops.

May 8. Volcanic eruptions on the islands of Martinique and St. Vincent caused the death of 30,000 people, it is estimated, and rendered waste a large part of both islands.

May 13. Twenty-three people were killed and 202 were injured in an explosion of naphtha at Sheridan, Pennsylvania.

May 14. News was received of the loss of the British-India liner *Camorta*, carrying 650 passengers. It is not known how many survived.

May 17. Eight men were shot to death and six people were wounded in a riot at Atlanta, Georgia.

May 18. From 50 to 100 people were killed and immense damage was done by a tornado in Texas. The storm extended northward, causing death and damage in other states.

May 19. Between 150 and 300 lives were lost in an explosion in a mine at Coal Creek, Tennessee.

May 20. A storm accompanied by a waterspout swept over Cincinnati and the adjoining country, killing six people and causing over a million dollars' damage to property.

May 23. The northeastern portion of Iowa was submerged by floods, causing great damage; 134 men were entombed in a mine at Fernie, British Columbia.

May 24. Portions of Illinois, Nebraska, Missouri, and Kansas were visited by severe storms which caused extensive damage to property.

In addition to these events, the month has been marked by the death of a score of men prominent in the world's work—A. J. Cummings, Potter Palmer, Archbishop Corrigan, Admiral Sampson, Bret Harte, Paul Leicester Ford, the Italian aeronaut Severo, Lord Pauncefoot, and others.

"Recent events," says the *Pittsburg Times*, "verify the statement that misfortunes follow fast upon each other's heels. The disaster in Martinique grows in severity as details are received. St. Vincent, in the same vicinity, adds to the tale of distress that comes from the West Indies. In Central America the deaths by earthquake are counted by the thousands. Great as is the calamity that has fallen upon our own community, measured by numbers it is slight as compared with those that are at present involving at least three important sections of the world."

Edwin L. Godkin

THE DEATH OF AN EMINENT JOURNALIST

EDWIN L. GODKIN, editor emeritus of the *New York Evening Post*, died in England, May 20. He was born in Ireland in 1831. Mr. Godkin retired from the editorship of the *Post* in 1898. His first work as an American journalist was on the *Nation*, which he and others established in 1865, and which became the weekly edition of the *Post* in 1881. Mr. Godkin is ranked among the greatest of

American editors. "He was," says his successor, "*par excellence* a leader-writer, with an astonishing productiveness, and a freshness in handling old themes which won even the hardened proof-reader's admiration. His inexhaustible fertility, his ever-renewed freshness, his indomitable spirit, falling to rise, and baffled to fight better—these were among the qualities which perpetually astonished and delighted those who were with him in daily association."

The *Tribune* says that "Mr. Godkin made himself a force to be reckoned with on all important questions of American life and politics. He was a man of strong character and high ideals, with a passion for setting things right according to his own theories of government and political economy, and he was sincerely devoted to raising the standard of individual and political morality and promoting what he regarded as the cause of justice and civilization. But he was narrow in his sympathies and intolerant in his opinions, and though an American citizen, and with honest and patriotic zeal devoted to the interests of his adopted country, it is doubtful if he ever really entered into the feelings of the great body of the American people. Probably this aloofness enabled him to see the defects of American character with clearness; on the other hand, it often put him completely out of touch with the prevailing tendencies about him, and left him honestly thinking that if the country did not adopt his political economy or his prescription for some other evil it was hopelessly corrupt and decadent." The *Times* says that as a journalist Mr. Godkin "had gifts and equipment such as are rare in any country at any time, and were particularly rare in this country when he began his independent work." His prejudices were strong, and his sympathies not so highly developed as his antipathies, but "No one," the *Times* thinks, "certainly no one in his profession, reviewing his work and seeking to estimate his influence, can fail to recognize high aims faithfully pursued with unflinching courage and fortitude and with very rare ability. It is easy enough to avoid what seemed to be his faults; it will never be easy for any American journalist to render better service."

Congressional Summary

CONGRESS DAY BY DAY

MAY 19.—Mr. Dolliver (Rep., Ia.) spoke in the senate in support of the Philippine civil government bill. The leaders in the house suffered another defeat, an amendment offered by Mr. Roberts (Rep., Mass.) to the naval appropriation bill providing for building three warships in government yards being adopted after it had been ruled out of order by the chair; the naval bill was passed.

MAY 20.—Debate on the Philippine civil government bill continued in the senate, the administration's policy being defended by Senators Foraker (Rep., O.), Lodge (Rep., Mass.), and Clapp (Rep., Minn.), and criticized by Senators Hoar (Rep., Mass.), and Bacon (Dem., Ga.). The senate also confirmed the nomination of Herbert G. Squiers, New York, to be minister to Cuba. A resolution congratulating the new Cuban republic was adopted unanimously by the house; conferees on the army appropriation bill were instructed not to yield to the senate.

MAY 21.—In the senate Senators Wellington (Rep., Md.) and Bacon (Dem., Ga.) spoke against the Philippine civil government bill; a resolution congratulating the Cuban republic was adopted, and the omnibus public building bill, carrying about \$21,000,000, was passed. The senate also confirmed the nomination of Jacob Sleeper, of Massachusetts, to be secretary of the legation of the United States at Havana, Cuba. Consideration of a bill to restrict immigration was begun in the house, and three election contests were decided in favor of the sitting members.

MAY 22.—In the senate Mr. Hoar (Rep., Mass.) spoke in opposition to the administration's Philippine policy, and Mr. Teller (Sil. Rep., Cal.) reviewed the legislation by which the Cuban republic was erected. In the house the amendment to the immigration bill offered by Mr. Underwood (Dem., Ala.), imposing an educational test, was adopted.

MAY 23.—Mr. Dubois (Dem., Id.) spoke against the Philippine civil government bill in the senate.

FOREIGN

The Swiss Elections

THE INITIATIVE AND REFERENDUM IN OPERATION

WE find in two French journals descriptions of the Swiss electoral system, offered, the writers explain, to those who demand "direct government of the people by the people"—a demand made in the United States by advocates of the initiative and referendum.

M. Quay-Cendré, writing in *L'Illustration* (Paris), contrasts the French method of holding elections with the Swiss method, which, he thinks, affords "a salutary lesson": "The landsgemeinde, which is formed of the electors of each of the twenty-one cantons of Switzerland, is assembled the first Sunday in May to accomplish a great task, for not only must it elect the members of the legislative body, the representatives of the executive power, the functionaries of the state, but also it must legislate, discuss, and admit the annual budget of the state, and elaborate or modify the laws, and this labor, which is accomplished with entire serenity, must be finished in a few hours.

"The landsgemeinde, surrounded by more or less ceremony, is opened everywhere by a prayer invoking the protection of God, the authorities, with heads uncovered, being mounted on a platform serving as a rostrum. The thousands of citizens present approve at once the financial and administrative management presented by the authorities whose terms of office are about to expire, and then they proceed to the elections. Next are taken up the propositions of law, from the most unimportant to those which may mean constitutional modifications, and finally the newly elected and afterwards the people take the oath of fidelity to the constitution.

"The landsgemeinde, to speak correctly, does not discuss, it disapproves or ratifies the propositions which are submitted to it. All that is submitted this day to the assembled people has been previously examined and discussed by the press of the different parties and at public meetings held in the communes, the districts, or the principal cities. In two or three cantons, as at Glaris, the children take part in the landsgemeinde and are grouped in the center at the foot of the rostrum. In this way they imbibe invaluable lessons and can quickly absorb the principles of direct democracy which the old Swiss cantons have conserved with such fervor."

"We have here no grandeur," says M. Christian Schefer in *La Revue de Paris*, "but simply a few thousand people with heads uncovered, grouped in a circle, motionless and silent. There is in their attitude a profound and sincere gravity, all apparently feel the importance of the object which has brought them together and standing as they do in the same places where their fathers often stood before them there is mingled with the religious meditation a deep remembrance of the past which is enhanced by the exquisite serenity of nature. We are here in the presence of a régime which special authors call pure democracy.

"In the matter of laws the right of initiative belongs to every citizen, but the propositions must be addressed to the cantonal council not later than the

31st of December. The order of the day is generally arranged sufficiently long in advance to give the citizens time to study it, a small brochure being printed which contains a list of the officers whose terms of office expire, together with the report of the cantonal council on the questions of law. Each one knows that he is to deliberate on each proposition emanating from pop-

THE ELECTIONS AT GLARIS

ular initiative, and he gives to each careful thought.

"As each new motion or measure is taken up, the landamman allows a member of the cantonal council to speak, choosing them in the order of their entry on the roll of the council. After a short speech this orator is followed by an opposer, and then a third and fourth until there is no response to the landamman when he demands if anyone wishes to speak further. The landamman then gives his opinion and immediately thereafter the vote of the people is taken."

President Loubet's Visit to Russia

Translations for PUBLIC OPINION

THE visit of President Loubet of France to Russia has been the occasion for renewed rejoicing in France and great enthusiasm in Russia. The continental press outside of these two countries has also paid considerable attention to the event. In toasting the president at Czarskoe-Selo on the 21st, the czar said that the French and Russian armies constituted

a brotherhood of arms, "which we can regard with all the greater satisfaction because those imposing forces are not destined to support one another aggressively, but, on the contrary, to strengthen the maintenance of general peace and safeguard respect for those high principles which assure the well-being and conduce to the progress of nations." Replying, the president, also referring to the armies of France and Russia, the occasion being a review in honor of the French visitor, said: "This imposing force menaces no one; but it has furnished Russia and France both a guarantee for the exercise of their rights and an ægis under which they can in all tranquillity follow the fruitful labors which are rendering the two nations more prosperous and augmenting their power and legitimate influence."

M. Hanotaux, whose authority in foreign politics is seldom disputed, expresses in a long article in *Le Matin* (Paris), his opinion on the status of the dual alliance, saying that it is at present "the most interesting feature of international politics. The visit of President Loubet to Russia," he continues, "is only the counterpart of the previous visit of the Russian sovereigns to Dunkerque and Compeign, and there is no doubt that the present exchange of declarations will be as important as those made on the *Pothuan*. It is a striking manifestation of the value of international alliances—the most solid basis of the peace of the world. It is very plain that Emperor Nicholas follows in his political relations with France the glorious traditions of Alexander III. It is plain also that the presidents of France are following identical traditions in their relations with the powerful empire. The strength of this alliance is therefore the main resource of our diplomacy. When Russia and France are one, the game of talking international diplomatic problems is child's play." The *Petit Journal* (Paris) claims to be able to see in the visit an assurance that "the Fashoda incident is not closed. Colonel Marchand was recently received in private audience by the czar," it remarks significantly. The *Figaro* comments upon the importance of the dual alliance in far-eastern affairs. "To the Anglo-Japanese alliance," says the *Figaro*, "we have answered by the Franco-Russian declaration. In doing so we have largely ex-

tended the original scope of the Franco-Russian alliance. Russia needed support in Manchuria and Korea, and she found this support in France." The position of England is thus made weaker than ever, a majority of the French papers assert, and a Nationalist organ remarks that "with her submarine boats France need no longer fear the British navy." This appears to be the opinion of the *Fanfulla* (Italian) which arranges the Mediterranean to suit Italy and France, the former to occupy Tripoli and the latter to hold Morocco. *La Epoca* (Madrid) thinks that "England will have something to say if France, Russia, and Italy continue to carry things with so high a hand."

The Kaiser's Aim

IS HE SEEKING TO DISTURB ANGLO-AMERICAN FRIENDSHIP?

THE London *Times* was the first to call attention to the alleged efforts of Germany to use the Morgan steamship deal to stir up hostility between England and the United States. And now we have what the London correspondent of the New York *Sun* calls "a remarkable insight into the future development of international politics along the lines of commercial rivalry" in an article in the London *Spectator* in part as follows:

"Germany, by the semi-official means which she knows so well how to employ, has seen an excellent opportunity in the excitement here, to exaggerate the perils to which we are being exposed, and has done the best to egg us on to resist the invasion of Great Britain by America. Her newspapers in public and her rulers in private have first triumphed over our alleged discomfiture, and then urged us to arm and withstand the American invader before it is too late. Their object in doing this has apparently been hidden from the majority of the leaders of public opinion, including a large number of members of the house of commons, yet the aim of Germany is clear enough. She is terribly alarmed at the notion that America is entering on anything approaching commercial co-operation with Great Britain, for she sees in that prospect the creation of a force which would infallibly

destroy her most cherished ambition. Accordingly, she has striven her hardest to make the assertion of America's claim to share in the Atlantic transport business not a source of closer relations between the two branches of our race, as it should be, but of enmity and distrust."

The London correspondent of the *New York Times* says that "this attitude toward the shipping trust is more and more imitated by the public here," and this and other manifestations of awakening common sense after the first indignation over the shipping combine, mark a decided reaction of English opinion on Mr. Morgan's coup. The real significance of these discussions, as already indicated, lies in the advent of a great new factor in world politics, which is destined ere long to become the controlling influence. Another article in the *Spectator* discusses the kaiser's efforts to ingratiate himself and his countrymen with the American people. The writer points out that the kaiser must not imagine that the Americans can be won by flattery. Moreover, nothing will win their confidence and affection unless he is prepared to do honor to certain ideals of which the Americans believe themselves to be special guardians, namely—civil and religious liberty, equality before the law, and the abolition of special and personal privileges. Nobody believes, however, that the kaiser will give up his autocratic pretensions or cease to require the slavish obedience demanded by the divine right of royalism.

Waldeck-Rousseau's Resignation

Paris Correspondent *New York Tribune*

SO far the only effect of M. Waldeck-Rousseau's announcement of his resignation is eager but idle speculation as to his successor. The name of Leon Bourgeois is on everybody's lips; nevertheless the Radical leader disavows any intention of again taking office. M. Deschanel, the brilliant and ambitious president of the defunct chamber, spoken of as the "dauphin" of the republic and regarded as a candidate for the chief magistracy at some later day, is also spoken of as a likely successor to M. Waldeck-Rousseau. So also are M. Delcasse and M. Constant, the sturdy statesman, who as ambassador to Constantinople had a successful diplomatic brush with the sultan last summer, and who pricked the balloon of Boulangerism ten years ago.

This is the first occasion since the third republic came into existence that France has been left without a constituted chamber of deputies, and with the president of the republic, the minister of foreign affairs, and the generalissimo of the army all absent in foreign lands and with a cabinet which has declared its intention of retiring from office, no more forcible object-lesson could be offered to the world of the strength and stability of the present régime.

SOCIOLOGICAL

Municipal Industries in Great Britain

THE SPREAD OF MUNICIPAL SOCIALISM

JAMES BOYLE, United States consul at Liverpool, has made a long report to the state department on the condition of municipal industries in Great Britain. Mr. Boyle says that from 1875 to 1900 the capital invested in such industries increased from \$465,000,000 to \$1,500,000,000. The report contains a long description of the many phases of this activity as shown in the excerpts given below.

There are now in Great Britain 931 municipalities owning waterworks, 99 owning the street railroads, 240 owning the gas-works, and 181 supplying electricity. The municipalities of Leamington and Harrogate own Turkish baths, two of the best at present existing in Great Britain, and Harrogate also gives fireworks displays at municipal cost. Glasgow, like Liverpool, owns its waterworks and trams, and provides municipal lectures. Glasgow has recently reduced the fares on the tramcars, so that there are now not only half-penny (1 cent) fares, but a distance of two and one-half miles can be traveled for 2 cents. Glasgow was the first city to establish a "municipal palace." Manchester owns shares in its ship canal. Out of its municipal tramway profits, Sheffield has appropriated \$75,000 for the erection of shops and business premises which it will rent. Quite recently the northern townships outside of London bought the well-known Alexandra palace, where the municipal authorities maintain an auditorium and give organ recitals and theatrical, military band, and variety entertainments of all sorts, and industrial exhibitions. Bristol has municipalized its docks and harbor at a cost of between \$10,000,000 and \$15,000,000. The Liverpool docks are municipalized in a modified way.

Liverpool is one of the foremost cities in municipal socialism. It owns the waterworks (one of the best systems in the world); it operates the street cars; it supplies the electric light and power; it has one of the largest and best public-bath systems anywhere, and proposes to erect the finest Turkish bath in Europe; it provides public laundries for the poor districts; it furnishes flowers and plants for the windows in the slums; it sells sterilized humanized milk for the children of the poor at cost price; it has a salaried organizer to play its famous municipal organ; it gives municipal lectures—and all these in addition to the usual undertakings of municipalities, such as parks with concerts, technical schools, etc. But the greatest socialistic undertaking by the Liverpool municipality is that of providing dwellings for the very poor, the dispossessed tenants of demolished unsanitary dwellings of the slums. The Liverpool municipal dwellings are mostly in the form of blocks of tenement-houses or "flats," three or four stories high. It is claimed that Liverpool alone among the municipalities of England and Scotland has been successful in supplying a type of building within the financial means of the poorest of the poor. The rent of two rooms ranges from 60 to 80 cents; that of three rooms, from \$1 to \$1.10; that of four rooms (the largest suites provided), from \$1.25 to \$1.50. The fixtures are simple, but superior to those supplied in like dwellings by private landlords. Since Liverpool went into this enterprise, it has paid \$1,925,000 for demolished property, and, in addition, several pieces of land have been purchased, costing \$335,825, for the erection of municipal dwellings. The cost up to date for construction alone has been \$732,875. The total

burden on the local taxation as the result of these combined operations amounts to $1\frac{3}{4}$ d. in the pound sterling, or $3\frac{1}{4}$ cents on every \$4.86. The rents paid are insufficient by about 2 per cent to meet the cost of the dwellings, without counting anything for a sinking fund, depreciation, etc.

The claim is made that the best-governed towns in Great Britain and the towns that have the least taxes are those where municipal socialism prevails. But this claim is strongly controverted, especially as to ultimate results; and the opponents of municipal socialism charge against that system a tendency to extravagance, jobbery, official indifference, and lethargy, and the broader charge is made that the system contracts and paralyzes individual effort and enterprise. Yet it should be kept in mind, in connection with this criticism, that municipal socialism has in some cases been embarked upon almost out of necessity—as, for instance, in the case of the housing of the poor in Liverpool, where private enterprise has failed absolutely to solve the problem.

The Care of School Children in Geneva

New York Staats Zeitung. Translated for PUBLIC OPINION

NOWHERE else is the conviction that hungry children are poor educational and civic material so strong as it is in the land of Pestalozzi. The school children of Geneva are especially well cared for, although the food furnished them is supplied, not by the city or cantonal government, but by private associations called *cuisines scolaires*, which are supported by voluntary contributions in money and provisions. In the autumn automobiles bring in contributions of fruit from the farmers of the surrounding towns, fairs and entertainments are held for the benefit of the school kitchens, members and others make annual contributions, and many manufactories send large quantities of their products. The city merely provides the kitchens and eating rooms. In some schools lunch is served in the gymnasiums, but special dining rooms and kitchens are included in the plans of two new school houses. The paid personnel consists of one cook for each kitchen. Voluntary assistants and overseers are obtained from the female teachers. The meals are served by members of the committee, citizens of the school district, each of whom undertakes to serve one day a week. Artisans, merchants, innkeepers, engineers, and others are found among these voluntary waiters. This enables the *cuisines scolaires* to feed six hundred children daily at the small cost of six thousand dollars a year. The meals are intended, of course, for the very poor, but other children, whose parents are away from home all day long, may partake on payment of six cents, but only five per cent of the diners belong to the paying class. There are four of these *cuisines scolaires* in Geneva, the largest feeding two hundred children.

But the daily dinner is not all. The new schools have baths and covered playgrounds for rainy weather. Children whose parents work away from home may remain in the school all day and even until eight in the evening, playing or studying, as they choose. In spring and summer they take long walks, accompanied by teachers. At six o'clock these children have a supper of bread, fruit, and chocolate. The benefits of these arrangements are not restricted to any religion or nationality.

The Doom of American Democracy

ACCORDING TO AN ENGLISH CRITIC

AN English author, Mr. Francis Grierson, writing in the *Westminster Review*, foretells the downfall of republican institutions in the United States. By way of opening the subject, he quotes Chateaubriand's dictum: "Aristocracy has three successive ages: the age of superiority, the age of privileges, the age of vanity; sprung from the first, it degenerates in the second, and expires in the third." In the United States the declaration of independence ushered in the age of superiority; the close of the war of secession opened the way for the age of privileges; we are now entering upon the last stage, the age of vanity and decay.

"Three things have caused this premature old age," says Mr. Grierson. "Rapid and continued increase of wealth, the American's love of travel, and a hasty, superficial culture. Long-continued prosperity has created a love of luxury unparalleled in the history of the world; rapid and easy traveling a taste for foreign things; cheap schools, colleges, and literature a belief that the highest culture consists in hearing and seeing. Americans have lived so fast that only an insignificant few have had the time to read and digest the work of the great thinkers and writers like Emerson, Lowell, and Whitman. Thousands who have made the voyage to Europe more than once have never crossed the Mississippi river; others from the far west know London and Paris without having passed a day in Washington.

"We have to look at such people from two points of view: the practical and the psychological. Considered in a scientific light the American business man has a young head; considered in a social light he has an old heart. In imagination he is still inventing and creating; in feeling he is discontented and *blase*. The typical rich American of today regards with indifference the luxuries with which he is surrounded. What he and his wife desire are the distinctions and privileges which belong to the illusions of the social world. Steeped in an atmosphere of *ennui*, the only solace for so much mental misery is a sojourn in Europe once or twice a year, where it is some consolation to dine with a decadent lord or sup with a *declassée* duchess. Thirty years ago the whole country took its moral tone from Boston. The whole nation is now influenced by the wealthy sets of the fashionable centers. Washington basks in the radiance of ambassadorial pomp; Baltimore has a cardinal's court; New York is both Catholic and Episcopalian; Chicago makes a distinction between the millionaires of the stock yards and those of the stock exchange. There is scarcely a city or town that is not in some way connected by a kind of wireless communication with the British nobility. But this state of things will not long satisfy the commercial potentates of the great republic. As soon as the American navy is three times as powerful as it now is an empire will be formed that may dominate the world, with a court at Washington surpassing in wealth and magnificence anything recorded in history."

CO-OPERATIVE RANCH COLONY: Ninety miles west of Pierre, South Dakota, on the big Sioux reservation, a coöperative colony, composed of forty Chicago men, has taken twenty-five quarter sections of land. The colony is to be conducted similarly to that of Fairhope, Alabama, the taxation being divided on the basis of land used.

The Red Cross Battle with Malaria in Italy

DR. ORESTE SGAMBATI, in *Le Tour du Monde*, Paris. Translated and Condensed for PUBLIC OPINION

A UNIQUE work of the Red Cross society is the care of malaria, patients in the Roman plains. As a rule, the society confines its efforts to wars and unusual disasters, such as plagues, earthquake shocks, or famines, but the ravages of malaria in the great plains around Rome were considered great enough to merit its attention. It has erected in the Roman country six sanitary stations, which are in operation during the most dangerous period of the epidemic; that is to say, from July to the end of November. Each one is established on a farm, in the midst of the region assigned to its service, the *personnel* being composed of a medical officer, a nurse, and a coachman, who is also a guide. As a means of transport these stations possess a large ambulance of two or three horses which can carry eight persons seated or four lying down on the litters, cases of medicine, surgical instruments, eatables, wines, and liquors.

The physicians of the Red Cross not only care for the sick, but they distribute and compel the peasants to take quinine, applying it as a prophylactic measure even to those who have not the fever. They furnish also the feeble and the poor with meat, bouillon, etc.,

while by a continual propaganda by word of mouth and by publication they demonstrate to the peasants that their salvation lies in seeking to avoid the bites of the anophele. Physicians, nurses, and guides have the windows and doors of their bed-chambers protected against the gnats by wire netting, and during their excursions in the plain, after the setting and before the rising of the sun, they always have the face covered with a silk veil and the hands gloved. Up to the present time, during three seasons of experience, not one of the persons employed in this service has been attacked with the fever, solely because they defend themselves against the bites of the gnats, for they all live in the most dangerous parts of the country.

The noble humanitarianism of the Red Cross from day to day gains the confidence of the peasants, who now gather in constantly increasing numbers at the sanitary stations to consult the doctor; for they have seen that the worst fever can be quickly cured by taking quinine even in small quantities, but at the proper time. In 1900 the Red Cross cared for 4,513 persons, of which 3,733 were sick from malaria, 306 being transported to the hospital in Rome, either by ambulance or by the railroad. This year the prophylactic cure has obtained much greater extension, and one already counts by hundreds those who have voluntarily requested to be regularly given quinine; and not one of these has suffered from malaria.

LETTERS & ART

The Moral Worth of Fiction

June Harper's Magazine, New York. Excerpt

THE objection to "the story with a purpose" is based on the same feeling that insists upon "art for art's sake only." The lesson which is taught by art is implicit, and it is an inspiration rather than a homily. This is true of fiction also in so far as it is an art. It is read not for instruction, but for æsthetic and intellectual entertainment, and, above all, for its dramatic appeal to sensibility through the emotional impressions produced, whether they belong to the tragedy or the comedy of life. The power of a story to enforce a moral offers a strong temptation to the story-writer who is also an ethical teacher, and not only has there been a great body of American and English and Continental fiction produced with specific moral intention and received with grateful satisfaction by a large class of readers who desire edification from every source of entertainment, but we have known very strong dramatic authors who have written novels and short stories for or against certain special "causes" agitating the moral sense of the public. It is true that the writer of fiction who yields to the temptation in such a way as to subordinate his imaginative work to this kind of special purpose denies himself his highest function as an artist, however efficient he may be as an ethical teacher. Nevertheless, in the larger sense of the word moral, all art, including poetry and fiction, has a transcendent moral purpose which in the literary is allowed an explicitness of expression wholly denied in any other form of art.

In the highest forms of literature, as in art, there still breathes the living spirit of beauty, truth, and righteousness that created the ideals of all past excellence; but for more than a century fiction has been the largest, most immediate, and most intimate in-

spiration of present ideals, reflecting and reënforcing characteristic national traits—those which indicate the general trend of a people's life—and those complex and infinitely varied ways of men and women which we call manners; resuming the offices once proper to the master poet and dramatist and to the great moralist. It is true that no writer so adequately expressed the English spirit of his time as did Tennyson; but for the most part the Teutonic conflict against lower pagan ideals, the struggle against arbitrary authority in matters of church and state and social custom, and the exposure of shams and hypocrisies, have found expression in fiction. The humor and the satire of Aristophanes and Molière have in our day been represented in the novels of Dickens, Thackeray, and Charles Reade. The relentless laws of life are as sternly portrayed for modern readers by Thomas Hardy as they were for the old Greeks by Æschylus.

The flexibility of the novel and its wide range, touching every phase of human sensibility and every intellectual interest, give it a manifest advantage over the great poem or the drama. Thus it is able to keep pace with the deepest and broadest culture of our time, and by this ability it is that distinction in this field is won. All times are open to the novelist for his illumination of critical moments and situations; but whatever the environment chosen by him, the moral significance of his work is in the ideals presented. George Eliot's "Romola," besides being a fine work of art, has the transcendent justification of a grand moral purpose—the vindication of the courage, simplicity, and sincerity of life in conflict with sophistry, treachery, and hypocrisy. George Eliot was the natural predecessor of Mrs. Humphrey Ward and of Mrs. Edith Wharton.

The Immorality of Henry James

THE LIAISONS OF PHANTOMS

HENRY JAMES is accused of moral decadence by Mr. Frank Moore Colby in the June *Bookman*, although Mr. Colby prudently calls it "queerness." His latest offense of this sort is his essay on "George Sand: The New Life," published in the April *North American Review*. Of this Mr. Colby says:

"Here he is as bold as brass, telling women to go ahead and do and dare, and praising the fine old hearty goings-on at the court of Augustus the Strong, and showing how they can be brought back again if women will only try. His impunity is due to the sheer laziness of the expurgators. They will not read him, and they do not believe anybody else can.

"Any other man would be suppressed. In a literature so well policed as ours, the position of Henry James is anomalous. He is the only writer of the day whose moral notions do not seem to matter. His dissolute and complicated muse may say just what she chooses. This may be because it would be so difficult to expose him. Never did so much vice go with such sheltering vagueness. Whatever else may be said of James, he is no tempter, and though his later novels deal only with unlawful passions, they make but chilly reading on the whole. It is a land where the vices have no bodies and the passions no blood, where nobody sins because nobody has anything to sin with. Why should we worry when a spook goes wrong? For years James has not made one shadow-casting character. His love affairs, illicit though they be, are so stripped to their motives that they seem no more enticing than a diagram. A wraith proves faithless to her marriage vow, and elopes with a bogie in a cloud of words.

"To those who never liked him he is the same in his later writings as in his earlier. There were always mannerisms in his work, and his hunt for the distinguished phrase was always evident. His characters never would do enough things, and he was too apt to make them stand stock-still while he chopped them up. Since then his interests have dropped off one by one, leaving him shut in with his single theme—the rag, the bone, and the hank of hair, the discreditable amours of skeletons. They call it his later manner, but the truth is, it is a change in the man himself. He sees fewer things in this spacious world than he used to see, and the people are growing more meagre and queer and monotonous, and it is harder and harder to break away from the stump his fancy is tied to."

Art as a University Study

New York Evening Post. Condensed for PUBLIC OPINION

COLUMBIA UNIVERSITY makes a significant innovation in detaching the schools of architecture and music, respectively, from the faculties of applied science and of philosophy. This change, apparently dictated by mere convenience of administration, is really the first stage in the formation of a school of fine arts. It is probably the first time in the history of American education that the study of art has had full recognition from a university, and while Columbia has at present, aside from the schools of architecture and music, chiefly good intentions and high ambitions to offer, those who believe that art is a proper subject

of university study will at once welcome this hopeful beginning and watch with keenest interest the further development of the scheme.

As the object of all university instruction is research, and as its methods are historical or experimental, it must be assumed that Columbia university wishes to produce primarily, not artists, but competent historians and critics of the arts. Of course, study of this kind requires great collections of materials. On the experimental side, indeed, it is best conducted in the museums. When the French government decided to train students in that concrete knowledge of objects of art which we call connoisseurship, it set up its school in its greatest gallery, the Louvre, from the curators of which it largely drew its teaching force. Unluckily, neither the organization nor the personnel of our American museums permits of that solution; but Columbia university is fortunate in being in intimate relations with the Metropolitan museum, which must be its great storehouse of examples.

How serious the undertaking is, and how different from the mere talk about the Correggiosity of Correggio, which is often—and properly, perhaps—the staple of the popular lecture has been already indicated. But in emphasizing the difference between the ideals of university education in art history and theory, and those—quite as legitimate in their way—of collegiate and popular instruction, we have not meant to imply that these ideals are in any way incompatible. The training of connoisseurs and art historians should do much to disseminate information and promote taste throughout the land. Such critics are the very ones who in the intervals of their severer studies should find time to show the relation of art appreciation to culture and the genuine pleasures of life. If the Columbia school of fine arts only undertook to produce specialists, it would still require no apology; for this country is now in the position of acquiring art treasures with few to interpret them, of founding great museums without competent curators to direct them. We need intermediaries between ourselves and the increasing store of masterpieces which we hardly have the time or the knowledge to enjoy.

A National Polish Dramatist

MME. VALERIE MARRENE MORZKOWSKI, in *La Rivue*, Paris. Translated and Condensed for PUBLIC OPINION

THE present Polish theater has been formed little by little of all the elements which in some manner float in the atmosphere of the country and appear to be condensed there. Symbolism has always had recognition in our literature, for symbolism has always been the language of those who had not the right to express themselves freely. After the autonomy of Galicia, the towns of Cracovie and Leopold immediately became two centers towards which gravitated young talents drawn by a truly national theater who in nearly every case took for their heroes our historic or legendary personages, accorded them with present tendencies, and gave them our aspirations and ideas of today. All of these more or less fantastic productions are in unison with the new school, for we here find beautiful verse, heroic actions, characters full of nobility, but in truth little care for historic verity, for all is subordinated to the idea which is always and everywhere love for the native country.

This, however, does not suffice to form a new school. It is necessary first of all to have a great heart and a great power which can force upon the

imagination the doctrines it proclaims and obliterate those which have lulled it for generations. This wished-for and desired one, who joins to a talent without a peer a profound and great character, is M. Wyspianski, whose great dramatic power manifested itself first in "La Légende." It is difficult to describe this fantastic drama which seems a series of terrible, capricious, and charming images. One sees there the painter who gives himself free play, for each scene is a richly colored picture which defines itself clearly to the eyes of the reader, while the rhythmic cadence of the verses, a rhythm peculiar to M. Wyspianski, soothes the ear as though it were the murmur of the sea. Since the appearance of "La Légende" this author has scarcely put aside his pen. He writes dramas and poems, but it is above all the drama which responds to his powers, and certainly no theater was ever so national. Leaving primitive times, he seeks his subjects in the recent catastrophes of his country, surrounds them often with a mystic atmosphere which transforms the known people into symbols, thus showing the historic synthesis. It is also true that each piece of M. Wyspianski differs from all of his other creations. For each one he adopts a new mode of action, another versification, and even a language adjusted to the atmosphere and to the personages created by him.

Never has a dramatic writer thought less of success, and never, perhaps, has anyone obtained such prompt and pronounced appreciation. It has hardly been a year since his "Noce" was presented, first at Cracovie and then at Leopold, yet since this time nothing else is spoken of or discussed in all Poland. The reviews, journals, and monthly periodicals of all sorts publish long commentaries on it, signed by our greatest critics, costly journeys are made to see this celebrated piece, the directors of the theaters giving it periodically in the two privileged cities in order that those who come from all parts of the country may see it.

M. Wyspianski joins to the enthusiasm of youth the glance of the thinker who knows how to judge men and conditions; his heart is torn when he paints his countrymen who are downcast; he wishes to continually find in them an unbending heroism at every trial, and he wishes that they might forget, for the good of others, their personal interests. This is why a great and noble sadness throbs in all of his work, and this is also why it is at the same time poignant and fortifying, for it is a continual exaltation which sounds among us, it is the rallying cry of our new generation.

The Detached Method in Literature

MARY B. SWINNEY, in the *Dial*, Chicago
Condensed for PUBLIC OPINION

PERHAPS the great French critics are the completest modern examples of personal detachment from literary work; but English and American students of life have conspicuously tried to escape their native bias. To be able to externalize one's environment, to get an outside view of one's dogmas, is deemed so necessary that the first step upon discovering an artistic faculty is to move to a metropolis and view past experiences and present emotions from that vantage-ground. Only recently has this been done with conscious eye upon the perspective. The blind impulse to get into a larger stream of life used to be the motive; or the need of a recognition not to be found in provincial society,—as when Dr. Samuel Johnson made his way to London. Jane Austen is the

only notable instance I can now recall of a dramatic portrayer of contemporary English manners who gives the effect of perspective in her picture, subdues the whole to artistic proportions, without effecting this objective treatment by bodily removal from the scenes she depicts. The quiet humdrum society in which she lived was irradiated for her by the lambent light of an inextinguishable humor. The fine delicate touch is that of serene detachment, not too complete and removed for understanding.

For satirists, such unexaggerated views are not essential. One can attack abuses from which one suffers acute and present misery the more fitly and definitely for the pain. The caricature derives its ingenious power to torment from the isolation of certain qualities, the bias of the treatment. But the gentle, mellow outline of nature, the nothing too much, the modeling of a figure without the distortion of dislike or the harshness of incomplete comprehension, is not to be done in the heat of controversy. The exquisite grace of a day that is dead may be deplored, but it is the better artistically since it can not come back in its crude emphatic salience.

Situations may press too close for the play of wit or fancy, but individuality presses closer still, and getting away from that is a far more subtle matter. A mind uncolored by habit, prepossession, or feeling, would be a difficult achievement. Burns's "see oursel' as ithers see us" seems to offer a rough-and-ready substitute for the absolute insight. There is the danger, however, of only exchanging one narrow circle for another. If, as Sudermann maintains in his novel "Es War," repentance is an emasculating exercise, destructive of the peace it seeks, surely the effort to view ourselves as others do,—and that is generally satirically, sometimes despondently,—can not produce peace of mind. The dramatist may find it profitable; but the lyrical poet or the man of action leans for strength upon his subjective energy, and that is liable to collapse from the intrusion of alien forces. Detachment, then, however desirable for critics and dramatists, seems to be in its infancy as a lay endowment, because of its difficulty of attainment. Whims and prejudices and personal bias serve their ends in urging us toward definite goals, and give color to the material upon which the student of life works.

Various Topics

THE FIFTEENTH MUSICAL FESTIVAL of Cincinnati began May 14, with the first performance in Cincinnati of César Franck's oratorio "Les Beatitudes." The forces engaged in the performance were the festival chorus of 500 voices; the orchestra of 150; Marie Kunkel Zimmerman and Clara Turpen, sopranos; Gertrude May Stein, contralto; Benjamin Davies and Ellison Van Hoose, tenors, and Andrew Black, bass. Theodore Thomas conducted. Mr. W. J. Henderson, musical critic of the *New York Times*, says: "First impression of the Cincinnati festival chorus was favorable. This is a good, well-trained body of singers, not at all remarkable, but well up to their work."

MEN AND WOMEN NOVELISTS: A correspondent of the *London Academy* says: "Men, beyond doubt, are more theatrical than women in their novels. A great gift, in either sex, is always fearless; but among the 'selling second-rate' it will be found that women write honestly, if badly, what they know and feel; whereas men of the same literary rank indulge in stilted diction, melodramatic effects, sham sentiment, false refinement, labored, unreal emotionalism. The woman, therefore, commands a larger public. She is more sincere, and the great good sense of the common reader, heedless of style, responds to her undisciplined earnestness."

From "Across the Islands of Lake Champlain," Rutland R.R.

Out of Doors

*"Sweet recreation barred, what doth ensue
But moody and dull melancholy,
Kinsman to grim and comfortless despair,
And, at her heels, a huge infectious troop
Of pale distemperatures, and foes to life?"*
—Comedy of Errors.

AT this time of year all healthily disposed people, old as well as young, feel an uncontrollable impulse to "Go forth under the open sky." And it is one of the many blessings of life in the United States that wherever one may live, east or west, he can, at small expense of time and money, gratify this craving to escape from his normal (or abnormal) surroundings and spend a few days or a few weeks in recreation. The summer vacation used to be (and is now for the unenlightened) a sore tax upon human endurance—"pleasure exertions" was the highly descriptive term applied by the late Josh Billings to such outings. But within recent years people have learned how to spend their vacations

in ways that are both pleasurable and profitable. Not only is there a saner conception of what a summer outing should be, but every year the railroads, the trolley lines, and the steamship companies open up new country to the summer visitor, and trips that were once impossible because of the time and effort they involved, may now be made in comfort, expeditiously, and at small cost. There are numberless summer hotels where one may spend as much and change his (or her) clothes as often as he (or she) chooses. And then there are whole territories, not mere places, where the traveler can find rest, retirement, if he wants it, and recreation of every sort and description. One of these territories is

The Region of Lake Champlain

Though Lake Champlain is but one hundred feet above tide water, the surrounding country has long been noted for healthfulness of climate, as well as for natural beauty. It is in no sense a resort for invalids, but rather for those who desire the tonic properties

of the atmosphere. The air is equal to that of the neighboring Adirondacks, dry and bracing, and the nights are always cool. An additional advantage is the entire freedom from the pest of flies and mosquitoes; the breezes which constantly sweep the lake render such nuisances impossible, and malaria is a thing unknown. The lake is an ideal spot for fishermen; pike and huge black bass abound, and in season there is an abundance of black duck and wild geese as well as small game.

Here and there the surface of the lake is pierced by picturesque islands, rich in farms, orchards, and forest lands. To those in search of rest and recuperation far from the madding crowd there is probably no spot more convenient of ready access

from the great metropolitan centers, which offers the seclusion so grateful to those in search of complete rest with which pleasures may be combined. An objection heretofore made to a sojourn upon the islands has been that, once there, one was virtually out of the world, as no communication could be had with the mainland but by boat. This has been overcome, and these havens of rest are now, while equally secluded, in touch with the outside world by means of telephone, telegraph, and the Rutland railroad.

Hereabouts was the old home of the Iroquois, and history has it that Samuel de Champlain was the first white man to discover the lake, and

the shrine of St. Anne. Brandon, too, shares in the popularity of this region, and adjacent places of interest are Scenery Mountain, Llana Cascade, Mount Moo-Sa-La-Moo, Sunset Hill, Bubbling Spring, Silver Lake, and Bread Loaf Inn.

The Adirondacks

"The sweet green valleys ridged with heathery slopes,
The streams whose soft blue arms encircle all,
And far away, the northern mountain-tops,
Hued like the azure of the dewberry,
And mingling with the region of the rain."

The Adirondack mountain region is so vast and so many are already familiar with at least a part of it, that any mention of it must seem inconsequential. Here are 6,000 square miles, containing five separate mountain chains, and comprising nearly 3,000,000 acres of forest land, 100,000 acres of improved lands, and over 50,000 acres of water surface.

The lake region stretches westward from the base of the main Adirondack range to the border of the forest, a distance of fifty miles. It includes the tract lying north and west of a line drawn from the Fulton chain, through the Raquette and Long lakes, to the Saranacs. This network of lakes and ponds is a wonderful and attractive feature of the great wilderness, adding a rare diversity to the scenery. They are so closely connected that trips of 100 miles can be made in guide boats, the water journey being broken only by short "carries," seldom exceeding two miles in length. These water-routes, combined with mountain trips and Adirondack stage rides, make this region a perpetual delight to the summer tourist. Nowhere else in the world is there such a combination of wild, grand scenery and delightful easy travel, lying at the very threshold of civilization. People are beginning to realize this, and every year adds thousands to the influx of city people. For these visitors a variety of accommodations are afforded to suit every taste and every pocketbook, ranging from the palatial modern hotel to the primitive wildwood cottage or hunter's camp.

The Adirondack wilderness is a vast country. Nature was moved by some large and noble impulse when its ten thousand hills were thrown into the air and the waters poured into its innumerable reservoirs. It would be a narrow mind that would prefer this or that section of the forest above

that away back in 1609. Evidences are numerous of the early settlers—the Jesuits, the Dutch and the French Huguenots, and on Isle La Motte the old French Mission church still stands, and pilgrimages are yet made by the devout to the

all the rest, unless for some peculiar purpose. Every square mile has its attractions. One can go anywhere and find much that fascinates and ennobles. The beaten paths are, of course, the cheaper, and yet expense is a matter easily regulated to suit one's convenience. A man who has a good pair of legs, and is not afraid to use them, can spend the whole summer in this wilderness at a nominal cost.

Twenty years ago it was impossible to go anywhere without a guide. Now guides are only necessary on water trips or hunting expeditions. The mountains are so well surveyed and settled that one can get about almost everywhere with little assistance. Many romantic portions of the forest have long been comparatively easy of access, but it is only recently that the New York Central has completed its system of lines and connections, by which the visitor may reach any part of this region.

The Catskills

The Catskill mountains dispute with the Adirondacks for supremacy in beauty and healthfulness. Each region has its advocates and neither side is open to conviction. But in associations, literary and historic, the Catskills have the best of it.

"If being the best part of a mile in the air, and having views of farms and houses at your feet, with rivers looking like ribbons, and mountains seeming to be haystacks of green grass under you gives any satisfaction to a man, I can recommend the spot. When I first came into the woods to live, I used to have weak spells, and I felt lonesome; then I would go to the Catskills to spend a few days on that hill to look at the ways of man."

These are the words of "Leatherstocking," that character in fiction so aptly characterized by Carlyle as "the one melodious synopsis of man and nature." Hear him as he continues: "The river was in sight for seventy miles under my feet, looking like a curled shaving, though it was eight lone miles to its banks. I saw the hills in Hampshire grants, the Highlands of the river, and all that God had done, or man can do, as far as the eye could reach." It is hopeless to expect to equal the realistic eloquence of the simple description.

For some fifty years, however, after its charms were discovered, this re-

gion remained practically inaccessible—its mighty crags, massive slopes, yawning canyons, dark, deep, and cool, where shimmering trout streams babbled among gnarled roots and mossy boulders; the gorges with slender scarfs of sparkling water, all these beauties were virtually closed to the outside world until 1870, when the iron horse began to sniff the air of the mountains. The completion of the railroad, of course, proved a great factor in the development of the Catskills as a popular summer resort. A new impetus was imparted to the mountain boarding business, and hotels, large and small, have risen here and there in the valleys and on the mountain slopes. It opened a new section of the range, which rivaled and even surpassed in beauty any other portion, while the entire region at once became easily accessible. Luxurious parlor and day coaches are now attached to the trains, and the most infirm, as well as those vigorously on pleasure bent, may enjoy the benefits of this great natural sanitarium and recreation ground. The only all-rail route to this region is by way of the Ulster & Delaware railroad, beginning at Kingston Point on the Hudson and crossing the entire range of the Catskills, a distance of 108 miles.

New Jersey as a Summer Resort

To those who desire to summer among the famous resorts on the Atlantic coast and about New York, northern New Jersey is an ideal headquarters. Almost any of the Jersey cities on the Lackawanna railroad, may be reached from New York within an hour, and the train service is such that a jaunt can be made at almost any time of the day or night.

Few people outside the Highlands of New Jersey ever consider any part of the state mountainous. Within ten miles of the Hudson river, however, after crossing the Hackensack meadows, the trains begin to climb into the Watchung mountains. At Newark, the first stop out of New York, the elevation above the sea level is 235 feet. The summit of Orange mountain, in Essex county, less than fifteen miles from New York, is 665 feet above tide water. Budd's lake is among mountains over 1,000 feet high. Copperas mountain has an altitude of 1,234 feet. The surface of Lake Hopatcong is 927 feet above the sea level. None of these points is more than fifty miles from New York, and all can be reached from the metropolis in a

little more than an hour's comfortable travel.

These figures indicate in a general way the mountainous country. They can not, however, give any evidence of the charm of the region. From the Hudson river west to the Delaware river, New Jersey presents an endless variety of mountain ranges, chains of hills, and magnificent intervening valleys. Beautiful streams and pretty lakes are found everywhere. Perfect drives lead in every direction among the mountains that at many points seem not to have an inhabitant or to have known an improvement. Within the next half mile a charming village will be found nestled upon the side of a mountain looking down into a farm-filled valley. Most famous of all Jersey resorts reached by the Lackawanna is Lake Hopatcong, described by an enthusiastic frequenter, as "Nestling amid the highlands reflecting the thousand beauties of the surrounding mountains, a diamond in the sunlight, an emerald in the shadow of the shores, a turquoise mirroring the sky," and not far along the line of this road is the Delaware Water Gap, Stroudsburg, and a country which combines great scenic beauty with every possible comfort and limitless opportunities for sport and recreation.

The Pennsylvania road reaches the ocean resorts which extend along the whole coast from Long Branch to Cape May. This road publishes a most complete manual for the summer traveler, including hundreds of resorts, mountain and seashore, on its own and other lines to which summer excursions are run. How to reach almost any resort can quickly

be learned by consulting this mine of classified information.

MATTICE FALLS IN THE CATSKILL MOUNTAINS
—From the "Catskill Mountains Ulster & Delaware Railroad"

Further South

Further south lie the Alleghenies, the Blue Ridge and the other numberless diversions of our eastern mountain range. From Cumberland, West Virginia, is the original line across the Alleghenies. The railway climbs the mountains from Piedmont to Altamont up a steep incline of seventeen miles through a winding and tortuous valley along the little Savage river. At the top of the climb lies the Glades, where are located the famous summer resorts of Deer Park, Mountain Lake Park, and Oakland, Berkeley Springs and hundreds of other much-frequented spots being passed on the way. This is the favorite inland recreation ground of people living in the more southerly cities beginning with Baltimore, but it has visitors from all parts of the country who believe that many spots in the Alleghenies, the summits of the Blue Ridge, and the valleys of the Shenandoah are the most favored in all the country, both on account of their health-giving qualities and the opportunities they afford pleasure seekers. In possessing a goodly number of fine trout streams, the region traversed by the various lines of the Baltimore & Ohio is especially favored by nature, for all through the southern section of the Keystone state and throughout the mountains of Maryland there are scores of beautiful streams which come tumbling down the mountains to join the rivers, and in whose sparkling depths and shallows there are myriads of the finest "speckled beauties" just waiting to be caught. In Virginia, the picturesque and historic Shenandoah valley, than which no section of our country possesses richer gifts showered by the hand of nature, annually attracts many upon "a-trouting bent," and in this section the angler invariably over-

takes a fair share of luck, and in spite of the wonderful advances of the past two or three years made by modern industry in her efforts to turn the rugged hills and mountains of the "warborn state" to the uses of modern life, West Virginia still remains much of the virgin forest and sportsman's paradise which she has been for many years.

Further North

Maine and New Hampshire must not be forgotten by the summer tourist. On the Maine coast from Marblehead to Bar Harbor and Mt. Desert are the summer resorts of thousands of city travelers. Inland are the numberless lake, wood and mountain regions so dear to the sportsman's heart. "Where else, in any one portion of the country, can an aggregate of noble rivers be found superior in community and commercial importance, volume of flow, and scenic surroundings, to the St. Croix, Penobscot, Kennebec, Androscoggin, Saco, Merrimac, Connecticut, and Housatonic rivers?" an enthusiastic writer asks.

"What other sections—save one—of North America can equal in variety, grandeur and impressiveness the lake system that includes Moosehead and the Aroostook waters; the Rangeleys, Megantic, and Parmachenee; Memphremagog, Willoughby, and the Connecticut lakes; Winnepesaukee, Winnisquam, the Squam lakes, and the great body of lesser formations that make up the lake system of New Hampshire and Vermont." No, for camping and

"roughing it" generally the Maine woods can not be surpassed anywhere in the United States, while the seeker for resorts of fashion may end his quest either at mountain, lake, or sea shore. A better idea of the country may be obtained by those who do not know it by looking over the publications of the Boston & Maine railroad which describe what New England offers the summer visitor—"Among the Mountains," "Along the Shore," and "Lakes and Streams."

THE SIMS WAR CAR—NEW RECORDS AT THE NICE COMPETITION

VICKERS' Sons & Maxim, the well-known English armament manufacturers, have built a war-car, the invention of Mr. Frederick R. Sims, an expert who has devoted many years' experiments to this particular subject. In general appearance the car may be described as a "mobile conning tower." It measures 17 feet in length, by 6 feet 2 inches in width over all, and has been designed to carry a maximum weight of 12 tons, though the actual weight to be carried will rarely exceed 6 tons. The car is propelled by means of a 16 horse power, four-cylinder, light hydrocarbon motor of the Daimler type. It is provided with a special gear of four definite speeds, *i. e.*, 1½, 3, 5, 9 miles per hour. With the accelerator, however, the speed of the car can be increased 25 per cent. The car, in spite of its weight, may be brought to a dead stop when going at full speed within six or eight yards. It carries sufficient petroleum fuel for 200 miles.

The most important feature of the car is the armor protection. The armor is so designed and constructed as completely to encircle the car frame. The bow and stern of the car are ram shaped, the angle of the nose being about 45 degrees. The extreme length of the armor, which is 18 inches off the ground, from point to point of the ram, is 28 feet. The extreme beam is 8 feet, and the extreme height 10 feet. The armor is of 6-millimeter Vickers steel, and is impervious to small arms. It is attached to the car frame by means of semi-elliptical springs, onto which it is hung by stout brackets. The four semi-elliptical springs are mounted on steel trestles, suitably braced and stayed to the main frame. Both rams are fitted with couplings, and are connected with tie rods direct to the main axles, so that in case the war-car is used for haulage almost a straight axial pull is obtained. The inside top edge of the armor is provided with half-embedded rollers, so as to prevent boarding, it being impossible owing to these rollers for any hand to obtain a hold on the top of the armor.

The armament of the war-car comprises two pom-poms and two automatic quick-firing Maxim guns

fitted on proper gun mountings, either in turrets or without. In the latter case the guns are equipped with shields, and the mountings are so constructed as to lower or raise the gun in or out of action. If necessary 6-pounder guns may be carried. The ammunition stores carry some 10,000 rounds or more. There is sufficient platform room for 20 men.

Among the principal automobile events at Nice were the mile and the kilometer (0.62 mile) dash, the latter for the Henri de Rothschild cup. The kilometer dash has been of especial interest this year owing to the record made by M. Serpollet of the kilometer in 29.4-5 seconds, and also of the general high speeds which were reached. M. Serpollet used a 12 horse power steam machine of the flash-tube boiler type, somewhat modified as to details. The front is formed of a sheet-iron cone which lessens the air resistance. The inventor considers that at such high speeds it is more essential to diminish the air resistance than to increase the power of the machine.

The best time for the mile was made by Osmont on a single cylinder De Dion motorcycle, which covered the distance in 57.4-5 seconds. The Mercedes 40 horse power machine built by the Daimler company carried off the honors of the automobile class, and the Darracq 20 horse power for the light automobiles.

Cannibal Plants and Flowers

C. L. McCLUER STEVENS, in the *May Chambers's Journal*, London

MOST carnivorous plants are of comparatively small size. The species recently discovered by Dunstan on the shores of Lake Nicaragua, however, is not so. As this naturalist was walking with his dog, he tells us that he was attracted by its cries of pain and terror, and hastening to the rescue, found the animal held by three black sticky bands, which had chafed the skin to bleeding. These bands were the branches of a newly-found carnivorous plant, which has been named by Dunstan the "land

THE SIMS WAR-CAR

THE SERPOLLET STEAM RACER

octopus." The branches are described as being flexible, polished black, without leaves, secreting a viscid fluid, and furnished with a great number of suckers by which they attach themselves to their victims; it might, in fact, be almost believed, without any great effort at imagination, to be an octopus transformed into a plant. This uncanny product of the vegetable kingdom is known to the natives as "the devil's noose."

The moth-catching plant (*Araugia albens*) is a native of Central Africa. It was introduced into Australia quite accidentally some eight or nine years ago, and has since been extensively propagated there, it having been found that its white and sweet-smelling flowers attract and destroy vast quantities of moths. The action of this truly remarkable plant has been found by experiment to be purely mechanical. The calyx of the flower is rather deep, and the receptacle for its sweet juices is placed at its base. Attracted by the powerful scent and the prospect of honey, the moth dives down into the calyx and protrudes its proboscis to reach the tempting food. Before it can accomplish its purpose, however, the proboscis is nipped between two strong, hard, black pincers which guard the passage. Once caught, there is no escape; the insect invariably perishes miserably. It is a somewhat singular fact, however, that in New Zealand, where the plant has been cultivated for the express purpose of destroying the detested codlin-moth, it has been a failure, chiefly because that wily insect declines to enter the trap.

The story of the upas-tree of Java is well known. Up till quite recently it was supposed to be a myth pure and simple. M. Becari, the French explorer, has, however, discovered in Sumatra a plant which actually does give forth poisonous exhalations. Its existence had long been asserted by the natives; and, after diligent search, the intrepid Frenchman came across several specimens buried deep in the pathless forests of the far interior. It resembled, as his guides had foretold, a gigantic lily. The spadix was over six feet high, the spiked leaves were from ten to twelve feet long, and the entire evil-smelling growth covered an area of over sixty square feet. The poisonous fumes were found to be strongest at sundown and for about an hour before sunrise. So virulent were they that a goat, a dog, and sundry other small animals tethered at night in its immediate vicinity were found quite dead and cold in the morning; while M. Becari himself was rendered violently sick by a mere cursory examination of the plant and its surroundings. In the loathsome depths of its bell-shaped flowers were found the decaying bodies of innumerable bats, small birds, etc.

The Struggle Against Cancer in Germany

Revue Generale des Sciences, Paris. Translated for PUBLIC OPINION

THE budget commission of the German chamber of deputies has voted the sum asked by the government for scientific research into the nature of cancer, and the best means to be employed in diminishing its ravages. The representative of the government states that there has been established at the charity hospital in Berlin a laboratory for scientific research into the nature, cause, and cure of cancer, and that the sum of 150,000 marks have been appropriated for the establishment of a permanent cancer institution.

The physicians of Frankfort-on-the-Main have already informed the committee of this city of the

results of the study of more than 1,200 cases of cancer. From this report the conclusion is reached that cancer is not hereditary, but infectious.

Clouds and the Weather

DR. WILSON BARKER, in *Knowledge*, London. Excerpt

EACH cloud has its history fraught with meaning; its open secret is writ on its face, and may be read by any one who will give himself a little trouble, nor need he go deeply into the study in order to make observations interesting to himself, and perhaps of great use in the furthering and perfecting of weather lore. To the ancients, the sky was doubtless an object of constant remark and interest, and possibly their intuitive knowledge of weather forecasting was much more accurate than ours. The dwellers in our modern cities see little of the sky, clouds have no interest for them beyond the personal consideration as to the advisability of taking out an umbrella or not. But farmers, fishermen, sailors, and others following open-air vocations are dependent on the weather, and to be wise in its forecast is of importance to them. To these, especially, cloud study should appeal; it can not fail to be profitable to them in their personal work, and they have all the opportunity, if the will be there, to forward the general knowledge of the subject by careful painstaking observations, which they may transmit to those scientifically engaged in dealing with weather laws, and thus assist in the elucidation of questions on which we are at present but very imperfectly informed. Whoever wishes to be weather wise, and who has time to study the weather charts published daily, may easily acquire such knowledge of local characteristics as will enable him to forecast fairly accurately. Cirrus clouds, as a rule—at any rate in England—are reliable guides; they form, as may be seen, in parallel threads, from the position and movements of which forecasts may be made. Should the threads appear on, and parallel to the west horizon, and moving from a northerly point, a depression is approaching from the west, but, although causing some bad weather, it will probably pass to the north of the observer. Should the lines appear parallel to the south-west or south-south-west horizon, and be moving from a north-westerly point, the depression will very likely pass over the observer and occasion very bad weather. These are two of many possible prognostics. Weather forecasting is much helped by a study of the daily weather charts. Again, weather is often very local, and to predict with fair accuracy a knowledge of local conditions is necessary. It is hoped that enough has been said in this article to attract more than a passing attention to clouds. If an observer be a photographer as well, he will find open to him in cloudland a fascinating field for study and a limitless variety of subject for his art.

A NEW ETCHING PROCESS has been invented by M. Bayard, the well-known artist. He has given it the name of cellulotypy. The process is exceedingly simple, and requires no special training. Instead of a metallic plate or a lithographic stone, M. Bayard uses a light and transparent celluloid plate, which permits him easily to calque any picture or drawing. The celluloid is kept in place on the drawing by means of slips of gummed paper. The outline of the object to be copied is followed with the tools commonly used for etching. The tracing point is made of steel and affixed to the end of a stick; the "roulette" (roller) is used for light shading, gray or half tint. The inking and printing are done as in ordinary etching.—H. de Parville, in *Des Debats*.

RELIGIOUS

Presbyterians Adopt Revised Creed

AN ALMOST UNANIMOUS VOTE FOR THE NEW STATEMENT

THE most important event of the Presbyterian general assembly during the past week, was the adoption of the report of the committee on creed revision. The revised confession of faith was adopted by a practically unanimous vote, and in the vote on the "supplementary statement" there were but two commissioners in opposition. The character of the changes brought about by this vote was outlined in our issue of last week. That part of the report relating to the confession of faith must go to the different presbyteries for approval or rejection. There was great excitement over the vote, the liberal wing of the church feeling especially jubilant.

The *New York Evening Post*, in commenting on the action of the assembly, refers to the statement of the committee that the new statement was not intended as a "substitute for or an alternative of our confession of faith." "Yet there can be no doubt," says the *Evening Post*, "that the new creed, as accepted, will supplant the old. It will do so immediately in the popular conception; it will do so gradually in the practice of the churches; and it will do so ultimately in Presbyterian law. There is no reason for delusions on this subject. The true issue before the assembly was the substitution of a new confession of faith for the Westminster."

The *New York Tribune* thinks that it was a choice between revision and suicide. "Hide away the fact as they might, even the conservatives realized that a refusal to touch the confession would retard the growth of the church and alienate an ever increasing number of its members. Doubtless many of them did not approve of the proposed changes in the confession, moderate and cautious as they are; but something had to be done, and done at once. So, with many misgivings, perhaps, they gave their vote in favor of the report."

It is the opinion of the *Philadelphia Press* that "Those upon whom the doctrine is binding will have, when the presbyteries vote upon it, a statement of belief that will invite rather than antagonize those who believe the church should represent the living present rather than the dead past. The revision committee has done an important communion a great service, and its energies can be expended in exemplifying the vital truths of Christianity and not in defending the shibboleths of other days."

The *Brooklyn Citizen* ascribes the success of the revisionists to the "subtle, indefinable, subconscious influence of New York. So long as they were satisfied to meet in semi-rural communities such as Philadelphia, Chicago, and other overgrown villages of the west and east, there seemed to be no possibility of their arriving at any consensus upon the suggested alterations of their standards of doctrine."

The *Pittsburg Gazette* thinks it an "Astonishing evidence of denominational harmony to find this great representative body of the Presbyterian church so nearly in accord as to questions of doctrine and polity. The effect of the proposed restatement of the doctrines of the church will affect profoundly, but not radically, the history of Presbyterianism in America."

Another important action of the assembly was the adoption of a resolution to appoint a committee of nine men to act with committees of the Episcopal and other churches in affecting public opinion upon the subject of divorce. The resolution was presented by the committee on church polity, and was as follows:

"Resolved, That in response to the fraternal request of the Protestant Episcopal church, this general assembly of the Presbyterian church in the United States of America appoints a committee of nine persons, five ministers and four elders, to confer with the committee of the Protestant Episcopal church, and with similar committees that may be created by other churches, with a view of securing some concerted action by the churches of America relative to divorce and remarriage, and so as to affect public opinion that uniform legislation may be enacted by the state that will conserve the family institution and preserve the sanctity of the marriage bond. That this general assembly viewing with sad apprehension the many perils to family life in our time, the growing rise and frequency of divorces upon grounds trivial and unscriptural, urges upon all our people the promotion of a wider reverence for the marriage bond."

Thomas Jefferson's "Bible" to be Printed

THE committee on printing of the house of representatives has ordered the printing of the extracts compiled from the four Gospels by Thomas Jefferson, and called by him the "Morals of Jesus of Nazareth." The original was not included in the list of Jeffersoniana ordered printed by the government in 1853, for the reason that the family were then unwilling to sell it. It has since been purchased and is now in the National museum. Mr. Heatwole, chairman of the house committee on printing, gives the following reasons for the action of the committee: "Representative Lacey, of Iowa, about a year ago found this book under lock and key in the National museum, and wrote a short article describing it, which was printed in many papers of the country, and the result is that frequent requests have been made for the publication of the book, these requests coming largely from ministers of the gospel on the one hand and people interested in the memory of Thomas Jefferson on the other hand. Accordingly Mr. Lacey introduced a resolution in the house providing for the publication of the work. It was carefully considered by the house committee on printing and favorably reported."

Mr. Heatwole says of the character of the book: "The effect of it is most excellent, and is one of the most convincing proofs of the Christian religion. He has prepared this little compendium in Greek, Latin, French, and English. He has not used a single syllable or punctuation mark that is not taken literally from the gospels. He has done it entirely without any words of his own. No one that examines this little volume, whether he be saint or sinner, will rise

from his perusal without having a loftier idea of the teachings of the Saviour."

The *Minneapolis Tribune* says: "Jefferson was what was then called an infidel, and is now called an agnostic. He drew his religious opinions from the same source as Thomas Paine, whose political writings had to wait for the present generation and Moncure D. Conway for adequate editing, because of the popular anathema against his works on religious subjects. Jefferson was less aggressive and better poised than Paine, and his larger political pre-occupations left him less time to offend the dominant feeling of his time. He would have been a pretty good liberal Christian today." The Rev. Charles W. Nevin, of Philadelphia, writes to the *Philadelphia Press* objecting to the publication of the book on the supposition, not yet verified, that it is an attack on the Christian religion. "No one could fairly object to the publication of Mr. Jefferson's annotated Bible by private enterprise, but every citizen should object to a national assault of this character upon any religious belief, and every Christian should resent a proposed attack upon Christianity under the imprint of national sanction."

The Death of a Great Missionary Bishop

COMMENT ON THE WORK OF BISHOP WILLIAM TAYLOR

BY the death of Bishop William Taylor, at Palo Alto, California, May 18, in the eighty-second year of his age, the Methodist Episcopal church loses one of its stanchest and most efficient missionary workers. Bishop Taylor was born in Virginia and began his missionary work among the miners of California in 1848. His career there earned for him the sobriquet of "California" Taylor. Thence he went into Canada as an evangelist at large. After Canada came Australia, Tasmania, New Zealand, South America and the West Indies, and India. In 1884, the general conference sent him to Africa and he explored a great part of that continent. His appointment as bishop came in 1888, with Africa as his field. Since 1898, he had not been in actual service.

The Springfield (Mass.) *Republican* compares Bishop Taylor to Paul in his zeal for converts. "He never lost a particle of his fire from the time when as a youth of twenty he heard a voice in a dream saying: 'William, God has a great work for you to do, and if you will not confer with flesh and blood, turn neither to the right hand nor the left, but follow the leading of the Holy Spirit, your wisdom will increase like a continual dripping into a bucket.' He could not present a report to conference without filling it with exclamations from his overbrimming fount of emotion, and he could not hear a prayer in any meeting without punctuating it with 'Amen' and 'Glory.' He believed in the old emotional Methodism—indeed, he embodied it; and if by chance the conference were growing dull and conventional and William Taylor were present, he would soon get the rich old responses going from all quarters of the hall or church, his sonorous voice leading all." "The record of Bishop Taylor's life is one of the most fascinating stories of the age," are the words of the Rochester (N. Y.) *Democrat and Chronicle*. "His adventures and achievements among the civilized and the savage races of the world, as related by himself and attested by his friends on every continent, seem marvelous to an age unaccustomed to his simple-hearted yet sagacious acceptance of the faith he taught and exemplified. To

a large degree, far more than many of the soldiers and statesmen of whom the world hears much, he shaped and inspired the sentiment of the new communities and strange people among whom he labored." The *Democrat and Chronicle* is also authority for the statement that he never received payment for his missionary labors, but supported himself entirely from the sale of his books. The Pittsburg (Pa.) *Gazette* opens its account of his career with the statement that the "death of Bishop William Taylor removes one of the towering figures of the religious world."

The Extravagance of Churches

DO THEY COST TOO MUCH?

IT is the opinion of a writer in the *Christian Work* that churches are spending too much money in useless show. The church property in the United States is valued at \$900,000,000, much of which, according to this author, "is represented in splendid and costly edifices, idle and empty monuments, cold, stately, and magnificent—but nothing more." He suggests that the work of the church would be more thoroughly done if some of this money "were turned into channels of missionary enterprise or into the funds for reaching and evangelizing the unchurched masses in our great cities and neglected country districts."

The New York *Tribune* admits that "here and there too much is spent on the ornamentation of churches, and in some cases the useful may be sacrificed to the artistic and æsthetic. Speaking generally, however," the *Tribune* goes on to say, "church buildings must satisfy the æsthetic sentiment of the people, otherwise nobody to speak of would go to church. Great stress is laid on the splendor and costliness of church buildings, and, as we know, the assertion is frequently made that poor people no longer care to go to church because modern churches are so luxurious and magnificent. But, like many another popular assumption, this assertion is not founded on fact. Years ago, perhaps, the church buildings of this country were relatively magnificent; but in these days of palatial hotels, office buildings, and private residences our churches—even the best of them—are relatively cheap affairs. In many cases, too, instead of repelling by their magnificence, their dinginess and faded furnishings are the things that most strongly impress the beholder. There are conspicuous exceptions, of course; but the average church building in the large cities seems to be overwhelmed by the onward march of modern civilization."

Various Topics

A CHILIAST is a person who believes that there is going to be a millennium by and by, despite present indications. St. Louis, however, has one who thinks that he can tell the exact date when the millennium is going to begin. It is impossible to refute a prophet, and it will take ten years to dispose of this one, for he gives himself a long term, naming 1912 as the year when things will begin to happen.—*New York Evening Post*.

CHRISTIAN ENDEAVOR IN HUNGARY: Hungary is added to Italy, Bohemia, Austria, Sweden, Norway, and Finland as countries that know the Christian Endeavor brotherhood. The pioneers of Christian Endeavor in Hungary are Professor Szabo and his wife. Mrs. Szabo is already at the head of a society for young ladies and another for children; the weekly Christian Endeavor topics are explained by Professor Szabo in a widely read weekly paper, and are studied, he thinks, by nearly ten thousand people every week.—*Christian Endeavor World*.

The Books of The Week

LABOR AND CAPITAL. A Discussion of the Relations of Employer and Employed. Edited with an Introduction by John P. Peters, D.D. Cloth, pp. 463. New York: G. P. Putnam's Sons.

DR. PETERS has edited the series of articles on the relations of laborer and employer published originally in the *New York Journal and American*. The suggestion for the preparation of the articles came from Bishop Potter. The questions sought to be answered include such as the nature and effects of trusts and labor unions, the desirability of compulsory arbitration, the manner of the division of the joint product of labor and capital and the degree in which the laborer receives his due share, the effect of the tariff, and the nature and scope of socialism. The contributors are forty-five in number and include such men as Cardinal Gibbons, Prof. John Bates Clark, Samuel Compers, James B. Dill, Bishop Potter, and John Mitchell. The articles are free from all bitterness and are apparently written with the one aim in view, that of reconciling so far as it may be done, the interests of labor and capital, not only in the production but also in the division of the product. By bringing so many men of so many different minds into the discussion, the advantage is gained of looking at the subject from every possible side and under the best possible circumstances.

THE DIARY OF A GOOSE GIRL. By Kate Douglas Wiggin. Cloth, pp. 117, \$1.

New York: Houghton, Mifflin & Co. KATE DOUGLAS WIGGIN writes in her usual sprightly and sparkling vein of a young woman who, growing "tired of people and wanting to rest by living with things," retires to the English village of Barbury Green and adopts the profession of a goose girl. "In alluding to myself as a goose girl," she writes,

THE GOOSE GIRL

FIVE VERANDA BOOKS

1

Already in its 50th Thousand!

1

THE LADY PARAMOUNT

Public Opinion:

"A free flight into the realms of fancy,—a pure romance, unalloyed by any mixture of the historical, analytical, or psychological element,—a love story which follows the smooth course of an ideal love unhampered by any tiresome actualities."

By HENRY HARLAND, author of "The Cardinal's Snuff Box," (85,000)
12mo, \$1.50.

2

DOLF WYLLARDE'S Great Tropical Novel

2

The Brooklyn Eagle writes:

"A brilliant, very entertaining novel, full of lively conversation, and free from any sort of morbidness or dreary pretension—very frank and unaffected. For once in a way everything comes out all right: the dreaded witness was in fact, dead; so Madge's secret remains conveniently buried forever—and that is how it happens in real life more frequently than not."

THE STORY OF EDEN

Decorative Cover. 12mo, \$1.50.

3

A New Omar Khayyam

3

INDIA'S LOVE LYRICS

The London Athenaeum:

"Mr. Hope has caught admirably the dominant notes of this Indian love poetry, its delirious absorption in the instant, its out-of-door air, its melancholy. Slender brown limbs stir silently in the garden where flying foxes cross the moon. And always there is the poignant sense of the fleetness of love—a moment's salvage from the flux of time."

Collected and arranged by LAURENCE HOPE.
Decorative Cover. 12mo, \$1.50 net.

4

Another Novel by RICHARD BAGOT

4

The N. Y. Times Saturday Review:

"The story has another, and for many a higher and stronger interest than that of plot—a vivid picture of what Roman religion through Roman politics has made the Roman society of today."

A ROMAN MYSTERY

By the author of "Casting of Nets." 12mo, \$1.50.

5

Another Elizabeth Book

5

COMMENTS OF A COUNTESS

The N. Y. Sun:

"Did n't Elizabeth of the famous 'Visits' marry an earl? To the best of our recollection she did. There is much of the same sort of cleverness in this book as in the other. Carlton, who is the author of the preface, says: 'I've read every word and I like it.' We agree with Carlton. This particular countess is all right."

ANONYMOUS. 12mo, \$1.00 net.

Literature, etc., sent post-free on application to

JOHN LANE The Bodley Head NEW YORK
67 Fifth Avenue

"I am using only the most modest of my titles; for I am also a poultry maid, a tender of Belgian hares and rabbits, and a shepherdess; but I particularly fancy the rôle of goose girl, because it recalls the German fairy tales of my early youth, when I always yearned, but never hoped, to be precisely what I am now." The effervescent humor of the Penelope books continues to bubble through the many amusing experiences of the goose girl.

TO THE END OF THE TRAIL. By Frank Lewis Nason. Cloth, pp. 302, \$1.50. Boston: Houghton, Mifflin & Co.

BARRING a hazy ending, the quality of this story is decidedly above the average. Ingalls, the easterner transplanted in Colorado, vibrating between goat herds and gold mines and making a success at neither, is a good type of the rolling stones with which the west is strewn. The west of the story is the new and orderly west that we know now, but with strange outcroppings of the old sinful days, of which the woman known as the "Big Swede" is the best example.

HARDWICKE. By Henry Edward Rood. Cloth, pp. 311, \$1.50. New York: Harper & Brothers.

MR. ROOD has related, in a simple and realistic fashion, the fortunes of a young minister in a little village "up New York state." His liberal views concerning Jonah and the doctrine of original sin arouse bitter feeling in his fold, but his practical goodness eventually wins all but the hardest hearts. There is some droll humor in parts of the dialogue and some fair drawing of village types.

WHEN OLD NEW YORK WAS YOUNG. By Charles Hemstreet. Cloth, pp. 353, \$1.50. New York: Charles Scribner's Sons.

MR. HEMSTREET has discovered a mine of interest in old New York. In the present volume he continues his researches into the history of the early days of Manhattan, and presents his results in a delightfully readable book. A valuable collection of old prints has been used for illustrating his work.

THE REASONABLENESS OF FAITH. By W. S. Rainsford, D.D. Cloth, pp. 309, \$1.25. New York: Doubleday, Page & Co.

A COLLECTION of vigorous, clear, and convincing addresses. Although lacking the author's personality, the book lacks none of his force and originality, and therefore to all those who have approached Dr. Rainsford either intellectually or personally the volume should be extremely welcome.

BREAD AND WINE. By Maude Egeron King. Cloth, pp. 191, \$1.25. Boston: Houghton, Mifflin & Co.

A STORY of the peasant life of Davos, a little Swiss community. It bears all the earmarks of accuracy, among them being a sad tendency to dullness. One could have pardoned a little less accuracy of description for the sake of a little more life in the narrative.

NONE BUT THE BRAVE—

By Hamblen Sears

DOMESTIC.—Seven hundred striking miners drove the non-union workers from the Grassey Island colliery.... Secretary Hay announced the independence of Cuba to all the nations of the world....The French cruiser *Gaulois* arrived at Annapolis with the commission who will be present at the unveiling of the Rochambeau statue in Washington....Judge Grosscup, in Chicago, issued an order restraining the beef combine....A cloudburst caused havoc in the vicinity of Cincinnati, Ohio, and Covington, Kentucky.

FOREIGN.—Great enthusiasm was shown at Havana when Señor Palma was formally installed as president of the Cuban republic....People at Fort de France, Martinique, fled from the city because of a second eruption of Mount Pelée, but the damage was apparently slight....President Loubet reached Russia.

WEDNESDAY, MAY 21

DOMESTIC.—Great Britain and Germany formally denied the sovereignty of the United States over the Sulu archipelago, which is firmly maintained by the government at Washington.... President Roosevelt unveiled a monument in memory of those who fell in the Spanish-American war erected in Arlington cemetery by the National Society of Colonial Dames....Edwin Lawrence Godkin, editor emeritus of the New York *Evening Post*, died in Brixham, England.

FOREIGN.—A fresh outbreak of Mount Pelée razed what was left of the ruins of St. Pierre, Martinique, and created a panic among the people of Fort de France, many of whom embarked on vessels for other islands; the United States relief ship *Dixie* arrived at Fort de France....A bullfight took place at Madrid, which was attended by King Alfonso and the queen mother....Czar Nicholas and President Loubet reviewed a large body of Russian troops at Czar-koe-Seloe.

THURSDAY, MAY 22

DOMESTIC.—The members of the Rochambeau mission from France arrived in Washington, and were received by President Roosevelt at the White House....All the washeries in the anthracite district in Pennsylvania shut down....The Presbyterian general assembly adopted the revised creed by an almost unanimous vote....A \$25,000,000 furniture combine was formed in Chicago.

FOREIGN.—The French government notified the governor of Martinique to make preparations to abandon the island....A bill was introduced in the Cuban congress to pardon all Americans now imprisoned on the island.

FRIDAY, MAY 23

DOMESTIC.—President Roosevelt took luncheon on board the French cruiser *Gaulois*, at Annapolis, the guest of the French ambassador, M. Cambon....A gift of \$75,000 was made to Wesleyan college for the construction of a building for scientific purposes....President Roosevelt abolished the long-standing practice by which army officers have acted as secretary of war in the absence of the secretary and assistant secretary.

FOREIGN.—A meeting of the British cabinet to discuss the progress of the peace negotiations in South Africa was held in London; the German foreign office received a cable dispatch from the German consul in Pretoria that peace had been practically concluded....Because of an explosion in a mine of the Crow's Nest Pass Coal company, at Fernie, British Columbia, 109 miners were shut up in the mine, and are believed to have perished.

SATURDAY, MAY 24

DOMESTIC.—The statue of Rochambeau erected in Washington was dedicated with imposing ceremonies by representatives of France and the United States....Lord Pauncefoot, the ambassador of Great Britain, died at the embassy in Washington....A general strike was ordered among the soft coal miners in Virginia and West Virginia, to begin on June 7.

FOREIGN.—In a fight between Turkish troops and Bulgarian revolutionists in Rumelia, six of the latter were killed....The Belgian steamer *Stanleyville* was wrecked on the Gold Coast, Africa; no lives were lost.

SUNDAY, MAY 25

DOMESTIC.—General Chaffee, the reviewing authority, has disapproved in part the findings of the court martial in the cases of Major Waller and Lieutenant Day, tried for executing natives of Samar without trial....The department of justice will defend General Brooke in the suit for \$250,000 brought against him by the Countess of Buena Vista, who claims an hereditary monopoly of the slaughter-houses of Havana.

FOREIGN.—President Loubet of France on his return voyage from St. Petersburg, landed at Copenhagen and was welcomed by King Christian....A defense of the conduct of General Sir Charles Warren at Spion Kop has been published in England.

West Shore and Ulster & Delaware R.R., Hudson River Day Line, and U. & D.

One hour's drive from Broadheads Bridge Station. Transportation free.

Rates, \$6 and \$7.

ELISHA MERRIHEW, Prop.

Business and Finance

With almost uniformly good wheat, corn, oats and cotton crop reports, improved retail demand caused by warmer weather, a full volume of reorder business for this season of the year, good collections and heavy railroad earnings, the only cloud on the situation would seem to be the continued unrest of labor and the idleness of large numbers of industrial workers as a result thereof. Even here, however, it is to be noted that, with the single exception of the anthracite coal-miners' strike, which, of course, affects demand and industry throughout a wide area, the disturbances are largely localized.

Price changes are few, and steadiness is a feature. Wheat is slightly lower on good crop reports, but straitened supplies of corn and oats make holders confident. Corn visible supplies are only half those of last year, and 60 per cent of the stock is in Chicago. Wheat supplies are smaller than one or two years ago, and only slightly larger than in 1898. Cotton was depressed early on confident short selling, but rallied later, and much covering occurred based on the "pinching out" of receipts and the fact that exports were very large. Hog products generally are rather easier.

* Pittsburg. † Net.

The New York stock market was influenced this week by favorable crop news and the easing of rates for money, 2½@4½, as well as by announcements of several railroad deals of some importance offsetting the effects of the anthracite coal-miners' strike. Heavy covering of shorts ensued, after which the market became quieter, although considerable manipulative strength was displayed in St. Paul, Union Pacific and other granger stocks, the anthracite coal stocks also tending to recover. Demand sterling rallied to about 4.87½, reacting to 4.87. Bank clearings for the week ending May 22 aggregate \$2,134,005,353, a decline of 15.5 per cent from a year ago.

Business failures for the week number 152, as against 192 in this week last year.

Bright's Disease and Diabetes

No other diseases known to medical science are so insidious. No others make such frightful inroads upon the human system without apparent symptoms.

On December 31st a physician, apparently in good health, was consulting me about a patient of his who had Bright's Disease. Neither the doctor nor I suspected that he had anything wrong with his kidneys. On February 1st that physician died with Bright's Disease. A heavy cold with high fever started the latent disease in his system and carried him off in five days.

J. W. CORBIN

One of the best and best known physicians of Philadelphia says that "every man past middle life should have his kidneys examined at least once a year." We say twice a year.

In every case of Bright's Disease or Diabetes the disease is detectable by a careful analysis long before it becomes acute or immediately dangerous. At our establishment we make this analysis absolutely free. We feel as happy as our applicants when we can assure them they are all right. There are enough who need our treatment, without our attempting to work on the fears or credulity of those who do not.

We will gladly send you our booklet on request. We never publish names or letters without consent. By its nature, our work is always confidential.

PUBLIC OPINION

Number 23
Volume XXXII

The Week

Thursday
June 5, 1902

PRESIDENT ROOSEVELT'S speech at Arlington on Memorial day contained his first directly-worded declaration on the Philippine issue, and whatever else may be thought of it, it can not be said that he was not plain spoken. Aside from this the speech, the salient features of which are given on another page, was not remarkable. In slightly changed words it repeated what was so often said by President McKinley and what has been asserted many times during the senate debate, namely, that the presence of our troops is the only assurance of peace and order in the islands, that anarchy would follow our withdrawal, that we do not conquer in order to set up arbitrary government, and that "with their (the Filipinos) growing knowledge their growth in self-government shall keep pace." The president even held out the possibility of independence, but asserted that at this time it was impossible to determine what our ultimate relations should be.

COMMENT upon the speech of course follows in the grooves long since made by the opposing parties in this discussion. There is, indeed, nothing in it to lead anyone to change his opinion; it is significant only of the administration's determination to stick to the policy adopted by President McKinley, and it disposes once and for all of the assumption that President Roosevelt had not made up his mind as to what our course in the Philippines should be. There have been some unfavorable comments from the south on the president's comparison between army brutalities and lynching, but these complaints can hardly be taken seriously when it is remembered that lynchings are not confined to any part of the country, and when the speech shows that the comparison was drawn merely to emphasize the fact that instances of brutality in the army no more stamp the service as brutal than a lynching proves that a nation is barbarous.

THE long and noteworthy debate on the Philippine government bill came to an end in the senate on Tuesday, and before this issue of PUBLIC OPINION reaches its readers the vote on the bill will have been taken and the bill passed. With the exception of the unfortunate injection into the debate of the charges of atrocities on the part of our soldiers, charges which, true or untrue, had nothing to do with the merits of the question before the senate. The debate has been most useful in bringing before the people all sides of the Philippine problem. It has been shown that a "deliberative body" has its uses after all; such speeches as we have had from Senator Hoar and some of the Democrats on the one side, and from Senators Lodge and Spooner on the other, go far toward rehabilitating our senate in the eyes of the country.

A SUBSIDIARY coinage bill passed by the house last week is approved by everyone on its merits; it also indicates the extension of business within recent years. Up to 1880 we got along very well with \$50,000,000 of subsidiary coins. Then the limit was raised to \$90,000,000, and in 1900 the coinage was increased to \$100,000,000. It is estimated that the house bill for the coinage of the treasury bullion will still further increase the total to \$150,000,000. This is a large amount of loose change, but it is less than \$2 a head of population and is no more than is necessary for trade.

NO known forces are working toward an ending of the coal strike, both sides having settled down to a long struggle in which quarter will neither be given nor asked. Hopes that the differences between the miners and their employers will be submitted to arbitration are still entertained in some quarters, but without apparent reason, and the operators have not gained public support by their refusal to leave

the questions in dispute to outsiders for decision. The extension of the strike to include the soft-coal fields does not seem probable at present, but on Monday the firemen, pumpmen, and engineers stopped work, adding greatly to the strength of the miners by confronting the operators with the prospect of having their mines flooded. On the whole, however, it is not apparent that either side has gained or lost ground since the beginning of the strike.

MR. CLEVELAND has accepted an invitation to make a speech at the opening of the new Tilden club of New York on the 19th. This will be the first speech made by Mr. Cleveland to a political gathering since his retirement from the presidency. For other reasons this will be a noteworthy occasion. The Tilden club will be, it is said, the center of anti-Tammany Democracy, but at its opening banquet there will be Democrats of all shades of opinion, and the fact that so many prominent Democrats whose views have been so radically opposed are to come together is regarded as proof that the occasion is the outcome of strenuous effort to harmonize the various elements of the party.

WE have the authority of the New York Times' London correspondent for the statement that the topic in London which rivals even the coronation and peace in South Africa is the talk of the successor to Lord Pauncefoot as ambassador at Washington. The British idea of the importance of the post has increased so largely during the late ambassador's term, that it is not easy to find a man who measures up to the high requirements of the position. Oddly enough, it seems to be the general opinion that a trained diplomatist is not wanted, but rather a man of great distinction and ability outside of the diplomatic rut. The search for such a man is expected to occupy several months.

BECAUSE it was so long in coming the news of peace in South Africa is all the more welcome, not only to Englishmen, to the world at large. The war just ended was not one in which Great Britain could gain either honor or direct profit, however it resulted, and in view of the disasters with which its course has been marked and the lack of sympathy in any part of the world, the enthusiasm with which the peace news was received can easily be understood. The terms at last accepted by the Boers are not materially different from those insisted upon by the London government from the first, but as the summary of opinion in the foreign department shows, there is no disposition to dwell upon the terms of peace; it is enough that a cessation of a struggle wearying for all concerned is announced. The discussion of details is postponed to a later date.

A LONG letter in the London Telegraph from its Pretoria correspondent gives a very interesting account of the South African peace negotiations. Of the Boer delegates, who were sumptuously entertained by Lord Kitchener, Schalkburger and the rest of the Transvaal delegates except Reitz were in favor of peace on any terms; Louis Botha shared their views, but Steyn, De Wet, and Delarey were in favor of demanding impossible conditions. Of these Delarey was the most bellicose, but it seems that the Boer women were the last to "come in." At first the Boers demanded a majority upon any administrative council that might be formed, and insisted upon the establishment of civil government within two years with general amnesty for all, including the Cape rebels. It was only after a very stubborn resistance that the Boers got down to the London government's "irreducible minimum," the terms of which have been known from the beginning of the struggle.

AMERICAN

John Hay, Secretary of State

AN OUTLINE OF HIS SERVICES IN CONNECTION WITH THE DEVELOPMENT
OF THE COMMANDING POSITION OF THE UNITED STATES

A EULOGISTIC survey of the career of Secretary Hay, from the pen of Brooks Adams, appears in the June *McClure's*. Mr. Adams ranks Mr. Hay's handling of events in connection with the Chinese outbreak as his greatest achievement. He saw instantly that "if war were declared against China, nothing could prevent the Americans from losing control of the situation, and the Europeans from acquiring it. The legations were relieved, Peking was occupied, and the campaign ended precisely as our cabinet wished. Afterward it only remained to dissolve the European concert, and facilitate an evacuation, to achieve all that America desired. Mr. Hay's plan was so simple as to bewilder his European colleagues, who could never persuade themselves that he was acting in good faith. They were convinced that the United States had some ulterior motive; whereas the only object of the United States was to get her rivals out of China, and keep them out."

Continuing his review, Mr. Adams says: "Mr. Hay has invariably yielded the immaterial to gain the material, and for the United States that which is most material in foreign affairs is the Monroe doctrine. Of this doctrine Mr. Hay has been the foremost modern exponent; and yet, probably very few Americans realize how momentous his achievements regarding it have been.

"This principle, asserted three-quarters of a century ago by Mr. Monroe, has never been explicitly accepted by Europe. On the contrary, foreigners long protested against it, and in 1850 Mr. Clayton committed the capital error of American diplomacy by acceding to the claim of Great Britain for joint control over any canal which might be cut through the Isthmus of Panama by the American government. In spite of persistent efforts to the contrary, Great Britain always refused to abandon her right under this treaty, and affairs stood in this position at the outbreak of the Spanish war. That war changed the whole equilibrium of the world. The United States then became an Asiatic power. From the dawn of time commerce has flowed from east to west. The question is whether it will continue to do so. To maintain it in this ancient channel Russia built the Siberian railway, and all Europe, with Germany in the lead, in 1900 tried to partition China. America opposed the attempt. We can now measure the re-

sult. The Siberian railway (as yet hardly more than a railway in name) is a failure as far as competitive freights are concerned, and, when tested, proved worthless as an instrument in war. Mainly for this reason partition broke down. Furthermore, America succeeded in maintaining the integrity of China. The effect of this success has been to split Europe into two hostile camps, leaving the United States the arbiter of the destiny of the east. No nation in recent times has held a more commanding position. The diplomacy of the world now centers in Washington.

"To support her pretensions, however, America must have available energy commensurate with her mass, and to develop such energy she must have undisputed control over her base at home. Hence the necessity for abrogating the Clayton treaty, a task which has been consummated by Mr. Hay.

"Whither these great changes will lead no man can now prophesy; but if the United States is destined to maintain an economic supremacy, traffic must flow to her from both east and west, and should it do so, the whole political and economic structure of civilization must be altered. In any event, Mr. Hay's administration of the state department marks the opening of a new era.

"My hope is that I have in some degree indicated Mr. Hay's services to his country; but the man himself can not be known unless the spirit be appreciated in which these services have been rendered. Few probably will doubt that Mr. Hay is versatile, adaptable, and able, but few, perhaps, comprehend that he is modest and unselfish. He has never failed in an emergency, but he has never asked for place; he has never been pushed as the representative of great interests, or by political parties; and, furthermore, he has never struggled with a friend for an object of ambition. When brought into such competition, he has invariably aided his friend and effaced himself. Mr. Hay has risen because he has loved himself last. This statement can be tested by facts. At three different epochs of his life John Hay has been thrown into close relations with three of the most remarkable men of diverse types whom America has recently produced—Abraham Lincoln, Horace Greeley, and Theodore Roosevelt. Not one of these three owed anything to him, or could look to personal advantage through his support, yet all judged him alike."

JOHN HAY, SECRETARY OF STATE

A New Era in the Southwest

CHARLES MORREAU HARGER, in the June *Review of Reviews*, New York. Condensed for PUBLIC OPINION

FOR half a century the cattlemen have ruled the southwest. Extending over the Panhandle of western Texas, western Oklahoma, southwestern Kansas, eastern Colorado, and eastern New Mexico, their holdings have embraced the whole southern portion of the "high plains." Voluminous advertising and the persuasion of immigration agents lured the settler into states farther north, and this wide area remained, in a sense, undiscovered. The cattleman reigned supreme. With the advent of barbed wire, he stretched his fences, like a vast thorn-tipped web, where he listed, enclosing with his own land that of the government and of the distant investor alike. For three decades, while millions of settlers surged across the Missouri, he held sway over a territory 500 miles north and south and 350 miles east and west, turning its leagues of pasture into fortunes.

Three things have changed this: The railroads have pushed their shining steel rails into the "short-grass country;" the Indian lands, leased by the cattle companies for a few cents an acre annually, have been given up to the homesteader; the western people have learned some new lessons in agriculture. In March of the present year the Chicago, Rock Island & Pacific railway completed a line from Kansas directly across the heart of this domain to El Paso, on the Mexican border, so level and unobstructed in its course that the track of one division of 128 miles has not a curve. The main line of the Atchison, Topeka & Santa Fé borders the territory on the west, and a new branch line skirts the east. Diagonally, from Denver to Fort Worth, is the Colorado Southern, Fort Worth & Denver. A half-dozen charters for branches and individual enterprises are presages of other incursions into the unoccupied area. Immigration has turned in this direction. The homeseekers' excursions to this section are patronized as were those of old to Kansas and Nebraska. Every freight train carries a car or two of furniture, implements, and teams belonging to adventurous families, leaving eastern and mid-western homes in search of cheaper lands and frontier experiences. Even on the despised "staked plains" sounds the locomotive's whistle.

The soil is very fertile and rich over much of the plain. The surface is covered at the northern portion with buffalo-grass, a close-curved, gray herbage that is stock food the year round. In January, as well as in June, on it alone flocks and herds will thrive. Toward the south is sage brush and mesquite. In the desert-like spaces the cactus rears its forbidding head, and the deceitful mirage beckons gaily to the traveler. The foothills of the Rockies crop out here and there with towering summits. Above is a sky forever blue, while ceaseless winds have this for their playground. Rain and snow are infrequent, even to the south-east, where the influence of the gulf is felt. These conditions, together with the mildness of its temperature, fit it especially for stock-raising and the attendant branches of agriculture which the west is learning to master. Because of this fitness, and because the "free range" days of the west are passing away forever, comes the demand for farms instead of ranches, and the recognition of the settler's rights. This spring the Capitol, or the X. I. T. ranch, which occupied a tract of 5,000 square miles in the Panhan-

dle, was sold in tracts of 10,000 to 200,000 acres. This ranch was so extensive that some states could not have contained it. Connecticut, for example, could not hold it by several hundred acres; the two states of Delaware and Rhode Island combined would not contain it. Its 3,000,000-acre tract was fenced thoroughly; 350 wells with windmills helped furnish water for 125,000 cattle. It was, in effect, a little empire, and the owners' iron-clad rule was to forbid a camper inside its boundaries. Now it is being divided among small holders!

Where six months and a year ago was open plain, today are towns with prosperous business houses, telephones, and banks. They are not large, most of the newer places having four hundred to five hundred population. They are the accompaniments of the railroad, and their shining new structures are visible for fifty miles across the level plain. The better class of immigrants is coming into the new country. They are not the "movers,"—never at rest,—but industrious toilers, familiar with western conditions, and prepared to overcome. The old freighting of goods across the prairie has ceased, and driving of cattle to market is ended; and economic conditions are in a state of transition, as the wilder civilization of the range gives way to that of the farm.

General Chaffee and the Army's Honors

THE WALLER AND DAY VERDICTS DISAPPROVED

THE reviewing authority, General Chaffee, on the court-martial of Major W. T. Waller, charged with illegal execution of natives of Samar, has disapproved the verdict of acquittal. His act is held to have been one of unlawful retaliation, rather than a justifiable act of war. It is recognized that Waller's mental and physical condition after his expedition into Samar rendered him in a measure irresponsible, and that while stricken with fever, he assented to the request of his men for revenge. That the court should have taken his condition into account, so far as to mitigate the finding to a minor offense, the reviewing authority thinks would have been proper, but a total acquittal is disapproved. Lieutenant Day, who obeyed Waller's order, knowing his condition, is also held to have been wrongfully acquitted, as, had he exercised his judgment, he could have prevented "the most regrettable incident in the history of the military service of the United States. An officer must be conscientiously regardful of the unquestioned legality of his agency in taking the lives of his fellow-men. Above and beyond all personal consideration officers must guard the name and honor of the country."

"This reversal of the verdict of the court-martial seems to cover the case in an honorable and satisfactory manner," the *Pittsburg Dispatch* (Rep.) says. "It is much better than the defiant claim that Waller was within his rights in murdering natives. It is true that it places some of the congressional defenders of the honor of the army in a very ridiculous position

when the military reviewing authority itself stigmatizes the affair as the most regrettable in the history of the service, and demands disapproval in justice to the army. The review tends to purge the army of the suspicion of possible approval of such acts, and is in line with the sentiment of the American people." The *New York Journal* (Dem.) says that "General Chaffee's stand in behalf of civilized usages in the Philippine war is everlastingly to his credit as an American soldier. He and not the murder and torture-justifying contingent, in and out of uniform, speaks for the honor of the army of the United States." In the opinion of the *Philadelphia North American* (Ind. Rep.), "General Chaffee's review of the findings of the Waller court-martial is the most sweeping indictment of the army that has been presented. According to the imperialists, Chaffee has covered the army with obloquy and atrociously defamed the devoted heroes who are defending the flag of their country. Shall this traducer of heroes be court-martialled and hanged for treason, dismissed in disgrace, or let off with a reprimand?"

The *Buffalo Commercial* (Rep.) finds in General Chaffee's comment "a pointed and deserved rebuke to the politicians and critics who have said that the army could not be depended on to vindicate the honor of the nation," while to the *Chicago News* (Ind.) "it is evident that the commanding officer of the American army in the Philippines appreciates the necessity of guarding the good name of his troops and his country. With the commanding general holding these views, it seems improbable that any large proportion of the forces in the Philippines can have made it a common practice to violate the code of civilized warfare." The *Indianapolis News* (Ind.) declares that those who have been denouncing the Philippine atrocities could ask for no more complete vindication, but these critics "can now well afford to leave their case with President Roosevelt and General Chaffee. Senator Hoar and those men who agree with him may be enemies of the American army, but President Roosevelt and General Chaffee can not be so characterized. They at least are friends of the army and lovers of the country. They hold that murder does not cease to be murder when committed by an officer of the army. The honor of the American army is safe in General Chaffee's hands."

State Politics

THE OHIO REPUBLICAN STATE CONVENTION

THE Ohio Republicans met in state convention at Cleveland last week, and nominated candidates for secretary of state and minor offices. All reports agree that the convention was "a continuous ovation for Senator Hanna," whose faction controlled the proceedings at every point, with practically no opposition. The platform opens with a eulogy of President McKinley, and "cordially sustains" President Roosevelt in his pledge to carry forward the legacy he received from his predecessor. As to the trusts, the platform says that "all combinations that stifle competition, control prices, limit production, or unduly increase profits or values, and especially when they raise the prices of the necessities of life, are opposed to public policy, and should be repressed with a strong hand."

Referring to Cuba, the platform says: "We believe it is due alike to Cuba and to ourselves that, in accordance with the Republican principle of reciprocity,

proper and reasonable trade concessions shall be made by our government to Cuba, in return for her concessions upon American products, so as to benefit the trade of both countries, and to fully and generously carry out every obligation of our national honor, whether expressed or implied." The president and the army are congratulated upon "the satisfactory progress made in the Philippines in suppressing insurrection and establishing order, and we unqualifiedly endorse the policy of our government in those islands. . . . Our flag is in the Philippines, and there it will remain." These are the main features of a long platform following orthodox Republican doctrine in every part.

Politics in Kansas

THE Kansas Democratic state convention adopted a platform which denounces the trusts, reaffirms the Kansas City platform, without mentioning silver; advocates the election of a board of railroad commissioners by the people; declares for the ownership of public utilities by the people, and endorses the policy of Democrats in congress with reference to their attitude on the Philippine question. The convention nominated United States Senator Harris to succeed himself. After a hot fight, fusion with the Populists was agreed upon, and it is impossible to say how the state ticket will stand, because ten places on it were left open to be filled by the Populists.

The Kansas Republicans held their convention a week later than the Democrats. W. J. Bailey was nominated for governor. "The feature of the convention," the press dispatches say, "was the strong Roosevelt sentiment." The platform warmly endorses the national administration.

The Next Congress

IN a careful review of political conditions the country over, the Washington correspondent of the *Boston Transcript* undertakes to set forth the probabilities in regard to the next congressional elections. "The prediction is rather freely made," he says, "that the Democrats will carry the next house; this is by no means an unusual estimate at this stage of the campaign, but," he adds, "it will not do for either side to rely on generalities in forecasting the coming congressional contest. It is different from any other

ASLEEP OR AWAKE?—*Minneapolis Tribune*

that has been fought since the civil war. There will be 386 representatives elected, of which 193 would be an even half. The south, not including Maryland or West Virginia, will contribute about 118 Democratic representatives. The thirteen distinctly southern states will have, under the new apportionment, 125 seats; the Republicans now have nine representatives from this belt, two each from Missouri, North Carolina, and Tennessee, and three from Kentucky." The correspondent estimates that the Democrats, to gain control of the house, must gain 25 seats in northern states, and, viewing the field as a whole, it appears to him doubtful if they can do this. "A very heavy political tide would, of course, easily accomplish it; but whether that tide is coming may much be doubted. This all depends upon the appeal which the anti-imperialistic issue makes to the American people." The *Savannah (Ga.) News* (Dem.) finds several things in favor of Democrats that are worth noting: "One is that they are united, while the Republicans are not harmonious respecting their Philippine policy, their policy in regard to lowering the tariff on Cuban products, and the president's action in respect to trusts and appointments. It is but reasonable to suppose that those who are dissatisfied with the administration will take the opportunity which the congressional elections present to express their dissatisfaction with it, feeling they can do so without endangering their party's control of the government. All things considered, therefore, the outlook for Democratic success is very encouraging."

A Case for Government Ownership

A SUGGESTION RESULTING FROM THE COAL STRIKE

"GOVERNMENT ownership of all coal lands and government control—not ownership—of all shipping facilities, so administered that a small operator could be sure of as favorable terms on the railroads for his carload of coal a day as the millionaire operator could get, the cost of transportation being fixed so that nobody could be charged an excessive rate, and no discrimination in rates, and there ought to be two results: Miners' strikes should become things of the past, and coal should be sold at about

the price it was sold for five years ago." Such is the opinion of the *Milwaukee Free Press*.

"The railroads at present are the coal operators," the *Free Press* continues. "The coal companies own nearly all of the lands. An independent operator is unable to get his coal delivered, or if it is delivered he is charged exorbitant rates of freight, and he has no accommodation and no rights as a matter of course. The coal consuming public is therefore entirely at the mercy of the great combination of coal miners and railroad companies, which are never satisfied with their dividends."

"Here is a field for the operation of the single tax theory. Mountains of anthracite coal in Pennsylvania, Virginia, and other states have come into the possession of the coal companies, which hold on to them all and work but a small portion of the mines that might be operated. Thus great mines of coal are worth millions, and escape even a moderate rate of taxation. There is probably no other business in the world that pays as big net profits as the business of anthracite coal mining in the United States."

The Pacific Cable

IS THE GOVERNMENT TO WITHDRAW IN FAVOR OF A PRIVATE ENTERPRISE?

REFERRING to the fact that Senator Perkins has withdrawn his support from the Pacific cable bill introduced by him, the *Detroit Tribune* says: "In his new character as promoter of a private enterprise, Senator Perkins makes much of the fact that the commercial company promises a rate of \$1 a word, instead of the present \$1.66. He either overlooks or expects the public to overlook the fact that the British government, now engaged in laying a Pacific cable, by a much longer route, promises a rate of 50 cents a word. There is another circumstance which he is careful not to consider in his later utterances, and that is that the Corliss bill provides that the government cable shall transmit messages at cost, or on a postal basis, rates being reduced whenever and to such extent as the volume of business or the cheapening of service creates a surplus in the accounts of the enterprise. Mr. Perkins knows, and everyone else knows, that no private monopoly will ever offer such advantages to American manufacturers and exporters. He pretends to consider it important that the Commercial company agrees to permit the government to fix its own rates for official messages. On the other hand, the fact is that what the government pays is unimportant. The government business would go forward if the rate were \$5, or even \$10, a word, and the item would not be an important one in the annual budget. Commercial business will not go forward if the tax is exorbitant. American trade on the Pacific is in competition with that of every other nation. It will be increasingly so. It will be sadly handicapped if compelled to pay one cent more per word than is necessary on business communications, the frequency and extent of which are particularly important during the stages of establishment and expansion."

Under the conditions of which the *Tribune* complains, the *Chicago Post* thinks that Senator Perkins "acted with judgment in having the Corliss measure set aside. The action of the naval committee was unanimous, and it may be concluded that the members took the same view of the matter as that expressed by the California senator. The house may pass the

HE SHOULD COME NEXT.—Cleveland Plain Dealer

Corliss bill, but it is certain the senate will not follow the same course. Why should the government at this time invest \$15,000,000 or \$20,000,000 in a Pacific cable when a private company has begun the work at its own expense and on its own responsibility? Let this private company construct the cable, and then, if the government should wish at any time to secure ownership and control, it would probably cost it no more to buy them than it would to build now. The private company is likely to construct the line cheaper than the government could."

Congressional Summary

CONGRESS DAY BY DAY

MAY 26.—Mr. Patterson (Dem., Col.) spoke against the Philippine civil government bill in the senate, and there were several lively colloquies, in which Senators Foraker (Rep., O.), McComas (Rep., Ind.), Hoar (Rep., Mass.), Carmack (Dem., Tenn.), and others took part; a debate on lynchings was precipitated by a resolution calling for an investigation of that subject which Senator Gallinger (Rep., N.H.) introduced. In the house the day was chiefly devoted to District of Columbia business.

MAY 27.—Unavailing efforts were made to fix a time for taking the vote on the Philippine civil government bill in the senate; Mr. Patterson (Dem., Col.) finished his speech against the bill. The Shattuc bill to restrict immigration was passed, after amendments prohibiting the sale of liquor at immigrant stations and in the capitol had been adopted.

MAY 28.—An agreement was reached in the senate to take the vote on the Philippine civil government bill at 4 o'clock, June 3; Mr. Burrows (Rep., Mich.) spoke in defense of the administration's policy. The house considered a bill for a subsidiary coinage.

MAY 29.—Senators Spooner (Rep., Wis.) and Morgan (Dem., Ala.) defended, and Senator Clay (Dem., Ga.) opposed, the administration's Philippine policy, several amendments to the civil government bill were adopted; Mr. Lodge, in charge of the measure, offered an amendment extending to the inhabitants the "bill of rights" of the constitution of the United States, except the right to bear arms and the right of trial by jury; in answer to an inquiry by Mr. Pettus, Mr. Lodge explained that in the opinion of the majority of the committee on the Philippines it would be unwise in the present circumstances to extend those rights to the Filipinos; the amendment was agreed to. The bill providing for the coinage of subsidiary silver was passed by the house.

MAY 31.—General debate on the Philippine civil government bill closed in the senate; Mr. Spooner (Rep., Wis.) finished his speech in support of the administration's policy and became involved in a lively controversy with Mr. Hoar (Rep., Mass.). The house was not in session. Felipe Buencamino, formerly secretary of war in Aguinaldo's cabinet, appeared before the house committee on insular affairs and made a statement strongly favoring American sovereignty in the Philippines. He said that his countrymen were not yet ready for self-government, but strongly desired that their political status be fixed by congress. Secretary Root sent to the senate committee on the Philippines a report from J. G. Livingston, civil governor of Sorsogon province, accusing American soldiers of torturing and murdering two native officials.

Various Topics

THERE SEEMS to be no truth in the report that Ohio has escaped from Hanna.—*New York World*.

PERHAPS those senators who opposed the "popular election" measure know the feeling of the people in their respective states.—*Detroit Journal*.

FORECASTS are out to the effect that it is likely to take congress two months longer to be sure that it has thoroughly cleaned up the surplus.—*Cleveland Plain Dealer*.

IN CASE we finally get those West Indies islands, we should lose no time in taking out a good stiff policy with some reliable earthquake insurance company.—*Washington Post*.

CO-OPERATION INDISPENSABLE: In order to conduct a war on a strictly courteous and philanthropic basis, a little coöperation on the part of the Filipinos themselves would be necessary.—*Washington Star*.

THEY HAVE BURNED another "nigger" at the stake down in Texas. Still, it is quite likely that Senators Bailey and Culberson will continue to dilate on the awful barbarities in the Philippines.—*Boston Herald*.

EVEN IF our French visitors had not got caught in the rain when they went riding with President Roosevelt last Sunday, there would have been no danger of their going home with the impression that ours is a "dry" country.—*Boston Journal*.

GENERAL MILES: The action of the president in revoking the executive order which placed the war department in charge of Lieut.-Gen. Miles and Adj.-Gen. Corbin in turn in the absence of the secretary and assistant secretary of war is naturally regarded by the public as another blow aimed at the official standing and influence of the commanding officer of the American army.—*St. Paul Globe*.

THE FIRST HAGUE CASE: The first case to be referred to The Hague tribunal is that known as the "Pius claim." It is based on the application of the Catholic church in California for moneys which are in the custody of the government of Mexico. It seems that there are certain trust funds in the keeping of that government on which there is a large amount of overdue interest. The whole amount at stake is about \$1,000,000. It is the understanding that the contending parties will choose two arbitrators each, and the four will choose a fifth from the eligible list of The Hague tribunal. The matter was arranged by our secretary of state and the Mexican minister at Washington. As this is the first case that tribunal it will doubtless be the of interest.—*Savannah News*.

ROOSEVELT AT ARLINGTON in referring to the soldiers of today who are fighting the country's battle in the Philippines asked his hearers to "keep in mind that the cruelties in the Philippines have been wholly exceptional, and have been shamelessly exaggerated. We deeply and bitterly regret that any such cruelties should have been committed, no matter how rarely, no matter under what provocation, by American troops. But they afford far less justification for a general condemnation of our army than lynchings afford for the condemnation of the communities in which they have taken place. In each case it is well to condemn the deed, and it is well, also, to refrain from including both guilty and innocent in the same sweeping condemnation. Our soldiers conquer, and what is the object for which they conquer? To establish a military government? No. We believe that we can rapidly teach the people of the Philippine islands not only how to enjoy, but how to make good use of their freedom, and with their growing knowledge their growth in self-government shall keep steady pace. When they have thus shown their capacity for real freedom by their power of self-government, then, and not till then, will it be possible to decide whether they are to exist independently of us or be knit to us by ties of common friendship and interest. When that day will come it is not in human wisdom now to foretell. All that we can say with certainty is that it would be put back an immeasurable distance if we should yield to the counsels of unmanly weakness and turn loose the islands," to see them made the scene of butchery and misrule.

FOREIGN

Austria and Pan-Germanism

REMSEN WHITEHOUSE, in the June *Atlantic Monthly*, Boston. Condensed for PUBLIC OPINION

THE Pan-German synthetic annexation scheme, as it is now defined by prominent advocates and adherents of the movement, embraces not only the German-speaking populations of Austria, but includes in its political orbit Bohemia with its admixture of Czech and Slovak, and the Slavonic and Latin elements of Carniola and Istria, while it aims at the assimilation of the Teutonic cantons of Switzerland.

The state thus formed will number some 70,000,000 of inhabitants, of which 62,000,000 are of German race and speech, 6,000,000 of Czech and Slovak stock, and scant 2,000,000 (on the Adriatic seaboard) of pure Latin or mixed Slavonic origin. This percentage of alien blood, admitted reluctantly and by force of geographical and commercial conditions, is, by reason of its density—especially in Bohemia—a source of considerable perturbation to those Pan-Germanists who view the synthetic movement from the ethnological standpoint alone. To the vast majority of practical Pan-Germanists the unavoidable and, in reality, insignificant admixture of races is lost sight of in the splendid opportunity offered by the geographical acquisitions in the Mediterranean basin. Not only do the ports of the German ocean and the Baltic obtain direct railway connection with those of the Adriatic, but by means of the Danube, and the proposed system of canals uniting that river with the Rhine and other German waterways, a cheap and facile access is secured to the Black sea and the "Hinterland" of Asia Minor, while over railways built and controlled by German capital the industrial output of the Fatherland can (within a few years) be advantageously distributed along the shores of the Persian gulf.

It will be readily understood that such an amalgamation of political, industrial, and commercial interests must entail not only the destruction of the existing political equilibrium of Europe, but radically revolutionize the economic factors regulating the trade channels of the world. Notwithstanding his prudent reserve, or his public opposition to militant international Pan-Germanism, there is ample proof that Bismarck recognized the rational connection between the ambitions of the movement and the commercial requirements of the empire. While he discountenanced his royal master's covetousness in 1866, he ceaselessly labored to guide the forces he could not control. He disclaimed any ambition for the possession of territories the heterogeneous composition of whose populations and the disquieting increase of the Catholic element in national representation would, he judged, prove more detrimental than beneficial. The guiding spirits of today belong to a different school, or are perhaps impelled by forces which inexorably constrain a modification of the theories held by a former generation. The value of a sentimental basis in popular action when dealing with adjacent linguistic territories has not been lost sight of; yet, as has been evinced by the policy relentlessly pursued in the French districts of Alsace and Lorraine, official Pan-Germanism is determined to eliminate where it can not assimilate. "*Salus Germaniæ suprema lex!*" The Slavonic and Latin elements in Carniola and Istria will be counted

but infinitesimal obstructions in the broad swath to be cut for Teuton feet to tread from the shores of the Baltic and the German ocean to the headwaters of the Adriatic.

Meanwhile prudent conservative Pan-Germanism relies on the numerous international associations founded for the propaganda of its tenets. A host of those more or less openly and avowedly connected with the movement, exert unmolested their seditious influence within Austrian territory.

The crisis which will precipitate the solution of this great political, social, and economic problem can not long be deferred. It is hardly conceivable that—although sacred as a doctrine of government—the voice of the Pan-Germanic people will be passively accepted by diplomacy as the voice of God.

The shifting sands of European politics make it unprofitable to speculate on the alliances or coalitions which may be called into existence within the next three or four years. In a recent article, entitled, "Will Italy Renew the Triple Alliance?" I endeavored to outline the advantages and disadvantages to Italy as a partner in this compact, and hinted that its renewal was already compromised by the ambiguous policy adopted by the Austro-Hungarian government in the eastern Adriatic. France, Italy, Russia, England, and presumably the United States will make their voices heard, singly or collectively. Pan-Germanists are fully aware that they will be called upon to vindicate any attempt at the practical application of their theories by force of arms. Three years hence (1905) Germany will be in a position to assert herself at sea as well as on land. Until that date, and as long after as circumstances necessitate, the Pan-Germanic propaganda will be unceasingly carried forward, for the issue is one of vital importance to the very existence of the state, and admits of no drawing back.

The Agreement Between Russia and Austria

Vienna Correspondent London Standard

STATESMEN still find it difficult to give a clear definition of the agreement between Austria-Hungary and Russia. In replying to a question by Dr. Max Falk in the foreign committee of the Hungarian delegation, Count Goluchowski repeated what he said last year, namely, that there are no stipulations in writing, and that the agreement of 1897 consists in the mutual exchange of views which have for their object to bring about an understanding between the two powers, in each separate case, as far as possible. If this is compared with the minister's statement in the Austrian committee, when he talked about "the full fruits of the *rapprochement* of 1897, which in the meantime has struck deeper and deeper roots," it will be seen that there is an attempt to depreciate what, but a few days ago, seemed to be something of great importance, as if it were the set purpose to make the situation obscure in the eyes of the world, including Austria's German and Italian allies. Since, however, Count Goluchowski can hardly be credited with this Machiavellian design, it must be presumed that—

just as a verbal promise on both sides had, for many years, to serve instead of a treaty between Russia and France—so the present Austro-Russian agreement is based solely on a conversation between the two emperors five years ago, supplemented, perhaps, by statements through ministers and ambassadors. And looking at the matter rightly, there could, indeed, be nothing else so long as Austria-Hungary is the avowed ally of Germany and Italy, and Russia is the avowed ally of France. Both sides, however, consider the agreement as something real and valuable which, under other conditions, may or may not lead to a legitimate union. It is, in short, the second iron in the fire.

During the debate which ensued after Count Goluchowski's reply, Count Eugen Zichy, the Asiatic traveler, not only expressed his satisfaction at the *rapprochement* with Russia, but, borrowing a leaf from the Pan-Germans in Austria, even suggested a combination of the triple and dual alliances against England and America. He had to be reminded by the delegate, M. Hodossy, of the fact that Russia's influence in the Balkans must always be greater than Austria-Hungary's, owing to affinity of race and community of religion, and that this country, therefore, must still vigilantly guard her interests and not look elsewhere.

Peace in South Africa

TERMS OF SURRENDER SIGNED MAY 31

GREAT BRITAIN learned on Sunday that the Boer delegates had signed terms of surrender May 31 at 10:30 o'clock at Pretoria. Lord Kitchener's telegram containing this announcement stated merely that "documents containing the terms of surrender" had been signed. King Edward's message to the public said: "The king has received the welcome news of the cessation of hostilities in South Africa with infinite satisfaction, and trusts that peace will be speedily followed by prosperity in his new dominions, and that the feelings necessarily engendered by the war will give place to the earnest co-operation of all his majesty's South African subjects in promoting the welfare of their common country."

It is believed that this ends a war which has lasted two years, seven months, and twenty-one days, having begun on October 11, 1899. The British losses in the war are placed at 21,966 killed and about 75,000 prisoners, wounded, and invalided. The British estimate of the Boer loss in killed is 19,000; the number of prisoners is at least twice this number. England's force in the field has numbered as high as 280,000 while the Boer strength at the beginning of the war was estimated as high as 50,000 and as low as half that number. Up to the date of the last budget statement the cost of the war to Great Britain was \$825,000,000.

The London *Telegraph* gives the credit for the ending of the war to Lord Kitchener, who, "coping with iron resolution and remorseless certainty with the most thankless and ungrateful problem that could be set a soldier, has earned a unique and enduring reputation and the imperishable recognition of his country." In concluding its editorial on the close of the war, the *Telegraph* says: "The nation, loyal and free, has the glorious privilege of remembering that from the very beginning of the struggle British subjects at home and over sea have given the most impressive example known in history of the maintenance

THE END OF THE STRUGGLE.—Cleveland Plain Dealer

nance of empire by the democracy." The London *Morning Post* also declares that the war "has brought Great and Greater Britain together in a manner unforeseen and hardly hoped for. Great Britain has been the champion not merely of the great principles with which her long history is associated, but also of the interests of other nations whose people during the whole course of the war have persistently maligned her. The British blood that has been so freely shed has been shed in a struggle for the right." The London *Times* asserts that the war "has proved that we are not unworthy of our past. It has given the world an earnest of what we are capable of doing in the future, if we learn the lesson of the struggle aright. No other nation could have made such a military effort at such a distance from its base. Lord Salisbury has put our relations with foreign powers on a footing which made it difficult for those who might be inclined to intervene in the quarrel to indulge their inclinations without risks which they did not care to face. By his sagacious and conciliatory diplomacy, ably continued by Lord Lansdowne, he had built up that amicable understanding between ourselves and our American cousins which has done much to sober the reflections of less friendly states." The *Times* also pays tribute to the "splendid courage and ability" of Mr. Chamberlain. "He has spoken the mind of the nation ever since this controversy became acute. We come out of war to prosecute our imperial mission, younger in the consciousness of our might and younger in our hopes than when the brave foes we now welcome as friends forced it upon us." The London *Chronicle* claims that England has "gained peace with honor. If our statesmen are henceforth wise in making use of their opportunities, we shall find that we have also gained peace with good-will." The *Daily News* thinks that it will do most to give us dignity and nobility in the hour of victory if we pay homage to the immense and heroic courage of our foes." The *Standard* and the *Graphic* also praise the heroism of the Boers.

After enumerating Great Britain's losses in men and money during the war, Mr. W. T. Stead says: "Add to this that we have intensified the racial difficulties in South Africa and have excited against Britain the bitter animosity of Europe, have destroyed two republics and have created two states despotically governed from London, and it will be evident to the

dullest observer that the war has been a bitter, bad business for John Bull." In slightly different words this is the comment most universally made by the newspapers of the United States.

When ex-President Kruger was awakened at night and informed of the peace news, he exclaimed, "My God, it is impossible!"

The Russification of Finland

Translations for PUBLIC OPINION

THE Russification of Finland is progressing with disastrous effects, according to the St. Petersburg correspondent of the *Independence Belge*. So far it has been next to impossible to secure accurate information concerning the troubles which occurred at Helsingfors and Viborg, on account of the close scrutiny of the censorship. In fact the Russian papers, among them the *Novoe Vremya*, the *Novosti*, and the *Gazette of St. Petersburg*, state editorially "that the government of St. Petersburg has not only been kept in absolute ignorance of the real state of affairs, but has actually been deceived" by the reports of General Bobrikoff, asserting the "Finnish people had accepted the new military law with entire satisfaction." "It is through such mendacious reports," says the *Novosti*, "that the Russian authorities have been deceived concerning the true situation of the country which they govern against the wishes and against the interests of the people."

The *Gazette of Finland*, semi-official organ of the government, is the only available source of information from which the correspondent of the *Independence Belge* in St. Petersburg could gather an account of the last revolutionary outbreak in Finland, and, as might be expected, this account is "highly colored for the benefit of the Russian authorities, while the true state of affairs is shown in a more dramatic light in private letters sent from Helsingfors to St. Petersburg." The government being under the impression that the application of the new military law, which provides for the oath of allegiance to Russia, would hasten the

Russification of Poland, ordered the recruiting to proceed. At Helsingfors 857 men were called for, and 57 only answered; riots occurred, and the Cossacks were compelled to charge the populace, which threatened to burn the barracks. Without the intervention of Mr. Mouren, the Lutheran pastor who addressed the rioters, the loss of life would have proved very large, as the first regiment of Finnish sharpshooters was ready to fire, when he interfered and begged the officers to allow him to speak. This incident started the revolutionary movement, which spread all over the duchy with lightning rapidity. Martial law is expected at any moment. The Russian government then issued an "imperial rescript," notifying the Finns that "disobedience to the military law would be a convincing proof of the insufficiency of the administrative system inaugurated last century to guarantee the peaceful conduct of public affairs and submission to the authorities."

The Finns consider this "rescript" as a practical proclamation of martial law, inasmuch as many "communes" (districts) have refused to obey the existing law. The governors have imposed very heavy fines on those "communes." Hammerford paid 35,000 marks, Helsingfors 30,000, and six other cities from 15,000 to 20,000 marks. These fines greatly exasperated the people. In some places the boards of medical examiners refused to assist in a system of recruiting which they consider unlawful. As usual, the Cossacks were on hand to handle the refractory recruits. At Viborg 150 young men were called by the military authorities; 32 only came. At Nikarleby a single man presented himself; he was crippled. Besides, not a single recruit would take the oath. The measures of repression were in keeping with Russian methods. At Helsingfors the Cossacks rode into the Protestant church, chasing everybody. They broke also into private houses, flogging the inhabitants, sparing neither women nor children. Convalescents were whipped in the hospitals, and a school teacher who attempted to protect a young girl was beaten to insensibility by an officer. The opposition to the military law is universal. According to the "officious" reports published in the *Gazette of Finland*, those who took part in the riots almost exclusively belong to the best classes of society. So far the opposition has been so successful that the period of enlistment has been extended to the end of June.

Commenting editorially upon these events, the *Independence Belge* says: "The Finns will not be brought to terms by the Cossacks; any kind of brutal action will do nothing but exasperate this prudent and wise nation, which would never have rebelled openly, but which protests against the illegal acts already committed with a dignity and self-respect worthy of the greatest praise. The government at St. Petersburg could formerly rely on the loyalty of the Finn; through its stupidity it has made of them a rebellious people, the resistance of which will prove unconquerable. What reliance can Russia place on these Finnish recruits, incorporated by force? Is it good policy to supply internal enemies with weapons, while organizing an army against the outsiders?" In the opinion of the same paper, if the government at St. Petersburg persists in its "unfortunate policy" in the grand duchy of Finland, the only result will be to give a large impulse to Finnish emigration. At the present time one thousand Finns leave their country each week, and if this state of affairs keeps up, Finland will be deserted in a very short time.

ALLOPATHIC TREATMENT

The doctor might at least give his medicine in a little jam—*Minneapolis Journal*

SOCIOLOGICAL

Beautifying the Public Schools

BERTHA DAMARIS KNOBE, in the June *World's Work*,
New York. Condensed for PUBLIC OPINION

THE movement for the decoration of schools is becoming so widespread as to command attention as an important educational factor. The organized placing of pictures and casts, mostly reproductions of masterpieces, began in the eastern states about ten years ago, the idea emanating from Ruskin-aroused England, though America has in this particular outstripped her sister across the sea. Largely through women's clubs the work has extended to every corner of our country, and even schools in the rural districts have become aroused. The beautifying by landscape gardening is more recent, but it is a part of the outdoor art movement developing everywhere, and should be stimu-

lated to schools in the poorer districts for six months at a time. Another school decoration center is Denver. Instead of a central society, each school has an art association with a prominent clubwoman as patron. The members of the associations, mostly mothers of the school children, hold monthly meetings and give entertainments to secure the necessary funds. In Philadelphia the art activity originated in a memorial building erected for a beautiful woman, Alice Lippincott, who devoted her life to educational interests.

For exterior embellishment with gardens, some of the most attractive schools are in Massachusetts. The George Putnam school, at Roxbury, has continuously taken the first prize offered by the Massachusetts

From the World's Work

HALL AND STAIRCASE OF WASHINGTON SCHOOL, EVANSTON

lated by the example of Europe, with its 81,000 school gardens. In beautifying the interiors the entire funds have usually been furnished by an outside society, though an occasional school board has co-operated by replacing the glaring white walls with a soft color and blackboards with a harmonious hue.

In Boston, the first stronghold of the movement, the Public School Art league and Mr. Ross Turner have been most active. The latter inspired the adornment of the Phillips school, four of whose rooms, in distinctive Roman, American, Italian Renaissance, and Egyptian effects, have been inspected by the leading educators of the world. In New York, still behind other cities, the work has been done by the Public Educational society. In Chicago, the John B. Drake school has become a model; \$1,000 has already been spent in covering the walls with tinted burlap, painting the blackboards a deep green, and hanging the walls and relieving the corners with pictures and busts. The Public School Art society owns a collection of twenty-nine pictures, worth over \$500, which

Horticultural society for the best school garden. The Garfield school, at Pasadena, California, is conspicuous for its masses of pink ivy-geraniums over the stone wall which supports the sloping lawn, its beds of pink and white geraniums, its clusters of rose bushes and palm trees.

In two cities, at least, the schools have extended outdoor beautifying to the homes. A society in Cleveland last year sold 121,000 packages of flower seed to school children at one cent a package, and the results of their individual gardens were shown in a "flower day" at the schools. At Carthage, Missouri, prizes to the value of \$100 were given to school children for the best examples of the artistic use of vines and flower gardens. For the most part school gardens have been cultivated by teachers and pupils or interested individuals, though the women's clubs, village improvement associations and local branches of the Woman's Auxiliary of the National Park and Outdoor Art association are beginning to take up the work.

Sociological Legislation in 1901

A REVIEW OF STATE STATUTES

A SUMMARY of the legislation in 1901 has recently been published by the New York state library from which we condense a brief account of the measures having an especial bearing on sociological questions. The first head is Charities: Supervision and Poor Relief. "The tendency of legislation appears clearly to be toward a closer central control of the state charitable and kindred institutions." Instances of this are the establishment of a board of control of state institutions in Minnesota and the law in New York vesting the control of the hospitals for the insane in the state commission in lunacy. "There is a marked tendency, especially in the rural districts, to keep dependent children in almshouses, even though this course is forbidden by law." For example, Indiana has passed a law "allowing children between the ages of three and seventeen to be kept in the almshouse for sixty days instead of for ten only as theretofore," before being placed in homes or institutions.

In the laws regulating the care of dependent, neglected, and delinquent children, there is an effort to distinguish between the first two classes and the last. The laws of Pennsylvania and Wisconsin illustrate this system. These "statutes also provide in common for the establishment of juvenile courts and a system of juvenile records, the right of petition to the courts by resident citizens in the interests of such children, and the appointment of probation officers. They forbid the commitment to jail of young children.

"The most important developments of the year in connection with the care of the insane occurred in Michigan and Minnesota." The former state provided for the erection of a psychopathic ward at the University of Michigan; the latter established in all cities of over 50,000 a detention ward for doubtful cases. This state also established a state board of control. Pennsylvania appointed a commission to inquire into the best methods of treatment of the insane, and Indiana enacted a statute allowing counties with a population of 150,000 or more to establish asylums for the chronic insane. The only legislation of importance looking to the care of the feeble-minded and the epileptic was in New Hampshire and New Jersey. New Hampshire had made no provision for the care of these classes prior to 1901, but in that year an act was passed "for the establishment and maintenance of a school for the care and education of the feeble-minded." New Jersey passed an act "to establish a village for epileptics."

"The trend of legislation relating to penal institutions was toward the centralization of control, the substitution of reformatories for prisons, and a more extended use of probation, indeterminate sentence, and parole." States that enacted laws embodying some or all of these ideas during 1901 are: Massachusetts, New York, Rhode Island, Connecticut, New Hampshire, Minnesota, Michigan, California, Indiana, and Vermont. Ohio and Virginia appointed a commission to inquire into the convict labor question. Missouri, South Carolina, Tennessee, and North Dakota broadened the scope of convict labor by allowing them to be employed on the highways or railroad lines, on state farms, or in state factories.

"Legislative action relative to the liquor traffic for 1901 clearly indicates an intention to subject the busi-

ness to such moderate restrictions as have heretofore proved effectual in limiting the number of places for traffic and locating them where the least harm can result and where they can be kept under surveillance. The imposition of excise taxes or license fees as the initial step toward this accomplishment continues to receive legislative approval." Laws dealing in some way with the liquor traffic were enacted in thirty states.

"During 1901 Montana and Wyoming were added to the list of states having a state board of health. At present all states but Georgia, Idaho, and Oregon have a central sanitary organization, and territorial boards of health are found in New Mexico and Oklahoma and also in Hawaii and Porto Rico." An act was passed by the Illinois legislature requiring the registration of births and deaths in that state. Kansas, Montana, and New Hampshire enacted elaborate statutes covering the subject of communicable diseases.

Labor problems received due consideration. Five states provided for free public employment bureaus, viz.: Connecticut, Kansas, Minnesota, West Virginia, and Wisconsin. Employers' liability was recognized by the legislatures of Colorado and Connecticut, and extended to street railway employees in South Carolina. The eight-hour day for laborers employed by the government or by public contractors was made compulsory in California, Minnesota, and Utah. Legislation touching the employment of miners and in general improving the conditions under which such employees labor was enacted in Massachusetts, New Hampshire, Wisconsin, Pennsylvania, Tennessee, Connecticut, California, and Florida.

A Family Budget

HOW TO LIVE ON £150 A YEAR

HOW a lower middle-class English family may manage to live comfortably on an income of 150l. a year is told by G. S. Layard in the *May Cornhill*. The family selected as typical is that of a cashier in a London solicitor's office and consists of the man and wife and two children. The different items of expenditure for the year are shown in the following table:

	£	s.	d.
Rent (26l.), rates and taxes (5l. 3s. 5d.)	31	3	5
Railway traveling	7	0	0
Life insurance and benefit club	4	18	3
Newspapers, books, etc.	4	10	0
Gas, coal, coke, oil, wood, matches	9	17	0
Summer holiday	5	0	0
Tobacco	2	5	0
Birthday and Christmas presents	1	10	0
Stamps and stationery		12	0
Food	47	9	0
House expenses	5	4	0
Boots	6	0	0
Tailor	6	0	0
Dress for wife and children	13	0	0
Balance to cover doctor, chemist, charities, etc.	6	1	4
	£150	0	0

The first item in the budget given above, rent, amounts to nearly one-fifth of the entire income, as compared with one-tenth spent for the same purpose by the so-called upper middle-class. To get comfortable quarters even at this price one must go to the suburbs, and this necessitated the expenditure of the next item

on the list, 7l. for traveling. The largest and most important item on the budget is that for food, 47l. 9s. This is divided by the author according to the following table for weekly purchases:

Meat and fish.....	s. d.
Greengrocery	7 0
Milk	1 3
Bread	2 6
Grocery	1 6
	6 0

18 3

"The item 4l., 8s., 3d. for 'insurance and benefit club' represents an annual premium of 2l., 1s., 3d. for a life policy of the value of 100l., effected at the age of twenty-five; 4s. for another 100l. in the case of death being by accident; 3s. for insurance of furniture against fire; and 2l. paid to a friendly society as provision against sickness. The item 5l. for a summer holiday will seem, to many, ridiculously small, but when we add to it what would have been the cost of living at home, it will be found enough to cover the extra traveling, lodging, and extra board for a fortnight's holiday. 'Newspapers, books, etc.—4l. 10s.' should not represent all the reading done in the family, for the man of intellectual tastes and high aims will have provided himself in his days of bachelorhood with something in the shape of a library; besides which he will, unless his neighborhood is scandalously behind the times, live within easy distance of a free library. Education for the children, it will be noticed, has no place in our budget. This is because our typical pair are wise enough to know that the teaching to be got for nothing under the elementary education acts is incomparably better than any private teaching within their means.

"The budget is no imaginary one. It is the outcome of actual experience, and has the special advantage of being applicable to all incomes between 150l. and 200l. It would be totally irrelevant to a man earning 50l. a year less, but the man with 50l. a year more will find no difficulty in expanding the items, especially if his quiver is unduly filled. As it stands, it is a budget of strict necessity, and every extra 5l. available may spell a certain degree of affluence."

A Definition of Sociology

LESTER F. WARD in the *June Popular Science Monthly*, Garrison.
N. Y. Condensed for PUBLIC OPINION

SO far as the definition of sociology is concerned, it is simply the science of society, or the science of social phenomena. All the more specific definitions that have been proposed have created more confusion than they have cleared up. What is needed in sociology is not definitions, but a clear presentation of the scientific principles underlying it. There is one such principle, failure to recognize which causes most of the difficulty in endeavoring to establish the science. This principle, however, is one that also applies to psychology, biology, and all the other sciences classed as complex. This principle may be formulated as follows: In the complex sciences the quality of exactness is only perceptible in their higher generalizations. In sociology, therefore, which is the most complex of the sciences, the laws must be the most highly generalized.

Even in civilized races there are certain things absolutely common to all. The great primary wants are everywhere the same, and they are supplied in sub-

stantially the same way the world over. Forms of government seem greatly to differ, but all governments aim to attain the same end. Political parties are bitterly opposed, but there is much more on which all agree than on which they differ. Creeds, cults, and sects multiply, and seem to present the utmost heterogeneity, but there is a common basis even of belief, and on certain occasions all may, and sometimes do, unite in a common cause. Not only are the common wants of men the same, but their passions are also the same, and those acts growing out of them which are regarded as destructive of the social order and are condemned by law and public opinion are committed in the face of these restraining influences with astonishing regularity. This is not seen by the ordinary observer, and every crime and breach of order is commonly looked upon as exceptional. But when accurate statistics are brought to bear upon this class of social phenomena they prove to be quite as uniform, though not quite so frequent, as the normal operations of life.

But these social, or sociological, laws may themselves be grouped and generalized, and higher laws discovered. If we carry the process far enough we arrive at last at the fundamental law of everything psychic, especially of everything affected by intelligence. This is the law of parsimony. It has its applications in biology, and its homologue in cosmology, but it was first clearly grasped by the political economists, and by many it is regarded as only an economic law. Here it is usually called the law of greatest gain for least effort, and is the basis of scientific economics. But it is much broader than this, and not only plays an important rôle in psychology, but becomes, in that collective psychology which constitutes so nearly the whole of sociology, the scientific cornerstone of that science also. While, in view of the number and variety of causes that combine to determine any single act, no law can be laid down as to how any individual will act under a given set of circumstances, we have a law which determines with absolute certainty how all men act under all circumstances. If there is any apparent exception to this law, we may be sure that some element has been overlooked in the calculation. Just as, in the case of a heavenly body which is observed to move in a manner at variance with the established laws of gravitation and planetary motion, the astronomer does not doubt the universality of those laws, but attributes the phenomena to some undiscovered body in space of the proper size and in the proper position to cause the perturbation, and proceeds to search for that body; so in human society, if there are events that seem at variance with the fundamental sociological law of parsimony, the sociologist may safely trust the law and proceed to discover the cause of the perturbation.

MR. WILLIAM WALDORF ASTOR has again shown the interest he takes in English educational matters by giving £20,000 (\$100,000) for the endowment of four professorships at University college in London. Mr. Astor's gift is one of several large bequests that have recently been made for extending the scope and increasing the efficiency of the University of London and University college, two well known and worthy educational establishments of London. The University of London was, until quite recently, simply an examining body. Recently the governing body decided that the University of London should be reconstructed and become a teaching university, with the hope and aim of establishing in London a great modern university, which would do for intellectual and commercial life what the universities of Germany and America are doing in those countries.

LETTERS & ART

Jean Joseph Benjamin-Constant

AN EMINENT FRENCH ARTIST DIES IN PARIS

BENJAMIN-CONSTANT, the eminent French painter, died in Paris, May 25, at the age of fifty-seven. M. Benjamin-Constant was often alluded to as one of the distinguished painters of France who had not received the Prix de Rome, and he was sometimes referred to as one of the men who would not try for the opportunity offered by the government every year

J. J. BENJAMIN-CONSTANT

to the successful pupil of the Beaux Arts for the four years' study in Italy. The facts are that for the first two years of his student life in Paris he was admitted *en loge*, which means that he was one of the ten pupils chosen from the different concours to be immured in a studio at the state's expense while completing the final work. That he failed at receiving the final prize was no discouragement for so young an artist, and it is doubtful if he ever regretted it. His chances were good for the third year, but the young artist fell under the influence of Fortuny's work, a man whom he had then never met, and he enthusiastically determined to become a colorist. He threw up his academic studies, his chances for the Prix de Rome, and left Paris, not finding there the conditions under which he wished to work. An opportunity presented itself for joining the staff of the French ambassador to Turkey, and he was absent from France several years, visiting Madrid, Granada, and Egypt, in addition to Turkey and the orient. The results of these trips were a wealth of studies that formed the basis for his eastern pictures. "The Women of the Harem" and "Prisoners in Morocco" made his reputation, and were a sensation in the Salon. "The Entry of Mohammed II," which is now in the Luxembourg, gave him a second medal, making him *Hors Concour* in the Salon. Of late years he turned his attention toward portrait painting, with the greatest success. There was no more popular portrait painter in Paris, or one whose time was more eagerly engaged. He often accomplished a portrait with singular rapidity, and during his visit to this country, in 1895, he painted four portraits in less than that number of months. His more noted works include "Hamlet and the King," "Samson and Delilah," "Moorish Butchers at Tangier," "Street Cor-

ner in Tangier," "Terraces at Evening," "Herodias," "Christ in the Tomb," "Day After Victory at the Alhambra," "Tahamy the Caid," and "Justice of the Cherif." His portrait of Queen Victoria is well known.

According to the *Boston Transcript*, his "temperament was distinctly of the southern order, and he was much loved personally for his geniality of nature. His paintings are more splendid in color than harmonious, and in his large canvases there is a riotous exuberance of gorgeous costume, jewelry, marble, mosaic, and arms. He carried this love of brilliant colors and fine textures into his portraits, in which there is a superficial magnificence, and a truly oriental taste for elaborate dress and ornament. The technique of his works is somewhat lacking in firmness of structure, as well as in sobriety of execution, but his rendering of surfaces is extraordinary, particularly in his draperies, flesh, stuffs, hair, etc. His fame will be chiefly connected with his recent portraits of royal and noble personages and with his mural decorations. His ceiling for the new Opéra Comique in Paris was a distinct success. There was much spirit also in his ceiling decoration for the Hotel de Ville."

It is the opinion of the art critic of the Springfield (Mass.) *Republican* that "M. Benjamin-Constant was famous rather for his popularity than his art, for truth to tell, notwithstanding his vogue, he had no strong and lasting qualities; his figure painting, though clever and very showy, was superficial, and his portraits emphatically so. Notwithstanding his gorgeous pigments, Constant was not a true colorist, for he never knew the value of quietude, repose, modulation. His ability was theatrical, and was best dis-

BENJAMIN-CONSTANT'S PORTRAIT OF HIS SONS

played in such big canvases as 'The Entrance of Mohammed II Into Constantinople.' His best portrait, and that to which he gave the profoundest study, was that of the famous London *Times* correspondent, Mr. de Blowitz. It should be said that in several of his stunning compositions he evinced capacities for better work, which, had he not been so fatally popular, might have given him a higher standing."

The Society Drama

AS AN ANTIDOTE FOR SOCIAL AMBITION

A PROPOS of the recent performance of a new society drama in New York city, *Harper's Weekly* comments on the useful function of such plays in revealing the true state of affairs in uppertendom, that is, of course, if the plays are at all true to life. Their effect is declared to be "admirable, since they remove much of the heartburn which in past days has consumed the worthy wight not born to the purple of the socially elect. No really sane person, seeing how things are in high life, would envy the lot of those miserable persons who get so little out of existence, and whose efforts in pursuit of pleasure are more laborious than those which result in real achievement. Anything which serves to mitigate any of the woes of the mass is to be commended, but these plays can not be held to be pleasant by one whose ideas are possibly old-fashioned as to what is nice to look upon."

The writer calls attention to the fact that it is only lately that this sort of play has come in vogue, and finds that a "possible reason for this omission on the part of American playwrights is that we are yet too young a nation to have developed a society that is interesting, or at least have been so until within a few years. Our socially elect have been too busy accumulating the dollars, or those other attributes which constitute their charm and claim to recognition, to have developed interesting dramatic possibilities. Moreover, until late years, society has not been made up of a materialized posterity which is interesting to contemplate, but rather of a hopeful ancestry too strenuous by necessity to fit into polite comedy.

"The idea that the days of the person who for some valid reason is a social leader are filled with misery never occurred to thousands of us who dwell on the outside, and are accustomed to seeing only the fair front of society. Watching the bejeweled millionairesses at the opera, observing their happy faces on the park drive in the afternoons, noting their demeanor at the dinner or supper parties at night, one would have supposed they were a happy and a cheery lot, who knew no care, and whose chiefest vexation of spirit was over some new gown, or some complication with a milliner that was in a large sense of no serious importance. But the hideous fact seems to be that society is all misery, sham, shame, and hypocrisy. Bereaved widows and orphaned children, for whom the world has hitherto had a wholesome and sympathetic respect, are depicted in comedy situations which some persons have even found revolting. Wives seldom, if ever, really love their husbands; husbands plunge themselves into a maelstrom of speculation, dissipation, and actual viciousness; young girls are cold, calculating, horsey, and speak the language of the prize-ring and the stable; domestic felicity is superseded by foreign intrigue; and the only individual who really elicits our admiration to any degree whatsoever is usually a third party—a bachelor who, instead of falling in love with the slangy young woman, or any of the other eligible maidens of his environment, settles upon somebody else's wife as the only woman he could ever love. It is all very queer, and we must confess that we find in it many elements of surprise. Ease of circumstance and high social position, one would think, would conduce to something besides such appalling woe as the playwrights have revealed to us."

Poetry as a Sociological Phenomenon

FRANCIS B. GUMMERE, in the *June Atlantic Monthly*, Boston. Condensed for PUBLIC OPINION

POETRY, high or low, as product of a human impulse and as a constant element in the life of man, belongs to that history which has been defined of late as "concrete sociology." Like war, marriage, worship, magic, personal adornment, and a dozen other institutions of the sort, poetry is an element in human life which seems to go back to the beginnings of society. Trustworthy writers even say it was one of the more conspicuous factors in the making of society; and when one is asked whether poetry, that is, emotional rhythmic utterance, must be regarded as a decreasing factor in contemporary social progress, one faces a question of sociological as well as of literary interest, and one must answer it on broader ground than biographical criticism, in clearer terms than can be furnished by the old hysterics about genius.

Hennequin saw that simply for critical purposes one must reckon not only with the maker of poetry, but with the consumer as well; and the student of poetry at large must go still farther. It is, after all, only a remnant who choose and enjoy great poetry, just as it is only a remnant who follow righteousness in private life and probity in civic standards. But what of the uncritical folk? Only a staff cut from Sophoclean timber will support your lonely dreamer as he makes his way over the marl; but the common-citizen, who does most of the world's work, and who has more to do with the future of poetry than a critic will concede, finds his account in certain smooth, didactic, and mainly cheerful verses which appear in the syndicate newspapers, and will never attain a magazine or an anthology.

It is that poet in every man, about whom Sainte-Beuve discoursed, who can best tell of the future of poetry. The enormous heed paid to the great and solitary poets, as if there could be a poet without an audience or reader, has distorted our vision until we think of poetry as a quite solitary performance, a refuge from the world. Is not poetry really a flight from self and solitude to at least a conventional, imaginative society? Poetry by its very form is a convention, an echo of social consent; with its aid one may forget personal debit and credit in the great account of humanity. Now, as in the beginning, poetry is essentially social; its future is largely a social problem. How far, then, has man ceased to sing in crowds, and taken to thinking by himself? What is the shrinkage, quality as well as quantity, in the proportion of verse to prose since the invention of printing?

Waiting for complete and trustworthy sociological studies which shall answer some of these queries, one may venture an opinion on the general case. Just as one feels that forests may vanish, and yet in some way the mighty watercourses must be fed, so with poetry. Nothing has yet been found to take the place of rhythm as sign of social consent, the union of steps and voices in common action; and whatever intellectual or spiritual consolations may reach the lonely thinker, emotion still drives him back upon the sympathy of man with man. Human sympathy is thus at the heart of every poetic utterance, whether humble or great rhythm is its outward and visible, once audible, sign; and poetry, from this sociological point of view, would therefore seem to be an enduring element in our life.

"Literature" and "Books"June *World's Work*, New York. Excerpt

IN the jeremiads of the overworked critics, the commercialization of literature has come up lately for much discussion. If for "literature" we read "books" the case is easily made out, for the writing and the publishing of books have become commercial industries—of many books at least. Such an industry is as legitimate as the making and the selling of soaps and pills. Sometimes (but far less often than the public imagines) it is a profitable occupation; for the truth is that almost, if not quite, as much money has been lost in recent years in exploiting some sensational novels as has been made by the sale of others. The business is not as safe as (for example) the manufacture of patent medicines, or as the management of a great circus; and it is more closely akin to these occupations than it is to the production or even to the sale of literature.

For literature? That is another thing; and the production of literature, and even its sale, has nothing in common with the manufacture of romances for kitchen and railway consumption. To the impatient writer and to the critic whose desk is loaded down with the new books, the whole world of publishing may seem, for a despondent moment, to have changed; but the despondent mood is not the mood for clear conclusions. The best books are written and are published and are sold and are bought and are read by men and women whose standards have not suffered permanent confusion. They are not many, nor do many of them sell by the half-million, but they endure at least for a season. The writing and the publishing of such books have never been occupations that men have pursued primarily for profit, and there are yet authors and publishers who do their high service to the public because it is a high service, and because they like to do it. Let us not lose our standards of judgment or be confused by ephemeral successes.

Nor is there the slightest reason for the critics' despondency. The best contemporary writers and the best contemporary publishers are faring as well as their predecessors fared—are faring better, indeed. Although a contemporary judgment of books is the most difficult of all judgments to make, there can be little doubt that during the last decade in the great departments of history and fiction, and perhaps in all other departments of literature except poetry, there has been a larger volume and a higher average of production than there was during any preceding decade of American life; and there are as many publishers who have not gone into the circus-ring as there ever were. Nor is it to be forgotten that the largest sales of books in recent years have not been of the sensational novels of the month, but of whole sets of standard writers.

Good English

How MAY IT BE LEARNED?

IN an article in the *Saturday Evening Post*, Professor George R. Carpenter discusses the perplexing problem of correct English. Professor Carpenter suggests that the Yankee "schoolmarm" is responsible for the prevailing idea that there is such a thing as an absolute standard in dealing with the English

language. This idea probably came into existence as a result of a conscious effort to imitate Latin which had become a system of unchanging rules and formulas. "A somewhat similar fallacy," he says, "is that which connects accuracy in the use of our language with the great authors of the past. So far as the looking backward is concerned, this is surely a pessimistic belief. Is the world growing so bad that we must turn to the past rather than to the future for perfection? Nor is it plain why the usage of the man of letters should be the sole test of accuracy, whether the said man of letters be living or dead. Genius gives no such authority over matters of language as royalty, in some countries, is said to possess over matters of ceremony. Our only excuse for looking to literature for standards of correctness is either that literature, being designed for wide circulation, has adopted the most widely current of the forms of expression used by the people, or that, being read by multitudes, it may influence many in favor of its own peculiar linguistic forms."

But what then is accuracy and how may we discover it. "Abstractly we can see that, in fields where accuracy is not to be determined mathematically, correctness describes the usage or procedure most conducive to efficiency in the purpose of the action. We may, then, in the abstract, say that we speak correctly when we use our native language most in accordance with its essential aim, which is that of providing a simple, systematic, and effective method of expression. One language would then differ from another, not only in the diverse words of which it is composed, but in the special system by which these words are combined. The English system is one that does away, so far as possible, with inflection, and avoids exceptional or irregular forms or combinations."

But in many cases there will be found two conflicting usages when there is no question of effectiveness or lucidity between them. "Theory is, then, a dubious guide. Intelligent people have made—and are still making—our language, and the process is the work largely of intelligence; but the large number of conflicting analogies on which our linguistic practice is based can not be reduced to a few simple and definite laws, nor can the action of the whole body of intelligent people be predicted with certainty in any particular instance. It is safer to trust ourselves, for a standard of correctness, not to theory but to fact—to the customs of the language. Correctness, from this point of view, is conformity to the usage of the great body of intelligent people who use our language. It is the language of this body—a body at once broad and select—that we may most justly call, in my opinion, our standard of correctness."

The Secret of RomanceMAURICE FRANCIS EGAN IN *Harper's Magazine*

The dullest man will pluck the wild red rose
That, in our June, flaunts gay on every hedge;
The common birds find food among the sedge—
The eagle, soaring, to the high rock goes.
Color or scent in every flower that grows
Draws meaner men; but he upon the edge
Of human greatness, or who gives the pledge
Of life to fame, the eagle's longing knows.
The queen of Egypt's beauty was not all
That held Mark Antony unto the last:
She read his mystery—the higher dream
He never spoke. Fine souls that yearn and fall,
Like Dante's lovers riding on Hell's blast,
Thirst for great good, but miss the good supreme.

SCIENTIFIC

Autobiographies of the Stars

RALPH BERGENGREN, in the June *Harper's Magazine*, New York. Excerpt

WHEN he has secured photographs of the spectra of the heavenly bodies, the astronomer has overcome the obstacle of space at one bound, for each negative is a star autobiography, an individual record of the various elements whose combined combustion produces the familiar white light of the star. The Harvard observatory now has more than 115,000 of these plates filed away in Cambridge, and the purpose is to make them a record—constantly increasing in completeness—of temporary celestial conditions, each one virtually a single page in a unique history of the stars. Never a day goes by without a chapter being added, and at this very moment the instruments at Cambridge and

Beginning with the first type, practically all of the stars may be arranged in sequence; beginning, even earlier, with the spectrum of a "new star," the classification is almost as complete. The gradual change from type to type is clearly visible when the spectra are set side by side, the characteristic lines of a new star merging into those of a star just becoming nebulous—the second step in stellar development—and the lines of the nebulous spectrum leading gradually to the classifications already briefly suggested, of which the typical stars are Sirius and the sun. Each division is immediately recognizable. So also the constant spectroscopic record of the temporary conditions of individual heavenly bodies—such, for example, as the "long period variables," whose alternately increasing and diminishing brightness was long an unsolved problem—will be seen at once to be of no little value, for it sets forth their development, their composition, even their habits, so to speak, in a permanent form which can be referred to readily.

Actual discovery is not the primary object of the work in spectroscopic photography at the Harvard observatory, but incidentally to it about a hundred and fifty additions have been made to the list of known variables. Six of the eight new stars whose brightness during the last ten years has singled them out from the host of lesser discoveries were found by Mrs. W. P. Fleming, curator of the observatory's collection of plates, in the routine examination which precedes filing and cataloguing. All of the spectroscopic binaries whose components are both bright stars were discovered on the negatives at Cambridge, and the entire class, including countless others, one of whose components is a dark body, must also be included in the enlarged knowledge of astronomy directly due to spectroscopic analysis. Visual astronomy had long before noted the presence in the firmament of double or binary stars. The first six spectroscopic binaries seen at Cambridge are in a class by themselves; the others are practically little Algol variables, and are so numerous that about one in every seven of the visible stars belongs to this recent category.

TYPICAL SPECTRA OF TYPES I AND II

Arequipa, where over a century ago Alexander Humboldt pointed out the present location of Harvard's southern station as an ideal spot for astronomical study, are either taking the latest pictures, or being made ready for tonight's work.

The study of thousands of their photographic spectra discloses a marked similarity in the composition of the stars—that is to say, of practically all the members of the celestial family which, like the sun, owe their brightness to their own intense heat, and not, like the planets, to reflected light. The chief divisions and subdivisions which the astronomers have made are less than two dozen in number, and to some one of them every star examined is found to conform. To the first type, of which the Dog Star is a generally familiar example, belongs the largest proportion. Its spectrum is continuous, and the lines, hundreds in number and very close together, prove the presence of many different elements, and show the star to be a solid incandescent body. The second type, which includes the bright stars Capella and Arcturus, closely resembles the sun in composition, and its spectra would appear like the sections of a rainbow if seen upon as large a scale and in their original colors. In the third division are Alpha Orionis and Alpha Scorpii, while a fourth and fifth embrace stars the majority of which are known only to the astronomer.

Substitutes for Sugar

ALL ARE COAL-TAR PRODUCTS AND ARE DANGEROUS TO HEALTH

IN the course of an article on food adulteration, Dr. de Lavarenne, editor of *La Presse Medicale*, refers to the manner in which the use of saccharin is being extended. It is one of the many bodies made out of coal-tar, and is, of course, not a sugar at all, although many people are quite convinced it is. It is not only used to sweeten beer, but it is now also employed in the manufacture of syrups, jams, lemonades, wines (especially champagne), cider, brandy, pastry, and chocolate. Special substances of this nature are on the market for sweetening cider and brandy. Among these *sucramine* may be mentioned, which is said to be 700 times sweeter than cane sugar. Other products of the same kind are sugar extract (made in Switzerland), cannabin, etc. All these names are misleading, for the substances are only sugars in name, being all

coal-tar derivatives. They are not foods. Moreover, their long-continued use may gravely affect the digestive functions. According to Professor von Bunge, of Basle, saccharin reappears in the saliva after being absorbed, and in this way leads to a persistent sweet taste in the mouth, which interferes with the appetite. Dr. Plugge has shown that the addition of saccharin in artificial digestion experiments with various digestive ferments interfered with the breaking up of food substances. Dulcin, another sweetening body, which has been used as a substitute for saccharin, was given to a dog at the rate of one gram a day. The animal died in three weeks.

The Cause of Death in Martinique and St. Vincent

A QUESTION that arises in the medical mind, on reading the stories of the St. Pierre disaster, is as to the exact cause of death. The newspaper accounts suggest direct burning or overwhelming with the volcanic dust. The *Philadelphia Medical Journal*, discussing this subject, says that "A considerable proportion of the deaths might be due to suffocation by noxious gases. Among such would be carbon dioxide, commonly called carbonic acid, and sulphurous acid. The former is not actively poisonous and would not be the cause of death unless present in considerable proportion, but the latter gas is highly irrespirable and even a small proportion will render air so irritating that suffocation must ensue. One of the most famous eruptions in history, that of Mt. Vesuvius, in A. D. 79, has been described by the younger Pliny from notes left by his uncle, who lost his life in an effort to rescue a friend. The narrator states that the death of the elder Pliny was due to fumes of sulphur. Even making allowance for the imperfect identification of chemical substances at that early period, we may safely assume that by such an expression sulphurous acid was indicated, since this gas was undoubtedly familiar; indeed, it is mentioned in the *Odyssey* as a disinfectant. The Roman writer further adds that the body was untouched by fire. In some of the recent reports from Martinique specific mention is made of the same suffocating influences."

Professor A. E. Verrill, of Yale, in a communication to *Science* (New York) says that during many years of teaching geology he has held in opposition to most text-books on the subject that explosive gases are evolved during violent volcanic eruptions, and that the flames seen by eye witnesses do actually exist, independent of lightning and the glow of the hot lava reflected from the jet of steam, etc., which are usually given as the explanation of the appearance of flames. "My view," he continues, "has been that the heat is sufficient to cause the dissociation of hydrogen and oxygen from the water, on coming suddenly into contact with highly heated lava; and in case of sea-water the chlorine would also be dissociated from the sodium. These gases suddenly ejected with great violence and exploding in the air, above the crater, would produce precisely the effects witnessed on an unusually large scale at Martinique. The people were mostly killed by the sudden explosion of a vast volume of hydrogen and oxygen, which will account for the sudden burning of flesh and clothes, as well as of the buildings and vessels. The chlorine, at the same time, combining with some of the hydrogen would produce hydrochloric acid, a poisonous and suffocating gas, which would quickly kill most of those not instantly destroyed by the explosion."

Steel Cutting with a Carbon Point

CHARLES H. DENNIS, in the *June Everybody's Magazine*, New York
Excerpt

JULIUS E. HASCHKE, an inventor of unusual gifts, has recently hit upon a method of concentrating electrical force so as to produce a destructive current of astonishing power. With the simple apparatus he employs he has driven an automobile up an alley in the rear of a bank, entered that institution, attached his wires, and cut open the steel vault in eight minutes, merely to show the possibilities of his method. He confidently offers to expose to view the contents of any safe made of metal while the second-hand of your watch is making a dozen revolutions or so.

Mr. Haschke, while reticent as to the details of his process, describes it as a new method of combining two electric currents at the carbon electrode in such a manner as to multiply their destructive force to an extent hitherto unknown. The carbon point which discharges the current, is attached to a simple wooden handle, and is thrust through a hole in the top of a

CUTTING IRON AT THE RATE OF A FOOT IN FIVE MINUTES

small, bottomless box of sheet iron, coated with asbestos and having also a wooden handle. This latter contrivance, which swings freely by a cord attached to the ceiling and is steadied by the operator's left hand, serves to shut out most of the withering white light that otherwise would beat into his face, as well as to protect him from the heat and the fiery carbon flakes that leap from the place of contact. The operator's eyes are further guarded by two pairs of dark spectacles, one above the other, and a piece of thick black cloth that is placed between the lenses. Without this protection he would be stricken blind in a very short time, as have been, temporarily, one or two foolhardy onlookers. Mr. Haschke's work is mainly performed with a current generated by a battery of twenty-eight cells. This is sometimes reinforced by a current from a convenient lighting or power plant.

The inventor has applied for patents on three features of his process, which he believes are original with him. Until he is assured that patents will be issued to protect these features from infringement he chooses to keep them secret. In their interrelation mainly lies the unique quality of his invention. The singular blowing or shooting force of the discharge from the carbon point, he says, has never been secured before. No other process produces from electric currents of a

given voltage anything like the destructive power which he has evoked. In fact, no swift results such as his appliances give have been produced before by electricity. In a mysterious black box about a foot square is hidden the secret which he declines to impart even to those who employ his process. This box, with its contents, is leased for a nominal sum when an installation is made, and is not to be opened, except by the owner and inventor.

The Physiological Effect of the Magnet

L'Illustration, Paris. Translated and Condensed for PUBLIC OPINION

UP to the present time the effect of the magnet on normal man has been denied. It seems, however, that the physiological neutrality of the magnet has been a little too prematurely stated and is not in every case admissible except in reference to sensibility. If one explores muscular contractions submitted to the influence of the magnet, as M. Fere has just done, it is seen that there is a very marked and very interesting phenomenon, to wit, that the magnetized bar acts on fatigued muscles and brings back their vigor. This action is accentuated to such a point that the work of a fatigued muscle under the magnetic in-

fluence is found to be raised above that which it was before its contraction. At the same time the subject of the experiment experiences a feeling of repose and of especial comfort. As a remedy for fatigue the magnet shows itself to be susceptible of being utilized by physicians and physiologists, and it is anticipated that the medical profession will sooner or later find means of putting this discovery into practical application.

Various Topics

EDISON announces that his storage battery for automobiles is now a perfect success, and that the horse as a draught animal is doomed. The battery is described in *PUBLIC OPINION*, Vol. XXX, page 784.

IS EPILEPSY A MICROBIAL DISEASE? M. Bra has laid before the Paris académie des sciences the results of numerous microscopic studies of the blood of epileptics from which it appears that immediately before and after an epileptic attack a peculiar micro-organism is invariably present in the blood of the patient. This parasite, when magnified five hundred diameters, becomes visible as a round dot. Often it occurs in pairs and sometimes in strings or chains of many individuals. The detached microbes move very rapidly and the chains sometimes attach themselves by one end to red blood corpuscles. If the discovery of the French savant is confirmed by further researches the idiopathic form of epilepsy will fall into the category of diseases due to micro-organisms.—*Staats Zeitung*.

RELIGIOUS

Creation Legends in Ancient Religions

MORRIS JASTROW, JR., in the June *Harper's Magazine*, New York
Condensed for PUBLIC OPINION

THE theologians of the Euphrates valley, as early at least as the second millennium before our era, grappled with the problems of beginnings, and finally contented themselves with a theory of evolution from chaos to order. On cuneiform tablets which date from the seventh century, B. C., and which represent copies of much older originals, we now read the story how once upon a time, before even heaven or earth existed, the waters covered everything; it was a period when confusion held sway. This confusion is symbolized by a monster known as Tiamat, whose name, signifying "the deep," is a survival of the very primitive notion found in various parts of the world that makes water a primeval element. The end of Tiamat's sway is foreshadowed by the creation of the gods, though we are not told in what way the gods were produced. Creation in the proper sense follows as the result of a conflict between chaos and order, in which the gods eventually prevailed.

The primitive view which regards water as a primeval element underlies the Egyptian creation story, as it does the Babylonian. Ra is the offspring of Nu—the personification of the watery deep. He is pictured as lying asleep in the waters, or as coming out of a world egg that floats on the waters. The bursting of the shell of this plant, pregnant with life, marks the beginning of the cosmic process. The conception suggests an "emanation" theory, and, viewed simply as a metaphor, the picture of a world egg comes closer to a genuine "beginning" than most of the other fancies in ancient religions.

We are approaching the high-water mark of ancient speculation regarding the beginning of things, and there is only one other story of creation among

those found in the religions of antiquity in which a higher point is reached. That other story is the famous one in the first two chapters of Genesis. As a matter of fact, we have two creation stories of Genesis. Confining ourselves to the first story, its points of contact with both the Babylonian and Egyptian legends are too striking to be due to accident. Here, too, we have the beginning of time—chaos pictured as a period of darkness, when the waters held complete sway. The "deep" must be placed under the control of the deity, who is called Elohim, before the work of creation can be undertaken. At the same time it is to be noted that we have not yet found in any Babylonian version an elaborate succession of genuine creative acts, such as form the noteworthy feature of the first chapter of Genesis.

The creation legends of the Phœnicians, so far as known, are a mixture of Greek, Egyptian, and Babylonian views, corresponding to the general eclectic character of the Phœnician religion. They are of little interest, except as illustrating the intercourse between the nations of antiquity, which was far more active and dates back to a much earlier period than is commonly supposed. The earliest source for the religion of India is the hymns of the Rig Veda, the date of which is now fixed at about 1000 B. C. In one of these hymns we encounter as the creator Purusha, who is simply a "magnified man." A pantheistic turn, however, is given to this conception under the influence of which Purusha becomes the "all in all," and is identified with the universe, with what has been and what shall be. In the Brahmanas, which carry us down to c. 500 B. C., the pantheism of the Vedic hymns is on the whole maintained, though with an admixture of mysticism, and with occasional relapses to

more primitive conceptions, while the final word of Vedic literature is one of scepticism.

Greek philosophy sounded the death-knell of creation legends, both primitive and advanced; it swept away the cosmogonies of Egypt and Babylonia and Phoenicia. If that of India survived, it was because the religious development of India was not affected to any extent by Greek thought, while the Hebrew story maintained its hold mainly because of the emphasis it placed upon certain religious doctrines that met with wide acceptance, and partly because of the sublime conception of a single power governing the universe that pervades the tale in Genesis. These features, however, of the Hebrew story must not blind us to the fact that to Greek philosophy belongs the great distinction of being the more direct precursor of the modern scientific theory. The tone of the Hebrew story is spiritual; its spirit is essentially religious, whereas the spirit of Greek philosophy is scientific.

Denominational Colleges in the United States

Independent, New York

THERE are in the United States, says Secretary Ray, of the Presbyterian Board of Aid for Colleges, 105 Baptist colleges and universities, 66 Methodist, 44 Congregational, and 39 Presbyterian. This includes colleges for women. We add that there are 61 Roman Catholic colleges, all for men; 24 Lutheran colleges, 15 Disciples, 9 United Brethren, and 7 Protestant Episcopal, of which 3 are for women; and a host of minor sects are represented, while many other colleges claim to be unsectarian, but are under some religious control. Now it can not be that all these colleges are needed. They must be interfering with each other, even in their own denominational lines. Thus New Jersey has 3 Roman Catholic colleges, Maryland 4, and the District of Columbia 4. Iowa is credited with 25 colleges, of which 4 are Presbyterian, and 6 Methodist. Missouri has 26 colleges, of which 4 are Baptist, 4 Methodist, and 3 Disciple. This is quite too large a supply, but it does not equal the 41 colleges of Pennsylvania or the 38 of Ohio.

When we consider the property and productive endowment, Dr. Ray's figures look large. He credits to the 44 Congregational colleges, \$29,668,000; to the 105 Baptist colleges, \$28,653,000; to the 66 Methodist, \$25,725,000, and to the 39 Presbyterian, \$15,868,000. In the west, the line being drawn so as to include Michigan, Illinois, Arkansas, and Texas, the average income of 42 Baptist institutions is \$25,700; of 40 Methodist, \$22,731; of 23 Congregational, \$17,268, and of 22 Presbyterian, \$10,485. Of the 21 colleges in Kansas, 9 have no productive funds, and 50 others have \$10,000, or less, and, omitting the University of Kansas, supported by the state, only 2 have over \$40,000 of productive funds. The largest amount is \$80,000. Iowa is an older and richer state; but of its 25 colleges, 5 have no endowment whatever, and 12 others have \$50,000 or less. Of the 8 remaining colleges, one is the state university; Iowa college (Congregational) has \$350,000 endowment; Drake university (Disciple) has \$153,000; Parsons college (Presbyterian) has \$151,000; Tabor college (Congregational) has \$103,000, and Cornell college (Methodist) has \$100,000. No other college has as much as \$60,000, but the low-water mark is reached by Graceland college (Latter Day Saints), whose total income was \$710, and which claims 6 teachers and 23 students.

The Salvation Army Meets in Annual Conference

THE twenty-second annual conference of the Salvation Army was held in New York city, May 21 to 28. The most important meeting of the conference, or the Pan-American congress as it is called in army circles, was the celebration of the twenty-second anniversary of the founding of the organization, held in Carnegie hall, May 27. Commander Booth-Tucker presided, and was assisted by Mrs. Booth-Tucker, both of whom made addresses. Forty cadets from the New York training home were commissioned. The entire national and provincial staff were present, and nearly two thousand field officers and soldiers. The commander reviewed briefly the work done by the Salvation Army in this country, and defended the methods used by the army. A collection for the work in this

COMMANDER BOOTH-TUCKER

MRS. BOOTH-TUCKER

country was taken up, and it was announced that \$3,099 had been collected. The commander gave some interesting statistics showing the increase in the various phases of the army's activity during the last six years. In that time the number of officers has increased from 2,000 to 3,000, and the corps, outposts, and social institutions from six hundred and twenty to nine hundred and seven. The total membership of the organization is about 30,000, although it fluctuates greatly owing to the enlistment of new recruits and the loss of old members to the churches. The philanthropic work of the army is receiving each year more attention. During the period of six years covered in the commander's report, more than \$350,000 have been expended in philanthropic work. As a result of this expenditure, the number of men lodged over night has increased from 600 a year six years ago, to 9,000 in the year that has just ended. The total number of beds furnished in six years was 3,000,000. The army now maintains twenty-one rescue homes for girls, as against seven six years ago. In that time over 1,500 girls have been inmates of these homes.

SPIRITUALISTS celebrated recently in Philadelphia the fiftieth anniversary of the founding of the first Spiritualist association. The New York *Evening Post* remarks: "This is about the only fifty-year-old association in the country which is able to marshal all its charter members to a fifty-year anniversary. Quite a number of the charter members were present in the flesh, and the rest were there spiritualistically, which is quite as satisfactory, according to trustworthy accounts."

Death of Jesus in the Light of Contemporary Science

DR. CABANES, in *La Revue*, Paris. Translated and Condensed for PUBLIC OPINION

THOSE who have doubted that Jesus died on the cross have given the following reasons for their belief: 1 The crucifixion was not sufficiently long to produce death; further, it was not aggravated by breaking the bones of the legs, as Jesus was spared this. 2 The wounds of Jesus were not sufficiently serious to produce death. 3 Jesus rested on the cross in a state of apparent death and he was living when taken down.

Was the crucifixion sufficient to produce death, and at the end of how many hours does death generally occur? The duration of the crucifixion was evidently variable and depended a great deal on the state of resistance of the subject. Because of the nerves which are abundant in the palms of the hands and the soles of the feet, it is not to be doubted that the impaling was very painful. It is also certain that the "emotions, appearances before the judges, ill treatments," the flagellations, and all that followed sorely tried Jesus, and it is known that he was incapable of carrying his cross. However, we also know that this is not sufficient to cause death after a short space of time, as there are cases in which persons have remained many hours on the cross without death intervening. By these examples it appears that crucifixion alone could not have produced the death of Jesus, and in reference to the wounds produced by the nails, these wounds being the result of crushing, the hemorrhage was small. A burning fever might possibly occur which would be manifested by an intense thirst, but the flow of blood could not be sufficient to cause death. Death in this case is preceded by a comatose condition which would be inconsistent with the cry uttered in a loud voice by Jesus shortly before his last breath. All the commentators of the Gospels further agree that Jesus did not remain more than from three to six hours on the cross and death can not be produced by an exposure of this duration to this mode of torture.

The generally accepted version of the lance wound received by Jesus is that the blow was struck on the left side and that there flowed from the wound water mingled with blood. It has been correctly remarked that blood does not flow from a corpse, and therefore if blood followed the lance stroke, Jesus must have been alive; further, in order that the blow might have killed the dying man, it must have injured a vital organ. It must be observed that a lance directed upward and from right to left could not reach the right-hand cavities of the heart without first opening the peritoneal cavity, traversing the liver, the pericardium and perhaps the pleura. We must therefore ask how the few hundred grammes of blood which a right ventricle could contain, could penetrate to the exterior of the body after such a great wound. Also with those who die slowly there is found a distended heart in which the blood has very rapidly coagulated, and it must follow that if a flood of the liquid appeared on the side of Jesus it could not have come from the heart. With regard to the vena cava, its situation is too far back to have allowed it to be touched by the lance. If the wound had been in the stomach a lesion of the digestive tube would have been disclosed by an ejection of blood mingled with alimentary matter, either from the mouth or the opening of the wound, or at least by a discharge of blood into the abdominal cavity. Had the liver been touched the symptoms of

an internal hemorrhage would have been observed, as in the case of President Carnot, in whose case the blow of the poignard directed downward, perforated the liver and the portal vein, inducing a state of coma, whereas Jesus, we have been told, cried out with a loud voice. We thus see that death was not due to the lance wound or to the torture of crucifixion, as so often stated.

Now with regard to syncope which occurs in cases of crucifixion and which can make an apparent state of death seem a true state of death, this is easily explained, the stupid and ignorant soldiers taking for death that which was only a loss of consciousness. Further, the legs and arms were bound so tightly with thick and rigid ropes that the physiological consequence of such compression would be a violent rushing of blood to the heart and head which would be quite capable of producing apoplectic conditions as well as swooning.

The singular faculty of certain subjects to remain inhumed for several days, even for several weeks without death ensuing is well known, occurring chiefly among the Indian fakirs. The case of Jesus is in no way similar, however, to that of the fakir, the state of this latter requiring very complex conditions, which conditions did not exist for Jesus, and therefore we must conclude that if there was apparent death in the case of Jesus, this was produced by syncope. This condition easily arises when the subject is standing, and Jesus rested on the cross in this attitude, it being also a well-known fact that syncope is produced after strong moral emotions, great sorrow, wounds, or a serious traumatic lesion of the limbs. The reader may observe that "if there was syncope this might have been mortal." True, but it might not have been prolonged, and under the care which was lavished upon Jesus by Nicodemus and Joseph of Arimathea, the one crucified could easily have been resuscitated.

Boisrond Canal as president, was formed at Hayti....An outbreak of bubonic plague is reported at Majunga, a port of Madagascar....The Cuban congress passed a bill granting President Palma \$300,000 for current expenses of government....Jean Joseph Benjamin-Constant, the eminent French painter, died in Paris....Henri Gréville (Alice Marie Céleste Durand) the French authoress, is dead.

TUESDAY, MAY 27

DOMESTIC.—Ratifications of an extradition treaty with Chile were exchanged at the state department by Secretary Hay and Señor Walker-Martinez, the Chilean minister to the United States....The Ohio Republican state convention exhibited an almost unanimous sentiment in favor of Senator Hanna....The French mission was formally welcomed to New York by Mayor Low and the board of aldermen, and there was a parade of the national guard and sailors from the warships in their honor....A special service was held at the British embassy in Washington over the remains of Lord Pauncefote.

FOREIGN.—Further volcanic disturbances were reported from Martinique; there were heavy rainfalls at St. Vincent....A rehearsal of the coronation procession took place at London....King Christian of Denmark granted an extension of the time for ratification of the treaty for the sale of the Danish West Indies....The German chancellor announced that a vigorous policy will be pursued in the Germanization of Poland....President Castro formed a new cabinet in Venezuela.

WEDNESDAY, MAY 28

DOMESTIC.—General Leonard Wood arrived in Washington, and was heartily congratulated by President Roosevelt on his good work as governor-general of Cuba....The Kansas Republican convention, at Wichita, nominated a state ticket headed by ex-Congressman W. J. Bailey for governor; the platform warmly endorsed the national administration, the sentiment for Roosevelt being a marked feature of the convention....The Ohio Republican state convention adjourned after adopting a platform and nominating a state ticket.

....The Havana Tobacco company was incorporated at Trenton, with a capital of \$35,000,000....The conference on international arbitration met at Mohonk lake.

FOREIGN.—The French cabinet resigned, owing to the decision of Premier Waldeck-Rousseau to retire from politics....Prof. Adolph Kussmaul, who is credited with introducing the stomach pump in medical practice, died at Heidelberg, Germany....Lord Brassey, in an address to the London chamber of commerce, said that Britain's position as a sea power was beyond the reach of competition.

THURSDAY, MAY 29

DOMESTIC.—Chattanooga reported a slight earthquake....Mrs. Nettie O. Craven, who claimed to be the widow of Senator James G. Fair, withdrew her suits against the estate....Dr. Charles A. Peabody, superintendent of the Worcester city hospital for twenty years, was sent to prison for embezzling \$9,000 of the hospital's funds....Gen. Felipe Buencamino, late secretary of war to Aguinaldo, called on the president and praised Governor Taft and the army in the Philippines.

FOREIGN.—Mr. Balfour made a statement in the house of commons, indicating that peace in South Africa would soon be declared....American plans for tube railway lines were approved by committees of the house of lords....The seventh international Red Cross convention was opened at St. Petersburg....Emperor William received the shah of Persia at Potsdam.

FRIDAY, MAY 30

DOMESTIC.—There was general observance of Memorial day throughout the country; in New York a magnificent soldiers' and sailors' monument was unveiled on Riverside drive, while a monument to the Confederate dead was unveiled at Kansas City; the day was also observed in a number of foreign countries; in Paris wreaths were laid on the tomb of Lafayette, and in Havana harbor the wreck of the battleship *Maine* was decorated....President Roosevelt spoke at Arlington national cemetery in answer to charges of cruelty against the army, which, he said, is fighting to bring about peace and freedom in the Philippines.

FOREIGN.—The king's birthday was celebrated in Great Britain in a loyal manner; at the ceremony of trooping the colors in London the king presented a color to the Irish Guards....The shah of Persia witnessed the annual parade of the Berlin garrison.

SATURDAY, MAY 31

DOMESTIC.—Secretary Root, by direction of the president, issued an order

reducing the total strength of the army to 66,497 men, a decrease of 10,790....Señor Buencamino, a Filipino leader, appeared before the house committee on insular affairs and made a statement in favor of American sovereignty.

FOREIGN.—President Steyn of the Orange Free State has suffered a stroke of paralysis, and will take no further part in the peace conference of the burghers at Vereeniging....A threatening crowd broke into the grounds at the cricket match between English and Australian teams at Birmingham and many persons were injured.

SUNDAY, JUNE 1

DOMESTIC.—The French battleship *Gaulois* sailed from Boston with some of the members of the French mission on board; the Count de Rochambeau and several others, however, remained for a more extended visit in this country....Four persons were killed and eleven injured in a fire at Rockaway beach which destroyed a score of hotels and other buildings....James Brown Lord, the architect, died after a long illness from cancer of the liver.

FOREIGN.—An official cable dispatch from Lord Kitchener received by the British war office announced that a document containing terms of surrender was signed in Pretoria on Saturday evening by all the Boer representatives, as well as by Lords Milner and Kitchener....The new French chamber of deputies met in Paris; M. Bourgeois, candidate of the Radical groups, defeated M. Deschanel for presiding officer.

Reflections of a Sick Man

When the doctor comes he always laughs at you. When you get hungry you are ashamed to acknowledge it, and, if your nurse is very particular, you are liable to suffer from hunger. When the medicine makes you sick and you complain to the doctor, he says: "That's what I expected; that's what I intended it to do." People come around the house you never saw before; the milkman, the iceman, and the washwoman. The neighbors never worry about your illness as much as you thought they would. When there is a knock on the door you think it is an inquiring friend, and try to look as pale and wan as possible, and then discover that it is a little girl who wants to borrow butter. What a lot of strange dogs play in your yard during the day! And occasionally there is a cow, and you wonder that the police are not more active. Along about the second day you begin to wonder that some of the neighbors don't go out and kill a quail for you; something delicate to tempt your appetite.—*Atchison Globe*.

The Books of The Week

AN ONLOOKER'S NOTE-BOOK. By the author of "Collections and Recollections." Cloth, pp. 310, \$2.25. New York: Harper & Brothers.

THERE are other clues to the authorship of this book than the statement that it is by "one of England's best known statesmen," but it is not necessary to pursue the inquiry. It suffices to say that the views here expressed are in themselves evidence of wide acquaintance and wide experience in the world, to which, the author says, he now rarely returns—thus explaining another of the book's qualities, its judicial and paternal tone. Chivalry, decorum, democracy, monarchy, luxury and simplicity, superstition, these are some of the subjects discussed by this onlooker, who includes among the vices of society irreligiousness, worship of money, frantic extravagance, indifference to all moral issues, cynical absorption of pleasure and self-indulgence, and impatience of restraint, privacy, and decorum. And yet the onlooker is not a cynic nor is he pessimistic as to the future; he insists only upon looking facts in the face, and hoping for the best. Thus he says of democracy that "it has not brought back the golden age; it has sunk from the glorious altitude of a divine ideal to the humble station of a decent and fairly workable arrangement." The essays have a whimsical quality that makes them very readable; they teem with anecdotes and illustrations, and on the whole are as clever as anything of their kind.

REMINISCENCES OF A DRAMATIC CRITIC. With an Essay on the Art of Henry Irving. By Henry Austin Clapp. Cloth, pp. 241, \$1.75 net. Boston: Houghton, Mifflin & Co.

MR. CLAPP'S recollections are, for the most part, of plays and players that have long since vanished from the American stage. Few today know anything about William Warren, Charles Fechter, J. L. Toole, or Charles Mathews. His point of view is that of the critic of the dramatic art pure and simple, with no regard to the personal lives or idiosyncracies of the actors and actresses criticized. He says of himself that he has been careful to have little or no personal acquaintance with the people of the stage in the hope that he could thus avoid the bias that such an intimacy is sure to breed. In his praise of the departed it is unavoidable that he should sometimes speak slightly of the American stage of today, but his tone is generally optimistic and hopeful. The American is to his mind the ideal actor, as combining the thoughtfulness and steadfastness of the English and the sureness and vivacity of touch of the French. His essay on Sir Henry Irving, is an attempt to explain why an

actor with so many fatal faults should have climbed so high in his profession.

HISTORY OF ENGLISH LITERATURE. By William Vaughn Moody and Robert Morss Lovett. Cloth, pp. 433, \$1.25, net. New York: Chas. Scribner's Sons.

IT is not often that one comes upon a better introduction to the study of English literature than this. One advantage is in the division of the subject; in addition to treating the authors chronologically, care is taken to show their proper relation to the general life of the time and their relative importance in the development of the particular school which they represent. This frees the student from the absurd tyranny of dates under which many have suffered, and gives him at the same time a view of the entire field, which is much more important than to be master of the date of Dryden's birth or the full circumstances of the death of Shelley. It comes as near to being a study of the psychology and the sociology of a national literature as an elementary work could come.

THE DEER FAMILY. By Theodore Roosevelt, T. S. Van Dyke, D. G. Elliot, and A. J. Stone. Cloth, pp. 334, \$2. New York: Macmillan Co. "THIS volume," says President Roosevelt in a foreword, "is meant for the lover of the wild, free, lonely life of the wilderness, and of the hardy pastimes known to the sojourners therein." It is to be presumed that the volume is representative of the American Sportsman's Library (edited by Caspar Whitney) which it auspiciously introduces, and if this proves to be the case the sportsman's book shelves will have received some important and fascinating additions. The chapters on the deer and antelope of North America are written by President Roosevelt; Mr. Van Dyke writes of the deer and elk of the Pacific coast, Mr. Elliot of the caribou, and Mr. Stone of the moose. Sportsmen's yarns and experiences connect the descriptive text and make a very readable book even for those who do not yearn for the chase.

THE BEST OF BALZAC. Edited by Alexander Jessup. Cloth, pp. 315, \$1.25. Boston: L. C. Page & Co.

IF the reader has the fact well in mind at the outset that it is impossible to give the best of any author—and especially of such an author as Balzac—within the compass of one small volume, he is not likely to suffer serious harm from reading the present work. It may fairly be said that the best of the "Best" is "Adieu," as exhibiting to the fullest Balzac's power of visualization; the other stories hardly merit consideration as representative of the work of the great author. But whatever they may be in themselves, these stories will have been published to some purpose if they happen to lead some few to a wider reading of the real "best of Balzac."

THE DESERT AND THE SOWN. By Mary Hallock Foote. Cloth, pp. 313, \$1.50. Boston: Houghton, Mifflin & Co.

A LESSON in renunciation, in self-sacrifice, in reaping what one has not sown alone. The character of Paul Bogardus, the son of a field hand and of a descendant of the Knickerbockers who marries the daughter of the commandant of a Western army post, consists too much of good intentions, but his gentle desire for martyrdom is well portrayed. The character of his father, who comes into the story as John the packer, a blameless murderer and a willing exile, is genuinely heroic. The story hangs together well and the action marches steadily forward from beginning to end. Nothing is overdone and yet when one has read it through to the end, there is no feeling that anything has been left unsaid that was important to the development of the whole.

JOHN KENADIE. By Ripley D. Saunders. Cloth, pp. 295, \$1.50. Boston: Houghton, Mifflin & Co.

JOHN KENADIE is a peculiar mixture of cotton-planter, bravo, and poet. The hatred of an old feud between the families of his father and his mother reappears in the quarrels between his cousin and himself, although they are not aware of the relationship until the moment of the final meeting in which they are both seriously injured. The immediate cause of their last and almost fatal fight is, of course, a pretty girl, whose name, of course, is Betty. A family feud, two handsome rivals, and a girl named Betty are all the ingredients necessary for a good southern novel as it is written nowadays. Mr. Saunders has not failed to make the most of his opportunities.

MARGARET VINCENT. By Mrs. W. K. Clifford. Cloth, pp. 356, \$1.50. New York: Harper & Brothers.

THE story, the plot, is here subordinated to the study of two very interesting characters—a social and religious apostate heir to a peerage, who buries himself in a country village, marries a farmer's widow, and lives content, and his wife, who is inferior to the husband only in superficialities. There are other more familiar types of men and women in the book, and all are exceptionally well drawn, but the story, and particularly the love story (which only indirectly concerns the principal characters), is very, very attenuated.

BYLOW HILL. By George W. Cable. Cloth, pp. 215, \$1.25. New York: Charles Scribner's Sons.

THE best that can be said of Mr. Cable's latest book is that it is a good study in jealousy, but it is even less interesting than most books of the same sort. It is legitimate to complain that a story is "unpleasant" when its unpleasantness is unrelieved, when this is a sole characteristic. And these are our grounds for criticism of Mr. Cable's book. It is as far removed from his most familiar and most appreciated vein as a book could well be.

WHAT IS RELIGION? And Other New Articles and Letters. By Lyof N. Tolstoy. Cloth, pp. 177, 60 cents, net. New York: T. Y. Crowell & Co.

THE religion of Tolstoy is based upon the Golden Rule. To do unto others as you would that others should do unto you is to his mind the fulfillment of the law and the commandments. The present form of Christianity, as taught by the churches of today, he rejects as having been warped and distorted through the efforts of men to disprove the essential equality of men before God, which was taught by the early Christians. This one principle of unselfish service he finds running through all beliefs and forming the only possible foundation for a universal religion. The other essays in the present volume are of slight interest, although the one on religious tolerance is worth reading as illustrating the extent to which plain speaking can go even in tyrannical Russia. The theories of the author suffer from the vagueness and incoherence of their expression in many places. The idea of a religion that shall be divorced entirely from both theology and science is a difficult one for the average mind to grasp.

HER SERENE HIGHNESS. By David Graham Phillips. Cloth, pp. 193, \$1.50. New York: Harper & Brothers.

A CAPITAL travesty on the Ruritania school of romance. It is sprightly, clever, with only a delicate hint here and there that the author is poking fun at Anthony Hope and his imitators. A young American invades the kingdom of His Royal Highness the Grand Duke of Zweitenbourg to possess himself of a picture called "The Spaniard," falsely attributed to Velasquez. He gets the picture and, in the bargain, Her Serene Highness, the Duchess Erica. It takes but three days for him to conquer the Zweitenbourgians, but in those three busy days he rescues his beloved from a wild boar, fights a duel, recovers from a mortal wound, storms the castle, and carries off his treasures.

LEE AT APPOMATTOX, and Other Papers, by Charles Francis Adams. Cloth, pp. 387, \$1.50. Boston: Houghton, Mifflin & Co.

MR. ADAMS here collects five papers and addresses: The Treaty of Washington, by far the longest and most important of the papers; Lee at Appomattox; The British "Change of Heart"; An Undeveloped Function; and A Plea for Military History. The purpose of the title article is to show that it was General Lee who ended the civil war after Appomattox and thus put a sudden end to warfare that might have continued indefinitely but for his determination. An Undeveloped Function is a plea for a higher tone in political discussion, and the paper on military history criticizes the defective treatment by historians of military operations. Mr. Adams compels interest in his subject, whatever it may be, by the breadth of his knowledge and his skill in presenting his arguments.

SCHOOLS

TO SCHOOL PRINCIPALS the fact is of interest that the readers of PUBLIC OPINION are people having a disposition to take advantage of the best that offers and financially able to gratify their aspirations along educational lines.

TO PUBLIC OPINION READERS the fact is of interest that only schools of the highest standing are advertised in these columns.

THE MISSES ELY'S SCHOOL FOR GIRLS.
Riverside Drive, 85th and 86th Streets, New York.

MT. PLEASANT MILITARY ACADEMY
Founded as the War of 1812 closed. Still maintains its honest and honorable record of nearly a century. For its year book, which you will like, address
Oakington-on-Hudson, N. Y. THE PRINCIPAL.

"THE BOOK OF THE NEW CENTURY"
will be sent on application.

AMERICAN WRITING MACHINE COMPANY,
343 BROADWAY, NEW YORK.

THE GOVERNMENT. What It Is and What It Does. By Salter Storrs Clark. Cloth, pp. 304, 75 cents. New York: American Book Company.

ACCORDING to the statement of the author in his introductory chapter, "The purpose of this book is two-fold; to show the practical part which modern government takes in everyday life; and to teach the meaning and value of that which is at once the birthright, the best achievement, and the destiny of the United States—government by the people." It should be especially useful for students beginning the study of civil government.

STRANGERS AT THE GATE. Tales of Russian Jewry. By Samuel Gordon. Cloth, pp. 458. Philadelphia: The Jewish Publication Society of America.

THIS is an excellent collection of short stories of the life of the Jews in Russia. The author has caught the note of sadness that underlies all the other characteristics of the oppressed race in that land, but has intermingled with it so much of the lighter and more cheerful strain that the stories make very agreeable reading. Some good things are said for the Russians themselves, and the whole effect is pleasing.

HERALDS OF EMPIRE. By A. C. Laut. Cloth, pp. 372, \$1.50. New York: D. Appleton & Co.

PIERRE RADISSON and his various alliances with the French government and the Hudson's Bay company are the best of material for a romance of the new world, but it must be admitted that the author has not made the best use of her opportunities. There is too much strutting and posing and loud talk and too little important action. Radisson really dealt in much larger affairs than are here described.

LOVE NEVER FAILETH. By Carnegie Simpson. Cloth, pp. 206, \$1.25. New York: Fleming H. Revell & Co.

MR. SIMPSON's sub-title is "An Emotion Touched by Moralities," and his book is an argument, on the basis of everyday life, in support of the old assertion that the greatest thing in the world is love. This certainly proves to be the case with Mr. Simpson's hero.

FABLES OF THE ELITE. By Dorothy Dix. Cloth, pp. 261, \$1. New York: R. F. Fenno & Co.

A LITTLE philosophy very well concealed in the midst of a great deal of wearisome slang.

AT SUNWICH PORT. By W. W. Jacobs. Cloth, pp. 351, \$1.50. New York: Charles Scribner's Sons.

A NOVEL with no other purpose than the amusement of its readers—a purpose which is admirably achieved.

STEPHEN HOLTON. By Charles Felton Pidgin. Cloth, pp. 312, \$1.50. Boston: L. C. Page & Co.

A STORY with the evils of intemperance for a moral.

If it isn't an Eastman, it isn't a Kodak

\$6.00

A new folding KODAK

for the pocket—almost for the vest pocket, at six dollars. Makes pictures $1\frac{1}{8} \times 2\frac{1}{2}$ inches, loads in daylight, has a fine meniscus lens, brilliant finder, automatic shutter—in fact, has the "Kodak quality" all the way through.

No. 0 Folding Pocket Kodak, for pictures $1\frac{1}{8} \times 2\frac{1}{2}$ inches, . . . \$6.00

KROEH'S LIVING METHOD FOR LEARNING

How to Think in French

Sent, postpaid, on receipt of \$1.00

The most successful means yet devised for learning and teaching how to speak French.

"I am sure the book will accomplish precisely what is set to be its purpose."—Prof. James W. Bright, Johns Hopkins University.

"You have done a great and beautiful work in the publication of your manuals."—Bishop John H. Vincent, Chancellor of Chautauqua.

How to Think in German

Sent, postpaid, on receipt of \$1.50

As a practical book to aid in quickly acquiring the power of correct and fluent speaking of the German language, this work has no equal."—Scientific American, Nov 11, 1893.

How to Think in Spanish

Sent, postpaid, on receipt of \$1.50.

"The learner is not obliged to think of rules or of English words when he wishes to speak Spanish."—N. Y. School Journal, July 14, 1894.

Prof. C. F. KROEH, Publisher
Stevens Institute of Technology
Hoboken, N. J.

THE TRUE AARON BURR: A Biographical Sketch. By Charles Burr Todd. Cloth, pp. 77, 50 cents. New York: A. S. Barnes & Co.

A BELATED and unconvincing, though at the same time a very interesting attempt to rehabilitate Aaron Burr. We doubt if this and other attempts in the same direction can be successful so long as the authors of them find it necessary to belittle various contemporaries in order that Burr's acts may be explained away.

ANIMAL ACTIVITIES. By Nathaniel S. French, Ph.D. Cloth, pp. 262, \$1.20. New York: Longmans, Green & Co.

THIS is a first book in zoölogy the aim of which is to interest, and so the better to instruct, pupils and especially young people in the study of living animals. The author is a teacher of zoölogy in the Roxbury high school, and presents here the result of fifteen years' experience in the classroom.

ELEMENTARY PHYSICAL GEOGRAPHY. By William Morris Davis. Cloth, pp. 401 and plates, \$1.40. Boston: Ginn and Co.

PROFESSOR DAVIS offers here a condensation of his "Physical Geography," prepared to meet the demand for a text book covering the subject in its most advanced scientific development, while preserving at the same time an elementary form. The book is exceptionally well illustrated.

THE GENTLEMAN IN LITERATURE. By William A. Quayle. Cloth, pp. 32, 25 cents, net. Cincinnati: Jennings & Pye.

WITH Don Quixote as a model the author discusses the treatment of the qualities of the gentleman by various authors in all ages.

THE TYPICAL AMERICAN. By Charles Edward Locke. Cloth, pp. 28, 25 cents, net. Cincinnati: Jennings & Pye.

THE typical American is, of course, Washington. This volume also contains a short essay on America's New Mission and Opportunity.

A NINETEENTH CENTURY CRUSADER. By Charles Edward Locke. Cloth, pp. 36, 25 cents, net. Cincinnati: Jennings & Pye.

A BRIEF sketch of the life of Gladstone with a supplementary essay on The Last Anglo-Saxon Invasion.

WILLIAM MCKINLEY: Memorial Address by John Hay, Delivered in the Capitol, February 27th, 1902, by Invitation of the Congress. Boards, pp. 30, 28 cents. New York: T. Y. Crowell & Co.

THE WAGER. By L. MacManus. Cloth, pp. 306, \$1.25. New York: F. M. Buckles & Co.

A STORY of the siege of Limerick by the forces of William III in 1690.

ARMAGEDDON. By Valentine Brown. Cloth, pp. 151. Portland, Oregon: Published by the Author.

The sparkle of cut glass

that constitutes so much of its charm cannot be preserved indefinitely by the mere use of soap and water. The beautiful facets and prisms take on after a time a dull and lifeless look beyond the reach of ordinary cleansing and polishing agents. There is one thing however that will restore the original fire and brilliancy to cut glass quickly and easily, and that is an application of **COLONIAL SPIRITS**.

COLONIAL SPIRITS is put up in sealed packages only, and if your dealer should not happen to keep it in stock send us 25 cents and we will send you a sample bottle by express, carriage paid. We will also include one of our pretty souvenirs if you will give us the name of your dealer.

BERRY BROTHERS, Limited, DETROIT

BUSINESS AND FINANCE

The Business Situation Selected and Condensed for PUBLIC OPINION THE GENERAL SITUATION

Dun's Review, New York, May 31

Ease in the money market, favorable crop prospects, and confidence abroad are the encouraging factors which outweigh the disturbing elements of labor conflicts and unseasonable weather for retail trade at many points. Effects of the depressing influences are less keenly felt because they are believed to be only temporary, and confidence is expressed that with the resumption of work and normal temperature there will be a return to the liberal distribution of merchandise. Despite the short corn crop last year, the large yield of wheat and high prices for both resulted in the greatest value for the two crops ever recorded, which means that the agricultural sections are prosperous, and other industries must share the good fortune by increased sales of products. Collections are prompt, as a rule, and payments through the principal clearing houses are well maintained. Notwithstanding diminished speculation, there was an increase of 1.2 per cent at New York compared with last year's exchanges, while an increase of 22.6 per cent appears in comparison with 1899. At other leading cities there was a gain of 6.1 per cent over 1901 and an increase of 20.4 per cent over 1899. Returns as to transportation show that losses in

THREE DAYS

Then Postum Saved Him

It makes rather solid friends of people when they discover a liquid food that will save life in extreme cases of need.

Speaking of Postum Food Coffee, a lady in Toledo, O., says, "For over five years now I have used Postum Coffee entirely in place of the ordinary coffee or tea.

I used to have stomach trouble and every time I drank a cup of ordinary coffee suffered the greatest distress. My troubles left when I left off coffee and began using Postum.

The most severe test I know of was when my husband was down with gastric typhoid fever. His stomach would retain nothing: we tried milk and various other drinks. Everything we put into his stomach would come up in less than three minutes. After the third day of this kind of work I concluded to give him some Postum Coffee. He drank it and relished it and retained it, and for four weeks he lived on Postum and nothing else to speak of. You can depend upon it that Postum gained some good friends, for Husband would have died if it had not been for the nourishment afforded by Postum Coffee." Name given by Postum Co., Battle Creek, Mich.

grain movement are being more than made up elsewhere, railway earnings thus far reported for May showing a gain of 6.5 per cent over last year and 19 per cent over 1900.

IRON AND STEEL

Efforts to place contracts for 100,000 tons of pig iron, deliverable in the second quarter of 1903, indicate the confidence of the leading consumer as to the future of this industry. There is no cessation of activity at the mills, and finished products are forwarded to importunate consumers as rapidly as possible. In the light of recent statistics, showing domestic production far in excess of all previous records, it is interesting to compare the official statement of April imports that has just appeared. Despite the unprecedented home output, it is found that 116,731 tons of iron ore were imported, against 44,725 tons a year ago; 19,067 tons of pig iron, compared with 5,335; 26,849,903 pounds of steel billets, bars, etc., against 977,473; 1,205,063 pounds of sheets, plates, etc., against 324,696, and 12,171,161 pounds of tin plates, against 7,826,217 in April, 1901.

COTTON AND WOOL

Increased orders for dry goods and clothing are features in western trade this week, while reorder business is affected by cool weather. Eastern jobbing centers report dry goods quiet. Cotton goods are strong in sympathy with the strength in the raw material. Rather more interest is displayed in wool, and a good volume of business could be done at concessions, which are not forthcoming, however, in view of the small supplies.

ports are 25,900,861 bushels, against 163,964,381 bushels last season. Realization of the straitened condition of supplies stimulated prices of cereals early. Manipulation in corn was especially marked, but larger primary receipts of this grain induced a reaction by which most of the early advance was lost. Wheat closed slightly lower.

FAILURES

Business failures for the week number 163, as against 144 in this week last year.

Financial

Bradstreet's, New York, May 31

THE MONEY MARKET

The movement of funds to New York has not been on such a large scale this week as was the case in the preceding one, the estimated gain up to Thursday having been about \$3,000,000. At the same time, the supply in the loan market has been large, and lenders found it necessary to make concessions in order to obtain business of a desirable character. Call money early in the week fell to 3 per cent and renewals have generally been made on that basis. Time money was dull, with large amounts offered at 4@4½ per cent for

SUMMER COMFORT

Get Ready for Warm Weather

By a complete change in breakfast, at this time of the year, one can put the body right to go through the summer comfortably.

Leave off meat, potatoes and heavy body heating foods, and use the food that will nourish the body and give reserve force to the brain and nervous system.

A most appetizing and healthful breakfast can be made on Grape-Nuts and cream, some fruit and perhaps two soft boiled eggs—this meal will furnish full strength and nourishment up to the next and has a remarkable effect on the body during hot weather. Remember the cells of the body you are now building will last you into summer, so be sure and build the kind that tend to keep a cool body and level head.

One pound of Grape-Nuts has more nourishment—that the system will absorb—than ten pounds of meat, without any of the internal heat of meat that a person wishes to avoid during the warm season; its rich, nutty flavor added to the delicate sweet of the grape sugar makes a dish pleasing to the most critical taste.

You receive Grape-Nuts from the grocer ready to serve, as it has been thoroughly cooked at the factory by food experts, and this saves heat from cooking and time and exertion necessary in preparing ordinary food.

A change from the old breakfast to one like this will refresh and invigorate the system in a surprising manner and permit you to enjoy the pleasures of summer in a cool, comfortable fashion when your neighbors, differently fed, will be "hot."

all periods, and industrial securities are again freely taken as collateral. There is, however, only a moderate inquiry for such accommodation from stock-market borrowers. In commercial paper more activity is seen, with the rates for prime double names at 4@4½ per cent.

THE STOCK MARKET

The New York stock market has been very dull, the fact that the stock exchange holiday included both Friday and Saturday checking speculation. The tone on Thursday was very strong, with advances in the hard-coal stocks on reports about the ending of the strike. There were also advances in Union Pacific, Hocking Valley shares, and Canadian Pacific. Good crop news from the west and the continued increases in railroad earnings tend to keep up bullish sentiment. The London market has been strong on the prospect of peace in South Africa, and foreign interests have bought American stocks, while financiers here are said to have purchased British consols freely in London. Foreign exchange is weak and lower at 4.86¼@4.87 for demand sterling.

Various Topics

The highest price ever paid for cattle in Kansas City was recorded when two carloads, averaging 1,475 pounds, sold at \$7.50 the 100 pounds.

The John A. Roebling's Sons company, Trenton, New Jersey, has increased the wages of its 4,000 employees 10 per cent. The increase is a voluntary one.

In the first quarter of 1902 France increased its imports of merchandise \$14,626,000. All of this increase came in raw materials of manufacture, of which \$17,610,000 more were imported than in the same quarter of 1901.

An amendment to the by-laws of the New York cotton exchange provides that any member of the exchange who shall be interested in, or who shall act as the representative of, or who shall knowingly execute any order for a bucket shop shall, upon conviction, be expelled from membership in the exchange.

Some details regarding the syndicate formed to underwrite the shipping combination, known as the navigation syndicate, have become public. The subscribers to the syndicate agree to furnish \$50,000,000 in cash, and for this they will receive new securities as follows: New 5 per cent bonds, \$50,000,000; new preferred stock, \$2,500,000; new common stock, \$25,000,000.

J. P. Morgan & Co. announce that the terms for the purchase of the Chicago, Indianapolis & Louisville ("Monon") by the Louisville & Nashville and Southern railway company are that the latter will accept all or any part, but not less than 51 per cent of the stock of the Chicago, Indianapolis & Louisville, paying therefor joint 4 per cent collateral trust bonds at 90 for the preferred and 78 for the common stock.

LAVILLES REMEDIES

In the inflammatory form relief is soon obtained by the use of Lavilles Liquor, and by persistent use of Lavilles Pills the recurring attacks can be prevented.

Number 24.
Volume XXXII

The Week

Thursday
June 12, 1902

EVENTS of great importance have been hard to find in the news columns of the papers this week, and in the editorial columns there has been only discussion of topics out of which interest was thrashed long since. The coal strike is one of several disagreeable subjects which still hold the attention of the public. The struggle is now in its sixth week with no signs of settlement in sight. Upon the merits of the controversy there is nothing new to say, nor have there been any new developments of much importance beyond the extension of the strike to the soft coal mines of the Virginias and isolated cases of violence. The mine owners have managed so far to keep their properties in fair condition in spite of the strike of the engineers, and so far the public is the principal sufferer on account of the suspension of coal production.

SOME new statistics show that the scene of the present strike is the source of a far greater proportion of our coal supplies than is generally realized. The total coal production in the past year was 67,471,667 short tons of hard coal and 224,769,091 of soft coal, a total of 292,240,758 tons. Of this amount Pennsylvania produced all the anthracite and over 80,000,000 tons of bituminous, more than half of all the coal mined in the United States, more by several million tons than was mined in Great Britain, five times the output of Germany, and eight times as much as the total production of France. With these figures before us it is easy to understand why a cessation of work in the Pennsylvania coal fields means a tremendous disturbance.

GOVERNOR TAFT'S mission to the Vatican has attracted some attention this week. Its object is plainly set forth in the paragraph of his instructions which says: "Your errand will not be in any sense or degree diplomatic in its nature, but will be purely a business matter in negotiating as governor of the Philippines for the purchase of property from the owners thereof and the settlement of land titles, in such a manner as to contribute to the best interests of the people of the islands." In other words it is Governor Taft's business to effect a purchase of the church lands and to secure the replacement of the friars by some other agents of the church, the friars having, deservedly or undeservedly, gained the ill will of the Filipinos. There are said to be good prospects that Governor Taft will succeed in his object. He has been received cordially by Cardinal Rampolla, the papal secretary, and by the pope, who assured him of their sincere wish for an early solution of the friar problem.

JUST as it began to look as though David B. Hill and his friends would have things all their own way this year in New York city and state, the "Liberal Democratic" party appeared on the scene. Without warning over two hundred of its delegates, representing all parts of the state, met at Cooper Union on Saturday, nominated a full state ticket, and adopted a platform. The body was called a convention, but to an outsider it sounded and looked like a David B. Hill denunciation meeting, this statesman getting even more and harder knocks than the Republican party and the trusts, both of which were trenchantly attacked. Past experience does not show, however, that anyone need be greatly alarmed by irregular political movements of the sort typified by the Liberal Democrats.

THE house now has an opportunity to show what it can do in the matter of Philippine legislation. The house has a bill which it prefers to the bill passed by the senate because the latter is less definite in its terms. The objects sought by the two bills are substantially the same and they embody the same view of the best policy to be pursued, and

there appears to be no good reason why an agreement between the two houses should not be reached without much delay. Last week's report of the progress of civil government in the islands shows that definite legislation is urgently called for in the interests of the United States no less than in the interests of the Filipinos.

MR. MORGAN'S steamship combine is to have a rival—so it is said. There is no very definite information on the point as yet, but it looks as though alarm over the morganizing of British ships was about to take practical shape in the formation of a rival combination backed by the British and colonial governments and including the Canadian Pacific railroad, the Cunard line, and other steamship companies. Fast freighters of huge tonnage are to be built, we are told, and Milford Haven, Wales, is to be the home port of the fleet. It is not reported that Mr. Morgan has lost any sleep over the threatened competition. Another projected combination that is likely to have an important effect on the shipping industry is that of the principal shipbuilders of the Atlantic and Pacific coasts, with Lewis Nixon at the head of it.

FRANCE has a new cabinet, and to the surprise of observers in this country it was obtained without a ripple of excitement even among the deputies themselves. It is a Radical cabinet from first to last, but this does not mean that there is even a general agreement between its members. The minister of finance would not accept until the minister of marine and the minister of public works in the first distribution of portfolios had changed places, because the latter favored the state purchase of railways—one of the principal features of the radical program. The minister of finance also opposes the progressive income tax, another leading feature of the radical campaign. Here is reason enough why the new cabinet should illustrate the saying, "Come easy, go easy," unless M. Rouvier should prove to be another Waldeck-Rousseau. The premier, Senator Combes, seems to be of minor importance.

MOST of the discussion of the terms on which peace was brought about in South Africa ignores the fact that Great Britain has not conceded any vital point. She has been so generous in minor matters that some commentators go so far as to say that Great Britain gets all the peace and the Boers get everything else, the intimation being that England paid a big price for the cessation of a wearying war. This view of the matter overlooks the fact that the main issue, the independence of the two Boer republics, has been decided in favor of Great Britain. There is no longer a Transvaal Republic and there is only an Orange River Colony—having accomplished the destruction of these states, Great Britain can well afford to let Boer school children learn Dutch if they think they want to.

THE war is over then, and on Great Britain's own terms as to vital points. But the war is yet to be paid for. It was supposed that because discussion of the budget was suspended when the end of the war became imminent that there would be a material reduction in taxation in the event of peace. These expectations were too sanguine; soldiers must be brought home, the Boer prisoners must be repatriated, their farms must be restocked, sinking-fund payments must be resumed, Lord Kitchener must have his \$250,000 reward, and there are many other bills to pay. Even the duty on food products is to be retained, but this taxation may be kept in furtherance of Mr. Chamberlain's Zollverein scheme rather than on account of the revenue it produces. Whatever their purpose, these taxes are extremely unpopular and they may make serious trouble for the government before long.

AMERICAN

The Oregon Election

THE REPUBLICANS ELECT THEIR TICKET EXCEPT THE CANDIDATE FOR GOVERNOR

GEORGE E. CHAMBERLAIN

OREGON voted on June 2 for a full state ticket and for two members of congress. As it has happened before in this state, the Democratic candidate for governor, in this case George E. Chamberlain, was elected, while the Republicans won the legislature, which will choose a successor to Senator Simon, and elected the two members of congress—T. H. Tongue and J. W. Williamson. Mr. Chamberlain has a plurality of about 350, while the

Republican pluralities range from 5,000 to 10,000.

The chief issue in the contest was the question of expansion, the Republican platform asserting that "the sovereignty of the United States should be maintained in the islands under such local self-government as the people may be or may become fitted to participate in," and adding, "We therefore declare against all proposals looking to the retirement of the United States from the Philippine islands;" while the Democrats, after condemning the denial by a Republican congress of free trade to the people of those islands, declared that "we believe that the true policy is to prepare the people of those islands for self-government as speedily as possible, and when so prepared to grant them their independence, retaining such coaling stations and ports as may be necessary to protect those islands from foreign interference and to maintain our trade relations in the orient."

A feature of the election was the submission of a constitutional amendment applying the principle of the initiative and referendum in legislative matters. This amendment recites that, while the legislative power is vested in a legislative assembly, consisting of a senate and house of representatives, yet "the people reserve to themselves power to propose laws and amendments to the constitution and to enact or reject the same at the polls, independent of the legislative assembly, and also reserve power at their own option to approve or reject at the polls any act of the legislative assembly." There seems to have been no opposition to the amendment.

"The state," says the *Portland Oregonian* (Rep.), "has refused to announce her indifference to the opportunities of Pacific commerce; she has refused to tell the country to abandon the Philippines. She has voted to refrain from throwing herself out of the currents of our active national life—as she would have done if she had declared against the policy which has given the country the basis of its business activity and established public confidence in the present and future." "Is the northwest in favor of a policy of scuttle?" that was the question the people of Oregon were called upon to answer, the *Tacoma Ledger* (Rep.) says, and the reply was an emphatic negative.

The *New York Press* (Rep.) says that "Democrats may learn from the Oregon election that their Amigo issue, if persisted in, will beat them in every state and district where honest Americanism is the inspiration of our citizenship, but it is necessary for Republicans also to realize what is so plainly indicated in Oregon—that the party must have its chosen candidates and that its issues must be sound Republican doctrine." The *World* (Dem.) calls the result a drawn battle. "This result was to be expected as an endorsement of the expansionist policy, which is for geographical reasons popular on the Pacific coast. Under the circumstances the choice of a Democratic governor is a considerable victory."

"As the governor of Oregon will have nothing to do with federal affairs, while the two congressmen will, the Oregon election may be deemed an endorsement of the administration, despite Mr. Chamberlain's success," the *Boston Transcript* says. "That a mixed result should have been achieved, giving Democrats as well as Republicans a taste of victory in a state where the Republican majority is about 13,000, will encourage the Democracy in other states," is the opinion of the *Philadelphia Record* (Dem.).

The Indiana Democrats

PROCEEDINGS OF THEIR STATE CONVENTION

THE Indiana Democratic state convention met at Indianapolis June 4. The platform contains no mention of Bryan, 16 to 1, nor past platforms. It condemns trusts and the Dingley law, and demands tariff for revenue only. It arraigns the Republicans for not giving the interstate commerce commission ample power, condemns the ship subsidy bill, and is opposed to the bill for an asset currency. The platform also condemns the administration's Philippine policy, saying on this point: "The Filipinos can not be citizens without endangering our civilization; they can not be subjects without imperilling our form of government; and as we are not willing to surrender our civilization to convert the republic into an empire we favor an immediate declaration of the nation's purpose to assist the Filipinos to establish for themselves an independent government, protecting them from outside interference, and securing to this country such commercial and naval rights and advantages as would be just and fully and fairly protect American interests."

"The ticket is clean and strong, and will satisfy everybody," says the *Indianapolis Sentinel* (Dem.). "The platform is a strong arraignment of the Republican party on national issues, and will appeal to thoughtful men of all parties. The party is now harmoniously launched in the campaign, and its prospects for success are of the brightest." The *Indianapolis News* (Ind.) thinks the convention was "notable chiefly for its practical repudiation of the Bryan leadership." This, the *News* says, is evidence of great progress. The *New York World* (Dem.) believes that "the Indiana Democracy has set a fine example by thus facing to the front and addressing itself to living questions only."

The Passage of the Philippine Bill

AFTER SEVEN WEEKS' DEBATE

AFTER seven weeks' debate the senate on June 3 passed the Philippine civil government bill by a vote of 48 to 30, Senators Hoar, Mason, and Wellington voting against the bill, and Senator McLaurin, of Alabama, voting with the Republicans.

The *New York World*, a hostile critic, thus sums up the meaning of the passage of the bill: "For practical purposes this bill makes no material change in the status of the Philippines and their 9,000,000 people. They will continue to live under a so-called civil government which is none of their choosing, and which could not be maintained over them for a week were it not for its background of bayonets and artillery. This bill simply provides for the indefinite prolongation of that kind of government, and with it the indefinite prolongation of our military occupation of the islands at a cost of considerably over \$100,000,000 a year. It will do nothing toward permanently pacifying the islands and releasing us from the burdens and perplexities of holding and ruling them by armed force, unless it is supplemented by a plain declaration of our ultimate purpose to let the Filipinos do in their islands what we have let the Cubans do in theirs—govern themselves." The measure now goes to the house, which has already before it a similar bill, which is preferred by many to the Lodge enactment. "Under the house bill the president is to decide when the insurrection has been put down, a census is to be taken, a legislature elected and a time is set when it shall meet. On the whole, it is a well-considered working plan as compared with the roundabout, indeterminate scheme of Senator Lodge, which, as a matter of fact, leaves the whole question of Philippine government in the air." This is the opinion of the Philadelphia *North American* (Ind. Rep.), while the Baltimore *Herald* (Ind.) thinks that "Every possible right of citizenship is extended to the natives of the Philippine islands, but the hand of the government is strengthened by a clause excepting the right of bearing arms and the right of trial by jury from the American bill of rights.

Compared with the Spanish laws under which the Filipinos were taxed and bullied for centuries, the present bill is freedom itself, and beyond this is the certainty that the American laws will be administered by clean hands."

The Democratic anti-expansion objections to the bill are well known. As the *Pittsburg Post* (Dem.) puts it, "The intent and purpose of the bill is to hold the Philippines permanently as a colonial possession, governed by such agents, civil and military, as we may send to them, and this is the material issue the bill presents, and on which the American people will record their judgment before the year closes. It is the issue of imperialism. We do not want the islands as colonies, territories, or states." The *Brooklyn Citizen* (Dem.) expresses this view: "The congress of the United States, in short, abdicates all of its constitutional powers over territory held by the United States, and so far at least as the government of these islands is concerned, transforms an American president into an autocrat." The *Rochester Post Express* (Rep.) objects to the presence in the bill of the silver coinage section. "A provision, which, if it is objectionable here is objectionable in the Philippines."

Reducing the Army

THE TOTAL FORCE REDUCED TO 66,497

THE Boston *Herald* thinks no one will be "grieved because Secretary Root, by direction of the president, has reduced the standard total force of the army from 77,287 men to 66,497, a reduction of 10,790. The standard total of 77,287 was fixed a year ago. Whether the army has actually had so many in it meanwhile, we do not know; but we doubt it. The reduction made is chiefly in the infantry arm, the companies being reduced from 104 men to eighty, and the total for the thirty infantry regiments of twelve companies each from 38,520 to 29,880. How much the diminution of the area and activity of the war in the Philippines has to do with the reduction is not stated, but it is said that it is the purpose to have one-third of the entire army in the Philippines all the time. That would be about 22,000 men. This is a

FEATHERING HIS NEST—*New York Tribune*

LEARNING TO RIDE—*Minneapolis Journal*

smaller quota than has been employed there during the last three years, and indicates an expectation of comparatively peaceful conditions." The *Baltimore Sun* commends the reduction, and says that "this country does not seem to need a large force continually under arms. By nature it is a land of peace, whose citizens, however, are always ready to fight in a good cause."

Representation and Colonial Government

PAUL S. REINSCH, in the *June Forum*, New York
Condensed for PUBLIC OPINION

THE experience of European nations with their dependencies points to the conclusion that it is a difficult matter to adapt representative institutions to colonies within which the white element is small, or to which the mother country is not ready to grant practical autonomy, with all that this implies.

Where the administration of the colony is responsible to the home government only, and is not fettered by the exigencies of local politics, it may act on its own resources as an impartial arbiter between the various classes of the population. It will listen to their suggestions and complaints and take the advice of representative men from the various interests and classes. In this matter the natives may be successfully protected against the exploiting ventures of the colonists from abroad, while the latter, in turn, are given every reasonable safeguard and encouragement in their commercial and industrial undertakings.

When, however, an elective legislature is established in such a colony, it will represent either the white minority or the native masses. If the property qualification is high, the natives will be almost entirely unrepresented; and experience has shown that their interests can not safely be entrusted to a legislature elected by the European minority. In cases, on the other hand, where the electorate is based upon a low qualification or upon manhood suffrage—a system which has been tried in the smaller French colonies only—the industrial and commercial development of the colony is endangered by unfavorable legislative activity.

It is at times most distressing to any one who feels a strong sympathy with the natives and a degree of admiration for their social life, to seem in a discussion of this matter to hold an opinion adverse to the desire for progress and for political rights among the natives of such regions as India and Africa. But it is impossible to avoid the conclusion that what to some societies is the breath of life becomes to others a deadly poison, and that a society in which the individual has not yet developed, and left the bonds of clan, caste, or family, would have its morale utterly destroyed and be reduced to calamitous confusion by the introduction of western individualistic institutions. But not only would the premature introduction of such a system injure social life and destroy its foundations; it would, moreover, lead to manifold abuses, manipulations, and suppressions of truth and right, in its application. For wherever institutions are given to a population which is not by historic evolution prepared to receive them, they can not be used properly, but will enable jobbers and shifters to ply their arts to the detriment of the commonwealth. And so either the unscrupulous will be given an opportunity, or the charter of free institutions must be rendered a dead letter by ignoring the voice of the representative councils—which is no less demoralizing.

When we glance over the whole vast area of territory within which the western powers now exercise political authority, we see that it falls into three classes of countries: (1) Those adapted for European settlement—South Africa, Canada, and Australia, where institutions of self-government have been, or soon will be, established; (2) those in the tropics inhabited by a population whose native social institutions have been destroyed—the West Indies and parts of the Philippines; and (3) the extensive regions occupied by native societies in central and northern Africa, Asia, and the islands of Oceanica. The continued use of the crown colony system seems to be advisable in small military and naval posts only, and in such dependencies where no adequate native institutions exist, and whose population can not be organized into constituencies according to interests. Everywhere else more flexible institutions are found to be desirable.

In general it may be said that the colonies where some form of the protectorate has been consistently and faithfully applied have been the most successful ventures. Thus France looks upon Tunis as her model colonial establishment; Great Britain has reason to be proud of her success in the Indian and Malaysian protectorates; and the great work accomplished by these methods in Java is matter of common knowledge. This experience shows that nowhere in the world can the natives be helped by having even the most perfect institutions worked out for them; the only manner to benefit them in reality is to give them an opportunity to help themselves by developing in a natural manner their own customs and institutions.

Lynching and Philippine Barbarities

THE PRESIDENT'S SPEECH—THE GALLINGER RESOLUTION

PRESIDENT ROOSEVELT'S comparison in his Arlington speech between lynchings and barbarities in the Philippines (see PUBLIC OPINION, 5 June, page 712), and Senator Gallinger's resolution providing for a congressional investigation of lynchings, are grouped together by the *New Orleans States* (Dem.) as twin efforts to divert attention from the disclosures relative to the cruel treatment of Filipinos by American soldiers. After disposing of Mr. Gallinger's proposition, the *States* says that "The Booker Washington dinner incident revealed Mr. Roosevelt in his true colors, and that incident has been supplemented by his Decoration Day speech, in which he made a strenuous effort to make lynchings in the south serve as palliation for the atrocities committed in the Philippines. The effort was strenuous enough, but it fell far short of the mark. It did nothing more than to emphasize the fact that the Philippine policy of the Republican party is indefensible and to show that the administration is on the defensive and striving desperately to avert a storm of popular condemnation." The *Memphis Commercial Appeal* (Dem.) also takes this view: "'It is true,' says Mr. Roosevelt in effect, 'that Smith did issue an order to kill and burn; but then a Negro ravisher was burned in Texas the other day.' Now these incidents have nothing more to do with one another than they have with the volcanic eruption in Martinique. If a million Negro ravishers were burned in the streets of New York it would have no bearing on the question whether Smith's order was or was not in violation of the rules of civilized war."

fare. Mr. Roosevelt knows full well that a lynching in Texas will not add a cubit to or subtract a cubit from the measure of Smith's guilt, and in lugging in an extraneous issue he convicts himself of intellectual dishonesty, and demonstrates the innate puerility of his reasoning powers."

The Philadelphia *Times* (Ind. Dem.) especially deplores "the outcry about the president's attack upon 'The South,' as though the south were still a separate section in which the president of the United States had no lawful interest or concern. All this is wearying and disheartening. What the president said about lynching is true, and it applied no more to the south than to any other section in which this lawless barbarity is tolerated. The only way to make lynching a sectional issue is by a sectional defense of it, or a sectional resentment of endeavors to abate it." The Chicago *Journal* (Ind.) can "see no occasion whatever for the southern people to become angry at the allusion to lynching made by the president in his Memorial Day address. He was illustrating his argument in regard to the alleged barbarisms of our soldiers in the Philippines by showing that human nature was not exempt anywhere from seeking retaliation and revenge for wrongs inflicted."

Mr. Gallinger's resolution directs the judiciary committee to inquire "whether, under the laws and constitution of the country, there is any remedy for the evil." Mr. Gallinger admitted that he doubted if the federal government could do anything in the premises, but he argued that an authoritative statement from the judiciary committee would be valuable. "It is doubtful," the Cincinnati *Enquirer* (Dem.) thinks, "if the judiciary committee can give any instruction on the subject. It can not make a plain case any plainer. Congress might sentimentally resolve against lynching as it might against any other evil, and let its expression of disapproval have whatever influence it might on the people, or on the states in the line of more stringent legislation or better execution of the existing state laws. It doesn't require a lawyer, or a whole judiciary committee, to determine that a lynching in a state is a matter for state treatment." The Detroit *News-Tribune* (Ind.) says "It is hardly necessary to discuss the constitutional aspects of the

implied proposition for federal enactments on a subject strictly within the reserved jurisdiction of the state, because it is impossible to believe that sober men will undertake to correct, by law-making, an evil which consists in the concerted and often communal defiance of all law."

Congressional Summary

CONGRESS DAY BY DAY

JUNE 2.—In the senate, Mr. Lodge (Rep., Mass.) offered a number of amendments designed to perfect the Philippine Civil government bill; debate continued under the fifteen-minute rule. The house adopted a resolution of thanks to Secretary Hay for his McKinley address, forty-six Democrats voting against it.

JUNE 3.—The senate passed the Philippine government bill by a vote of forty-eight to thirty. Three Republicans—Messrs. Hoar (Mass.), Mason (Ills.), and Wellington (Md.)—voted against the measure, and one Democrat—Mr. McLaurin (S. C.)—voted for it. All amendments offered by the minority were rejected. The house began consideration of the "Anti-anarchy bill."

JUNE 4.—Consideration of the Isthmian Canal bill began in the senate, Mr. Morgan (Dem., Ala.) speaking in favor of the Nicaragua route. Debate on the Anti-anarchy bill continued in the house.

JUNE 5.—Debate on the Isthmian Canal bill continued in the senate, Mr. Hanna (Rep., O.) speaking in favor of the Panama, and Mr. Mitchell (Rep., Ore.) for the Nicaragua route; the Military Academy Appropriation bill was passed. The house continued to debate the Anti-anarchy bill.

JUNE 6.—Mr. Hanna continued his speech in favor of the Panama Canal route. In the house, debate on the Anti-anarchy bill closed; Mr. Richardson (Dem., Ala.) attacked President Roosevelt for his Memorial Day address.

JUNE 7.—In the senate, Mr. Mitchell (Rep., Ore.) spoke in favor of the Nicaragua canal route, and Mr. Depew (Rep., N. Y.) advocated the establishment of a forest reserve in the southern Appalachians.

A CARRIE NATION IN THE CAPITOL—Minneapolis Journal

THE BIG "BLACK DEMON"—New York World

The New British Ambassador

THE HON. MICHAEL HENRY HERBERT APPOINTED TO SUCCEED
LORD PAUNCEFOTE

CONTRARY to London advices to the effect that the selection of a successor to Lord Pauncefoot as British ambassador to the United States would be delayed until fall, the appointment of the Hon. Michael Henry Herbert, secretary of the embassy at Paris, to this post was announced last Thursday. Mr. Herbert is in his forty-fifth year. He acted as chargé d'affaires at Washington in 1888, and was promoted to be secretary of legation in 1892, leaving Washington the following year for The Hague. In 1888 he married Miss Leila Wilson, of New York. The appointment is warmly welcomed by the administration, and "Socially as well as officially," says the

THE HON. MICHAEL HENRY HERBERT

New York Times, "the coming of the new ambassador will give pleasure in Washington and in New York, where he is already well known. It is to the mutual advantage of the two governments that a gentleman already measurably familiar with the duties of his post and on terms with the officers of the United States government is to be charged with the transaction of international business in behalf of that foreign power in whom we feel the deepest interest and whose friendship we value so highly." The Washington Star thinks that "The appointment of Hon. Michael Henry Herbert evidences the care which the government at London is exercising to maintain the pleasant relations now existing between the two countries. The New York Evening Post believes "It has been, to England, at least—where the selections have been carefully made—a fortunate dispensation that has given us not diplomats, but engaging excursionists in diplomacy; since the expansiveness that our ministers at London now are required to maintain has generally brought them a sound personal popularity which has been more valuable than the treaties they have negotiated. In the Hon. Michael Herbert she gives us what is, after all, more to the point, a fine example of her own type."

The question will simply be:

Will Two boss One or will One boss Two

Or will Somebody Else—you might guess Who—

Will Somebody Else boss Three?—*Puck*.

IT COULDN'T FAIL.—If Mr. Carnegie really wants to die poor, he had much better remain in this country and eat plenty of meat.—*Philadelphia Press*.

PEACE IN SOUTH AFRICA leaves Uncle Sam lonesome. He is the only "world-power" at war. And he really likes peace more than all the rest of 'em put together.—*Cleveland Plain Dealer*.

ENGLAND can make its preparation for a coronation in complete confidence that this is one branch of industry in which it need not fear American competition.—*Washington Star*.

JUNE 14 IS FLAG DAY.—It was on that day that congress, sitting in Philadelphia, in 1777, enacted that the flag of the thirteen United States be thirteen stripes, alternate red and white; that the union be thirteen stars, white in a blue field, representing a new constellation."

AN EXPERIMENT, PERHAPS.—"I see by the paper," said the grocer, "that the congressmen have passed a resolution that no more liquor can be sold in the capitol building."

"I reckon," said Mr. Meddergrass, absentmindedly reaching into the box of gingersnaps, "that this here Phillypeen investigation has led them to try that there water cure on themselves."—*Baltimore American*.

THE LIBERAL DEMOCRATS of New York held a state convention at Cooper Union on Saturday and nominated a state ticket headed by E. L. Ryder for governor. The Liberal Democratic party has as its component parts the old Bryan Democracy, the Chicago Platform Democracy, and the old-time Populists. The platform opposes the present "unjust distribution" of wealth, due to the "monopoly of natural opportunities and the creation of special privileges;" says that the hope of the nation lies only in the perpetuation of Democratic institutions; reaffirms the national platforms of 1896 and 1900; says the principles of the Declaration of Independence should be extended to the Philippines; demands public ownership and operation of public utilities; declares that the right to issue and coin money is solely the function of the government; demands that only land values be taxed; favors the initiative and referendum; calls for direct nominations for elective offices at the primaries; criticizes court decisions declaring the labor law unconstitutional. David B. Hill was denounced by all the speakers, and the name of W. J. Bryan was received with acclaim.

SENSATIONAL SEVERANCE of the cordial relations existing between President Roosevelt and Senator Hanna is the possible result of charges filed against federal officeholders in Cleveland, Ohio, by Representative Burton, of that district. The president is determined to investigate. Senator Hanna is strongly opposed to such a course. Friends of both say a serious break is threatened. Should this break come it would be the most spectacular and disastrous breach between a president and chairman of the national committee of the ruling party that has occurred since the falling out of President Harrison and Senator Quay, who managed the campaign in which he was elected. The retirement of Representative Burton from the congressional fight in Cleveland is only an incident. Mr. Burton is looked upon by party managers as one of the ablest men in the house. He is chairman of the river and harbor committee and is regarded as a safe and sound counsellor in national party affairs. Mr. Burton is concerned in the threatened break between the president and Senator Hanna because he brought personally to the attention of the president charges of the pernicious activity on the part of the federal officials in Cleveland. These officers are Charles F. Leach, collector of customs; Frank M. Chandler, United States marshal, and W. R. Hopkins, deputy United States marshal, all of whom are Hanna men and were appointed at his suggestion. One other officer involved is C. C. Dewstoe, postmaster of Cleveland, who was appointed at Mr. Burton's suggestion. Civil Service Commissioner James R. Garfield will go to Cleveland.

FOREIGN

The Terms of Peace in South Africa

COMMENT ON THE PROTOCOL SIGNED MAY 31

THE terms upon which peace has been brought about in South Africa are in brief as follows:

The burgher forces lay down their arms and hand over all the rifles, guns, and ammunition of war in their possession or under their control. Rifles are allowed for protection.

All prisoners are to be brought back so soon as possible to South Africa without loss of liberty or property.

No action to be taken against prisoners, except where they are guilty of breaches of the rules of war.

Dutch is to be taught in the schools, if desired by the parents, and used in the courts, if necessary.

Military occupation is to be withdrawn as soon as possible, and self-government substituted.

There is to be no tax on the Transvaal to pay the cost of the war.

The sum of three millions sterling is to be provided for restocking the Boers' farms.

Rebels are liable to trial, according to the law of the colony to which they belong. The rank and file will be disfranchised for life. The death penalty will not be inflicted.

From the pro-Boer *Daily News*, which says the terms embody "peace with reason," to the ultra-patriotic *Daily Mail* and *Telegraph*, which express entire satisfaction, the London press is a unit in approving the terms granted to the Boers. The *Chronicle* declares that "The close of the war has converted us all to pro-Boerism. England, as a whole, has taken her triumph as she took her disaster; namely, with a sobriety and a discretion which should help our former enemies over the remaining rough places to lasting friendship." By sobriety the *Chronicle* does not, it may be presumed, mean the tumultuous celebrations which took place throughout England on the day the peace was announced.

There is some difference of opinion among American papers as to the meaning of the liberality of the terms now granted. Some papers, like the Boston

Post, consider only the fact that "Great Britain gains every point of the demands by which, three years ago, she forced the Boer republics into war." Other papers believe that the terms would not have been granted had the Boers made a less vigorous fight. This is the opinion of the Baltimore *American* and the Cleveland *Plain Dealer*, the latter saying: "That the terms are so lenient to the Boers is due to their stubborn resistance, and in that way the apparently hopeless struggle of the last year or more has been well repaid. But for the determined battle against overwhelming odds and the readiness to fight to the point of annihilation rather than submit unconditionally, the conditions in the agreement of May 31 would never have been granted." The Toronto *Globe* insists that "If there had been no terms, if the capitulation had been unconditional, the treatment of the burghers would have been quite as generous as they have secured by negotiation."

However this may be, there is no difference of opinion as to the general nature of the peace terms. "It is a settlement," the New York *Tribune* says, "that makes for conciliation and for friendship between the races which have hitherto been antagonistic. It is full of high promise for the future of South Africa." The *Post* notes how "The furious and futile proclamations of Mr. Chamberlain in September last, threatening confiscation and exile, were quietly thrown into the waste-basket, and terms of peace arranged on a rational and even generous basis. If the war was a Conservative war, the peace is a Liberal peace. It is so in the sense that the terms finally made are substantially those which Mr. Bryce and John Morley and the other spokesmen for the old Liberal tradition have been urging upon an unwilling government for more than a year. However the thing was brought about, whether by pressure from the king or the dawning of

ROME, JUNE 2.—On the receipt of the news of peace in South Africa the Pope expressed his joy, adding: "I hope to close my eyes on world-wide peace"—*Phila. North American*

PEACE WITH HONOR—*New York World*

a better mind in the cabinet, the final settlement is as magnanimous as it is judicious." The *Philadelphia Record* thinks that "The terms of peace bear eloquent witness on the one hand to bravery unparalleled wringing concessions from a powerful foe by its very deserving; on the other to a generous magnanimity that maintains national honor while extending the hand of brotherly friendship." The *North American* also believes that the terms promise well for the happiness and prosperity of the annexed territory.

A multiplication of comments would show merely that those just quoted are representative of the whole. Thus the *Chicago Record-Herald* says: "These terms are honorable both to the Boers and to the victors, as expressive of British intentions to the whites of South Africa. The burghers have lost absolute independence, but it is probable that in the end South Africa will have gained a freer and more enlightened government than would have been possible had President Kruger been able to fulfill his purpose to drive the British into the sea." The *News* agrees that "These are terms which the Boers can accept without disgrace or undue bitterness. Instead of the unconditional surrender with no concessions which was to have been secured from them, they have succeeded in getting terms which plainly recognize their status as a people, who are beaten but not conquered." Full credit is given by the press for the valor with which the Boers have maintained the fight for their independence and which has won generous terms for them.

KING CARLOS OF PORTUGAL

"Long live the Revolution!" "Long live the Republic!" The same paper has issued appeals to the troops requesting them to refuse their assistance to the government against the revolutionists. These appeals were emphasized by a petition bearing the signatures of two hundred navy officers of all ranks. "We have nothing to say against royalty," they assert, "we protest only against the corruption of the government."

The whole trouble began apropos of the bill for the "Conversion of the exterior debt," in which the custom-house receipts were assigned to financial corporations. According to the *Imparcial* (Madrid) "this alienation of the custom-house receipts to financial jobbers and tricksters created the greatest indignation among the masses," and the riots at Coimbre were the immediate result. The Republicans, although insufficiently organized, took a hand in the movement, and other riots occurred all over Portugal, the troops refusing in most instances to assist the police authorities. The number of killed and wounded has been carefully suppressed by the censorship. The *Imparcial*, however, organized a news service along the Portuguese frontier, and in this manner ascertained the serious aspect of the revolutionary movement.

"The main danger is," according to this paper, "that this movement should gain ground on Spanish territory. For this reason Spanish troops have been sent within reach of the frontier." *El Liberal* is authority for the statement that the Spanish government is ready to send troops to Portugal at any time to reestablish order if the request is made by the Portuguese government. The suggestion of resorting to such extreme measures is said to have been offered by the Spanish minister in Lisbon. The majority of the Madrid press is opposed to military interference. The *Imparcial* sums up in these words the opinion of his confrères: "We shall not interfere with political affairs in Portugal; we have troubles of our own. Let the Braganzas deal with their subjects as best they can." The *Imparcial* admits, nevertheless, that the revolutionary movement in Portugal is apt to have a counterpart in the Spanish provinces, particularly in Catalonia. Meanwhile the anarchist colony, which is quite numerous in Lisbon, shows signs of renewed activity. Many anarchists have been expelled from the Portuguese territory. Not only the university at Coimbre has been indefinitely closed, but the Polytechnic school has been disbanded, the students having taken part in the riots in the capital. The Paris papers are of the opinion that the Spanish reports of events in Portugal should be taken "cum grano salis." Among them *L'Eclair*, *Le Journal Des Debats*, point to the fact that "there is no love lost between the Portuguese and the Spaniards." Yet

The Outbreaks in Portugal

Translations for PUBLIC OPINION

LATE advices from Portugal, via Spain, show that the revolutionary movement has assumed alarming proportions in that country. What was reported at first as a commonplace riot of hot-headed students at the University of Coimbre, seems to be a preconcerted movement supported by the influential classes, as well as by the army and navy. Not unlike the original outbreak of the French revolution of 1789, the plebeian element has remained in the background, so to speak, the leaders belonging to the middle state (bourgeoisie) and to the aristocracy. The censorship established by the Portuguese government has been so strict that the Spanish minister in Lisbon deemed it necessary to report in person to Madrid. The majority of the press of Portugal considers the riots at Coimbre as a mere periodical outbreak of boisterous students. The *Heraldo* (Lisbon), however, does not hesitate to print editorials headed:

these papers admit that the situation is very critical.

The *Indépendance Belge*, which is represented by a special correspondent in Lisbon, thinks "that there is no immediate danger of a revolution in Portugal, because the Republicans are not sufficiently organized to successfully accomplish their ultimate purposes; the riots at Coimbre and elsewhere are nothing else but periodical revolutionary outbreaks to which undue importance should not be attributed. The troubles arising from the conversion of the exterior debt are attributable to the fact that the Liberals refuse to let part of the customs revenue be alienated." "This is an humiliation," concludes the Belgian organ, "that a nation never voluntarily accepts."

"The Last Word of Islam to Europe"

IN *La Revue* (Paris) M. Finot gives through the mouth of Sheik Abdul Hagk, of Bagdad, "the last word of Islam to Europe," from which we take the following:

"For us in the world there are only believers and unbelievers; love, charity, fraternity towards believers; contempt, disgust, hatred and war against unbelievers. Amongst unbelievers the most hateful and criminal are those who, while recognizing God, attribute to Him earthly relationships, give Him a son, a mother. Learn then, European observers, that a Christian of no matter what position, from the simple fact that he is a Christian, is in our eyes a blind man fallen from all human dignity. Other infidels have rarely been aggressive toward us. But Christians have in all times shown themselves our bitterest enemies. . . . The only excuse you offer is that you reproach us with being rebellious against your civilization. Yes, rebellious, and rebellious till death! But it is you, and you alone, who are the cause of this. Great God! are we blind enough not to see the prodigies of your progress? But know, Christian conquerors, that no calculation, no treasure, no miracle can ever reconcile us to your impious rule. Know that the mere sight of your flag here is torture to Islam's soul; your greatest benefits are so many spots sullyng our conscience, and our most ardent aspiration and hope is to reach the happy day when we can efface the last vestiges of your accursed empire. Before the Christian peril we have effaced the quarrels of our sects. Islamic unity is rising from one end of the world to the other. The cause of Islam's sterility is entirely in the fatal abyss created by your churches between us and western civilization."

In strong contrast to the spirit of the declaration just quoted is the attitude of the Young Turks party, which has just held a congress in Paris. The party has been split into two factions, which are extremely hostile to one another. The adherents of the one faction are Turkish Nationalists who maintain that the salvation of Turkey must be accomplished by the Turks themselves. They are strongly opposed to any kind of foreign intervention. The majority of the Young Turks, however, are convinced that Turkey no longer possesses the strength within herself of carrying out effectively the reforms necessary for her preservation from ruin. This group favors European intervention in Turkey, and the establishment of a rational system of government and administration under the supervision of the powers.

The New French Cabinet

SENATOR COMBES THE SUCCESSOR OF WALDECK-ROUSSEAU

THE new French cabinet which was completed on Saturday is constituted as follows: Premier, minister of the interior, and minister of public worship, Senator Combes; minister of finance, M. Rouvier; minister of justice, Senator Valle; minister of foreign affairs, M. Delcassé; minister of war, Gen. André; minister of marine, M. Pelletan; minister of public instruction, Senator Chaumie; minister of public works, M. Maruéjols; minister of colonies, M. Doumergue; minister of commerce, M. Trouillot; minister of agriculture, M. Mougert. All the ministers are Radicals in name at least, M. Rouvier being the least advanced member of it. MM. Doumergue and Pelletan represent the Radical Socialists, and M. Mougert the minister of agriculture, represents the Radical Left. MM. Combes, Delcassé, Trouillot, Valle, Chaumie, and Maruéjols are Republican Radicals. M. Combes, in spite of his sixty-seven years, is very active and energetic, and lives extremely modestly, near the senate house. He is president of the Democratic group in the senate. The positions he has held—chairman of the committee of the law associations and reporter of the bill on secondary education—marked him out for the premier-ship. He is an eloquent orator and, while little known himself outside of parliamentary circles, he has selected his principal colleagues from among the best-known and qualified Radical leaders.

The hardest labors in connection with the program of the new ministry will fall on M. Rouvier. The ministerial declaration announces that the task which will call for most of the attention of the government and parliament will be straightening out the country's finances, and dwells on the necessity for economies and reforms calculated to reestablish the budget equilibrium. The cabinet therefore will introduce a measure providing for a more just proportional distribution of the taxation, and it also desires to reduce the term of military service.

The Fate of the Young Polanders

THE fate of the young Polanders who live under German rule is not very much to be envied, according to the *Praca* of Posen, the editors of which, with few exceptions, are imprisoned in Prussian jails. This paper is authority for the statement that "the public school authorities have ordered that all Polish scholars who have refused to answer questions propounded in German in the schools shall spend eight hours in jail every week." The schedule of imprisonment for Thursdays and Saturdays reads as follows: Thursday afternoon, 2 to 3 o'clock, catechism; 3 to 4, jail; 4 to 5, jail. Saturday morning, 7 to 8, arithmetic; 8 to 9, German; 9 to 10, physics; 10 to 11, jail; 11 to 12, jail. "It is not quite certain," remarks the *Praca*, "that this system will inculcate in the Polish youth an astonishing fondness for the German language; it will rather furnish them with the leisure and opportunity to think about the best ways of resisting the process of Germanization."

SOCIOLOGICAL

An Industrial Absolutism

ONE-MAN RULE IN PELZER, SOUTH CAROLINA

PELZER, a South Carolina mill town, is described by Professor Richard T. Ely, in *Harper's* as a "pure autocracy in industrial affairs." Professor Ely prefaces the descriptive part of his article with the statement that "absolutism in politics is receding into past history; in industry it belongs to the present." He then passes on to a specific application of this thesis in the case of Pelzer. "Pelzer is a place of some six thousand inhabitants, situated on a high table-land in the northwestern part of South Carolina. It is about twenty miles from Greenville, and is on a branch of the Southern railway. Through the town flows the Saluda river. The surrounding country is still given up chiefly to cotton, although some little progress seems to have been made in introducing a diversified agriculture. The Pelzer corporation has acquired a large tract of country, and extended its operations until it has four cotton mills and a proximately twenty-eight hundred employees. The company owns all the land, all the houses, and nearly all the buildings in the place. The few buildings which it does not own, as e. g., the churches, are built on leased land. There are besides the four cotton mills three other institutions of an economic character in the place, viz., a savings-bank, an oil-mill, and a mattress-factory. But the president of the milling corporation is also president of these other concerns. There are perhaps a dozen retail 'stores' operated in buildings which belong to the company.

"The head of the Pelzer corporation has a power in his domains such as no monarch can boast. Who is he? The impression produced by the personality of the man is in harmony with his position. Captain Ellison A. Smyth is his name, but usually he is known simply as 'the Captain.' We have then in 'the Captain' the ruler of this community, a ruler whose rights are coextensive with those given by private property, and those rights go far beyond any mere political authority. No municipal elections are held. They take time, involve expense, and would interfere to a considerable extent with the control of 'the Captain.' Now, no political power above the corporation is nearer than the county. We may thus speak of the government of Pelzer as an absolutism. We may go a step further, and speak of it as enlightened absolutism;

and as its primary purpose is profits, we may call it an instance of enlightened absolutism of the commercial type—the type of absolutism which belongs to our day, now that political absolutism is passing away.

"The longer one studies Pelzer the more clearly one sees evidence of a desire to do what is possible, consistently with profits, to promote the welfare of this great family of six thousand souls, and we may go a step further and say this: In case of doubt, there is evident inclination to make an interpretation of interests favorable to the population. Perhaps no building is more conspicuous than the school-house. School is kept ten months in the year instead of three or four months, as in most other places in the state. So far as I know, it is the only place in South Carolina which enjoys what now ought to be a universal

privilege of childhood, namely, compulsory education. But this is the result of the enlightened absolutism which obtains there. When Pelzer was started, probably seventy-five per cent of the adult population could not read or write; the percentage is now, after eighteen years, reduced to fifteen or twenty, and the illiterates are chiefly the newcomers

From Harper's Magazine

VIEW OF PELZER

from the farms and mountains. The policy followed has its economic justification. An ignorant people can not be good producers of wealth. Captain Smyth believes that education has been profitable to the company, and I have little doubt about this. Certainly my observation was not extensive, but I saw nowhere else such keen, alert, open-eyed, intelligent-looking workers in a cotton-mill.

"But the educational provision for the population of Pelzer does not end with the good school provided by the company. A lyceum with an excellent reading-room and a well-lighted library of some five thousand volumes are kept open in the evening after working hours. Entertaining and instructive lectures are also given from time to time. Attention is directed to the training of the body also in the provision of opportunities for wholesome forms of athletic exercises and recreation. A baseball field is found on the edge of the settlement, and baseball seems to be the favorite sport. A 'Smyth wheel club' indicates that bicycling has its adherents, and a company belonging to the militia, called 'the Smyth rifles,' shows that arms are not neglected."

The Washington *Post* is not inclined to look with favor on the Pelzer experiment. "There may be countries in which a Pelzer would be a permanent and great success, but we believe that to be impossible in the United States. One of the first and strongest desires of the average American young man is a home of his own. Men who are not inspired by that sentiment are not the material of which virile communities can be constructed. Another fatal defect of the Pelzer plan is its denial of local self-government. There is but one city in the United States where that sort of government is successful. That is the national capital. But it differs from the Pelzer plan in that its government is in the hands of all the voters of all the states, instead of a commercial corporation. It is absolutely impossible for American families to be contented under the Pelzer conditions. They have no assurance that the roof that shelters them today will shelter them next year or next week. It is virtually a one-man power that controls their destinies."

Are Wages Declining?

CENSUS FIGURES SHOW A DECREASE AS MEASURED IN PRICES OF COMMODITIES

OUR issue of May 22 contained a table showing the variations in nominal wages since 1850. This table was incomplete in that it did not show the variations in the purchasing power of these wages. This want is now supplied by the editor of *Guntton's Magazine*—for the last decade only, however. Mr. Guntton bases his statements on the census reports and on Dun's index of prices. According to the census, average wages in 1890 were \$444.83, and in 1900 \$437.95, a decline of 1.5 per cent in nominal wages. "If we turn to prices, we find, according to Dun's index number of prices of 350 articles averaged according to importance in consumption, that on January 1, 1890, a given amount of these products cost \$90,191 and on June 1, 1900, when the census was taken, these same articles cost \$91,829, showing an increase of \$1,638, or 1.8 per cent. Here, then, if we take the wage averages for the two periods just as they stand, we have an actual fall of 1.5 per cent in wages and a rise of 1.8 per cent in prices, which means a reduction of 3.3 per cent in real wages or the purchasing power of a day's work. Even assuming that there was no real fall in average wages, the decreased purchasing power of a dollar would indicate a decline of nearly 2 per cent in real wages during the decade." This contradicts the conclusions of the article referred to above.

Then Mr. Guntton makes a comparison between the decade just ended and the one preceding it, and finds greater progress in the one ending 1890. "The products *per capita* increased just twice as fast. Nominal wages increased 28 per cent and real wages 38 per cent in the former period, as against practically stationary wages between 1890 and 1900, and a fall in real wages of nearly 2 per cent. The actual increase in total product was \$335,281,737 greater from 1880 to 1890 than from 1890 to 1900, while the per cent of increase was 74.5 per cent in the former period as against 39.1 per cent in the latter, or nearly twice as great. Thus it will be seen that in some respects, conspicuously wage distribution, we have made no progress at all during the decade ending 1900, while in every respect—including investment of capital, total product per capita and purchasing power of money—the progress of the previous decade was strikingly greater than in the last."

The Growth of Luxury in America

CAUSING POLITICAL AND SOCIAL DECADENCE

THE baleful effects of the growth of luxurious tastes and habits among the American people is the theme of an article by Mr. John Gilmer Speed in the June *Ainslee's Magazine*. "The hurt of luxury, considered as a necessity, is in others," says Mr. Speed, "others who can not afford to lead luxurious lives, but who consider that to lead plainer lives is almost indecent. This is not using too strong language. Even in thrifty France, where men and women look things in the face with less illusion and self-deception than anywhere else in the world, the modern love of luxury is attacking the very stronghold of the thrift which has made France rise superior to the direst ills that could befall a nation. In this country we have—heaven save the mark!—the bachelor maid, the woman who glories in the fact that she has emancipated herself from the glories of love and the sweet responsibilities of maternity. And why has she done it? Because in her independence she can have comforts and luxuries which in marriage she might have to do without." Mr. Speed refers to the changed conditions under which the young men of today begin the work of life. Formerly, "when a young man was finished at college he set about learning a profession or a business and gaining a wife at the same time. When he was prepared for the one he was ready for the other. It is vastly different now, for now the youths must begin where the old folks leave off—they must do this or they lose caste. The whole topsyturvy disarrangement of that which is natural and proper may all be attributed to that growth of luxury which is the most marked characteristic of the age in which we live." The evil influence of luxury extends also to politics, both municipal and national. "In America our municipal governments are such rich stores on which the corrupt may draw that there is scarcely an honestly administered city in the whole of the United States. A congressman who lives on his pay in Washington must live in a boarding-house or a cheap hotel. He can afford no luxuries and still be honest."

The following table gives a fairly correct idea of the distribution of wealth in this country:

	No. in Class	Amount of Wealth	Average
Wealthy classes Property of \$50,000 and over	15,500	\$52,000,000,000	\$335,500
Well-to-do classes Property of \$5,000 to \$50,000	1,937,700	33,000,000,000	17,000
Middle classes Property of \$5,000 to \$500	6,773,400	12,500,000,000	1,850
Poorer classes Property under \$500	6,773,400	2,500,000,000	370
Totals	15,500,000	\$100,000,000,000	\$6,450

According to this table, fifty-two per cent of the wealth of the country is owned by one per cent of the population.

BRYN MAWR COLLEGE is the latest institution to benefit by the generosity of Mr. John D. Rockefeller. His offer of \$250,000 conditional on the raising of an equal sum from other sources has been met and a half million dollars is thus added to the Bryn Mawr endowment.

Civilization and the Birth Rate

Revue Scientifique, Paris. Translated and Condensed for
PUBLIC OPINION.

M. NEYMARCH recently read before the society of statistics of Paris an important study on the question of decrease of births with an increase of civilization, in which he examined some of the economic, financial, and social causes which, according to him, exercise a greater influence than physiological causes. M. Neymarch believes first that the more civilization is developed and the more a country progresses, the more births have a tendency to decrease. In Germany the birth rate was 42 per 1,000 in 1875, and twenty years later 36; in England during the same period it decreased from 36 to 29, and in France the same years it decreased from 26 to 25.2.

The economic causes which influence natality greatly are the following: 1 The expense of living or to be more exact, the increase in needs. It is not demonstrable in its ensemble that the cost of living is greater than formerly, but that which is incontestable is that "needs" have augmented. 2 The desire for greater comfort for one's own and for one's self. One considers the expenses of the family with reference to the revenue or the capital possessed, what it will cost to raise several children, pay for their instruction, education, maintenance, etc., and what it will cost later to "establish" them. 3 One desires to conserve the acquired wealth and not to decimate it among a large number of inheritors. 4 The lowering of the revenues obtained from capital. A person who formerly could live happily and at ease on a capital of \$20,000 producing a revenue of from \$1,000 to \$1,100 per year, that is, five to five and one-half per cent, has today with the same capital only a revenue of \$550 to \$600, whereas his taxes, his charges, and his needs have increased. 5 The increase in taxation. 6 Feminism, or the accession of the woman to the work and occupations formerly reserved to the man. The woman becomes more and more the producer, she is occupied in commerce, in domestic service, in the liberal professions, in mines and trades, in shows, and in general affairs. This work in France occupies 3,353,831 women who think less of maternity than of their professional occupations. Besides these, there can be cited an entire population which has no children, to wit, bachelors over 25 years of age, 3,861,599; homes without children, 1,808,838; divorcees, widows, and widowers without children, 3,000,000; total 5,970,437.

The Lake Mohonk Arbitration Conference

Outlook, New York

FORMER Secretary of State John W. Foster, as presiding officer of the eighth Lake Mohonk conference on international arbitration, May 28-30, declared that "the event of greatest moment was the assembling of representatives from all the independent nations of the Americas in the city of Mexico. Some criticism has been passed upon our government for not lending its support to the plan of obligatory arbitration, but is hardly well founded, in view of the action of the senate on the Olney-Pauncefote arbitration convention, and of the desirability of avoiding a disruption of the congress and of securing harmonious action. Ten of the nineteen nations rep-

resented, however, united in the project of a treaty, to be ratified by their respective governments, providing for the obligatory arbitration of all controversies which, in the judgment of any of the interested nations, do not affect either their independence or national honor, prescribing that in these two exceptions are not to be included controversies concerning diplomatic privileges, limits, rights of navigation, or the validity, fulfillment, and interpretation of treaties. Another important event was the meeting of four of the presidents of the Central American republics, which resulted in a treaty submitting to arbitration "every difficulty or question which might present itself." A special tribunal is created and rules laid down for its procedure. Mr. Foster expressed it as his opinion that the formal ratification of the convention would quickly follow, and that much of the ill-feeling and the frequent wars between these republics would be thereby greatly reduced, if not entirely eliminated. He considered the treaty for obligatory arbitration just concluded between Chile and Argentina, the reference in the Danish islands treaty of all disputed questions to The Hague tribunal, and the reference by the United States and Mexico of the Puis claim to the same tribunal for adjudication, as constituting a notable advance.

Not the least interesting and important feature of the conference was the presence and active participation of a large number of prominent business men. One whole session was occupied by them in arguing for the principles of international arbitration and in suggesting ways and means of interesting the commercial, mercantile, and industrial organizations in behalf of the movement. The speakers at this meeting were John Crosby Brown, of Brown Brothers, who pleaded for the enforcement of the Golden Rule among nations; William F. King, former president of the New York Merchants' association, who considered reciprocity as making for arbitration; Mahlon N. Kline, of the Philadelphia Trades league; Warner Van Norden, of New York; George Foster Peabody, of Spencer Trask & Co.; Osborn Howes, of the Boston Chamber of Commerce, who referred to the denationalization of trade as a potent factor for the peace of the world; and J. Edward Simmons, president of the Fourth National bank of New York. The testimony of these and other business men during the conference will go a long way toward demonstrating the thoroughly practical character both of the Mohonk conference and of the movement which it stands for. The platform of the conference recited the progress of the past year, and called especially upon the business men and the business bodies of the country to lend their influence to the creation of an irresistible public opinion in favor of arbitration. The conference was the largest in point of numbers thus far held, and its sessions were of high public interest.

DIVORCE IN HAWAII: The Honolulu correspondent of the *Boston Transcript* says that every divorce granted in Hawaii since the republic became a territory is void under a ruling made by Judge Humphreys in a recent proceeding for separation. Every marriage solemnized since the passage of the organic act two years ago of divorced parties is in consequence illegal, and transfers made by divorced parties of property are also of no legal effect. The discovery of a clause in the organic act by Philip J. Farley, of Boston, which makes necessary a legal residence in the territory of two years as a condition for divorce will cause much trouble. The divorce laws of Hawaii have always been notoriously lax, made so, no doubt, by the Hawaiian habit of dispensing altogether with the formality of a marriage or divorce ceremony.

LETTERS & ART

A Literary Nihilist

THE PHILOSOPHY OF ANATOLE FRANCE

ANATOLE FRANCE is held up as an example of the literary nihilist by Thomas Seccombe in the June *Cornhill*. Literary nihilism is described as a "form of literary skepticism which submits the most important operations of life to contemptuous analysis, and which laughs at the assumed dignity of an animal swayed by the ridiculous impulses, the grotesque beliefs, and the

hopeless desires of mankind, while assuring the individuals of the species that the worst possible mistake they can make is to take themselves seriously."

Mr. Seccombe finds in M. France a striking resemblance to "Lucian, that strange contemporary of Marcus Aurelius, whose playful satire has still so much that is of modern application about it. In his fondness for the dialogue form, in his calm abstention from needless explanations, in his admirable blending of comedy and philosophy, and in the delightful waywardness of his narrative, by which the tedious portions of the tale proposed seem as if by magic evaded, M. France is continually suggestive of Lucian. There is no imitation, of course, but there is a remarkable affinity and a common attainment of that most difficult literary aim—the gift of making us think without being a bore.

"The real complexity of Anatole France's genius was first revealed by his successful story, 'Le Crime de Sylvestre Bonnard.' Irony and pathos, learning and fancy, love of the past and insight into the present were promptly recognized to form in the new novelist a combination of faculties such as are very rarely seen in conjunction. The inclination of the author to irony is qualified by a feeling of profound compassion for human wretchedness. Against the skeptic's tendency to coldness and dryness, which seemed to be gaining so terribly upon Flaubert's work in his later years, M. France is happily preserved by a delicate imagination and a very profound sensibility. Skepticism has never gained over his heart. He enjoys feeling even more than apprehending.

"M. France has retained a predilection for the type of the antiquary and the scholar, but since he wrote 'Le Crime de Sylvestre Bonnard' he has discovered a very different kind of model, and he has mixed his colors upon a very different plan. In 'Le Lys Rouge' we are afforded a glimpse of the furious hatreds and the hurricanes of jealousy that subsist but too often in the relations between scholars of a world-wide celebrity. But it is not until we come to Anatole France's later work entitled 'Histoire Contemporaine' that we feel the full force of his pessimistic philosophy. The protagonist, M. Lucien Bergeret, is by far the most carefully finished portrait in the gallery of scholars created by M. France. In him the playful irony of Bonnard is almost wholly replaced by a cynicism that is full of a profound bitterness. He is Latin profes-

sor and 'maitre de conférences' to the faculty of letters in a city of northern France; and he takes the part of a generally dispassionate and always very satirical observer of the byplay of scholastic life, and of the numerous clerical and social intrigues which make up the life of an important provincial town, with its archbishop, its prefect, and its general of division. The portraits of these worthies and of other local celebrities are all most carefully drawn.

"From youth he was *tres livresque*, and his early books are characterized by an erudition from which he distils a honey that has always a certain acidity of flavor. But it is in his latest series of volumes, upon every page of which is impressed his profound knowledge of human nature, that the doctrine of nihilism stands out so boldly as the fruit of his mature reflections not only upon books but also upon men and women. The commerce of books and the habit of intense reflection and self-analysis have fitted him in a degree that has never been excelled to fulfill the function of an author as he has specially conceived it—as that of an ironical critic, namely, who from a quiet and sheltered nook of observation can meditate at his ease upon the clamor and the folly—occasionally pathetic, but more often purely ridiculous—of his fellows in the dusty market-place."

The Books of Turkey

WHAT MAY BE FOUND IN A CONSTANTINOPLE BOOKSHOP

TURKISH books, as one finds them in a Constantinople bookshop, are described by Mr. Henry Otis Dwight in the June *Forum*. "Turkish books fall into two separate literary periods, unless the comparatively insignificant writings of the last fifty years be rated as of a third period." The first period ends with the conquest of Constantinople. During this time the center of Turkish literary activity was in Turkestan. Authors who belong to this period and whose works still circulate in Turkey, are: Timourleng, or Tamerlane, Ulugh Bey, his grandson, and Baber, his great-grandson, the founder of the Mongolian empire in India. "The works of weightiest influence belonging to this first period, and still in circulation in Turkey, are religious writings of the great Muslim mystics of the fourteenth and fifteenth centuries, who lived in Bokhara, Tashkend, and Samarcand."

The second period, that beginning with the conquest of Constantinople, is characterized chiefly by the work of historians, or more strictly annalists, whose value is in the material they have collected rather than in any genuine historical work they have done. "It is a singular fact," says Mr. Dwight, "that the change of the center of Turkish literary activity to Constantinople involved a change of style which has proved a serious hindrance to the literary culture of the Turks. The salient characteristic of Turkish writings of the second, or Constantinopolitan, period is the appearance in Turkish books of a new language, not genuine Turkish, and not spoken anywhere to this day, unless by courtiers in the most formal moments of state functions.

"Separation from practical connection with life and from the interests of the common folk marks the work of Turkish writers of the eighteenth and nineteenth centuries. In the relation of the learned men to the common people distrust lingers in the very air, as though the common people ought not to be trusted with books. Even the dictionaries of the Turks seem to have been devised with satanic ingenuity of arrangement to prevent their use by the ignorant. The government fosters the same idea by its prohibition against any translation into Turkish of the Koran and the classics of the immediate successors of the Prophet. The separation of writers from the interests of the people has reacted upon the learned, bringing upon them a sort of mental paralysis like that which marked the attitude of the early scholastic philosophers of eleventh-century Europe."

American Press Illustrators

SOME EXAMPLES OF NEWSPAPER ILLUSTRATIONS

THE great improvement that has been made in recent years in the art of newspaper illustrating is commented on by Mr. Will. Jenkins in the June number of the *International Studio*. Mr. Jenkins opens his article with the statement that this improvement "has been made possible by two principal influences. Firstly, the development of public interest in pictorial matter brought about by the magazines, which had so largely opened their pages to the clever black-and-white draughtsmen of the time; and, secondly, a more vital reason, that of a national characteristic of deeply interested curiosity, which makes the American mind so keenly responsive to 'live news,' eager for detail, and quick to grasp the anecdotal side of pictorial art. Thus the 'illustrated' newspaper has become a component part of the social condition of the American people. Each man of the staff is a specialist in some line—portrait, society, yachting, naval, military sport, or humor, and must also, if need be, suddenly fill the place of one of his fellow-workers, and make presentable drawings of any of the enormous range of subjects with which a newspaper deals, often under most trying conditions."

The credit for the advance in this field of art "is due not only to the artist, who has so carefully and conscientiously developed a suitable and effective group of methods conforming to new conditions, but also to

his brother workers, the photo-engraver, stereotyper, and printer, who have greatly assisted him by enlarging the possibilities of their respective processes. In this connection it may be interesting to state that whereas not long ago the complete transition from the drawing to the final blocks required a time limit approaching hours, the facility with which it can be done now resolves itself into a question of minutes. The drawing from the artist's hand passes through a wonderful time-saving system of rapid plates for the photo process, rapid formulas for developing and fixing, rapid-drying electric fans, and, most marvelous of all, an 'etching machine,' whereby a system of sprays of acid is thrown upon the zinc, which is eaten away in a few moments, and the 'cut' is then ready for the stereotyper, who, again, has learned to do his work in a space of time which suggests something of 'black art.'

Mr. Jenkins deprecates the excessive use of photographs in the place of drawings. "If the users of photographs base their claims on their journalistic or news value, their argument will not stand comparison with the results shown by the artist-journalist, who, with his facility in sketching, can grasp more clearly, and set down his story with more convincing force, than is possible to any photographer."

Moreover, he possesses that most valuable power, the elimination of unimportant detail and of adding emphasis to the essential facts, such as only the practical journalistic eye could select and set down with the clearness so necessary to any newspaper statement. The whole subject is one to be judged from the journalistic standpoint. Tame and unsatisfying, indeed, would be the text matter of a paper having no discerning writers to 'enliven' the presentation of its facts in news. This, then, is exactly what the camera can not do, but the artist can do so with taste and style."

Of the examples of newspaper illustrations presented here, Mr. Jenkins says: "Mr. Stein is best known for his striking rendering of portraits. His dashy, 'etchy' system of lines is especially suited to the interpretation of exact but delicate modulation of color, light, and shade, as in this portrait of Alphonse Daudet from the work by Carrière. There is much feeling of the original paint in this drawing. Ability to strongly express character—or sometimes greatly emphasize it—is in many subjects a valuable qualification to the newspaper artist. In the example of Mr. Thorndike's work, illustrating an incident in a criminal trial, this has been necessary. Most of the actors in this scene—judges, counsel, witnesses, prisoner, etc.

Philadelphia North American
COLUMBIA AND CONSTITUTION
BY C. HOFACKER

New York Herald

ALPHONSE DAUDET. BY MR. STEIN

—had previously become familiar to the public through the many illustrations published during the trial; it then became necessary to have each person depicted in such a manner as to be easily recognized by the readers, and any peculiarity of face or figure forcibly drawn. This artist has also done excellent work as a political cartoonist. The drawing of a yacht race, "Columbia and Constitution," by Mr. Hockacker, is representative of his clever work in marine subjects, and is from pencil sketches 'on the spot.'

Richard Strauss and His Music

GUSTAVE KOBBE, in the June *North American Review*, New York
Condensed for PUBLIC OPINION

RICHARD STRAUSS—a new name to conjure with in music! His banner is borne by a band of enthusiasts like those who, many years ago, carried the flag of Wagner to the front. Something new certainly has been achieved by Strauss. It forms neither a continuation of Wagner nor an opposition to Wagner. It has nothing to do with Wagner, beyond that Strauss appropriates whatever in the progression of his art the latest master has a right to take from his predecessors. Strauss is, in fact, one of the most original and individual of composers. He has been a student, not a copyist, of Wagner. Thus, where others who have sat at the feet of the Bayreuth master have written poor imitations of Wagner, and have, therefore, failed even to continue the school, giving only feeble echoes of its great master, Strauss has struck out for himself. With a mastery of every technical resource, acquired by deep and patient study, he has given wholly new value and importance to a form of art entirely different from the music drama. The music of the average, modern Wagner disciple sounds not like Wagner, but like Wagner and water. Richard Strauss sounds like Richard Strauss.

One first looks at Richard Strauss in mere amazement at the size of what he has produced. "Thus Spake Zarathustra" lasts thirty-three minutes. "A Hero's Life" forty-five. This initial sense of "bigness," as such, having worn off, one becomes aware of marvelous tone combinations in orchestral effect. Listening again, one discovers that these daring instrumental combinations have not been entered into merely for the sake of juggling with the orchestra, but because the composer, being a modern of moderns, has the most modern message in music to deliver, and, in order to deliver it, has developed the modern orchestra to a state of efficiency and versatility of tonal expression beyond any of his predecessors. Richard Strauss scores, in the most casual manner, an octave higher than Beethoven dared go with the violins. While he has increased the technical difficulties of every instrument, what he requires of them is not impossible. He knows every instrument thoroughly, for he has taken lessons on all; and, therefore, when he is striving for new instrumental effects he is not putting problems which can not be legitimately solved. His "Till Eulenspiegel's Merry Pranks" makes, possibly, the greatest demand of all his works on an orchestra. But, if properly played, it is one of the most bizarre and amusing *scherzos* in the repertoire.

What is the difference between classical and modern music? Write a chapter or a book on it and the difference still remains just this: Classical music is the expression of beauty; modern music the expres-

sion of truth. Modern music seems entering upon a new era with Strauss. It is beginning to illustrate itself, so to speak, like the author-artist who can both write and draw. Today, music not only expresses truth, but represents it pictorially. It was like a man of great intellectual activity, such as Richard Strauss is, to select for musical illustration the Faust of modern literature—Nietzke's "Zarathustra." The composer became interested in Nietzke's works in 1892, when he was writing his music drama, "Guntram." The full fruition of his study of this philosopher's works is "Thus Spake Zarathustra." But this is not an attempt to set Nietzke to music, not an effort to express a system of philosophy through sound. It is rather the musical portrayal of a quest—a being longing to solve the problems of life, finding at the end of his varied pilgrimage that which he had left at the beginning, nature deep and inscrutable. "A Hero's Life" is another work of large plan. Like "Zarathustra," it derives its importance as an art work from its eloquence as a musical composition. In "A Hero's Life" we hear (and see, if you like) the hero himself, his jealous adversaries, the woman whose love consoles him, the battle in which he wins his greatest worldly triumph, his mission of peace, the world's indifference, and the final flight of his soul toward the empyrean. All this is depicted musically with the greatest eloquence. The battlefield scene is a stupendous massing of orchestral forces.

At the age of thirty-eight, Strauss occupies a commanding position in the world of music. He has achieved it through a remarkable combination of musical technique and inspiration coupled with rare industry. His ideals are of the highest. His intellectual activity is great. He seems a man of calm and noble poise, of broad horizon. It would be presumption to speak of "expectations" as to one who has accomplished so much. For the great achievements already to his credit are the best promise for the future.

Various Topics

THE TWO GREATEST MANUSCRIPTS in America according to the *Bookman*, are the manuscript of the Declaration of Independence, which is in the Government archives, and which has become illegible, and the life of Benjamin Franklin, written by himself (the only manuscript entirely in his own handwriting), which changed hands a few weeks ago and was added to a private collection in New York city. The Franklin manuscript was discovered in France some years ago, in the possession of the descendants of M. Le Vaillard, to whom it had been given by William Temple Franklin, Franklin's grandson.

BOOKS AND THERAPEUTICS: The *Lancet* ought to take up the question of medicinal literature and prescribe the proper books which shall soothe or stimulate the pulses of hospital patients. In her "Lights and Shadows in a Hospital," Mrs. Terton shows how empiricism practices on disease with a book. There was a melancholy man, depressed with rheumatism, in her cottage hospital. The point was to cheer him up. Ordinary hospital literature was no good. At last said the nurse, "I shall read him 'Three Men in a Boat,' and if that doesn't amuse him, I shall give him up as hopeless." So she read, till finally "a reluctant smile came over his face, and he said, with slow satisfaction: 'I do think they be three rum 'uns.'" That was the turning-point in his illness. He recovered completely, and left the hospital a bright and cheerful man. Mr. Jerome, when critics sneer at him because he is not M. Maeterlinck, will henceforth be able to retort that Maeterlinck will not cure rheumatism. What would be the best book for, say, St. Vitus' dance? Something very soothing would be required.—*Academy*.

SCIENTIFIC

The Seventeen-Year Locust

PECULIAR CHARACTERISTICS OF THIS PERIODICAL PEST

THIS month, according to the reckoning of entomologists, various parts of the United States will begin to resound with the shrill whistle of one of the largest and most destructive broods of periodical cicada, or seventeen-year locusts, known to scientists. Already they have appeared in Maryland, New York, the northern part of New Jersey, and sixteen other eastern, southern, and central states, together with the District of Columbia. Mr. Lowe, of the New York agricultural experiment station, has written an elaborate treatise on the subject, from which the following facts are taken.

The interesting habits of the cicada, their appearance in great swarms, and the noisy way in which they proclaim their presence early attracted attention. The species is a native of America, and legend has it that the aborigines of the continent were acquainted with its periodical appearances, but the first authentic record is found in Moreton's "New England Memorial," in which it is stated that the Puritans observed a swarm at Plymouth in 1633. The first person to make a study of the species was the pioneer in natural science, Linné (or Linnæus), who described it in 1758 and gave it the scientific name of *Cicada septendecem*. The difficulty, however, of following a number of individuals through the long life under ground prevented a thorough knowledge of the insect's subterranean life until the comparatively recent investigations of the late Dr. C. V. Riley, former entomologist of the department of agriculture, Washington, and those of C. L. Marlett, assistant entomologist at Washington. The work of these two men has resulted in throwing much light on the entire life history of the seventeen-year locust.

Like all other species of insects, the periodical cicada passes through the egg, larva, pupa, and adult stages. The principal difference in the life history of the cicada is its long life under ground. There are many others that are known to live nearly a year in the soil, and there are a few, such as the common white grub, the larva of the May beetle, which remain three years in the ground before emerging, but no other insect known can equal the periodical cicada for longevity. The eggs are deposited in the twigs and young branches of both fruit and forest trees and vines. In fact, all kinds of trees are attacked except

evergreens. They are deposited well into the wood in two double converging rows. The color is pearly white, and they measure one-twelfth of an inch in length. Although affected by weather conditions, the period of incubation is from six to seven weeks. When the larva is fully matured within the egg and ready to emerge, the eggshell gives way and permits its escape.

The newly hatched larva is an awkward, somewhat spider-shaped creature, one sixteenth of an inch in length. The most striking peculiarity of the insect, both in the larval and pupal states, is its prominent, lobsterlike front legs, with which it digs its way into the ground. Soon after the larva is free it looses its hold on the twig and drops to the ground. After reaching the ground the first impulse of the young larva is to get beneath the surface. During its long underground life it grows many times its length. It lives within a cell of compact earth, which is usually formed so that one or two fine roots of a food plant run through the roof walls in easy access of the insect's beak. It may thus obtain nourishment by thrusting its beak into the tissue and sucking the sap.

The pupa resembles the larva in its advanced stages, but the rudimentary wings have become prominent, while the front legs are much developed, and are well fitted for digging. Observations have shown that the usual depth is from twelve to eighteen inches below the sod, although there are records of pupæ coming up from the bottom of a cellar and through cinders five feet thick. A case is reported where one was found ten feet below the surface. When ready to abandon the subterranean life, the pupa digs upward toward the surface of the ground. The pupa, when it first appears above the ground, is soft bodied and creamy white in color. In the course of a few hours it finds a suitable support upon which it can climb, and to which it can securely cling. The skin hardens rapidly, and in a short time the adult escapes, leaving behind the empty pupa skin. The adult cicada is about three inches from tip to tip of the wings, and the body is about an inch in length.

Under some circumstances, not yet well understood, the pupæ build chimneylike huts on the surface of the ground, just before abandoning subterranean life. These huts may open at the top or be closed at the top and open at the sides. The hut is in reality a

A, Pupa; B, Shell; C, Adult Cicada (Enlarged); D, Eggs

continuation above ground of the channel in the earth made by the pupa.

The so-called song of the cicada is produced by the male only. Each male has two song-producing instruments, one on each side of the basal segment of the abdomen, underneath and concealed by the wings. They are quite complex, but each consists principally of a corrugated, earlike drum, which, controlled by a powerful muscle, may be made to vibrate rapidly. While the males are sounding their ear-splitting choruses the females are doing damage by depositing eggs on the twigs of trees. The real injury resulting from the periodical visits of the seventeen-year locust is not so great as is the general belief. The tendency in the future will be for less and less injury. Two or three natural causes are operating to bring this about. In the first place, the periodical cicadas are not migratory. They fly only short distances, and one generation after another lives in almost identically the same place. Entomologists hold to the supposition that originally the cicada was uniformly distributed in the eastern part of the United States. Gradually, by the breaking up of the forests for cultivation and the arrival of a few individuals a trifle earlier or later than the general swarm, the tendency was to divide them into broods. The continuance of this subdivision, together with the extermination by the plough, will in time tend to make the species extinct.

The Last Word on the Diet Question

THE RESPECTIVE MERITS OF VEGETARIANISM AND MIXED DIETS

L. KUTTNER, in the *Berliner Klinik*, discusses the respective merits of vegetarianism and mixed diets. His conclusions may be summarized as follows: (1) that a mixed meat diet is natural and most suitable to man, because vegetable foods are more bulky, more irritating, and less assimilable; moreover, animal food stuffs produce more heat.

(2) Impartial investigation has proved that, given judicious choice and preparation, strict vegetarianism is not only sufficient to maintain condition, but even to increase weight. Successful experiments are, however, few and far between, and the subjects do not as a rule compare favorably with those who eat mixed or animal diets in their power to put on weight and resist disease.

(3) That a modified vegetarian diet (that is, one supplemented by such animal products as milk, butter, cheese, honey, and eggs) is suitable (a) for corpulent constipated patients deficient in intestinal activity, but it is not to be recommended in the case of young growing people with a tendency to *embonpoint*; (b) in certain cases of alcoholism; (c) it is followed by brilliant results in dyspepsia and intestinal affections of nervous origin; (d) particularly to be recommended in idiopathic neuralgias, as well as those having a gouty basis; (e) useful in the treatment of headaches and other disorders dependent on constipation in neurasthenic, hysterical, and epileptic patients; (f) as the pulse-rate is diminished under a vegetable diet, it is to be recommended in conditions of abnormal irritability of the heart (arising from emotion, excessive muscular action, sexual excitement, etc.), and in exophthalmic goitre; it is contraindicated in all conditions of heart weakness due to arterio-sclerosis, myocarditis, etc.; (g) a marked addition of vegetables to diet should be considered in many cases of insomnia

nervosa, urticaria, psoriasis, and occasionally scrofula.

(4) That to achieve a favorable result in absorption a reasonable combination of animal and vegetable food stuffs is essential. For all healthy and for most sick persons a mixed diet (different in degree and constitution according to the patient) is to be recommended.

(5) As a guide to the arrangement of a suitable modified vegetarian diet, the following may be of value: (a) In weak, broken-down patients with chronic catarrhs or an inclination to ataxy of the stomach, a vegetarian diet must be gradually approached, and must only be maintained temporarily (say for six weeks); (b) in gastric neurasthenia, and especially in habitual constipation in patients of good physique, a vegetarian diet may be instituted less gradually, and may be maintained for a longer period.

Nervous Crises among Animals

M. HENRY COUPIN, in *La Nature*, Paris. Translated and condensed for PUBLIC OPINION

A VETERINARY surgeon, M. Lepinay, has just called the attention of the society of hypnotism and psychology to the importance of the mental pathology of animals. Nervous troubles among beasts may be produced as among us by different causes. First, there are intense moral emotions, and the fear which horses have of steam engines, automobiles, etc., has frequently produces lameness and false paralysis, of which the true origin has often passed unperceived. The fear of correction among small animals and the joy of again seeing the loved master has given birth to crises more or less persistent which have been ascribed to epilepsy in many cases.

A dog, whose history M. Lepinay gives, was put out to board at the commencement of the holidays each year, and upon his return to his home great care was necessary that the dog and its mistress did not come immediately in contact, for if they did a nervous crisis occurred which lasted for several months. Here is a case of nervous trouble provoked by fear, and related by Dr. Hygyer, the subject being one of his canary birds: The bird was singing happily in its cage, when a cat suddenly entered the room, threw itself upon the cage, and knocked it to the floor. The doctor put the cat to flight before the bird was wounded, or even touched, but the shock had been such that the canary lay without movement or voice on the bottom of the cage, and only after sprinkling it with cold water was life restored. It then became alive, and in a moment or two commenced to hop and jump as before. It had, however, become suddenly mute, complete aphonia having developed. This condition persisted for six weeks, and then as suddenly as he had lost it the bird regained his voice and again exercised his full musical powers.

A traumatic shock can also produce hysteria. Very often a dog which is the victim of an accident becomes lame without there being any symptom to explain the manifestations, and after killing the animal the autopsy has disclosed no lesion sufficiently serious to produce the malady. Dr. Hygyer presents another case having the same origin. A cat, nine months of age, was bitten by a dog. The cat sank down at once, as if paralyzed, and from this time moved only by dragging its hind quarters, the posterior third of the trunk and the hind legs being completely paralyzed, as well as the tail. Two months after the accident a servant, wishing to

see if paralyzed cats, similarly to well cats, always fell on their feet, threw the poor beast from the first-story window. The cat fell on its feet and scampered away on all fours. The blow of the new emotion had completely cured its paralysis.

Lightning striking a stable has often produced insignificant burns and wounds, followed by excesses of grave hysteria, most frequently a paralysis or a contraction. These accidents have been especially studied by M. Huet, and in his accounts one observes undeniable nervous troubles. M. Arueh, of the veterinary school of Milan, has related several cases, the subjects being dogs, which manifested very accentuated nervous troubles under the impression of fright, rebuke, or jealousy.

The Aluminum Welding Process

Harper's Weekly, New York. Excerpt

YET another nerve-racking device of modern progress seems doomed. We need no longer ride on pounding trolley-cars; the flat wheel, which can, under proper auspices, exert such a pleasing concussion on the trolley-rider's nerves as it goes thumping along, is an anachronism, so to speak. At the last meeting of the New York chemical society a representative of the German thermite company gave an exhibit of one of

the most interesting discoveries, or rather processes, of recent years. It was simply the enormous heating power of powdered aluminum when burned with some substance rich in oxygen. Its scientific value lies in the fact that by this means it is possible to obtain the highest temperatures yet reached by man, exceeding, it seems, the temperature of the electric arc. The practical value of the Goldschmidt process lies in the fact that it affords a portable supply of intense heat in any desired quantity, and that, for example, a boy can carry round a can of it and weld tramrails or broken steamer shafts, or other trifles, in place. All that is needful is to jacket the shaft or rail or whatsoever with the aluminum mixture, and touch it off with a match. So intense is the heat generated that a huge steel casting will melt to run like water in a few seconds, and the most refractory one turned to a liquid. The application of the process to the welding of street rails is, of course, but an incident, but it is a boon. By this means rails may be welded together as cheaply as put together by a common noisy joint. As the wheels then have no rail ends to hammer on, the ordinary jar of running is immensely reduced, and flat wheels become almost unknown. This system is already in successful use in Berlin, Dresden, Hamburg, and all the great German cities; it is time that it should be introduced here, and it can not come too soon. We commend the subject to every trolley-line manager in America.

RELIGIOUS

Spain and the Holy See

Translations for PUBLIC OPINION

ANOTHER ministerial crisis—only postponed on account of the accession of Alphonso XIII—is shortly expected in Spain. The Madrid press is unanimous on the subject, particularly since *El Siglo Futuro*, the official Catholic organ, has openly disclosed the position taken by the Vatican concerning the enforcement of the law regulating the status of the religious congregations. This law enacted September 19, 1901, at the suggestion of Señor Gonzalez, secretary of the interior, was intended to prevent the French religious congregations, who left France, from invading the Spanish provinces. The Gonzalez law provided that all the religious congregations located or intending to locate in Spain, should ask from the government an authorization to do so, such request for authorization to be formulated in terms almost identical with the provisions of the law recently enforced by the Waldeck-Rousseau ministry in France. The Spanish congregations were granted a delay of six months to apply for the authorization of residence. The Spanish government manifested at first the intention of strictly enforcing the law, but it appears that some secret arrangements were made with the Vatican.

El Siglo Futuro publishes the text of an official statement made by the archbishop of Heraclea, nuncio of the pope in Madrid, the salient points of which plainly characterize the attitude of the Vatican. The nuncio says: "Religious congregations, not authorized until now by the government, will have to comply with no other formality than to effect 'civil inscription' which can not be refused to them. This formality accomplished, they will be recognized by the government and as such will be included in the category of recognized congregations. This basis, accepted by

both parties (Vatican and Spanish government), will constitute the point of departure of other negotiations." The above declaration was issued a few days before the accession of the king, and a long time after the delay of six months granted to the congregations had expired. *El Liberal*, referring to this formality of "civil inscription," remarks that not a single one of the unauthorized congregations has applied for the authorization. For this reason it considers the new arrangement made with the Vatican as a mere dodge to evade the main provisions of the law. *El Liberal*, as well as the other liberal organs, complains that "The Holy See has taken advantage of the advent of the king to emphasize the dependence of Spain on the pope. There is no doubt," they assert, "that the government has practically surrendered to the congregations; and furthermore that Señor Canaljas, the secretary of agriculture, who is in favor of enforcing the law, has not even been consulted in the matter."

The liberal press blames mostly Señor Mouret, who has replaced Señor Gonzales as secretary of the interior. The Madrid correspondent of the *Paris Temps* considers "the attitude of the Vatican as very conciliatory," in fact it says that "the pope has only acted through deference to the queen regent," his intention having been to prevent unpleasant religious complications at the time of the expiration of the regency. The contention of the Holy See, according to the *Paris paper*, is "that the congregations which have obtained the authorization of residence should be recognized by the Concordat; furthermore this authorization can not be refused if the congregations effect 'civil inscription.'" The Madrid correspondent of the *Independance Belge*, reflecting the opinion of the Spanish liberal press, sent the following comment to his paper: "It

is a foregone conclusion that the liberal government of Spain can not accept this interpretation of the law, because the authorization reduced to a simple formality of 'civil inscription' would be a silly joke against which all the liberal elements would energetically protest. If Señor Sagasta shows, in the course of his negotiations with the Vatican, the energy displayed by M. Waldeck-Rousseau in France under similar circumstances, he will find that the Vatican will concede all points and prove to be very conciliatory because the Vatican dreads above everything to see the liberal movement in Spain assuming the character of an open fight against the influence of the church." So far, however, the tone of the Spanish press shows that the Gonzalez law is considered as a dead letter. It has been ignored from the start by the congregations which are as powerful as ever, the majority of the high clergy being recruited from their ranks.

The opinion in Spain is rather divided on the subject. The liberals are for the strict enforcement of the law; the ultramontane Catholics advocate the interpretation of the law according to the views expressed by the Vatican, because in their estimation they have everything to gain in reopening a discussion of article 45 of the Concordat, providing, as a matter of course, that the "civil inscription" is a prima facie evidence of the legal status of the congregations. The moderates, with Señor Mouret at their head, are satisfied with the status quo; they are willing to admit for granted the formality of "civil inscription," trusting that matters will adjust themselves through the convenient process of the "fara da se." A ministerial crisis has already been averted on this account; the question, however, is a complex one, and the presence of Señor Mouret in the ministry may prove a stumbling block to a satisfactory solution.

German Missions in Africa

Deutsch Kolonialzeitung, Berlin
Transmitted and Condensed for PUBLIC OPINION

WITH the exception of the missionary station of Dar-es-Salaam, which dates from 1890, Catholic missions in east German Africa commenced with the year 1894. Since this time missions have been founded at Lukuledi, Nyanga, Iranga, Peramiho, Kolosini, etc. Members of the Benedictine and Saint-Otilie orders have furnished the missionaries for these divers stations which apparently are in a prosperous and rapidly developing condition, at Dar-es-Salaam an orphan asylum being joined to the mission as well as a school of religious instruction at the head of which are a Benedictine father, an examiner, and three lay brothers. The latest of these missions, the one at Kolosini, has a domain of three hundred and forty hectares on which more than one hundred Negro families live, most of whom have embraced the Christian religion. The religious school which is joined hereto instructs annually about fifty young people, who are destined to teach or preach among their fellows and who receive a careful education. The orphan asylum at this place shelters nearly one hundred and sixty children who, besides their daily lessons, work in the garden and at the trades of carpenter, shoemaker, blacksmith, and mason. Further, they are also employed in the agave plantations. The young orphan girls are received in a special establishment at Dar-es-Salaam at which place the missionaries in 1899 constructed a large and handsome church.

Dr. John H. Barrows

THE CAREER OF A PROMINENT PREACHER AND EDUCATOR

THE president of Oberlin college, Dr. John H. Barrows, died at Oberlin, June 3. Dr. Barrows was born in Medina, Michigan, on July 11, 1847. After studying theology at Yale, Union, and Andover theological seminaries, he undertook home missionary work in Kansas. After nearly three years of educational and church work in Kansas he was pastor of the First Congregational church, in Springfield, Illinois, for a year. Prior to taking up the presidency at Oberlin, in 1898, he had been for fourteen years the pastor of the First Presbyterian church in Chicago. He was most widely known, however, for his services as one of the prime inaugurators and the pre-

DR. JOHN H. BARROWS

siding officer of the World's Congress of Religions held at the time of the Columbian exposition in Chicago. In 1896 he attracted much attention by receiving the first appointment to the Haskell lectureship established under the direction of the University of Chicago. On this appointment he traveled in India and Japan, delivering one hundred and thirteen lectures. On his return to this country, Dr. Barrows delivered

many lectures, including the Morse course at the Union theological seminary on "The Christian Conquest of Asia." Dr. Barrows was one of the trustees of the United Society of Christian Endeavor, and one of the advisory council of the Chautauqua system. He was also president of the Council of Seventy of the American Institute of Sacred Literature. His published works were: "The World's Parliament of Religions," "A World Pilgrimage," "Christianity, the World Religion," "The Christian Conquest of Asia," "I Believe in God," "The Gospels as True Histories," and a life of Henry Ward Beecher, said to be the best brief biography of the Brooklyn preacher.

The Chicago *Evening Post* says of Dr. Barrows: "He believed that Christianity was the best religion for the world, and he preached this belief around the world. He was a man of many parts, but we shall remember him best for his broad Christianity, his charity of thought and act, his readiness to find good in everything." "There were those who feared that Dr. Barrows' zeal in the project to gather men of all religions in a congress at Chicago, and his intimate association with the scholarly men of other faiths, would make him less of a Presbyterian," says the Chicago *Inter Ocean*. "It was a time of sentimental

phrase making and of much talk about a cosmic religion and the brotherhood of man, but Dr. Barrows said to the greatest gathering of religionists that the world had ever seen: 'We are met as conscientious and truth-seeking men in a council where no one is asked to surrender or abate his individual convictions, and where, I will add, no one would be worthy of a place if he did.' This was the keynote of Dr. Barrows' religious policy. He held to it when he went to India and Japan to deliver his course of lectures on comparative religions, and if any of his old friends believed that in his enthusiasm he was in danger of being carried off his feet they had their answer when this champion of toleration and this pleader for a better understanding among differing faiths was elected president of the most Puritan of western colleges."

The Church and Expansion

WHAT CHURCHMEN NOW THINK OF AMERICAN RULE IN THE PHILIPPINES

IN the course of his testimony before the senate Philippine committee, Bishop Thoburn, the Methodist Episcopal missionary bishop of India and Malaysia, referred to the American occupation of the Philippine islands as an act of God. He is reported to have used the phrase, not in the ordinary legal sense as meaning something unusual or calamitous, but as describing a course of action beneficently ordered. The bishop's statement moves the *Minneapolis Tribune* to remark: "From the beginning of this Philippine business, the churches have been in the forefront of the movement for American expansion, and have confirmed the doubtful and encouraged the faint-hearted with the boldness and fervor of the militant saints we read of in the history of early movements of national expansion. The militant churches have been most outspoken; but none of them has been really backward."

A somewhat different view of the matter would seem to have been taken by the members of the American Unitarian association, in session recently in Boston. This body adopted a resolution to be presented to the president and congress, in which, after making "generous allowance for all the undoubted embarrassments of the situation," the president and congress are besought "to take such prompt and efficient measures as may replace the present measures of coercion with a policy of conciliation and good will."

Another incident serving to show indirectly what at least one member of the church thinks of this matter is a letter written by the Rev. Dr. Joseph R. Duryea to the Springfield (Mass.) *Republican* in reply to a request to join in a "protest against the conditions in the Philippines revealed by testimony before the senate committee." Dr. Duryea said, in part: "My sense of justice to the American troops in the Philippines will not permit me to sign the protest. The tendency of this senate inquiry is to make the army bear the blame of an immoral policy of subjugation begun four years ago. The conduct of our soldiers as a whole has been, under the horrible conditions of life in the islands, remarkably praiseworthy." A recent issue of *Zion's Herald* has the following brief comment on the attitude of the Methodist church: "The Methodist Episcopal church, from its board of bishops to humblest layman, is a unit in hearty and enthusiastic support of President Roosevelt in completing the work in the Philippines handed down to him by the lamented McKinley. This is no time to bark at the president's heels."

The Condition of Religion in New York City

REV. WALTER LAIDLAW, in the *Evangelist*, New York
Condensed for PUBLIC OPINION

THE non-Christian population of New York has grown proportionately more in the last ten years than its Christian population. Chinese, Japanese, Hindus, Turks, and miscellaneous Asiatics have increased 165 per cent, and fully half of this increase, of course, is non-Christian. The Hebrew growth of New York in the last decade has been astonishingly large. There are today not less than 650,000 Jews within the limits of Greater New York, an increase of nearly 100 per cent in ten years. This growth is continued by the arrival of every immigrant-bearing ship; 66,172 Hebrew-jargon-speaking immigrants landed at Ellis island between June 30, 1900, and April 1, 1902, in addition to 40,000 other Jews, speaking Polish, Slovak, or other dialects; and the Hebrew birth-rate is so much higher than the Protestant birth-rate that it is altogether likely that New York's Jewish population will soon reach one million. The lower East Side of Manhattan island is, of course, the main Hebrew quarters, but the Jews comprise over 25 per cent of the population in assembly districts as far north as Eighty-third street, and there is not a district above Forty-second street on the upper East Side, where they are less than 13 per cent of the entire population. They have today at least 286 organizations in Manhattan and Bronx, and 29 more in Brooklyn, Queens, and Richmond. There are 247 organizations south of Fourteenth street and east of Broadway. The Hebrew property throughout Greater New York which is exempted from taxation amounts to \$6,538,525, and the Episcopalian, Presbyterian, Methodist, and Roman Catholic properties are the only ones that exceed these figures.

Roman Catholicism has greatly distanced Protestantism in growth in New York since 1890. This is true both concerning property and membership. The exemptions of Roman Catholic churches and institutions in 1901, throughout Greater New York, were \$38,774,075, while the total Protestant exemptions were but \$74,687,570. The Roman Catholic church in 1890 claimed 25.3 per cent of the population of Manhattan and the Bronx, and in 1901 27.8 per cent. The Protestant communicants in Manhattan and Bronx in 1890, on the other hand, were 8.9 per cent of the entire population, and in 1901 are only 8.3 per cent. Roman Catholicism has grown 12.9 per cent faster than population, while Protestant communicants have grown 6.1 per cent less than population. Throughout Greater New York the Roman church claims 954,602 persons, and the Protestant communicant membership is 332,546. Of the entire population of New York at the time of the federal census, viz., 3,437,202 persons, the Federation of Churches estimates that 1,206,955 were practical or hereditary Roman Catholics; 589,012 Hebrews, the balance actual or potential Protestants, making a potential Protestant population of 1,632,335.

THE CHURCH OF ENGLAND TEMPERANCE SOCIETY now has 7,000 branches, with a membership of 150,000 adults and 400,000 junior members. In a recent anniversary address before the managers of the society, the Archbishop of Canterbury declared that in England the cause of temperance had made real progress during the year. The fact that parliament was considering the Children's bill was a good omen. The Licensing bill also showed that the pressure was great enough to compel the government to move.

THE NEWS OF THE WORLD

MONDAY, JUNE 2

DOMESTIC.—Nearly 80 per cent of the engineers, firemen, and pumpmen in the anthracite region obeyed the order to strike; by using non-union men, many of whom are clerks and bosses, the operators, with their force of more than three thousand special policemen, were able to keep their pumps going.... Oregon held its state elections; the Democrats elected their candidate for governor, the Republicans winning on the rest of the ticket.... The United States supreme court upheld the constitutionality of the national bankruptcy law.... President Roosevelt held conferences with a number of Republican senators, at which he urged action on Cuban reciprocity and isthmian canal legislation at this session of congress, and pointed out the necessity for party harmony.

FOREIGN.—In the house of commons Mr. Balfour, and in the house of lords Lord Salisbury, read the terms of peace agreed upon in South Africa, there being general approval of the liberality of the conditions.... Soldiers charged a party of strikers at Lemburg, Austria, killing three and wounding forty persons.... The courts have decreed the judicial separation of the Prince and Princess of Monaco.... Sixteen persons were killed and four wounded by an explosion of gas in an ozokerite mine in the province of Galicia.

TUESDAY, JUNE 3

DOMESTIC.—Señor Quesada was confirmed by the Cuban senate as minister to the United States.... A general strike of the employees of the United Traction company, controlling nearly all the street car lines in Rhode Island, began at midnight.... Dr. John Henry Barrows, president of Oberlin college, died.... The Bethlehem steel company has received the contract for building the steel tubes for the Pennsylvania tunnel under the North river.... Twenty persons were injured, several probably fatally hurt, in Chicago by street fights between the police and sympathizers with striking teamsters.... Ten former volunteer soldiers were released from the Leavenworth prison under the decision that convictions of volunteers by regular officers are illegal.

FOREIGN.—Waldeck-Rousseau's ministry resigned at Paris.... President Kruger and the Boer delegates in Europe conferred at Utrecht in reference to the peace terms, but made no public statement.... A London cablegram states that War Secretary Brodrick said in parliament that the total number of Boer prisoners was 25,565.

WEDNESDAY, JUNE 4

DOMESTIC.—The Hon. Michael Henry Herbert has been chosen to succeed the late Lord Pauncefoot, as British am-

bassador at Washington, and Señor de Ojeda is to succeed the Duke de Arcos as Spanish minister.... Señor Buencamino, the Filipino leader, finished his statement in support of American sovereignty in the Philippines before the house committee on insular affairs.... Justice Chester, of New York, granted an injunction against several western meat firms doing business in this state.

FOREIGN.—The king created Lord Kitchener viscount and asked authority from parliament to make him a money grant of £50,000.... Eight miners were burned to death by an explosion of gas at Guest, Keen & Co.'s colliery, at Dowlais, Wales.... The Tokyo foreign office received information that the Singapore government has declared Hong Kong plague-infected, and quarantined all ships coming from there after May 17.

THURSDAY, JUNE 5

DOMESTIC.—Coal guards shot a boy in the anthracite fields; the operators are gaining on the water in the mines, and expect to get them clear.... The convention of the National Association of Military Surgeons was opened in Washington, President Roosevelt making an address to the delegates.... The president sent a report to congress on British operations at Chalmette, Louisiana, holding that there has been no violation of the neutrality laws.... Governor Taft was received by the pope and stated the objects of the mission; the pontiff expressed his approval of the American government's plans.... John F. Jewell, of Illinois, was nominated for consul at Martinique.... The Chicago striking teamsters compromised with the meat packers.

FOREIGN.—M. Combes has undertaken the task of forming a new French cabinet.... General Collozo, the last prominent Cuban to oppose the presidency of General Palma, pledged his support of the government; a reform movement was initiated by the dismissal of all the Cienfuegos police.... Emperor William and many other notables took part in the ceremonies marking the restoration of Marienburg castle.... Sir William Cotton, prominent in London politics for a generation, is dead.

FRIDAY, JUNE 6

DOMESTIC.—The new constitution was formally adopted by the Virginia convention by a vote of ninety to ten, two Republicans voting for it.... The instructions given to Governor Taft for conducting negotiations with the Vatican regarding the friars' lands in the Philippines were made public by Secretary Root.... The strikers in the anthracite region were quiet, but the tone is for riots and acts of serious disturbance; many workers quit work,

and mines are filling with water.... Floods, caused by excessive rainfall, did great damage in South Dakota, Iowa, and Nebraska.

FOREIGN.—The names of the new French ministers under the premiership of M. Combes, were announced; the new ministry has a strong Radical and Socialist element in it.... The British government decided that, owing to his age and infirmities, Mr. Krüger would not be required to acknowledge British sovereignty, and that all the Boer delegates in Europe could return to South Africa.... Boer officers in the Bermuda prison camps were released on parole.

SATURDAY, JUNE 7

DOMESTIC.—The ambassadors of Germany and Russia presented a joint note to Secretary Hay, proposing concerted action by the powers against anarchists; the secretary expressed President Roosevelt's hearty sympathy with the movement.... The navy department will probably take no action in the case of the officers of the *Chicago* accused of misconduct at Venice, Admiral Crowninshield having disapproved the recommendation for a court-martial.... An outbreak of violence occurred in the West Virginia soft coal field and a mine boss was killed by strikers.... The whaleback steamer *Thomas Wilson* and the wooden steamer *George G. Hadley* had a collision just outside the Duluth canal and the *Wilson* sank within less than a minute, nine men losing their lives.

FOREIGN.—M. Rouvier accepted the portfolio of finance in the Combes ministry in France, and the new cabinet was presented to President Loubet at the Elysée palace.... The Boer commandoes in South Africa continue to surrender under the terms of the peace agreement.... A British committee on military training and education condemned the practices of Sandhurst and Woolwich, and demanded an army system of promotion for merit.

SUNDAY, JUNE 8

DOMESTIC.—The grant of eighty thousand acres of land in Bolivia to the Bolivian syndicate of New York is causing trouble.... Gonzalo Quesada, Cuban minister to Washington, sailed from Havana on the *Morro Castle* on his way to his post.

FOREIGN.—King Edward and Queen Alexandra, the Prince and Princess of Wales and many other distinguished persons attended a peace thanksgiving service at St. Paul's cathedral, London.... On the eve of the peace meeting of Boers at Vereeniging, South Africa, sixty arrests were made in Pretoria of persons engaged in an extensive plot to blow up government buildings and General Kitchener's residence.

The Books of The Week

FACTS AND COMMENTS. By Herbert Spencer. Cloth, pp. 292, \$1.20. New York: D. Appleton & Co.

"THE volume herewith issued I can say with certainty will be my last." For this if for no better reason it will have many readers among the more thoughtful of humankind; the last words of Herbert Spencer even upon subjects which, as he puts it, are relatively trivial, can not fail to be of deep interest. Have the processes of age changed his views or his outlook? This is the question in the mind of the reader when he takes up the book, and he is quickly answered in the negative. Only in the final brief chapter on Ultimate Questions is there even a glimmer of a change. With the coming of old age, he admits that there is an increasing tendency to speculate upon the riddle of existence, a speculation which takes common forms among old people. But, "after contemplating the inscrutable relation between brain and consciousness, and finding that we can get no evidence of the existence of the last without the activity of the first, we seem obliged to relinquish the thought that consciousness continues after physical organization has become inactive. . . . And then the consciousness itself—what is it during the time that it continues? And what becomes of it when it ends? We can only infer that it is a specialized and individualized form of that Infinite and Eternal Energy which transcends both our knowledge and our imagination; and that at death its elements lapse into the Infinite and Eternal Energy whence they were derived."

The first chapters are those described as relatively trivial. They refer to such subjects as the over-trustfulness of the public in lawyers and banks, the passing of old scenes and old things to make way for new and practical, but not always interesting, innovations; to the misuse of words (unkindly called "Americanisms"), and to the corruption of music. If these chapters do nothing more, they exhibit an intensely practical side of a mind whose strongest bent is toward generalizations and abstractions. In the eighth chapter, Feeling vs. Intellect, we come upon some comments of great importance. Because, it is pointed out, the brain is the organ of the mind, it is assumed that the brain is chiefly if not wholly the organ of the intellect. "The error is an enormous one. The chief component of mind is feeling. . . . The body of even our thought-consciousness consists of feelings, and only the form constitutes what we distinguish as intelligence." This is familiar enough; it is in the application of these facts that the importance of the comment lies. To the error referred to Mr. Spencer attributes most of the failures in educa-

tion; by it is shown the futility of mere instruction as a moralizing agent. "Were it fully understood that the emotions are the masters and the intellect the servant, it would be seen that little can be done by improving the servant while the master remains unimproved. Improving the servant does but give the masters more power of achieving their ends." This, of course, is not an argument against education, but against undue faith in teaching.

Mr. Spencer's old bogey, militarism, reappears in the chapters on Patriotism, Imperialism, and Slavery, Re-barbarization, and Regimentation. The case against imperialism is put effectively in the illustration of a prisoner with bound hands and a cord round his neck being led home by his conqueror. "The one, you say, is captive and the other free? Are you quite sure the other is free? He holds one end of the cord, and unless he means to let his captive escape, he must continue to be fastened by keeping hold in such a way that it can not be easily detached. He must be himself tied to the captive while the captive is tied to him." The trend of athleticism, the popularity of blood-thirsty literature, and all sorts of appeals to "our latent savagery," the ideas and feelings and institutions appropriate to a peaceful life, replaced by those appropriate to fighting life, these are the evidences of "re-barbarization," and we are told that "If there needs a striking illustration of the result, we have it in the dictum of the people's laureate that the lordliest life on earth is one spent in seeking to 'bag' certain of our fellow men."

The chapters on the Origin of Music, Developed Music, Meyerbeer, and Some Musical Heresies are of especial interest, and besides those subjects we have mentioned there are many others on which the comments of the greatest mind of the age can not fail to be stimulating as well as interesting.

TERRORS OF THE LAW. Being the Portraits of Three Lawyers, "Bloody Jeffreys," the "Bluidy Advocate Mackenzie," "The Original Weir of Hermiton." By Francis Watt. Cloth, pp. 129, \$1.25. New York: John Lane. Of the three men described here, "Bloody Jeffreys" is probably the most generally execrated, and for that reason Mr. Watt's plea in his behalf is the less likely to find favor. But it must be said that the author has made out a good case even for Jeffreys. He was the judicial agent of the restored Stuart, and he was on the bench to find for the crown whenever there was the slightest taint of treason attaching to the accused. Of the manner in which he treated the prisoners at the bar, Mr. Watt can only say that it was little if any worse than that of every other judge of the same day. It was a rough age, and one not to be judged by the standards of today. The others are less known, but their judicial mission was practically the same as that of Jeffreys and they are to be viewed and judged in the same light. Mr. Watt's style and

method of treatment are sufficiently legal to give the appearance of accuracy and sufficiently human to make very interesting reading.

THE TRUST: ITS BOOK. Being a Presentation of the Several Aspects of the Latest Form of Industrial Evolution. By Charles R. Flint, James J. Hill, James H. Bridge, S. C. T. Dodd, and Francis B. Thurber. With Numerous Expressions of Representative Opinion and a Bibliography. Edited by James H. Bridge. Cloth, pp. 255, \$1.25 net. New York: Doubleday, Page & Co.

A COLLECTION of special pleadings for the trusts. The point made by all of the writers that industrial combinations are good and necessary is not disputed at the present time, except by a few negligible individuals and a handful of irreconcilable newspaper editors. The real point of the controversy as it presents itself now is as to the conditions under which these combinations are to be allowed to exist and do business. This is not discussed in this volume. If any reader is so far misled by reading the list of authors as to imagine that he is to have a few pages from the inside history of trusts, he is doomed to disappointment. Most of the things said, while eminently true, are platitudinous and unnecessary.

THE TEACHING OF HISTORY AND CIVICS in the Elementary and Secondary School. By Henry E. Bourne. Cloth, pp. 385, \$1.50. New York: Longmans, Green & Co.

A most excellent guide for the use of teachers who know history but do not know how to teach it. Part I contains chapters on The Meaning of History, The Foundation of Historical Scholarship, The Facts of Most Worth, and The Source Method. It also contains a description of the methods of teaching in vogue in the schools of Germany, France, and the United States. The suggestions as to the use of original sources are valuable to all students, whether elementary or advanced. The second part consists of a list of suggested courses for the study of history of all periods.

A PASTEBOARD CROWN. A Story of the New York Stage. By Clara Morris. Cloth, pp. 370, \$1.50. New York: Charles Scribner's Sons.

OUT of Miss Morris's store of knowledge of the life of the stage, she might readily, it would seem, have written a more unusual story than this, for here we have only the old tale of the actress who is made by a manager not wholly inspired by disinterested devotion to art. And as always happens, the actress finds that her fame has been dearly bought. The crown is so thinly coated with tinsel that its base materials are clearly recognizable. The story, such as it is, is, however, very well told, and it conveys a lesson without in any way marring its interest for those who are in no danger of falling victims to the allurements of the stage.

A PRINCE OF GOOD FELLOWS. By Robert Barr. Cloth, pp. 340, \$1.50. New York: McClure, Phillips & Co.

JAMES V. of Scotland, is the prince of good fellows, and the tales in this book celebrate the many adventures of which he was the hero—if we may believe Mr. Barr. However difficult the position into which the lively disposition of the king entangled him, he is sure to come out of it with flying colors and with credit to his traditional goodness of heart as well as to the quickness of his wit and his sword. The tales afford several hours of very agreeable entertainment.

MARGARET BOWLBY. By Edgar L. Vincent. Cloth, pp. 436, \$1.50. Boston: Lothrop Publishing Co.

A STORY of the rise to power of an honest politician, who, throughout, was more or less dependent upon a feminine assistant, Margaret Bowlby. There is some life-like work in the book and there are portions which are crude; things do not happen so fortuitously in this world and especially in corrupt legislatures as Mr. Vincent would have us believe, and yet his recital of the events of the sessions during which his hero distinguishes himself, are life-like enough to have been drawn from actual experiences.

POEMS. By Robert Underwood Johnson. Cloth, pp. 270, \$1.20, net. New York: The Century Co.

THESE verses are the expressions of the feelings of a deep and quiet artistic nature, but not of a strongly emotional or passionate one. There is an intellectual realization of the power of the primitive sensations, but no evidence of a personal experience of them. For that reason they will appeal only to a small class of readers. There is none of the vivid emphasis or over-emphasis that is often necessary to carry conviction when verse is the vehicle of argument or propaganda.

MR. WHITMAN. A Story of the Brigands. By Elizabeth Pullen. Cloth, pp. 352, \$1.50. Boston: Lothrop Publishing Co.

MRS. PULLEN has written a very amusing book under a title that at first suggests a more or less serious narrative. We shall not deprive the reader of the pleasure of coming unawares upon the surprises the story affords, but we can assure him that these surprises and some amusement besides await those who follow the experiences of Mr. Whitman among the Italian brigands.

SYSTEMS OF ETHICS. By Aaron Schuyler. Cloth, pp. 464, \$1.50. Cincinnati, O.: Jennings & Pye.

THE chief value of this book is in its historical survey. This portion is clear and comprehensive, and traces the history and growth of ethical schools rapidly and clearly. The portions on theoretical and practical ethics are in no sense exhaustive, and the survey of opposing systems and arguments is insufficient to combat the arguments of other schools or to uphold its own.

NOW READY

The Kindred of the Wild

By **CHARLES G. D. ROBERTS**

Author of "THE HEART OF THE ANCIENT WOOD," "THE FORGE IN THE FOREST," etc. Illustrated with 51 full-page plates and many decorations from drawings by Charles Livingston Bull

For Sale Everywhere

L. C. Page & Company, Boston

A 70% Investment

in a sound industrial enterprise should prove attractive to all readers of *Public Opinion* who are anxious to have their money safely and profitably invested. The

U. S. Milk Flour Food Co.

(Incorporated). (Capital Stock \$5,000,000, in shares of \$1 each, full paid and non-assessable) whose full-page advertisement appeared in *Public Opinion* on May 29, offers to the man with limited capital the very best opportunity that has ever been given the general public to secure an interest in a growing, prosperous enterprise.

The U. S. Milk Flour Food Co. has been organized to manufacture milk flour from skim-milk, through sub-companies to be established in dairy districts throughout the country. The process of manufacture and the product are fully covered by valuable patents owned entirely by the Company, giving them practically a monopoly of the business.

The Company have just purchased a large factory in Washington, N. J., and are now installing the necessary machinery for preparing many milk flour specialties, as, Malted Milk, Cocoa and Milk, Milk Flour Tablets, etc.

In order to push the work of organizing sub-companies as rapidly as possible, the U. S. Milk Flour Food Co. are now offering for a limited time only

100,000 Shares of the Capital Stock at 50 cents per share.

We earnestly invite the attention of business men to this enterprise. We believe that after a careful investigation you will agree that our estimate of profits to be earned is very conservative—70 per cent. yearly. We invite the closest investigation and will gladly mail free our prospectus and other literature which will be of interest to you.

Applications for stock should be made without delay, as the price will soon be advanced.

Remit by cash, check or money order, payable to

U. S. MILK FLOUR FOOD CO.,
120 Nassau St., New York.

At your own Request

Upon receipt of only 25 cents we will send ten (10) weekly issues of

26 and 28 Downing Street, New York City

THE GATE OF THE KISS. By John W. Harding. Cloth, pp. 404, \$1.50. Boston: Lothrop Publishing Co.

A HISTORICAL novel of the days of King Hezekiah and Sennacherib is about as far back as anyone is likely to care to go. The author would seem to have scored in this way, if in no other. But in many other ways the story is worthy of consideration. There are the usual beautiful woman and the customary man of superhuman strength, but beyond this there is a distinct departure from the dusty path worn by the other novels of the historical school; for the woman is a traitress in the pay of the Assyrian king, and the man, a Jew, perishes miserably in exile, after he has revenged himself on the woman for her betrayal of himself and his country.

MON ONCLE ET MON CURE. Par Jean de la Brete. Edited for school use by Elizabeth M. White. Cloth, pp. 222, 50 cents. New York: American Book Co.

A DELIGHTFUL, vivacious French story with all that is supposed to pertain thereto, minus the immorality. The book has been crowned by the French academy, and is now carefully edited for school use. It is safe to say that no book could have been chosen which better illustrates the French language in its purity as well as its idiom.

THE COURAGE OF CONVICTION. By T. R. Sullivan. Cloth, pp. 257, \$1.50. New York: Charles Scribner's Sons.

Two young New York men waver between devoting their lives to the making of money and the study of painting and music. The painter decides early in favor of his art and the musician comes to the same conclusion later on, after he has failed to make a go of it in Wall street. The theme is promising, but the treatment is unsatisfactory.

THE SEIGNEUR DE BEAUFOY. By Hamilton Drummond. Cloth, pp. 259, \$1.50. Boston: L. C. Page & Co.

Seigneur of Beaufoy was a great French noble of the time of Charles VII, and here are some stories of the more famous of his exploits. They were very exciting exploits and these are very good stories, as good as anything of the kind since the publication of "The Exploits of Brigadier Girard."

THE BOOK OF VEGETABLES. By George Wythes. Cloth, pp. 106, \$1. New York: John Lane.

COMPILED with the same serious regard to completeness and accuracy this volume is a valuable addition to the other treatises of the series to which it belongs. As gardener to the Duke of Northumberland, the author has had a large experience to which he adds a broad knowledge.

STRAY LEAVES FROM A BORDER GARDEN. By Mary Pamela Milne Home. Cloth, pp. 340, \$1.50. New York: John Lane. A SWEETLY told chronicle of a garden's history in dark and bright weather. The book speaks not only of the garden, but

LAVILLES REMEDIES

In the inflammatory form relief is soon obtained by the use of Lavilles Liqueur, and by persistent use of Lavilles Pills the recurring attacks can be prevented.

Pamphlet giving full information sent free by
E. FOUGERA & CO.,

26-28-30 North William Street, New York

of the personality of the author as well, and we see one who is deeply in love with her flower-friends and with the wealth of fancy which exists in her century-old home and its surroundings.

A REMEDY FOR LOVE. By Ellen Olney Kirk. Cloth, pp. 227, \$1.25. Boston: Houghton, Mifflin & Co.

A STORY of excellent intent and good execution, the chief character being a man who after the space of twenty years becomes, for a second time, a lover. The book furnishes innocent amusement and a mild lesson.

THE TRUTH IN CHRISTIAN SCIENCE. By Herbert Ernest Cushman, Ph.D. Cloth, pp. 64, 60 cents. Boston: James H. West Co.

A DEFENSE of Christian Science which leaves the subject in a state of obscurity and inconsistency, notwithstanding the author's assertions to the contrary.

DANIEL WEBSTER. By Samuel W. McCall. Cloth, pp. 124, 80 cents. Boston: Houghton, Mifflin & Co.

THIS is a reprint of the elaborate oration delivered by Mr. McCall at the Dartmouth college centennial observance last year of the graduation of Daniel Webster.

BUELL HAMPTON. By Willis George Emerson. Cloth, pp. 420, \$1.50. Boston: Forbes & Co.

A RATHER turbid novel with an intricate plot and a humanitarian purpose. Notwithstanding manifest defects of plot and construction, the book is not without interest.

ASA HOLMES. By Annie Fellows Johnston. Cloth, pp. 215, \$1. Boston: L. C. Page & Co.

THIS book brings to life a current in literature which we had believed to be about spent. It is merely the ordinary rustic tale with little wit or wisdom to recommend it.

THE STORY OF CHINA. By R. Van Bergen. Cloth, pp. 224, 60 cents. New York: American Book Co.

THE history and present condition of China are briefly sketched. The author's long residence in that land lends considerable weight to what he has to say.

LOVE'S COMING OF AGE. By Edward Carpenter. Cloth, pp. 162. Chicago: Stockham Publishing Co.

AN INTERESTING little essay on marriage, its possibilities, and dangers. The book is clear, logical, and well directed.

JOYFUL PRAISE. For Sunday-schools, Young People's Societies, Devotional and Revival Meetings. Compiled by Chas. H. Gabriel. Cloth, pp. 248, 30 cents. Cincinnati: Jennings & Pye.

THE STORY OF ANIMAL LIFE. By B. Lindsay. (The Library of Useful Stories). Cloth, pp. 196, 35 cents. New York: D. Appleton & Co.

UNCLE JED'S COUNTRY LETTERS. By Hilda Brenton. Cloth, pp. 73. Boston: Henry A. Dickerman & Son.

SEARCHING FOR TRUTH. Cloth, pp. 579. \$1.50. New York: Peter Eckler.

BUFFALO LITHIA WATER

Registered by
U. S. Patent
Office.

"The Most Effective of the Natural Medicinal Waters" and "Strikingly Superior to Lithia Tablets" in Bright's Disease, Calculi, Gout, Rheumatism, etc.

Dr. I. N. Love, New York City, Former Professor of Clinical Medicine and Diseases of Children, College of Physicians and Surgeons and in Marion Sims College of Medicine, St. Louis, Vice-President of American Medical Association, etc., in an article in Medical Mirror, says:

"While being the most effective of the natural mineral waters, it is strikingly superior to emergency solutions of lithia tablets and pure water, even where the said solution is an exceedingly strong one."

E. H. Pratt, A. M., M. D., LL. D., Professor of Official Surgery to the Chicago

Homoeopathic Medical College, and Attending Surgeon to Cook Co. Hospital, says:

"For many years I have found **BUFFALO LITHIA WATER** a very valuable therapeutic resource. It has proved especially efficacious in Rheumatism, Gout, and Affections of the Kidney and Bladder, generally, including Bright's Disease."

Dr. William Doughty, Former Professor of Materia Medica and Therapeutics, Medical College of Georgia, Augusta:

"**BUFFALO LITHIA WATER** is the only reliable treatment known to me for the permanent relief of gravel, and the antecedent conditions that determine it."

Dr. Cyrus Edson, recently Health Officer of New York City:
"I have **BUFFALO LITHIA WATER** with great benefit in Bright's Disease of the Kidneys."

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally.

Testimonials which defy all imputation or question sent to any address.

BUSINESS AND FINANCE

The Business Situation Selected and Condensed for PUBLIC OPINION THE GENERAL SITUATION

Bum's Review, New York, June 7

Peace in South Africa has greatly improved the outlook. Foreign industrial markets will quickly benefit by the development of that country, while a return to active gold mining will have a helpful influence in monetary circles. Owing to the present exceptional home consumption, producers in this country may not be able to take advantage of the opportunity immediately, but even the indirect effects must be beneficial. Domestic conditions still have but the one drawback of labor disputes, which have reduced the earning power of a large force. Additional profit sharing and numerous advances of wages are reported, but new controversies have broken out elsewhere. Outside the limits of this influence there is little cause for complaint. Orders are large, and distribution is less interrupted by the shortage of cars. Railway earnings for May show an increase of 6.8 per cent over last year and 17.4 per cent over 1900. A stagnant stock market and the holiday account for the decrease of 41.9

BODY HEAT

Reduced 20 Degrees in Summer

Never eat heavy carbonaceous foods for the morning meal, for these foods should follow and not precede hard work.

The best morning foundation is Grape-Nuts and cream, a little fruit, a cup of Postum Food Coffee and possibly a couple of eggs prepared to suit the taste—this breakfast is sufficient to satisfy the hardest worker, either of brain or muscle, until the noonday meal.

Particularly is this true at the present season of the year, when meat and other fatty foods increase the internal heat of the body and make the summer day still more disagreeable.

Grape-Nuts come to you from the grocer ready to serve, having been fully cooked at the factory by food experts and this saving in time and exertion is appreciated by the housewife as well as the economy, for being a concentrated food, four teaspoonfuls is sufficient for the cereal part of a meal for one person and costs only one cent.

A booklet of excellent recipes is found in each package of Grape-Nuts from which many easy and delicious warm weather dishes can be made for luncheon and supper that are not only nutritious but pleasing to the palate.

A trial of the above selection of food for ten days will prove to anyone that health and vigor, an active mind and a keen enjoyment of the pleasures of summer will take the place of poor digestion, a dull brain and that heavy, draggy feeling caused by improper food during the hot weather.

per cent in bank exchanges at this city compared with last year's figures, but at other leading cities, where speculative influences are less of a factor, clearings for five days were only 15.5 per cent less than in the full week of 1901.

STEEL AND IRON

Contrary to expectations, the leading producers maintained their conservative position by making no advance in the price of steel rails for delivery in 1903, notwithstanding the very material rise that has occurred in pig iron. Much new business has been placed during the past week, although consumers have found difficulty in booking orders for delivery in 1902. This is especially noticeable as to structural material and railway supplies. Interruption to work at blast furnaces was not wholly averted, but the loss in output did not reach a large figure owing to prompt concessions on both sides. Practically no orders were accepted for pig iron, however, owing to the uncertainty as to the extent of the strike. In tubes, pipes, and kindred lines there is much activity, with quotations fully maintained.

COTTON AND WOOL

Textile goods are firmly held, with stocks well under control. Buyers still show a disposition to hold back orders, yet better terms are not indicated by the condition of supplies. The fall print basis has been established, at least for the time. Inquiries are larger for export grades of cotton goods, but sales in all lines are limited. Quiet conditions are also reported in woolens, some cancellations following the better deliveries by mills recently idle through strikes.

3,468,842 bushels in the same week last year. Exports from all ports of the United States were 3,743,244 bushels, while the movement a year ago was most exceptional, reaching 5,646,597 bushels. Western receipts of corn were 3,475,403 bushels, against 4,713,010 last year, but the comparison as to Atlantic exports was 68,887 bushels, against 2,169,697 in 1901.

FAILURES

Business failures for the week number 153, as against 163 in this week last year.

Financial

Bradstreet's, New York, June 7

THE MONEY MARKET

There were during the present week some renewals of demands for money at the interior, while the treasury also absorbed money from the banks. It was estimated on Friday that the net movement of funds during the week resulted in a loss of upward of \$250,-

WHY DON'T THEY GO?

A Way to Push off the "Hang on's"

Perhaps some day you will wake up to the fact that coffee is quickly and surely doing the business for you. You wonder why the symptoms of disease which grow more and more pronounced do not disappear, but hang on in spite of all the medicines you can take.

Fixed organic disease may result if you keep up your present course, and yet it is an easy thing to give up coffee and get well. Have your cook make Postum Food Coffee strictly according to directions, and that is easy. Use enough of it and boil long enough to bring out the taste, then you will find that the famous food drink will satisfy your coffee taste and the old troubles gradually disappear.

There are hundreds of thousands of cases in America that prove the truth of this statement.

A gentleman from Columbus, Ga., says, "My wife had been an invalid for some time and did not seem to yield to any sort of medicines. She could not eat anything without distress, and naturally was badly run down in every way.

Finally we concluded that perhaps it was the coffee that hurt her, so she quit it and went on to Postum, also began using Grape-Nuts Breakfast Food. She immediately began to improve and kept gaining strength and health, now she can eat heartily of anything she wants, vegetables and anything else, without hurting her. She has gained nearly thirty pounds since she made the change.

I saw such an improvement in her health that I decided to quit coffee myself and you would be surprised to see the change. I have gained in flesh about twenty-five pounds, and have entirely lost the old, dull headaches that I used to have so much.

Our two children are very fond of Postum. You can use my name if you like." T. M. Coggin, 1220—10th Ave., Columbus, Ga.

000 to the New York clearing house institutions. On the other hand, speculative activity is so light that unless there have been some large borrowings by syndicates the aggregate loans should show no increase, and perhaps a slight decrease. Owing to the very moderate demand for accommodation, the tone of the money market throughout the week has been comparatively easy, call loans having ruled at about 3 per cent. Rates are slightly firmer at 4 per cent for thirty to ninety day arrangements and $4\frac{1}{4}$ @ $4\frac{1}{2}$ for longer maturities. There was considerable inquiry for commercial paper, principally from out of town, but the offerings of choice names were on a limited scale, rates for endorsed bills receivable being 4 @ $4\frac{1}{2}$ per cent.

THE STOCK MARKET

The New York stock market is firm but dull, although the more threatening aspect of the coal strike caused selling for both long and short accounts in the early part of the week. Commission-house business is greatly restricted, but the peace in South Africa and the good crop news, together with continued gains in railroad earnings, create confidence in the future and discourage selling by investment holders of securities. Some good buying is reported in Union Pacific and the granger and Pacific stocks. Specialties, like Consolidated Tobacco fours, or Canadian Pacific, have, however, been the active features of the week, pool operations being responsible for the movements in these securities. Bonds are firm. Foreign exchange is higher on limited offerings of bills, demand sterling being $4.87\frac{1}{2}$.

BANK CLEARINGS

Bank clearings for the week ending June 5 (five days) amount to \$1,798,296,971, a decrease of 11 per cent from last week and a loss of 32 per cent from the same week in 1901. Exchanges outside of New York, \$737,875,383, show a loss of 1 per cent from last week and a decline of 13 per cent as compared with the like week last year.

Various Topics

The Union Pacific railroad company has increased its holdings of Southern Pacific stock from \$75,000,000 to \$90,000,000.

William E. Nichols & Co., the bank stock specialists, of 15 Wall street, have just published a statistical compendium of New York bank and trust company stocks. The tables include the capital, surplus, deposits, earnings, dividends, yearly increase, book value, and net return to investor.

Directors of Chicago & Northwestern railway company have declared a semi-annual dividend of 3 per cent and 1 per cent on the common stock and the regular quarterly dividend of $1\frac{3}{4}$ per cent, with 1 per cent extra on the preferred, thus bringing up the year's distribution on the two classes to 7 and 8 per cent respectively. This is more than holders of either common or preferred shares have received since 1884.

Our endowment plan returns a man's accumulated earnings to him just at a time in his life when he most needs money—when his energies are waning. It is a good, wholesome, practical plan, and easy on the policy-holder. Read "The How and the Why" free booklet.

The Week

Thursday
June 19, 1902

PRESIDENT ROOSEVELT'S message in behalf of Cuba may not have the desired effect in bringing into line those who oppose tariff concessions to the island, but it is generally thought that the president's action will result in legislation of some kind being passed without further delay. The main features of the message are given on another page together with three expert estimates of its probable effect. Things have come to a strange pass when the fate of a piece of legislation should remain doubtful after it had been demonstrated that this legislation was demanded by a vast majority of the people of the country, representing all political parties and including the president of the political party dominant in congress. But up to this time we have never had such things as "Beet-sugar Men" to deal with.

SENATOR ELKINS'S joint resolution providing for the annexation of Cuba to the United States and the construction of the island into a state of the union is regarded merely as an effort to befog the tariff issue. Senator Elkins has been a leader in the fight against a twenty-per cent tariff reduction in favor of Cuba. He now comes forward with a measure which will wipe out all tariff duties on Cuban products—that is, it will if it should ever become a law. No one, however, considers the possibility of Cuban annexation at this date, and the resolution being looked upon as a means of further delaying action looking to the relief of Cuban industry, it may be doubted if the Cubans will be able to see the joke involved in Mr. Elkins's proposal. It is the climax of discourtesy toward the republic just established and can not fail to be offensive to the Cuban people.

THE senate agreed to vote on interoceanic canal legislation to-day, Thursday. It was time that some action was taken on the several measures before it—the Nicaragua bill, the Panama bill, and the proposal to leave the selection of the route to the president. For if we may judge from the expressions of the press, the country is weary of the delay caused by the squabbling in congress over the route, and demands that a canal shall be built across the isthmus at one point or the other. The volcanic scare raised by the Panama advocates has not materially reduced the number of partisans of Nicaragua, the latter route is still the choice of the majority. But whichever route is selected, the difficulties of construction are sure to be so great that the choice will sooner or later be deplored, and, realizing this, the public demands that we begin one canal or another at once.

THE house accomplished some important work last week: it passed the so-called anti-anarchy bill for the protection of the president and high officials and to suppress anarchy; killed the government Pacific cable bill, and adopted the senate irrigation bill, which is substantially in accord with President Roosevelt's recommendations and meets, we believe, the demands of the west. It provides for a fund for reclamation purposes to be formed by the sale of public lands in arid-land states; in a sense land is to reclaim land. Only five per cent of the receipts from the special land sales are to be reserved for any other purpose than reclamation, and this five per cent is to be devoted to public education.

WEST POINT'S centennial celebration served to give the institution a much-needed advertisement. We doubt if half the people who read the accounts of last week's ceremonies ever realized before the many reasons why the nation has cause to be proud of its military academy. It is the oldest and most efficient institution of its kind in the world.

Foreign military authorities are in the habit of sneering at the American army, but they refer to the organization, the rank and file. The American officer is recognized as the equal of the officer of any army, and this is an acknowledgment of the excellence of his training school. This is reason enough to be proud of West Point, but there are many others to be found in the account of the centennial ceremonies.

COMMENTING upon the effort under way in Great Britain to counteract the power of Mr. Morgan's shipping combination, we mentioned the United States shipbuilding company as one of the elements likely to exert an important influence in this industry. This combination of shipbuilders grows steadily in scope, its latest feat being the acquirement of the Bethlehem steel plant, which enables the new concern to boast that it is the only one in the world that can build, arm, armor, and completely equip a battleship. Mr. Lewis Nixon, who seems to be more successful as a shipbuilder than he was as leader of Tammany Hall, announces for the new company that "notice is served upon Europe that even in shipbuilding we propose to go to the front," and everyone will hope that the expectations of Mr. Nixon and his associates will be fully realized. We have much to do before we can claim to rank with Germany and England in shipbuilding.

THAT President Roosevelt wants to do something to bring the coal strike to an end is to be expected. But what are his powers in this respect? Conciliation has been tried and has failed, and it does not seem to lie within the power of the president to do anything that has not been done in this direction. Not long ago, however, an extensive strike in Boston was brought to an end merely by the publication of the two sides of the controversy; these were obtained by an impartial agency and the force of public sentiment did the rest. The commissioner of labor, who has been investigating the strike at the direction of the president, may be able to perform a feat similar to this. In the meantime 165,000 men and boys remain idle, and frequent outbreaks of violence show that the worst stage of the strike has not been reached.

THE sitting of the French chamber of deputies on Thursday when for the first time the new ministry faced the new legislature, is described by a correspondent as "a ministerial bull-baiting." Another correspondent says that the impression obtained by watching the sitting is that the new Democratic social elements that came into the chamber as the result of the recent elections have made the assembly more like a political mass meeting than anything heretofore seen in the Palais Bourbon. Epithets of the most violent description were hurled at the new premier by Royalists and Nationalists, but the government nevertheless received a vote of confidence carried by 329 to 124, which is said to represent the majority upon which the cabinet can normally rely.

CLEAR political skies are promised for coronation week, not only in Great Britain but in the world at large. The Boers are surrendering rapidly and in such numbers that the estimates of the number of Boers in the field during the war have been increased to 80,000. Of more importance than these surrenders, which now number over 10,000 men, is the fact that the burghers are displaying an excellent temper toward their conquerors, a more or less contented acceptance of the result, and an evident determination to settle down under the new régime and if possible bring about Dutch control of the federation of South Africa after the immediate effects of the war have passed away.

AMERICAN

West Point's Centenary

THE 100TH ANNIVERSARY OF THE NATIONAL MILITARY ACADEMY
OBSERVED WITH GREAT CEREMONY

THE one hundredth anniversary of the United States military academy at West Point was celebrated last week. President Roosevelt and many members of the administration, army and navy officers, a large representation from the diplomatic corps, and other distinguished guests participated in the ceremonies. The president in his address asserted that "not merely has West Point contributed a greater number of the men who stand highest on the nation's honor roll, but I think beyond question that, taken as a whole, the average graduate of West Point during this hundred years has given a greater amount of service to the country through his life than has the average graduate of any other institution in this broad land; and of all the institutions in this country none is more absolutely American, none more, in the proper sense of the word, absolutely democratic than this. Here we care nothing for the boy's birthplace, for the boy's grade, for his social standing, here we care nothing save for his worth if he is able to show it. Here you represent with almost mathematical exactness the country geographically. You are drawn from every walk of life by a method of chance, meant to insure, and which in a great majority of cases does insure, nothing but active youth. Here you came together as representatives of America in the higher and more peculiar sense than can possibly be true of any other institution in the land, save your sister college that makes similar preparation for the service of the country on the seas."

Ambassador Porter followed the president. Secretary Root then spoke, defending the American soldier, claiming that the record that they had made in the Philippines would be counted to their honor, and concluding with the promise that they should not be condemned unheard. The greatest enthusiasm of the day was evinced when Ambassador Porter said that "the soldiers of the Philippines, after making the name respected throughout the foreign world, had become the objects of the envenomed shafts from carping tongues at home. But the shafts have not even pierced their honest khaki uniforms," he continued. "When the embittered assailants are mouldering in their graves the people of the United States will be looking for marble white and pure enough to adorn the graves of our fighting men in the Philippine islands."

The academy was organized under the act of March 16, 1802, with Major Jonathan Williams as the first superintendent, but it did not go into operation until the middle of June. During the century of the academy's career the number of cadets admitted has been, 8,504. When this year's class receive their diplomas, the graduates will have num-

A GLIMPSE OF THE OLD AND NEW WEST POINT

bered 4,121, and 373 cadets will be left in the academy. Of the 4,067 men who had passed through the institution before last summer, 1,900 are living and 1,400 are in active service in the army.

"The whole country," says the *New York Tribune*, "joins with pride and sympathy in the commemoration exercises, rejoicing in the fame of the military academy, and, above all, in the spirit which it exemplifies and inculcates. Since its earliest days the school has never failed to justify its

existence, though there have been times when it has enjoyed too scanty a measure of public and official appreciation. It recently passed through an experience which it was feared might leave it exposed to some lasting antagonism, but precisely the opposite effect was produced by the congressional inquiry, and it is undoubtedly today an object of stronger interest and admiration than ever before. The large appropriation to augment and modernize the material equipment of the academy which the present congress has just voted is a decisive recognition not only of its intrinsic worthiness, but of the estimate in which it is held by the people of the United States."

"For the patriotism which has inspired it, for the valor of its graduates in war, their usefulness in peace and the high ideals of personal honor which with rare exceptions they have cherished and exemplified, the thanks of the country are fairly due to the military academy at West Point, which now celebrates its hundredth anniversary," says the *New York World*. "For the same reason that this is the most unfortunate season for an attack upon the army, it is the most fortunate season for the graduates of West Point to be celebrating the centenary of that school of labor and duty which so few of them, when they were actually her nurslings, looked upon in the light of an Alma Mater. The country is with them in their rejoicings on this centennial day, and with them will delight to honor the academy to which the nation owes a debt which it can never discharge and which it is only now beginning fully to acknowledge." This is the comment of the *New York Times*. The *Pittsburg Times* comments upon the adaptability of the West Pointer whether in peace or in war. "In peace as well as in war the West Point graduates proved the value of the academy. They performed great engineering works that assisted in developing the resources and commerce of the country, and others which added to its security in time of war. The people are deservedly proud of West Point and its graduates and will sympathize heartily in the rejoicing of the latter over its centennial." The *Minneapolis Journal* asserts that "the great military academy at West Point stands as an illustration of the transcendent quality of the national power."

Quay's Triumph

THE SENATOR'S CANDIDATE FOR GOVERNOR EASILY DEFEATS
HIS OPPONENT

A MOST interesting political contest came to an end in the Pennsylvania Republican state convention, June 11. The boss-ship of Senator Quay was at issue, and Judge Pennypacker's nomination for governor is a personal victory for Quay. John P. Elkin was formerly one of Quay's chief lieutenants, and when he became a candidate it was thought he was the senator's choice. After delegates friendly to Elkin were elected in several counties, Mr. Quay advised against the attorney general's candidacy. Mr. Elkin declined to withdraw. Mr. Quay then made a public declaration against his candidacy, and when Judge Pennypacker was suggested for the nomination, the senator endorsed him. Elkin was backed by Governor Stone and other members of the state administration. In the convention Judge Pennypacker received 206 votes to 152 for Elkin.

The platform endorses the administration of President Roosevelt, reaffirms loyalty to the principles of protective tariff, declares for pure and honest ballot reform, condemns trusts, approves the action of the president and attorney general in proceeding against the beef trust, and makes no mention of the state administration.

The *Inquirer* (Rep.) was Elkin's only supporter in Philadelphia, and in consequence greatly deplors the result, charging that bribery and corruption alone could have accomplished Mr. Elkin's defeat. The *North American* (Ind. Rep.) exclaims: "Quay a conquerer of corruption, iniquity overthrown by iniquity, virtue made the willing creature of vice—when was more sardonic spectacle presented to an amazed people? Dominating it all is the figure of a small, old man with seamed face and bent shoulders. Fate reserved for his last days the greatest triumph of his career. That which the whole people could not do he has done. For years futile assault has been made upon entrenched government. At his bidding the walls are razed and the defenders scattered. He has served himself first, but the state also, in destroying the evil power of the Stone-Elkin ring. Of this victory the spoils assuredly are his, and no less the dishonor of the means employed." The *Philadelphia Press*, Republican to the core but always an opponent of Quay, favored the nomination of Pennypacker because he was the better man, while the nomination of Elkin promised a continuance of the present régime. "We accept and welcome Judge Pennypacker for what he himself is," says the *Press*. "We know his quality.

The bench, the bar, and the people of Philadelphia and of the surrounding country know it. The people of the whole state will come to know and applaud it. Come in what way he may he bears no man's impress. His mold is wholly his own. His nomination saves the party from a break, and his governorship will save the state from shame." Notwithstanding the fact that the opposition to Quay's dictatorship within the Republican organization never appeared so formidable as at this year's convention, the *Philadelphia Times* (Ind. Dem.) declares that "Never before was his personal power manifested with more crushing force. His victory over all classes of opponents is complete and overwhelming. Little regret can be felt for Elkin's failure, except that his effort was made through a popular appeal that commanded some sympathy. Otherwise he represented no principle that was distinguishable from Quay's."

The *Pittsburg Gazette* (Rep.) declares the result as "A triumph for the people over all the influences of patronage, deposit of public funds and manipulation of public contracts." While the *Post* (Dem.) attributes the result wholly to the "handling" of money. The Elkin faction was not a whit more scrupulous than Quay, but they did not have the "ready cash." "This convention may become historic as the culmination and climax of all that is treacherous, base, and corrupt in Pennsylvania politics."

The Maine Republicans

NO voice was raised save in favor of Governor John F. Hill as a candidate for a second term at the Maine Republican state convention, and the members of the party from the First district, who met before the state delegates were called to order, unanimously renominated Representative Amos L. Allen. The platform adopted eulogized President McKinley, praised President Roosevelt, expressed faith in the protective tariff, declared for ship subsidies, congratulated Cuba on independence, and approved the policy in the Philippines. The convention also adopted a resolution "demanding" faithful and impartial enforcement of the prohibitory law, and recommending the enactment of a direct primary law by the next legislature. The temperance plank was the subject of a warm debate between members of the committee of credentials and finally those who championed sterner measures succeeded in having the resolutions as originally drafted amended to read "demand" instead of "favor." The amended plank was adopted by the convention without dissent. A plank favoring direct primaries also was added. Secretary Shaw made a speech at the convention.

S. W. PENNYPACKER

"IT WAS A CINCH"
—Philadelphia North American

JOHN P. ELKIN

Governor Taft's Reception at Rome

GOVERNOR TAFT'S mission to Rome to effect a settlement of church problems in the Philippines, has begun with promise of success. He was assured that the vatican would meet the question involved in a conciliatory spirit, and a commission of cardinals was appointed to consider the subject. The *Boston Pilot* (Catholic) says that "the appointment of this mission was an act of political wisdom, and its good results will astonish those unhappy bigots who live in fear that justice to Catholics means the transference of the seat of civil government to the vatican." In the opinion of the *Omaha Bee* (Rep.) "The friendly feeling toward the United States expressed by Pope Leo gives ample assurance that his great influence will be exerted to aid our government in the Philippines, he having intimated no objection to the policy made necessary by our constitution in respect to the separation of church and state. The visit of Governor Taft to Rome was most judicious and may confidently be expected to have most beneficial results."

JUDGE TAFT

Referring to Governor Taft's instructions, an outline of which was given in PUBLIC OPINION last week, the *Chicago Inter Ocean*, with the possibility in mind that it might be asserted that the mission usurped congressional authority, says that Secretary Root's instructions are "flawless even from the viewpoint of the most sensitive congressman or the most captious churchman. They constitute an admirable public document drawn to meet a case without precedent in our history, covering negotiations of the greatest delicacy and importance, in accordance with the recognized principles of traditional American policy." The *Chicago Chronicle*, though strongly anti-expansionist, asserts that "the government of the United States should be the only landlord in the Philippines. Use of the land, not its proprietorship, should be granted to individuals, and grant of use should be made only to actual occupiers, who will pay their rent directly to the government of the United States. Only thus can the monstrous evils of oppressive or speculative landlordism be kept out of the Philippine islands under their new political connection. Only thus can the rights of the real purchasers of the lands, the people of the United States, be protected. Only thus can the people of the United States do their full duty to the people of the Philippines." The *Chronicle* thinks that this is the only way in which a just distribution of the church lands can be secured.

L'Independance Belge (Brussels), thinks it sees a change in the attitude of the vatican toward the Anglo-Saxon race: "The recent sending to Rome of a special mission from America, conducted by Governor Taft of the Philippines, has made it possible for the pope to see the possibility of the establishment of a United States legation near the Holy See. *L'Italie* foresees an evident agreement between the vatican

and the United States, an agreement which is manifested by the reported choice of Archbishop Keane, one of the most ardent defenders of Americanism, for the archiepiscopal seat of New York, which became vacant on the death of M. Corrigan. This attitude of the vatican does not surprise us." *L'Independance* adds, "The church understands that the Latin races are menaced with decadence, that she can not count on the unreserved support of France, and she wishes to rely on the Anglo-Saxon race, whose influence will tomorrow be all powerful."

The Cuban Tariff "Bombshell"

THE CONTRIBUTIONS MADE BY GENERAL WOOD AND THE SUGAR TRUST IN AID OF CUBAN RECIPROCITY

AT a hearing before the Cuban relations committee of the senate last week, the fact was brought out that General Wood, in his official capacity as governor of Cuba, had paid the United States export association \$2,800 for circulating arguments in favor of tariff concessions to Cuba. The fact was also brought out that the sugar trust, through Henry J. Havemeyer, had contributed \$2,500 for the same purpose.

General Wood has made this explanation of his payment to the export association: "I did authorize the expenditure of \$2,800 and much more, all for the purpose of presenting the case of Cuba and her economic needs to the American people in order that justice might be done her. I considered myself, as much as does Mr. Palma today, in honor bound to defend the interests of the island, and I should have betrayed my trust and failed to properly use the authority I had as military governor of the island had I not used every proper effort to obtain for Cuba those commercial relations on which her stability and prosperity as a nation depend. Mr. Thurber was simply a distributing agent through the lists of the New York export association, which I used as I would have used a directory to distribute such matter as I considered suitable to convey to the people of the United States a correct understanding of the needs of the people of Cuba."

The *New York Press* (Rep.), points to the "disclosures" before the senate committee as proof that the sugar trust is the principal influence behind the demand for Cuban reciprocity. The *Press* demands a congressional investigation of General Wood's action.

KINKS THAT MAY JUSTIFY FEDERAL INTERFERENCE
—New York World

The Brooklyn *Times* (Rep.), takes the same view, and calls attention to the fact that Mr. Havemeyer stated before the Cuban committee that he had no interest in the tariff reduction bill, and had done nothing to advance it. "Mr. Thurber's statement does seem somewhat at variance with the sworn statement of the principal officer of the sugar trust."

The New York *Tribune* (Rep.) says that "the enemies of the administration have diverted the investigation from its original object into an inquisition that obviously has for its purpose the defeat of reciprocity by means of delay, and by the hope of so befogging the issue that the few doubting members of the senate and house—if there are now really such among the 450 members of congress—will become so confused as to welcome an opportunity to cause a postponement of definite action on the reciprocity proposition to the next session or the next congress."

The Brooklyn *Eagle* (Ind. Dem.) believes that General Wood "acted with the best intentions." But the governor erred. "His right to urge reciprocity may have technically included the privilege of taking funds from the insular treasury for that purpose, but it is strange that he should not have foreseen the criticism which such an expenditure was bound to inspire. No wrong was meant, but much harm may be done." Mr. Havemeyer's contribution is of "far less moment," the *Eagle* says: "That the trust favored Cuban reciprocity has never been concealed."

"Does anybody believe that if the sugar trust had seen a prospect of gaining millions through an enactment of congress it would have contented itself with a picayune subscription to the funds of Mr. Thurber's literary bureau?" The Philadelphia *Record* (Dem.) asks. "Those who are familiar with the methods of trust lobbies when the game is for big stakes will see the absurdity of such a proposition. The objects to which Governor General Wood devoted the money granted to the export association were perfectly legitimate. The interests of the island were to be advanced by the creation of a sentiment in these states in favor of reciprocity, and the publication and distribution of literature, statistical or otherwise, was a proper exercise of governmental power." The Philadelphia *Press* (Rep.) concedes that Senator Teller has scored in the game of debate and agitation, but not in the field of serious argument. General Wood's error of judg-

ment changes nothing. "It does not affect the main issues. It alters neither the basis nor purpose of the broad policy summed by the measure for the relief of Cuba and for the discharge of the obligations of the United States. The needs of the island and the duty of this country remain all they were, unchanged and unaltered." The Boston *Transcript* (Ind. Rep.) comments in the same vein: "It would have been in better taste and more tactful if General Wood had eschewed hired assistance in endeavoring to carry out his benevolent purpose, but his action was not corrupt, since he did not attempt to buy over an adversary but simply paid for the professional services of an expert. Even if General Wood has made a mistake his error ought not to affect the merits of the contention that we ought to grant that relief to Cuba which was the inducement that caused her to accept the Platt amendments."

The President's Message on Cuba

A PLEA FOR CUBAN RECIPROCITY

PRESIDENT ROOSEVELT sent a special message to congress, Friday, urging the passage of a Cuban reciprocity bill at the present session. "No American industry will be hurt," he said, "and many American industries will be benefited by the proposed action," and he asked for legislation on the ground both of duty and self-interest. He said that provision can be made to guard against the possibility of the benefits from tariff concessions going to the sugar trust instead of the Cuban planters "without having recourse to a measure of doubtful policy, such as a bounty in the form of a rebate."

Opinions differ as to the effect the message will have on the Cuban legislation. The Washington correspondent of the New York *Tribune* says: "The president's message has cleared the atmosphere perceptibly. It sounds the tocsin for which his party leaders in the senate have been waiting. Straight reciprocity with Cuba is now a party measure, and the beet sugar Republicans must come into line or openly support the Democratic obstructionists. It is not believed that many of them, either in the house or the senate, will care to break with the party organization over beet sugar, as they did a few years ago over free silver coinage. At any rate, it is now certain that not a sufficient number of them will longer advocate the specious makeshifts of a rebate in the senate and a confusing tariff revision in the house to threaten the administration's clearly defined Cuban policy with defeat."

The New York *Times's* Washington correspondent differs from the above opinions. "The prevailing view," he says, "is that the breach in the Republican ranks has been widened by the president's action, and that there is far less chance for the passage of the administration reciprocity bill than there was before the message was read in congress. The purpose of the message was to make a final appeal to the Republican senators and representatives who have favored the rebate plan and opposed reciprocity, to come into line with the administration. The information was emphatically conveyed that the president had taken a hand in the fight between the two Republican factions, and so placed himself that he would necessarily have to 'stay put.' Heretofore the beet sugar senators had not been without hope of converting the president to the rebate bill. Notwithstanding the effect of the president's message seems to have been diametrically

THE SENATE PHILIPPINE BILL OFFERS GREAT INDUCEMENTS TO THE BAD FILIPINO.—Minneapolis Tribune

the opposite of what it was expected to be, the administration men are confident that ultimately it must produce a strong effect upon the beet sugar men, because it is a serious matter for a Republican congressman to finally separate himself from the administration, and that, they claim, will be the result if any beet sugar men continue to hold out. One effect of the message was to solidify the Democrats against the bill. Heretofore the administration has been counting on a few Democratic votes. It will not get them now, it is believed."

The Washington correspondent of the New York *Evening Post* says "The message has noticeably cleared the air, by making Cuban reciprocity more than ever a party measure. The message, while nominally addressed to congress, was really addressed to his own party, and there was considerable truth in Senator Bailey's jesting suggestion that it should be referred to the Republican caucus. The prevailing opinion is that the Republicans in the senate will get together on some very moderate measure, satisfactory to the president—perhaps the compromise outlined above. Its passage through the house is still seen to be much more difficult than through the senate, and it is too early to make any prediction as to final results."

Congressional Summary

CONGRESS DAY BY DAY

JUNE 9.—In the senate Mr. Harris (Rep., Kan.) spoke in favor of the Nicaragua canal route; Mr. Simmons (Dem., N. C.) advocated the proposed Appalachian forest reserve; consideration of the naval appropriation bill was begun. The house passed the so-called anti-anarchy bill by vote of 175 to 38.

JUNE 10.—The senate passed the naval bill, carrying more than \$78,000,000; the house provision that one of each class of ship shall be built at government yards was struck out. The bill to transfer forest reserves to the control of the agricultural department was killed, in the house, on motion of Chairman Cannon, of the committee on appropriations, who warned the house against extravagant expenditures; consideration of the Corliss Pacific cable bill was begun.

JUNE 11.—F. B. Thurber, president of the United States export association, testified before the senate sub-committee on Cuban relations that he had been paid by the military government of Cuba for his advocacy in this country of a reciprocal reduction of duties upon Cuban products and American products imported into Cuba. The senate reached an agreement to vote on the Nicaragua canal bill June 19. The Corliss bill, providing for government construction of a Pacific cable, was killed in the house.

JUNE 12.—Debate on the Isthmian canal bill continued in the senate. Mr. Morgan (Dem., Ala.) attacking the Panama project, and Mr. Fairbank (Rep., Ind.) proposing a bond issue to pay the cost of canal construction. Consideration of the bill providing for irrigation of arid lands in the west was begun by the house.

JUNE 13.—A special message was received from President Roosevelt urging the passage of a Cuban reciprocity bill at the present session. The nomination of General William Crozier to be chief of ordnance of the army was considered by the senate. The senate bill providing for irrigation of arid lands in the west was passed by the house with slight amendments.

JUNE 14.—The house amendments to the irrigation bill were agreed to by the senate, thus finally pass-

ing that measure, and the District of Columbia appropriation bill was passed. A resolution calling for a statement of the cost of the Philippine war was laid on the table in the house by a party vote; nearly two hundred private pension bills were passed.

Various Topics

IT PAINS US to perceive that the postmaster at New Orleans is to resign on account of ill health. We never knew that a southern Republican could become so sick and live.—*Washington Post*.

IS IT WICK-ED? Now we have a lamp trust. Turn it down.—*Minneapolis Times*.

Why not snuff it out?—*St. Joe Gazette*.

Or blow it up.—*Baltimore American*.

COMPARATIVE VALUATION.—"Be not like dumb driven cattle!" exclaimed the graduation girl. "No chance of it!" muttered the cynic in the back row of the auditorium. "I'd like to see the day when I'm worth as much as sirloin and porterhouse."—*Washington Star*.

THE DEFEAT OF the Corliss Pacific cable bill may be said to have again put the seal of indefinite postponement on the much-advertised project of the government going into the telegraph business. So long as it can be shown that private enterprise can do the business cheaper and more efficiently than the government can, the movement to nationalize it will be up against a potent argument.—*Boston Herald*.

BUYING DELEGATES IN PENNSYLVANIA: The straits to which Quay has been driven were shown by the direct steal of four delegates by the state committee acting under his orders. Two of these are in Luzerne and two in Schuylkill. The genuine Schuylkill men had been offered eight thousand dollars each and refused to be bribed, so they were simply thrown out.—*Harrisburg Correspondent Philadelphia Inquirer*.

HUNGER IN CUBA.—There was no session of the Senate yesterday, public or secret. Nor will there be a session today. The sections will meet and the scheme of the personnel will be approved, a matter that keeps a phalanx of aspirants with their mouths open, and which is the reason why the portal of the building occupied by the senate is perpetually crowded, although the usher at the entrance announces that there will be no session.—*La Republica Cubana*.

NOT A TIMELY SLOGAN.—Mr. Hanna's slogan for the coming campaign is: "Keep on letting well enough alone." This will be an interesting campaign cry for the people who are unable to obtain meat as food because of the exactions of the trusts. It will also be an interesting cry for the consumers generally whose income has undergone no material increase, but whose living expenses have doubled because of the control which the trusts have over the necessities of life.—*Omaha World-Herald*.

FANNING THE BLAZE—*Ohio State Journal*

FOREIGN

*The Elections in Japan*M. J. TĚBLA in *L'Illustration*, Paris. Translated and Condensed for PUBLIC OPINION

AS it operates today the parliamentary régime of Japan does not possess any serious dangers because it was effectively shackled by those who created it. First, suffrage is restricted, and second, the ministers are only responsible to the mikado. To be an elector it is necessary to be twenty-five years of age and to pay \$10 direct tax, licenses not included, and to be eligible for election the same tax is required, and it is necessary to be thirty years of age. Thus in a population of forty millions there are scarcely 300,000 electors, and but 300 persons who are elected to public office.

A POLITICAL MEETING

During the elections the labor is divided among all. Immediately upon the closing of a session, even when the elections are not in sight, the principal orators of each group divide themselves into small bodies and disappear to conquer the opinion of a new district or to strengthen that of one which vacillates. There is nothing more interesting than these political meetings in the country. In any improvised place, tavern, or theater, a platform is erected. On one side two chairs are reserved for the police and in front are the stenographers, whose trade is no sinecure when one considers that the *summum* of eloquence consists in pronouncing the greatest possible number of syllables in the *minimum* of time. In the middle a small, low table covered with a cloth and having on it a stone teapot and a glass awaits the orator or orators, of which I have seen as many as twenty-eight. Behind, long white streamers carry the name of the speakers and the subject to be developed.

The first speaker arrives and bows to the spectators who do not stir, and then the storm breaks. I one day heard a young and fiery débutant forget himself so far as to shout to the public: "Yes, gentlemen, such a minister is a thief." The policeman, who up to this time had heard without moving many sarcasms thrown in his direction, now arose with great gravity and said a few words in a low voice to the orator. "Gentlemen," the latter replied, "the chief of police requests me to retract the word which I have just spoken. Although the word of the sage should never re-enter, let us make a concession, let us take back the word and keep the idea." This sally was followed by great applause and cries of "Bravo."

The natural corollary of political meetings are the

Konshinkwai or "meetings to warm friendship." In election times these meetings rage violently, for Japanese philosophers know that the gratitude of the stomach is one of the most solid in the world. Liquor is plentifully imbibed, the food is forgotten, faces become inflamed, the eyes bloodshot, cries mingle, and the meeting becomes a bacchanalian orgy in the midst of dances and enraged howls.

The meetings and the banquets prepare for the elections under the control of the Soshi. The Soshi of the present time are the descendants in a direct line of the famous Ronin of the feudal epoch of whom everyone has heard. The imperial restoration has not suppressed the Ronin, it has transformed him into the Soshi. The latter is the mimic of the former, and not being able to live independently and by adventure they have attached themselves to private persons and political parties, receiving a regular pension, or at least subsistence and support. In return they are the servants for all delicate and difficult work, and at the time of the elections each candidate has an armed guard of these men who keep watch over him, guaranteeing him from any assault that might be attempted by the Soshi of the adverse party. Armed simply with a cudgel or a blade prudently concealed in a hollow cane, they visit the electors at their homes, and by means of promises or intimidation buy their votes. The day of the ballot arriving they drag the reluctant voters to the mayor's office, and for fear of trickery they guard the ballot-box and escort the officer who carries it to the chief place. If on the way they encounter their adversaries bloody battles follow.

SOSHI ESCORTING THE BALLOT-BOX

Elections are relatively very expensive for the candidates. It is estimated that the cost is between \$3,000 and \$6,000, for independently of the traveling expenses, the drink money, and the banquets, the votes are expensive. Before the law of 1896 on electoral corruption I have seen votes rated from \$3.30 to \$6.60, and even more, according to the candidate and the district. It is also true that once sure of their commission the deputies seek to regain their money by means of the secret funds which the minister uses to obtain a majority. This is not surprising when one considers that the salary of a deputy is but \$1,056. Although there are people whose hands are always open for the receipt of bribes, there are also many who hotly pursue the politicians who corrupt the morals of Japan.

Revolutionary Movements in Russia

Translations for PUBLIC OPINION

RIOTS are such a common occurrence in the Russian empire that the European press nowadays seldom pays much attention to them. Furthermore, the task of securing accurate information is not an easy one, on account of the rigorous scrutiny of the censorship. The recent outbreaks in southern Russia, however, as well as the revolutionary demonstrations in Moscow, have assumed such serious character that even the Russian newspapers state that the "dominion of the czar is on the eve of an extraordinary insurrectionary movement." Outsiders, they say, "can have but a faint idea of the terror which prevails from the Baltic to the Black sea." "Peaceable people are afraid to go out; the police invade private resi-

NICHOLAS: "Ah, Now I and My People Are At Peace"
—*Simplissimus, Munich*

dences at all hours of day and night in search of conspirators, and no one feels safe from arrest." The professors of the lyceums who were never molested are now closely watched, and many of them have been imprisoned in the fortress of St. Petersburg. There is rebellion in the army, and official orders have been issued in the *Messenger of the Government* to the effect "that the troops are to obey the commands of their chiefs regardless of sex, age, or rank." A regiment which refused to fire on a mob mostly composed of women and children was decimated; that is, one man in ten was shot, and what was left of that regiment was sent to Siberia.

The labor agitation in Moscow began a long time ago, but until it became revolutionary in its tendencies the attitude of the officials remained passive. A peculiar phase of the situation is that the manufacturers are as dissatisfied as their employees. They have declared to General Trepow, the chief of police of Moscow, that they can not resume manufacturing under present conditions. M. Plehwe has issued a state-

ment to the effect that the labor agitation has ceased. According to the *Invalid*, there is only a suspension of hostilities due to the fact that "the workmen have left Moscow for the holidays; they are returning now and a renewal of the troubles is daily expected."

Anent the scenes of vandalism which occurred in southern Russia, particularly in the governments of Pultowa and Kazkow, the official report published in the *Messenger*, the official organ of the government, leave no doubt as to the motives which led the peasants to open rebellion. They were hungry and unable to secure food except through organized pilfering. Once started, they attacked openly the castles of the landlords, stole the provisions, and burned a number of farms.

The *Independance Belge* compares this outbreak of the Russian peasantry to the French "Jacquerie" of the middle ages. "It is a revolt," says the Belgian organ, "of those who have nothing against those who possess something. These foraging expeditions in which weapons are used for pillage and destruction are more serious than the riots in the cities, because they show that the masses are moved by the revolutionary spirit." The *Lokal Anzeiger* (Berlin), which announces this fact, comments upon the assertion made by the *Novoe Vremya* that there is nothing political about the revolutionary outbreaks of the peasants; it says that "these outbreaks are undoubtedly the result of a secret agitation which has lasted for a long time." The same paper announces that Tolstoy sent to Nicholas II a letter in which he begged him "to allow the peasants to represent their own interests in the legislative bodies." The czar is said to have answered that "there was a good deal of truth in Tolstoy's letter." The *Anzeiger* explains that the letter referred to was delivered under hand by a member of the imperial household. "This state of affairs is heartbreaking," says the *Independance Belge*, "and it indicates that the living forces of this great and marvelous empire are annihilated by a regimen which does not answer the aspirations of a modern people. Nicholas II needs to be freed from the bad influence of his advisors. Free people alone are able to take care of the development of their prosperity, based on social peace."

The Situation in the Balkans

Translations for PUBLIC OPINION

THE political crises in Bulgaria and Servia are attracting a good deal of attention in Europe, particularly in Austria-Hungary. The *Neue Freie Press*, summing up the opinion of the press in Austria, says that the situation is exceedingly critical, full of danger, and that no one can feel assured that Austro-Hungarian and Russian influence in the Balkans will be able to prevent the early realization of the ambitious projects of Bulgaria and Servia.

So far no one seems to be able to foretell to what extent the action of the revolutionary committees in Servia, Bulgaria, and Macedonia can be controlled. Emperor Francis Joseph, referring to the situation in the Balkans in his message from the throne, said the understanding between Austria-Hungary and Russia was absolutely satisfactory because it insured the maintenance of the *statu quo*. Count Goluchowski, secretary of foreign affairs, asserted, however, that the *statu quo* in the Balkans "could not be considered as a final solution of the question, because the conditions now prevailing would not withstand events independent of the will of Russia and Austria-Hungary." The

Young-Czechs party opposes the *rapprochement* between Russian and Austria-Hungary, but its leaders think that the greatest disturbance is likely to result from the designs of Italy in the Adriatic and in the Balkans. Under these conditions they point out "the anomaly of an *entente cordiale* with Russia co-existing with the triplique. This is also the opinion of many Italian papers.

The *Independence Belge* says that "if a conflict should take place in the Balkans, the agreement to maintain the *statu quo* would naturally cease to exist; Austria-Hungary and Russia would each recover their independence of action, and try to profit by the complications to increase their influence. As soon as Russia believes," this paper adds, "that the time has come for her to realize certain projects, she will push Bulgaria into immediate action, and the state of affairs will change altogether. Austria-Hungary will have to go to war or part with her influence in the Balkans."

Europe's Economic Crisis

DEPRESSION IN RUSSIA, GERMANY, AUSTRIA-HUNGARY AND ELSEWHERE

THE Springfield *Republican* calls attention to the fact that the industrial depression on the continent of Europe continues. It is severest in Russia, which has suffered from several successive crop failures, and between acute distress in the rural districts and widespread unemployment in the cities, the spirit of revolution waxes strong. The assistance of the public treasury has alone prevented general bank failure and worse financial distrust even than exists. Industry in Austria-Hungary is in the midst of a period of depression nearly as severe as that which afflicts Russia. Switzerland, Belgium, and the Scandinavian countries are similarly situated, while in Germany, whose crisis has attracted more attention, there is no relief as yet from the downward trend of credit and enterprise. The liquidation still goes on, and the end is not in sight.

Dr. A. Braun, of Stuttgart, writes in the current number of the *Yale Review* on the economic crisis which has spread over continental Europe and more especially as to its origin and extent in Germany. The account of the industrial and speculative development in that country, which culminated two years ago in the collapse of the mortgage banks, followed by the general breaking down of credit and the drop of the iron and steel, the electrical and other industries, from a state of feverish activity to one of deep depression, is singularly like what might be written of the United States for the past four or five years, barring the collapse from which we have thus far escaped. The syndication of industry on an extraordinary scale went on there as here; and always with it a growth of labor unionism and labor troubles, which continued up to the time when the storm broke.

The same rapid diversion of industry from agriculture to manufacturing, trade, and transportation has been experienced in Germany as in the United States. During the past twenty years the German population in gainful occupations has increased 17.8 per cent; but in agriculture the increase has been less than 1 per cent, while in manufacturing it has been 29.5 per cent, and in trade and transportation 48.9 per cent. There followed at the same time, and particularly within the past decade, a tremendous capitalizing of industrial projects and speculation in the securities representing syndicated enterprise. From 1897 to

1900 the stocks and bonds of German industrial companies listed on the domestic exchanges increased from 356 to 670 million marks. Securities of all kinds were listed during the four years to the amount of 11,018 million marks. "The few men," says Dr. Braun, "who prophesied reaction during the period of brilliant trade prospects were laughed at and derided. Even Socialists, hypnotized by the brilliant results of an unexpected expansion of industry and trade, began to believe in the possibility of an unbroken continuance of good times."

The crises came in the early months of 1900, and as usual quite unexpectedly. The syndication of industry, which was supposed to have brought in a new era from which crises had been banished, proved to be a source of weakness rather than strength. It had stimulated an overspeculation and an overproduction of plants and products, whose existence was not detected until the break came. The collapse of credit began with the failures of certain banks which had marketed among the people great quantities of land mortgage debentures, or stocks secured by blanket mortgages, and which had turned the capital thus raised into numerous syndicate undertakings. Since then the distrust has been spreading to include nearly all securities and ventures, and the liquidation still goes on two years after the first break.

Mr. Chamberlain's Imperial Tariff Scheme

BEFORE the house of commons adopted the registration duties on grain and flour, last week, the chancellor of the exchequer, after saying that the only object of the tax was income, added that his remarks were to be construed without prejudice to the impending colonial office conference, which he hoped would promote a freer trade between Great Britain and the colonies. The chancellor also explained that while the war was over there were so many extraordinary expenditures remaining that the government had not seen its way clear to surrender any of the revenue it had prepared to raise before peace was declared. The London correspondent of the *New York Evening Post* says that "Sir Michael Hicks-Beach's speech in the house of commons is taken to indicate that Mr. Chamberlain has won a victory in the cabinet for his imperial tariff schemes. It is understood that at the coronation conference, which opens on July 2, Mr. Chamberlain will inform the colonial premiers that the British ministry will welcome the day when the colonies shall be enabled so far to forego the revenue from duties on British goods as to establish free trade within the British empire. Awaiting that day, the British ministry will adhere for the present to a policy of widening the area of indirect taxation, as exemplified by the new taxes on coal, sugar, wheat, and flour, and if the colonies shall approach the question of sharing the cost of the defence of the empire in a co-operative spirit, the British ministry, in the interests of a free trade within the empire, will be prepared to exempt them from all taxes on imported produce, placing the colonial producer on the same footing as the British producer. It is suggested that imported meat and timber will come under duties in the next budget, Australasia, and Canada largely benefiting at the expense of the United States and the Argentine. The Liberals intend to offer determined resistance to what they regard as a momentous departure on the part of Great Britain towards protection."

SOCIOLOGICAL

Negro Colonies in New York City

MARY RANKIN CRANSTON, in the June *Southern Workman*,
Hampton, Va. Condensed for PUBLIC OPINION

NEW YORK'S oldest Negro colony, which has been in existence for twenty-five years, is situated in Harlem and is bounded by 97th and 103d streets and 2nd and 3d avenues. There are several smaller ones of more recent date, one at 6th and 7th avenues and 26th and 33d streets, another between 36th and 44th streets and 7th avenue, westward to the Hudson river. A still smaller colony is found in 47th street, between Broadway and 8th avenue, contiguous to the residential, retail-store, club-house, and theater district. Today a large number of Negroes live in the section of the city bounded by 61st and 62d streets and 10th and 11th avenues. The last census shows that this block contains more people than any other in the city, having a population of about four thousand individuals. Without exception, agents say that Negroes are not allowed to occupy houses until the tenements are really unfit for human habitation. After these quarters have

not be such a poor showing, but when it is known that four hundred are inside rooms and that six hundred and fifty-five have only one window, the deplorable condition of these tenements will be understood. The lodging system is the greatest deterrent in the Negroes' efforts for pure living in New York. Family life is conceded to be the Negroes' gravest weakness, and by taking strangers into the privacy of their homes and permitting the consequent intimate association with their growing children, domestic life is destroyed and demoralization ensues, as is liable to be the case whether the family be black or white.

In view of the vast improvement in tenement-house construction for white people during the past ten years it is strange that, until recently, nothing has been done for the "brother in black." Philanthropists have built improved tenements, lowering rents at the same time, and lodging houses supplied with comforts and conveniences have been erected, but none of them for the

PROSPEROUS NEGRO COLONY, EAST 103d STREET

POOR NEGRO COLONY, EAST 97th STREET

become so dilapidated that white tenants will no longer live in them, they are rented to the colored people, invariably at a higher rate, although, generally speaking, Negroes are good tenants and take far better care of property than a certain class of our white immigrant population. Absolutely no conveniences except wash-tubs are to be found in these tenements, not even ranges or bathtubs. For these accommodations, or rather for the lack of them, tenants pay from nine to fifteen dollars for three rooms and from fifteen to twenty dollars for four rooms, according to location.

The great majority of New York's sixty thousand Negroes earn small wages, and the high rents reduce the family income so materially that a large number find it necessary to take boarders. In the 13th assembly district, comprising a part of what is known as the Tenderloin, the Federation of Churches found over six thousand Negroes. Nineteen per cent of these live in one and two room tenements, 37 per cent in three rooms, and 44 per cent in four or more rooms. One-fourths of these pay less than ten dollars a month, two-thirds pay from ten to twenty dollars and always from one to two a month more than white tenants. If the rooms were of good size with ventilation this would

Negro. At last, however, a promise of better things can be seen. The City and Suburban Homes company, which has built several model tenements for white people, has broken ground for a similar structure for Negroes. This will be an exact counterpart of the company's white tenements, and will be let at the same rentals for similar conveniences.

Training Schools in Philanthropy

PRACTICAL PREPARATION FOR CHARITABLE WORK

SOME ways of securing an adequate preparation for philanthropic work are explained by Mr. Jeffrey R. Brackett in the June number of *Charities* (New York). One of the first mentioned is a "study class, like the one Miss Zilpha D. Smith, general secretary of the Boston associated charities, has led for three years. It should consist of not over a half-dozen persons. Those of some experience are preferred. It does not merely read—it studies certain books and papers, experiences are compared, customs are probed, good ways are proved. A condition of membership is per-

sonal work for the uplift of a family in distress. The first thought is to get the right conception of the aim of the associated charities, the next is to see the social conditions within which it works; the rest of the time is given to study from various points of view of problems of charity and correction."

A slightly different sort of work was undertaken by a class organized by Dr. P. W. Ayres, of Cincinnati, in the summer of 1894. "The class visited and studied somewhat the charitable and correctional institutions of the city and several industrial establishments; were made familiar with the principles and methods of the associated charities, each member having the opportunity of taking 'some particular family in charge, over whom he or she was to have particular guardianship'; and undertook to make investigations and reports upon the sweating system and tenement houses in Cincinnati for the state bureau of labor, several members being commissioned as agents of the bureau."

In the same year the Hartford school of sociology was opened under the society for education extension, for the purpose of supplementing university instruction in sociology by a three-year course. "The plan included lectures by many eminent specialists, seminaria, and throughout the third year, under the direction of the general secretary of the Hartford charity organization society, who had been an instructor at Johns Hopkins university, (1) a course in general economics as a foundation for the study of sociology, (2) a sociological conference weekly, (3) fieldwork for training in special investigations and visitation of institutions, (4) a special conference of friendly visitors for practical philanthropic work."

One of the best-known schools is the summer training class conducted by the charity organization society of New York city. The aim of this class is to prepare men and women for charity work as a life-calling, and not merely as a subject of incidental interest or activity. In the three annual sessions that have been held "seventy students from seventeen states in the union have attended these courses. Of these, twenty-two have entered the paid service of charity organization societies in different cities, two are general secretaries, one is an assistant general secretary, eight are residents in settlements, of whom three are head workers, two are in kindergarten work, two are in the paid service of churches, three have given courses of university lectures based upon the work of the school, fifteen hold paid positions in the work of other societies and institutions, and the remainder are serving as volunteers in their respective communities. The school merely gives a bird's-eye view of the wide field of opportunities, with points of special interest carefully pointed out by those who know them well. The program is arranged by a very representative committee and carried out under a director with the coöperation of chosen representative workers, so the danger of attempting too much with insufficient experienced direction is minimized as much as possible."

Women's clubs are giving considerable attention to charitable and correction work, as shown in the bulletin of the United States department of labor in July, 1899, in a report on the "attitude of women's clubs and associations toward social economics." "Over 1,200 clubs responded to inquiries. Four hundred and thirty-one said that they studied 'sociology, political economy, or philanthropy,' and 425 said that practical work was being done in all or one or two of those subjects. The women's clubs of Illinois, numbering 225 or more, and representing some 20,000 members, are, by a large majority, interested in philanthropic work.

"Enough illustrations have been given to indicate

plainly the educational movement, of which proper supervision of charities is a part, which has been going on with increasing momentum in our land in the recent past. It touches law, it can not be separated from civics, from religion. It is a part of the spirit of the times. The illustrations which have been given are in part factors, in part expressions of it. They have come about with the growing centralization of administration, with the growth of the scientific spirit and method in all fields of knowledge, with the spread of recognition of the interdependence of men. The movement, with all its weakness as yet, is truly a mighty one in meaning, and seems to be only in the beginning."

Princeton's New President

WOODROW WILSON ELECTED TO SUCCEED DR. FRANCIS L. PATTON

WOODROW WILSON

PRINCETON university has elected a new president in record time. At a meeting of the board of trustees, June 9, Dr. Francis L. Patton, who has been president since 1888, presented his resignation without warning, and within an hour Professor Woodrow Wilson, of the chair of jurisprudence and political economy, was chosen to succeed him as recommended by the retiring president. The reason

given by Dr. Patton for his resignation was his desire to devote more time to literary work. He will remain in the university as professor of Biblical instruction, ethics, and philosophy of religion. Woodrow Wilson, the new president, was born at Staunton, Virginia, in December, 1856. He began his academic studies at Davidson college. In 1875 he went to Princeton and was graduated with high honors from the institution. From Princeton, President Wilson went to the University of Virginia, where he studied law for several years. Afterward he practiced law in Atlanta, Georgia. Leaving his Atlanta law office he went to Johns Hopkins to devote his whole time to his chosen studies. While at Johns Hopkins he wrote his work on "Congressional Government," which was published in 1885. The work has passed through many editions. In 1886 he received his Ph.D. from Johns Hopkins and was professor at Bryn Mawr from 1885 to 1888. In 1887 Wake Forest college, North Carolina, made him an LL.D., and in 1888 he was elected to the chair of history and political economy at Wesleyan university. In February, 1890, he was made professor of jurisprudence and political economy at Princeton. Just before leaving Wesleyan Professor Wilson published his study of contemporary government called "The State."

The Springfield (Mass.) *Republican* calls attention to two significant facts in the election of Professor Wilson. "Princeton has broken away from the tradition which has demanded that the presidents of our colleges be clergymen, a fact which the great Eliot of Harvard will not fail to note, and the trustees, upon the advice of Dr. Patton, have accepted another of Eliot's ideas in giving one who has made teaching his profession the great prize in the educational world that was at their disposal."

The fact that teaching has been the new president's business also seems important to the Boston *Transcript*. "Few men are better grounded than he in politics and history. In those respects he probably has no superior. He understands Princeton thoroughly from the standpoints both of student and teacher, and he is entirely in touch and in sympathy with the educational thought and methods of the day."

An intelligent comment is that made by the New York *Evening Post*. "President Wilson's specific task is to direct an overgrown small college, with a due regard for inherent tradition and for educational progress. And this, we believe, is for the moment the great problem of American education. The principles of university polity are fixed; an administrator has only to learn them and to follow the great examples. But the future of the American college is absolutely undefined. Are we to accept the logical implications of the free elective system, with its theory of the equality of educational values, and make the college merely a step to the university, as the German gymnasium is? Or are we to determine the capacities of raw lads by some occult process of divination, and assign them to their appropriate 'groups' of studies? Or, again, are we to hold to the traditional theory of disparity of educational values, and retain, with such modifications as new conditions prescribe, the old disciplinary course? Princeton has followed this latter way hitherto."

Against a National Divorce Law

MRS. STANTON OPPOSES A UNIFORM LAW AS HOSTILE TO THE INTERESTS OF WOMEN

MANY arguments have been advanced to show the desirability of uniform divorce legislation throughout the United States, but the other side of the case has not hitherto been presented in concrete form. This is now done by Mrs. Elizabeth Cady Stanton in *Collier's Weekly*. Mrs. Stanton complains that most of the suggestions for the change have come from judges and bishops, and "as judges and bishops are proverbially conservative, their tendency would be to make the laws in the free states more restrictive than they now are, and thus make it more difficult for wives to escape from unhappy marriages. The applicants for divorce are chiefly women, as Naquet's bill, which passed the chamber of deputies of France, some years ago, abundantly proves. In the first year there were three thousand applications, the greater number by women. Unhappy husbands have many ways of mitigating their miseries impossible to wives, who are financial dependents and burdened with children. Husbands could easily leave the country and invest their property in foreign lands. Laws affect only those who respect and obey them, and those made to restrain unprincipled men fall with crushing weight on women. A young woman with property of her own can now free herself from an unworthy husband by spending a year in a state having liberal divorce laws, and in due time marry again. Because an inexperienced girl has made a mistake, perhaps owing partly to her advisers, shall she be denied the right to marry again?"

In view of the sources of the suggestions for a uniform law, Mrs. Stanton thinks that "we may infer that the proposed national law is to place the whole question on a narrower basis, rendering null and void the laws that have been passed in a broader spirit, according to the needs and experiences in certain sections of the sovereign people. And here let us bear

in mind that the widest possible law would not make divorce obligatory on any one; while a restricted law, on the contrary, would compel many, marrying perhaps under more liberal laws, to remain in uncongenial relations. As we are still in the experimental stage on this question, we are not qualified to make a perfect law that would work satisfactorily over so vast an area as our boundaries now embrace. I see no evidence in what has been published on this question of late by statesmen, ecclesiasts, lawyers and judges that any of them has thought sufficiently on the subject to prepare a well-digested code or a comprehensive amendment to the national constitution."

The Dispensary System in Alabama

JAMES E. TIMMONS, in the *Outlook*, New York. Excerpt

THE first agitation of the dispensary question in Alabama, a state which has been slow to take hold of innovations, came about through the desire of conservative thinkers, enthusiastic workers, and faithful adherents to the prohibition cause to effect some reformation in the handling of the liquor traffic. The leader of the forces was Senator Frank S. Moody, of Tuscaloosa, who introduced a bill to give certain counties the privilege of establishing dispensaries. The reception of the measure was not encouraging to its supporters. However, it received greater support than was expected at first. Many good men feared that we would have a repetition of the troubles experienced in South Carolina. To many it carried with it the idea of the state going into the liquor business, and this was repugnant. To others it looked like a compromise with the devil. Some predicted that it would grow into a powerful political machine which would wield an influence for evil. The actual operations of the system since its establishment in certain towns have proven that all these fears were groundless.

The dispensary system in Alabama does not cover the entire state. Each town or city is given the privilege of voting on the question. Local option governs in this matter. It has been the rule of the dominant party in the state for years to let each locality decide for itself, and the party still adheres to this plan. The dispensaries are selected as follows: Three names of citizens are selected by the county commissioners, and these names are handed to the town council, who select one from the three. The essential features of the system are: Unbroken packages, no drinking allowed on premises, no sales to minors, to drunkards, or to those under the influence of liquor. Some of the acts call for a requirement that has proven inoperative—namely, that only one sale shall be made to the same person in one day. The bottles sold are all full measure, and prices are twenty-five per cent lower than in saloons by reason of this fact. All sales are cash, no credit being given to any one.

Some of the benefits accruing from the system have been increased appropriation to public schools, special funds for road improvement and other community interests. One town has abolished city taxation, and is using half the proceeds of the dispensary to establish a sewerage system and put in water supply. So it will be seen that the "business" end of the system is highly satisfactory. While this is true, it is equally true that the moral life of the towns is much better. The "blind tigers" have been driven out in the majority of places. The dispensary has no bar-room attractions. It is open from 6 a. m. to 6 p. m. If one wants liquor, it is there for sale, but it can not be drunk there.

LETTERS & ART

The Making of a Picture

THE GREAT IMPORTANCE OF CAREFUL PRELIMINARY STUDIES

AN article by Mr. Henry E. Fyffe in the June number of the *Brush and Pencil* (New York) gives an account of the preliminary labors of the artist that must be gone through before he is ready to give final form to his picture. The illustrations which accompany the article and explain the author's meaning as well as, if not better than, his words, are studies and the finished picture of Sir E. J. Poynter's "Sea Nymphs."

"The average art lover who visits a gallery to enjoy the pictures exhibited is usually the creature of impressions," says Mr. Fyffe. "He sees a canvas, and approves or disapproves, extols or condemns, and rarely gives himself the trouble of asking why. Indeed, if he should ask why, the probability is he could not give a satisfactory reason. It is the general effect that elicits his admiration or excites his tacit or expressed criticism. To the artist himself, however, reasons are all-important. He knows how fatal is the mistake of bad composition, of falsely placed accents, of a wrong disposition of high lights and low lights, of ill-advised arrangements of color. He knows that in painting, as in other fields of human interest, it is but a step from the beautiful to the repellent, from the sublime to the ridiculous. He knows the value of covering up the evidence of his toil and travail, and what a trifle will often divert the spectator's mind from a noble idea pictorially expressed to the mere mechanics of execution. The happy effects must seem as though they came spontaneously, by inspiration. An author may blue pencil his own

copy, cross out, amend, interline, paste in new sentences or paragraphs if necessary, and the kindly printer comes as an intermediary between him and his reader. The artist's only recourse is to make careful preliminary studies, and even these can only be made tentatively, subject to such modifications as may be necessary when the various figures entering into a composition are given their proper position and the many studies are coördinated into a well-balanced whole.

"The various studies entering into the 'Sea Nymphs' speak volumes for the conscientious, painstaking labor of Poynter, but only an experienced artist would appreciate the difficulties encountered by the veteran painter and understand the modifications made necessary in the final grouping of the studies. In the recumbent nymph in the foreground, the changed disposition of the high lights will be observed, necessitated by the requirements of the picture as a whole. The separate upturned arm in the study tells of an unsuccessful experiment. It was doubtless the painter's thought to have the nymph's arm in that position, but the angle of the arm coincided too nearly with the angle of the leg, and the parallel lines had to be abandoned. Otherwise the effect would have been almost fatal.

"Presumably Poynter started with the merest outline, just a few hints here and there to fix the idea he wished to express. Then followed separate studies of the animate and inanimate figures entering into the picture; then the coördination of all the figures in the composition. Concessions had to be made all along the line—concessions to the

THE FINISHED PICTURE

STUDIES FOR SIR E. J. POYNTER'S "SEA NYMPHS"

figures themselves to the composition, to the coloring. No change was made hastily or without adequate reason. Just as a change of a word in a paragraph often necessitates numerous other changes, so in the evolution of the picture a change of form or accent in one place necessitated corresponding changes in other places. Of all this toil and trouble the finished painting in its magnificent beauty gives no hint or suggestion, and it would have been a rare treat to any lover of art to have watched the progress of the work and noted its gradual transformation from a series of pictures into one, from sketches in themselves beautiful into a painting still more beautiful."

Youth and Literature

London Academy. Excerpt

A YOUTH is convinced, sub-consciously, no doubt, that because his impressions are keen and vibrantly new, he has only to record them to achieve literature. He is doubly deceived. In the first place he can not record them. Of all his experiences none is so notorious as that which finds him baffled in the moment of putting pen to paper. The mountain labors, the mouse emerges. This is because four-fifths of his imagined message is the mere tingling of his nerves. The current which seems ready to break into memorable words is of his body; its intellectual part is too thin to bear separation, and if by reason of youth there be a delusion of outflowing strength this, too, is all a matter of red blood and saltatorious hope. Secondly, if he does write with a certain abundance and expression, he is debarred from producing literature by the flatness of his mind. He produces it no more than a mirror produces art. A naive logic would say that no account of the world can be so true as that which is rendered by a young and sensitive mind to whom the world is newly revealed. And if the human mind were nothing but a mirror, doubtless a new one would be the best reflector. Inasmuch, however, as the mind is a haunted, brooding, and progressive microcosm, the opposite, or nearly the opposite, is the truth. Irony may speak of life as a game of shadows and sensations; but her remarks are no more effective here than summer lightnings over a thronged city.

The exclamations and profundities of youth can never become literature, because their energy is partly the incommunicable energy of young blood and partly the inchoate energy of young brain. In every school the newcomer is conveniently ignored or snubbed. His astonishment is not interesting. His questions will answer themselves. His information is insipid, and his conclusions are "side." In the school of literature it is the same. Sensitiveness, eagerness, and gusto are nothing until they are taken under the control of understanding. Only the push of sorrow and experience can convert a young man's cogitations into the stuff of books. But when this arrives the impulse may have gone, the *afflatus* may have fled; and the youth who promised to be a great writer may have become not even a great reader. Such things have been.

Can the veritable writer be distinguished in his early and volcanic outpourings? It is a question of much interest, and one which may be presumed to appeal to a multitude of literary beginners. Our suggestion is that he can not. So long as the writing of a young man or woman is essentially youthful, impulsive, and volcanic his future, or hers, is uncalculable. The difference in the merit of produced specimens of writing

will have no sure significance. The precise age of the writer can not be a criterion, for age is here to be measured by development rather than by years. There are astonishing differences in the rate at which minds mature, and in the durations of youth. Moreover, a deeper doubt than any which criticism can discuss is involved. Call in the palmist rather than the critic. We do not believe that the most astute critic can be trusted to know whether work done at this incandescent age is an end or a beginning; whether the current that leaps in the morning sun is but the emptying of a cup, or the outflow from an inward tarn of genius, exhaustless, sparkling, and divine.

It is a curious reflection, then, that your crudely exuberant writing youth is often producing work equal to the work produced at the same age by men whose names are planetary. For a few years, and as it were contemporaneously, he is the equal of—who knows, Shakespeare himself?—but let us say of Byron, Dickens, Landor, Mr. Meredith, M. Maeterlinck. They increased and he may decrease, but meanwhile his work baffles inference and repudiates contempt.

How to Learn to Draw

CHARLES DANA GIBSON, in the *New Liberal Review*, London. Condensed for PUBLIC OPINION

I THINK the teaching of drawing is an over-estimated profession. It doesn't seem to me as if I could teach—as if I would feel it would be exactly honest to teach. What can a teacher do? If you are a born illustrator, you will know your own mistakes better than anyone can tell you about them. If you do not see your mistakes, nobody can ever help you to be anything. If your own work looks quite finished and perfect to you, or if it looks wrong and you can not tell exactly what is the inaccuracy or lack, you may depend upon it that you were not born to be an illustrator. To my mind, just so much instruction in drawing is necessary as is needed to tell the child who is learning to write which letter is which, and how to pronounce and recognize it. That once learned, the child will go its own sweet way, and develop a handwriting such as no one in the world can exactly duplicate. So it is with drawing. When the first fundamental instructions are over—which anyone who can draw can give you—you are your own master, and will draw or not as you were born to do.

Just as the way to learn to write is to write, so the way to learn to draw is to draw. I think it is best to begin with objects in the room, and with figures; any objects, any figures—it does not matter. But draw one over and over again; draw it from all sides; draw it big, and draw it little, and draw it again. Then go to something else, and then come back to it later the same day. Put them all away till the next day, and then find the mistakes in them. The more mistakes you can detect, the better able you are to draw. In all this work observe one rule: Never mind about drawing a thing as you may possibly have been told to do in the course of instruction. Draw it the way it looks to you. You will see it differently as you go back to it again and again. If you do not see it differently, you can not see your own mistakes, and that is positive proof that for your fame is waiting at some other door—or, at any rate, that it will not come to you from art.

NATIONAL ACADEMY OF DESIGN FULL: At the seventy-eighth annual meeting of the National Academy of Design the list of academicians, limited to 100, was filled for the first time in the history of the organization.

Few Good Novelists

AN ESTIMATE OF THE NUMBER OF WRITERS OF FICTION OF THE FIRST RANK

A SHORT time ago there was a discussion among librarians and those interested in libraries, notably, Mr. Carnegie, as to the propriety of placing some restrictions on the purchase of fiction by public libraries. The same problem leads Mr. John Cotton Dana, in a recent issue of the *New York Times Saturday Review*, to make some interesting statements anent the probable number of novelists whose works would seem to be really worth reading. The article is a comparison of the number of authors actually read by frequenters of public libraries with the number worth reading. According to Mr. Dana: "Libraries, established and maintained at public expense, for the purpose of general improvement, are finding that from 70 to 80 per cent of all the books they lend each year are novels. Taking a few typical libraries for example we find that they contain, with total collections of from 80,000 to 120,000 volumes, between 5,000 and 10,000 different titles of fiction, adult and juvenile; and that these 5,000 to 10,000 stories have been written by from 1,200 to 3,000 different authors. Are there 3,000 or even 1,200 writers of good novels, or have there ever been so many in the whole history of English literature, even if you include writers of stories translated from other languages? And have all the writers of novels of the last two centuries produced 10,000, or even 5,000, different story books for old or young worthy of a place on the shelves of any public educational institution? I believe not.

"An examination of the lists of fiction of many libraries, and some experience in reducing longer lists to shorter ones, led me some years ago to the conclusion that there are in existence in English today not over 2,000 good novels, including those for young people, and that instead of there being from 1,200 to 3,000 writers who have produced good novels, there are not more than 800. I believe anyone, no matter how conversant with novels he may be, who attempts to make a list of fiction in English of more than 1,500 titles will find long before he reaches that limit that he has passed out of novels of the first rank into novels of the second rank, and even into novels of the third, fourth, and fifth rank. The most carefully selected list of its size as yet published in English is Sonnenschein's 'Best Books,' issued in 1891. This contains 50,000 entries of the best books on all conceivable topics. I mention of the writers of novels, including in foreign languages only those which have been translated into English, a total of 295 only; and of English and American writers of novels a total of only 193. Mrs. Oliphant, in her 'Literary History of the Nineteenth Century,' finds fifteen novelists worthy of mention."

The Plethora of Unread Poets

SIDNEY LOW, in the *June Cornhill*, London. Excerpt

I CAN never consider the subject of contemporary poetical production in England without a sense of bewilderment. It piques my curiosity more than it rouses my interest, and presents me with a whole series of problems which I am powerless to solve. On the one hand, I seem to see indications of an extraordinary absorption in verse composition, while there are, at the same time, facts which might point to abso-

lute public indifference. "This is not a poetical age," it is said; and it is an opinion which one would be disposed to accept without much question. You do not see any particular proof that poetry is widely read. But then, was there ever an age when more verse was produced? I can not answer the question, and perhaps nobody else can, for I suppose that statistics of the metrical output of various literary periods have not as yet been compiled. It may be that, when the comparative method has been as scientifically applied to literary history as it has been to economics, we shall get tables of verse averages, giving us the curve of poetical fertility from decade to decade. We may discover that poetry, like matrimony, bears a close relation to the price of bread, and that the number of lyrics published varies inversely with the increase in the importation of grain. In the absence of these particulars I will only observe that the intelligent student must find it difficult to account for the mere quantity of poetry poured out to a presumably unpoetical generation.

Considering the extraordinary interest taken in almost every other literary form, the public indifference to verse is curious. There are, I believe, some few living poets—I suppose not more than three or four at the outside—whose works do command a sale which would not be held to signify absolute failure in the case of a second-rate novelist. But their experience is quite exceptional. Taking the whole body, we may assume that they write not only without reward—poets have often done that—but even without recognition.

The lack of poetry is in the reading public, which, has apparently lost its taste for the oldest and most characteristic art-form of the Anglo-Celtic race. Why this should be so is, as I began by saying, a riddle which I do not profess to be able to read. If I might venture on a tentative and partial solution it is this, which may perhaps be thrown into the form of a question. Has the music of the written word been drowned by the deeper music of tones and numbers? Has the more persuasive, more intellectual muse paled before the passionate charms of her younger sister? The art of Beethoven and Bach is not nobler or more perfect than that of Virgil and Dante, of Milton and Shelley. But it may be that it strikes more easily to the heart of our generation. Does poetry share with sculpture the disability that waits on plastic art in an age which has lost the sense of form, the delight in symmetry? Our hurrying emotions, our tense and quivering nerves, can not pause to dwell on line and curve and balance, or to taste the cold perfection of ordered rhythms, of exquisite description, of subtle allusion, of carved and pinnacled and fretted language. The poet, like the sculptor, makes his appeal to the senses and the passions through the mind, the imagination, and the memory. But the composer goes straight to the fevered modern soul, nor does he demand from it that kind of tranquil and intelligent coöperation, without which verse is like the tinkling of a cracked cymbal, the beat of an untuned drum.

AUTOGRAPHS AT AUCTION: A remarkably interesting autograph manuscript of John G. Whittier was sold at auction in New York lately. It consists of twenty-two verses of four lines each of his beautiful poem "The Eternal Goodness." Another interesting item in the same sale was a fine four-page letter of Oliver Wendell Holmes, dated December 29, 1855, relating to his address to the New England society and discussing his views of slavery. Still another item of great interest was a letter of three pages, written by Washington Irving to Daniel Webster in regard to the former's recent appointment as minister to Spain.

SCIENTIFIC

The Effect of Wind on Lake Levels

REMARKABLE OBSERVATIONS ON LAKE ERIE

THE great changes in level of the water of Lake Erie, due to the prevailing westerly winds, constitute, on account of the shallowness at both ends of the lake, a serious menace to navigation. A report by Prof. Alfred J. Henry, recently published as a bulletin of the weather bureau, gives the results of observations, and is summarized in the last issue of the *Engineering Record*.

The frictional action of the wind on the surface of a body of water is manifested in various ways. First, a surface current is produced in the direction in which the wind blows. Second, it piles up the water on the shore which is directly opposed to the flow of the current and in the case of lakes and other landlocked bodies of water depresses the level of the water on the weather shore. Third, it alters the temperature of the surface waters both by mixture and the importation of waters having different temperatures. Of these effects the first named is by far the most important. It seems probable that the first effect of a strong wind upon the waters of the lake is to transfer from one end toward the other sufficient water to disturb the condition of hydrostatic equilibrium which existed before the wind began. Shortly after the maximum force of the wind has been exerted the lake tends to return to a state of stable equilibrium. The water that has been piled up on the leeward shore of the lake will immediately recede, although the velocity of the wind may continue high for several hours after the water falls. A condition of stable equilibrium is reached by a series of rockings of the water of the whole lake about a nodal line passing through the center of the lake, the water at either end rising and falling alternately until a condition of rest is attained.

A November storm gives a good example of the action of the water with a strong westerly gale blowing. The wind at Buffalo attained a maximum velocity of 80 miles per hour from the west at 1.37 p.m., and continued to blow at an average of over 60 miles per hour until nearly 8 p.m. The level of the lake rose sharply and the water in the canal backed up so that it reached the streets in the south portion of the city. The rise began at 8 a.m., when the wind had attained an average velocity of 36 miles per hour and continued until 4 p.m. At that time the lake level had risen 8.4 feet above the stage at 8 a.m. This extreme height was not long maintained; the water began to fall shortly after 4 p.m., and continued falling as rapidly as it had previously risen, so that by midnight the stage was 2 inches lower than at 8 a.m. The oscillation was completed in 16 hours. The reflex wave that began immediately after the primary wave had subsided reached a moderate height only, viz., 2 feet above zero.

The level of the lake at Amherstburg (at the west-end) did not begin to fall sharply until 10 a.m., when the stage of water was 22 inches above zero. The fall continued until 4 p.m., reaching a stage of 33 inches below zero, a range of 4 feet 7 inches. The rise at Amherstburg began at 5 p.m., nearly an hour after the fall had begun at Buffalo, and the water rose as sharply as it had fallen, passing beyond the initial stage and reaching a height of 34 inches above zero. This oscillation was completed at Amherstburg in 16 hours. The extreme difference in level between the two ends

of the lake at any one time was 13 feet 1 inch. It should be noted that the crest of the rise at Buffalo was reached just as soon as the wind began to slightly abate. The average velocity from 3 to 4 p.m. was 66 miles per hour. During the next hour it fell to 62 miles per hour, and the level of the water sank 2 feet 8 inches. In the succeeding two hours, although the wind was blowing with a velocity of 61 miles per hour, the level of the water continued to fall at the rate of over a foot an hour.

Metal Hose

Scientific American, New York. Excerpt

METAL is about the last thing one would regard as a substitute for rubber, and particularly where great flexibility is a quality which was absolutely essential; but this has been done recently, and a hose has been manufactured out of a steel tape which has all the flexibility of a tube made of rubber, and also several advantages which the rubber does not possess, such as great durability in all classes of service and the power to resist the action of heat and corrosion as well as that of acids and other chemicals. It is, therefore, adapted to the conveying of steam, compressed air, water, oils, acids, alkalis, gases, benzine, naphtha and gasoline.

METAL HOSE

No rubber whatever enters into the manufacture of this hose. It is constructed entirely of a metal tape which is rolled up in the form of a spiral, so that the edges overlap and fit into each other without in the least interfering with its flexibility. As the tape is rolled up it forms a groove for the reception of a packing which is completely enclosed in the metal as it rolls, where it remains fully protected from external or internal wear and tear. The packing causes the tubing to be perfectly tight, while the jointing induces a flexibility superior to that of a rubber hose of equal dimensions. As this hose will not kink, crust or blister, it can always be relied on to deliver its full capacity, which is greater than that of a rubber hose of the same dimensions, all connections being outside.

The single hose is recommended for all ordinary purposes; but where it is designed to convey air or steam under pressure, a double hose is made which will, it is claimed, resist a pressure of three thousand pounds to the square inch. This is constructed by placing one metallic hose within another, the coils of each running in opposite directions. This combination enables it to withstand the hardest usage successfully. While this hose is just being introduced into this country it has been in actual use long enough in Germany, where it originated, to demonstrate its serviceability. It has been adopted by the German navy and by the North German Lloyd. It has also done excellent service at the Liverpool docks, where over one thousand feet of it are used to convey steam from the boilers to the grain elevators.

Metallized Textiles

Engineering, London

A METHOD of metallizing textiles electrically, which is said to afford the possibility of impregnating the thickest piece of cloth, either thoroughly or only on its surface, with any kind of metal, has been invented by Dr. K. Donalowski, of Russia. The object is attained by an electrical process of separation of the different salts from a given metal by accumulation of the separated metal in a cathode. There can be used copper, iron, silver, nickel and any of the metals which can be separated from their salts by electrolytic action. The textile has to go through a preparatory treatment before ready for the process of metallization; consisting of impregnating the salt with a solution of the salt of a certain metal. After the cloth has been impregnated, it is submitted to treatment with oxidized sulphur, which causes the metal to be separated from the solution in a sedimentary mass, which, being very fine, intrudes into the cloth, uniting closely with its fibers, and settling down on its surface. When the cloth is thus made ready it is put into an electrolytic tub filled with a solution of the salt of the kind of metal which is to be coated upon it, and brought in contact with the positive surface of an electrical device. The power of the current, as well as the contents of the tub, has to be regulated for each case, respectively.

"The Right Man and the Left Man"

Condensed and Translated for PUBLIC OPINION

FROM experiments reported in the *Bulletin de l'Academie des Sciences*, it resulted that in ninety cases out of a hundred the right and left leg of man were of uneven length. This fact was demonstrated by directing a blindfolded individual to walk toward an object placed directly in front of him at a comparatively short distance. The individual would in the majority of cases unconsciously change his course to the right or to the left, and a measurement of the legs would show that one of them was shorter than the other; to this was attributed the inability of the blindfolded subject to walk on a straight line.

These experiments proved to a certain extent how it is that people lost in the woods or in the open generally return to their starting point while trying to find their way. Mr. E. Rollet, of Lyons, who has made extensive researches on the subject, came to the conclusion that man is seldom, if ever, symmetrical in

stature. *L'Illustration* (Paris) has summarized in a recent issue the researches of the Lyons scientist. This gentleman ascertained first that "at the point of view of length there is a great difference between the right and the left side of the body. In 93 subjects out of 100, taken at random, the humerus is longer on the right than on the left side. The same thing is true of the forearm, the two superior limbs being equal in length only in one case out of one hundred; the difference is from 8 to 22 millimeters in favor of the right side. The preponderance of the right side is also observed in the structure of the face, the right of which is more voluminous; this characteristic is found in the Venus of Milo. That the left leg is longer than the right was proven by actual measurements taken on 5,141 German recruits."

The conclusion of Mr. E. Rollet is that the superior limbs are "rightist" and the inferior limbs "leftist." The reverse is true of the monkeys. Among other animals equality generally prevails; when the limbs are unequal, however, the preponderance exists on the left side. "Man is rightist, and the monkey is leftist. The lion kills his prey with his left foot; the parrot seizes his food with the left foot also."

The higher development of the right arm is undoubtedly due to the greater use to which it is put. Why the right arm is used more than the left has never been satisfactorily determined. It is supposed to be due to education in infancy, left handedness occurring when the right member is injured in such a way as to lead to the employment of the left hand to an extent that produces a life-long habit.

Harmless Tobacco

Revue Scientifique, Paris. Translated and Condensed for PUBLIC OPINION

M. HIRSCHBERG mentions in the *Bulletin de Therapeutique* a discovery which the hygienists and the physicians, as well as the incorrigible smoker, will appreciate. In all previous methods of denicotinization the tobacco has been rendered insipid and has possessed a disagreeable flavor, so that up to the present all the so-called "inoffensive tobaccos" have found but few users. The method of M. Gerold, of Halle, the celebrated pharmacologist and toxicologist, however, is very different, as it renders the tobacco inoffensive by neutralizing the nicotine without destroying flavor or taste.

The tobacco leaves are treated with a solution of tannic acid which fixes the alkaloids in such a manner that the nicotine and essences of the plant are neutralized and rendered harmless. It appears that this does not destroy the flavor of the tobacco, but to reproduce the perfume damaged by the tannin the tobacco is dipped in a decoction prepared with the plant *Origanum vulgare*.

To determine whether or not the tobacco was poisonous after preparation according to Gerold's formula moderate smokers, aged from twenty-two to twenty-four years, of good health and non-alcoholic, were submitted to the following experiments: First, the pressure of the radial artery was measured and the pulse was registered. Then the young men were given cigars which had not been subjected to any preparation, and consequently contained active nicotine. The arterial pressure was again measured, and again the outlines of the pulse were taken. Fifty experiments gave the following results: After the cigars which had not been prepared

there was a lowering of the arterial pressure and an enfeebling of the pulse. After the prepared cigars the arterial pressure and the pulse suffered no modification.

A few minutes after the injection of five centigrams of an active tobacco infusion under the skin of a vigorous frog weighing from thirty-six to thirty-seven grams, there was observable a state of apathy and laziness, and after twenty minutes a state of complete catalepsy. It was only after one hour that the frog slowly manifested his normal activity. The same quantity of neutralized infusion injected into a frog under identical conditions had for result only a little lassitude, and this at the end of ten minutes only; there was no apathy and no catalepsy. On his own part M. Bardet gives some very interesting observations on the neutralized tobacco from a smoker's point of view.

1. The cigars kept the taste of the tobacco, it being difficult for any one to perceive any difference between cigars of the same quality.

2. Wishing to make relative trials of the lessened, if not neutralized, action of this tobacco, M. Bardet smoked in one day from ten a. m. to six p. m., fifteen cigars. He did this with complete impunity, whereas he had never been able, before or after, to smoke more than two ordinary cigars in the same length of time.

3. A prepared cigar was given to a young boy of sixteen years of age who more than once had been made ill in attempting to smoke, but this time there was no disagreeable sensation.

Up to this time the statement that all the nicotine could be left in a cigar and yet the cigar rendered harmless, has been paradoxical, but scientifically nothing opposes the fact that a preparation may fix the alkaloids in such a way as to render them non-volatile.

ELECTRIC LIGHT, a Russian specialist has decided, plays less havoc with the eyes than other forms of artificial light. He bases his deductions on the fact that damages to the eye are proportioned to the frequency of the closure of the lids. He found that the lids close in a minute 6.8 times with candle light, 2.8 times with gas light, 2.2 times with sun light and 1.8 times with electric light.

THE INFLUENCE OF THE MOON ON THE AURORA AND THUNDER-STORMS: An interesting abstract from Danish papers of the work of Professors Ekholm and Arrhenius shows the existence of a monthly variation in the fall of atmospheric potential according to the moon's revolution period. The aurora appears to have a well-defined periodic variation with a maximum at new moon and a minimum at full moon. Elaborate calculations were made to eliminate the effect of the moon's light. The result showed a pronounced variation of the aurora with the declination of the moon in the northern hemisphere.—*Terrestrial Magnetism.*

RELIGIOUS

Religious Condition of the Middle West

AS VIEWED BY AN EXPERT OBSERVER FROM THE EAST

THE series of articles in the *Outlook* on Religious Life in America, by Mr. Ernest Hamlin Abbott, is continued in the current issue by a study of the religious condition of the middle west, or the eastern west, as Mr. Abbott calls it. Mr. Abbott finds conventionalism to be the keynote of the churches in this region.

"True religion and undefiled, in the eyes of the dwellers in that part of the west, is to conform to certain standards of thought and conduct. Such religion is displayed in the services of the churches. Among Episcopalian churches, on the one hand, ritualism flourishes; in non-ritualistic churches, on the other hand, there thrives an equally strong conventionalism, though of opposite appearance. The surplice is inadequately replaced by the white tie; the vaulted nave by the semi-circular auditorium with opera chairs; images of the saints by blackboards, maps, and stereopticon screens; Gregorian tones by an easily recognizable type of anthems furnished by publishing houses at so much a month. These and other like symbols of religion which I might name are not all found in every church, but they might be combined to form an ideal to which most of the churches which I saw are tending. In religious thinking, too, conformity is the rule. The questioning spirit which will not down even in the southwest exists also in this land of broad acres and growing cities, but it is on the defensive. When it becomes too active, it crystallizes into one of numerous new and strange sects, of which the land yields more than its share, and ceases to have any portion in religion pure and undefiled. Eloquence, of a sort that must meet the test of the summer assembly platforms

which are within reach of most of the people, rather than thought, is the primary essential in making a sermon acceptable. The successful minister must have business enterprise. The preacher who 'warms up to his subject' and is efficient in raising a debt 'challenges admiration.'

"The combination of traditionalism and enterprise, of conventionality and 'hustle,' is what gives distinctive character to this large region which may be called the eastern west. It has come into its enterprise by inheritance, for not long ago it was pioneer country. But with the years its unconventional manners have become stereotyped and developed into new conventions. The nonconformist has made of his nonconformity a new conformity. It is the history over again of the Protestant freeing himself from an infallible church only to set up in its place an infallible Bible—of the Puritan fleeing from an established church in England only to set up an establishment of his own in America."

One of the most "enterprising" churches visited by Mr. Abbott in a city to which he gives no name, was the "Central Church of Christ," belonging to the denomination known colloquially as "Campbellite" and also as "Christian" and "Disciple." One characteristic of this church was its remarkable growth in numbers, attributed by Mr. Abbott to "parochial unselfishness." On this point he compares it with the Congregationalists. "Among Congregationalists the local church is living unto itself. It may, and usually does, give largely to missions, but its chief interest is in its own prosperity. A small Congregational church almost invariably feels the competition, rather than the assistance, of a neighboring rich church of its own denomination." This Central Church of

Christ was called by its pastor semi-institutional. "The building contained two reading-rooms, each with its own function; a recreation-room, with games; classrooms for the use of the Bible school, week-day classes, and various church clubs; and a gymnasium, besides the pastor's office, the church auditorium, and the lecture-room.

"Another church of the same type, but not by any means so obviously successful, I saw in a Wisconsin city. I had made an appointment to meet the pastor at the church, but missed my appointment because, when I reached the place to which I had been directed, I could see no sign of a church. After a fruitless search, I returned to the place and discovered that what I had taken to be an elegant clubhouse or apartment-house was in fact the church. Within, except for the main auditorium, the building was appropriate to its exterior—tasteful parlors, a good library, convenient classrooms, two kitchens, office-rooms for the pastor and officers of the church, and a small theater, with stage complete. Its comparative inactivity was due to at least two causes: one was that, being a Congregational church, it did not have the coöperation of other churches; the other was that its success had in some respects threatened its ruin, for one after another of its projects had so outgrown the capacity of the church that separation became necessary, and energy formerly exercised under the church organization had necessarily been withdrawn. The very appearance, therefore, of inactivity was in this instance a demonstration of the value that this church had in the community."

The College of Cardinals

AS CONSTITUTED AT PRESENT

AT the papal consistory held June 9, the pope bestowed the red hat of the cardinal on the following: Monsignor Martinelli, formerly papal delegate in the United States; Prince Archbishop Skrbensky, of Prague, and Prince Bishop von Prezyna, of Cracow.

According to the Boston *Herald*, "counting in the three cardinals just appointed, the college at the present time consists of sixty-eight members, the full number being seventy, but it is rarely the case that the full number is appointed. Of these sixty-eight, Italy has forty-one, Austria-Hungary eight, France seven, Spain five, Germany two, Ireland two, England one, Belgium one, and the United States one.

"While the government of the Church of Rome can not be controlled by the laws of inheritance, it is, as will be seen above, strongly national so far as its central administration is concerned. It would be necessary to go back for centuries to find a pope who was not of Italian birth, while in the distribution of the highest honors of the church it has been the rule to keep the Italian prelates constantly in the majority. It is to the conceded credit of those Italians who have been members of the college of cardinals, and those of their countrymen who have been raised to the high dignity of the papacy, that in spite of this national coloring the church has been able to hold itself measurably free from contentions and discords due to national jealousies. If Italy had been a great and aggressive nation, such as Germany, Russia, France, or England, it is doubtful whether this harmony could have been maintained. One is compelled to judge of questions such as this on the practical ground of results attained, and the wonderful

ability shown by those who have had control of the affairs of the Roman Catholic church makes it open to doubt whether anything approaching an equal success would have been obtained if the controlling force in this great religious organization had not been men who through long descent were possessed, as these Italian prelates have been of great diplomatic skill."

Chinese Jews

A COLONY AT KAIFENGFU

FOR a number of years it has been known that there was a colony of Jews at Kaifengfu, in an interior province of China. An effort to establish communication with them about fifty years ago was thwarted by the Tai-ping rebellion. A similar attempt was made in 1900 by a regularly organized committee of Jews at Shanghai, and messages were interchanged through Chinese messengers, but the Boxer rising brought this communication to a premature end, although not until some members of the colony had actually been induced to visit Shanghai. The visitors expressed themselves as anxious to establish close relations with their co-religionists and to take up the practices of their ancient religion.

N. E. D. Ezra, in the June *Menorah* (New York), recounts what has been learned of the colony through messengers, and through the colonists who visited Shanghai. "As to whether any of them knew anything of their religion, they said that for a long period before the Tai-ping rebellion they were gradually declining and their religion was getting forgotten, and at present they do not observe any of the ordinances of their religion, nor do they observe the idolatrous practice of the heathen. With regard to the number of Jews still remaining, they said that quite a number had gone out of Kaifengfu on business and had thus been lost, but those that they know who are members of the seven clans in the colony do not number more than 140 adults. They are at present in such a deplorable condition that they have no leader, no synagogue, and no schools in which to educate their children. With regard to their synagogue they have been told by their fathers that once upon a time they had a place of worship, which was the heart of their community, but for a considerable period the buildings have been completely destroyed. The ground on which the synagogue was erected used to be in the name of one of their people, but at the time of the Tai-ping rebellion the title deeds were lost. It is now a water hole with a stone standing alongside; on this stone the names of Abraham, Moses, Adam, etc., are mentioned, with an account of their religion.

"They have a few traditional commands that they still remember and are even trying to observe. They are under no circumstances allowed to use heathen musical instruments in marriage. They are to take out sinews before preparing the meat for their food and are prohibited to eat pork. One man stated that he remembered his father telling him that in the olden days, when they entered their synagogue, they always took off their shoes. They never knew of the existence in any parts of the world of any Jews besides themselves. Their first knowledge of their outside co-religionists was when they received the letter which the Shanghai Jews sent to them. They denied that any of their sect has embraced Buddhism or Mohammedanism, but it is true that the few who had left Kaifengfu have never been heard of and these they consider as lost."

British Religious Statistics

Christian Work, New York

THE British census returns, with one exception, are very complete. "Religious profession" is not registered in England or Scotland, but it is in Ireland, where the population is overwhelmingly Catholic. In England the great plurality, but not the majority, is Episcopal. The *Quarterly Register* gives these figures:

	Church Sittings	Communi- cants
Baptists	1,287,424	353,083
Congregationalists	1,645,092	403,711
Presbyterians	166,391	76,071
Wesleyans	2,224,057	564,324
Primitive Methodists	993,909	187,260
Calvinistic Methodists	455,349	158,114
Salvation Army	540,000	no return
United Methodist Free churches.....	381,872	81,464
Methodist New Connexion	167,946	37,383
Bible Christians	153,600	30,257
Society of Friends	no return	17,346
Six smaller bodies	123,579	36,919
Total	8,139,219	1,945,932
Episcopal church	7,000,375	1,974,629

In the England-speaking world, omitting all non-Protestant bodies, these figures are given:

	Communicants	S. school scholars
Methodists	7,659,285	6,961,529
Baptists	5,454,699	2,586,692
Presbyterians	3,916,450	3,087,713
Congregationalists	1,201,254	1,455,100
Total	18,231,688	14,091,034

Anglican and daughter churches.... 3,367,052

The Methodist church, therefore, ranks as the largest non-Episcopal body of English-speaking Protestants in the world; the Baptist church ranks next; the Presbyterian comes third; at a considerable distance behind comes the Episcopalian, the Congregationalist bringing up the rear.

Churches Prepare for the Summer Campaign

TENTS TO BE USED DURING HOT WEATHER

MENTION has been made occasionally in the religious press of summer evangelistic services being conducted in tents in different parts of the country. This work has hitherto been unorganized and sporadic, but this year systematic plans have been made, and the efforts of different cities are being coordinated. The movement for systematization originated with the Presbyterian general assembly; a committee has been appointed, consisting of Mr. John H. Converse, Drs. George B. Stewart, J. Wilbur Chapman, and John Balcom Shaw, to prosecute the work.

The *Evangelist* (New York) tells what has been done so far. "A recent tour of the secretary of the committee brings to light the determination of Christians in many cities to engage in this work next summer. Cleveland presbytery has appointed a committee and heartily endorsed and recommended the work to the churches of the city. It is proposed to

secure two tents, which will be put in operation as early as may seem best. A half dozen or more ministers in that city are planning to preach in the open air. At Toledo initial steps have been taken and a systematic canvass will be made to awaken interest and secure equipment. Chicago is contemplating a general union movement. The plan is to have a union movement in which each denomination will bear its own share of the financial burden and cooperate in the organization of workers and in facilitating the tabulating of results. The Presbyterians of the city have in contemplation the erection of at least three tents, and the movement is taking such a firm hold on the workers of our church that they may be able to have five or six tents. In St. Louis the Presbyterians are planning to have five or six tents. The other denominations are considering plans and methods for a similar movement, and a committee has been appointed representing all the churches, looking toward a union movement. This committee will plan and provide for evangelistic work during the World's Fair, to be held in St. Louis during 1903. In Indianapolis steps are being taken by business men toward the inauguration of summer work in such a way as to enlist the sympathy and active cooperation of all who are concerned in the spread of Christianity. In Pittsburgh, a stronghold of Presbyterianism, committees have been appointed by Allegheny and Pittsburgh presbyteries for the organization of some especially interesting evangelistic work. It is expected that not one pastor alone, but pastors of all the various denominations will unite in this work."

Various Topics

A LARGE GIFT: The daily press notes the significant fact that Henry Cole, one of the oldest real estate men of Denver, Colorado, is to enrich the Methodist churches of that city by a gift of over \$350,000. The interest of the fund is to be divided—fifty per cent to evangelistic work, twenty-five per cent for buildings and improvements, and the balance for charities.—*Zion's Herald*.

AMERICAN BIBLE SOCIETY: The eighty-sixth annual report of the American Bible society, which has just appeared, is cheerily optimistic. The income of the society shows from each distinctive source of revenue—individuals, churches, auxiliaries, and bequests—a substantial gain for the past year over the year previous. The total receipts for the year 1901-02 was \$433,173. The aggregate of the year's issues was 1,723,000 volumes, of which a little more than one-third were distributed in the United States. The remainder went to foreign mission countries. One recent advance movement of the society has been the establishment of a special agency at Atlanta, Georgia, for the purpose of circulating the Bible among the colored people of the south. Rev. J. P. Wragg has been appointed superintendent and he is rapidly organizing an extensive force of colporteurs.—*Interior*.

REV. GEORGE H. HEPWORTH, who died in New York, June 7, had a remarkable and diversified career. He built up a Unitarian church in Boston with a large congregation, which disbanded a few years ago, after his successor, Dr. M. J. Savage, left it. Dr. Hepworth went to New York in 1870 and was pastor of the Unitarian Church of the Messiah, from which he withdrew after two years, declaring his belief in the divinity of Christ, and organizing the Church of the Disciples, which continued in the Congregational denomination for several years. He has been for nearly twenty years connected with the New York *Herald*, writing brief editorial sermons for its Sunday edition. He made an investigation of the Armenian massacres in Turkey a few years ago, bringing home valuable information. As a preacher and author he exercised a large influence for good. He was sixty-nine years of age.

THE NEWS OF THE WORLD

MONDAY, JUNE 9

DOMESTIC.—Whitelaw Reid, special envoy of the United States to the coronation of King Edward, presented his credentials in London to Lord Lansdowne....The hospital of St. Luke's society, in Chicago, was burned, and thirteen patients and one doctor were killed....Two prisoners in an Oregon jail, in a successful effort to escape, killed three guards and wounded another prisoner who tried to stop them....President Palma signed the amnesty bill giving Americans in Cuban prisons or under trial in that country their liberty....The opening exercises of the centennial anniversary of West Point were held....A short but severe fire in Saratoga resulted in the death of five persons and a property loss of \$300,000....President Roosevelt nominated two major generals and six brigadier generals in the regular army, including successors to Generals Brooke and Wheaton and Surgeon General Sternberg....Professor Woodrow Wilson succeeded Dr. Francis L. Patton as president of Princeton university.

FOREIGN.—The pope, at a consistory bestowed the red hat on three prelates, one of them being Cardinal Martinelli....The German reichstag has passed the third reading of the bill abolishing the dictatorship in the reichsland (Alsace-Lorraine)....At a fire in the heart of London nine girls were burned to death and fifteen persons were injured.

TUESDAY, JUNE 10

DOMESTIC.—Cambridge university, England, conferred the degree of doctor of laws on Whitelaw Reid....The Arkansas Democratic state convention, in session at Little Rock, renominated Gov. Jefferson Davis....President Roosevelt in a letter to the National Unitarian association said that there was now "almost no policy of coercion" in the Philippines....The New York court of appeals unanimously affirmed the conviction of John Most of publishing an anarchistic and dangerous article in his paper....In a collision on the Southern railway at Juliette, Georgia, two persons were killed and many injured....Swarthmore college increased its endowment fund to \$400,000.

FOREIGN.—The grain tax clause of the budget passed the committee stage in the house of commons, despite the averments of the Liberal leader that it meant the end of the policy of free trade....Revised figures of the British budget placed the total expenditure at about \$882,000,000 and the revenues at \$762,000,000, a consols loan of about \$150,000,000 being proposed to meet the deficit and for a contingent fund....The policy of the new French ministry was set forth before the chamber of deputies by Premier Combes, who said that econ-

omy would be promoted and friendly foreign relations would be favored.

WEDNESDAY, JUNE 11

DOMESTIC.—C. F. W. Neely, after serving two years in prison in Havana for complicity in postal frauds, was set at liberty under the terms of the amnesty act....Francis B. Thurber testified before the senate sugar investigating committee that he had received three payments from the military government of Cuba, and one from President Havemeyer of the sugar trust for his efforts in behalf of reciprocity....Judge Samuel W. Pennypacker, of Philadelphia, was nominated for governor on the first ballot in the Pennsylvania Republican state convention; the platform pledges the state party's support to Roosevelt for president in 1904; Senator Quay was made chairman of the state committee....The state department was informed that the foreign ministers at Peking had agreed to a reduction of the claims for indemnity against China....A tornado in Illinois and Iowa caused great damage.

FOREIGN.—The king and queen of England, with a distinguished company, were the guests of Ambassador Choate at the American embassy in London....Colonel Arthur Lynch, M. P.-elect for Galway, landed in England from France, and was arrested and subsequently arraigned for high treason in a London police court....Commandant Kemp, with his commando of nineteen hundred men, surrendered in South Africa....Mussolino, the noted Italian brigand, was sentenced at Lucca to life imprisonment....Sidi Ali, the Bey of Tunis, is dead.

THURSDAY, JUNE 12

DOMESTIC.—The beet sugar Republican senators held a conference at which it was decided to attempt to pass the house Cuban reciprocity bill, with the amendment abolishing the sugar differential....President Roosevelt presented diplomas to cadets at West Point....A large force of militia was called out to prevent streetcar railway employees at Pawtucket, Rhode Island, from obstructing tracks and assaulting employees; a man and a boy were shot and fatally injured.

FOREIGN.—British cotton manufacturers have organized for the purpose of encouraging cotton growing in British colonies and protectorates....The British steamer *Lady Joicey* was wrecked in the Straits of Magellan....Pan-German leaders in the Austrian reichsrath engaged in fistcuffs....The French chamber of deputies voted confidence in the new ministry....The rebel force which has been investing Kweilin, capital of the southern province of

Kwang-Si, has been defeated by the Chinese imperial troops.

FRIDAY, JUNE 13

DOMESTIC.—Captain S. C. Lemly, judge advocate general of the navy, has applied for retirement, on the ground of disability incurred in the line of duty....Major L. W. T. Waller, who arrived from the Philippines on the transport *Warren*, said he left Samar a howling wilderness....Charles S. Shively, secretary and treasurer of the American District Telegraph company, was arrested, charged with embezzlement of the company's funds.

FOREIGN.—The fifth and final court of the season was held at Buckingham palace, London, members of the various special embassies being present; at a special court held to receive addresses from the lord mayor and corporation of London the king took occasion to pay a compliment to the Boers....Lord De Freyne, an Irish landlord, secured writs against a large number of members of the Irish parliamentary party on the ground of conspiracy in connection with tenant troubles....Famine is spreading throughout Siberia, and the stricken people are flocking to Irkutsk, the capital, for relief.

SATURDAY, JUNE 14

DOMESTIC.—Judge Taft informed the vatican authorities that if they preferred cash to Philippine bonds endorsed by the American government for the lands owned by the friars in the Philippines, they could have the cash; the value of the lands is reckoned at from \$7,000,000 to \$10,000,000....Admiral Melville, engineer in chief of the navy, announced the success of a series of tests which give hope that oil may soon be substituted for coal as fuel on warships.

FOREIGN.—Colonel Grimm, of the Russian army, was sentenced at Warsaw, Poland, to twelve years' imprisonment at hard labor for selling military secrets to a foreign power....Colonel Arthur Lynch, M. P.-elect for Galway, was arraigned in a London police court on the charge of high treason; the case of the prosecution was presented by Sir Edward Carson, the solicitor general.

SUNDAY, JUNE 15

DOMESTIC.—Thirteen thousand persons attended the annual communion services of the Christian Scientists in Boston....The Rev. Dr. Anson Judd Upson, chancellor of the University of the State of New York, died in Glens Falls, New York....Rioting broke out afresh in Pawtucket, Rhode Island.

FOREIGN.—King Edward is suffering from an attack of lumbago....General Delarey, with eight hundred men, surrendered at Lichtenburg....The Grand Prix de Paris, worth 200,000 francs, was won by Kizil-Kourgan.

BOOK REVIEWS

"The Mystery of William Shakespeare" *"The German Empire of Today"* Current Fiction

THE MYSTERY OF WILLIAM SHAKESPEARE. A Summary of Evidence. By His Honor Judge Webb. Cloth, pp. 302, \$4. New York: Longmans, Green & Co.

THIS, as the title states, is a summary of evidence, or rather of the theories old and new which have been advanced by those seeking to determine the authorship of the plays and poems commonly attributed to Shakespeare. These theories are sometimes supported by facts constituting evidence and sometimes there are no facts. Judge Webb has little respect for the older commentators and among the modern investigators he accepts Mr. Philipps as the most trustworthy, although he is not followed at all points. The plays and the man, or to speak more exactly the personality are considered in every aspect which might throw light upon the authorship of the plays, and Judge Webb's conclusion is that "the young man from Stratford" did not write them, the principal basis of this belief being that this young man had neither the education nor opportunity to compose the writings attributed to Shakespeare. Judge Webb does not say that he believes Francis Bacon to be the author of the plays, but he leaves the reader to infer as much when he explains at length how Bacon might have written them and why he repudiated them. The reader who has not the patience to read Swinburne, Lee, Philipps, Rowe, Dr. Johnson, and the score or more of "authorities" on the authorship of Shakespeare's works will find that Judge Webb's book affords an opportunity to grasp all that is important in the books of these investigators applying to this never-ending controversy. And besides having the points of the dispute thus conveniently grouped the reader has the advantage of Judge Webb's luminous commentary thereon.

AMERICANS AT OXFORD. By John Corbin. Cloth, pp. 325, \$1.50. Boston: Houghton, Mifflin & Co.

MR. CORBIN has gathered a lot of interesting information about Oxford which is well worth reading. Picking out discriminatingly and reciting in a very interesting style the various phases of development in the university and in its life, the volume leaves the reader with the comfortable feeling that he knows pretty much all about Oxford that is worth knowing. The impression is that American universities have lost by taking too much from the German and too little from the English university systems. Emerson once said that out of all the graduates of Oxford each year not more than forty attained to any measure of success. It is rather difficult to glorify the greater institutions of learning when we analyze their results. The most important factor in American edu-

cational life as yet is the small college, which the author entirely ignores. Mr. Corbin admits that the American system is in advance of the English, but the burden of his argument is that we should build upon Oxford models. In reading this volume one must, of course, take in consideration the fact that the dark side of Oxford life is not brought to the forefront. The right kind of university should turn out men capable of self-support, capable of using their fellows, and of being of use to them. Measured by this standard there seems to be ample room for improvement in the greater institutions, both of England and America.

THE GERMAN EMPIRE OF TODAY. Outlines of Its Formation and Development. By "Veritas." Cloth, pp. 340, \$2.25. New York: Longmans, Green & Co.

"VERITAS," we believe, is an Englishman, but he is one of the few who can write of Germany in a spirit of fairness. He may be considered somewhat more than fair in regard to one or two matters in the present book. Beginning with an historical outline of the formation of the German empire, the author considers successively the army and navy, commercial policy, traffic policy, colonial policy, education, and finance. The record of the progress made in all directions is a remarkable one. We are in the habit of complimenting ourselves upon the rate at which we progress, but it is doubtful if we can compare in this respect with Germany. It is to be remembered, too, that the Germany of today dates from 1871; the growth in national, industrial, and commercial efficiency since that time is almost without parallel, notwithstanding temporary setbacks. We strongly recommend this book as giving briefly and clearly the main facts of the development of the most interesting nationality in the world at the present time.

THE PHYSICAL GEOGRAPHY OF NEW YORK STATE. By Ralph S. Tarr. Cloth, pp. 396, \$3.50. New York: Macmillan Co.

PROFESSOR TARR's book is the outcome of an investigation undertaken on behalf of the American geographical society. From a modest beginning the work grew into its present proportions, without doubt the most comprehensive work of its kind upon the territory it covers. The physical geography of this territory is of much general interest because of the unique features it possesses, the Adirondacks, the Great Lakes, and Niagara. Besides the chapters on these divisions of the subject, there are others covering the general physiographic features, the plains and plateaus, the influence of the glacial period upon the topography, the rivers, shore lines, and

the influence of the physiographic features of the state on its industrial development. Mr. E. T. Turner contributes a chapter on the climate of New York. Charts, maps, and other illustrations of characteristic formations add to the value of the volume.

THE VIRGINIAN. A Horseman of the Plains. By Owen Wister. Cloth, pp. 504, \$1.50. New York: Macmillan Co.

THE Virginian is a decided addition to the characters of present day fiction. His daring, self-reliance, courtesy, dignity, and underlying and abiding gentleness of character make him very attractive and impressive. To be sure the world in which he lives, the world of western cattle ranges, has passed away before the railroad and the barbed wire fence, but it is to be hoped that the type which he represents will last always. His creator has done well to show this man to the world, rough and untamed, but never uncouth or ill at ease, and very much of a man and a gentleman. His love for the little school teacher from Vermont—enriching and strengthening his life—is the last touch to a consistent and well-developed figure.

IN THE EAGLE'S TALON. A Romance of the Louisiana Purchase. By Shepard Stevens. Cloth, pp. 475, \$1.50. Boston: Little, Brown & Co.

MISS STEVENS's story is placed partly in St. Louis and partly in France. It dates early in the nineteenth century, and includes pictures not only of frontier scenes, but of the second empire as well. To France the hero goes to find and restore to her father a girl cousin, who has been lost during the revolution; he finds her only to lose her again "in the eagle's talon," or in other words, in the prison where she has been sent by Napoleon for safe keeping until she shall take a favorable view of his suit. But in the end the young girl is brought back safely to St. Louis, not, however, as the reader supposes, to become the bride of her rescuer—he remains faithful to the love he left behind him. A well-told if not remarkable story.

A FOOL'S ERRAND. By One of the Fools. Cloth, pp. 520, \$1.50. New York: Fords, Howard & Hulbert.

JUDGE TOURGEE's book appears in still another edition, indicating that books of sterling worth have a long lease of life in America. Its picture of reconstruction days has never, so far as we know, been equaled; it is vivid, true, and tells the story in all its details. To this generation it will be a revelation, just as it was to the first generation of its readers. Properly speaking, it is an historical work, but it has something more than the interest of fiction.

THE SPENDERS. By Harry Leon Wilson. Cloth, pp. 512, \$1.50. Boston: Lothrop Pub. Co.

CRAMMED into the pages of this book are all that is newest, much that is worst, and some that is the most vital in modern America. The plot is the simplest of the simple; the son of a millionaire, and incidentally the widow and daughter of the same, come to New York to redistribute some of the money heaped up by the father and grandfather in the west. They have little trouble in finding people to help them in this pious endeavor, and the upshot of the business is that after the boy comes to grief in Wall street he kidnaps the girl who angled for him while his money lasted and felt sorry for him after it was gone, and goes back to the west to begin over again with his canny old grandfather. The humor consists of equal parts of slang and satire, and is amusing to one who is not impervious to either.

THE PATH TO ROME. By H. Belloc. Cloth, pp. 448, \$2 net. New York: Longmans, Green & Co.

THIS is literally the path to Rome which the author pursued on foot, from Toul, across France and Switzerland, into Italy, and so to Rome. It is whimsical and full of the vagaries that are apt to seize on men of a contemplative and unconventional cast of mind when they are thrown much upon themselves. It is not so much a book of travel as of a traveler; always the matter discussed is subjective. Scenery, hills, valleys, towns, and mountains are important only as they excite some sensation and reaction in the mind of the traveler. To read it is to have a double revelation of the beauties of the route from Toul to Rome, and of the mental processes of Hilaire Belloc, the author. In the narrative the two are inseparable; each brings out the more attractive qualities in the other.

NATURE'S MIRACLES: Vol. I, World Building and Life: Earth, Air and Water. Cloth, pp. 258. Vol II, Energy and Vibration: Sound, Heat, Light, Explosives, pp. 255. Vol. III, Electricity and Magnetism, pp. 243. By Elisha Gray. 60 cents per volume. New York: Fords, Howard & Hulbert.

We have already noticed all but the last of these volumes completing a series which is not the least achievement of Dr. Gray. There are plenty of scientific books for the scientist, but there are very few for the layman. These volumes combine accuracy and simplicity with a literary quality that suits them to old or young, educated or ignorant. For supplementary school reading, we can think of no books of their kind which combine so many advantages as these possess.

THE SMALL END OF GREAT PROBLEMS. By Brooke Herford, D.D. Cloth, pp. 303, \$1.60. New York: Longmans, Green & Co.

THE small end of the great problems of the universe is that end at which the individual stands. It is from this point

that Dr. Herford starts and works out to the wider significance of things, but always with a view to the ultimate effect of forces and movements on the individual standing at the center of his own universe. As one reads the book the result is disappointing. The author's view of every problem that he touches is that of the orthodox churchman made gentler and kindlier by long experience, but supremely orthodox still for all that.

ANIMAL FORMS: A Second Book of Zoölogy. By David S. Jordan, M.S., M.D., Ph.D., LL.D., and Harold Heath, Ph.D. Cloth, pp. 258, \$1.10. New York: D. Appleton & Co.

DESIGNED to meet the needs of a beginner in this study, the early chapters deal with the common characteristics of living things. Cell and protoplasm are discussed in succeeding chapters by way of preparing the student for an examination of animals representing the principal classifications from the view-point of structure, functional parts, habits, and life-history. The book presents a broad view of the animal kingdom and a foundation for future observation no less than future study.

THE KINDRED OF THE WILD. A Book of Animal Life. By Charles G. D. Roberts. Cloth, pp. 374, \$2. Boston: L. C. Page & Co.

MR. ROBERTS is a skillful biographer of animal life. His portraiture is simple and sympathetic without being unduly pathetic or lachrymose. There is no straining to catch the animal's point of view or to humanize him out of all semblance to his natural self. In these pages we catch glimpses of the animal as he is, wild and untamable; hunting and being hunted; keen in instinct without possessing intelligence. The style of the book is vigorous and clear and the illustrations by Mr. Bull are unique and illustrative.

A GIRL OF VIRGINIA. By Lucy M. Thurston. Cloth, pp. 306, \$1.50. Boston: Little, Brown & Co.

ANOTHER story with the University of Virginia for a background. It is a strange story in some ways; it violates the traditions of fiction. The hero is not a hero and the villain is the tamest and, to us, most inoffensive villain we have met for some time—but he is not so regarded by the heroine—and so after all he is as good as a villainous villain for all practical purposes. The story is so colorless in its outlines that we suspect that it has a purpose of some kind back of it, but what this purpose is we are not able to say.

THE RISE AND DEVELOPMENT OF CHRISTIAN ARCHITECTURE. By Rev. Joseph Cullen Ayer, Jr., Ph.D. Cloth, pp. 64, \$1.50. Milwaukee: The Young Churchman Co.

DR. AYER has taken a series of buildings that may be regarded as typical of the stages through which Christian architecture has passed, and has used these to illustrate the development of a great and interesting form of art. The de-

scriptions of the buildings selected are precise and critical, and with the many illustrations with which the quarto volume is illustrated give the reader an excellent idea of the most renowned specimens of church architecture.

OLDFIELD. A Kentucky Tale of the Last Century. By Nancy Huston Banks. Cloth, pp. 431, \$1.50. New York: Macmillan Co.

IN a quiet, contemplative fashion, this book has a charm and a flavor that is peculiar and delicate. If one seeks action and spirited dialogue, he must seek it elsewhere. There is only the merest thread of a narrative, but the personalities of the people of the little Kentucky village are clear and vital. The high qualities of courage, endurance, uncompromising self-sacrifice, and unselfish love, shine out in the midst of the plainest surroundings, and shine all the brighter by reason of their surroundings.

ADVANCED FRENCH PROSE COMPOSITION. By Victor E. Francois. Cloth, pp. 292, 80 cents. New York: American Book Co.

THAT a knowledge of French is an impossibility without a knowledge of French idiom is the vital part of Mr. Francois's book and the starting point of his treatise. The book deals with no vague French classic for purposes of illustration, but with the ordinary life of a traveler in France. In this way the student is brought in contact with the language in its vigor, its shading, its practical use application.

HOME THOUGHTS. By C. (Second Series.) Cloth, pp. 340, \$1.20. New York: A. S. Barnes & Co.

A BOOK such as this is a token of a literature which is sorely needed in America, a literature of the home and the heart; a literature which should not be purely ideal, but above all practical, a finding of the actual in the ideal. It is this feature which manifests itself so sturdily and clearly in this book. It is the utterance of a woman who knows life in many phases, and out of the richness of her experience gives guidance that is invaluable and timely.

TRUE TALES OF BIRDS AND BEASTS. Edited by David Starr Jordan. Cloth, pp. 132. Boston: D. C. Heath & Co.

A COLLECTION of stories from the pens of well-known writers. The editor has chosen twelve stories, "each one of which is trustworthy as to fact, told with some literary skill, and not so tragic as to be painful reading." For the child the book is valuable, as it introduces him in the best possible manner to the lives of bird and beast.

AMONG THE WATERFOWL. By Herbert K. Job. Cloth, pp. 224, \$1.35. New York: Doubleday, Page & Co.

A BOOK which is noteworthy not only for its scientific spirit in reference to detail and correctness, but for the numerous and admirable photographs of birds in their natural state. The studies are actual experiences of the author, and the volume is a real treasure to

either the nature student or the nature lover.

MY JAPANESE WIFE. A Japanese Idyl. By Clive Holland. Cloth, pp. 217, \$1.50. New York: Frederick A. Stokes Co.

In its previous editions we have said all the complimentary things we could think of in regard to this book. It is aptly described by its sub-title—A Japanese Idyl, and is especially attractive in its new dress and with its native Japanese decorations.

NOT ON THE CHART. A Romance of the Pacific. By Charles L. Marsh. Cloth, pp. 336, \$1.50. New York: F. A. Stokes Co.

GIVEN an island "not on the chart" and three castaways, two men and a woman, and the details of the story, so far as we care to indicate them, can be readily imagined. The story lives up to its promise of several hours' amusement.

'TWEEN YOU AND I. By "Max O'Rell." Cloth, pp. 480, \$1.20. Boston: Lothrop Pub. Co.

MAX O'RELL is so well known in this country that a review of a book from his pen is in effect merely an announcement. The present volume is characteristic, being replete with bright generalizations and charming views of men, women, and worldly affairs.

THE FOOL. By William Henry Carson. Cloth, pp. 334, \$1.50. New York: G. W. Dillingham Co.

A STORY of a Massachusetts fishing village in which an intelligent man masquerading as a fool, a stage-struck girl, a homely but honest fisherman, and a crafty New Yorker are the principal *dramatis personae*.

THE RED ANVIL. By Charles Reginald Sherlock. Cloth, pp. 342, \$1.50. New York: Frederick A. Stokes Co.

THE underground railway of Abolition days runs through the village of Smithboro, involving the inhabitants of the hamlet in many controversies over the slavery question and even leading to riots and armed conflicts.

T'BACCA QUEEN. By Theodora Wilson. Paper, pp. 355, 50 cents. D. Appleton & Co.

A WESTMORELAND story containing some mild excitement, two heroines of different states of material and social fortune, and a great deal of true local color and atmosphere.

UNTO THE END. By "Pansy." Cloth, pp. 365, \$1.50. Boston: Lothrop Pub. Co.

A DOMESTIC story written for the hearth and young people. The teaching is entirely "safe," the story depicting a woman's trial and her courage amid great sorrow.

FIVE LITTLE PEPPERS ABROAD. By Margaret Sidney. Cloth, pp. 449, \$1.10. Boston: Lothrop Pub. Co.

A CHILD's story of more than usual excellence and interest. The book has a further value in being instructive both from the moral and intellectual points of view.

If it isn't an Eastman, it isn't a Kodak

Clean cookery is a great appetiser.

GOOD COOKS
clean their utensils with
SAPOLIO

IN MY VICARAGE GARDEN AND ELSEWHERE. By Rev. Henry N. Ellacombe. Cloth, pp. 219, \$1.50. New York: John Lane. The Bodley Head.

CANON ELLACOMBE'S book is a running commentary on the making of a garden, not as a garden might be made or as it had been made, but as it was making. There are some excursions to the world without the garden hedge, and facts and comments of varied interest are introduced from time to time, making a good book for a lazy hour—especially for the lazy hours of garden makers.

THE LATE RETURNING. By Margery Williams. Cloth, pp. 205, \$1.25. New York: Macmillan Co.

A STORY of a revolution, presumably in South America, although it might have occurred anywhere in the world, from all that one can discover from the context. By an unfortunate paradox the principal parts in the drama are taken by unimportant people, and the most promising of all, Rainer, the revolutionary leader, appears on the stage only for a short time, just before the curtain falls upon the play and upon his life as well.

A COMPREHENSIVE GUIDE-BOOK TO HYGIENIC DIET. By Sidney H. Beard. Cloth, pp. 167, \$1. New York: T. Y. Crowell & Co.

MR. BEARD seeks to place the diet question on a rational and wholesome basis, but his principal object is to prove the case of the vegetarians. If he does not show to our satisfaction that the vegetarian diet is the best, and of course no diet is "the best," for all persons and under all circumstances, he shows that it is a possible and agreeable diet by the recipes that support his argument.

MY CAPTIVE. By Joseph A. Altsheuler. Cloth, pp. 281, \$1.50. New York: D. Appleton & Co.

A PATRIOT soldier, fighting under Morgan and an English girl acting as a spy for Tarleton play hide-and-seek with each other, are captor and captive by turns, and end by each surrendering to the other, with wedding bells ringing in the background. The best that can be said of the book is that it will make pleasant reading for an hour, and the worst that it will probably be forgotten in another hour.

THE HINDERERS. A Story of the Present Time. By Edna Lyall. Cloth, pp. 179, \$1. New York: Longmans, Green & Co.

THIS story is aimed at hinderers in general, but the course of the story concentrates the blow upon those who hindered a juster attitude toward the Boers and certain social hinderers of a common type. It is of only moderate interest and not of the best literary quality.

SATAN AND DEMONS. By L. T. Townsend. Cloth, pp. 131, 25 cents. New York: Eaton & Mains.

JONATHAN FISH AND HIS NEIGHBORS. By Hu Maxwell. Cloth, pp. 110. Morgantown, W. Va.: Acme Pub. Co.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Buss's Review, New York, June 14

No diminution in business is apparent from labor controversies, owing to the prosperous condition of the agricultural sections and the bright outlook for this year's crops. Nevertheless, it is only a question of time when the nation's progress will receive a severe check if the purchasing power of a vast army of wage earners continues to decrease. Iron workers at Valley furnaces have received higher wages, and other settlements were made by various concessions, but the situation in the Pennsylvania coal region is unchanged. Retail distribution of light weight wearing apparel has felt the stimulus of higher temperature, while full reports for May are most encouraging as to iron output, railway earnings, and financial conditions. Railway earnings in May were 8.7 per cent larger than last year and 21.7 per cent above those of 1900.

IRON AND STEEL

There continues to be a wide discrepancy between the amount of business offered and the contracts closed in many branches of the iron and steel industry, owing to the inability of producers to assure delivery at a specified time. Contracts running well into next year, however, indicate that the end of activity is not near. Pressure is still most conspicuous for railway and structural sup-

CATCHING

The Coffee Habit Breeds Trouble

It is quite commonly the case that both husband and wife are somewhat similarly troubled with coffee drinking.

A lady writes and, after giving description of her husband's relief from coffee dyspepsia and general nervous trouble, says, "I was almost as bad as he, having the headache nearly every day and was nervous and weak, did not sleep well, was pale and thin and had a bad complexion.

When I found how much good Postum Coffee was doing Husband I concluded to use it and I tell you life is altogether a different thing. I eat and sleep well and look like a different woman. My usual weight for years was from 98 to 100 pounds, I now weigh 108 pounds and everyone tells me how much better I am looking.

I had some friends who did not like Postum, but knowing it was because they did not boil it long enough I made some at their house one day, and they agree with me that Postum is a delicious beverage, and while, of course, the flavor and taste is pleasing and we are glad Postum does suit us that way, the great advantage is in the wonderful, bounding health that we have recovered." Name given by Postum Co., Battle Creek, Mich.

plies, and agricultural implement works are crowded with orders. Quotations are not altered on remote deliveries, but current business is done at increasing premiums. Sales of Bessemer pig iron at Pittsburg for delivery next year were recently made at \$16.50, while immediate shipments command about \$5 more. According to the *Iron Age* the total production of pig iron during May reached the unprecedented amount of 1,570,243 tons, yet furnace stocks declined 21,243 tons, indicating a wonderful rate of consumption.

COTTON AND WOOL

Limited stocks are still the cause of steadiness in all branches of textiles. Holders are not urging sales, and buyers show a disposition to wait. The result is a quiet but firm market. Purchasers of cotton goods are influenced by the prospect of cheaper raw material after the new crop begins to move, although a fair business in fancy prints has been done on last week's basis of five cents. Cotton rose slightly on a few unfavorable weather reports, but the outlook is very bright in many states. Tardy deliveries of sample pieces by the woolen mills has caused complaint among the clothiers, and fall orders are not placed freely. Wool sells more freely at leading eastern markets and quotations are steady.

WHEAT AND CORN

Grain markets have shown the effect of conflicting crop estimates and weather reports. After revising the returns in the light of census statistics, and subsequently eliminating an acreage duplication of considerable size in Nebraska, the department's statement of condition on June 1, indicates a total wheat crop of about 640,000,000 bushels, according to the produce exchange expert. Compared with last year's record-breaking yield, this shows a large loss, but no other year except 1898 produced as much. There was considerable covering of short accounts, but no aggressive operations for an advance. The corn outlook is very bright, according to correspondents of R. G. Dun & Co., acreage being largely increased and little injury experienced from weather or insects. A record-breaking yield of oats is also indicated by the official return. Total exports of wheat from the United States during the week were 3,292,878 bushels, flour included, against 4,105,637 a year ago, while Atlantic coast shipments of corn were only 71,021 bushels, compared with 2,187,525 in the same week of 1901.

FAILURES

Liabilities of commercial failures for the first week of June amounted to \$1,776,709, of which \$499,084 were in manufacturing and \$1,045,936 in trading lines. Failures for the week numbered 162 in the United States against 179 last year.

Financial

Bradstreet's, New York, June 14

THE MONEY MARKET

In some quarters it is thought that money may harden considerably as preparations for the July 1 disbursements go on. Indeed, certain lenders on time were this week disposed to ask slightly higher rates, but such tendencies did not affect the loan market materially, being offset by the large supply and the moderate borrowing demand. The absorption of money by the treasury continues, but the ending of the war tax collections on July 1 will it is thought tend thereafter to create more of an equilibrium. The market was not disposed to feel any apprehension on account of the strength of foreign exchange, as no gold shipments were in prospect. The supply of call money was large, and the prevalent rate was 3 per cent. Commercial paper was dull, and

COOL FOOD

For Hot Days

Better health comes with less meat and fat during the warm weather.

By proper and pleasant diet you can prepare the body for summer and feel from ten to twenty degrees cooler than your neighbor.

Grape-Nuts and cream, a little fruit and possibly a couple of soft boiled eggs, is sufficient for the breakfast. An ordinary portion of Grape-Nuts contains sufficient nourishment to fully sustain the body until the noonday meal; being a predigested food, it does not overtax the stomach and contains none of the heat supplied by the heavy carbonaceous foods.

Fully cooked at the factory by food experts, brings it to you ready to serve, and does away with the heat of cooking and the time necessary to prepare ordinary food, and its crisp daintiness is pleasing to the palate of young and old.

Many delicious recipes are found in each Grape-Nuts package, so that the form of eating this wholesome food can be changed to suit the user.

These suggestions, if followed for ten days, will convince the most skeptical that a cool body, an active brain and an energy hitherto unknown will prevail and the general lassitude peculiar to warm weather will disappear.

offerings of prime names were limited. Gains from the interior offset the absorption of cash from the treasury, the estimated net increase in the banks' cash this week being over \$1,000,000, and a favorable bank statement is expected today.

THE STOCK MARKET

The New York stock market is firm but dull after experiencing increased activity, with an advance in standard railroad stocks based on favorable crop news and further large gains in railroad earnings. The activity and buying were, however, mainly speculative and professional, though representing renewed confidence on the part of large financial and stock-market interests. The continued ease of money was also a factor in the market. The coal strike was rather disregarded, and, despite the prospect that the suspension of labor in the anthracite field may be protracted, Wall street seems to believe that the effects of the disturbance will not extend to other quarters. Industrials were neglected, and the United States Steel stocks showed some heaviness on the litigation against the bond-issue plan. London has taken little interest in our market, dullness due to the coronation prevailing there despite favorable anticipations regarding the effects of the successful establishment of peace in South Africa.

Foreign exchange has been firm, demand sterling being at 4.87½, largely on the ease of money on call at New York.

BANK CLEARINGS

Bank clearings for the week ending June 12 amount to \$1,865,445,226, an increase of 3 per cent over last week, but a loss of 23 per cent from the same week in 1901. Exchanges outside of New York, \$757,685,544, show a gain of 2 per cent over last week, but a decline of 3 per cent as compared with the like week last year.

Various Topics

The capital invested in railroads throughout the world is estimated at \$32,661,696,000, of which no less than \$18,170,114,000 has been invested in 162,225 miles of European railroads, which have an average capital of \$119,593 per mile, while the average of 263,356 miles in the other parts of the world is \$55.034 per mile.

The seventh annual convention of the National credit men's association, which was held this year in Louisville, adjourned June 12 after electing J. Harry Tregoe, of Baltimore; George J. Pulfer, of Detroit; and Wm. A. Prendergast, of New York, president, vice-president, and secretary respectively.

Cattle sold at \$8 a head in Chicago June 11. This is the highest price since 1884. Hogs are \$7.55 for heavy, the top of the season.

The Texas court of criminal appeals on Thursday rendered a decision upholding the law passed by the last legislature prohibiting dealing in futures in Texas.

WIT AND HUMOR

The Anglo-Saxon

Hurrah for the Anglo-Saxon!

He's our sinew, blood and bone;
He's the chap who fights our battles,
Unsupported and alone.

They had a little scrimmage

In the Philippines today,
Where our Anglo-Saxon heroes
Died like heroes, so they say.

Sergeant Mike Mulcahy, privates Bat Magee,

Christian Swartz and Frederick Schmidt
were ambushed, April 3;

Color Sergeant Engel and Lieutenant
Hugh McGowan

Were wounded in a charge upon a
Filipino town.

Hurrah for the Anglo-Saxon!

He's our bright industrial star;

His get-ahead development

Has made us what we are.

A mine in Pennsylvania filled
With gas, last week, and some

Of the Anglo-Saxon miners

Made a trip to kingdom come.

Kosinski, Kolipinski—foreman Patrick
Snell—

The Anglo-Saxon names are rather dif-
ficult to spell—

And Salvatore Abbaticchio are burned in
the mine,

The entire list of missing Anglo-Saxons
numbered nine.

Hurrah for the Anglo-Saxon!

Where the shining stuff is made

His name is ever foremost

In the seething marts of trade.

If you differ with or doubt me,

Test the truth of what I say

By a casual inspection

Of the signs along Broadway.

Guggenheimer, Levy, Abraham, and
Isaac Saks,

Clothes and hats and gloves and shoes;
hammers, nails, and tacks.

Every single name you see is Anglo-
Saxon pure;

We pray the Lord in Heaven this con-
dition may endure.

Hurrah for the Anglo-Saxon!

Bow your heads, and bow 'em low,

The man who made America

And keeps us on the go.

He rides astride of Progress

And his hand controls the bit,

He's the only real and purely

Unadulterated "IT."

McKinley, Roosevelt, Bryan, Carnegie,
Miles, and Schley!

Every man who hopes to get before the
public eye

Is sure to be of Anglo-Saxon bone and
blood and birth—

The grand, majestic, noble breed that
owns the sky and earth!

PUBLIC OPINION

Number 26
Volume XXXII

The Week

Thursday
June 26, 1902

THE conclusion appears to have been reached that it is utterly hopeless to expect favorable action on reciprocity for Cuba at this session of congress. This is the word sent out from Washington by the best informed correspondents. The island's case only became hopeless when its interests began to be opposed both by the sugar trust and the beet-sugar interests, which are now said to be, to all intents and purposes, one and the same thing. And of course it is not to be expected that support of the president and party and national obligations would weigh in the balance against the omnipotent sugar trust. As to the responsibility, public opinion has already placed it where it plainly belongs, on "the governing group of Republican senators," to adopt the phrase of the *New York Tribune*. There is no higher authority on matters Republican.

DEVELOPMENTS which have come to light since the opinions quoted in this issue on the vote for the Panama canal were formed, indicate that the house will accept the lead of the senate and reverse its vote in favor of Nicaragua. This is partly due to the belief that Panama is better than no canal at all, partly to an actual change of sentiment, and partly to a desire to force the senate to show whether or not it acted in good faith in voting for the Panama route. If the senate, therefore, counted on the house sticking determinedly to its choice of the Nicaragua route and thus blocking the building of any canal, it is likely to be sadly disappointed. Considerable latitude of action is left to the president, and we may yet have a Nicaragua canal if it is found impossible to get a good title to Panama or to buy out the old company at the price fixed by the senate bill.

MR. BRYAN was not present at the Tilden club gathering in New York last week. That is one reason why it was an incomplete affair. Another reason is that it offered Democrats nothing definite in the way of ground on which to "get together" except a hope for victory. Furthermore it did nothing to quiet the old as distinguished from the new anti-Clevelandism, as witnessed by the rage into which Mr. Henry Watterson's paper is thrown by the mere possibility that Mr. Cleveland may again become an important factor in the councils of the Democratic party. Thus, as a harmony and rehabilitation meeting, the Tilden club christening was not a great success. But it was something to induce Mr. Cleveland to emerge from his retirement long enough to make even a short and somewhat vague political speech which may be the forerunner of wider political activity.

A LEGAL decision of much importance is that of the New Jersey court of chancery refusing to sanction the conversion of a large part of the preferred stock of the United States steel corporation into bonds. The decision has created quite a stir in "trust circles" and has had a wholly unwarrantable effect on the price of the stock. It at first appears that the common stockholders will suffer because the conversion plan involved a reduction of two per cent in interest charges, but on the other hand the stockholders remain in at least nominal control of their property. From the standpoint of those who were engineering the conversion there was reason enough for it in the fact that J. P. Morgan & Co. were to be paid \$10,000,000 for effecting the transaction.

PRESIDENT MITCHELL of the United mine workers has issued his promised statement to the public. He claims that the cost of living has increased to a point where the miner is compelled to ask for higher wages; denies that the productive capacity of the miners has fallen off and asserts that it has increased; quotes official figures to show that higher

wages could be paid without increasing the price of coal; asserts that the coal-carrying roads absorb the profits of their coal companies by charging exorbitant freight rates; claims that a ton of coal at the mines means anything from 2,740 to 3,190 pounds, and alleges that more men are killed and injured in the anthracite mines annually than were killed or wounded during the Spanish-American war. Mr. Mitchell makes out a strong case against the operators, but the public knows that there is another side to all these matters. The real strength of the address to the public lies in the fact that the offer is again made to submit the questions in dispute to arbitration.

LONDON, by working night and day, prepared for the great pageant which was to accompany the coronation of King Edward; from all accounts the celebration would have eclipsed everything of its kind both in magnificence and extent. A natural disappointment that these elaborate preparations have been wasted is, however, forgotten in the face of the fear that a far graver result may follow the illness of the king, and with this thought in mind it is not likely that tears will be wasted over the postponement of a mere ceremony. Nevertheless the English people might justly complain that the fates have been particularly unkind in interposing to prevent the coronation after every detail of the elaborate ceremony had been completed. The most impressive thing in the promised event was the demonstration of the homogeneity of the empire. This at all events is not lost.

THE conference of colonial premiers after the coronation bids fair to fall quite flat. The government has made no definite declaration as to preferential trade with the colonies, and now it is announced that the colonies refuse to consider the matter until definite proposals are submitted to them. Lord Salisbury and Sir Michael Hicks-Beach, chancellor of the exchequer, are known to be opposed to Mr. Chamberlain's Zollverein scheme, and the premiers are reported to be in favor of looking after their own welfare and letting the mother country get along as best she can. "What is the good of our having a mock debate for the sake of holding up Mr. Chamberlain's hands in the empty air?" one of them asked.

M. ROUVIER, the new French minister of finance of whom so much is expected, has encountered so many obstacles in preparing the budget for 1903 that the submission of the estimates to the deputies has been postponed until October. This has had a good effect in bringing Frenchmen to a realization of the perilous financial condition of the country, and meetings are being held in all the large cities to protest against a further increase in the fiscal burdens of the republic. It has also gained support for the proposal to do away with the initiative of deputies in proposing expenditures which is the principal source of the present desperate financial situation. This bill is regarded as the first serious measure of economy proposed in the legislature of the third republic.

VENEZUELA'S latest revolution appears to be a really serious affair. The movement led by General Matos has gained such strength that the capital is threatened and its port, La Guayra, has already passed under the control of the revolutionists. As usual there is a great deal of contradiction in the reports from the scene of trouble; one statement is to the effect that the Orinoco has been blockaded, while another report denies this. Whatever the details may be, it appears certain that President Castro's government is seriously threatened, and that a new dictator is to take his turn at the helm. Fortunately for all concerned, the change, if there is one, can hardly result for the worse.

AMERICAN

The Tilden Club Gathering

GROVER CLEVELAND AND D. B. HILL DISCUSS THE REHABILITATION OF THE DEMOCRATIC PARTY

EX-PRESIDENT CLEVELAND'S speech at the opening of the New York Tilden club last week, was the principal feature of an important occasion—an occasion dedicated to "the rehabilitation and consolidation of the Democratic party." Mr. Cleveland admitted that "the party's situation might be improved, and some of us," he added, "may think it perilously undermined," but, he asserted, the party was "very far from political insolvency." The party was never more ready to do enthusiastic battle, "if only we can be marshaled outside the shadow of predestined defeat." Is it too much, Mr. Cleveland asked, "to pray to be delivered from the burden of issues which have been killed by the decrees of the American people; to ask our leaders to avoid paths that are known to lead to disaster?" Neither recrimination, despair, nor the search for "gaudy issues," the ex-president said, "could effect anything toward the rehabilitation of the party."

In dealing with new issues we of the Democratic faith are extremely fortunate in the simplicity of Democratic standards and the ease with which new questions can be measured by those standards. A party based upon care for the interests of all the people as their aggregate condition demands, with no unjust favoritism for any particular class; a party devoted to the plan of popular government as our fathers ordained it and for the purposes which they sought to establish; a party whose conservatism opposes dangerous and un-American experiments, and yet puts no barrier in the way of genuine and safe progress, ought to be able to deal with new questions in a manner quite consistent with Democratic doctrine and stimulating to Democratic impulses and instincts.

Democracy has already in store the doctrines for which it fights its successful battles; and it will have them in store as long as the people are kept from their own, and just as long as their rights and interests are sacrificed by favoritism in government care, by inequality in government burdens, by the encouragement of huge industrial aggregations that throttle individual enterprise, by the reckless waste of public money, and by the greatest of all injuries, as it underlies nearly all others, a system of tariff taxation whose robbing exactions are far beyond the needs of economical and legitimate government expenditure, which purchases support by appeals to sordidness and greed, and which continually corrupts the public conscience. What but infatuation with the visage of defeat can explain the subordination of these things by democrats when they prepare for battle?

DISTURBING THE FISHERMAN—*Detroit News*

In conclusion Mr. Cleveland said that he believed that "the times point to another Democratic opportunity near at hand." As for himself, his days of political activity were past, but he hoped to see before he died "the restoration to perfect health and supremacy of that Democracy whose mission it is to bless the people; a Democracy true to itself, untempted by clamor, unmoved by the gusts of popular passion, and uncorrupted by offers of strange alliance—the Democracy of patriotism, the Democracy of safety, the Democracy of Tilden, and the Democracy that deserves and wins success."

Mr. Cleveland was received with great enthusiasm by his audience, composed of Democrats from all parts of the country. Mr. Bryan was asked to attend, but did not respond. Mr. David B. Hill spoke at length, arraigning the Republican party and declaring in conclusion:

The interests of the Democracy of New York are those of the Democracy of every other section of the country. We have no criticisms to make of any Democrat in the land. We are neither assuming to make or unmake national platforms at this time. We are excluding no man or set of men from the party councils. We have no test oaths to administer to those who wish to join us. We need recruits for our cause, and our Democratic doors are thrown wide open. The Democracy of New York, with no selfish inter-

"BLESS YOU, MY CHILDREN"—*New York World*

ests to serve and no ambitions to gratify, are simply endeavoring to strengthen our lines for the contests of the future, and in this necessary and patriotic work, by which we expect to promote the success of good government in our state and nation, we invite the cooperation of every man who believes in the principles of Jeffersonian Democracy.

The comment of the New York newspapers is typical of the opinions expressed throughout the country on Mr. Cleveland's speech and the significance of the meeting at which he spoke. The *New York Herald* (Ind.) believes that "if the Democratic party can drop the issues that decreed its defeat in the last two presidential campaigns and unite in sup-

port of the sound and familiar basilar principles invoked by Mr. Cleveland it will receive the enthusiastic support of all independent voters eager to overthrow the existing oligarchy of greed." The *New York Times* (Ind. Dem.) says that Mr. Cleveland "spoke last night with the power and the wisdom of a leader. He was not mealy mouthed in referring to the dreadful errors that have brought the party into defeat and disrepute. His warning against the repetition of those errors was outspoken. But it was a speech of breadth and tolerance, for while he declared that he had not come to make confession of sin and crave absolution he protested against any system 'of arbitrary proscription and banishment.' There is room for

A DISCORDANT NOTE—*New York Tribune*

The Senate Vote for the Panama Canal Route

BY a vote of 67 to 6 the senate last Thursday passed the Spooner substitute for the Hepburn Nicaragua canal bill. This substitute provides that the president, through the law officers of the government, shall first determine whether a clear legal title to the Panama company's concessions and property can be secured; and, in case such a title can be obtained, the president is authorized to buy out the Panama company for \$40,000,000 and proceed to finish the Panama canal. But if, in the opinion of his law advisers, a clear title can not be obtained, the president shall then construct a canal by the alternative route.

The house, with only two dissenting votes, having decided in favor of the Nicaragua route, the question now raised concerns the possibility of an agreement between the two houses. The senate's vote has not changed public sentiment in any quarter, and, as the *New York Tribune* (Rep.) says, "there can be no doubt that sentiment—and not unreasoning sentiment, either—has been overwhelmingly upon the side of Nicaragua, and not only thus negatively but positively and aggressively against Panama." The *Tribune* now looks to see "the friends of Panama prove by their works that they are in earnest in desiring the construction of a canal, and that they are not mere marplots."

The more heated partisans of the two routes are not willing to concede the possession of honesty, much less honest opinion, to each other. Thus the *New York Press* (Rep.) says that "this victory for the Panama ditch lobby is a smarting defeat for the isthmian canal plan. For the senate's action on the Spooner measure does not mean that an isthmian waterway—either the Panama ditch or any other work—is assured. Rather does it mean that there will be no isthmian canal at all, or that the completion of such a project is so indefinitely delayed that the railroad interests need have no concern about it for a long, long time." The *Sun* (Rep.) opposes this statement: "The passage of the Spooner substitute for the Hepburn bill ought to gratify and encourage every American who wants to see the two oceans connected by a waterway controlled by our government. The partisans of the Nicaragua route have been declaring that the sole purpose of the Panama advocates is to prevent the construction of a canal by either route. If they are sincere in that opinion, they can defeat the supposed plot of the transcontinental railroads and their agents,

HE SEEMS TO PREFER THE PANAMA
—*Minneapolis Journal*

every Democrat in the ranks of the Democracy as he would have them reformed." The *New York World* (Dem.) thinks that "the presence of no two men could have done more to indicate the true spirit of harmony and a desire for Democratic rehabilitation than did that of ex-President Cleveland and ex-Senator Hill. If they can 'get together' there would seem to be no good reason why any real Democrats should stay apart. Their speeches will be read with attention throughout the union." Commenting upon the appearance of Mr. Cleveland and Mr. Hill in company, the *Brooklyn Eagle* (Ind. Dem.) says that "Those who recognize the one as the party sage and the other as the party leader in this state will not mistake the power of the party as a union of the forces of ideality and of action."

The *Tribune* (Rep.) finds Mr. Cleveland "vague" when he comes to prescribe alternatives to the present trend of the Democratic party, but the *Tribune* "should not be surprised if a portion of the Democracy is encouraged by its latest utterance to invoke Mr. Cleveland's services as the only possible hope of winning that victory which is his 'one burning, anxious political aspiration.'" The *Sun* (Rep.) thinks the speech is "creditable to Mr. Cleveland's faithfulness out of power to a conviction which he singularly failed to carry into effect when he was president for a second term; but it will be uphill work to convince the great mass of the Democracy that the way to go forward is to go backward."

FREE CUBA—Chicago Inter Ocean

tools, and dupes, by turning to in the house and passing the canal bill as it comes from the senate. Then there will be an isthmian canal in short order."

The Panama route has lately made some friends in the east if not in the west and south. The *Springfield Republican* (Ind.); among other comments, says that "the decisive majority by which the Spooner substitute for the Hepburn canal bill was passed by the senate is a tribute to the common sense of that body; and it also vindicates one's faith that the more this simple business question were studied the surer would be the adoption of the policy now determined upon." Another convert, the *Philadelphia Press* (Rep.) believes that "as the house had a better understanding of the relative merits of the two routes than it had when it declared for Nicaragua there is a fair prospect of its accepting the senate proposition in lieu of its own." The *North American* thinks that "in all probability the house will recognize the wisdom of the senate's decision and the bill will be passed before adjournment. There is one point, however, on which the house might well refuse to accept the senate's lead. That is the provision for the issuance of \$130,000,000 in bonds, which was inserted at the last moment at the instance of Senator Fairbanks. It would be no great strain on the revenues of the government to meet appropriations of \$13,000,000 a year for the next decade. The country can pay as it goes without suffering inconvenience. It would be folly to sell the bonds in a lump and hold the money in the treasury at a loss."

Presidential Prestige

MR. ROOSEVELT'S POSITION IN THE LIGHT OF THE REJECTION OF HIS CUBAN POLICY

"WHEN a president can not command the support of his own party in the senate, there is an end of his importance as a controlling factor in public affairs." This is the opinion expressed by the *Boston Post* (Dem.) in the apparent determination of the congress to reject President Roosevelt's recommendation as to Cuba. "Every one can see that the present crisis is big with the political fate of President Roosevelt," the *New York Evening Post* (Ind.) says. "His defeat in the Cuban matter has been brought about by political managers who are hostile to him in their hearts, and who are determined to prevent his renomination. What we are certain of is that

if he chose to fling himself upon the popular sympathies and support, and assert the right of the people to govern themselves without consulting the bosses, he could make himself strong enough to defy the confederated politicians, and at the same time render the country an incalculable service."

"In a narrow political sense, Mr. Roosevelt has sustained a serious reverse," the *Chicago Evening Post* (Rep.) admits. "He has failed to carry his party with him on a vital and important issue, it is said. But, strictly speaking, it is the Republican majority in the senate, not the president, that has suffered disaster and humiliation. The president has done his utmost—not for any policy original with him and peculiarly Roose-

CAN'T MAKE HIM DO THE TRICK—New York World

veltian, but for the policy of his predecessor and of the Republican party as a whole. But it is neither his duty nor his privilege to drive, coerce, and bully congress—to impose his will upon the legislative department by threats and such weapons as the command of patronage places in his hands." The *Chicago Record-Herald* (Ind. Rep.) claims for the president that "he has been heart and soul for the right. On the other hand his party in congress has been responsible for a combination of demagogical and corrupt politics. If the party escapes punishment for the humiliating and disgraceful climax to its work it will only be because it may find a refuge in the record of the president, whom it supported at first in a half-hearted manner, and whom it now appears to have thwarted." The *Chicago Tribune* (Rep.) thinks "it is difficult to see how the president can avoid making one further effort in behalf of the Cubans by calling a special session. This will be a distasteful act. Members of the house with a campaign on their hands will not relish it. But a petty minority representing one small, pampered industry should not be allowed to dictate the policy of the nation on a question where its honor is deeply involved. It will be humiliating and dangerous for the Republican party to go before the voters next fall with the admission that it can not do justice to Cuba because the beet-sugar manufacturers are stronger than it is."

The *New York World* (Dem.) attributes the fail-

ure of congress to support the president not to his lack of influence with his party, but to the "disabilities created by the Dingley act," and as to the nation's attitude on this question, we have the authority of the *Philadelphia Press* for the assertion that "the newspapers of all sections and all parties stand for Cuban reciprocity with extraordinary unanimity; nothing but a public issue of the clearest and most commanding character ever evokes such exceptional and emphatic agreement." This is supported by the statement of the *Providence Journal* that "the press of the country is virtually unanimous on the president's side."

State Politics

CONVENTIONS IN ILLINOIS AND OTHER STATES

IN the Illinois Democratic state convention at Springfield last week the only contest was over the chairmanship of the state central committee. John P. Hopkins was reelected after a bitter contest with Mayor Carter H. Harrison. Candidates for minor state offices were nominated, and a platform was adopted which opens with this declaration: "The Democrats of Illinois declare their adherence to all fundamental principles of the Democratic party as laid down in the Declaration of Independence, the constitution of the United States, and repeatedly affirmed by past Democratic conventions." A rigid enforcement of anti-trust laws is demanded, and the Republican tariff is denounced as the mother of trusts. "True American expansion" is favored, but the gov-

ENOUGH SAID—*Minneapolis Journal*

ernment which the Republicans have adopted for the Philippines is denounced as being "monopolistic and autocratic," and it is demanded that the Filipinos shall be promised independence as soon as hostilities cease, and a stable government be established.

In the opinion of the *Chicago Chronicle* (Dem.), the most important feature of the convention was the abandonment of the silver issue, "unshrouded and unconfined," resulting in the reunion of the party in Illinois for the first time since 1892. Commenting upon the perfunctory proceedings of the convention, the *Chicago News* (Ind.) says that "if the Democrats expect to win there was little in their proceedings to show

it—the highest office on the list went begging for a candidate." If, indeed, the opinion of the *Chicago papers* may be taken as final, the ticket was nominated to be beaten.

Other Political Notes

Eight candidates for governor presented themselves to the Nebraska Republican state convention at Lincoln, June 18. John Mickey was finally nominated on the fourteenth ballot. The platform adopted "heartily endorses the administration of President Roosevelt," Cuban reciprocity, national irrigation, and the administration's policy toward the trusts being especially commended. "The American soldier," it is declared, "needs no apology. To criticize him is unjust, to denounce him is cowardly, to deprive him of honor is cruel."

The Tennessee Republicans, in state convention at Nashville on June 18, nominated Judge H. T. Campbell for governor and a full state ticket. The platform is largely concerned with state issues, public education and the encouragement of investment of capital being the most important topics touched upon. The McKinley and Roosevelt administrations are endorsed; restraint of monopolies is demanded. A supplementary resolution denouncing those seeking to bring reproach on the American soldier was adopted.

By a vote of nearly two to one, Connecticut last week rejected the new constitution, over which the convention of the state worked so laboriously. All the newspapers agree that the vote indicates not that the people are not in favor of reform, but that they were not satisfied with the proposals before them. These proposals did not do away with the system of town representation; they preserved the old abuses in a modified form. There was a very light vote.

Here and there we find a comment on the action of the Virginia constitutional convention in proclaiming the new state constitution (the main purpose of which was Negro disfranchisement) in violation of the promise that it would be submitted to the people for ratification. The *Richmond Times* admits that this was a revolutionary act "to offset as far as possible the revolutionary enactment of the 15th amendment to the constitution of the United States. That amendment was worse than proclaimed. It was rammed down the throats of the southern people with bayonets. The people of Virginia stood it as long as

COULD MANAGE HIM BETTER IF HE HAD A FLY NET

Ohio State Journal

they could, but they finally determined to rid themselves of the incubus of the Negro vote. Having adopted this plan, they determined that the surest way of putting it into effect was the best, and they have no apologies to make."

The Maine Democratic state convention at Bangor last week nominated S. W. Gould for governor and adopted a platform which, so far as it deals with national issues, is devoted principally to denunciation of the Republican policy in the Philippines. The policy pursued in regard to Cuba is advocated for the Philippines, and an immediate declaration to this effect is demanded. The immediate abolition of the tariff on trust-made articles is favored, as is also free trade with "the insular territories which the Republican party is attempting to govern as colonial provinces."

At the Vermont Republican state convention at Montpelier, last week, Gen. John G. McCullough was nominated for governor in the convention hall, while a body of insurgent delegates were nominating Percival W. Clemens for the same office in another part of the city. The campaign that generally ends in Vermont with the nomination of a Republican for governor has thus only just begun. The present prospects are that the state will see two Republican candidates, each on a high license platform, running for the governorship, the restriction of the liquor traffic being the principal feature of the campaign. The platform approves the policy of the national administration in the Philippines and in other directions.

Congressional Summary

CONGRESS DAY BY DAY

JUNE 16.—In the senate Messrs. Cullom (Rep., Ills.) and Kittredge (Rep., S. Dak.) spoke in favor of the Panama canal route; the London dock charges bill was passed. A large amount of miscellaneous business was transacted in the house, including adoption of a rule providing for the debate and vote on the Philippine civil government bill.

JUNE 17.—Debate on the Isthmian canal question continued in the senate, Senators Perkins (Rep., Cal.), Stewart (Rep., Nev.), and Morgan (Dem., Ala.) speaking for the Nicaragua route, and Senator Gallinger (Rep., N. H.) for Panama. The Republican members of the senate committee on Cuban relations finally agreed to the acceptance of the Spooner bill providing for reciprocity with Cuba. A bill amending the bankruptcy law was passed by the house.

JUNE 18.—The last day of debate on the Isthmian canal question in the senate was marked by much animation and excitement, the principal speeches being made by Senators Spooner (Rep., Wis.) and Hanna (Rep., O.), both favoring the Panama route; in executive session the nomination of Capt. Charles E. Clark to be a rear admiral was confirmed. The general deficiency, the last of the great appropriation bills, was passed by the house; the debate was of a political character, Mr. Cannon (Rep., Ills.) replying to Democratic attacks on the Republican party. The president signed the irrigation bill.

JUNE 19.—The friends of the Panama canal route won a victory in the senate, the Spooner substitute for the Hepburn Nicaragua bill being adopted by a vote of 42 to 34 and passed by a vote of 67 to 6. Debate on the Philippine civil government bill began in the house, Mr. Cooper (Rep., Wis.), chairman of the committee on insular affairs, making the opening argument in

defense of the administration's policy, and Mr. Jones (Dem., Va.) speaking for the Democrats.

JUNE 20.—The nomination of Capt. William Crozier to be chief of ordnance of the army, with the rank of brigadier-general, was confirmed in the senate by a vote of 44 to 12; the military academy appropriation bill was finally passed. Debate on the Philippine civil government bill continued in the house; the Isthmian canal bill was sent to conference.

General Gomez's Retard

THE \$25,000 PAID TO THE CUBAN LEADER BY
GENERAL WOOD

THE following "semi-official" statement has been made at Washington regarding the payment to General Maximo Gomez under the American administration of Cuban affairs:

The conditions in Cuba two years ago were precarious. Not a Cuban believed that the United States ever would withdraw from Cuba, and the half-famished veterans of the Cuban army were in a dangerous mood, and clamoring for their pay. General Gomez was the head and front of their army, and had served the revolutionary cause as its principal leader without having received a cent of pay. General Wood thought and Secretary Root thought afterward that General Gomez was entitled to consideration; to a home, which was supplied him, and in which he entertained his comrades, and to an income, which last might be set down as a small offset to the money due Gomez from the Cuban republic. That the Cubans themselves regarded the matter in the same light was shown by the passage by the present Cuban congress among the very first of its acts of a bill providing a liberal pension for General Gomez. The necessity being present then, in Secretary Root's view, the only other point was the legality and propriety of the payments. He soon satisfied himself that there was not the slightest doubt on that score. The military governor was obliged to assume the responsibility for his disbursements, and to exercise his discretion. General Brooke did this, and after him General Wood; and Secretary Root now fully approves of everything they did, including the payments to Gomez.

The Buffalo News says the payments were "Money well spent." They show "a prudent consideration of all conditions by the war department, which was charged with the care of affairs in Cuba and whose purpose it was to restore normal conditions as early as possible. The end crowns the work. It is a success—such a success as is rarely seen in military statesmanship." The Boston Journal thinks "It is picayune statesmanship of the cheapest kind which would seek to make political capital out of the fact that the veteran Cuban chieftain, General Gomez, received a share of the American largess distributed among the needy soldiers of the Cuban army soon after the end of the war. No American with any heart of his own would dream of begrudging to this venerable hero the stipend which has given him a rest, security, and happiness unknown before in his long and strenuous lifetime." The Chicago Chronicle also belittles the whole matter, but on different grounds: "That grand old liberator, Gomez, never did pretend that he was in the revolution business either as a hygienic occupation or as a means of recreation. Why, moreover, is there such a hue and cry over this \$25,000 matter when it is admitted that Maximo did receive certain other sums from the Cuban treasury, nominally as compensation for his military services, but really to keep him from taking to the woods once more with his army of liberators, who ate up a twenty-four hours all the cornmeal and bacon that General Shafter left out of doors at Guantanamo?"

FOREIGN

The Coronation of King Edward VII

AN OUTLINE, FROM VARIOUS AUTHENTIC SOURCES, OF THE CEREMONIES AT WESTMINSTER, JUNE 26

KING EDWARD VII
His latest portrait

THE ARCHBISHOP OF
CANTERBURY
Who Crowns the King

BY a natural evolution the coronation of England's king has become almost entirely a religious ceremony, and as a consequence the chief functionary in the service is the head of the church, the Most Rev. Frederick Temple, Archbishop of Canterbury. In the course of the service, which takes place at Westminster today, he anoints and crowns King Edward, and is the first to pay him homage. The religious character of the coronation rites is furthermore shown by the fact that the crowning and anointing of the sovereign is immediately followed by the communion, the absolution, and the prayer of consecration.

Closely associated with the Archbishop of Canterbury in the service is the Very Rev. George Granville Bradley, the Dean of Westminster. Because of the dean's advanced age, for he is now eighty-one years old, his duties may be performed by the Rev. Dr. Robinson Duckworth, the sub-dean and canon of Westminster. The queen's coronation is performed by the Archbishop of York, and at different times in the service certain bishops, whom precedent has particularly favored, assist by supporting the king and queen.

On the morning of the coronation the archbishops and bishops, vested in the insignia of their office, wait for the royal procession at the great western door of the abbey. Here an annex has been erected, similar in style to the Jerusalem chamber, with battlemented walls and windows. The plaster with which it is covered has been mixed with soot or some other similar material to bring it into tone with the surrounding smoke begrimed houses. Within are retiring and dressing rooms for the royal suite.

As soon as notice of the approach of the coronation coach is given, on its way from Buckingham palace, the clergy enter the abbey and take seats immediately in front of the altar and on either side of the ancient St. Edward's chair, where for centuries the monarchs of England have been anointed and crowned.

The duties of the Archbishop of Canterbury begin as soon as the king and queen reach the theater, the name applied to the raised platform before the altar and between the transepts, where the coronation service is performed. After the king and queen have taken seats before their respective thrones on the theater the archbishop, accompanied by the lord chancellor, the lord great chamberlain, lord high constable and earl marshal, goes to the four sides of the theater

and proclaims to the people the presence of the king. This is called the act of recognition. The archbishop then performs a number of different offices, the most striking of which is the administration of the oath, by which the king swears to rule according to the statutes of parliament; the anointing, when the king, divested of his crimson robes by the lord great chamberlain, takes his seat in St. Edward's chair, and the archbishop anoints the head, the breast and hands of the king with the spoon into which oil has been poured from the ampulla; the investiture with the ring, on the fourth finger of the right hand, and, lastly, the coronation, when the archbishop places the crown upon the king's head as he sits in St. Edward's chair.

The archbishop is also the chief figure in the enthronization of the king, when, assisted by the Archbishop of York, and the other bishops and peers of the realm, he lifts the king into his throne. The Dean of Westminster, among other important offices, lays upon the altar all the regalia except the five swords which have been borne in the procession by various noblemen, pours out the oil from the ampulla into the anointing spoon, presents the spurs to the lord great chamberlain, who touches them to the king's heels, invests the king with the armilla and imperial mantle, and the other royal robes and assists the archbishop in delivering to the king his scepter and orb.

The coronation of the queen follows that of the king, and is performed by the Archbishop of York. It is on similar lines, save that the queen is anointed and crowned in a chair placed immediately before her throne, and not in St. Edward's chair. The queen is supported by the Bishops of London and Winchester.

The act of homage which is perhaps the most imposing from the spectacular point of view, inasmuch as it permits the different lords and ladies to display their costumes of ermine and velvet, used to be the feature of the ceremony, in which the sovereign took by far the most vital interest. In mediæval days a king was not sure whether or not he had the support of his barons until they thus knelt before him and pledged their fealty. At the present time, however, it has lost its original significance, and has become such a long and laborious part of the ceremony that, at the request of the king, it has been largely abbreviated. Consequently, only the first peer of each order, with the exception of the royal family, performs the act of homage. Prior to this act the peers have been seated in the north transept, with the peeresses opposite in the southern transept.

Politics in Sweden

THE SMALLER COUNTRIES OF EUROPE VIEWED AS LABORATORIES
OF POLITICAL EXPERIMENT—London Pilot

THE general strike which has just been carried through in order to hasten the extension of the franchise in Sweden has received little notice. Hitherto that country has been, so far as politics are concerned, one of the least known in western Europe. A political conservatism which kept the franchise more limited than in any other civilized nation, though that may not be wonderful in a country which, up to 1865, preserved the mediæval estates of the realm in its parliament, has coëxisted with so much readiness to adopt the appliances of modern civilization that a recent visitor the other day told the present writer that the whole population had appeared to him to be perpetually engaged in conversation on the telephone. But the chief political concern has been to preserve the union with Norway, for fear that, if the Norwegian government were once free to deal directly with a foreign power, they would at once lease an Atlantic port to Russia, with a strip of territory running across the north of their own country, and so the secular enemy of Sweden would be free to attack her on both sides at once, and make her into a second Finland.

The nation, however, has had other political questions to deal with, notably those of military service and protection to native agriculture, which are still unsettled, and for the settlement of which an extended suffrage is indispensable. The parliamentary electors number only 6.7 per cent of the population; in the United Kingdom the proportion is estimated at 16.5 per cent, though this must include the double qualifications of the out-voters who sometimes turn county elections; in the German empire it is 21.2 per cent; in France, 27.5 per cent. As the country has become more industrial it has also become more democratic in spirit, and a "people's parliament" has been periodically elected by the reformers by manhood suffrage, and with the distribution of seats they desire to see adopted, in order to agitate for the extension of the franchise, and give a practical demonstration of the fitness of the nation for the proposed change. The agitation had so far succeeded that a parliamentary committee, which had been constructing a franchise bill out of a dozen different schemes, recently produced a compromise based on a tax-paying and property qualification—both very low, however—and involving a redistribution of seats at the expense of the large towns, in order, as was ingenuously explained, to prevent the more experienced voters from being swamped by the newly enfranchised.

The smaller countries of Europe are of considerable value as laboratories of political experiment. Switzerland has exhibited the working, and the weaknesses, of the referendum and the initiative. Belgium has demonstrated the failure of the general strike when associated with violence. Sweden has at least shown that it can be carried out in an orderly way. The experiment has been undertaken in a serious spirit, and with a coolness that shows the patience of the masses. Still more instructive is their willingness to wait for a new bill till the year after next in the face of a ministerial assurance that it will not include manhood suffrage pure and simple. When the suffrage is widened, however, Norway will be measurably nearer independence, for it is hardly likely that the new voters in Sweden will be quite so Russophobic as the old.

Comment on the New French Cabinet

Translations for PUBLIC OPINION

THE *Autorité* defines M. Combes as "the avowed candidate of the radico-socialists whose program may be summed up in the phrase: "Religious persecution and the income tax." The *Liberté* lays stress on the contradiction which exists between a cabinet such as the one just formed and the conciliatory words uttered by the president of the republic at the time of his departure for Russia, and the *Voir Nationale* relies on this fact in declaring the "constitution to have been violated." With the utmost scorn the *Gazette de France* entitles its article: "The ministry composed of Republican rascals." The *Eclair*, which regards the Combes combination as "on the whole the best that the winning party could have produced," makes the following remark: "If M. Rouvier is the man of the situation, he is also a man of politics, politics which unfortunately can not be accommodated to certain financial reforms in the new cabinet's program." On the other hand the names of MM. Delcassé and Rouvier reassure the *Temps*, which declares that "the continuance of M. Delcassé at the office of foreign affairs is an indication which makes us rejoice for the sake of the country." The *Journal des Débats* is alarmed because of the "illiberal menaces" which are implied by this new cabinet, and it has doubts with reference to the duration of the ministry. "There are at the beginning two opposed tendencies in the cabinet, one impelling in one direction, the other in a different direction, and both of them possessing different followings in the chamber and in the press. The conflict is both near and inevitable."

The Death of King Albert of Saxony

THE LAST OF THE GREAT FIGURES IN THE FRANCO-PRUSSIAN WAR

KING ALBERT of Saxony died at the Castle of Sibyllenort, June 19. In consequence of his illness he had previously designated his eldest brother, Prince George, the heir to the throne, to be his representative in the affairs of state. King Albert had suffered for a long time from cancer. The king's sober life produced few incidents in the Protestant-Catholic country which he ruled, and his unobtrusive support of his own church, the Roman Catholic, never caused a conflict with popular opinion. The majority of the inhabitants of Saxony are Protestants. Emperor William always referred to King Albert as a fatherly friend. King Albert of Saxony, whose kingdom ranks third of the states of Germany forming the empire, was one of the chief instruments in bringing about that unification, and is the last of the chief German commanders of the Franco-Prussian war. In the proclamation of the king of Prussia as German emperor in the palace of Versailles, he was a conspicuous figure and was made a field marshal. He succeeded his father, King John, on the throne of Saxony, in 1873. Few disturbing occurrences have affected the internal tranquillity of Saxony during his reign of nearly thirty years, both the monarch and the state having accepted the place accorded to them in the federal constitution. King Albert married in 1853 Queen Carola, daughter of Prince Gustav of Vasa, but there were no children of the marriage. His brother, Prince George, who was born in 1832, succeeds to the crown.

SOCIOLOGICAL

The Position of Women in Spain

LITTLE BETTER THAN DOMESTIC SLAVES, BUT SATISFIED WITH THEIR LOT

WOMAN in Spain has had no part in the emancipation of the sex that has taken place in most European countries in the last century, says a writer in the *Fortnightly Review*: "As a factor in social life she stands entirely in the background; man has the predominant influence and the position of woman is an entirely subordinate one. To the foreigner the first sign of this is visible in the absence of that easy and homely spirit of hospitality prevalent in other countries, and which owes so much of its character to female influence. In this matter the ideas of the Spaniard retain a flavor of orientalism which the progress of time and the general advance of civilization around him have been unable to dissipate. He possesses what we should call most limited views as to the sphere in which woman should move. He thinks that a good wife should have no interests which may distract her from the duties of her household, and hence these duties—the chief among them being the care and bringing up of children—form the chief occupation of the Spanish lady.

"Any unusual development of intellect in a woman is held by public opinion to be unfeminine, and the proportion of intellectual women in Spain is remarkably small. The majority of Spanish girls are quite uncultivated, in our modern sense of the word, except as regards hand embroidery, music, and dancing, for which the race has considerable aptitude. Half a century ago, the orthography of a large percentage of well-born Spanish ladies would not have come up to the standard of one of our elementary board schools. The education of Spanish women has indeed improved during the last thirty years owing chiefly to greater facilities for travel and a certain filtering through of foreign habits of life. But this has only taken place within the recognized lines of communication over the country. Physical training plays as small a part in the education of Spanish women as does intellectual culture. In this, too, there is a wide distance separating the Anglo-Saxon woman from her southern neighbor. One of the most noticeable characteristics of the former is the love of exercise which she has recently acquired, and in which she can now with impunity indulge. In Spain, on the other hand, not only do women take little or no exercise, but they have a strong aversion to taking it. Spanish girls are never, in their childhood, taught to appreciate open-air life, and they have no opportunity of acquiring the taste later on. An endeavor was made a short time ago to introduce bicycling into Madrid as a feminine amusement, but the attempt was a failure, owing to the obstructive attitude of both sexes. The new idea was only taken up by a few votaries of foreign fashion."

One result of the position of the Spanish woman is the easy solution it offers of "conjugal problems." The explanation of this fact is to be found in a corollary to the following general proposition offered by the author: "One of the most essential conditions of conjugal happiness is that the views of the contracting parties as to their respective spheres of action should be in perfect harmony. In Spain, there is

never any question of what a woman can or can not do or think. She is a domestic slave, but she is a perfectly contented one, and no more devoted wives and mothers are to be found than in that country.

"In this connection two points are worthy of note. The first is the closeness and strength of the family tie throughout the peninsula. No other country in Europe can offer such a striking example of the solidarity of relationship, and in none other is the love of hearth and home so marked. The devotion in all classes between father and son, husband and wife, brother and sister, is one of the finest traits of the popular character, and recalls a time when, prior to the disintegrating process of civilization, blood was, in the best sense of the word, thicker than water. The second condition of Spanish life which tends to raise the moral standard of the women above that reached by the men is one which can only be lightly touched upon here: I refer to the national religion. It is over the female mind in Spain that the most powerful influences of Roman Catholicism are exerted. In that country the women are far better Catholics than the men, in the sense of following the spirit as well as the letter of their faith. Religious practices are held to be far more important for a woman than for a man, and devotional exercises form a considerable ingredient in female education. Hence the clergy find they can best tighten and retain their influence over the female mind by strict exaction of obedience to the forms and precepts of religion, but are too disposed to keep in touch with the male element by tacit acquiescence in, or at least disregard of, its vices."

Fresh Air Charities

Harper's Weekly, New York. Excerpt

THE movement begun years ago to give the poor of our cities an opportunity to breathe the fresh air of the country for a few weeks in summer has assumed such importance today that it might be called a national charity, carried on in nearly every city of any considerable size, and supported by tens of thousands of people. Although New York leads all the other cities in this respect, and the charity movement was first inaugurated in this city nearly half a century ago, it is not by any means, in proportion to its population and the needs of its poor, very far ahead of some of its sister cities. Chicago, Boston, and Philadelphia have perfectly organized fresh-air associations, which annually send great numbers of children to the country or seashore, while some of the smaller western cities show even a larger spirit of charity in this respect than the better known and advertised cities.

It is estimated by charity experts that the fresh-air associations save many thousands of dollars to the cities every year. This saving is obtained in two ways. By giving the little ones an opportunity to make a change in the hot, sickly months, their health is preserved, and hundreds are kept from becoming

charity patients in the hospitals and almshouse. In recent years an active and efficient feature of the fresh-air movement has been the securing of permanent homes in the country for city orphans. When the children are distributed among the different homes in the country, very many become attached to the kind people who shelter them, and the latter in many cases agree to keep the little visitors until they grow old enough to work for themselves. Thus thousands of orphans have found homes in the country, and the city orphan asylums are saved the expense of rearing them. It is estimated that on the average it costs the city about \$120 a year to give an orphan a home in one of these asylums, but the fresh-air associations have placed hundreds of children in country homes at an average cost of \$30 to \$40 apiece.

The Children's Aid society is one of the largest and most efficient of the associations in New York which support summer homes for the poor children and endeavor to place permanently in country homes the little waifs who come under their charge. The large home of this society at Bath Beach accommodates thousands of children every summer, and excursions are made daily there in the heated term for the benefit of those who can only get a day's outing. In addition to this well-known society there are several others which make a business of helping the poor children to get a glimpse of the country and a breath of fresh air in summer. The Working Girls' Vacation society is organized to give working-girls in the city a chance to get a little rest and recreation in the country in summer, and to send those who have broken down under the strain of their labors to the Santa Clara home in the Adirondacks. The St. John's guild supports two floating hospitals, which daily carry the sick and suffering for short trips down the bay in hot weather. Together these hospital-ships give some 70,000 people a chance to breathe the salt air in July and August. The Gilbert A. Robertson home in Westchester gives whole families an opportunity to refresh themselves for a few weeks in the country, taking broken down and tired mothers along with their sickly children and invalid husbands. All through the summer some eighty to ninety families are entertained at the home. The Association for the Improvement of the Poor has a place at Sea Breeze, Long Island, where its poor people have bath-houses, pavilions, and recreation-grounds to entertain them during their stay in the country. The Edgewater Crèche near Fort Lee under the Palisades has one of the prettiest and best equipped country playgrounds and recreation places for the poor in the country, and over 10,000 mothers and children flock there every summer.

Social Service at Harvard

PRACTICAL PHILANTHROPY AMONG COLLEGE MEN

"PHILANTHROPIC work as carried on at Harvard university is under the direction of an organization known as the Harvard University Social Service committee, which is itself a department of the university Y. M. C. A.," says Philip Livingston Thomson in the *Boston Transcript*. "The aims of the organization are classed under four heads: 1 Increased efficiency of philanthropic work. 2 Judicious expenditure of time and energy by interesting students. 3 Actual enlargement of his views and his capabilities in after life through this contact with existing conditions. 4 An attempt to help meet the

need of general educated philanthropic sentiment.

"Harvard men are doing two classes of work: first, entertainment; and second, friendly visiting, management of boys' clubs, teaching, etc. Every year so-called entertainment troupes are formed, composed usually of six or eight men with more or less ability in vocal or instrumental music, reading, Indian club swinging or legerdemain. These troupes visit various institutions in Boston and vicinity, and with amateur, though none the less appreciated concerts, help to make life more cheerful for the unfortunate inmates. Of the second class of work there is more to say. It embraces many of the philanthropies of Boston and Cambridge, and the extent to which they are here of interest is in the light of the volunteer work done by the students in them.

"Among the volunteer visitors of the Associated Charities of Boston are and have been numbered many Harvard men. The Associated Charities of Cambridge also attracts several workers from the university. In the well-known sphere of the Boston Children's aid society, the home libraries always create a demand for volunteer visitors, and this year six or eight Harvard undergraduates are filling such positions. Three or four students are acting as volunteer collectors in the Society for Home Savings.

"In the Prospect Union in Cambridge there is an institution distinctly the product of Harvard. Founded in 1891, by Robert Erskine Ely, Prof. Francis G. Peabody, and four other Harvard men, it has grown to be a large factor in the life of the community. The union is educational and social, but not religious, and its field is among the workingmen of Cambridgeport. There are over thirty-five students interested in the work, which includes a variety of interests. Evening classes, conducted by students, are given in many subjects. Men are fitted to pass civil service examinations for different public services. Weekly lectures are given by professors and instructors in the university, and on Saturday evenings there are informal talks by students. There are athletic clubs, social clubs, a camera club, and a summer camping club, which meet the athletic and social needs of the members. On much the same lines as the Prospect Union is the Social Union located at No. 42 Brattle street, in Old Cambridge. The Harvard Free library in East Cambridge originated and is carried on exclusively by Harvard men.

"The South End house in Boston is a well-known settlement, and its head worker, Robert A. Woods, is a recognized authority on university extension and philanthropy in all its forms. Four or five Harvard undergraduates are usually volunteer associates to the residents. The Denison house, at No. 93 Tyler street, is another settlement where Harvard men are of assistance. Classes for boys and girls, and for men and women, clubs for all, and social gatherings, lectures, and entertainments at frequent intervals—all these are included in the scope of the work. The most recently organized philanthropy in the university is a division of the Boys' Industrial league, and when it starts work next fall, it will be under the direction of twenty Harvard men."

To the above list should be added the Harvard colony soon to be established in New York under the tutelage of Mr. James B. Reynolds, secretary of Mayor Low, and former head of the university settlement of New York. This colony is to have its home in the notorious eighth assembly district and is expected to play an important political as well as social rôle.

LETTERS & ART

The Muse of Poetry at the Coronation

WILLIAM WATSON AND BLISS CARMAN CELEBRATE THE CROWNING OF EDWARD VII

• WILLIAM • WATSON •

THE coronation of King Edward VII has been the inspiration of two coronation odes of more than momentary value, and the poet laureate and Mr. Kipling have not yet spoken. The underlying thought in the ode by Mr. William Watson, published by John Lane, is the ancient and traditional splendor of the English throne. He reminds the king that he is the heir to the glories and

the honor of the Normans, the Plantagenets, Elizabeth, and William of Orange.

The kings thy far forerunners; he that came
And smote us into greatness; he whose fame,
In dark omnipotence and ivied pride,
Towers above Conway's tide,
And where Carnarvon ponders on the sea;
He, that adventurous name,
Who left at Agincourt the knightly head
Of France and all its charging plumes o'erthrown,

But hath with royal-hearted chivalry
In Shakespeare's conquests merged at last his own;
And she, a queen, but fashioned king-like, she
Before whose prows, before whose tempests, fled
Spain on the ruining night precipitately;
And that worn face, in camps and councils bred,
The guest who brought us law and liberty
Raised well-nigh from the dead;

Yea, she herself in whose immediate stead
Thou standest, in the shadow of her soul;
All these, O King, from their seclusion dread,
And guarded palace of eternity,
Mix in thy pageant with phantasmal tread,
Hear the long waves of acclamation roll,
And with yet mightier silence marshal thee
To the awful throne thou hast inherited.

After the recital of the past glories of the kingdom comes a warning and an exhortation to England not to depend too much on these.

Already is doom a-spinning, if unstirred
In leisure of ancient pathways she lose touch
Of the hour, and overmuch
Recline upon achievement, and be slow
To take the world arriving, and forget
How perilous are the stature and the port that so
Invite the arrows, how unslumbering all
The hates that watch and crawl.

Nor must she, like the others, yield up yet
The generous dreams! but rather live to be
Saluted in the hearts of men as she
Of high and singular election set
Benignant on the mitigated sea;
That greatly loving freedom loved to free.

A more stirring and optimistic spirit characterizes the ode written by Mr. Bliss Carman and published by L. C. Page & Co. Mr. Carman speaks as a loyal but independent colonial who thinks little of the past glories of the kingdom but much of the greatness of the empire of the present and the future. He also takes occasion to remind the king that he holds his crown, not only by right divine, but by the sovereign will of English citizens in all quarters of the world. Some may quarrel with Mr. Carman's fondness for high-sounding phrases and sweeping characterizations, but the spirit of the ode is above reproach.

• BLISS • CARMAN •

There'll be men of little learning and men of proven worth,
Of every caste and creed, come up from all the earth,
To watch him brave and fine,
To speak of right divine,
Plantagenet and Lancaster and Stuart in his line,
And bless the nameless memory of Her who gave him birth.

But who will stand before him, with simple words and few
And a knowledge of the morrow, and tell him straight and true,
Not only by God's grace
He comes unto his place,
The sovereignty of office, the reverend pride of race,
But by their will who choose him as their fathers used to do?

By the touch of love that kindles the blood beneath the tan;
By the loyalty they bear him because he is a man
Who has learned the modest way
To serve and to obey,
Who never flinched from duty, nor faltered in fair play;
For the world is held together by the link of code and clan.

Stand up, Sir, in your honor! They come from near and far,
Rajah and Chief and Councillor and Prince and Rassel-dar,
From Canada and Ind
And the lands behind the wind,
Whose purpose none may question nor their decree rescind,
To name you King of England for the gentleman you are.
In the closing stanzas, the poet prophesies a wider and better future for English rule.

By sea and plain and mountain will spread the larger creed
The love that knows no border, the bond that knows no breed;

For the little word of right
Must grow with truth and might,
Till monster-hearted Mammon and his sycophants take flight,
And vex the world no longer with rapine and with greed.

O England, little mother by the sleepless northern tide,
Having bred so many nations to devotion, trust, and pride,
Very tenderly we turn
With welling hearts that yearn
Still to love you and defend you—let the sons of men discern
Wherein your right and title, might and majesty, reside.

O Sir, no empty rumor comes up the earth today
From the kindred and the peoples and the tribes a world away;
For they know the law will hold
And be equal as of old,
With conscience never questioned and justice never sold,
And beneath the form and letter the spirit will have play.

When you hear the princely concourse take up the word
and sing,
And the Abbey of our fathers with acclamations ring,
Know well that, true and free,
By the changeless heart's decree,
On all the winds of heaven and the currents of the sea
From the verges of the empire will come, "God save the King!"

The Chinese Drama

ARCHIBALD LITTLE, in the *June Nineteenth Century*, London
(New York: L. Scott Pub. Co.) Condensed for
PUBLIC OPINION

THE stage in China, as we see it today, appears almost exactly identical with the stage in England in Shakespeare's time. The only pictorial representation that has come down to us of the Globe theater, Blackfriars, is by the Dutch traveler De Witte. There, as now in China, we see a stage composed of a square platform projecting into the pit, with a door of entrance and a door of exit on each side of the rear wall. There is a total absence of scenery, so that the whole weight of the performance falls upon the actors, who were doubtless as universally excellent in Shakespeare's time as they are today in China. The musicians are seated at the back of the stage in full view of the audience. And the wealthy patrons are seated in galleries round the open courtyard.

Elaborate historical dramas form the bulk of the performances given in the public theater, which almost every village in China possesses, by companies of strolling players who are paid by subscriptions from the more wealthy inhabitants. These companies are generally hired for a week or a fortnight. The performance commences at noon, and goes on till about nine at night. The extraordinary endurance of the actors, an endurance characteristic of the Chinese in all their vocations, is shown by the long successive hours they spend upon the stage. And as all the important pieces are sung to the accompaniment of the band, how they support the strain upon the voice is almost incomprehensible. They have a large *repertoire* which they carry in their heads. Many of them have no books of the plays. They are apprenticed as children, and so learn the pieces by rote at an age when the memory is especially vigorous. A mark of attention to a distinguished visitor is to hand him the *repertoire*, and ask him to choose a play out of some hundred pieces contained therein. I have often selected an unpopular and seldom-performed play, and never found the test too much for them, the

piece being produced immediately; on the other hand, should a play on the program happen to contain a character of the same name as that of the visitor it is at once suppressed. Although there is no scenery the dresses are extremely handsome, elaborate embroideries being worn by princes and generals, and generally the dressing and get-up are careful and accurate. There is no curtain and no drop scene. And curiously enough, there is no interval between successive plays, only a peculiar note is sounded on the cymbals, a signal known to the initiated. This has led Europeans to say that a Chinese play went on forever. It is true that sometimes when a succession of historical plays is given, such as Shakespeare's dramas of the Plantagenets, the same story may go on for three or four successive days. There is, moreover, one celebrated play which has no less than twenty-four acts; as a rule, however, the lighter Chinese pieces are even shorter than ours.

Moral tendency is strongly insisted upon in Chinese plays. Obscenity is a crime by Chinese law, and the punishment for writers guilty of it is imprisonment as long as their works are extant. The drama, say Chinese writers, should present pictures of the highest teaching to those too ignorant to be able to read; the penal code, which punishes immoral writers, states the object of theatricals to be to offer true though imaginary pictures of good men and chaste women, of affectionate and obedient children, and of scenes calculated to lead the spectator in the paths of virtue. The only interference with the stage in China is the statute forbidding the representation of emperors of the reigning dynasty.

The modern stage, as it exists today in China, dates, it is said, from the reign of the Emperor Wên-ti, the founder of the Sui dynasty (580 A.D.), and the bulk of the plays were written during the three flourishing epochs of modern Chinese literature—three distinct periods: that of the Tang Dynasty (720 to 905 A.D.); that of the Sung dynasty (960 to 1119 A.D.); and that of the Tartar and Mongol dynasties Kin and Yuen (1123 to 1341 A.D.).

Theatricals are still a part of the life of the people; scarcely any public function goes on without them, and they are indissolubly connected with religious observances.

Freakishness in Sculpture

UNCONVENTIONAL TREATMENT OF BEETHOVEN AND DAUDET

TWO statues have been unveiled recently in Paris and Vienna which are noteworthy because of their wide departure from conventional methods. The Vienna statue is of Beethoven, by Max Klinger. The New York *Commercial Advertiser* describes it briefly:

"The nude figure of Beethoven in purest Grecian marble is seated in an elaborately decorated bronze seat, a veritable throne for the immortal god of the tone world. The lower part of the body is covered with a drapery, the folds of which are cleverly indicated by the veins running through the block of onyx that has been selected with an astonishingly happy result. The base of black marble projects into the air, so that a huge dark-pinioned eagle, that seems to wait obedient to his call, appears as if seated on a cloud. The total effect is to give Beethoven's throne the semblance of being poised high on some mountain summit.

"The ornamentation of the throne seat with metal

BEETHOVEN, BY MAX KLINGER

tones of various tints has been acclaimed as a veritable stroke of genius. Round the upper part of the back runs a frieze of ivory angels' heads, which seem like great cameos on a band of rich mosaic, formed of opal jaspers and other jeweled decorations."

René de Saint-Marceaux is the sculptor of the statue of Alphonse Daudet in Paris. M. Edmond Frank describes it for the readers of *L'Illustration*. "There has just been inaugurated at Paris the monument raised by subscription to the memory of Alphonse Daudet. It is placed in the center of a grass plot on the Champs-Élysées not far from the Avenue Gabriel. The sculptor has depicted the celebrated writer seated on a rock in an unconstrained and pensive attitude, the lower portion of the body being closely wrapped in a plaid. The head is uncovered and the face is of an extreme beauty, with a slight touch of melancholy, while the eyes are fixed upon a distant point as though contemplating a far horizon."

The Kaiser Condemns Wagner

SAYS THE FAVORITE MUSIC OF THE GERMANS IS TOO HEAVY AND NOISY

Kaiser William II has made his mailed fist felt in musical circles. Christian A. Luhnnow, the Berlin correspondent of the *Boston Transcript*, says that he has been making some very caustic criticisms of Wagnerianism and that the worshippers of the universal German musical idol are dismayed. "Kaiser William's piquant commentaries on modern tendencies and characteristics of German art, drama, music, and literature often bear the label of a past master rather than a novice or dilettant. At Wiesbaden his majesty 'let go' like a steer in a china shop and destroyed for example some of the pet illusions of modern German opera producers. 'There is too much orchestration, which drowns the melodies, the voices of the soloists and ensembles,' saith William II. Harmless as this criticism appears at first blush it has nevertheless caused something akin to consternation in professional musical circles. To uphold Nicolai's 'The Merry Wives,' and berate Wagner and the other German idols who bear heavy on orchestral effects and sonorous brass music sounds like

DAUDET, BY RENE DE SAINT-MARCEAUX

rank heresy. And yet these words come like a kind of imperial mandate.

"Kaiser William has not favored the Opera Royal in Berlin with a single visit this season. That there may be no mistaking the fact that the kaiser is not much pleased with the repertory of the Opera Royal, which is heavily weighted four or five nights a week with repetitions of the Wagner 'Nibelungen Ring,' the kaiser patted Count Hülsen, director of the Wiesbaden festival and Opera Royal, on the shoulder, and said, 'George, you are a man after my own heart. You know how to give substance to my ideas and to bring out the ideal and all that is best in opera and stage productions.'

"The compliment to Count Hülsen is not ill placed. Wiesbaden is rapidly eclipsing Bayruth, Berlin, Munich, and other musical centers of Germany. Count von Hülsen is elevated to the position of royal regent of modern German musical tendencies. The compliments showered upon this able manager suffice to give all the rest of the opera intendants and directors their cues. It will also suffice to turn a certain class of musical composers, who are anxious to break into the repertories of the königliche opera houses, to a new train of thoughts. Nevertheless it remains to be seen if the kaiser expresses the wishes and musical aspirations of the German populace. It is extremely doubtful. The Opera Royal is packed every night when Wagner is on the boards. When Miss Smyth's 'The Forests' was given its première at the Opera Royal here several weeks ago it fell flat. And yet the opera was a gem of melody, of tuneful effects and soft, soothing recitatives."

THE CHASTENING OF ANDREW LANG: *Punch* points the following limerick:

Time was when the great Andrew Lang
Had the deuce of a critical fang;
Never was such a biter
To maul a new writer
Who wasn't a friend of A. Lang.

But none of us now feels a pang
When he reads the remarks of A. Lang,
Discoursing of Marys
And Crystals and Fairies,
A chastened, benevolent Lang.

SCIENTIFIC

The Sugar Beet

JOHN WADDELL, D.Sc., Ph.D., in the June *Popular Science Monthly*,
New York. Condensed for PUBLIC OPINION

OF the sugar consumed in the United States, about sixty-five pounds per capita per annum, three-quarters is provided by the sugar cane, the remainder being manufactured from beets.

In Germany, where sugar-beet cultivation and beet-sugar extraction has reached the highest stage of development, less than seven tons of beets are required to produce a ton of sugar. The first beet-sugar factory was established in this country in 1840 and was a failure; the number is now about fifty, the largest being at Salinas, California.

Beets should have a sugar content of at least twelve per cent and perhaps even thirteen or fourteen per cent, otherwise it will not probably pay to erect a factory. This is not because at present prices a factory using beets of twelve per cent sugar could not pay, but because in many parts of the country a considerably higher percentage is obtainable, and, in view of competition, the most favorable locations should be chosen. In the examination made by the department of agriculture of beets sent in during the years 1897, '98, and '99 from thirty-nine states and territories, it appeared that Arkansas was least suited for beet culture, giving an average of a little over seven per cent of sugar. On the other hand, Nevada showed an average of eighteen per cent of sugar in the samples examined.

A matter which is almost, if not quite, as important as the percentage of sugar is its purity, and in this respect Nevada was almost at the top of the list, the "coefficient of purity" being 83.8. The coefficient of purity means the percentage of sugar in the total solids dissolved in the juice. For example, if one hundred pounds of beets yield a juice containing fifteen pounds of solid matter dissolved in it, twelve pounds of which is sugar and the remaining three something else, the sugar content is said to be twelve per cent with a coefficient of purity 80. Impurity keeps part of the sugar from crystallizing and so prevents its recovery in the factory and hence a high coefficient of purity is exceedingly important.

A very important factor in the cultivation of beets is the temperature. A large part of the United States has too high temperature. Where the temperature is high beets grow luxuriantly, but they contain a small percentage of sugar. On the other hand where frosts come early in the autumn, the beets can not arrive at maturity. Other things being equal, the farther north the beets can grow to maturity, the greater will be the sugar content. The rainfall is a matter of importance. Warm rains in the early part of the season and dry weather during the period of maturing are best. In arid districts, irrigation may be restored to, and has the great advantage that the supply of moisture can be regulated.

The sugar is not the only valuable part of the beet. When the juice is extracted there is a pulpy residue from which the liquid is pressed out. This pulp is very valuable as food for stock. Some factories have dairies in connection with them. The experiments already made have been very satisfactory. The pulp is probably the cheapest food that can be

used considering the amount of nutrition. The leaves are also valuable as food, but probably still more valuable as a fertilizer. Sugar takes nothing from the ground. It is made from the water vapor and carbon dioxide of the air. But the tissue of the beet contains considerable potash, magnesia, phosphoric acid, and nitrogen, and all these are removed to a greater extent by the leaves than by the roots. If then the leaves are left on the ground or are plowed under, the soil is much less exhausted than if they are taken away. For beet-raising the cultivation of the soil must be very carefully attended to. This cultivation has a very beneficial effect on other crops grown in rotation with the beet, hence the advantages of beet-growing are indirect as well as direct. The cost of raising beets is considerable, but, on the other hand, the returns are large, and the profits may be estimated as on the average twenty dollars an acre.

The Automatic Winding of Clocks

M. L. REVERCHON, in *Cosmos*, Paris. Translated and Condensed
for PUBLIC OPINION

WE here present two perpetual-motion schemes which rely on a constantly renewed force proceeding from the daily action of substances sensible to the action of changes in temperature.

The first is that of M. Jeanneret. AAAA is a frame of which the two vertical rods (1 1) are of zinc and measure a meter in length. The upper horizontal part of the frame is so arranged that the lengthening of (1 1) occurs below. On the lower part of the frame are placed two rods (2 2) of nickel steel, carrying a bar (BB) on which are fixed two new bars of zinc (3 3) each one meter in length.

Other rods of nickel steel and of zinc alternate, as is indicated by the figure, in such a way that the system terminates in the center of AAAA by a rod of zinc (7) articulated with the little branch H of the lever H K. The total dilations of the rods of zinc of one meter are added together and the total of this addition is conveyed to the central rod (7) with the deduction of the inverse lengthening of the nickel steel rods.

If from night to day we suppose the variation of temperature to be ten degrees only, the extremity of the arm of the lever K will be displaced

JEANNERET SYSTEM

5.739 centimeters, drawing with it the two racks (R R) acting on the fine-toothed ratchet (T) against which both are held by the circular spring S. This ratchet draws the drum over which passes the suspension chain (C) of the weight P. It is thus seen that the latter will ascend a certain amount each time the temperature rises and also each time that it falls, the teeth of the racks being arranged in such a way that the movement of the ratchet always takes place in one direction, and with sufficient force to wind a clock.

In the apparatus of M. Howe, the two large columns at the right and left are rigid receptacles for alcohol, and communicate with a central column of thin, finely corrugated brass. On the upper portion of this column there is attached an axis on which are articulated two rods which draw on two small arms of the symmetrical levers, the extremities of the large arms of these levers carrying steel ribbons which are rolled in the same direction on the axis of a small stationary barrel. When the alcohol dilates its dilation is amplified by the two large arms of the levers, the force of which is restricted by the ribbons to a determined quantity proportioned to the elevation of the temperature. When the latter is lowered the spring tends to unwind, but a tooth plate fixed to its axis operates by a catch on the propelling spring of a clock causing it to become wound to a certain point. It has been demonstrated that daily variations of temperature in an apartment suffice to produce the continual movement of the pendulum when adjusted to the apparatus described in the manner shown in the illustration.

HOWE SYSTEM

Is Ice Purified in the Freezing?

Journal A. M. A., Chicago

THE old idea that ice is purified frozen water receives considerable substantiation through recent investigations. Researches on this subject which were begun in 1888-89 under the direction of the Massachusetts state board of health demonstrate the mechanical influence of crystallization in purifying water. Experiments in the physics of freezing natural or artificial ice show the tendency which there is for substances in either solution or suspension in the water to be thrown out of the forming ice. So far as bacteria are concerned it seems these researches show that when the freezing begins at the top, as in the case of winter ice, and does not go to the bottom, 90 per cent and upwards of the bacteria are eliminated. But in ice which includes all of the water, as in shallow pools or in artificial ice, all of the bacteria present are, of course, necessarily included. This agrees with the well-known trick of those ice manufacturers who use impure water and then tap the center of each block before complete consolidation in order to draw off that portion of the water in which the impurities are perceptibly concentrated.

In commenting on these valuable researches, H. W. Hill calls attention to two other factors which, by the work of Winslow and Park, are proved to tend strongly towards the purity of ice. First, typhoid bacilli, the most dreaded bacteria of water supplies, are destroyed to the extent of 90 per cent by a temperature of a little above 0 C., a temperature which water passes through just before it freezes, and then, second, in ice itself some 90 per cent of any typhoid bacilli included die out during the first twenty-four hours. In a longer time even a greater purification occurs. By reason of all these factors being at work it is claimed that given 1,000,000 typhoid bacilli in a certain quantity of water, all but 100,000 would be expelled by the mechanical process of crystallizing that water, of the remaining all but 10,000 would be killed at the special temperature mentioned, and, finally, only 1,000 would survive a sojourn of twenty-four hours in the ice itself. This amounts to a purification of 99.9 per cent—an extremely successful filtration. We may conclude from all this that natural ice properly cut so as to avoid the uppermost layer, which is often impure from matter originally floating on the water and by later accretions from above, is comparatively innocuous.

Water Drinking and Health

G. T. PALMER, M. D., in the *July Good Housekeeping*, New York
Excerpt

THE human body contains a complete sewerage system in which poisonous and disease producing refuse is constantly gathering, and jeopardizing the health. The same rule which applies to municipal sanitation will also apply to personal sanitation, and the danger of disease may be forestalled by flushing out this sewerage system with an excess of water. Just as truly as the gathering of filth from the city in the "sewerage veins" endangers the lives of the inhabitants, so the poisons generated by the bodily metabolism, collected in the excretory organs, will jeopardize the lives of the millions of inhabitants of the body: the living cells. Every action of muscle or of nerve is accompanied by the destruction of cells which, if not eliminated, will accumulate like clinkers.

Aside from the mere "choking of the flues," we must bear in mind that the body is constantly generating poisons, which, if eliminated freely, will do no harm; but which, if retained, will be productive of disease. Such a poison is uric acid, which is charged justly with causing rheumatism, gout, constant headaches, dizziness and a train of other symptoms, and it must be seen that if the accumulation of refuse is the cause of such conditions, the logical means of cure is its elimination. Other "products of metabolism" create their own types of disease and all may be prevented by the free use of water.

A beginning of kidney trouble lies in the fact that people, especially women, do not drink enough water. They pour down tumblers of icewater as an accompaniment to a meal, but that is worse than no water, the chill preventing digestion, and indigestion being an indirect promoter of kidney disease. A tumbler of water sipped in the morning immediately on rising, another at night, are recommended by physicians. Try to drink as little water as possible with meals, but take a glassful half an hour to an hour before eating. This rule persisted in day after day, month after month, the complexion will improve, and the general health likewise. Water drunk with meals should be sipped, as well as taken sparingly.

RELIGIOUS

Close of the Career of a Great Theologian and Educator

DEATH OF DEAN HOFFMAN OF THE GENERAL THEOLOGICAL SEMINARY

DEAN HOFFMAN, of the Episcopal general theological seminary, in

New York city, died at Plattsburg, New York, June 17, at the age of seventy-three. Eugene A. Hoffman was educated at the Columbia grammar school, New York, at Rutgers college, and Harvard university, graduating from Rutgers with the degree of B.A. and from Harvard with B.A., and subsequently receiving from Harvard the degree of M.A. Later he was honored with the degree of D.D. from Oxford university, Rutgers, Racine, Columbia, the General theological seminary, and Trinity college; with that of LL.D. from the University of the South and Trinity university, Toronto, Canada; and with that of D.C.L. from King's College university, Windsor, Nova Scotia. He was ordained deacon in 1851 and priest in 1853, and began his ministerial career by taking charge of a mission in Elizabethport, New Jersey. In 1853 he was made rector of the newly formed parish of Christ church, Elizabeth, New Jersey, where he remained for ten years. In 1863 he was called by his bishop to the rectorship of St. Mary's church, Burlington, New Jersey, where he paid off a large debt on the church property and placed it on a firm financial basis. In 1864 he accepted the rectorship of the important parish of Grace church, Brooklyn Heights, which he held for five years. From Brooklyn he became rector of St. Mark's church, Philadelphia, where he remained for ten years, doing faithful service.

In 1879, after having twice declined the nomination, he was elected dean of the General theological seminary. When he became the head of the seminary he found it a struggling, almost moribund, institution, overwhelmed with debt and living on its capital, with six professors (oftentimes obliged to forego their salaries) and students averaging in number seventy-five. Now it has come to have ten professors, their chairs fully endowed, as is also the office of dean; three instructors, five fellowships, and nearly 150 students in regular attendance. In 1900, a new building, Hoffman Hall, was dedicated at the seminary in token of his efforts in behalf of the institution.

While most diligent and painstaking in the discharge of his duties as dean, Dr. Hoffman found time to attend to many outside interests. He was president of the New York historical society, fellow

DR. EUGENE A. HOFFMAN

of the American Museum of Natural History, to which he presented a valuable collection of the butterflies of America, Asia, and Africa, and member of many of the learned and scientific societies of the country. He was also on the boards of the chief charitable and religious societies of the church, including the Domestic and Foreign missionary society, the Clergymen's Retiring Fund society, the Widows' corporation, the Cathedral of Saint John the Divine, Trinity school, and many others. He had been a delegate to the general convention from the diocese of New York since 1880, and had been a member of the joint commission for canon revision since 1892.

The activity and usefulness of Dean Hoffman's life lead the Brooklyn *Eagle* to say: "The inheritor and conservator of

great wealth, Dean Hoffman was never classed among those who make money a minister to self. At any time after his attainment of manhood he might have sought ease in retirement from the duties of an active career, but, instead of so doing, he gave himself to the ministry of God and in that ministry toiled unremittingly to the end. So that in due time and long before he reached that fullness of years which was his when the final summons came he was known as one who, while 'the richest clergyman in America,' was also an apostle of work."

Creed-Making

AUSTIN BIERBOWER, in the *Standard*, Chicago

TO impose a creed on the churches is to compel everybody to accept what nobody approves. For a creed is not what people believe, but what they agree to concede. Instead of a fair expression of anybody's opinion, it is always a compromise. Where no two have the same view the only utterance they can adopt as a whole is one which represents nobody. People who think want different things, and to satisfy all they take something different from the desire of any; so that the creed is something which eliminates the issues, or which none care enough about to quarrel over. The things about which men dispute are not adopted by great conventions, and, in most legislative bodies, they are simply evaded. For to adopt a creed which represents anybody is to alienate the rest. So Christians, in making their official declarations, drop what is essen-

tial in their contentions and take the remainder for a creed. They thus get the worthless and let the rest go. For anything on which all can agree must be something of small value, or else something not true. On great truths men differ widely, and on things of great value they will not yield. They must, therefore, find some common ground on which they can all be indifferent, and this they declare to be their sentiments.

The creed thus expresses something else than the substance of men's belief. Never full or accurate, it represents not the agreeing, but the dissenting and contending; and it might be called, "A statement of that about which we don't care," or "Things which we are all willing to surrender." The words of a creed are the concessions which men who are at variance make to one another, and they might be called the "Give aways," or refuse of thought. They are never honest, and are usually made to be imposed on others than those who make them. For the makers of creeds are done with them when they are formulated, so that what nobody believes in one age is meant to be the opinion of everybody in the next, for nobody who helps make a creed ever believes it. A creed can be believed only by those who need not express it. While the difficulty of one generation, accordingly, is to make a creed, and of the next to believe it, the believing generation would never believe it if they knew how it was made and how it represented nothing at the time.

In modern times, accordingly, creeds are made mainly to be rejected. For when those who make them do not deem them satisfactory, others can not. The followers learn to accept creeds as loosely as the leaders learn to produce them; for looseness in making creeds, which has always been a habit of the church, has set an example of looseness in teaching them and in believing them. As a creed expresses anything but the opinions of its makers, it comes in time to express anything but the opinions of its accepters. For, as it expresses only approximately what the makers think, it expresses only approximately what the believers believe. The masses, accordingly, explain them away before believing them, as their makers explained away their opinions before embodying them in such formulas. A creed is now only the utterance of men who believe something else. People must see in a creed what is not there in order to get anything like what its makers thought. None who take it literally get its import. A man must doubt a creed to accept its meaning, or doubt what it says to agree with those who adopt it. What expresses nobody's opinion can not be believed by anybody except by those who dissent from everybody. Creed-believing goes by contraries. One must reject it to get its value. Creeds were made not to be believed, but to relieve men of believing. After expressing them, their makers give them up; and after the people accept them, they cease to take their meaning. Being adopted rather than believed, voted rather than comprehended, and taken for a motto rather than an opinion, they must be held both in ambiguity and in doubt.

Religious Festivals Among the Pueblo Indians

L. BRADFORD PRINCE, in the *Independent*, New York. Condensed for PUBLIC OPINION

THE Pueblo Indians have the most elaborate religious system of which we have any knowledge. It enters into every phase and action of life, from morning till night, from the first to the last day of the year. Everything has some ceremony connected

with it, and all the ceremonials are founded on their religious ideas. Perhaps it would be more correct to say that their religion is a most intricate system of ceremonies; for the latter survive, while the fundamental ideas that gave them birth may have perished. These ceremonies find especial expression in their great festivals. Some of these are secret, confined either to members of the pueblo, or to single societies, or to persons of priestly rank within it; others are public and are the occasions of extensive visiting from other pueblos, from the Navajos, Apaches, and Utes, and from all the white settlements in the vicinity. The best known of their public festivals are those occurring on the saint's days of the different pueblos. There are nineteen Pueblo Indian villages in New Mexico, and each of these at the time of the Spanish occupation was dedicated by the Franciscans to some saint who became its patron. In some cases the old name of the pueblo was retained, prefixing that of the saint, as San Geronimo de Taos, San Diego de Tesuque, and San Lorenzo de Picuries; and in others the pueblo has no name but that of the saint, as San Juan, Santa Clara, San Felipe, etc. But in all the saint is the patron, his or her image is in the village church, and the saint's day is the occasion of the greatest public festival. The mixture of Christianity with the old religion, or rather the way in which the old religion is glossed over with Christianity, is one of the peculiarities of the Pueblo condition.

The following may be taken as the ordinary program at one of the annual festivals. The preparations for the ceremonial dances occupy several weeks in advance of the occasion; the younger participants are carefully instructed, and the garments and ornaments, all of which are precisely prescribed as to material, color, form, etc., are duly prepared. On the preceding day a temporary structure or booth is erected on one side of the principal plaza. The front is open, and at the back is placed a table covered with blankets as a temporary altar. At sunrise of the festival day an official, who may be called a herald, makes proclamation from the housetops in various parts of the town that the day is to be properly celebrated, and calls on all to participate. At nine o'clock mass is said in the church, and at its conclusion the people form a procession and carry the image of the patron saint from the church to the temporary altar in the booth, where it remains all day. Soon after the principal dance of the day begins and usually lasts for several hours.

In these dances the number of men and women engaged is equal, and the figures are beautiful and sometimes quite intricate. The motion is peculiar, and that of the women differs materially from that of the men, but the time kept is absolutely perfect, and so is the performance of the figures. During the whole day men, women, and children, but principally women, come to the booth and kneel before the image of the saint on the altar, bringing with them offerings of various kinds of food. At the summer festivals melons and vegetables preponderate, but at all times there are a multitude of loaves of bread of a peculiar shape only seen on these occasions. While nominally offered to the saint, they are usually taken by the priest and form part of the provision for his maintenance. There is a great variety in the dances, many of which are dramas, accompanied by chanted poems, which form an accompaniment in words to the acted story of the dancers.

THE NEWS OF THE WORLD

MONDAY, JUNE 16

DOMESTIC.—Señor de Quesada, the Cuban minister, was received by President Roosevelt, cordial speeches being made by both....Secretary Root assumed full responsibility for payment made by General Wood to General Gomez....The president nominated Captain Charles E. Clark, formerly commander of the *Oregon*, to be a rear admiral....Joseph E. Proffitt, of West Virginia, was nominated for consul at Pretoria, South Africa....Connecticut's voters rejected the proposed new constitution.

FOREIGN.—A review of 31,000 British troops was held at Aldershot; all branches of the service were represented; the king, though in better health, was unable to be present, and the Prince of Wales reviewed the forces....Venezuela revolutionary troops attacked the city of La Guayra....It is announced at Madrid that the Spanish government has decided to appoint a minister to the republic of Cuba.

TUESDAY, JUNE 17

DOMESTIC.—The *Cincinnati* and the *Topeka* were ordered to La Guayra to protect American interests which may be threatened by the revolution in Venezuela....Maine Democrats held their state convention....Mayor Ames of Minneapolis was indicted for bribery....The Augustinian college of St. Thomas, at Villanova, Pennsylvania, conferred the degree of doctor of jurisprudence on ex-President Cleveland....As a result of the departure from Peking of the Austrian minister to China, Baron Calkann von Wahlborn, Edwin H. Conger, United States minister, became doyen of the diplomatic corps there....The Illinois Democratic convention, in session at Springfield, omitted from its platform reference to the money question or Hon. William J. Bryan....Henry Smith Pritchett, of Boston, was chosen as president of the University of Wisconsin, to succeed Charles Kendall Adams.

FOREIGN.—All the Boer soldiers in the Transvaal and the Orange River Colony have now surrendered, making a total of 16,620....Venezuelan revolutionists took a Norwegian steamer, which was afterward fired on by government vessels, the captain being killed....A letter written apparently by some survivor of the missing steamer *Huronian* confirms the loss of the vessel....Disorderly scenes marked the meeting of the French chamber of deputies....Volcanic eruptions and earthquake shocks were reported from France, Hawaii, and Morocco.

WEDNESDAY, JUNE 18

DOMESTIC.—Admiral Crowninshield censured Captain Dayton, of the *Chicago*, for not looking after the interests

of the ship's officers when they were arrested in Venice; the admiral declares that a court martial under the circumstances would be a farce....President Mitchell, of the United Mine Workers of America, authorized a call for a convention to decide upon a national strike....The Republican state convention of Nebraska nominated John Mickey for governor....The Right Rev. F. M. Whittle, bishop of the Episcopal diocese of Virginia, died....A mob at Paterson, New Jersey, closed every silk mill there, after conflicts in which many shots were fired....Booth Tarkington, the author, was married to Miss Laurel Louisa Fletcher in Indianapolis.

FOREIGN.—The chancellor of the exchequer announced in the house of commons that there was no intention on the part of the government to upset the fiscal policy of the nation; also, out of consideration for the needs of Ireland, the duty on maize would be reduced one-half; the grant of £50,000 to Lord Kitchener was adopted by the commons....Venezuelan rebels captured the seaport of Le Vela de Coro....Patrick A. McHugh, Irish Nationalist member of parliament, was sentenced at Sligo to three months in jail for contempt of court.

THURSDAY, JUNE 19

DOMESTIC.—John G. McCullough was nominated by the Republicans for governor of Vermont....The Italian ambassador in Washington called at the state department and expressed the annoyance felt by his government over the case of the *Chicago* officers....Secretary Root stated the cost of the Philippine war up to date to be \$170,326,586....The miners in the bituminous districts of Pennsylvania have been ordered to work only four days each week....At the opening of the Tilden club's new house, in New York city, ex-President Cleveland made his first appearance at a political gathering since his retirement.

FOREIGN.—The volcano Mont Pelée, on the island of Martinique, ejected a column of slime which overwhelmed a village, but caused no loss of life....Prayers were offered in the City Temple, London, for the recovery of the Rev. Joseph Parker, who is seriously ill....King Albert of Saxony died in the royal castle near Dresden....A French force defeated a tribe of Tuaregs in the Soudan with great slaughter.

FRIDAY, JUNE 20

DOMESTIC.—Secretary Moody expressed regret to the Italian ambassador that the findings of the court of inquiry in the case of the *Chicago's* officers had been made public....Five persons were killed and twenty-nine injured in a railway collision near Staples, Minnesota, between two passenger trains.

FOREIGN.—Dresden was draped in black in memory of the king of Saxony....Prince George was proclaimed king by the ministers....Emperor William spoke on the value of religion at Aix-la-Chapelle....Lord Charles Beresford again censured the British navy for negligence.

SATURDAY, JUNE 21

DOMESTIC.—The cost of the coal strike was estimated at the end of the sixth week at \$35,000,000; there was an outbreak of violence at Shenandoah, Pennsylvania, but there were no shots fired....The unarmored cruiser *Denver*, the torpedo boat destroyer *Hull*, and the steamer *Finland* were launched....Cornell made a clean sweep in the rowing regatta at Poughkeepsie, winning all three races, the 'varsity eight and four-oar and freshman eight.

FOREIGN.—Great Britain's action in shutting American cattle out of South Africa was explained by the statement that hundreds of horses and mules had been inoculated with charbon and glanders by Boer sympathizers, causing an epidemic in Africa....The Order of the Golden Fleece was conferred upon President Loubet.

SUNDAY, JUNE 22

DOMESTIC.—President Mitchell, of the United Mine Workers of America, in a statement gave the mine workers' side of the present controversy and made a strong plea for arbitration....A disastrous fire occurred in Portland, Oregon....Major General Wheaton, just returned from the Philippines, said that American occupation of the islands has saved more lives by sanitation than were lost in the war....Forest fires destroyed millions of feet of standing lumber on the line between British Columbia and Washington.

FOREIGN.—Forty-nine persons were injured in a railroad accident near Milan....The town of Aqua Dulce was again captured by Venezuelan troops....One hundred and fifty lives were lost by an explosion on the Chinese cruiser *Kai-Chi*....Lord Milner was sworn in as governor of the Transvaal.

Elevating Influences

Imp (excitedly)—Your majesty, there are a lot of missionaries coming down here from the earth. What do you think they're up to?

His Satanic Serenity (cynically)—They'll probably try to raise hell, as usual.—*Harvard Lampoon*.

"You are in my pew, sir" said Mr. Upjohn, stiffly.

"Then I am sitting in the seat of the scornful!" replied the stranger, getting out of it with alacrity and taking a seat further back in the church.—*Chicago Tribune*.

The Books of The Week

POEMS, CHARADES, AND INSCRIPTIONS OF POPE LEO XIII. Including the Revised Compositions of His Early Life in Chronological Order. With English Translations and Notes by H. T. Henry. Cloth, pp. 321, \$1.50. New York: The Dolphin Press.

EVER since the translation of the pope's Epistola ad Fabricium Rufum in 1897 and the publication of his ode on the opening century which appeared three years later, we have been aware that Leo XIII possessed poetic talent of a high order. It must be said, however, that these two poems represent the highest quality of his work; there are no other poems here that rank with them, although there are not a few that reach the average of minor poetry. Mr. Henry gives the Latin text together with his translations, which are good equivalents and doubtless do full justice to the quality of the originals.

The chronological arrangement of the poems makes it possible to trace the pope's development as a versifier from the lines on his sickness—

A youth of twenty years—how sickly and how spare!

Ah, to what natural shocks my flesh is heir! Haply to utter here my memorable grief, May bring, if not surcease, some sad relief—

to the poem on Death, 1897,

The westering sun draws near the cloudy bed,
Leo, and gradual darkness veils thy head;
The sluggish life-blood in thy withered veins
More slowly runs its course—what then remains?

Lo! death is brandishing his fatal dart,
And the grave yearns to shroud thy mortal part:

But, from its prison freed, the soul expands
Exulting pinions to the enfranchised lands.
My weary race is run—I touch the goal:
Hear, Lord, the feeble pantings of my soul;
If it be worthy, Lord, thy pitying breast
Welcome it unto everlasting rest!
May I behold thee, Queen of earth and sky,
Whose love enchained the demons lurking nigh

The path to heaven; and freely shall I own
'Twas thy sweet care that gained my blissful crown.

The pope's verse is from the heart rather than from the head, but it does not lack wisdom and the apt expression of moral axioms such as we find in the lines he placed on a portrait of himself presented to the Roman Society of Catholic Youth:

Enter at once the "narrow path";
No Open Sesame it hath;
Long heats and burdens you must bear—
Wet are the brows that laurels wear!

There are, too, some examples of the pope's skill in turning aphorisms—"Ambition, the fiercest spur to hidden hate and open war, turns its back on justice, and making deceit its companion, strives brazenly for the rewards due to virtue."

A number of charades, among other verses in a lighter vein, show that the pope has been fond of using verse as a medium of amusement as well as a means of serious expression. "Solfanello" is a good example of his efforts in the former direction:

Behold, the heaven glows
With starry light,
While earth and sea repose
In shades of night

My first ascends—each hill
Is ridged with gold;
The flowers new sweets distil,
New charms unfold.

My second then in gray
And crimson clad,
Offers an artless lay,
A chirping glad.

Again 'tis evening dun:
Strike on the head
My whole, for now the sun
Has gone to bed.

—sol, the sun; fanello, a linnet; solfanello, a match.

In order of merit after the lines on frugality and long life (the epistle to Fabricius Rufus) and the ode on the new century we should place the lines to the widow of Count Carlo Conestabile, esteemed by the pope both as a friend and for his literary abilities:

Death claimed him, and he met the common doom:

In dreams I see you stand beside his tomb,
And tearless press the swelling sorrow down—
Say rather, glimpse the fadeless laurel crown;
For with fair brow raised to the bending skies,
Hopeful you look toward heaven with love-lit eyes!

Ah, whence thy strength and constancy of mind?

Faith nourished it; and Hope auspicious shined

God's promises within thy heart, and so
Thou wouldest not yield thy soul to depths of woe.

Anon you see a sudden splendor bright
Suffuse the golden gates with heaven of light!
Open they swing; and lo! before your eyes
His dear face smiles on you from Paradise.

Ah, me! with what a joy your heart must swell!
Inflamed with love it bids the last Farewell,
And shall with endless praise besiege God's citadel.

The pope is invariably happy in dealing with his friends and the great of his church; there are many such verses. The purely religious poems are not nearly so successful.

AMERICAN FOOD AND GAME FISHES.

A Popular Account of all the Species Found in America North of the Equator, with Keys for Ready Identification, Life Histories, and Methods of Capture. By David Starr Jordan, Ph.D., and Barton Warren Evermann, Ph.D. Cloth, pp. 573, \$4. New York: Doubleday, Page & Co.

THIS is the first volume of a series of books on the natural history of North America, and the series will be a truly notable one if the volumes that follow are as complete as this one. The author's aim, as they state it, has been to make a book which will prove useful and entertaining to anglers; to commercial fishermen and dealers in fish and fishery products; to teachers and others who wish to inform themselves regarding our vast array of food and game fishes; and to the multitude of intelligent men and women who have an interest in nature and nature study. The introductory chapter, which is concerned mainly with the method of classification, is followed by chapters on How to Identify a Fish, American Bait Minnows, and Fishing with a Fly. Then follow the chapters on the several classes of fish found in North American waters. Without belittling the painstaking labors of the authors, it must be said that the illustrations are the most

valuable feature of the book. There are ten plates in color, sixty-four full-page plates from wonderful photographs from life by A. R. Dugmore, and several hundred smaller cuts in the text. These with the elaborate system of identification supplied by the authors make it possible for anyone to "know the fishes" beyond a doubt. The reputation of Professor Jordan and Dr. Evermann among ichthyologists is such that perfect confidence may be felt in the scientific exactness of their work. The volume represents a great undertaking; it has been carried out to the smallest detail by authors and publishers, and the result is a volume that reflects high credit upon both.

HEARTS COURAGEOUS. By Hallie Erminie Rives. Cloth, pp. 407, \$1.50.

Indianapolis: The Bowen-Merrill Co. COLONIAL novels are so numerous that relationships between them are unavoidable. The Anne Tillotson of this book is a very close relation of the Janice Meredith known to novel readers; that is to say, they very closely resemble each other in all that concerns their position as heroines. They have much the same experiences and even in small details they are alike—both, for instance, fall in love with and marry men who are apparently renegades, but who are in fact persons of high quality. But Janice, however alluring, had no Hallie Erminie Rives to celebrate her charms in such words as these: "Her hair was a wave of russet lights, with shadows of warmer brown. Her face, rose-stained, was the texture of a rose. Her mouth, below serious eyes of blended blue, gave a touch of wilfulness. If there was intentness on the brow, so was there languor on the lips, red, half-ripe, the upper short and curved to smile. She was all raptures—all sapphire and rose-gold." And the landscapes, no less than the people in this book, are altogether remarkable. Thus on one occasion "the rose-stained east turned kingfisher color and then amber, and the sun splashed the clouds with pools of burnt yellow and gold till they went in a glory." And yet it must be said that in spite of its many absurdities the book is fairly interesting reading, and for all we know its picture of life in Virginia in revolutionary times may be something like the original. The known personalities in the story, however, are mostly caricatures; Patrick Henry is made a sort of clown; Lord Fairfax's Toryism is absurdly exaggerated; Lord Dunmore is a villain of the deepest dye, and so on.

THE VARIETIES OF RELIGIOUS EXPERIENCE. A Study in Human Nature.

Being the Gifford Lectures on Natural Religion, Delivered at Edinburgh in 1901-1902. By William James. Cloth, pp. 527, \$3.20 net. New York: Longmans, Green & Co.

MR. JAMES discusses religion as a purely personal matter, the expression of the particular mental condition of the individual. He does not deny the existence of a supreme being, he simply leaves such a possibility out of account and

NIAGARA FALLS

One of the natural wonders of the world. A charming place at any season of the year, reached from every direction by the

NEW YORK CENTRAL LINES

A visit to the Falls is an object lesson in geography; an exhibition of landscapes that no painter can equal, and a glimpse of the latest developments of the industrial world.

A copy of Four-Track Series No. 9, "Two Days at Niagara Falls," will be sent free, postpaid, to any address on receipt of a two-cent postage stamp, by George H. Daniels, General Passenger Agent, New York Central & Hudson River Railroad, Grand Central Station, New York.

considers solely the effect upon men of continued thinking about God and the future of the soul. He does not consider whether there is a God, and why we should or should not believe in one, but to what such a belief leads those who do hold it. The volume is full of illustrations of what men have thought and said and done under the influence of religious belief, and of the gain or loss to men and to the world occurring from the various forms and phases of religion. One can not read through the lectures without becoming convinced that religion, more than any other one subject, has commanded the attention of men of all ages, and has had, probably, a greater effect than any other in dictating their course of conduct.

LAFITTE OF LOUISIANA. By Mary Devereux. Cloth, pp. 427, \$1.50. Boston: Little, Brown & Co.

At last the memory of Jean Lafitte, the prince of buccaneers and the ally of the Americans at the battle of New Orleans, is freed from the opprobrium that long has rested on it. He was really the son of a French nobleman and a friend and devoted admirer of Napoleon, whom he visited and attempted to befriend when the latter was an exile at Elba. Far from being a pirate, as history unkindly relates, and most people believe, he was a gallant and honorable soldier, who made regular and legitimate warfare upon the enemies of the republic of Carthage. The fact that for all practical purposes he was at that time the republic of Carthage and therefore at liberty to choose his own enemies does not disturb the author in the least. It is now in order to cleanse the reputations of Judas Iscariot, the Emperor Nero, and Benedict Arnold.

PAPERS PRESENTED AT THE FIFTH ANNUAL SESSION OF THE SUMMER ASSEMBLY OF THE JEWISH CHAUTAUQUA SOCIETY, HELD AT ATLANTIC CITY, N. J., JULY 7 TO JULY 28, 1901. Paper, pp. 118. Philadelphia: The Jewish Publication Society of America.

THE Jewish publication society issues a special series of publications, of which the present pamphlet is the first for the year ending June, 1903. The subjects discussed in this number are of interest to those who wish to know something of the trend of thought of the leaders among the Jews in America at the present day.

OLYMPIAN NIGHTS. By John Kendrick Bangs. Cloth, pp. 224, \$1.25. New York: Harper & Brothers.

THE virus of "commercialism" has infected even high Olympus, as we learn from Mr. Bangs, who has lately returned from a visit to that exalted realm. Cupid has become an elevator boy, Adonis a valet, Mercury a chauffeur, and Alcestis a waiting maid for Dr. Esculapius; Mars has become a celestial golf links, and the Martian canals that have puzzled terrestrial astronomers for so long are nothing but silvery bunkers. A feature of the royal palace is an indoor links with bunkers

304 to 314 HEWES ST., BROOKLYN, N. Y.

filled with champagne, Burgundy, iced tea, and Scotch. All the bunkers empty into an indoor sea, making a punch so potent that even Bacchus was overcome when he attempted to swim from Chambertin inlet to Glenlivet bay on a wager, and the treasury of the gods was nearly emptied in providing gold enough to cure him. If Mr. Bangs could only assure us that hades had been as greatly improved and modernized as Olympus, the minds of mortals would be much relieved.

ELEMENTARY CHEMISTRY. By F. W. Clarke and L. M. Dennis. Cloth, pp. 340, \$1.10. New York: American Book Co.

INTERSPERSED with the text of this excellent elementary treatise are descriptions of the more important of the simpler experiments in chemistry. It is, therefore, a laboratory manual as well as a text-book for use in the classroom. Those students who desire only a working knowledge of the fundamental facts of chemistry will find it very useful; those who pursue the subject further will find it useful only as a starting point.

A MAID OF THE WILDWOOD. By George W. Louttet. Cloth, pp. 351. Fort Wayne, Ind.: The Colonial Press.

The legend of Pocahontas is completely outdone in this idyll of the wilderness. An Indian girl who talks like a college professor and a white man adopted by the Indians are the central figures of the story. Of course, the white man marries the Indian girl and they return to Indiana to live happily ever after. The time at which the events narrated take place is in the early years of the last century culminating with the death of Tecumseh.

It's UP To You. A Story of Domestic Bliss. By Hugh McHugh. Cloth, pp. 121. New York: G. W. Dillingham Co.

SLANG to the nth power, and very little else. It is to be feared if authors are to be held responsible for the crimes of their imitators, Mr. George Ade will have much to answer for, in this world, at least, if not in the next.

GRAMMAR SCHOOL ALGEBRA. An Introduction to Algebra for Beginners. By Emerson E. White. Cloth, pp. 96, 35 cents. New York: American Book Co.

ADMIRABLY designed to make the transition from arithmetic to algebra easy. The author states in the preface that the whole of the book may be mastered easily in the last year of the grammar school course.

THE DICTUM OF REASON ON MAN'S IMMORTALITY, or Divine Voices Outside of the Bible. By Rev. David Gregg. Cloth, pp. 73, 50 cents. New York: E. B. Treat & Co.

THE WAY OF ESCAPE. By Graham Travers. Cloth, pp. 378, \$1.50. New York: D. Appleton & Co.

A RATHER long drawn out tale of human weakness and suffering, with a very obvious moral lesson, and a leaning toward the "Elsie books" method of treatment. It begins with the unfortunate love affair of a Puritanical but hot-blooded Scotchman and a trustful, inexperienced girl, and ends with the death of the woman after long years of painful atonement. One could read it with more patience if the precocious brothers and sisters, whom she elects to bring up after the death of the mother, had been eliminated from the tale. There can be no doubt of the erring woman's complete atonement if she suffered half as much from their sayings and doings as does the reader.

SELECTIONS FROM DE QUINCEY. Edited with an Introduction and Notes by Milton Haight Turk, Ph.D. Cloth, pp. 501. Boston: Ginn & Co.

THE unholy mystery with which many critics have shrouded the life of De Quincey has tended often to increase the interest felt in his writings, but also to double the difficulty of understanding them. Professor Turk's brief introduction helps to a clear view of the man and his life, and the selections which he has made are admirably fitted to lead the student to a study of his works. The Confessions of an English Opium-Eater is, of course, given a prominent place, but it is necessary to read The English Mail Coach to get an idea of the man's broad, dramatic way of looking at things.

A MAID OF BAR HARBOR. By Henrietta G. Rowe. Cloth, pp. 368, \$1.50. Boston: Little, Brown & Co.

COMFORT was a maid of Bar Harbor when that now fashionable resort was merely Desert island, the abode of various hard and close fisted New Englanders, the hardest of which was Comfort's father. Mrs. Rowe's intention has been not only to tell a story, but to exhibit the traits, good and bad, of the true Yankee. She has succeeded in this and in writing a story which interests because one's sympathies are enlisted in Comfort from the day of her birth, and the reader must needs follow her to the end, which, rightly enough, is the beginning of a happier life than she lived at Bar Harbor.

THOSE BLACK DIAMOND MEN. A Tale of the Anthracite Valley. By William F. Gibbons. Cloth, pp. 389, \$1.50. New York: Fleming H. Revell Co.

A PICTURE of the life of the coal-miners in the anthracite district is especially appropriate at this time, in view of the attention attracted to the hard-coal miners by the present strike. Those who dislike the Sheldon school of fiction will yet be able to find much in this story that is timely and valuable, and those who do not object to having their fiction diluted with preaching, or their preaching diluted with fiction, will welcome it on every account.

THE REBUILDING OF OLD COMMONWEALTHS. By Walter H. Page. Cloth, pp. 153, \$1.00. New York: Doubleday, Page & Co.

THIS little book contains two addresses delivered by the author at educational institutions in the south, and one address which previously appeared in magazine form. The author's discussion is of the old and new educational methods in the south, the argument being that "the very virtue of a democracy is that by the right training of all its children it has the power constantly to re-enforce itself from the rear."

AMOR VICTOR. By Orr Kenyon. Cloth, pp. 424, \$1.50. New York: Frederick A. Stokes Co.

IN the reign of the Emperor Domitian, a young Parthian giant comes to Greece, is baptized a Christian by the aged Apostle John, becomes an apostate and a gladiator of the emperor, but after many thrilling adventures finds his way back to the faith again. The pictures of the persecutions of the Christians by Domitian, and the shows and combats of the arena are lurid and intense.

AN UNWILLING GUEST. By Grace Livingston Hall. Cloth, pp. 327. Philadelphia: American Baptist Publication Society.

MISS HALL has written a good love story and a good missionary narrative with a strong emphasis upon the religious elements of many situations in life. The transfer of the scene of the story to China makes possible the introduction of a variety of incident that increases the interest of the story.

THE KING IN YELLOW. By Robert W. Chambers. Cloth, pp. 274, \$1.50. New York: Harper & Brothers.

WE are glad to see a new edition of this book. Mr. Chambers has never written anything better, and, in our opinion, nothing so original and so good. The unfortunate circumstances under which these stories were first published could not entirely obscure their merit. Now they should have more and more appreciative readers.

HOW TO ANSWER A WANT AD OR HOW TO APPLY FOR A POSITION. By Charles S. Clark and Annie Bressel. A Comprehensive Practical Work on Personal and Written Applications, with Illustrations Taken from Actual Business Life. Paper, pp. 88. Rochester: New York State Pub. Co.

A GUIDE that should be very useful to the uninstructed, and which might be worth a thousand times its cost.

TREES IN PROSE AND POETRY. Compiled by Gertrude L. Stone and M. Grace Fickett. Cloth, pp. 184. Boston: Ginn & Co.

A COMPILATION for supplementary reading of literary selections inspired by love of our common trees.

Snappa

The Camera
with a
Magic
Magazine

Snappa

Camera is the most recent development of photographic science. So marvelous in its mechanical perfection as to entirely revolutionize the making of pictures.

Snappa magazine carries 12 plates or 24 films, which change automatically. You always have a fresh plate or film ready for instant use. It is impossible to make two exposures on one plate. Each exposure is developed separately—the only way to make perfect pictures.

Snappa takes pictures with a rapidity and precision heretofore unknown in snap shot work.

Ask to see it at the dealers, or send for descriptive book.

BUSINESS AND FINANCE

The Business Situation Selected and Condensed for PUBLIC OPINION GENERAL SITUATION

Dun's Review, New York, June 21

Trade at the east is more quiet owing to the advancing season, and the bad effect of prolonged labor controversies is being felt in certain lines. Reports from the interior and the far west are more encouraging; bountiful harvests being expected, while the light stocks carried over from the previous season assure profitable prices. The best indication of continued prosperity is the fact that quotations do not recede, even in the lines where at present there is only a moderate degree of activity. There is no evidence of yielding on either side in the coal strike, and as the convention of soft coal miners has been called for July 17, the sympathetic strike can not become a factor for some weeks, even if it is decided upon. Railway earnings thus far reported for June increased 3.9 per cent in comparison with last year, and 20.0 per cent over 1900. Bank exchanges at New York are still affected by decreased speculation, showing a loss of 29.8 per cent for the week from last year's figures, but increasing 14.1 per cent over 1899. Clearings at other leading cities gained 1.9 per cent over 1901 and 24.7 per cent over 1899.

SUMMER FROLIC

Get Ready Now

Give the brain and body food during the summer that does not overtax the stomach and heat the body.

Grape-Nuts is a crisp, dainty and delicious food, selected parts of the grain treated by heat, moisture and time to slowly and perfectly develop the diastase from the grain and transform the starch into grape sugar in the most perfect manner; the small particles of phosphate of potash found in certain parts of the cereals are retained and these elements vitalize and nourish the body, brain and nerve centers.

In its predigested form, it furnishes the necessary strength and energy in an easy way for the system to absorb without undue exertion, and removes the general feeling of heaviness usual to hot weather.

Grape-Nuts and cream, a little fruit and possibly an egg or two cooked to suit the taste, is an ideal breakfast and will fully sustain the body until the noonday meal. Delicious desserts for luncheon and supper can be quickly made and have a flavor all their own from the peculiar, mild but satisfying sweet of the grape sugar.

Grape-Nuts will save the heat of cooking and the exertion of preparing food; will make you feel internally ten degrees cooler and fit you for the summer's heat so that you may enjoy the full pleasures of the season.

IRON AND STEEL

Uncertainty regarding their ability to secure pig iron at reasonable prices is making producers of steel cautious in accepting contracts that call for delivery at even remote dates. Raw material is undoubtedly in light supply, and the anthracite coal strike has suspended work at a number of furnaces. In certain lines of finished steel products the addition of new plants to the productive capacity has had a perceptible influence on prices, introducing more competition. This factor is felt in only a few divisions, however, and in all heavy lines, notably rails and structural material, orders run far into next year, and there is no question of concessions in quotations. Jobbers having a surplus of bar iron sold moderate quantities at a lower figure than the market rate, but steel bars are firmer.

COTTON AND WOOL

Quiet conditions prevail in eastern dry goods markets. Distribution of textiles from second hands is only of average volume, and it is evident that jobbers' supplies require only moderate replenishing. Buyers of cotton goods take only for immediate consumption, indicating faith in cheaper raw material with the new season, and consequent reductions in products. A stronger silver market has revived purchasers for export to China, although, like the home trade, this is still on a moderate scale. Supplemental buying of woollens is also limited, in part owing to the tardy delivery of sample pieces. It is noteworthy that prices in all textile lines are firmly held, despite the slow movement, indicating confidence on the part of sellers.

CORN AND WHEAT

Lack of rain in the southwest is the only seriously unfavorable crop indication of the week, while exceptionally encouraging reports are received from most points. Domestic grain makes good progress, but bad news has been received from abroad, and the outlook is favorable for large exports. Comparisons for the week with last year's movement show losses, however, the

outgo of wheat, flour included, from all ports of the United States amounting to only 2,380,426 bushels, against 4,057,027 a year ago, while Atlantic coast shipments of corn were 77,754 bushels, compared with 1,926,511 last year. In the speculative markets there was much activity at Chicago, where the short interest in corn was badly demoralized by aggressive manipulation, July options reaching 69 cents. Heavy liquidation brought a sharp decline from the top figure.

FAILURES

Failures for the week numbered 194 against 193 last year.

Financial

Bradstreet's, New York, June 21

THE MONEY MARKET.

The New York banks lost money to the treasury, but gained from the interior, the estimated net increase in their cash holdings being about \$2,500,000. The strength of exchange and the possibility of gold exports had little or no effect on sentiment in the financial market. Call money was in plentiful supply at 3 per cent throughout the week. Lenders were somewhat conservative about making time arrangements until the July interest and other disburse-

HAMPERS BUSINESS

Coffee Drinking Incapacitates Some People for Business at Times

A gentleman from McBain, Michigan, says, "Coffee drinking has cost me much, for during my life I have been many times so thoroughly put out of condition that I have been compelled to abandon business for a day or two at a time. The attacks of headache would commence on the right side behind the ear and become so severe as to totally incapacitate me for any exercise, even mental. I have frequently had to take morphine to relieve the suffering. Sour stomach troubled me and I had a nervous heart that gave me a great deal of trouble.

Four years ago I saw an advertisement for Postum Food Coffee, which recited the ill effects of coffee on the nerves. I at once decided to make the change and leave off coffee and take on Postum. The result has been all that one could expect.

I am never constipated any more, the bilious attacks never come on except from some indiscretion such as drinking coffee, which I am foolish enough to indulge in now and then. I have no more headaches, on more sour stomach and no bilious spells. I have not been sick to my stomach or had a nervous vomiting spell in three years. Am now 56 years old, and have better health and do a better business than ever before in my life. I certainly attribute the change to leaving off coffee and using Postum, for I have taken no medicine to aid in making the change.

The experiment as stated is absolutely true. I am willing, if necessary, to attach my affidavit to it." Name given by Postum Co., Battle Creek, Mich.

ments are completed, and rates were firm in spite of the slack demand for accommodation. Commercial paper is quiet, with a small supply of attractive names and a rather limited buying demand.

THE STOCK MARKET

Decided strength and further activity have continued to prevail in the New York stock market, interest centering in the southwestern, Pacific and granger stocks. These securities were higher on manipulation and general buying, induced by favorable crop reports. Reading was advanced early in the week in the face of the adverse strike news, but receded later on realizing sales. The United States steel stocks developed weakness and were the objects of general selling, due to the decision against the preferred stock conversion and the possible entire abandonment of that scheme. The bond market is very strong and active, with steady demand for good securities from interests which, it is presumable, will reinvest July income receipts. Foreign exchange is very strong, demand sterling being 4.87 3/4 on limited supplies of bills and a good inquiry.

BANK CLEARINGS

Bank clearings for the week ending June 19 amount to \$1,930,270,697, an increase of 3 per cent over last week, but a loss of 19 per cent from the same week in 1901. Exchanges outside of New York, \$779,663,514, show a gain of 2 per cent over last week and an increase of 1.9 per cent as compared with the like week last year.

Various Topics

According to the official returns of the foreign trade of the port of New York for the month of May there was an aggregate import and export movement, including specie, of \$86,627,021, or a decrease of more than \$25,000,000 from the corresponding month of last year.

A general advance in wages amounting to 10 per cent was announced Wednesday at the Joliet (Ill.) mills of the Illinois Steel company. Machinists who have been receiving 29 1/2 cents an hour will be paid from 32 to 33 cents. The advance also applies to common labor.

A Houghton, Michigan, report says that official figures of the copper production of the Calumet and Hecla for the year ended April 30, 1902, show an output of nearly 20,000,000 pounds less than the commonly accepted estimate for the year. Instead of 170,000,000 pounds as the lake region output, 150,000,000 pounds are given.

A Wilkesbarre report gives the following figures as showing the losses suffered during five weeks of the Pennsylvania anthracite mines strike: Money loss thus far, \$30,000,000; to operators, \$13,100,000; to miners, \$6,480,000; to other employees, \$1,600,000; to coal region business men, \$4,200,000; to other business men, \$2,500,000; damage to mines, \$1,000,000; cost of police, \$350,000; cost of non-union men, \$50,000.

WIT AND HUMOR

Our Great and Good Friends
They're coming with the statues now,
from almost every land;
From Greenland's icy mountains clear
to India's coral strand;
The Emperor of China sends a shaft
that's sure to please—
The grand old ruler Wun Shi Lung,
whose pigtail fans the breeze;
And like the statue-giving heads of all
the other powers,
He vows that Wun Shi Lung was once
a great big friend of ours.

Good Abdul Hamid orders that his
sculptors all shall sculp,
Or else he'll hold a festival and grind
them to a pulp;
He thinks he'll send a dainty thing—
a home-and-fireside group
Of ten or fifteen wives of his, prepar-
ing Turkish soup.
The label on the soup-can shows Chi-
cago's streets and towers,
Which proves that Abdul Hamid always
was a friend of ours.

The King of Patagonia and Sultan of
Sulu
Have boxed some statuettes and things
and billed them: "Hurry
Through."
The Brigands of Bulgaria show how
their love has grown
By ordering a monument—if we will
send the Stone.
And all the big and little kings, and
heads of all the powers
Are shipping sculptured things to show
that they are friends of ours!
—*Baltimore American.*

The Good Old Days
Oh, for the good old hat of straw
Ere came the flaunting Panama
To claim our money.
The old straw hat of simple weave
Which one might wear and not believe
That he looked funny.

With beef and coal still on the rise,
The gilded youth in sad surprise
Gets up and hollers—
"The hat, as good to all intents,
That once cost 67 cents,
Now costs \$10!"
—*Washington Star.*

The Editor's Joke
Isabel—I think that editor man is
simply horrid.
Judith—Why?
Isabel—He placed an engagement an-
nouncement of myself to young Slop-
pington under the head of "Business
Opportunities."—*Smart Set.*

Just to Humor Him
A sore-hipped hippopotamus, quite
flustered,
Objected to a poultice made of custard.
"Can't you doctor up my hip
With something else than flip?"
So they plastered on his hippopotamus-
tard.
—*Princeton Tiger.*
